J. H. & SON can also supply fine, strong, and healthy plants of all the best Pelargoniums in cultivation, at moderate prices, of which a Catalogue is annually published, containing an accurate description of each variety, together with Calceolarias, Pansies, Verbenas, Fuchsias, &c. &c. Also, Catalogues of Dutch Bulbous Roots. Garden, Agricultural, and Flower Seeds.

ROSES.

T. RIVERS, jun., begs to announce to the Public that his new descriptive Catalogue of Roses is now ready for distribution. It will be sent, as usual, free to all those who have ever favoured him with their commands, and also on receipt of applications enclosing a twopenny stamp.

A few hints on the Culture of Roses are given in the Catalogue; the descriptions will be found accurate, and not exaggerated.

"The Rose Amateur's Guide," 2d edition, price 6*s.*, is still on sale at Messrs. Longman and Co.'s.

October 20th.

MESSRS. YOUELL and Co. beg to announce the following:—

FUCHSIA ST. CLARE.—This, the most Splendid Fuchsia yet introduced to public notice, will be ready for sending out in the 2nd week of April next, at 10*s.* 6*d.* per plant, postage free, to any part of the United Kingdom, by Youell and Co., who possess the entire stock of it. Dr. Lindley's opinion of it will be found in the *Gardeners' Chronicle* of the 14th of May last, as follows:—

"Your Seedling Fuchsia is by far the finest hybrid we have seen; the flower being three inches in length, with the tube and sepals of a bright carmine colour, and the petals of a rosy purple. If, as you say, it is a strong grower and a free bloomer, it will prove a valuable addition to this beautiful genus:—"

Which two latter qualities it possesses in the extreme. All orders, as well as those from the Continent, will receive every care in packing, so as to ensure their perfect safety. The usual discount to the Trade, where not less than six plants are ordered. For further particulars see their advertisement in the *Gardeners' Chronicle* of the 8th inst.

CARNATIONS AND PICOTEES.—A Superb Collection of the above are now being sent out at the following prices:—

25 pairs of extra fine first-rate Show flowers,	£5	0	[illegible]
12 ,, do. do. do.	2	10	0
25 ,, of fine Show flowers, . .	3	0	0
12 ,, do. do. . . .	1	10	0
25 ,, of extra fine Show Pinks, . .	1	4	0
12 ,, do. do. . . .	0	12	0

The selection being left to Y. & Co.

Who, should it meet the wishes of those favouring them with their orders, will send them free to any part of the United Kingdom, at the extra charge of 2*s.* per dozen pairs.

A Post-office order, or reference, is respectfully requested from unknown correspondents.

Their Catalogue, containing every known variety worthy of cultivation, may be had by enclosing two postage stamps.

ARAUCARIA IMBRICATA.—Y. and Co., who possess by far the largest stock in the country of the above most noble Hardy Plant, which is in course of planting by most of the Nobility, are executing orders for it in fine strong healthy Plants, at 60*s.* per dozen.—Great Yarmouth Nursery, Oct. 20th, 1842.

HYACINTHS, TULIPS, &c.

H. GROOM, Clapham Rise, near London (removed from Walworth), by Appointment Florist to her Majesty, respectfully informs the Nobility and Gentry that this is the proper season for planting the above bulbs, and that his Catalogue is ready and may be had on application.

"OBERON."

SAMUEL HODGES begs to inform the admirers of the Pelargonium that he intends to send out in strong Plants, at 42*s.* each, the above-named Pelargonium early next month; it was exhibited at Chiswick in June and July, at the Horticultural Show; also at the Crown and Anchor, Tavern, Strand; at the Cheltenham and Gloucestershire Shows, and was greatly admired; it is allowed to be a beautiful and new variety.

Cheltenham Imperial Nursery, 20th October.

N. GAINES begs to inform the Nobility, Gentry, and Trade in general, that his List of first-rate Pelargoniums, Pansies, Calceolarias, Fuchsias, Verbenas, Chrysanthemums, Cinerarias, Auriculas, &c., may be obtained by application at the Nursery.

SPOTTED DIGITALIS.—Seed of this Splendid Flower, which received a Medal at the June Meeting of the Horticultural Society at Chiswick, can be obtained in small packets at 5*s.* each—also some fine Pansy-Seed, at 2*s.* 6*d.* do.—Surrey-lane, Battersea, 20th Oct., 1842.

W. LYNN, Nursery and Seedsman, late of Henley-on-Thames, begs to offer to the Trade, and Public in general, the following articles, which are good and fine:—viz., Maiden Cherries, ditto Stocks, 4 to 6 ft.; 11 varieties of Dwarf Trained Plums; Standard Plum Stocks, 6 to 8 ft.. Standard Walnuts; Red Cedars, 1 to 2 ft.; Arbor Vitæ, 4 to 6 ft.; Box-trees, 2 ft.; Spiræa bella; Camellias, 1 to 2 ft., set for bloom; Auriculas; Myrtles, 2 ft.; Gesnera fragrans, 2 ft.; Hoya carnosa: Pelargoniums; Lobelia ignea; also a small stock of his new Dwarf Wrinkled Marrow Peas, at 2*s.* 6*d.* per quart: this Pea has given universal satisfaction in the neighbourhood of Henley—it is superior to the Knight's Marrows, and much more advantageous, especially in small gardens, its height being 3 to 4 ft.; it is the most prolific Pea the advertiser ever saw, perpetual in its bearing, quite full, and of most delicious flavour, even when nearly ripe. New White Reading Onion—seed of own growth; Long and Short Prickly Cucumbers; fine Curled Parsley; Vegetable Marrow; Walnut-leaved Kidney Potatoes, and Knight's Seedling Early Frame ditto:—For which early applications are requested. All orders and communications addressed (pre-paid), No. 9, Lower Homerton Terrace, Homerton, will be punctually attended to.

NEW SPLENDID HEARTSEASE AND PINKS.

JOHN COUDREY, Nurseryman and Florist, Edgbaston Nursery, near Birmingham, begs to call the attention of Florists generally to his new HEARTSEASE, Prince of Wales, the finest dark flower in cultivation—from the opinion of the "Gardeners' Gazette," it is pronounced to be fit for any stand, and allowed by all Florists that have seen it to be the best dark yet out, being extra large, fine substance of petal, and unequalled shape; Plants, 7*s.* 6*d.* each.

Also British Queen—fine white ground, beautiful bold dark eye, three lower petals richly belted with fine purple, and extra shape; Plant, 5*s.*

Also his four new Seedling PINKS—Lord Calthorpe, 7*s.* 6*d.*; Lord Littleton, 3*s.* 6*d.*; Adelaide, 3*s.* 6*d.*; Venus, 3*s.* 6*d.*; all first-rate; descriptions of which appeared in the "Gardeners' Gazette" of Sept. 17.

J. C. wishes to inform his friends, that on account of the shortness of his stock of his Prince of Wales, he will not be able to send out more than 50 Plants this season; on that account early orders are particularly requested. A remittance from unknown correspondents will be required.

Edgbaston Nursery, Oct. 18th, 1842.

NAMED TULIPS and DAHLIAS for SALE.—An Amateur, who is an Extensive Grower, being anxious to reduce his Stock, would be glad to dispose of 700 named TULIPS, consisting of 150 Varieties; he would dispose of them, either in one or two lots, as might be required, at a low price. Also, about 120 ground-roots of DAHLIAS, consisting of about 80 very select Varieties, comprising nearly the whole of the leading show-flowers in cultivation.

The names and further particulars may be had by Post-paid application to Mr. THOMAS LAW, Nurseryman, Scotch-street, Carlisle, who is commissioned to treat for the same.

Carlisle, Oct. 11, 1842.

AURICULAS AND TULIPS.

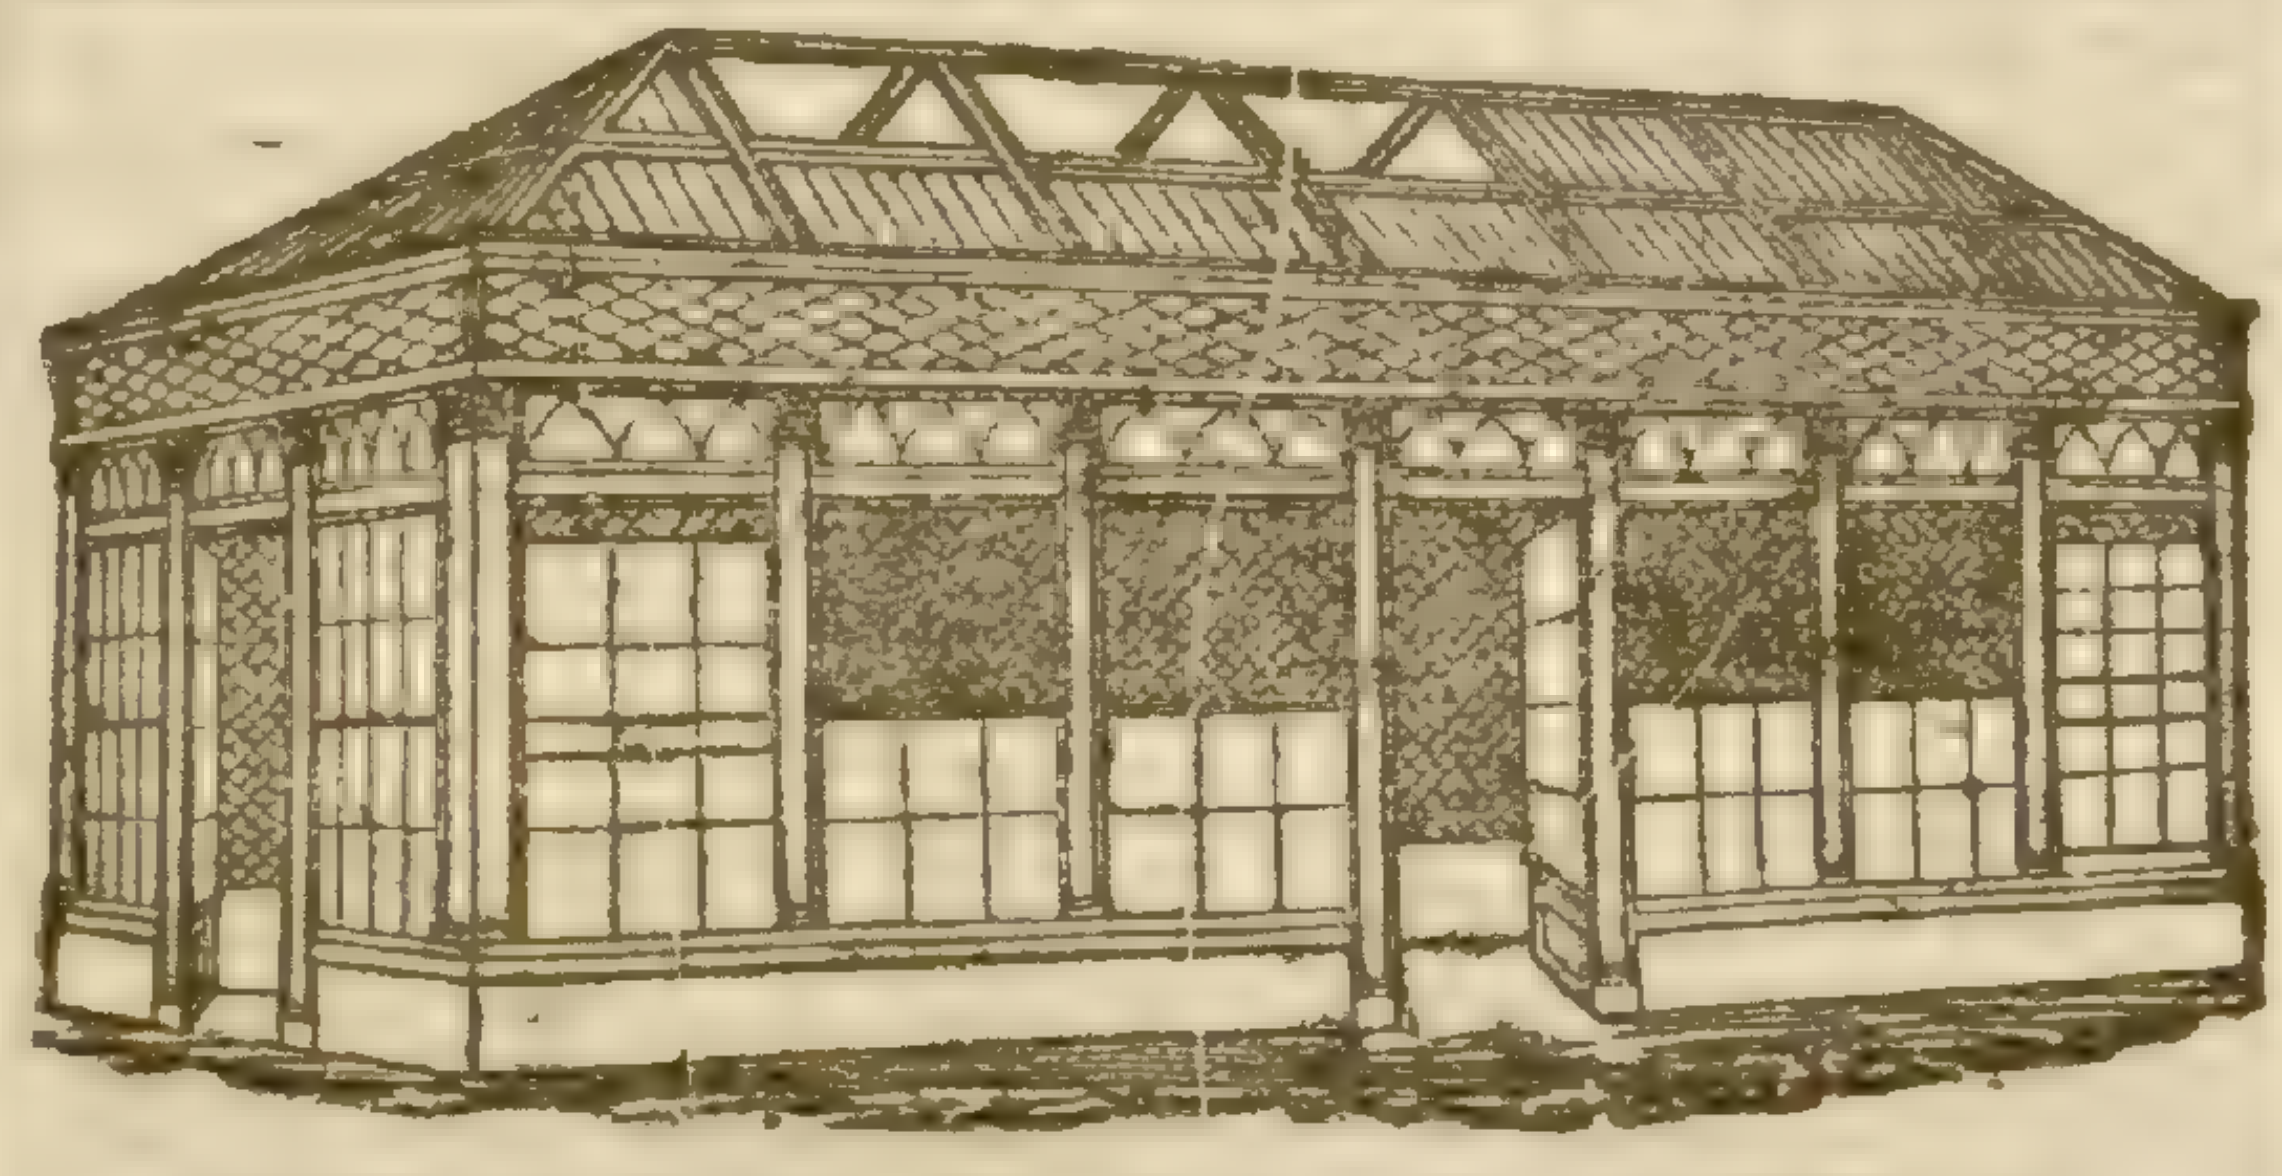
TO AMATEURS.—To be disposed of—a Collection of 70 Pots of named AURICULAS, among which are two Plants of Laurie's Glory of Cheshunt, 1 of Oliver's Lovely Ann, 2 of Franklin's Bellona, 2 of Waterhouse's Conqueror of Europe, and other first rate flowers, price 5*l.* Also a collection of fine-named TULIPS—47 rows—about 500 bulbs—together with the drawers divided into compartments and fitted in a case complete, in which the Tulips are arranged, price 5*l.* The above *very cheap* lots are well worth attention.—To be seen from 8 to 9 o'clock in the morning, by applying to Mr. Bray, Six Bells, King's Road, Chelsea.

SOMERSTOWN SOUTHSEA NURSERY-GROUND.

TO BE SOLD BY PRIVATE CONTRACT, about 2 Acres of Freehold Land, with a good Stock on it; a good opportunity for a young man that wants to enter the Nursery Business. It is situated in a pleasant spot and a genteel neighbourhood, half a mile from Portsmouth and one and a half miles from Gosport South-Western Railway Terminus. On the ground is a Dwelling House, used as a Seed-Shop, Greenhouse 94 feet long, 2 Bricking Pits, &c.; it will be sold with the Stock, or without, if preferred.—For Particulars apply to Mr. Nobes on the Premises; or to Messrs. Minchin and Oaks, Solicitors, St. George's Square, Portsea.

TO NOBLEMEN, GENTLEMEN, AND OTHERS.

MESSRS. PROTHEROE and MORRIS are instructed by the Trustees of Messrs. Adamson and Son, to submit to public competition, by Auction, on the premises, Stoke Newington Common, on Monday, 31st Oct., 1842, and following days, at 11 o'clock, the whole of the Valuable NURSERY-STOCK on 30 acres, consisting of Fruit and Forest-trees, Evergreens, American Plants, Deciduous and Ornamental Shrubs, of every variety, in considerable quantities. Also about 5,000 of MYATT'S BRITISH QUEEN STRAWBERRY (acknowledged by superior judges to be the finest in cultivation), Rhubarb for forcing, &c., &c. The Stock may be viewed prior to Sale. Catalogues 1*s.* each, returnable to purchasers, may be had on the premises, of the principal Seedsmen, and of the Auctioneers, American Nursery, Leytonstone.



HORTICULTURAL BUILDING AND HEATING BY HOT WATER.

J. WEEKS and Co., Architects, &c., Gloucester-place, King's-road, Chelsea, Hothouse Builders and Hot-water Apparatus Manufacturers, beg leave to inform the Nobility and Gentry that their business, which has been extensive throughout the country for many years, is entirely confined to the BUILDING OF HORTICULTURAL ERECTIONS of every description, and the HEATING of them by HOT WATER.

CONICAL and other BOILERS of all sizes; their largest consumes but a small quantity of fuel, only requiring attention once in 10 hours, and will heat a range of Forcing Houses 300 ft. in length.

Their improved plan of BOTTOM HEAT FOR PITS, by means of an open trough under the bed, is now being universally adopted.

References may be had, and their works seen at most of the Nobility and Gentlemen's Seats in the country, nearly the whole of the London Nurseries, and a great variety of Horticultural Erections and Hot-water Apparatus, Models, Plans, Estimates, &c., at their Horticultural Manufactory, Gloucester-place, Chelsea, near Sloane-square.

CORBETT'S HOT-WATER APPARATUS, for heating Green-houses, Hot-houses, Pineries, &c., by means of Hot Water in open Troughs.

Thos. Corbett, in thanking the Nobility, Gentry, and Nurserymen, for the kind patronage they have given to his new method of heating by means of Open Troughs, takes this opportunity of stating to the Public, that he has made arrangements with Messrs. S. and W. Kingdon, of Exeter under which he has appointed them Sole Agents for the Making, Selling, and Erecting the said Apparatus. All applications addressed to them will be immediately attended to. And Thos. Corbett hereby cautions all persons against the Making, Selling, or Erecting the said Apparatus, after this notice, without their consent.

Messrs. Kingdon beg to inform Noblemen, Gentlemen, Nurserymen, and others, that they have undertaken the sole Agency of the above new Apparatus, which, in the opinion of several of the most eminent horticulturists, stands unrivalled amongst the many inventions for supplying artificial Heat and Moisture with Ventilation, to Stoves, Green-houses, Hot-houses, Pineries, &c.&c. Messrs. Kingdon have erected a model of an apparatus on their premises, which is opened for inspection; and they feel confident that this method of heating will supersede all others. The apparatus may also be seen at Messrs. Lucombe, Pince, and Co.'s, Nurserymen, Exeter Nursery, by whom any information will be given.

HOT-WATER APPARATUS FOR HEATING HORTICULTURAL BUILDINGS, DWELLING-HOUSES, CHURCHES, and MANUFACTORIES, upon improved principles, and at very moderate charges, erected by DANIEL and EDWARD BAILEY, 272, HOLBORN.

D. and E. Bailey having devoted much time to the consideration of this subject, and had much experience in the erection of apparatus for the above-mentioned purposes, have, by improvements suggested in their practice, rendered their mode of heating not only very efficient, but very simple, and have combined durability in the apparatus with economy in the charge. They have erected apparatus in England, Scotland, and Ireland, for many noblemen and gentlemen, and have had the honour to be employed by the Horticultural Society of London, in executing the works of their splendid Conservatory, lately erected at Chiswick.

D. and E. Bailey also construct in metal all descriptions of Horticultural Buildings and Sashes, and invite noblemen, gentlemen, and the public to an inspection of their various drawings and models, at 272, Holborn, where they have the opportunity of exhibiting, amongst other metal works, an extremely complete and convenient kitchen apparatus, or range, adapted for the continued supply of hot water, and an arrangement of the oven more complete than has hitherto been brought before the public.

D. and E. Bailey were the first to introduce metallic curvilinear houses to horticulturists, and can refer to the Conservatory attached to the Pantheon as one of their works, besides many others in this country and on the Continent.

D. and E. Bailey have prepared a quantity of the Galvanic Plant Protectors, which are now ready for immediate delivery; they beg to introduce to public notice a new Trough Pipe, for Orchidaceous or other Houses where vapour is constantly, or at intervals, required, and which may be seen at their Manufactory.

HEATING BY HOT WATER.

JOHN WALKER, 46, St. John's Square, Clerkenwell, London, having been for many years extensively engaged in Warming Churches, Manufactories, Hospitals, Hothouses, Conservatories, and Private Houses, by means of Hot Water, either in Pipes or Pedestals, can confidently recommend this mode of heating in preference to any other. Numerous references can be given both in town and country, where he has successfully and satisfactorily applied it. Baths fitted up and heated in a superior manner. Orders executed in all parts of the Country with punctuality and despatch.

WANTS a SITUATION as GARDENER.—ALEXANDER DAWSON, several years Gardener to F. Clarkson, Esq., Hanger's Lane, Stamford Hill, Middlesex, being about to leave that gentleman's employment, is desirous of meeting with another engagement in the same capacity; is a Married Man, without encumbrance, 30 years of age, fully competent as Forcing Flower and Kitchen Gardener, and can have the highest character as such from his present employer, as well as for sobriety, honesty and industry. Letters Post-paid, addressed as above, will be strictly attended to.

WANTS a SITUATION as GARDENER, a married man, without family, aged 28, who has a general knowledge of his business; his wife has no objection to take charge of a house or lodge. Wages per week, with a cottage, 1*l.* 2*s.* Satisfactory references can be given. Address, A. B., Post-office, Acton, Middlesex.

TO NOBLEMEN AND GENTLEMEN.

WANTS a SITUATION.—A PERSON without encumbrance, who has a thorough knowledge of Horticulture in its various branches, and has had extensive practice in Laying-out and Planting, with attention to Timber; he has likewise superintended Agricultural Improvements, Irrigation, &c.: wishes for a situation as Gardener, or as Gardener and Bailiff, or Assistant Steward. The most satisfactory reference can be produced.—Address, prepaid, to H. A., at J. Charlwood's, Tavistock Row, Covent Garden, London.

HOT-WATER APPARATUS, for Horticultural and other Buildings.—STEPHENSON and Co., Agents for the Old Park Iron-works, and Manufacturers, 61, Gracechurch-street, London, solicit an inspection of their improved Conical Boiler. (See Editor's description, *Gardeners' Chronicle*, March 12, p. 175.) To Amateurs these Boilers will be found invaluable. They are complete without furnaces or setting in brickwork, movable at pleasure, very ornamental in appearance, and require attention only once in 14 or 15 hours, price 5*l.* 5*s.* and upwards. Further particulars, with plans and estimates for heating any description of building, may be obtained as above; where also may be seen the improved Wrought-iron Boiler, as applied with Chanter's Smoke-consuming Furnaces at Chatsworth, and many other of the Nobility's Seats. Iron Fencing, Hurdles, Bedsteads, Ornamental Wire-work, Garden Implements, &c. &c. The trade supplied with Hot-water Socket-pipes.

N.B.—Wayte's New Patent Land-presses and Drills.

EDWARD BECK invites the attention of Horticulturists to the different articles manufactured by him in SLATE. They may be seen in use at Worton Cottage, Isleworth, upon application to the gardener—*Sundays excepted.*

ECONOMIC LIFE ASSURANCE SOCIETY,
No. 34, BRIDGE-STREET, BLACKFRIARS, LONDON.
Established 1823. Empowered by Act of Parliament, 3 William IV.

Lower rates of premium than those of any other office, that entitle the assured *to participate in the profits*, as follows:—

Age.	15	20	25	30	35	40	45	50
Annual Premium per cent.	1 10 8	1 14 7	1 19 0	2 4 3	2 10 11	2 19 9	3 11 9	4 8 0

The Bonus declared in 1834 amounted upon an average to 16*l.* per cent. on the premiums then paid; and in 1839 a second Bonus was awarded, amounting on the average to 31*l.* per cent. on the premiums paid during the preceding five years.

No extra charge for residence in any part of Europe, nor for proceeding (in a decked, sailing, or steam vessel) from any one Port thereof to another during peace, to Assurers, not being seafaring men by profession. Licenses are granted to go to any part of the world upon terms proportionate to the risks.

Policies on the lives of persons dying by suicide, duelling, or by the hands of justice, are not void as respects the interests of parties to whom they may have been legally assigned.

Assurances may be effected on any and every day.

By order of the Board of Directors,
Campbell James Downer, Secretary.

This day is published, in one volume royal octavo, handsomely bound in cloth, price 20*s.*,

THE GRASSES OF SCOTLAND; containing a Scientific Description of each Species, Remarks on their Use in Agriculture, &c.—By Richard Parnell, M.D. F.R.S.E. Illustrated with a Figure of each Species and several Varieties, amounting to One Hundred and Thirty. Drawn and Engraved by the Author.

William Blackwood & Sons, Edinburgh; and 22, Pall-mall, London.

In a few days will be published,

A HISTORY OF BRITISH FOREST-TREES, indigenous and introduced. By Prideaux John Selby, of Twizell, Esq. This volume gives an account of the useful and ornamental properties, and the best mode of culture, of the various Forest-trees now grown in Great Britain. It forms a manual for the planter, and an interesting and informing volume for the general reader. Each species is historically described and figured. The Engravings, amounting to nearly 200, represent the perfect tree, and details of the flowers, leaves, and fruit. Demy 8vo, 28*s.*; royal 8vo, 2*l.* 16*s.*

John Van Voorst, 1, Paternoster-row.

THE BOOK OF THE FARM.
By Henry Stephens.

Part VIII. will be Published on the 1st of November, when the Monthly Issue will be resumed.

The First Volume, consisting of the Seven Parts published, illustrated with Seventeen Engravings on Steel, and nearly Two Hundred Woodcuts, may now be had, bound in cloth, price 30*s.*

The Second Volume will complete the Work.

William Blackwood and Sons, Edinburgh and London.

THE ONLY GARDEN ALMANAC,

On November 1 will be published, price 1*s.*

HARRISONS GARDEN ALMANAC & FLORAL CALENDAR for 1843. All Advertisements intended for insertion must be forwarded to the Publisher, 66, Old Bailey, by the 26th inst.

This day is published, imp. 32mo, gilt edges, price 1*s.*,
Second Edition,

THE LADIES' HAND-BOOK OF KNITTING, NETTING AND CROCHET; containing plain directions by which to become proficient in those branches of useful and ornamental employment.

THE LADIES' HAND-BOOK OF FANCY NEEDLEWORK AND EMBROIDERY; containing plain directions whereby to become a perfect mistress of those delightful arts, Second Edition imp. 32mo, gilt edges, price 1*s.*

H. G. Clarke and Co., 66, Old Bailey, 6 doors from Ludgate Hill

---

THE GARDENER and PRACTICAL FLORIST.—In Weekly Numbers, Price 3*d.*, and in Monthly Parts, Price 1*s.*, containing all that is new and valuable in Gardening and Floriculture. Published by R. Groombridge, Paternoster Row, by whom Advertisements and Communications for the Editor are received.—Sold by all Booksellers and Newsmen.

HORTICULTURAL SOCIETY OF LONDON.

EXHIBITIONS AT THE GARDEN.—This is to give Notice, that the latest day for receiving Suggestions as to the manner of arranging the Prizes, is the THIRTY-FIRST OF THE PRESENT MONTH; immediately after which the Committee will proceed to settle the Prizes for next year.

21, Regent-street, Oct. 14, 1842.

The Gardeners' Chronicle.

SATURDAY, OCTOBER 22, 1842.

MEETINGS FOR THE TWO FOLLOWING WEEKS.

Tuesday, Nov. 1	Horticultural	3 P. M.
	Floricultural	7½ P. M.
	Linnean	8 P. M.
Wednesday, Nov. 2	Geological	8½ P. M.

A USEFUL fact has lately been brought under our notice by Mr. Dawson, of Tottenham. He has a Jargonelle Pear-tree, which "is planted against the gable end of a coach-house, and consequently is trained much higher than it could be on an ordinary garden-wall. One of the principal limbs, at a little more than a foot from its junction with the main stem, is cankered three inches of its length on one side, and for more than six inches on the other. The part affected is about an inch and a half thick one way, by three-fourths of an inch the other. Above and below the wound, the circumference is about six inches. There is not the least bark or young wood connecting the upper and lower parts of the branch, the diseased part being black, and the wood extremely hard. Nevertheless, strange as it may appear, this branch produces every year an abundant crop, invariably about a fortnight earlier than the rest of the tree. The fruit is certainly not equal to that grown on the other branches, but its ripening earlier causes that defect to be overlooked. Excepting fruit-spurs, this branch has not made an inch of wood during the last four years; although the rest of the tree is very vigorous. There is neither bark, liber, alburnum, nor any other living substance externally on the diseased part. I have had it under my own observation for four years; and I have reason to believe that the wound is much older. The question is, how, during all that time, the branch in question has derived its nourishment?"

This instance is one of very considerable interest in gardening. We all know of the operation of ringing—that is to say, of removing a ring of bark from a branch, for the purpose of rendering it fruitful. This is an artificial mode of gaining the same end as has been attained accidentally in the instance now described: fruit is produced abundantly, it ripens earlier than it otherwise would have done, and it is of somewhat inferior quality. When branches are thus treated, it is generally supposed that the alburnum or sap-wood remains alive, and conveys the fluids upwards beyond the wound; but there is no question that, in many instances, the alburnum becomes dead, and loses all such power.

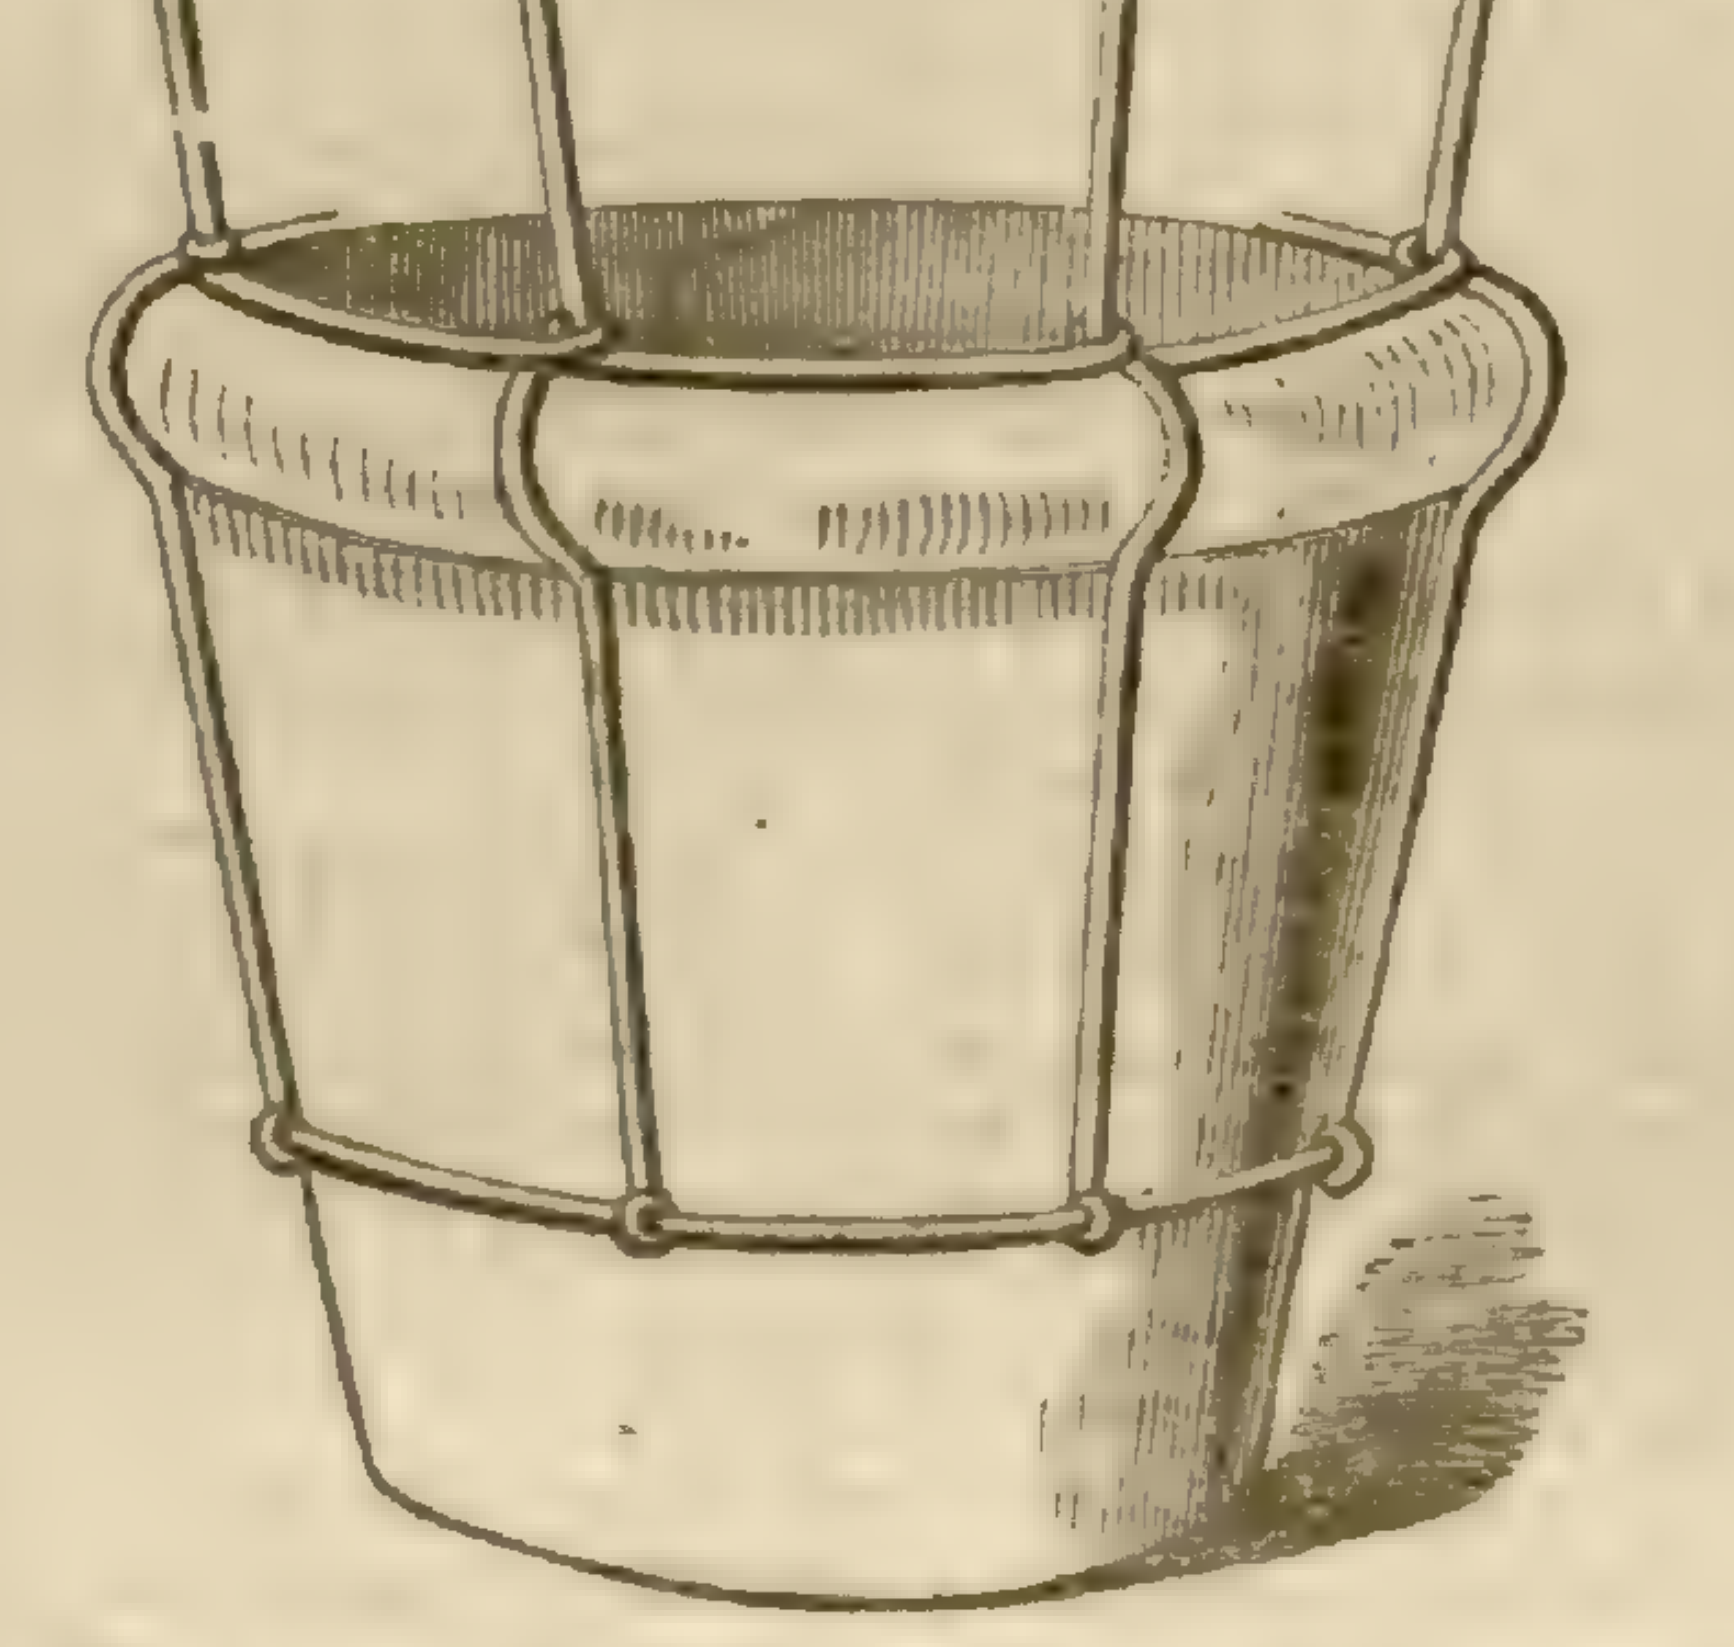
The fact is, that the notion of alburnum exclusively conveying sap upwards is one of those popular errors that it is almost impossible to eradicate. The alburnum is only wood a little younger than that beneath it; two such layers of wood are in no respects different, nor are they cut off from communication with each other; on the contrary, they are united by myriads of lateral passages, as well as being placed in contact. Why, then, should one execute the office of conveying the sap, and the other lose it? Again, the wood that is called alburnum this year loses the name next year without changing its nature; and it is inconceivable that a part of a plant which conveys sap upwards one year should cease to do so afterwards, without essentially altering its structure. In truth, sap rises through the whole mass of the wood, whether heart-wood or sap-wood, but with a rapidity dependent upon the condition of the wood. That hard part of a tree which we call wood, principally consists of tubes of various sizes, through which sap rises from the roots into the branches. When the tubes are young, they are smooth in the inside and quite open, and consequently sap passes through them very easily. But as they become old, they are gradually clogged and choked up by the sediment deposited in them by the sap; and, of course, when that is the case, the passage for fluids becomes obstructed. Such sedimentary matter alters the colour of the tubes, hardens them, and causes them to assume the dark appearance characteristic of heart-wood. But so long as any opening whatever remains in the tubes, so long will sap rise through them, whether in the centre or the circumference of a tree; and therefore there is nothing surprising in finding the alburnum all dead, and yet the branch beyond it in the full vigour of life.

That the sap flows upwards through the whole mass of the wood, unless its tubes have been choked up by the sediment of many years, is easily proved. Cut down a tree in the spring, and the whole surface of the wound will soon be moistened by the rising sap, centre as well as circumference: or, in the month of August, introduce into the interior of a Sycamore some coloured fluid which will rise along with the sap, and it will be found that the whole of the central parts are stained, while the alburnum is uncoloured. So that it even appears as if, in some cases, the sap avoids the alburnum, instead of being absolutely confined to it.

If the centre of a tree becomes extremely dark-coloured, and all its tubes are in consequence completely filled with incrustation, then, no doubt, sap will be unable to force its way upwards; and in such a case the direction of it must necessarily be through the softer parts; but even in that case the alburnum will only receive its share of the ascending fluid.

It is, we think, somewhere suggested, that in those instances where the communication between the upper and lower part of a tree is intercepted by a long wound with a dead surface, the leaves must provide their own food, and feed the branch, by attracting nutriment from the atmosphere. We, however, know that leaves cannot, under ordinary circumstances, do this; and it is unphilosophical to assign them such a special power in particular cases, especially when the real nature of a phenomenon is to be explained by reference to causes habitually in operation.

WE last week promised our readers an exact plan of the manner in which the wire trellis for climbing plants is attached to the pots—a matter of great importance, and of which the separate plans that have been proposed, and some of which are published, convey an incorrect idea. The following cut will now render this part of the construction intelligible, and apply to all plans of trellises, be they what they may.



It will be seen that a strong wire ring is carried round the pot, a little above its bottom. To this a sufficient number of upright wires are attached, all round. The uprights are pressed down upon the surface of the pot, till they reach the rim, over which they are firmly bent till they reach the highest point of the rim, or are even bent a little within it. At this point they are secured by a second ring of stout wire, adjusted as in the drawing; which having been done, the uprights are directed upwards, and fashioned into the pattern required. By these means a sort of collar is formed upon the rim of the pot which prevents the trellis from slipping downwards, while at the same time the lowest ring of wire keeps it from swinging and swaying backwards and forwards.

We believe the first application of this ingenious plan for securing trellises to flower-pots, for management of creepers and other plants, was made by Mr. John Green, the excellent gardener of Sir Edmund Antrobus; and we are sure that the surpassing beauty of his specimen plants thus treated must be fresh in the memory of every visitor to the exhibitions of the Horticultural Society. Previously, the supporting wires were universally fastened to the inside of the pots, and consequently wanted that steadiness and security which are so essential to top-heavy plants.

AMONG the many curious evidences that the flowers and fruit of plants are really formed out of leaves in a peculiar state, there is one occasionally to be found at this time of the year, of which we are reminded by a letter from a friend in Northumberland. On a bank in a field above 700 feet above the level of the sea, is a very old stunted Oak, of the sessile-flowered species, which rarely forms Acorns, but in their room an abundance of little clusters of brown hairy scales, looking like very large buds burst open. These bodies are not uncommon on stunted trees, but seldom appear on specimens in a state of vigorous growth. They are in reality Acorns, whose parts cannot completely transform themselves into fruit because of the debility of their parent. This will be readily ascertained by comparing them with true Acorns, after the following explanation shall have been studied.

An Acorn in its natural state, when *very young*, consists of small scales, placed one over the other in large numbers, just like scales in a bud. Of these scales, some (about eight) in the centre separate a little from the others, roll themselves up, and form the embryo Acorn. At a later period, all the exterior scales enlarge, and grow together into the cup; while the inner scales also enlarge, but in a different way, and form the perfect Acorn. Now suppose that this natural tendency on the part of the scales to join together, on the one hand, into the cup—and on the other, into the Acorn, is interfered with by any constitutional peculiarity in the tree that bears them, it is evident that they will form nothing but clusters of scales, of which the innermost will probably be somewhat different from the others.

But it may be asked, why we are to conclude that an Acorn is composed of modified leaves, because it consists of scales like the scales of a leaf-bud? The process of reasoning by which this inference is established is the following:

That the scales of which a leaf-bud is composed, and which we shall call A, are merely imperfect leaves, is demonstrated in the spring, when the buds are producing branches; because such scales can be readily traced into common leaves, which we will call C. Now it will be observed, that if B (the scale of the Acorn-cup) is the same as A (the scale of the leaf-bud), and if A can be so traced into C as to leave no doubt about its being of the same nature, then B must be the same as C also.

ON ANIMAL MANURES.—No. V.

(By PROFESSOR CHARLES SPRENGEL. Translated from the German.)

(Continued from page 692.)

5. *Hair and Wool.*—As hair and wool contain the same component parts as horn-shavings and hoofs, it is easily to be understood why both are equally valuable manure: they act most powerfully the first year, because, on account of their minute division, they are more quickly decomposed than horn-shavings; but, for the same reason, they do not produce any effect after the first year.

Formerly, the refuse of wool, as well as of woollen rags, could be easily procured in the manufactories; but since the art of fabricating new cloth from old rags (by a certain operation of scraping), or even from refuse of wool, has been discovered, the farmer has become confined to the use of the hair left after tanning, and to such bristles as are useless to the brushmaker. The former are mostly mixed with lime, and must, therefore, be brought at once to the ground, or, which is better, be introduced into the compost-heap, containing much humous earth, to be used subsequently as a top-dressing. If that is neglected, such materials decompose, and lose much of their nitrogen under the form of ammonia.

Some persons have advised us to strew woollen rags about the sheep-fold, without considering that by so doing the volatilization of the most powerful ingredient in them is still further increased; because sheep manure is altogether deficient in any principle capable of fixing the ammonia, whether generated by the decomposition of rags, or by the excrements of the sheep.

6. *Refuse of Glue Manufactories.*—In the fabrication of glue, portions of sinews, cartilage, &c., are left behind. These are also very powerful manuring substances; not more, indeed, than 1000lb. of them is to be applied to a Magdeburg acre, or the crops will be laid. In some countries this refuse is formed into balls of 30 to 40lbs. each, of which 30 to 35 are used to the acre. The refuse of glue manufactories contains 13 or 14 per cent. of nitrogen, which fully explains their manuring quality. They are best suited to Cabbages, but their action does not last beyond the first year.

7. *Greaves.*—When suet and fat are converted into candles or soap, the skin and the cellular tissue, which contained the fat, are left behind; they contain, like cartilage, sinews, and horn, 15 or 16 per cent. of nitrogen, and are consequently, like them, a powerful manure. To prevent their making the crops over-rank, they must be used in small quantities (800 to 1000lb. per acre), and their effects are very transient. The best way with the refuse of glue and with greaves is to rot them with humous earth, after which they can be better distributed over the land. They are never to be mixed with lime, which disperses their ammonia.

8. *Animal Coal.*—It has been considered a great discovery in France to carbonise the flesh of animals, dying a natural death, in large iron retorts, and to use the powder as a manure. But in the process of carbonisation of animal substances, much nitrogen escapes in the shape of ammonia. It is therefore evident that this vaunted discovery is of no importance. The only advantage is, that carbonate of ammonia and sal-ammoniac are obtained as secondary products. The coal thus obtained can never be such good manure as the fresh animal parts. It is far better to cut the flesh into small strips and to dry it, for then no part of the manuring substance of the flesh is lost. It may afterwards be pulverised and used as a top-dressing. This process is now also used in France, and may supersede the conversion of flesh into charcoal. Both expedients, however, are merely make-shifts, which can only be resorted to in cities where, as in Paris, from 30 to 40 horses are daily carried away to the knacker. But it cannot be too often repeated, that, whenever they are to be had, the carcasses of dead horses, &c., should be used more economically, instead of being mere food for ravens, and poisoning the surrounding air.

9. *Refuse of Sugar Manufactories (Coal of Bones, Blood, Milk)*.—It is known that in refining sugar, blood, milk, and animal charcoal (coal of bones) are employed. From what has been already said, it is evident that the refuse of sugar manufactories, consisting chiefly of coagulated blood, albumen, and fibre, must be a powerful manure, because if fluid blood (containing much water) is so, its solid parts must possess equal properties. There is, in-

deed, scarcely any manure better than the refuse of sugar-manufactories, if blood has been used for refining; but the refuse will be useless if animal charcoal has been employed, as I have found by several experiments. The coal of the cartilages envelops to such a degree the phosphate of lime of the bones, that it cannot be dissolved either in the humic or carbonic acids of the soil. Moreover, since the manufacturer has learned that the coal of bones may be so prepared as to be fit a second time to clarify sugar, little of it finds its way to the farmer. If *milk* has been used in refining, the refuse will be of the same value as that of blood, because the caseine of the milk is equally rich in nitrogen. In manuring with blood or caseine, great caution is to be exercised, or the crops may grow too rank; such materials must be used as fresh as possible, or the rapid action of putrefaction will expel much of the ammonia, in the form of gas; but in this case also the loss can be prevented, if the refuse is left to rot among humous earth. The manuring quality of such refuse is quickly lost, and so this effect will not last more than one year: 500 to 600lbs. are the utmost which one acre of land will bear. Like all manures which are used in small quantities, they are employed as a top-dressing, and are harrowed in with the seed.

10. *Fish, and the Refuse of Fish.*—On the sea-coast occasionally such large quantities of fish are caught, that they cannot be used more advantageously than as manure. In some parts of England (Lincolnshire, Cambridgeshire, and Norfolk) enormous quantities of sticklebacks are thus employed. It has been calculated, that one load of fish is equal to six loads of the best stable-dung; it must, however, never be used with any sort of grain, as it causes smut and mildew, as I know from experience. The refuse left in salting and smoking fish is equally powerful. In England, fish, or their refuse, are always laid in heaps mixed with earth and lime, and are left to rot. If only a small quantity of lime and an earth very rich in humus are used for this purpose, no ammonia will be lost, and the grain will suffer less from mildew.

If we consider the chemical constituents of flesh and bones of fish, it is evident that they must yield a very powerful manure. 100,000 parts of fish flesh are composed of—

13,000	parts of fibre, albumen, osmazome, mucus and fat containing phosphorus.
5,000	parts of glue.
2,000	. . . phosphate of potash, chloride of potash, lactate of soda, carbonate and phosphate of lime, phosphate of magnesia, and traces of iron.
80,000	parts of water.
100,000	parts.

On account of its great amount of water, the flesh of fish is not quite so nourishing as that of quadrupeds, and consequently possesses less manuring power.

The bones of fish, on the other hand, contain in 100,000 parts,

37,360	parts of cartilage.
6,160	. . carbonate of lime.
55,260	. . phosphate of lime.
1,220	. . sulphate and chloride of soda.
100,000	parts.

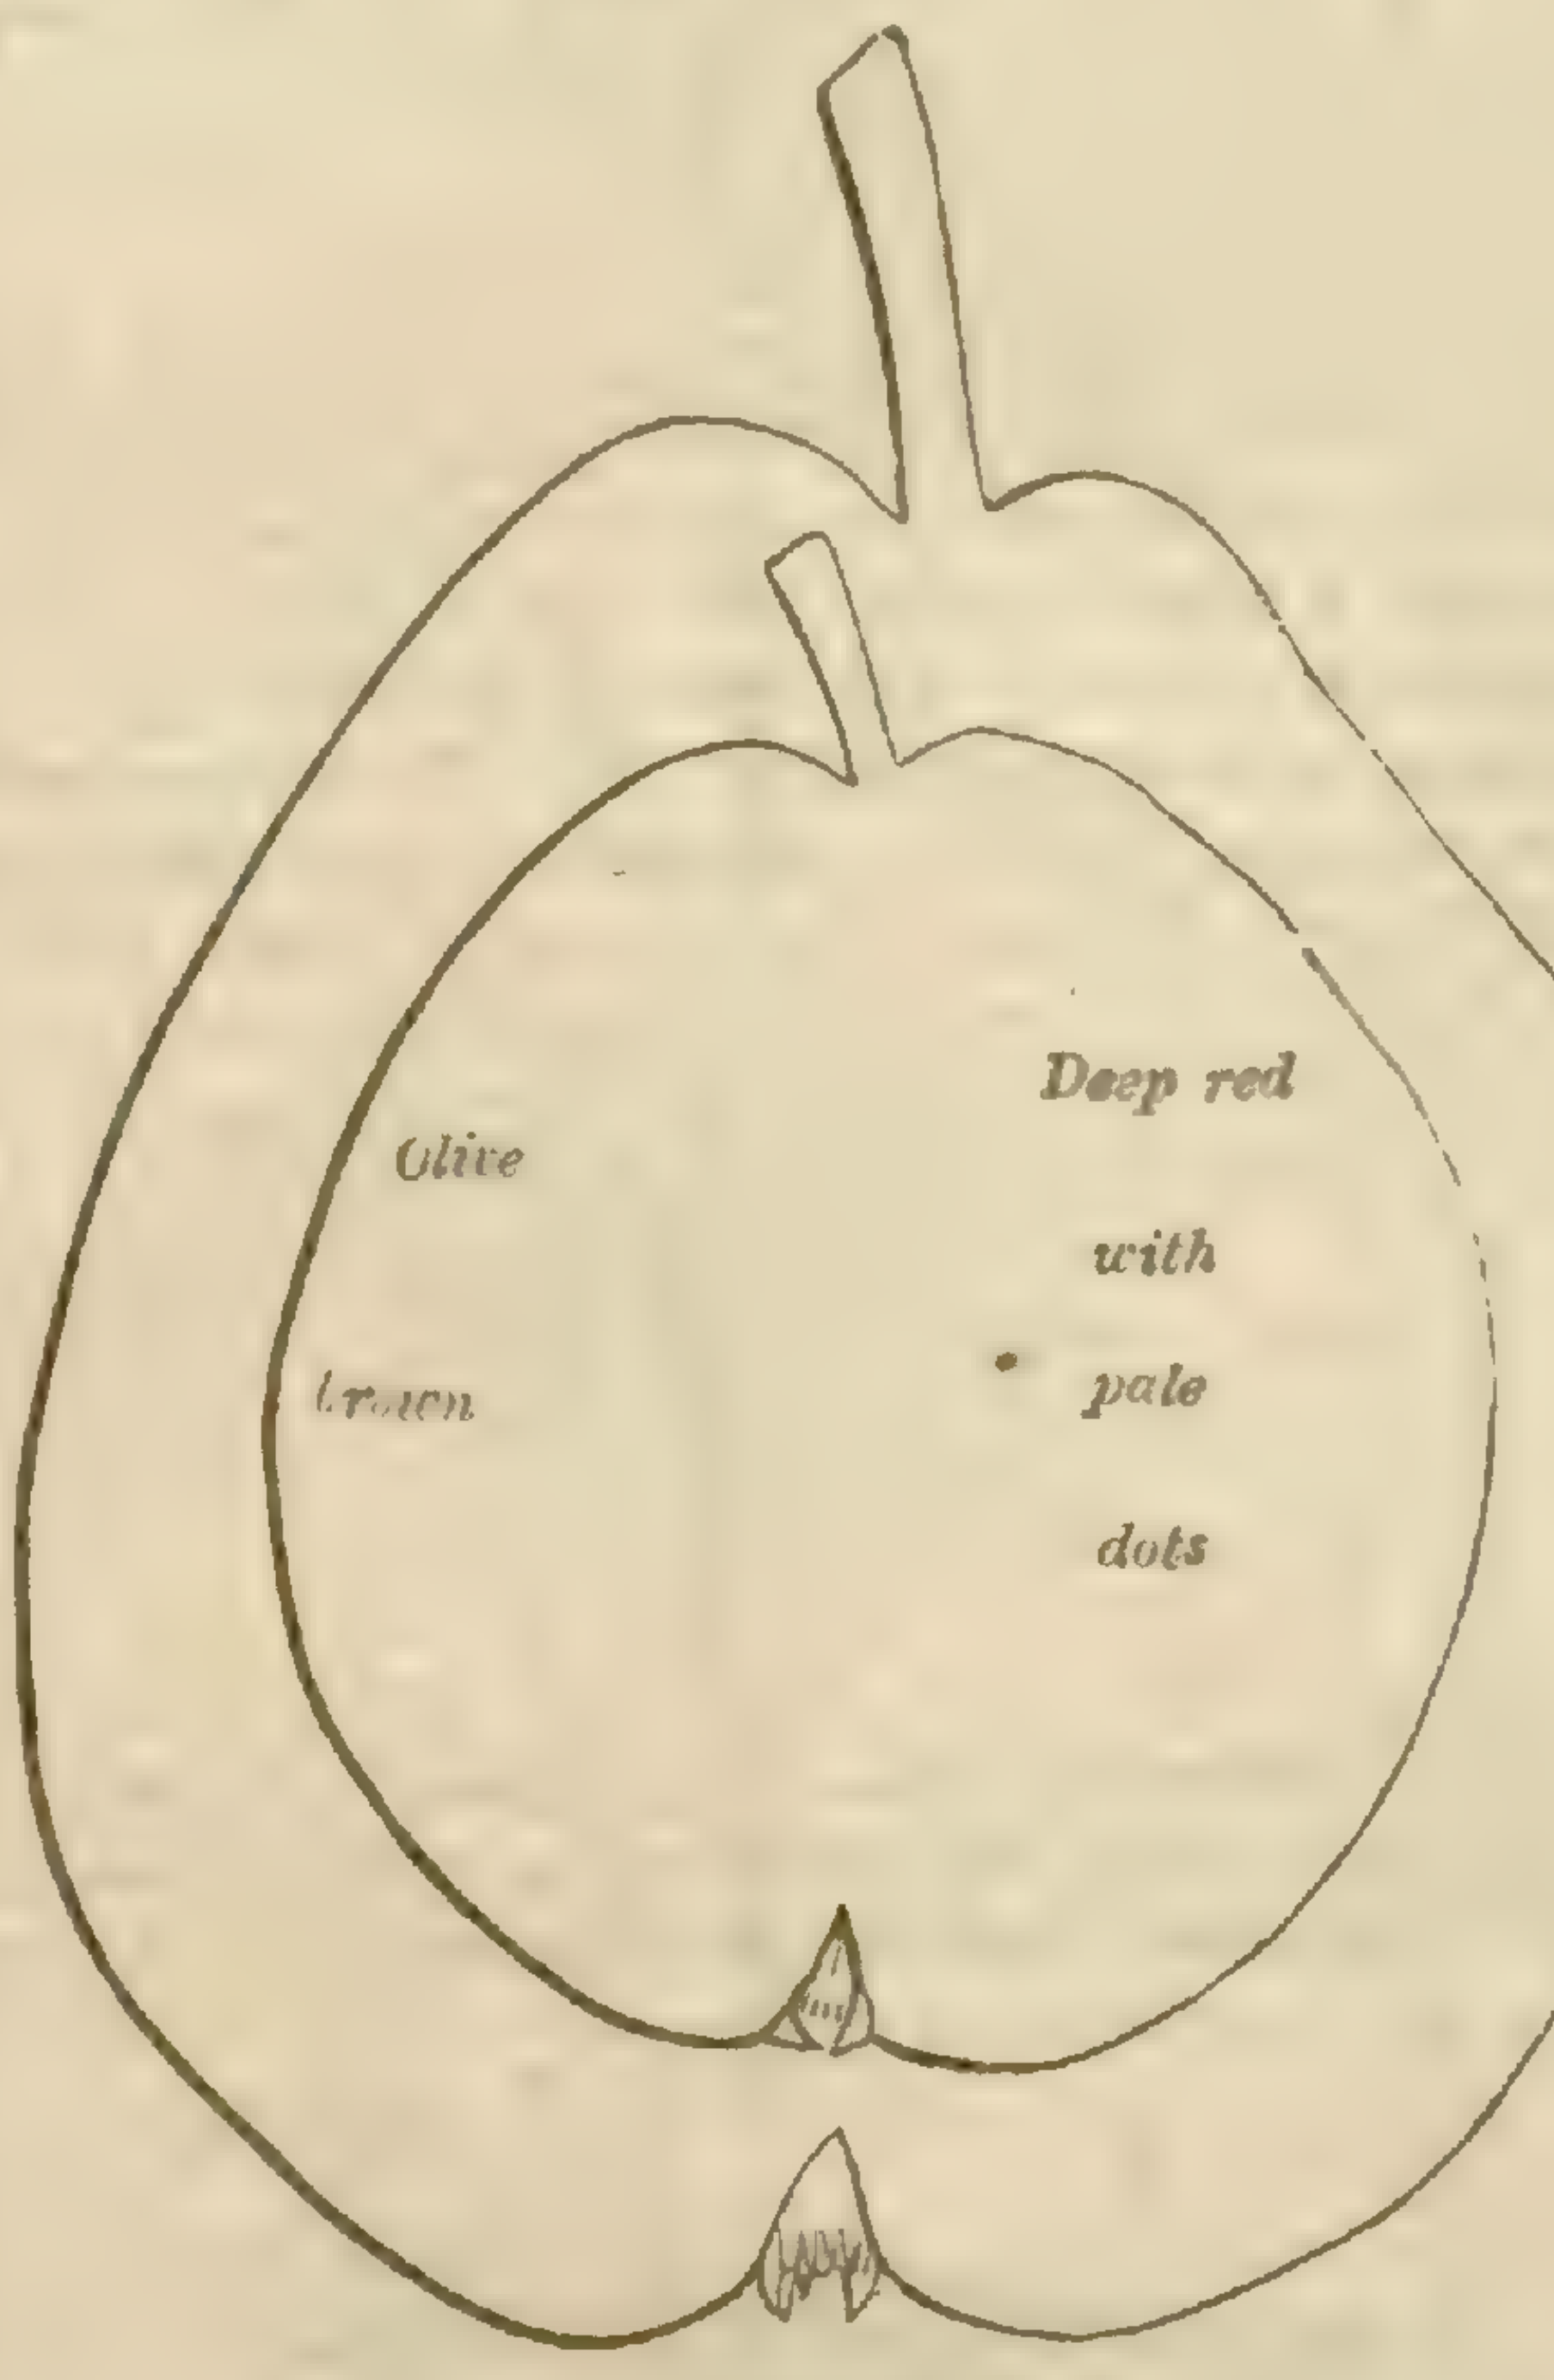
Besides fish, the flesh and offal of seals are used as manure on the coast of Scotland.

(*To be continued.*)

THE SECKEL PEAR.

Seckle, Red-cheeked Seckle, New York Red-cheek.

The accompanying outlines are those of the Seckel Pear; the larger having been taken from a fruit grown against a wall—the smaller, representing the average size, from a standard tree in good condition. The fruit varies from a small to a medium size, and is obovate: the stalk is short, the eye open, with the segments of the calyx slightly converging; skin olive-brown where shaded, deep red next the sun, and acquiring a brighter tint between the period after the fruit is gathered and the time that it becomes fit for use. A sprinkling of pale dots is most apparent on the highest-coloured portion of the surface: the flesh is yellowish-white, tender, melting and juicy, with a rich honied sweetness, and musky aroma, which is most agreeable even to those who dislike perfumed Pears. The fruit ripens in October, and somewhat in succession from the same tree; but it will only keep a short time after it attains perfection. The tree is vigorous, not subject to canker, and suitable for a standard, bearing in that state very abundantly and in clusters. Many varieties of Pears, grown to a comparatively large size on walls, lose their flavour in proportion; but the Seckel naturally possesses so much, that although it loses a little by being increased in size, it still retains enough to constitute a rich fruit.—Some account of this variety, with plants and a drawing, was sent to the Horticultural Society by Dr. Hosack, of New York. From this, published in the 3d vol., p. 256, First Series of the Transactions of the Society, it appears that Mr. Seckle (or Seckel), of Philadelphia, had the credit of having first cultivated it in the vicinity of that city; but it is likewise stated that it was grown by Mr. Weiss upwards of 70 years ago, and that he obtained the tree, with many others, at a settlement of Swedes which was early established near Philadelphia; and that probably Mr. Seckel's family had obtained grafts from Mr. Weiss's tree. However this may be, as both families were of German origin, it led to the supposition that the Pear in question had been imported from the continent of Europe; but this does not appear to have been the case, otherwise it would certainly have been discovered amongst the collections that have been so extensively made during late years. It has probably originated from seeds of the Rousselet de Rheims, a variety highly esteemed for drying: from this the Seckel is perfectly distinct, yet it bears a closer resemblance to that than to any other of the many hundred varieties cultivated in the garden of the Horticultural Society.—I believe Seckel, and not Seckle, ought to be the name. It is Seckel according to *Kenrick*, the "American Orchardist." There is no such name as Seckle in the German language, but there is Seckel-meister—a treasurer.—*R. Thomson.*



ON PRUNING ROSES.

(*Continued from page* 691.)

The practice I would insist upon is this:—That the system of the tree be not interfered with, excepting only so far as the situation is concerned, and then not to such an extent as to throw back the sap to two-year old wood; which operation, if the tree were vigorous, would injure the flower by producing wood in its stead; and, if weak, might destroy its health by removing buds useful in drawing up the sap:—That, with due regard to the symmetry of the plant, each shoot do its proportion of work, and be kept as nearly as possible of a regular size; be stopped when too vigorous, or cut out when too weak; and that shoots bearing matured or entirely-formed leaves be not cut away upon pretence of strengthening the rest:—That no more buds be left than are likely to start (and that with vigour from well-ripened wood); nor so many taken away as shall force the sap to find fresh channels of escape:—That the cultivator shall have a definite idea of what he means when he prunes, as to where the buds will start, and in what direction the branches from them will grow; leaving in standards (as far as he can do) his top buds outside, in order to expand the head; which by these means will be symmetrical, and not bare on one side from the death of a branch of half-dried wood, nor bushy on another from a cluster of eyes at the end of a two-year old shoot. He will thus obtain a regular supply of flowers, well dispersed amongst the foliage, with large and healthy leaves; and, lastly, he will maintain both the vigour and shape of his plants. Their heads will be well thrown open to the air, and a very moderate attention to the removal of suckers and side shoots will plump up the buds for the succeeding year, and carry the sap through the accustomed channels with freedom.

The deviations from this mode of treatment will be dependent upon certain varieties which will not flower unless great length of shoot be left. Such plants as Brennus are fitter to stand alone than those whose growth is less rapid; and the cultivator must be content to consider their foliage as a part of their beauty (as it is indeed in all), and wait till age and a large supply of ripened wood shall modify the flow of sap in a manner that he cannot effect with the knife.

With reference to the action of the leaves upon the bulk and health of a plant, let the operator choose a Dog-Rose which from some cause has partially died down after working, but which, recovering at the root and throwing out side shoots of small dimensions, is surrounded by a forest of dark green leaves. This plant will throw up a sucker. With a view of strengthening this sucker, let the shoot and leaves aforesaid be cut away. Great will be the disappointment when it is found that the growth of this stem has been checked instead of increased, and that if it *does* live it will be found to be green, pithy, and weak; whereas, had the leaves been left, this shoot would have hardened as autumn advanced.

For this cause, viz., to avoid deteriorating the quality of the wood, it is inexpedient to shorten the branches either before or after they have been worked, until the sap be down, as such operation is in fact a requirement of fresh action after exhaustion—a robbery upon the tree, defensible only as a matter of business to gain time, but in reality a loss of the hard quality of the wild wood as an overlaying stratum round the inserted bud.

That wood thus formed produces an important effect may be inferred from this fact, which has probably met the observation of many, viz., that some rapid growing Roses produce their wood in such quantity down the sides of the stock, that if the coldness of the season should kill the tender head, the stock, closely wrapped in its new covering, does not possess the power to break at the sides, but though remaining green (under examination by the knife) during the summer, dies entirely in the succeeding winter. If, therefore, the operator desires to start his buds during the season in which they have been inserted, let him do it by depressing one end of the shoot that has been worked; endeavouring thus to throw the sap into the new bud by making the bend rather sudden about an inch beyond it. He will find that many buds will start in this way, and that the general health of his plant will not be in the least injured by it. When the sap is down, he may shorten the wild shoot to two eyes, and cut it back to one, or even close home in the spring; but it will be better to avoid transplanting the tree until another season has ripened the wood and strengthened the head, which in a lately removed plant should have its branches unpruned to the latest possible period. When cut back it will then experience no check (the greatest trial a tree unrooted in its present position has to undergo), and will thus be preserved from the injuries of the little worm; whose point of attack consists chiefly of such buds as, being placed at the base of each shoot, have not been brought into action till the spring pruning has produced that effect, and when they are consequently in rather a defenceless state against frost.

That the inability to break at the sides does not arise from sickness in the plant, I infer from the following experiment:—Having frequently observed that if the weather destroyed some particular plants, it generally destroyed the stem also, and finding at the same time that this evil took place only where the stock had been much swollen by the deposition of new wood, I this year broke off the branches of a rapid-growing plant, thus preventing it from increasing at the head; and it has shown no inclination to break by side-shoots—the buds, from which those must spring, being probably too closely confined to possess the power of bursting forth. This death of the stock may frequently be observed in worked plants of Lamarque and Jaune Desprez, both rapid growers. I know not whether it would occur to the Rose fulgens, which with me appears, under all circumstances in which I have observed it, to produce fewer side-shoots than most others. Although its stem swells very much, it will yet transplant in the midst of the most rapid growth; taking, however, two seasons to recover itself when large. Rose-trees planted in the turf should always have a vacant space left round them the first season; their roots otherwise imbibing no nourishment from slight showers, nor indeed from the beams of the sun, both of which advantages are fully enjoyed by such plants as are placed in a good soil under gravel.—*A Practitioner.*

WEIGHTS OF FINE HORTICULTURAL PRODUCTIONS.

Pine-apple, *Providence:* weight, 9 lbs. 3 oz.; length, 9 inches; breadth, 8 inches; number of pips in height, 11; crown moderate; a remarkably well-formed fruit. Grown by Mr. C. Judd, gr. to Geo. Knott, Esq., Barnet, Surrey.

Pear, *Duchesse d'Angoulême:* weight, 16¼ oz.; length, 4½ inches; breadth, 3¾ inches; somewhat deformed. Grown by W. D., Chichester.*

Pear, *Crassane:* weight, 9½ oz.; length, 3 inches; breadth, 3¼ inches. Grown by W. D.*

Pear, *Uvedale's St. Germain:* weight, 1 lb. 4 oz. 6 drs.; length, 6¼ inches; width, 3¾ inches; well formed. Grown by Mr. G. O'Grady.*

Apple, *Beauty of Kent:* weight, 1 lb.; length, 4¼ inches; breadth, 4 inches; well formed. Grown by W. D.*

Apple, *Blenheim Pippin:* weight, 13 oz. 12 drs.; length, 3¾ inches; breadth, 3½ inches; a handsome fruit. Grown by J. C., Harpenden.*

Apple, *Alfriston:* weight, 12 oz. 10 drs.; height, 3¼ inches; breadth, 4 inches; form perfect. Grown by Mr. G. O'Grady.*

Vegetable, *Parsley:* weight of plant, free from mould, 3 lbs.; diameter, 3 feet; leaves prettily curled. Grown by Mr. J. Allen, Haydon-Bridge.*

AMATEUR'S GARDEN, No. XLIII.

Preparations may now be made for the protection of half-hardy plants, such as Fúchsias, Caméllias, Alóysia citriodora (Lemon-scented Verbena), and things of that kind, during the approaching winter. In many parts of the south of England, and other situations near the sea, such plants will live and flourish without any kind of protection; but about London and other inland places they are generally much injured by the severity of the winter. Many plants will live out of doors, about Edinburgh for example, that are invariably destroyed in the gardens in the neighbourhood of London; hence the amateur who resides near the sea has the means of growing many beautiful species, which others who live in the same degree of latitude, but in places more inland, cannot manage to preserve. There are various materials which are used for their preservation; but the principal object is to keep the plants dry, as well as to protect them from the cold; for it is well known, that they will endure a much lower degree of temperature without injury, if the ground is dry below them and if the stems are kept dry, than when planted in a wet soil and exposed to the rain. Deciduous plants, such as Fúchsias, may be tied together as soon as the leaves have fallen, the ground above their roots may be covered with litter, and the stems thatched over with dry straw. Evergreen plants, like Caméllias, can be well protected with stakes and mats, or some other material of that description, having a door which opens to the north, and which can be opened and shut at pleasure; but things of that kind should always be placed in the warmest and most sheltered situation. Leaves, ashes, old tan, and many other articles are all useful, and can be got together now for the protection of herbaceous plants. The branches of evergreens are also extremely useful to tie against plants on walls, when there is no means of protecting the ends of their branches.

---

* The specimens marked (*) may be inspected at the Office of the *Gardeners' Chronicle.*

Mats should now be purchased and prepared for covering frames and pits. The way in which this is generally done is, first of all to tie the ends and sew the required number together; the end one is then nailed to the extremity of the pit, and the whole are fastened down by loops and nails at back and front. When it is not required, the loops are taken off, and the mats are rolled up towards the end which has been nailed down: they are then ready to be rolled on again whenever it is necessary to do so. This plan is much better than covering with single mats, which are always getting blown about by the wind. Dry litter is also a useful and effectual covering for pits and frames, providing they are placed in situations where this will not get blown about all over the garden. I have called attention to these things thus early, in order that the amateur may be prepared in time; no plants should be covered up, however, until the weather is so severe that it is no longer safe to leave them exposed: this may not happen for some weeks yet.

The showers which have fallen this week will enable the amateur to proceed with the planting of evergreens, about which some directions have been already given. As the beauty of Verbenas, Petúnias, and other things of that description, is now gone by for the season, it is advisable to look over the beds and borders, and to cut away all the branches which have overgrown the edges of the walks. When they are in full flower, they are sometimes allowed to get out of their proper bounds; but the Box, the Thrift, and other kinds of edging, must be attended to now.—*R. F.*

HOME CORRESPONDENCE.

Scotch Fir Insects.—In some extensive plantations of Scotch Fir (intermixed with Larch and Forest trees), spread over 200 or 300 acres, in belts and detached groups, and which have been planted 15 to 20 years or more, it was observed five or six years ago that a few of the Scotch Fir, in different parts of the plantations, after declining for one or two seasons, altogether died. In the first stage of their disease they lost many of their leaves, beginning from the upper part, and presented a sickly and ragged appearance. In succeeding years, the disease appears gradually to have increased, and has now extended over every part of the plantations; but it is observed that, in general, the trees are affected *singly—here and there*—and not in groups. Circumstances prevented any particular inquiry into the cause of this, and it was attributed to the nature of the soil, which is in general sandy—in many parts resting on a gravelly subsoil or pan—the land being formerly part of Ascot-heath. On visiting the plantations a few days since, I observed the ground under many of the Scotch Firs to be *strewed* with the tufts or end shoots of the Fir, as though they had been bitten or broken short off, and the trees (though otherwise in a perfectly healthy state) beginning to assume the ragged appearance noticed above. On examining the fallen shoots, I found them all perforated throughout the interior (longitudinally) and the cell to contain one or more small Beetle Flies—(these are the Hylurgus piniperda). You would greatly oblige me by informing me of the nature and habits of these destructive insects, and whether you suppose them to be the occasion of the serious injury the plantations are suffering; and if so, whether any probable remedy can be adopted. The Larch have also died extensively in the same plantations, but I have not yet had an opportunity of carefully examining them.—*F—, Berks.*—[This is a well-known insect, and certainly does appear to us to be increasing fast; for we see much more of its mischief now than twenty years ago. Köllar has the following observations upon its habits:—"This beetle is somewhat shaggy and black; the wing-cases are pitchy-black, irregularly striated, entire at the tips, thorax somewhat anteriorly narrowed, antennæ and feet brownish-red. The larva is thick, cylindrical, milk-white on the middle of the body, the head dull yellow, also the front of the body and the anal extremity, but somewhat lighter. The pupa resembles that of the common bark-beetle—The abode and place of propagation of the perfect insect or beetle are in the pith of the young shoots of the Pine, particularly in the side twigs. The beetle burrows for one or several inches below the terminal bud on the youngest shoots, eating out the pith straight upwards, and gnawing out again near the bud or through it. According to Bechstein, the beetle bores through shoots of the Spruce Fir when there are none of the Scotch Pine to be had. The eggs are laid under the bark of sickly and felled Pines, also on the Silver and Spruce Firs, in the bark of which the maggot also lives. The food of the beetle is the pith of the young shoots of the Pine; and the maggot lives on the stagnated fermented juice under the bark. The mode of its propagation and its enemies are the same as those of the common bark-beetles.—The larvæ feed on the trunks of dead or dying trees, and the beetle only places her brood on healthy trees when necessity compels her to do so. The methods for prevention and destruction which have been pointed out for the common bark-beetle may be applied to this beetle also; but it is more difficult to prevent its devastations on the young shoots, which frequently become serious. In young woods, cutting off the attacked shoots and burning them is the only successful method, which, however, cannot be applied to lofty trees. In one respect the ravages of this insect do less injury to the forests than those of some others, inasmuch as it generally only attacks the side twigs, leaving the leading shoot untouched. Müller, the royal Bavarian forester, had an opportunity, in 1819, of observing these beetles, and found them so numerous in several Pine woods of sixty and eighty years' growth, that they occasioned the extreme points of the side shoots to become yellow; yet the main shoot was spared, and the stems grew the following year as formerly, without being perceptibly weaker."]

Insects Injurious to the Pine Tribe.—Many newly-planted Scotch Firs in this part of the country have suffered very much this season from two causes. The first attack was made in the spring by the caterpillars of the Lophyrus Pini (Tenthredo Pini of Linnæus), so that upon some of the trees scarcely a leaf was left. It was curious to mark the progress of the caterpillars in their work of destruction: in their young state they feed only on the parenchyma, or soft part of the leaves; but as they increase in size their voracious appetite gains strength also, so that fibres and all disappear. In the summer months, many of those trees which escaped the ravages of the caterpillars were much disfigured by a small beetle, which destroyed the young shoots; the latter appearing as if they had been bored half through by a small gimlet. The beetle sometimes works towards the joint of the branch; at other times it descends into the last year's shoot. The leaves towards the extremity of the branches soon become brown, and not unfrequently the young shoots are unable to support their own weight, and hang down in a sorrowful manner. The beetle which works this mischief is the Hylurgus piniperda; it may be difficult to check them in their career, but if the young trees that are much injured by them were cut down and burnt, many would perish in the flames, those trees which are once attacked being scarcely fit for any other purpose than to be burnt. —*Peter Mackenzie.*

American (Cotton) Blight.—I find that common oil rubbed over the infected spots with a stiff painter's brush will invariably free Apple-trees from this insect.—*W. R.*

Acacia, or Locust-tree.—May it not be doubted whether this tree is ever likely to be raised in this country as a profitable timber-tree? and if not, whether it is worth while to bestow so much trouble in the raising it, as would appear to be necessary in Mr. Billington's and other papers that are to be found in the *Chronicle* on this subject. It is professedly a brittle hard wood, and therefore little suited for country purposes; and it is to be hoped that it is not likely to supersede the cultivation of Oak, Elm, and Ash, among many others of native growth. Even supposing it would thrive in soils unfit for the profitable cultivation of British timber, would it ever repay the expense of cultivation? In raising it as an ornamental tree, some care must be taken of it when young, to guard against hares and rabbits; but how could that be done in extensive plantations of some hundred acres, except at an enormous expense? The greater part, indeed, of the directions given by many of your correspondents for raising and managing plantations are quite inapplicable to woods on a large scale, though useful enough sometimes for managing single trees, or small ornamental plantations. In most cases, in thinning a large plantation intended for timber, it is better to cut down a young faulty tree than to try to prune it into shape; the common fault being to leave trees too thick. As to the Welbeck system of managing woods, alluded to by Mr. Billington, the reader will find an account of the origin of it in an early article in this year's *Chronicle*, under the signature used below. That the system should still subsist on that extensively wooded estate, is to be lamented; but there seems to be no probability of a change at present; indeed, half a century must elapse before the damage can be repaired, were the change to begin to-morrow.—*M. D. P.*

The Acacia, or Locust-tree.—Previously to Mr. Cobbett's publishing the dimensions of the different forest-trees, with a view to show the rapid growth of the Acacia, he requested permission to measure some specimens of the latter, which had been planted conjointly with other trees by my late father, some 30 years since. I have to state, that, although from its extreme brittleness in its early stage, I was induced to consider that it would never keep the lead on account of the large branches which the south-west winds were continually snapping off; still, it peers above the surrounding trees, distances them in bulk, and forms an elegant and pleasing foliage. I had some of the timber used, and the workmen complained of its hardness. Any person applying to the editor may have permission to judge for himself.—*R. G., Earl's Court, Brompton.*—[We have examined these trees, and find them, generally speaking, to exceed in size those of other kinds planted at the same time, most of them appearing to be between three and four feet in circumference at the base, and from 30 to 40 feet in height. Although there are traces of their having been greatly damaged by the wind at an earlier period of their growth, they do not appear to have been much injured latterly.]

Pruning of Pear and Apple Trees.—The growth and productions of trees and plants are determined by certain laws of nature; and, consequently, if those laws which determine fructification are opposed, fruit cannot be produced in perfection as to quantity or quality. It surely, then, must be important to gardeners to understand those laws. I have, in two different publications, explained what experience induced me to conclude those laws are; but, for reasons best known to themselves, both nurserymen and gardeners have refused to acknowledge the correctness of my conclusions, and to act up to them. However, the subject now appearing to be thought of some interest to your readers, and 50 years' experience and observation having confirmed the correctness of my conclusions, I have now no hesitation in challenging any person to prove the contrary; and if it cannot be done, it must be obvious that neither the root-pruning of Mr. Rivers, nor the breaking down branches by Mr. Bowers, offers the best and most certain mode of obtaining the desired object—which of course must be to procure the greatest quantity of fruit and of the finest quality in the least space of ground and time. My Pear-trees are on Quince stocks—have been under my mode of pruning and borne fruit every year for the last twelve years. I have never pruned the roots, nor do I ever shorten the branches; and I have no wood-spurs. My dwarf espaliers stand about 4 feet high, and the head is about 4 feet in circumference. My wall-trees occupy about 200 superficial feet of wall. With this I send you specimens of fruits:—Crassanes and St. Germains from wall-trees; the Marie Louise, Gansell's Bergamot, and the Poire Anglaise, from dwarf standards. When fully cropped, each tree will bear a bushel. I have just gathered from a dwarf standard above 200 Pears. The Poire Anglaise I know of no English name for: I had it from Paris. It is a Pear well worth every one's attention, from its being a constant bearer. It may be remarked as curious, that whilst in England we value none but French Pears, the Pear that sells more than any other in Paris is this Poire Anglaise.—*J. Hayward.* [The Pears sent *are* correctly named and good specimens of their respective kinds. The Poire Anglaise is also known as the Beurré d'Angleterre.]

The Flowers and Seeds of Laburnum.—Notwithstanding the scepticism of your correspondents, there can be no doubt that these are deleterious, not merely to man, but to the inferior creation. My memory is at fault, and I cannot remember whether in "Jesse's Gleanings," or the "Journal of a Naturalist"—a rather late publication—I have found recorded the death of the parent bird with its brood, in the nest, from the seeds of the Laburnum, an error of instinct.—*J. Murray.*

Domesticated Thrush.—Mr. W. Falconer, Croy, near Inverness, has had a hen thrush for the last four years, which is allowed perfect liberty. However far she may wander in the course of the day, she is very precise in returning home at the family meal hours, and partakes of such as they are content with, whether salt or fresh; beef and mutton, however, seem to be the most favourite dish. She is fond of butter, and frequently examines the cupboard, if it is left open. This bird is on good terms with the cat and dog, even during meals. She builds three nests every season, lays five eggs in each of the two first, and three in the last nest, always building in the same place. Her labour is, however, all in vain, for she never hatches her eggs, but attentively feeds her neighbours' broods whenever a nest is brought into the house.—*Snowdrop.*

The Season.—We have had here a most extraordinary season, and more like a Continental autumn than a Scotch or even English one. Two of my Oslin trees are displaying a profusion of fresh blossoms; the early Strawberry plants are flowering, and in ten days hence, if the weather were to continue mild, I might have a second crop of Raspberries from the young wood. On my hill the Ulex is budding anew; and in the garden the Pyrus japónica, several Lupines, Sweet-williams, &c., are bringing forth their second flowers.—*Aberdeen.*

Vines.—A Dublin subscriber complains in your last Number of the unhappy condition of one of his Vines, and asks the cause of it, justly concluding that

"This effect defective comes by cause."

He says that his Vine ripened a large crop last year, and although equally great this season, that it is not well ripened, *especially at the top of the house.* Perhaps he crops too largely, and his tree, like an overdriven horse, is "distressed." If not so, perhaps he shares in the luck which has befallen my vinery, in this best of all possible summers, and will find the remedy in the treatment I propose for mine—freer ventilation. Like your Milesian friend, I had last year an excellent crop, well ripened, in spite of the badness of the season. This year my crop is equally abundant, and the Grapes appeared to do very well, and the Vines to be in excellent health, till the time arrived that the Vine ought to be ripening, when, to my surprise, in contradiction to the beauty of the season, and in the face of the most splendid sunshine we have enjoyed for many years, they began to show signs of great reluctance, and very few in the upper part of my house have arrived at perfect maturity. Many bunches of the Black Hamburgh are entirely *red*, and though sweet and eatable, by no means mature. The White Frontignans are many of them quite sour; and some bunches, better ripened in the shoulders, are shanked at the extremities. The Chasselas is in a somewhat better condition. The Purple Frontignan is very slow in progress, and will hardly be matured. The Black Prince, though pretty well in livery, is not so good as it ought to be in flavour. My "solution of the problem" is this: last year the season being, as you know, a cold, wet, and sunless one, all my lights were kept closed except at top; and from these alone, owing to the prevalence of high winds throughout the summer, a wholesome agitation of the air of the house was constantly maintained. This year the same practice was pursued, and allowance not being made for superior sunshine, warmth, and prevalent calm, I am persuaded that during the months of most active vegetation my Vines were kept too warm; or, if not kept too warm, not sufficiently supplied with fresh air. The fault, in short, was what I suppose you vegetable physiologists and chemists would call "imperfect oxygenation." What also tends to strengthen this opinion is, that I observe the bunches in the lower part of the house are in better condition than those in the upper—precisely the reverse of what I have usually experienced. In ordinary seasons the lower bunches have generally been a fortnight behind the upper; this year they ripen soonest and best. In ordinary seasons, or, like last summer, *sub*ordinary ones, I believe that free ventilation at the top will suffice; but in *superior* summers, like this we have just been blessed with, air ought to be freely admitted at bottom as well, to insure a wholesome supply to all parts of the vinery. Like your Dublin subscriber, I also find that some of my Vines exhibit a black mildew, which is certainly not caused by moisture, but I firmly believe by bad air.—*Amateur.*

Turf Pits for Cucumbers.—In page 220 of the *Chronicle*, mention is made of the turf batteries at the Royal Military College, Sandhurst. Allow me to remark, that when I lived there, our labourers were very expert in constructing turf buildings. The way in which we grew our Cucumbers in the open air was in a pit of turf, the walls of which were one foot in thickness, three feet high, and four feet wide. The intermediate space was filled with prepared dung, one foot higher than the walls, which were all level. After remaining a few days until the dung had fallen nearly level with the turf walls, the dung was covered with soil about six or eight inches deep. At regular distances were placed small hills of prepared soil, in which the Cucumber plants were ridged out and covered with hand-glasses for about a month or six weeks after planting. When finished, the whole had a very neat and tidy appearance.—*M. G. B. A.*

Experiments on the Potato.—In compliance with your request, I send you the particulars of some experiments on the Potato, conducted on the estate of J. S. Cunningham, Esq., of Caprington Castle. The quantity of ground operated on was 5 roods, or 1¼ acre (the Scotch acre). The soil was a sandy loam, in some parts inclining to peat; and having been previously neglected for some years, it was full of Couchgrass, Mare's-tail, Potentilla, and other weeds. The soil was well worked and pulverised, and cleaned with a very efficient grubber; the whole was manured very equally, at the rate of 50 cubic yards of rotted farm-yard manure per acre. The Potato was the variety called Pink-eyed Don, and the crop on the whole 72 bolls, or about 57 bolls per acre. The boll of the Kilmarnock measure is amongst the largest in Scotland. Mr. Moffat, the land steward, found the average weight to be 55 stone, or 770 lbs. per boll, which gives 19 tons 18¾ cwt. as the quantity per acre, or nearly 20 tons. One Potato weighed 2¾ pounds. For experiment, three drills were marked off, each 366 feet long, without any dressing, which produced 44½ pecks, of 48 lbs. each; three drills in another portion of the ground, each 364 feet long, without dressing, produced 47 pecks, of 48 lbs. each. In the first portion of ground, 366 feet long, three drills, dressed with 12 lbs. sulphate of soda and 6 lbs. of urate (or at the rate of 2½ cwt. per acre), produced 45½ pecks; three drills, dressed with 30 lbs. British guano (or at the rate of 4 cwt. per acre), produced 46½ pecks. In the same portion of the ground, 364 feet long, three drills, dressed with 15 lbs. of urate (at the rate of 2 cwt. per acre), produced 47 pecks; three drills, dressed with 7½ lbs. sulphate of soda and 7½ lbs. nitrate of soda (2 cwt. per acre), produced 48½ pecks. Little difference of the drills could be perceived when growing; the foliage had a uniform dark green appearance, and the average of the whole was rather above that of the marked drills. It will be perceived also from the above statement, that the produce of one of the marked portions that received no dressing of artificial manures was greater than most of those that were dressed, while the other was the least of any; showing that very different results may be got from different portions of the same field, and inculcating the necessity of varying experiments on different descriptions of land, in different seasons and climates, before laying down rules for practice. The land being richly manured and exceedingly well worked, was perhaps the cause of the very little apparent increase from the use of the artificial manures.—*R. Lymburn.*

Lammas Wheat.—On the 24th of Feb., Mr. C. Cooknell, of Southam, planted 2 roods and 38 perches of land with Red Lammas Wheat, which he reaped the 9th of August. The produce was exactly 50 bushels, or at the rate of 8 qrs. 2 bushels of fine grain an acre. It weighed 62 lbs. a bushel.—*George Batt.*

Sulphur.—In reference to an article in your last on the subject of sulphur, in its relation to plants, I need not remind you that chemical manipulution has certainly detected sulphur in plants. Dr. Schouw, Professor of Botany at Copenhagen, informed me, he had met with an Alga and a Hypnum in one of the craters of Etna, in a sulphury vapour, at an elevation of 14,000 feet above the level of the sea, in a temperature of 98°. If I remember right, I observed, in 1818, either a Conferva or Ulva in a sulphuretted spring at one of the Baths of Trajan, near Civita Vecchia. Among the fumes of sulphur in the Solfaterra, near Naples, I noticed various plants, such as Erica cinérea, Arbutus Unedo, Juníperus communis, &c.—*J. Murray.*

To Cook Potatoes for Cattle.—I observe in a recent Number of the *Chronicle* a query, "in what form Potatoes are most advantageously given to swine or cattle?" I have been told by a gentleman who has an extensive farm in Ireland that they are best steamed or baked if for fattening animals, which they do amazingly quick; but for milch kine they must not be baked or roasted, but given in a raw state in equal proportions with Turnips or Mangel Wurzel. Thus prepared, they will greatly promote the quantity and quality of the milk; but if given roasted or steamed, they will soon dry up the milk.—*Wm. Rogers.*

Conical Boilers.—Mr. Rogers has taken some pains to prove, that the first of our series of advertisements did not appear in the *Chronicle* until June 1841, and then related principally to iron fencing. In this he is mistaken, as will be found on reference to the previous month, at page 338, where (as upon subsequent occasions) an improved apparatus for warming, &c., is expressly mentioned, and gentlemen are invited to inspect it. Although, strictly speaking, a boiler cannot be considered an apparatus, yet this term is also employed by Mr. Shewen, who, in his advertisement, describes his cast-iron boiler as an apparatus; and our advertisement, therefore, preceded Mr. Shewen's improvement two months. But, as we have before stated, these boilers have been in use several years; and the accompanying letter, which we are favoured with by a gentleman of high respectability, will show that the defective form of Mr. Rogers's original boiler suggested an improvement almost immediately after its introduction.—*Stephenson and Co.*—[The letter alluded to is the following:—"I most willingly testify, that the copper boiler I have had in use for the last four years is precisely the same in form as the one recently supplied to me, and which you designate 'The Improved Conical Boiler,' the description of which is accurately given in the *Chronicle* as having been made by Mr. Shewen. The boiler first supplied has experienced some hard service, and is apparently as sound as ever. There is no difficulty in removing clinkers without extinguishing the fire." We are in possession of this letter; the writer's name is suppressed at his desire.]

FOREIGN CORRESPONDENCE.

Tinakori Cottage, Wellington, New Zealand, 24th October, 1842.—We have a great deal of land round the harbour, which, if it were a little more accessible, would be invaluable. I feel sure that it will produce everything which man can want, not even excepting oil and wine. Its present productions are woods of many varieties, and fit for all purposes. I frequently see pieces of furniture made in this place from wood grown in the neighbourhood, which are really beautiful, and would be highly esteemed in London. In my trips I seldom go without a pocket sextant strapped round my waist; with which instrument I can easily determine heights and distances. I have measured many specimens of the Pine tribe from 70 to 75 feet high, without a branch. When properly seasoned, the value of a plank 40 feet long and 5 feet wide must be great, yet such a plank may be frequently obtained, of Totara, Maie, Rimu, Kaikatea or Milu; they are really splendid productions. Some of the forest scenery of this country is exquisite. The colour of the Evergreens is not sombre, but they are gay and various. The arborescent Ferns (I have measured two 60 feet high without branches, and have seen several more which I believe to be of equal altitude), and the Nikau, a species of Palm, add much to the beauty of the scenery. Then there are the beautiful little streams which we constantly meet with, and which contain the clearest water possible. I will not, however, allow you to suppose that our rambles through the bush are entirely "couleur de rose;" the under brush is frequently very thick and the struggle hard. Still it is a fine and delightful country, and has fewer drawbacks than any which I have before visited. There are many people who come out and think as I do in this respect; some there are whose fancies carry them farther, that imagine they can live without working, but they soon find out their mistake. Those, however, who believe that when they arrive here they are still on earth, and that it is necessary for them to get their living by the sweat of their brow, may get a very good living, and, if commonly prudent, may put something by to make their old age comfortable. During the last winter my *servants* have never once, I believe, dined without two or three kinds of vegetables, of which there are many sorts in the garden. We have had Green Peas till within the last eight weeks, and shall have them again in less than a fortnight. We have never been without abundance of Salad, and we still have it in all stages. I do not mean such salading as you have in London during the winter—little unhappy-looking Lettuces, nearly as big as a wine-glass. Ours have seldom been thought worth cutting till they were from *six* to *eight* inches through the middle; these we can produce with little or no trouble. Our farm-yard continues to do well. I must not forget to tell you that some of the folks here are getting up a Horticultural Society—the subscription is low, but we shall have the more subscribers, and I think it will do much good."—*W. M. Smith, Capt., R.A.*

COUNTRY SHOWS.

Felton Florists' Society, Oct. 10.—The Florists of Felton and its vicinity held their annual show of Dahlias at Mr. Liddell's, the Coach and Horses Inn, when the Prizes were awarded as follows:—GENTLEMEN'S GARDENERS—*Best* 12 *Blooms*, 1, Mr. Riddle, gr. to Mrs. Mitford, for Pickwick, Phenomenon, Grande Baudine, Bloomsbury, President of the West, Cox's Defiance, Miss Johnson, Egyptian King, Windsor Rival, Ansell's Unique, Conqueror of the World, and Hope; 2, Mr. Forsyth, gr. to A. J. B. Cresswell, Esq., M. P., for Conservative, Duchess of Richmond, President of the West, Elizabeth, Suffolk Hero, Egyptian King, Grace Darling, Beauty of the Plain, Climax, Mary, Rival Sussex, and Virgin Queen; 3, Mr. J. Reed, *for the best* 6 *Blooms*, viz., Marquess of Lothian, Hope, Springfield Rival, Miss Johnson, Hylas, and Sulphurea elegans; 4, Mr. Riddle, for Egyptian King, Maria, Pickwick, Edwards' Mary Jane, Phenomenon, and President of the West. AMATEURS' CLASS—*Best* 6 *Blooms*, 1, the Rev. J. Orrell, for Pickwick, President of the West, Rienzi, Cox's Defiance, Bloomsbury, and Hope; 2, Mr. J. Thompson, for Phenomenon, Grande Baudine, President of the West, Lewisham Rival, Mary Jane, and Maria; 3, the Rev. J. Orrell, *for the best* 3 *Blooms*, viz., Pickwick, Hope, and Bloomsbury; 4, Mr. J. Thompson, for Windsor Rival, Cox's Defiance, and Grande Baudine. The prize for the *best tipped Dahlia* was awarded to Mr. R. Richardson, for Ansell's Unique; that for the *best self-coloured ditto*, to Mr. J. Thompson, for Grande Baudine; and that for the *best seedling of* 1842, to Mr. Forsyth, but the name was not given in.

Haydon-Bridge Amateurs' Horticultural Society, Sept. 24.—The second annual meeting was held in a pavilion erected for the purpose in the yard of the Anchor Inn, when the following prizes were awarded:—DAHLIAS, FIRST CLASS—*Best* 18 *blooms*, Mr. T. Temperley, with Pickwick, Maid of Bath, President of the West, Cox's Defiance, Metella, Lee's Bloomsbury, Rouge et Noire, Phenomenon, Duchess of Richmond, Edwards's Duke of Richmond, Andrew Hofer, Pamplin's Bloomsbury, Edwards's Mary Jane, Ward's Mary, Triumph, Hope, Coronal, Beauty of the Plain; 2, Mr. W. Walton. *Best* 12, Mr. T. Temperley, with President of the West, Maid of Bath, Cox's Defiance, Pickwick, Metella, Dowager Lady Cooper, Rouge et Noire, Duchess of Richmond, Grande Bandine, Edwards's Mary Jane, Triumph, Maria; 2, Mr. Walton. *Best* 6, Mr. Walton; 2, Mr. T. Temperley, with Hope, Pickwick, Duchess of Richmond, President of the West, Maria, Andrew Hofer. SECOND CLASS—*Best* 9 *blooms*, Mr. T. Dickinson; 2, Mr. T. Pearson. *Best* 6, Mr. T. Dickinson; 2, Mr. C. Pattinson. *Best* 3, Mr. C. Pattinson; 2, Mr. T. Dickinson. DAHLIAS, OPEN TO ALL—*Best Self-coloured*, E. Welford, Esq., Pickwick. *Tipped or Variegated*, E. Welford, Esq., Bridesmaid. BEST DEVICE, W. F. Lee; 2, Mr. J. Burn. BEST BOUQUET OF CUT FLOWERS, Mr. W. Watson; 2, Mr. A. Drummond. BEST EXOTIC PLANT, IN BLOOM, Mr. W. F. Lee. BEST COLLECTION OF FRUIT, Mr. W. F. Lee. DESSERT APPLES, Mr. W. Heslop. BAKING DITTO, Mr. T. Pearson. PEARS, Mr. J. Dickinson. ONIONS, Mr. R. Waggot; 2, Mr. T. Temperley. POTATOE ONIONS, Mr. J. Urwin; 2, Mr. T. Cowing. CAULIFLOWERS, Mr. J. Dodd. CABBAGES, Mr. T. Cowing. CARROTS, Mr. J. Corbett. TURNIPS, Mr. R Shield. KIDNEY POTATOES, Mr. W. Kirk. ROUND DITTO, Mr. J. Dickinson. CELERY, Mr. R. Shield. CORN—*Best Sample of White Wheat*, Mr. J. Thompson; *Red ditto*, Mr. M. Cowing; *Barley and Oats*, Mr. J. Cowing.

Leyland Hundred Agricultural and Horticultural Society, Oct. 6th.—The Fifth Annual Meeting of this promising society took place at Leyland, and was highly interesting. The stock exhibited was both more numerous and of better quality than any which has hitherto been shown here, and elicited the warmest encomiums. The brood mares, two-year-old horses, and colts, were particularly fine. The horticultural produce was exceedingly good. The fruit was beautiful. We were also particularly struck with the Dahlias, one of them appearing to be perfect in every respect. The sphere of the operations of the society has this year been greatly enlarged; it now extends over the whole Hundred of Leyland, instead of being confined as heretofore to the Township only.—The following is a list of the prizes for horticultural produce:—RED CABBAGES, 1, J. N. Ffarington, Esq., weight 33lbs.; 2, Mr. R. Bannister, 33lbs.; 3, Mr. T. Nelson, 18½lbs. SCOTCH CABBAGES, 1, Mr. E. Barlow, 40½lbs.; 2, J. N. Ffarington, Esq., 45lbs.; 3, Mr. H. Barlow, 39lbs. SAVOYS, 1, Mr. J. Livesey, 19½lbs.; 2, W. Boardman, Esq., 16½ lbs.; 3, J. N. Ffarington, Esq., 11lbs. CURLED BROCCOLI, 1, Mr. F. Pilkington, 17½lbs.; 2, Mr. John Singleton, 17½lbs.; 3, W. Boardman, Esq., 13lbs. ONIONS, 1, Mr. R. Higham, 1½lb.; 2, Mr. T. Waddecar, 1½lb.; 3, Mr. J. Cocker, 1¼lb. MANGEL WURZEL, 1, Mr. J. Cocker, 21lbs.; 2, J. N. Ffarington, Esq., 16½lbs.; 3, Mr. J. Livesey, 13½lbs. SWEDISH TURNIPS, 1, J. N. Ffarington, Esq., 16lbs.; 2, Mr. H. Baker, 15½lbs.; 3, Mr. J. Livesey, 13lbs. YELLOW TURNIPS, 1, Mr. H. Baker, 26½lbs.; 2, J. N. Ffarington, Esq., 22½lbs.; 3, J. Livesey, 22lbs. WHITE TURNIPS, 1, J. N. Ffarington, Esq., 27½lbs.; 2, Mr. R. Bannister, 27½lbs.; 3, Mr. W. Bannister, 18lbs. CELERY, 1, Mr. R. Scott, gr. to the Rev. W. Yates, 5lbs.; 2, Mr. T. Baron, 3½lbs.; 3, J. N. Ffarington, Esq., 3½lbs. SEEDLING POTATOES, 1, Mr. T. Rose; 2, Mr. R. Sumner; 3, Mr. E. Barlow. APPLES, *Baking*, 1, Mr. T. Webster; 2, Mr. H. Baldwin; 3, Mr. J. Smith. *Table Fruit*, 1, Mr. J. Livesey; 2, Mr. R. Scott; 3, J. N. Ffarington, Esq. PEARS, 1, Mr. Gilchrist; 2, the Rev. G. Baldwin; 3, Mr. J. Livesey. EXTRA PRIZES—For *Potatoes*, from seed sown in 1841, 1, Mr. H. Barlow; 2, Mr. E. Barlow. For *Grapes* and *Plums*, J. N. Ffarington, Esq. For *Raspberries*, J. N. Ffarington, Esq. For *Cucumbers*, Mr. R. Scott. For *Onions*, Mr. T. Rose. For a *Device in Flowers*, J. N. Ffarington, Esq.

North British Professional Gardeners' Society.—The autumn meeting was held in the Calton Convening Hall, and prizes were adjudged as under:—DAHLIAS: 1, Mr. J. Downie, gr. to Gen. Robertson—Pickwick, Bridesmaid (Brown's), Highgate Rival, Burnham Hero, President of the West, and Metella; 2, Mr. J. Hogg, gr. to W. Bonar, Esq. HOLLYHOCKS: 1, Mr. Alex. Foulis, gr. to Sir P. Durham; 2, Mr. D. Foulis, gr. to Alex. Blair, Esq. CHINA ASTERS: 1, Mr. J. Gourlay, gr. to Sir G. Warrender, Bart.; 2, Mr. J. Hogg. PICOTEES, Mr. D. Foulis, for Grace Darling, Prince George, Mrs. Wortley, Miss Bacon, England's Defiance, and Don Carlos. CARNATIONS, Mr. D. Foulis, for Duke of Leeds, Don John (Merchant's), Admiral Napier, Mrs. Ely, William the Fourth, and Hepworth's Elizabeth. SEEDLING DAHLIA: 1, Mr. J. Hogg; 2, Mr. P. Thomson, gr. to J. J. Hope Vere, Esq. LOBELIAS: 1, Mr. D. Foulis; 2, Mr. J. Hogg. STOCKS: 1, Mr. J. Addison, gr. to the Earl of Wemyss; 2, Mr. Alex. Foulis. PHLOXES: 1, Mr. J. Downie; 2, Mr. G. Stirling, gr. to Viscount Melville. PENTSTEMONS: 1, Mr. J. Downie; 2, Mr. J. Young, gr. to T. Oliver, Esq. HARDY ANNUALS: 1, Mr. G. Stirling; 2, Mr. J. Addison. VERBENAS: 1, Mr. J. Downie; 2, Mr. J. Addison. SALVIAS: 1, Mr. J. Downie; 2, Mr. J. Young. TENDER EXOTICS: 1, Mr. G. Stirling; 2, Mr. D. Foulis. GRAPES, *Black Hamburgh*: 1, Mr. D. Foulis; 2, Mr. R. Watson. BEST GRAPES OF ANY KIND: 1, Mr. J. Goodall, jun., gr. to L. Buchan, Esq.; 2, Mr. J. Hogg. *Muscat of Alexandria*: 1, Mr. J. Goodall, jun.; 2, Mr. J. Hogg. PLUMS: 1, Mr. J. Goodall, jun.; 2, Mr. G. Stirling. PEACHES, Mr. R. Watson. NECTARINES, Mr. R. Watson. MELON: 1, Mr. Thom, gr., St. Germains; 2, Mr. R. Watson. JARGONELLE PEARS: 1, Mr. P. Thomson; 2, Mr. Alex. Foulis. DAHLIA SWEEPSTAKES, *open to the whole of Scotland, six prizes*: 1, Mr. P. Thomson—President of the West, Marquess of Lansdowne, Phenomenon, Yellow Climax, Grande Baudine, Lady Cooper, Conductor, Westbury Rival, Maid of Bath, Suffolk Hero, Lewisham Rival, Bloomsbury (Pamplin's), King of Roses, Unique (Walter's), Rouge et Noire, Duchess of Richmond, Attila, Scarlet Defiance, Pickwick, Beauty of the Plain, Climax, Prince of Wales, Princess Royal, Scarlet Eclipse; 2, Mr. J. Downie—Yellow Climax, President of the West, Pickwick, Conservative, Egyptian King, Bridesmaid (Brown's), Highgate Rival, Maria, Scarlet Defiance, Hope, Duchess of Richmond, Andrew Hofer, Windsor Rival, Bishop of Winchester, Danecroft Rival, Lady Cooper, Conqueror of the Plain, Eclipse (Catleugh's), Rienzi, Maid of Bath, Regina, Princess Royal (Hudson's), Metella, and Lady Middleton; 3, Mr. W. Thom; 4, Mr. J. Addison; 5, Mr. J. Lindsay; 6, Mr. J. Gourlay.

Tamworth Royal Horticultural Society, Sept. 27.—The fourth exhibition for this season was held at the Town Hall, where the following Prizes were awarded:—BEST COLLECTION OF GREENHOUSE PLANTS, T. Brammall, Esq. DAHLIAS:—24 *varieties*, Mr. Holmes. *Pan of* 12—1, Lord Vernon; 2, Mr. Holmes. CLASSES:—*Dark*, 1, Lord Vernon; 2, Mr. Wroughton; 3, Rival Sussex, Mr. Holmes. *Purple*, 1, Lord Vernon; 2, Conductor, Mr. Wroughton; 3, Mr. Holmes. *Crimson*, 1, Lord Vernon; 2, Rev. J. Brammall; 3, Mr. Holmes. *Scarlet*, 1 and 2, Bloomsbury, Lord Vernon; 3, do., Mr. Holmes. *Orange*, 1, Lord Vernon; 2, Jackson's Grenadier, Mr. Holmes; 3, Lord Vernon. *Lilac*, 1, Mr. Holmes; 2, Mr. Wroughton; 3, Lord Vernon. *Shaded*, 1 and 2, Lord Vernon; 3, Mr. Holmes. ASTERS, H. J. Pye, Esq. FRUIT:—PINE, Lord Vernon. GRAPES, *Black*, 1 and 2, H. Stokes, Esq. *White*, 1 and 2, Lord Vernon. MELONS, 1, Capt. Inge; 2, H. J. Pye, Esq. PEARS, 1, Lord Vernon; 2, Capt. Inge; 3, H. J. Pye, Esq. PLUMS, 1 and 2, Lord Vernon. APPLES, *Dessert*, 1, Ribstone Pippin, Mr. Harding; 2, Scarlet Nonpareil, 3, Garnett's Pippin, and 4, Golden do., H. J. Pye, Esq. *Culinary*, 1, Alexander, Capt. Inge; 2, Keswick Codlin, Mr. Whaley; 3, Capt. Inge; 4, Newtown Pippin, H. J. Pye, Esq. NECTARINES, Lord Vernon. PEACHES, 1 and 2, Capt. Inge. FILBERTS, H. J. Pye, Esq. WALNUTS, Capt. Inge. DAMSONS, H. J. Pye, Esq. FIGS, H. J. Pye, Esq. VEGETABLES:—CELERY, Capt. Inge. BEET, 1 and 2, Mr. Wheeley. ONIONS, 1 and 2, Mr. Wheeley; 3, Lord Vernon; 4, Capt. Inge. CARROTS, 1, Mr. Wheeley; 2, H. Stokes, Esq.; 3, Mr. Webb. Mangel Wurzel, Mr. Wheeley. Parsneps, 1 and 2, Mr. Wheeley. Swedish Turnips, 1, E. Peel, Esq.; 2, Lord Vernon. *White*, Mr. J. Willroy. *Red Top*, 1, Mr. Wheeley; 2, Rt. Hon. Sir R. Peel, Bart. Sheep Cabbage, Lord Vernon. *Red*, 1, J. Pye, Esq.; 2, Capt. Inge. Cape Broccoli, Capt. Inge. Blue Potatoes, 1 and 2, Mr. Wheeley. *White*, 1, Mr. Wheeley; 2, Mr. J. Willcox. *Kidney*, 1 and 2, Mr. Wheeley. Scotch Kale, Mr. Wheeley. Turnip Radishes, Capt. Inge. French Beans, Capt. Inge. Numerous Cottagers' Prizes were also awarded.—[It will be seen from the above report, that the names of the winning Dahlia flowers have not been furnished by the exhibitors to the secretary. It would perhaps be advisable to make it a rule on future occasions, that unless a list is handed in with the flowers, the prize-money will be withheld.]

Whitefield Horticultural Society, Oct. 15.—The annual meeting for the exhibition of Celery and other garden Vegetables was held at the house of Mr. James Mather, Church Inn, Whitefield; when the following prizes were awarded:—Celery—1, 2*l.* 10*s.*, *White Italian*, weight 12 lb. 10 oz., Mr. J. Smith, gr. to R. Phillips, Esq.; 2, 1*l.* 10*s.*, *Seymour's White*, weight 12 lb. 9 oz., Mr. J. Davies, gr. to J. Richardson, Esq.; 3, 1*l.* 5*s.*, *Seymour's White*, weight 12 lb. 2 oz., Mr. T. Berry; 4, 1*l.*, *Seymour's White*, weight 11 lb. 7 oz., Mr. T. Deavonport; 5, 15*s.*, *Seymour's White*, weight 10 lb. 10 oz., Mr. J. Lord; 6, 12*s.* 6*d.*, *Seymour's White*, weight 9 lb. 9½ oz., Mr. W. Chorlton, gr. to P. M. James, Esq. Apples—1, *Alexander*, Mr. W. Jones, gr. to Mrs. Bealey; 2, *Cheshire Maid*, Mr. W. Jones; 3, *Ribstone Pippin*, Mr. W. Chorlton. Pears—1, *Gansell's Bergamot*—2, *Catillac*, Mr. W. Chorlton. Melon—1, Mr. W. Jones. Love Apples, Parsneps, Onions, Rope of Onions, White Cabbage, 1 and 2 Indian Wheat, Mr. W. Jones. Silver Beet, weight 14 lb. 4 oz., Mr. J. Ramsbotham. Parsley, *curled*, Mr. J. Allen. Potatoes, Mr. J. Allen. Cauliflowers, Mr. J. Smith, gr. to R. Phillips, Esq. Carrots, Mr. I. Taylor. Turnips, Mrs. Bindlass. Curled Kale, Mrs. Bindlass. Red Cabbage, 1, Mr. T. Booth; 2, Mr. E. Bleakley. White Cabbage, Mr. W. Ogden. Vegetable Marrow, Mr. J. Swaile, gr. to A. Thomas, Esq.

NOTICES of NEW PLANTS WHICH ARE EITHER USEFUL OR ORNAMENTAL.

Pentstemon gentianoides: var. splendens. Gentian-like Pentstemon, splendid variety. (*Half-hardy Herbaceous Plant*).—Scrophulariáceæ. Didynámia Angiospérmia.—The flowers of this singularly handsome variety combine the scarlet of P. gent. coccinea with the dark reddish crimson or purple of the original species. In its tints it eclipses all the other known varieties. There is little doubt but that this showy plant is a genuine variety, raised from Mexican seeds, and not obtained by English art, through the medium of culture and hybridization.—*Paxton's Bot. Mag.*

Sta'tice monope'tala; var. denudata. Naked Monopetalous Sea Lavender. Plumbagináceæ. Pentándria Pentagýnia.—This is a well-marked variety of Státice monopétala, having smaller and paler flowers, a more "drawn up" manner of growth, broader leaves, somewhat wavy at the edge, and a much smaller quantity of calcareous scurf. No trace of it is found in books, and it is probably of garden origin. The Horticultural Society received it from the Botanic Garden of Leyden, under the erroneous name of Státice suffruticosa. It is nearly hardy, requiring only a slight protection during winter, when planted in the open border; but it suffers from damp. It flowers during the autumn months, grows freely in any rich light soil, and is easily increased by cuttings of the young wood, treated in the ordinary way.—*Bot. Reg.*

Ae'rides crispum. Sir Richd. Brooke's Air-plant. (*Stove Epiphyte.*) Orchidáceæ. § Vándeæ. Gynándria Monándria.—This species is a native of Coustallum, a small place near the southern point of the peninsula of India, and is certainly one of the finest of its race, well worthy of a place in all collections of merit. In cultivation it requires a hot and damp stove. When sus, ended upon a block of wood, or in a copper wire basket, from the rafters, it will grow luxuriantly with very little care, providing it is well supplied with water. If there is a cistern in the house, it ought to be hung above it, as it evidently likes the moisture which is continually evaporating from such a place. When not in a growing state, less water should be given than at other times, but it should never be kept too dry.—*Bot. Reg.*

Helleborus oly'mpicus. Olympian Hellebore. (*Hardy Herbaceous Plant.*) Ranunculáceæ. Polyándria Pentagýnia.—A native of the Bithynian Olympus, whence it was sent to the Horticultural Society by Mr. Sandison, her Majesty's Consul at Brusa. It is a hardy herbaceous plant, requiring a rather moist situation, and peat soil to grow in. It is easily increased by dividing the old plants when in a dormant state, or by seeds, which should be sown directly they are ripe, in pans filled with light rich soil.—*Bot. Reg.*

Sophronitis grandiflora. Large-flowered Sophronitis. (*Stove Epiphyte.*) Orchidáceæ. Gynándria Monándria.—This interesting plant is a native of Brazil, and flowered for the first time in this country in the collection of Messrs. Loddiges, of Hackney, in October 1841. For so diminutive a plant, the size of the flowers is really extraordinary, and the stalk is made to curve downwards, apparently with the weight of the blossom. The colour is a rich cinnabar, variously tinted with crimson and orange, and pale orange or deep yellow in the centre. When in flower, the plant is not unlike a dwarf Cattleya; and this appearance, combined with the novelty of its colour, in relation to that genus, makes it peculiarly interesting. The most natural way of growing this plant, is to fasten upon a *small* log of wood. If a small portion of moss be placed around the bottom of the pseudo-bulbs, and over the younger roots, it will form a nucleus for moisture, and keep them shaded. This species flourishes well in a house that is only moderately warm and moist, and should have rest for three or four months, beginning at December. It is increased by taking off one or more of the pseudo-bulbs in spring and placing them upon another block.—*Paxton's Bot. Mag.*

Erica Nei'llii. Dr. Neill's Heath. (*Greenhouse Shrub.*) Ericáceæ. Octándria Monogýnia.—This lovely Heath is a hybrid between E. aristata major and E. linnæoides. Its habit slightly resembles that of E. aristata, but is better, and has more of the erectness and bushiness of E. linnæoides. The flowers are produced in terminal clusters, and are of a deep pink, inclining to light purple at the base, and gradually becoming paler till it passes into white in the limb. It was raised by Mr. M'Nab, of the Edinburgh Botanic Gardens.—*Paxton's Bot. Mag.*

MISCELLANEOUS.

The Dial of Flora.—The period at which certain flowers expand, if correctly noted, is well worthy of attention, and sometimes presents remarkable phenomena. The greater part of the vegetable kingdom appears to be unaffected by this circumstance, and blossoms alike at all hours of the day; but a certain number, belonging to totally distinct genera, are evidently affected by some diurnal influence. The list of plants arranged in the order in which they expand constitutes what Linnæus, in his metaphorical style, calls Flora's Dial. The period of their expansion during summer at Paris is as follows:—Between 3 and 4 in the morning,—Convólvulus Nil and C. sépium; between 4 and 5,—the Tragopogon, with several other Chicoraceous plants, and Matricária suavéolens; at 5 o'clock,—Papaver nudicaule, and the chief part of the Chicoraceous tribe; between 5 and 6,—Momórdica elatérium, Lapsana communis, and Convólvulus tricolor; at 6 o'clock,—Hypochæris maculata, several species of Solanum, and Convólvulus siculus; between 6 and 7,—the various species of Sonchus and Hierácium; at 7 o'clock,—the Water Lily, Lettuces, Camelinas, and Prenanthes muralis; from 7 to 8,—Mesembryánthemum barbatum, Campánula spéculum, and Cúcumis Angúria; at 8 o'clock,—Anagallis arvensis; between 8 and 9,—Nolana prostrata; at 9 o'clock,—the Field Marygold; between 9 and 10,—the Ice plant; between 10 and 11,—Mesembryánthemum nodiflorum; at 11 o'clock, the Purslane, Ornithogalum umbellatum (called, on that account, Lady 11 o'Clock), and Tigrídia pavónia; at noon,—most of the Ficoideæ; at 2 in the afternoon,—Scilla pomeridiana; between 5 and 6,—Silene noctiflora; between 6 and 7,—the Nightshade; between 7 and 8,—Céreus grandiflorus, Mesembryánthemum noctiflorum, Œnothera tetráptera and Œ. suaveolens; lastly, about 10 at night,—Convólvulus major, called by gardeners the *Belle de jour*—no doubt, because they always find it expanded before they rise. These phenomena, in conjunction with the duration of the flower, have divided those plants which bloom periodically into two classes: 1st, Ephemeral flowers, which open at a stated period, and fall or close regularly the same day, and at nearly the same hour. There are diurnal ephemeral flowers, that is to say, those which expand during the day; such as the different species of Cistus and Linum, whose blossoms open between five and six in the morning and fall off before noon; and nocturnal ephemerals, such as the night-blowing Cereus, which expands about seven in the evening and closes about midnight. 2dly, Equinoctial flowers, which open at a stated hour, and close again the same day at a fixed period, then reopen again on the morrow, and sometimes for several days successively, at a certain hour. There are, as in the preceding, diurnal equinoctial flowers, such as Ornithógalum umbellatum, which opens for several days successively at 11 in the forenoon, and closes at three in the afternoon; and nocturnal equinoctial flowers, such as the Mesembryánthemum noctiflorum, which opens several successive days at seven in the evening, and closes between six and seven in the morning.—*De Candolle's Physiologie Végétale.*

Ancient Pickles.—In a vase discovered in the ruins of Herculaneum, the Abbé Facciolati found an Orange in vinegar. It appeared the Romans pickled Oranges as we do Girkens. This pickle has been preserved for 1780 years!—*Manchester Guardian.*

A Gigantic Hollyhock.—There is now growing in the grounds occupied by Mr. W. Dent, grocer, at Nettleton, near Caistor, a Hollyhock, of the height of 15½ feet, and beautifully flowered from near the root to the top.—*Manchester Guardian.*

Vegetable Monster.—At the meeting of the North Suffolk and South Norfolk Agricultural Association, Sept. 21, "a great natural curiosity was exhibited, being a small branch of a tree, the leaves on one-half of which are Horn-beam, and on the other American Oak. There are three of these trees now growing near each other in the county of Norfolk, all of the same description. They are apparently of twenty-five years' growth, and it does not appear that this remarkable phenomenon has ever before been observed."—*Country Newspaper.*—[We really cannot help wondering that the well-informed editors of newspapers can insert such stuff as this.]

GARDEN MEMORANDA.

Woodhall, the seat of A. Smith, Esq.—The mansion is a modern structure, built by Sir T. Rumbold, delightfully situated upon an elevated part of the park, and overlooking the river Beane; which, in its course through this demesne, expands into a broad serpentine piece of water. The park contains some old trees, of large dimensions, and is beautifully diversified by hill and dale. The present owner has removed the wooden fence which used to form the boundary, and has replaced it by a brick wall. Upon the lawn we noticed some fine Cedars, and a few large specimens of the Copper Beech, Portugal Laurel, Flowering Ash, &c. At a short distance from the mansion is a small conservatory, in which the plants look healthy, although by no means rare. The Kitchen and Forcing Garden is situated at a distance from the mansion; it was laid out by Malcolm, and is probably one of the finest of the kind in that part of the country. This was in after years the field in which the able Griffin carried on his experiments, under whom some of the best practical men of the present day were tutored. This place is now under the directions of Mr. Davis, of whose practical knowledge we have a proof from the products which were exhibited by him at the three fêtes of the Horticultural Society. We can only add that the garden, especially in the Forcing department, reflects great credit upon Mr. Davis. We may observe that this part of Hertfordshire is one of the best fields for rewarding the investigation of the lover of native plants, as in our numerous walks in this locality we have, among other beautiful species, met with the following: Paris quadrifólia, Stratiotes aloides, Parnássia palustris, Hottónia palustris, Ophrys apifera, Chlora perfoliata, Ophrys muscifera, Adoxa moschatellina, Neóttia spiralis, Anagallis tenella, Polemónium cæruleum, Orchis latifólia, Fritillária meleagris, Listera ovata, Allium ursinum, Epipactis latifólia, Helleborus fœtidus and viridis, Platánthera bifólia, Chrysosplénium oppositifólium, Orchis pyramidalis, Monotropa Hypopithys, Aristolóchia Clematitis, Hyoscyamus niger, Gentiana Amarella, Láthyrus Nissólia, Malva moschata, Genista pilosa, and many others which we cannot now enumerate. We were struck with the scarcity of Quercus sessiliflora in the county of Hertford, where, as it is a district which produces so much Oak timber, we thought of finding it in tolerable abundance.—*J. A., Sept.* 22.

Fairbairn's Nursery, Clapham.—At this place is cultivated in great perfection that most interesting tribe of plants, the Heaths. We observed, in particular, numerous specimens of Erica Willmoreana and E. Linneana superba, which had during the season made shoots at least 2 ft. in length. The collection of Epacris is also good, and comprises the best varieties in cultivation; when in flower, these will make a beautiful display. Amongst the Heaths in bloom are E. Lambértia rósea, a rich flesh-coloured variety, of a much deeper tint than the old E. Lambértia; E. cerinthoides magnífica, with the lower part of the tube lightish pink, and the upper half of a bright vermilion colour; E. grandinosa nana, a prolific bloomer, with transparent white flowers; E. transparens nova, remarkable for the length of time which the flowers continue to expand in succession; at their first appearance, these are almost colourless, but gradually assume a deep rosy colour. A great number of the delicate E. grácilis and E. arbúscula, loaded with their little purplish bells, gave the house a gay appearance. Although Heaths and Epacrises are the principal objects of cultivation here, yet the Azáleas, Borónias, and Leschenaúltias are not less worthy of notice. By being allowed an abundance of air, whenever practicable, in order to render them as hardy as possible, and to enable them the better to withstand the approaching winter, they have assumed that deep green tint, which is so characteristic of perfect health.—*R. A., Oct.* 17.

Reviews.

Martin Doyle's Cyclopædia of Practical Husbandry.

We have received the 6th Part of this excellent work, which has now reached as far as Harrows. It contains good articles on Fences, Flax, and Grasses. We extract the following on Goats:—

"The male of this species will engender at the age of twelve months, and the female at eight; but if the object be to have a good description of the animal, it is better not to rear those which are produced by parents so young. From two to five years of age the male is most vigorous, and the female bears her best kids from two to eight years, though she may be fruitful and live much longer. A young she-goat or emasculated male, if perfectly fat, is excellent meat as to flavour, though it is said to be indigestible comparatively with beef and mutton: a well-fed kid is delicious for the table.

"No one presuming to call himself a farmer, or possessing shrubs and plantations, would think of keeping these animals, unless confined in a yard as pets for children, who ought at a very early age to acquire habits of tenderness and care for every gentle and domestic animal; but to the mountaineer, in his wild and lonely solitudes, goats are a source of subsistence and profit. If at liberty, these hardy creatures will find food enough among furze brakes, and apparently barren lands, where other animals would starve; because they eat a greater variety of plants than any other domestic animal. The sheep comes nearest to them in this particular; it being supposed that the latter eats 400 varieties of vegetables, while the goat will eat 500 kinds. Horses and cows, again, reject about one half of what are palatable to the sheep. But this calculation is on the supposition that some plants, though rejected by these different animals under circumstances favourable to the gratification of their appetite for other food, will be eaten by them when hungry, or at particular seasons, though rejected at others; so that a fixed rule, as to what plants any of them will absolutely reject or consume, cannot be laid down. The goat, however, is certainly the least fastidious of them all; berry plants, indeed, are poisonous to them; but they thrive on some which are noxious to other animals, and can feed on common Hemlock, which is decidedly a poison for cows, and which, though it will not kill the ass, causes it, from its narcotic powers, to fall into a state of insensibility, in which it shows no signs of life.

"The female goat, when giving milk, should, like all other females in the same state, be well fed; in proportion to the succulence and abundance of the food which she relishes, will be her secretion of milk, and salt will be found highly conducive to her general good condition. To those who are unable to keep a cow, the goat is a treasure when giving milk, which she will yield for several months if well fed, at the rate of two quarts a day.

"The medicinal properties of goat's milk are well known; it is intermediate in its qualities between that of the cow and of the ass, being thinner than the first, and less serous than the second. It curdles easily, and makes a very palatable cheese. The largest and finest goats are in cold climates, and seem designed for our use in regions where the cow would not find sustenance, or even a secure place for her feet. The hair of the goat in some parts of the world is highly prized for its fine quality, and in our own country it is useful for linsey, and the skin is convertible into leather—of the morocco kind—or it is worn with the hair on by the Highland peasantry in winter, as an outside garment. It is surprising that goats are not much more numerous than they are in our Irish mountains, where they might be maintained almost literally without expense: to see a female kid so often sold by the necessitous poor for a shilling, though its life, if spared, would be so great a source of comfort to them, is a melancholy manifestation of extreme distress."

Selby's History of British Trees is now completed. To the many favourable notices of the work which have already appeared in this Journal we have only now to add that it forms a very handsome volume beautifully illustrated. It is the best compendium we possess of the qualities of the trees which constitute the woodland scenery of England; and, which is saying a great deal, it is in all respects worthy of being regarded a descendant of the Sylva of John Evelyn. The concluding Number is entirely occupied with Coniferous plants, and treats, among other things, of the Cedar of Lebanon—the bad quality of whose timber is admitted. Nevertheless, Mr. Selby adopts, without any question, the opinion that the Temple of Solomon was wholly constructed of it—a somewhat improbable circumstance, considering the quality of the material, and scarcely confirmed by the words of the Bible, as we have endeavoured to show at p. 765 of our *Chronicle* for last year.

Rivers' Descriptive Catalogue of Selected Roses for 1842 has just reached us. It is an excellent account of the Roses in cultivation, well classed, and with prices and short descriptions of each sort. It has also the varieties that are most remarkable for their fragrance, distinguished from the others by marks indicating the amount of fragrance. We recommend all lovers of Roses to procure this Catalogue.

CALENDAR OF OPERATIONS *for the ensuing week.*

Within the last few years, the benefit of getting the roots of fruit-bearing trees in some degree under our command, by confining them near to the surface of the ground, has begun to be appreciated; but even now that system is not by any means so generally followed as it ought to be. For the formation of fruit-tree borders, no general rule can be laid down which would be applicable to all cases: the practice must be regulated by the quality of the soil and by the nature of the sub-soil. That in which almost all kinds of fruit-trees are the most productive and the most permanent, is what is called "strong loam"; that is, loam rather inclining to a clayey than to a sandy texture. Perfect drainage is, however, essential in such soil, more especially if the under stratum is a stiff clay. To facilitate this, and to prevent the roots from penetrating into bad soil, a layer, six or eight inches thick, of stones, brick-bats, or other hard rubble, should be spread evenly over the bottom as trenching proceeds, observing particularly to make the bottom of the border quite smooth, and with a regular fall of six inches from the wall to the tile-drain, which must be laid along the front, a few inches below the bottom of the border, to carry off surplus water. The depth of soil should be governed by its texture and quality. Of such as is now treated of, two feet in medium depth will be amply sufficient for the support of any tree whatever. If of a more clayey nature, fifteen inches at the wall, gradually deepening six inches to the front of the border, is a proper depth. In very light soil, a greater depth should be given, say two feet or two feet six inches. Where the subsoil is not wet, nor in any other way inimical to vegetation, the layer of rubble at the bottom of the border may be dispensed with.

As we would diminish the depth, so likewise we would increase the width of wall-borders. Some writers have advised them to be as wide as the wall is high; but this is a very objectionable rule. For a twelve feet wall (and for permanent trees none ought to be lower) the border should be at least eighteen feet wide; if twenty, so much the better; but in that case the necessary walk along the front might be made to pass over the prepared ground, so that the roots could extend beneath it. In all cases, the surface of the border ought to be somewhat higher than the level of the walk, more or less according to circumstances. Where a garden is so unfortunately situated that thorough drainage is impracticable, the borders for the finer kinds of wall-trees may with great advantage be elevated a foot or more above the general surface. It is scarcely necessary to observe, that no stimulating manure should be mixed with the soil in which fruit-trees are planted.

If these hints, and those before given upon planting, be acted upon, and the branches are allowed ample space to extend, there will be but little necessity for the now fashionable system of root-pruning.

I.—KITCHEN-GARDEN AND ORCHARD.

In-door Department.

Pinery.—In case a great decline of bottom-heat, or any other circumstance, renders it advisable to renew the beds and regulate the plants now in preference to waiting for the usual supply of fresh leaves, it will be better to do so without further delay. If much fresh bark should be required to raise the beds to a proper height, the old bark need not be screened, and particularly if the added portion is fresh from the tan-yard; this, however, ought not to be the case if it can be avoided. Set all fruiting plants at the warmest end of the house, unless a compartment can be wholly devoted to them, which would be preferable, as they ought to have a minimum temperature of 65°, whereas 58° or 60° by artificial heat is sufficiently high for the general stock from this time till spring. Plants intended to show fruit soon after Christmas should also be placed in a house by themselves, where they can be kept comparatively cool and dry, so as gradually to suspend vegetation.

Vinery.—Prune the Vines in the succession houses as the wood ripens. It will be advisable also to check any signs of prolonged vegetation in those that are not yet fit to be pruned, by taking off all young growths that may continue to push. Persevere in washing the leaves if any red-spiders still remain.

Peach-house.—Most of the leaves will probably now part readily from the shoots; if so, they should be removed in the usual way. Continue to give air freely to all the houses that are covered.

Cucumbers and Melons.—For the latter, no further directions will be needed than those given last week. Cucumbers must be well attended to insure success. A temperature of about 70° should be maintained artificially, which will allow of a little air being given on comparatively cool and dull days. Stop the progressing shoots at every second joint, and pinch of all tendrils and young fruit that are not wanted to swell as soon as they appear.

Out-door Department.

The extraordinary fineness of the weather of late has caused many vegetables to attain such a size and succulence, that it is very questionable whether they will be capable of withstanding severe frost; it will be well, therefore, to try every method that presents itself to prepare such over-luxuriant plants against winter by giving them a temporary check. With this view, tall Broccoli which was not removed last month might be laid down as then directed, and those of more sturdy growth should be well earthed up.

Cabbages.—Plant out from the nursery-beds the largest of those which were originally purposed to remain there all winter, and replace them with any small plants from the seed-beds.

Cauliflowers.—Put out the hand-glass crop on a south border. Most persons fill the glasses with plants, and in spring remove all, except three or four of the strongest, to the open ground. A bed should also be pricked out in a dry place to be protected in severe weather by hoops and mats.

Garlic and Shallots may now be planted. To obtain very large bulbs, draw deep drills and fill them up with rich compost, in which single cloves are to be planted a foot apart. If worms are afterwards troublesome by drawing the bulbs out of the ground, dust a little quicklime along the rows.

Lettuce.—Young plants may be made less succulent, and thereby better able to bear cold, by pulling them up and exposing the roots to the sun till they begin to wither. When replanted, they grow more slowly, and are consequently hardier.

Turnips.—Hoe between or hand-weed the latest crop. The plants should likewise be thinned if they touch each other, or they will suffer from wet.

Orchard.—Lose no time in completing new fruit-tree borders before wet weather sets in. Unproductive wall-trees, whatever may be their size, if worth the labour, should be taken up and replanted near the surface. Cut away all roots that are too stubborn to lie horizontally, and spread out those which are retained after the manner of a fan-trained tree. A little fresh earth about the roots will be beneficial. When the leaves of Peach-trees begin to lose their attachment, they should be brushed off with a birch-broom.

II.—FLOWER-GARDEN AND SHRUBBERY.

In-door Department.

Stove.—Artificial heat will now be constantly required at night; 60° for the common stove, 65° or 70° for the warm Orchidaceous house, and about 50° for the cool one. All plants, such as the different species of Achimenes, which are beginning to die down, should be removed to a less prominent situation, and kept less moist than formerly, but not perfectly dry until they lose their stems and leaves.

Greenhouse and Conservatory.—If worms are troublesome in the pots, apply lime-water once or twice, which will either kill or bring them to the surface. Pelargoniums which are wanted to bloom early should be repotted and encouraged. Let them have the full benefit of light, and water with caution. As they advance in growth, the tuberous-rooted Tropæolums should be shifted into their flowering pots, and regularly trained to the framework over which they are intended to spread. The more delicate species must not be overpotted, as too much moisture rots their tender fibres. The pot in which the plant grows may be plunged into a larger one, to which the wire frame should be attached. Place the plants in an airy part of the house.

Pits and Frames.—All plants in pots which require shelter in winter, including Pinks, Stocks, Violets, &c., for forcing, ought now to be housed, in anticipation of frost. Useful structures for the preservation of half-hardy plants may be made by building walls of turf, and making a dry floor of brickbats covered with coal-ashes. In lieu of glass lights, the straw mats we have before recommended will form a roof in bad weather.

Out-door Department.

Scarlet and other Pelargoniums which have been left in the beds of the flower-garden, in order to prolong its beauty, should now be taken up and housed. Where a great stock of large plants is required for bedding out in spring, and there is not room enough for them in the houses, they may be wintered in any dry place which is inaccessible to frost, simply by cutting off all the leaves and covering the roots with dry mould or sand. Tall Fuchsias might also be hybernated in a similar way. Finish the planting of hardy bulbs, and take up Tigrídias, Marvel of Peru, &c.

NURSERY AND FOREST DEPARTMENT.

Nursery.—Continue to gather seeds of all required kinds. Rooted layers of all deciduous trees may now be taken off and planted in rows.

Forest and Coppice Woods.—At this season of the year planting ought to supersede all other wood-work; thinning and felling can be done any time during the winter.—*J. B. Whiting, The Deepdene.*

State of the Weather near London for the Week ending Oct. 20, 1842, as observed at the Horticultural Garden, Chiswick.

Oct.	Barometer. Max.	Barometer. Min.	Thermometer. Max.	Thermometer. Min.	Thermometer. Mean.	Wind.	Rain.
Friday 14	30.209	30.204	57	42	49.5	W.

Sat. 29	53.7	35.9	44.8	6	0.42	2	3	2	—	3	4	1	1

The highest temperature during the above period occurred on the 24th, in 1833—thermometer 68°; and the lowest on the 28th, in 1836—thermometer 23°. In 14 years out of the last 16, the 27th has been wet.

REPORT ON COVENT GARDEN MARKET,

For the week ending Oct. 21, 1842.

The supply of Fruit during the past week has greatly exceeded the demand for it; consequently, trade is far from being brisk. *Fruit:* Pines are plentiful from 3*s.* to 5*s.* per lb.; amongst them are some fine specimens of the Providence. The price of Grapes remains unaltered. We observed a few Melons at 1*s.* 6*d.* each. Pomegranates have made their appearance, from 3*s.* to 5*s.* per dozen. Pears are somewhat cheaper than in our last account; the supply of Gansell's Bergamot is becoming limited: the Marie Louise, Louise Bonne, and Swan's Egg are, however, plentiful; the two former from 2*s.* to 3*s.* 6*d.* per half-sieve; the latter, from 2*s.* to 3*s.* per bushel. Excellent samples of the Catillac Pear are also selling at the latter price. Ribstone and Downton Pippins do not fetch more than from 3*s.* to 4*s.* per bushel. The Imperatrice Plums are of good quality, and are selling at 1*s.* per punnet. Damsons are less abundant, at 3*s.* and 4*s.* per sieve. There are plenty of English Walnuts, from 1*s* to 1*s.* 6*d.* per 100. Cucumbers are becoming scarce; the best fruit are selling at 8*s.* per dozen. *Vegetables:* There is an abundant supply of all kinds of Greens. A few French Beans may be met with, but it is probable that after this week their season will be over. Turnips are of excellent quality, and fetch from 1*s.* 6*d.* to 2*s.* 6*d.* per dozen bunches. Endive and Lettuces are well supplied; the former from 9*d.* to 1*s.* 6*d.* per score; the latter from 1*s.* to 1*s.* 6*d.* per score. Jerusalem Artichokes are plentiful, from 1*s.* 6*d.* to 2*s.* per half-sieve. Vegetable Marrows and Tomatoes have suffered from the late frosts, and are consequently less abundant. *Cut Flowers:* Caméllias, Roses, and Amaryllises are very good; and with Combretum purpúreum, Bignónia venusta, Picotees, Chinese Primroses, Pelargóniums, and Neapolitan Violets, make a pretty display.

PRICES, Saturday, Oct. 22, 1842.—FRUITS:—

Pine Apple, per lb. 3*s* to 5*s*
Melons, English, each, 1*s* 6*d*
Grapes, per pound, 1*s* to 2*s* 6*d*
— Muscats, per pound, 2*s* 6*d* to 3*s*
— Spanish, 9*d* to 1*s*
— Portugal 1*s* to 1*s* 6*d*
Plums, dessert, per punnet, 1*s*
Damsons, per sieve, 3*s* to 4*s*
Apples, dessert, per bush., 3*s* to 6*s*
— Kitchen, 2*s* 6*d* to 5*s*
Pears, dessert, per hf.-sieve, 2*s* to 5*s*
Berberries, per hf.-sieve, 4*s* to 4*s* 6*d*
Cucumbers, per doz., 2*s* to 8*s*
Oranges, per doz., 1*s* to 3*s*
Oranges, per 100, 8*s* to 24*s*
Lemons, per doz. 1*s* to 3*s*
— per 100, 8*s* to 20*s*
Almonds, per peck, 7*s*
Sweet Almonds, per pound, 3*s*
Chesnuts, per peck, 4*s* to 7*s*
Walnuts, per bush., 12*s* 16*s* 20*s*
Filberts, English, per 100 lbs. 65*s* to 70*s*
Cob Nuts, per 100 lb., 80*s* to 90*s*
Nuts, per bushel—
— Brazil, 16*s* to 20*s*
— Spanish, 20*s*
— Barcelona, 24*s*

VEGETABLES.

Savoys, per doz. 9*d* to 1*s*.
Cabbage, per doz. 6*d* to 1*s*
— plants, per doz. 1*s* 6*d* to 2*s* 6*d*
— Red, for pickling, 1*s* 6*d* to 3*s*
Brussels Sprouts, per hf.-sv. 1*s* 6*d* to 2*s*
Broccoli, per bunch, 6*d* to 1*s*
Cauliflowers, per doz., 2*s* to 4*s*
Beans, Kidney, per hf. sv., 2*s* 6*d* to 3*s*
— Scarlet, per hf.-sv. 1*s* to 1*s* 6*d*
Potatoes, per ton, 40*s* to 80*s*
— per cwt. 2*s* to 4*s*
— per bushel, 1*s* 6*d* to 2*s*
— Kidney, per bu., 2*s*
Jerusalem Artichokes, per half-sieve, 1*s* 6*d* to 2*s*
Turnips, per doz. bun., 1*s* 6*d* to 2*s* 6*d*
Carrots, per doz. bun., 3*s* to 5*s*
Red Beet, per dozen, 9*d* to 1*s*
Scorzonera, per bundle, 1*s* 3*d* to 1*s* 6*d*
Salsafy, per bundle, 1*s* 3*d* to 1*s* 6*d*
Horse Radish, per bundle, 2*s* to 5*s*
Radish, per doz. hands (24 to 30 each) 9*d* to 1*s*
Radish, Turnip, p. doz. bch., 1*s* to 1*s* 6*d*
Parsneps, per dozen, 9*d* to 1*s*
Spinach, per sieve, 1*s* to 1*s* 6*d*
Leeks, per doz. bun., 1*s* 6*d* to 2*s*
Onions, per bushel, 4*s* to 6*s*
— Green, p. doz. bun. 3*s* 6*d* to 4*s*
— Spanish, per doz. 1*s* to 5*s*
Garlic, per lb. 6*d* to 8*d*
Shallots, per lb., 1*s*
Lettuce, Cabbage, p. sc., 1*s*
— Cos, 1*s* to 1*s* 6*d*
Endive, per score, 1*s* 3*d* to 1*s* 6*d*
Celery, p. bd., (12 to 15) 9*d* to 2*s*
Small Salads, per punnet, 2*d* to 3*d*
Watercress, per doz. sm. bun. 4*d* to 6*d*
Parsley, per doz. bun., 1*s* 6*d* to 2*s* 6*d*
Tarragon, per doz. bun., 2*s* to 3*s*
Sage, per doz. bunches, 1*s* 6*d* to 2*s*
Mint, per doz. bunches, 2*s*
Vegetable Marrow, per doz., 3*d* to 1*s*
Tomatoes, per hf. sv. 2*s* 6*d* to 3*s*
Capsicums, Ripe, per 100, 4*s* to 4*s* 6*d*
Mushrooms, per pottle, 1*s* to 1*s* 3*d*

Notices to Correspondents.

We shall be obliged if our Correspondents, in their future communications, will take care that no general question relating to *different* subjects is asked in the same paragraph, and that each question is headed with the principal subject. *One side only of the paper should be written on*, so that we may separate each question. If these directions are observed, it will greatly facilitate our obtaining answers, and will enable us to arrange our Correspondence under general heads, separating those questions and answers which are of interest merely to individuals, from such as are of general interest.

Ammonia.—*An Original Subscriber* says—Suppose a tank be filled with liquid manure, consisting of equal parts of strong soap-suds and urine, and that when the latter was known by its odour to be giving off ammonia, sulphuric acid were added to fix it, would not the acid combine more readily with the alkali contained in the soap-suds, than with the ammonia evolved from the urine; and, consequently, until more acid were in the mixture than the alkali in the soap-suds could combine with, the ammonia in the mixture would remain unaltered? Now, if the alkali in the saponaceous portion of the mixture be not improved by the addition of an acid, there must, I take it, be a considerable waste of the latter, which might be prevented by keeping the urine and soap-suds each in different vessels. Would this be advisable if practicable? or would the whole mixture, the potash in the soap-suds being converted into a neutral salt, and the ammonia being fixed, be upon the whole the best? [He is perfectly right; when sulphuric or any other strong acid is added to urine, soap-suds, &c., the acid will first combine with and neutralise the potash or soda of the soap; and subsequently, if there be any excess of acid, it will unite with the ammonia; the affinity of the two fixed alkalies, as they are called, for acid is much stronger than that possessed by ammonia; hence, if we add only a very small quantity of acid to a mixture of urine and soap-suds, the whole of the acid added will very probably combine with the alkali of the soap, whilst the ammonia will not be fixed. It is most probable that the sulphate of potash or soda which is formed when sulphuric acid is added to the above-mentioned kind of liquid, constitutes a valuable part of the manure. It must be remembered that the alkaline sulphates cannot help to fix ammonia, but their presence in liquid manure is desirable; sulphate of potash is particularly useful, as many plants cannot thrive unless they have a due supply of that salt from the soil.—*E.*]——*G. Watson* asks what is the best substance to fix ammonia in liquid manure, so as not to render it thick, and what quantity should be used? For several reasons already given it is probable that sulphuric acid is the best and most convenient fixer for ammonia; the addition of this substance does not in any way interfere with the fluidity of the liquid, or prevent the use of a pump. If gypsum, however, be preferred for any local reason, the contents of the tank must be allowed to settle before drawing off the liquid manure; the white powder which settles at the bottom is a mixture of gypsum and carbonate of lime, and of course does not contain any ammonia. There is no general rule as to the quantity of acid or gypsum to be added; it of course depends on the quantity of ammonia in the liquid; enough must be added to prevent any pungent smell being given off; when that is perceived we may be sure that ammonia is escaping.—*E.*

Nitrate of Soda,—*An Amateur.*—The proportion of this substance which may be applied to autumn-sown Onions is small. You had better try at first what effect half-an-ounce, dissolved in a gallon of water, has upon them; but you should not apply it until the spring.—‡

Manures.—*C. B.*—No better means occurs to us for burning marl than a lime-kiln. If it should turn out that when burnt it is so much more efficacious than in its rough state, perhaps you would be so kind as to inform us. You could not use a better material than clay marl for consolidating the light soil of your garden. The effect of the burning is to convert the calcareous part of the marl into lime.—†

Salt.—*Adam.*—No doubt you may kill all sorts of weeds with salt, if given in doses of sufficient strength. Asparagus likes salt, and, therefore, takes no harm; but, on the contrary, is improved by its application. But if you give it to your Strawberries, you will be quite certain to kill them, for they do not like salt. The Strawberries will, however, take no harm if you apply the salt only to the walks between the beds.—†——*A Subscriber.*—It does not much matter whether salt is applied to Asparagus beds now, or in spring; but if it is spread over the beds at this time of the year, it is apt to be washed away from the roots.—‡

Lime-water.—*A. A.*—This is prepared by putting a quantity of quicklime into water; stir the mixture a few times and allow the lime to settle: the clear liquor which floats is what is used. It will destroy the worms near the surface of the ground, without injuring your Roses.—‡

Mushrooms.—*J. D.* writes to us thus:—"I have constructed a house lately on Oldacre's principle, with a flue passing along the front and one end of the house, and with tiers of shelves on the back part. I had the beds built about the middle of August, with short dung taken from an open shed where horses are constantly kept. The dung, when broken to pieces and put together, fermented, but not violently. When the heat had sufficiently subsided, the beds were made about 10 inches deep; they were spawned in the usual way, and covered with loam and horse-droppings mixed together. The latter were taken from an engine-house where horses pump water to supply the mansion and garden. The beds worked well at the commencement, but have since turned out a complete failure. Quantities of Mushrooms make their appearance, but immediately become soft and tough, similar to leather, and it is a great chance if one arrives at perfection. I at first attributed this failure to drought, in consequence of which I watered the beds with tepid water, and had some sweet fermenting dung put into the house; this caused a perfectly sweet, humid atmosphere, but the beds did not appear to be in any way renovated by it. I have grown Mushrooms for some years, and I never was so beaten before. What degree of heat is sufficient to destroy the vegetative properties of Mushroom-spawn?"—[If this statement is correct, the only probable solution which we can give is, that the boards of which the shelves are composed have been formed of Kyanised timber. Should this have been the case, it at once accounts for his failure. The smallest amount of heat required to destroy Mushroom spawn is not known.]—‡

Cucumbers.—*J. S. B.*—If you *can* grow Cucumbers in winter, we do not see why plants raised from cuttings should not succeed quite as well with you as those raised from seed. We cannot, however, see your object in rearing them from cuttings when seedling plants are so much more easily obtained. It is doubtful whether Cucumbers can be procured with *certainty* in M'Phail's pits during winter.—‡

Vines.—*A Constant Reader.*—You will not injure your Vines by removing the old and useless wood now. There is no danger of their bleeding at this season of the year, and if any of the wounds are large and commence bleeding in the spring, you may easily stop the flow of sap by pressing into the pores of the wood a paste formed of one-fourth of calcined oyster shells, beaten to a fine powder, and three-fourths of cheese, well worked together.—‡

Heating Pits.—*Suburban* states that he has built a pit 10 ft. square, with a good drainage into an adjoining ditch. A pier rises in the centre, from which spring two arches, the pier and the arches being flued. Over the arches is a course of hollow tiles, the joints of which are well cemented to prevent the entrance of rank steam. The sides of the pit are also flued. Having an abundance of stable litter, he proposes to keep these arches constantly filled with hot dung, hoping to obtain a regular heat of 80 deg. [We doubt not but he may maintain a good temperature by this means; but for what purpose does

Mr. Wheeley; 2, H. Stokes, Esq.; 3, Mr. Webb. MANGEL WURZEL, Mr. Wheeley. PARSNEPS, 1 and 2, Mr. Wheeley. SWEDISH TURNIPS, 1, E. Peel, Esq.; 2, Lord Vernon. *White*, Mr. J. Willroy. *Red Top*, 1, Mr. Wheeley; 2, Rt. Hon. Sir R. Peel, Bart. SHEEP CABBAGE, Lord Vernon. *Red*, 1, J. Pye, Esq.; 2, Capt. Inge. CAPE BROCCOLI, Capt. Inge. BLUE POTATOES, 1 and 2, Mr. Wheeley. *White*, 1, Mr. Wheeley; 2, Mr. J. Willcox. *Kidney*, 1 and 2, Mr. Wheeley. SCOTCH KALE, Mr. Wheeley. TURNIP RADISHES, Capt. Inge. FRENCH BEANS, Capt. Inge. Numerous Cottagers' Prizes were also awarded.—[It will be seen from the above report, that the names of the winning Dahlia flowers have not been furnished by the exhibitors to the secretary. It would perhaps be advisable to make it a rule on future occasions, that unless a list is handed in with the flowers, the prize-money will be withheld.]

Whitefield Horticultural Society, Oct. 15.—The annual meeting for the exhibition of Celery and other garden Vegetables was held at the house of Mr. James Mather, Church Inn, Whitefield; when the following prizes were awarded:—CELERY—1, 2*l.* 10*s.*, *White Italian*, weight 12 lb. 10 oz., Mr. J. Smith, gr. to R. Phillips, Esq.; 2, 1*l.* 10*s.*, *Seymour's White*, weight 12 lb. 9 oz., Mr. J. Davies, gr. to J. Richardson, Esq.; 3, 1*l.* 5*s.*, *Seymour's White*, weight 12 lb. 2 oz., Mr. T. Berry; 4, 1*l.*, *Seymour's White*, weight 11 lb. 7 oz., Mr. T. Deavonport; 5, 15*s.*, *Seymour's White*, weight 10 lb. 10 oz., Mr. J. Lord; 6, 12*s.* 6*d.*, *Seymour's White*, weight 9 lb. 9½ oz., Mr. W. Chorlton, gr. to P. M. James, Esq. APPLES—1, *Alexander*, Mr. W. Jones, gr. to Mrs. Bealey; 2, *Cheshire Maid*, Mr. W. Jones; 3, *Ribstone Pippin*, Mr. W. Chorlton. PEARS—1, *Gansell's Bergamot*—2, *Catillac*, Mr. W. Chorlton. MELON—1, Mr. W. Jones. Bleakley. WHITE CABBAGE, Mr. W. Ogden. VEGETABLE MARROW, Mr. J. Swaile, gr. to A. Thomas, Esq.

NOTICES OF NEW PLANTS WHICH ARE EITHER USEFUL OR ORNAMENTAL.

PENTSTEMON GENTIANOIDES: var. splendens. Gentian-like Pentstemon, splendid variety. (*Half-hardy Herbaceous Plant*).—Scrophulariáceæ. Didynámia Angiospérmia.—The flowers of this singularly handsome variety combine the scarlet of P. gent. coccínea with the dark reddish crimson or purple of the original species. In its tints it eclipses all the other known varieties. There is little doubt but that this showy plant is a genuine variety, raised from Mexican seeds, and not obtained by English art, through the medium of culture and hybridization.—*Paxton's Bot. Mag.*

STA'TICE MONOPE'TALA; var. denudata. Naked Monopetalous Sea Lavender. Plumbagináceæ. Pentándria Pentagýnia.—This is a well-marked variety of Státice monopétala, having smaller and paler flowers, a more "drawn up" manner of growth, broader leaves, somewhat wavy at the edge, and a much smaller quantity of calcareous scurf. No trace of it is found in books, and it is probably of garden origin. The Horticultural Society received it from the Botanic Garden of Leyden, under the erroneous name of Státice suffruticosa. It is nearly hardy, requiring only a slight protection during winter, when planted in the open border; but it suffers from damp. It flowers during the autumn months, grows freely in any rich light soil, and is easily increased by cuttings of the young wood, treated in the ordinary way.—*Bot. Reg.*

AE'RIDES CRISPUM. Sir Richd. Brooke's Air-plant. (*Stove Epiphyte.*) Orchidáceæ. § Vándeæ. Gynándria Monándria.—This species is a native of Coustallum, a small place near the southern point of the peninsula of India, and is certainly one of the finest of its race, well worthy of a place in all collections of merit. In cultivation it requires a hot and damp stove. When suspended upon a block of wood, or in a copper wire basket, from the rafters, it will grow luxuriantly with very little care, providing it is well supplied with water. If there is a cistern in the house, it ought to be hung above it, as it evidently likes the moisture which is continually evaporating from such a place. When not in a growing state, less water should be given than at other times, but it should never be kept too dry.—*Bot. Reg.*

HELLEBORUS OLY'MPICUS. Olympian Hellebore. (*Hardy Herbaceous Plant.*) Ranunculáceæ. Polyándria Pentagýnia.—A native of the Bithynian Olympus, whence it was sent to the Horticultural Society by Mr. Sandison, her Majesty's Consul at Brusa. It is a hardy herbaceous plant, requiring a rather moist situation, and peat soil to grow in. It is easily increased by dividing the old plants when in a dormant state, or by seeds, which should be sown directly they are ripe, in pans filled with light rich soil.—*Bot. Reg.*

SOPHRONITIS GRANDIFLORA. Large-flowered Sophronitis. (*Stove Epiphyte.*) Orchidáceæ. Gynándria Monándria.—This interesting plant is a native of Brazil, and flowered for the first time in this country in the collection of Messrs. Loddiges, of Hackney, in October 1841. For so diminutive a plant, the size of the flowers is really extraordinary, and the stalk is made to curve downwards, apparently with the weight of the blossom. The colour is a rich cinnabar, variously tinted with crimson and orange, and pale orange or deep yellow in the centre. When in flower, the plant is not unlike a dwarf Cattleya; and this appearance, combined with the novelty of its colour, in relation to that genus, makes it peculiarly interesting. The most natural way of growing this plant, is to fasten upon a *small* log of wood. If a small portion of moss be placed around the bottom of the pseudo-bulbs, and over the younger roots, it will form a nucleus for moisture, and keep them shaded. This species flourishes well in a house that is only moderately warm and moist, and should have rest for three or four months, beginning at December. It is increased by taking off one or more of the pseudo-bulbs in spring and placing them upon another block.—*Paxton's Bot. Mag.*

ERICA NEI'LLII. Dr. Neill's Heath. (*Greenhouse Shrub.*) Ericáceæ. Octándria Monogýnia.—This lovely Heath is a hybrid between E. aristata major and E. linnæoides. Its habit slightly resembles that of E. aristata, but is better, and has more of the erectness and bushiness of E. linnæoides. The flowers are produced in terminal clusters, and are of a deep pink, inclining to light purple at the base, and gradually becoming paler till it passes into white in the limb. It was raised by Mr. M'Nab, of the Edinburgh Botanic Gardens.—*Paxton's Bot. Mag.*

MISCELLANEOUS.

The Dial of Flora.—The period at which certain flowers expand, if correctly noted, is well worthy of attention, and sometimes presents remarkable phenomena. The greater part of the vegetable kingdom appears to be unaffected by this circumstance, and blossoms alike at all hours of the day; but a certain number, belonging to totally distinct genera, are evidently affected by some diurnal influence. The list of plants arranged in the order in which they expand constitutes what Linnæus, in his metaphorical style, calls Flora's Dial. The period of their expansion during summer at Paris is as follows:—Between 3 and 4 in the morning,—Convólvulus Nil and C. sépium; between 4 and 5,—the Tragopogon, with several other Chicoraceous plants, and Matricária suavéolens; at 5 o'clock,—Papaver nudicaule, and the chief part of the Chicoraceous tribe; between 5 and 6,—Momórdica elatérium, Lapsana communis, and Convólvulus trícolor; at 6 o'clock,—Hypochæris maculata, several species of Solanum, and Convólvulus sículus; between 6 and 7,—the various species of Sonchus and Hierácium; at 7 o'clock,—the Water Lily, Lettuces, Camelinas, and Prenanthes muralis: from 7 to 8,—Mesembryánthemum barbatum, Campánula spéculum, and Cúcumis Angúria; at 8 o'clock,—Anagallis arvensis; between 8 and 9,—Nolana prostrata; at 9 o'clock,—the Field Marygold: between 9 and 10,—the Ice plant; between 10 and 11,—Mesembryánthemum nodiflorum; at 11 o'clock, the Purslane, Ornithogalum umbellatum (called, on that account, Lady 11 o'Clock), and Tigrídia pavónia; at noon,—most of the Ficoideæ; at 2 in the afternoon,—Scilla pomeridiana; between 5 and 6,—Silene noctiflora; between 6 and 7,—the Nightshade; between 7 and 8,—Céreus grandiflorus, Mesembryánthemum noctiflorum, Œnothera tetráptera and Œ. suaveolens: lastly, about 10 at night,—Convólvulus major, called by gardeners the *Belle de jour*—no doubt, because they always find it expanded before they rise. These phenomena, in conjunction with the duration of the flower, have divided those plants which bloom periodically into two classes: 1st, Ephemeral flowers, which open at a stated period, and fall or close regularly the same day, and at nearly the same hour. There are diurnal ephemeral flowers, that is to say, those which expand during the day; such as the different species of Cistus and Linum, whose blossoms open between five and six in the morning and fall off before noon; and nocturnal ephemerals, such as the night-blowing Cereus, which expands about seven in the evening and closes about midnight. 2dly, Equinoctial flowers, which open at a stated hour, and close again the same day at a fixed period, then reopen again on the morrow, and sometimes for several days successively, at a certain hour. There are, as in the preceding, diurnal equinoctial flowers, such as Ornithógalum umbellatum, which opens for several days successively at 11 in the forenoon, and closes at three in the afternoon; and nocturnal equinoctial flowers, such as the Mesembryánthemum noctiflorum, which opens several successive days at seven in the evening, and closes between six and seven in the morning.—*De Candolle's Physiologie Végétale.*

Ancient Pickles.—In a vase discovered in the ruins of Herculaneum, the Abbé Facciolati found an Orange in vinegar. It appeared the Romans pickled Oranges as we do Girkens. This pickle has been preserved for 1780 years!—*Manchester Guardian.*

A Gigantic Hollyhock.—There is now growing in the grounds occupied by Mr. W. Dent, grocer, at Nettleton, near Caistor, a Hollyhock, of the height of 15½ feet, and beautifully flowered from near the root to the top.—*Manchester Guardian.*

Vegetable Monster.—At the meeting of the North Suffolk and South Norfolk Agricultural Association, Sept. 21, "a great natural curiosity was exhibited, being a small branch of a tree, the leaves on one-half of which are Horn-beam, and on the other American Oak. There are three of these trees now growing near each other in the county of Norfolk, all of the same description. They are apparently of twenty-five years' growth, and it does not appear that this remarkable phenomenon has ever before been observed."—*Country Newspaper.*—[We really cannot help wondering that the well-informed editors of newspapers can insert such stuff as this.]

GARDEN MEMORANDA.

Woodhall, the seat of A. Smith, Esq.—The mansion is a modern structure, built by Sir T. Rumbold, delightfully situated upon an elevated part of the park, and overlooking the river Beane; which, in its course through this demesne, expands into a broad serpentine piece of water. The park contains some old trees, of large dimensions, and is beautifully diversified by hill and dale. The present owner has removed the wooden fence which used to form the boundary, and has replaced it by a brick wall. Upon the lawn we noticed some fine Cedars, and a few large specimens of the Copper Beech, Portugal Laurel, Flowering Ash, &c. At a short distance from the mansion is a small conservatory, in which the plants look healthy, although by no means rare. The Kitchen and Forcing Garden is situated at a distance from the mansion; it was laid out by Malcolm, and is probably one of the finest of the kind in that part of the country. This was in after years the field in which the able Griffin carried on his experiments, under whom some of the best practical men of the present day were tutored. This place is now under the directions of Mr. Davis, of whose practical knowledge we have a proof from the products which were exhibited by him at the three fêtes of the Horticultural Society. We can only add that the garden, especially in the Forcing department, reflects great credit upon Mr. Davis. We may observe that this part of Hertfordshire is one of the best fields for rewarding the investigation of the lover of native plants, as in our numerous walks in this locality we have, among other beautiful species, met with the following: Paris quadrifólia, Stratiotes aloides, Parnássia palustris, Hottónia palustris, Ophrys apífera, Chlora perfoliata, Ophrys muscifera, Adoxa moschatellina, Neóttia spiralis, Anagallis tenella, Polemónium cærúleum, Orchis latifólia, Fritillária meleagris, Lístera ovata, Allium ursinum, Epipactis latifólia, Helleborus fœtidus and víridis, Platánthera bifólia, Chrysosplénium oppositifólium, Orchis pyramidalis, Monotropa Hypopithys, Aristolóchia Clematitis, Hyoscyamus niger, Gentiana Amarella, Láthyrus Nissólia, Malva moschata, Genista pilosa, and many others which we cannot now enumerate. We were struck with the scarcity of Quercus sessiliflora in the county of Hertford, where, as it is a district which produces so much Oak timber, we thought of finding it in tolerable abundance.—*J. A., Sept. 22.*

Fairbairn's Nursery, Clapham.—At this place is cultivated in great perfection that most interesting tribe of plants, the Heaths. We observed, in particular, numerous specimens of Erica Willmoreana and E. Linneana superba, which had during the season made shoots at least 2 ft. in length. The collection of Epacris is also good, and comprises the best varieties in cultivation; when in flower, these will make a beautiful display. Amongst the Heaths in bloom are E. Lambértia rósea, a rich flesh-coloured variety, of a much deeper tint than the old E. Lambértia; E. cerinthoides magnífica, with the lower part of the tube lightish pink, and the upper half of a bright vermilion colour; E. grandinosa nana, a prolific bloomer, with transparent white flowers; E. transparens nova, remarkable for the length of time which the flowers continue to expand in succession; at their first appearance, these are almost colourless, but gradually assume a deep rosy colour. A great number of the delicate E. grácilis and E. arbúscula, loaded with their little purplish bells, gave the house a gay appearance. Although Heaths and Epacrises are the principal objects of cultivation here, yet the Azáleas, Borónias, and Leschenaúltias are not less worthy of notice. By being allowed an abundance of air, whenever practicable, in order to render them as hardy as possible, and to enable them the better to withstand the approaching winter, they have assumed that deep green tint, which is so characteristic of perfect health.—*R. A., Oct. 17.*

Reviews.

Martin Doyle's Cyclopædia of Practical Husbandry. WE have received the 6th Part of this excellent work, which has now reached as far as Harrows. It contains good articles on Fences, Flax, and Grasses. We extract the following on GOATS:—

"The male of this species will engender at the age of twelve months, and the female at eight; but if the object be to have a good description of the animal, it is better not to rear those which are produced by parents so young. From two to five years of age the male is most vigorous, and the female bears her best kids from two to eight years, though she may be fruitful and live much longer. A young she goat or emasculated male, if perfectly fat, is excellent meat as to flavour, though it is said to be indigestible comparatively with beef and mutton: a well-fed kid is delicious for the table.

"No one presuming to call himself a farmer, or possessing shrubs and plantations, would think of keeping these animals, unless confined in a yard as pets for children, who ought at a very early age to acquire habits of tenderness and care for every gentle and domestic animal; but to the mountaineer, in his wild and lonely solitudes, goats are a source of subsistence and profit. If at liberty, these hardy creatures will find food enough among furze brakes, and apparently barren lands, where other animals would starve; because they eat a greater variety of plants than any other domestic animal. The sheep comes nearest to them in this particular; it being supposed that the latter eats 400 varieties of vegetables, while the goat will eat 500 kinds. Horses and cows, again, reject about one half of what are palatable to the sheep. But this calculation is on the supposition that some plants, though rejected by these different animals under circumstances favourable to the gratification of their appetite for other food, will be eaten by them when hungry, or at particular seasons, though rejected at others; so that a fixed rule, as to what plants any of them will absolutely reject or consume, cannot be laid down. The goat, however, is certainly the least fastidious of them all; berry plants, indeed, are poisonous to them; but they thrive on some which are noxious to other animals, and can feed on common Hemlock, which is decidedly a poison for cows, and which, though it will not kill the ass, causes it, from its narcotic powers, to fall into a state of insensibility, in which it shows no signs of life.

"The female goat, when giving milk, should, like all other females in the same state, be well fed; in proportion to the succulence and abundance of the food which she relishes, will be her secretion of milk, and salt will be found highly conducive to her general good condition. To those who are unable to keep a cow, the goat is a treasure when giving milk, which she will yield for several months if well fed, at the rate of two quarts a day.

"The medicinal properties of goat's milk are well known; it is intermediate in its qualities between that of the cow and of the ass, being thinner than the first, and less serous than the second. It curdles easily, and makes a very palatable cheese. The largest and finest goats are in cold climates, and seem designed for our use in regions where the cow would not find sustenance, or even a secure place for her feet. The hair of the goat in some parts of the world is highly prized for its fine quality, and in our own country it is useful for linsey, and the skin is convertible into leather—of the morocco kind—or it is worn with the hair on by the Highland peasantry in winter, as an outside garment. It is surprising that goats are not much more numerous than they are in our Irish mountains, where they might be maintained almost literally without expense: to see a female kid so often sold by the necessitous poor for a shilling, though its life, if spared, would be so great a source of comfort to them, is a melancholy manifestation of extreme distress."

Selby's History of British Trees is now completed. To the many favourable notices of the work which have already appeared in this Journal we have only now to add that it forms a very handsome volume beautifully illustrated. It is the best compendium we possess of the qualities of the trees which constitute the woodland scenery of England; and, which is saying a great deal, it is in all respects worthy of being regarded a descendant of the Sylva of John Evelyn. The concluding Number is entirely occupied with Coniferous plants, and treats, among other things, of the Cedar of Lebanon—the bad quality of whose timber is admitted. Nevertheless, Mr. Selby adopts, without any question, the opinion that the Temple of Solomon was wholly constructed of it—a somewhat improbable circumstance, considering the quality of the material, and scarcely confirmed by the words of the Bible, as we have endeavoured to show at p. 765 of our *Chronicle* for last year.

Rivers' Descriptive Catalogue of Selected Roses for 1842 has just reached us. It is an excellent account of the Roses in cultivation, well classed, and with prices and short descriptions of each sort. It has also the varieties that are most remarkable for their fragrance, distinguished from the others by marks indicating the amount of fragrance. We recommend all lovers of Roses to procure this Catalogue.

Home News.

COURT.—Her Majesty and Prince Albert, with the Prince of Wales and the Princess Royal, are still at Windsor Castle, and in excellent health. It is expected that the Court will leave the Castle for Brighton on the 1st Nov., and remain there for a month.—The preliminaries for the marriage of her Royal Highness the Princess Augusta of Cambridge have been finally arranged, and the ceremony will take place at no very distant period. His Royal Highness the Duke of Cambridge arrived at Windsor on Wednesday last, for the purpose of communicating the fact to her Majesty. The future husband of the Princess is his Royal Highness the hereditary Grand Duke of Mecklenburg Strelitz, the eldest son of the reigning Duke George V. It is expected that the ceremony will take place on the Continent.—Her Majesty the Queen Dowager and suite left Cranford House on Monday to honour the Earl of Shaftesbury by her company at St. Giles'-house.—Her Royal Highness the Duchess of Gloucester left Ravensworth Castle, after a visit of some days, on Monday, on her return to Gloucester House, and visited Sir Robert and Lady Peel, at Drayton Manor, on her way to the Metropolis.—His Imperial Highness the Archduke Frederick of Austria, with Capt. Fitzroy and the noblemen constituting his suite, return to Mivart's Hotel on Tuesday next, from a tour in Yorkshire, Durham, and Scotland.

Bankruptcy Commission.—The following is a correct list of the new bankruptcy commissioners, and of their several destinations. It differs in some respects from those previously published:—Birmingham, Mr. Balguy (Q.C.), and Mr. Daniell; Liverpool, Mr. Skirrow (Q.C.), and Mr. Charles Phillips; Manchester, Mr. Sergeant Ludlow and Mr. Jemmett; Leeds, Mr. M. J. West and Mr. Montagu Bere; Bristol, Mr. Sergeant Stephen and Mr. Stephenson; Exeter, Mr. Sergeant Goulburn; Newcastle, Mr. Ellison.

Horse Guards.—The Duke of Wellington, as Commander-in-Chief, has issued a general order in reference to the corps of Yeomanry employed during the recent disturbances in the manufacturing districts. This order states that his Grace "has discharged a duty the most gratifying to himself, by reporting to the Queen, through her Majesty's Secretary of State for the Home Department, his Grace's sense of the promptitude and alacrity with which these corps assembled for the preservation of the public peace, regardless of the inconvenience to which a separation from their private avocations and pursuits, at that season of the year, must have exposed them. The Duke of Wellington did not fail to report to the Secretary of State, for the information of the Queen, at the time, his Grace's deep sense of the gallantry, discipline, activity, and forbearance evinced by the Yeomanry in the performance of the delicate and important duties with which it became necessary to entrust them, for the support of the magistracy in the restoration and maintenance of the public peace, the protection of private property, and the preservation, to every individual of the community, of the right to work as he might himself be inclined, according to the terms of his agreement with his employer." This document is accompanied by a letter from Sir James Graham, conveying to the Duke of Wellington her Majesty's gracious approbation of the services performed, as well by the Yeomanry as by her Majesty's troops.

Foreign.

FRANCE.—The French journals congratulate themselves and the country, not without reason, on the returns of the three quarters' revenue, published by the Ministerial papers. An increase of consumption and of revenue is observable in every item; and the *Journal des Débats* contrasts this fact with the result of Sir R. Peel's financial efforts. It states that the amount of the indirect taxation has attained in the present returns a higher one than at any previous period, the increase on 1840 being 42,774,000f., and on 1841, 25,372,000f. The details are not only satisfactory in the amount, but the increase has been on articles consumed by the poorer classes of society. Native, or beet-root sugar, has increased 33 per cent., and colonial 8 per cent.; whilst the customs have advanced 11 per cent., stamp duty 6 per cent., and potable liquors 4 per cent. These results are the more remarkable, as the increase has not been obtained from any extraordinary system of taxation, but in spite of considerable reductions in the custom-house tariff, and on almost all the indirect taxes.—The abortive project of the commercial union with Belgium continues to be the topic of the journals last received. The French cabinet could not agree on the terms, the members not being unanimous on the subject; the political men alone were in favour of the union, while the men of business opposed a strong resistance to the measure. M. Martin, Minister of Justice, is connected with the coal interests of the northern departments. M. Cunin Gridaine was a cloth manufacturer. The Ministers connected with commerce cannot reconcile it to themselves to ruin their own manufactures by opening the French market to Belgian competition. The military and war party, on the other hand, declare that political advantages will outweigh commercial loss. The Ministerial papers are silent on the subject, but the Liberals discuss it without reserve. They admit the disadvantages consequent on a commercial treaty, but declare that a political union cannot otherwise be brought about. The higher commercial classes in France are, however, so opposed to it, that their union can never, probably, be carried, except as the result of a popular clamour, similar to that which forced them to vote the fortifications of Paris.—A report is current in various circles that Count Molé and M. Thiers are about to enter the Cabinet. The Republican papers consider that it is more than probable. M. Thiers has boasted that he could arrange the negotiations pending with Belgium, and induce the Chambers to agree to a commercial treaty with England, and it is well known that M. Guizot is most anxious to effect some arrangement which may include both countries.

The Capital.—A general inventory of the diamonds, pearls, and jewels of the crown of France has just been made. This process was first made under the empire in 1810. A verification of that inventory took place under Louis XVIII., on his return from Ghent, whither those jewels had been carried during the Hundred Days; and all the different pieces having been taken asunder, the diamonds, pearls, and jewels which composed them weighed and valued, it was found that those jewels amounted in number to 61,312; that they weighed 18,751 7-32 carats, and were worth 20,900,260f. A new verification has now been made, in virtue of the law of the 2d of March, 1832, by Messrs. Bapst and Lazare, the jewellers of the crown, and no change has been found either in their number, weight, or value.—Notwithstanding the death of the Duke of Orleans, the great patron of the turf, it seems to be determined that everything shall be done to keep up with spirit the amusement of horse-racing in France, and in consequence to encourage the breed of horses. The king has given his patronage to racing; the Government supports it by liberal donations; the aristocracy, in imitation of the king, favour it with their patronage; and the mass of the people follow the general example.—The papers announce that a small mosque will be built next winter in the Champs Elysées, for the Mahomedans residing in Paris.

French Post-office.—The propositions for a revision of the Post-office tariff between France and England, submitted to the English Government on the part of the French authorities, have been received in a spirit which promises the desired results, and the bases of the prospective arrangements are understood to be as follows:—The French Government consents, as regards all letters to and from England and France, to apply the same tariff as for letters in the interior of this country; and the English Government, on its part, agrees to reduce the uniform charge of tenpence to threepence, so that a letter from Paris to London, or from London to Paris, which now costs two francs, would only cost ninepence in London, or ninety centimes (eighteen sous) in Paris; and the postage for letters beyond the weight at which the single rate is now charged would experience a reduction on the same scale. In addition, it is offered by the French Government to reduce considerably the charges for the transit of letters from England, through France, to the East Indies, and other points. In addition to this, the daily papers announce, with satisfaction, that the Marseilles road is now definitively open for expresses, and that for the future no impediments will be thrown in the way of their couriers.—Another question of some interest, namely, that relating to the right of personal search, claimed by the Post-office agents, has been decided by the Court of Cassation against that administration. The criminal chamber of that court lately enacted that the search, authorised by the decree of 27th Prairial, year 9, cannot be extended beyond certain limits, formally specified therein; that the provisions of that decree are not applicable either to the persons of travellers or to their effects; and that consequently the latter ought not to be subjected to an obligation that is not imposed on them by the law. The pretension of the Post-office to search the persons or baggage of travellers for letters has thus been pronounced unfounded by the highest legal authority in the kingdom, and resistance to that pretension declared lawful.

SPAIN.—Our advices from Madrid are of the 10th inst. The official *Gazette* contains a decree of the Regent, extending the benefit of the amnesty of the 30th of Nov., 1840, to the Carlists, subalterns and privates, still under confinement, who were not included in the convention of Bergara. All the Moderado journals loudly complain that the Christino exiles should be excluded from this act of mercy, and declare that a measure betraying so strongly the feeling of the present rulers of the country is little calculated to consolidate their power.—On the 8th inst. the anniversary of the crushing of the Christino insurrection of October, 1841, was celebrated with great pomp, and passed off without any incident. The safeguard of the Palace had been exclusively confided to the National Guard, and the Queen, her sister, the Regent, the Ministers, and the civil and military authorities, assisted at a solemn *Te Deum*, chanted in the Royal Chapel. It was observed that the Regent had on no former occasion displayed so much state.—On the 10th, Queen Isabella II. completed her 12th year. The Guardian had decided that no Levee should be held by her Majesty on that day, but permitted the Palace to be illuminated in the evening.—The well-known Maroto, the signer of the Bergara Convention, having lost his property at the gaming-table, was preparing to leave Madrid for Cadiz, with the intention of embarking, it is said, for South America, to try and retrieve his fallen fortunes. He had been latterly in great poverty.—The papers announce that the offers to construct a navy for Spain by some foreign capitalists, on the condition of having the privilege of cutting down the great oak forests, could not be accepted.

PORTUGAL.—We have Lisbon news to the 10th inst. In the absence of the Cortes there was little of any interest going on at Lisbon. Intrigues against the Government as lately constituted; difficulties in raising money, unless at exorbitant interest; the tariff question still unsettled, and apparently likely to continue so for some time; speculations as to the future fate of the Ministry; and new elections for twenty deputies to supply the vacancies caused by the double returns,—are the principal topics of intelligence, but the details have no interest for the general reader. The affair of the slaver Gloria is still unsettled.

BELGIUM.—The Brussels papers publish the reports made by the gentlemen sent to Guatemala to explore that country, with the view of ascertaining whether the foundation of a Belgian colony would be practicable and desirable. They recommend St. Thomas as much preferable to Vera Paz. Speaking of the English settlement at Abbotsville, they say, "The English colony is in a miserable condition; most of the settlers do not work; they are idle drunkards, and lead an irregular life. This unhappy result must be ascribed to the bad management of the enterprise. The settlers arrived in a country where nothing had been prepared, where they are tormented by the mosquitoes, and where the means of communication are difficult. Accordingly, they were soon discouraged; they have not continued to clear the land, and have made no use of that which is already cleared. It must be said that the situation of the colony was badly chosen with respect to the climate. The diseases which followed, and those which originated in the intemperance of the settlers, added to the suffering of the colonists. The best of the settlers, including the Protestant clergymen, have emigrated. It having been stated that the company intended to send a hundred settlers at the end of this month, the secretary of the company contradicts this statement, and says that the company will send at first to St. Thomas a few persons only who will employ the natives in cutting down the woods, clearing and sowing the ground for the first settlement, and erecting the habitations—not for 100 settlers, but only for 25 or 30, with their families, who will not set out till at least twelve months after the first, and will, in their turn, and with assistance, prepare the land and habitations of those who are to follow them."

HOLLAND.—The opening of the Session took place on the 17th, with a speech from the throne. His Majesty alluded to the recent marriage of his daughter, and took a general view of the financial prospects of the country. The speech was unusually long and comprehensive in its matter. The King at the conclusion said—"I shall have nothing more at heart than to contribute to perfect concord during this session. On this point I reckon on the co-operation of all, each in the circle which is assigned him by the fundamental law; and for my part, I hope faithfully to fulfil the high duties which Providence has imposed upon me. When the Prince, in harmony with his people, seriously aims at promoting the general good, the blessing of the Almighty may be confidently hoped for."

HANOVER.—The official *Gazette* of the 14th inst. contains a Royal decree, by which his Majesty King Ernest gives his consent to the marriage of Prince George of Cumberland with the Princess Alexandrina, of Saxe-Altenburg, born the 14th April, 1818, and eldest daughter of the Duke of Saxe-Altenburg, formerly Hilburghausen. The mother of the Princess is a daughter of Duke Louis of Wurtemberg. The reigning Duke of Saxe-Altenburg has four daughters and no son. His sisters are married to Prince Paul of Wurtemberg and the King of Bavaria, and his brothers are connected by marriage with the houses of Mecklenburg-Schwerin, Hohenzollern, &c. Prince George of Cumberland will have attained his 23d year on the 27th May next.

GERMANY.—A number of German papers had given different versions of an impressive address delivered by the King of Prussia to a body of the clergy that came to pay their respects to his Majesty at Minden, during his late progress through his Rhenish provinces. The *Westphalian Mercury* declares inaccurate all the versions that have hitherto appeared, and gives the following as the true one:—"After the King had thanked the clergy for the sentiments they had manifested towards him, and particularly for the confidence they had expressed in his disposition towards the Evangelical Church, he added that the voice of calumny had published so much respecting his views and endeavours as regarded ecclesiastical affairs, that it would be difficult for him to preserve silence altogether. Things utterly inconsistent with the spirit of the age, nay, downright absurdities had been gratuitously attributed to him. Among other matters, it had been said he contemplated the enactment of laws for enforcing a strict observance of the Sunday. Now, there was certainly something very beautiful, something of great national importance, in the holy observance of the Sunday; but he was far from thinking of attaining so desirable an end by the enactment of outward laws. That end could be attained only by the religious habits of the people; and those habits must be formed by the endeavours of the clergy themselves. Much, he was well aware, remained to be done in the church; but he had no wish to force anything upon the church by legal violence. On the contrary, his own opinion was that the church ought of her own accord to repair the defects that still existed in the church, and he was not disposed to deprive her of the office." The Frankfort papers publish the following reply of his Majesty to a deputation from the citizens of Königsberg, who waited on him to remonstrate against the appointment of Dr. Hoevernik as Professor of Theology, on account of his religious opinions. The sentiments it expresses are quite in accordance with everything which proceeds from this enlightened Sovereign. The King said, "I have received your remonstrance against the minister Eichhorn. These remonstrances are not only directed against Professor Hoevernik, but against me; for the minister Eichhorn has acted in my name. The minister is an honest man, although the youth of Germany call him *muckler*, &c. I repeat it, the minister is an honourable man, and I approve of what he has done. You complain of Dr. Hoevernik, because, you say, he committed a fault 15 years ago, when he was young. I have ordered he require 80 deg.? In the depth of winter 70 deg. is quite sufficient for anything.]—†

Grapes.—*A Friend.*—The Poonah Grape may be obtained under that name at most of the principal nurseries in England.—‡

Clayey Soils.—*A. A.*—Rotten sawdust, soot, road-sand, and lime rubbish are all valuable agents in lightening heavy soils. The following trees and shrubs are suitable for a clayey soil, provided it is not very wet:—Quercus rubra and coccínea; Turkey, Fulham, and common Oaks; most kinds of Alder and Ash; Quinces, Hollies, Deciduous Cypress, Portugal and common Laurel, Berberries, Yew, Lime-trees—particularly the White and American ones; Beeches, Elms, Chesnuts, Acer platanoides and macrophyllum; Thujas, Red Cedar, Silver Firs, the Deodar and Common Cedar, Plátanus orientalis and occidentalis, Ribes, Cotoneasters, the different kinds of Cratægus and Philadelphus, Althæa frutex, Euónymus latifólius, Rhamnus, Víburnums, Medlars, Privet, Cytisus, Spiræa ariæfólia, and other strong-growing kinds; Tartarian Honeysuckle, Pyrus A'ria and spectábilis, and Moutan Pæony.—‡ ¶

Hardy Fuchsia.—*H. K. M.* forwards to us a specimen of a Fuchsia, in order to learn what species it is. She states that a plant of it, six feet high, was planted beside, and tied to, pillars supporting a balcony, and that it was entirely unprotected through the whole of last winter, although the situation lies high and exposed; the extreme tips only of the branches were injured, and early in spring the plant sent out buds all over, which are now flowering most luxuriantly.—[The specimen was completely withered when we received it. It appears to be F. Riccartónia, one of the best of the old kinds.]—‡

Leyceste'ria formosa.—*N. S. H.*—This plant is perfectly harmless and may be introduced with the Snow-berry as food and cover for game.—‡

Pruning.—*Anonymous.*—Prune hardy plants in the autumn; tender ones in the spring, after the severe frosts, because the branches afford some protection to the latter during winter. When you do prune Ceanothus azúreus, cut it back to the sound and strong wood.—†

The Acacia.—*M. W.*—In all probability the roots of your favourite Acacia, which is losing its branches, are in some uncongenial soil. Is the ground WELL drained? if not, that will account for it.—†

Epiphyllum truncatum.—*Suburban.*—Your plant which is now showing bloom, will flower much better in a temperature of 65° than in one ranging between 75° and 80°.—‡

Ipomœa rubro-cæru'lea.—*Suburban.*—You should keep all your plants of Ipomœa rubro-cærúlea in a warm greenhouse or stove during the winter, giving them water sparingly until they begin to grow in spring. Re-pot them at that time, or plant them out in the border of the stove; when they grow freely, supply them liberally with water. With this treatment, and ordinary care, they will flower in high perfection.—§

Brugmansia sanguinea.—*Suburban.*—It is not improbable that your plant, which has lately been brought from the open air into the Greenhouse, drops its blooms on account of the house being so much drier than that of the exterior air to which it has been accustomed.—‡

Wintering Plants.—*H. B.*—Sálvias, Fúchsias, and similar plants, which it is wished to preserve through the winter, should be taken up with a good ball of soil attached to them, and placed in pots of such a size as will conveniently hold them. Any common garden-mould will do for the purpose of potting them in, and if too stiff, it may be rendered lighter, by mixing a portion of leaf-mould with it. If the plants are placed in a cool frame, and protected from frost, they will keep very well through the winter: air must, however, be given at all favourable opportunities, and water must be administered with judgment—‡

Pinks.—*A Subscriber.*—You will find the following 24 Pinks, first-rate show flowers. The Pink named Hope is to be obtained of Mr. Neville, Meeting-house Lane, Peckham; we believe the stock is very limited.

Creed's President
Neville's Hope
" Zephyr
Brown's Garland
" Eclipse
" Model
" Acme
Cousens' Little Wonder
Norman's Henry
" Defiance
Hodges' Gem
" 166
Unworth's Omega
Robinson's Blackheath Hero
Garrett's Alpha
Cousens' Coronation
Hall's 360
Wallace's Unique
" Indispensable
Holmes' Coronation
Coppen's Duke of Bedford
Young's Marquis of Winchester
Kean's Ne plus ultra
Ibbett's Triumphant

Onions.—*M. G. B. A.*—It is not improbable that the cause of Onions growing thick-necked may proceed in some measure from the bad quality of the seed. It is well known that most persons choose the largest Onions to replant for seed, in preference to those of a middle size. The former generally have thick necks, and it is not surprising, therefore, that in spite of the late dry season, and their being grown on poorish land, a part of their progeny should also be inclined to be stiff-necked.—‡

Bulbs.—As the beds in which you intend to plant Hyacinths and Tulips are situated in a conspicuous part of the flower-garden, which you wish at all times to keep as gay as possible, you had better take up the bulbs as soon as their beauty is past, and lay them in by the heels in some sunny part of the garden, until the leaves and stalks are entirely withered.—‡

Grafting.—*John Jones* says he has read somewhere of grafting the Weeping Willow on an Ash plant, in order to procure a tall, straight, tough stem; he adds, that he has tried several times to effect this union without success, and he asks us or any of our correspondents to help him. We can assure Mr. Jones that he might just as well try to multiply a bushel of Wheat by a quart of water. The thing is impossible.—†

Beurre' Spence.—*J. Abell.*—The Beurré Spence is not known; the varieties received as such in this country having proved synonymous with Beurré Diel, Beurré de Capiaumont, and others.—‖

Potatoes.—*K.*—There is no good mode of multiplying Potatoes more rapidly than by sets. As every eye will grow, we cannot comprehend the necessity of seeking for more expeditious means, even if they were attainable, which they are not. Cuttings may be easily struck, but they will yield very little return for the trouble. *Le jeu ne vaut pas la chandelle.*—†

Tomatoes.—*N. S., A Housekeeper, and others.*—We fear we have been very unintentionally the cause of some astonishment to you by the directions given last week for the preparation of Tomato-ketchup. By an unlucky blunder of the printer, 4 lbs. of salt are ordered to be used instead of a ¼ lb.; if any one has been unfortunate enough not to discover this mistake, his Tomato-ketchup will be *rather* too salt. Tomato-sauce is made thus:—When the Tomatoes are quite ripe, cut them in two, press out the pulp, and separate the seeds; then put them into a skillet, with some savoury sauce, and a little salt. When of the thickness of pea-soup rub it through a coarse cloth, boil it to the consistence of marmalade, put it into jars, and in a day or two after pour over it lard or butter, and tie down with oiled paper. The French direct savoury sauce to be made thus:—To 4 lbs. of veal fat, from the kidneys, cut small, add 1½lb. of ham, 1½lb. of rasped bacon, 5 or 6 chopped Carrots, 8 small Onions, a large bunch of Parsley, 3 Cloves, 2 Bay-leaves, some Thyme, Basil, Mace, 3 Lemons (sliced, without peel or seed), and 1 lb. of butter; boil them in any weak broth; skim; simmer for five or six hours; strain, and keep the liquor for use.

Scale Insect.—*A Constant Reader.*—In order to destroy the Scale which infests your Pear-trees, observe when the young insects issue from below the scales in spring. Being then naked, like mites, they are exceedingly tender, and may be washed off, before they form new habitations by means of a brush and water; lime-water is, however, preferable. The washing should be occasionally repeated till such time as the old habitations are deserted. Those situated on the stem and naked parts of the branches may be mostly removed with a scraper or wire-brush. The stem may be finally scoured quite clean with a coarse cloth, sand, and water.—‖

Gardeners' Societies.—We have received a copy of the Hammersmith Gardeners' Mutual Instruction Society. The following regulations may be adopted generally with advantage to all concerned:—"During the time any member is delivering his subject, no person will be allowed to make observations, or in any way to cause obstruction. Any member introducing any subject not relating to horticulture, at any of the meetings before ten o'clock, will be fined one penny; and any member making any improper observation will be fined one penny; also any member differing in opinion from a fellow-member, and expressing such differences in an uncivil or ungentleman-like manner, will be fined threepence for each offence. Any member found intoxicated *will not be allowed to enter into discussion.* [For this we should read, "*will be expelled.*"]

Works on Gardening.—*W. D. W.*—You will find M'Intosh's Practical Gardener a useful work, as it gives full directions respecting the management of the flower-garden and greenhouse.—‡

Miscellaneous.—*T. S.*—It is utterly impossible to form any opinion of the merits of a Pansy after it has passed through the Post-office with no other protection than a letter-cover.—‡ ——*C.*—We will undertake to publish from time to time such lists as you speak of.—‡——*Arabella.*—You will find a select list of Pelargóniums in last week's *Chronicle.*—‡——*Hockey.*—Your plants are Limnócharis Humboldti, Ceropégia élegans, and Thunbérgia Hawtayneana.—‡——*M. G. B. A.*—Your Fern is the Grámmitis Céterach, and is rare. Your other question shall be answered shortly.—‡——*A Constant Reader* had better procure "Rivers' Rose Amateur's Guide."—‡——*Deptford.*—We cannot speak with certainty regarding the species of spider sent; it is an Epeïra, and we are inclined to think that it is only a variety of the Aranea diadema of Linnæus.—*R.* ——*R. E.*—Your plant is Colletia spinosa, a half-hardy shrub, of no beauty. It bears small green flowers.——*W. O.*—See a Leading Article of to-day.—†——*A Regular Subscriber* has not sent the lungs of the Oak, Sticta pulmonácea, of which an account and figure will be found at p. 84 of this year's *Chronicle*, but the lichen called Peltígera canina. The only *quite* hardy Rhododendrons are the varieties of R. pónticum, catawbiense, máximum, davúricum, ferrugíneum, hirsutum, and the R. campanulatum.—†——*Wilts.*—Your plant is Argyreia speciosa: a fine thing.—†——*A Farmer.*—You will find good directions for converting the mud of ponds into manure, in a paper by Professor Sprengel, at p. 545 of this year's *Chronicle.*—‡——*H. E. B.*—Your Moth is the Scoliopteryx Libatrix, or Herald Moth; so called on account of its appearing plentifully in October, and thus, as it were, heralding the approach of winter.—‡——*A Subscriber.*—Your Vine is the West's St. Peter's, and is valuable on account of the length of time for which the fruit may be kept after it is ripe.—‡——*F. M. C.*—What *can* we make of half a score leaves, of a very ordinary aspect, and no flowers? Your plant may be Fuchsia thymifólia, and it may be 20 other things. —†——*An Original Subscriber.*—Your Oak seems to be Quercus palustris.—†——*Hockey.*—Do not suppose that your Fuchsia fulgens is a new variety, because it is a seedling. We would refer you, for some observations on this subject, to an article in the *Chronicle* at p. 579 of last year.—†——*A Constant Reader.*—Your plants are, 1, Dracocéphalum virginicum; 2, Linária speciosa; 3, Linária spártea; 4, Linária dalmática; 5, Linária triphylla; 6, Crucianella stylosa; 7, Sedum oppositifólium.—‡ ——*An Original Subscriber.*—Your seedling Pansy, named Empress, is a flower of fine form, and delicate yellow ground, with a fine, distinct, dark eye: it is decidedly a good flower.—* ——*K.*—The seedling Fuchsia is very inferior to many varieties at present cultivated; the colour is dull, and the form inferior. The crimson Pansy is deep and fine in colour: we hope to see larger blooms, as the specimen sent is too small for showing. —*——*Major, Knosthorpe.*—The white Pansy is a good flower of fine form, having a distinct and well-marked eye.—*——*F. Davies.*—The pencilled eye of your Pansy gives it a poor and weak appearance; the side petals are too small, and, considering the size of the flower, it wants substance.—*——*J. Schofield.*—Your Surprise is a fine, well-formed flower, of good substance; the eye is bold and distinct, and the broad margin of purple round the lower petals is shown to advantage by the deep mulberry colour of the upper ones. No. 12, white ground, is of no use, unless it comes larger. No. 20, of an extraordinary colour, but too small. No. 2, a flower of fine form and texture, of a deep mulberry hue; the band round the lower petals is very broad, leaving but a small centre: it is a distinct variety.—*——*R. C.*—The bloom of the seedling yellow Dahlia is small and thin; if it is the first flower that has opened, we recommend you to try it another season, as the colour is very fine, and the petal of a good form.—*——*Edwards.*—The deep crimson colour of your seedling Pelargonium is very desirable, and the petals are well formed. The texture appears rather thin; but the petals had fallen, and the flowers were so much pressed, that it was impossible to decide upon its other properties.—*——We cannot answer *S. S.* as to the probabilities. ——*J. R.*—You will find an account of the manner in which home-grown Tobacco is cured at p. 705 of last year's *Chronicle.* —‡——*Y.*—Your Barley is the Hórdeum hexástichon.—†——*A West Countryman.*—We will endeavour to give you the information you ask for about Covent-garden measures.——*A Constant Reader, Limerick*, shall have his wish attended to. ——*H. C.*—To give you such an amount of information as you request would be to write a treatise upon Mushroom-growing. You had better consult some good book on gardening affairs generally.——*C. D.*—Your plant is Gróbya galeata.——*Agarica.*—You have no notion how much time it takes to put correct names to Fungi; and, with all the desire in the world to give up that time to your service, we really are not able. *This once*, however, we have made out the following, viz.—3, Agaricus alutáceus; 6, A. muscárius; 9, A. repandus; 10, A. sórdidus; 7, Boletus æ'reus; 8, Lycoperdon gemmatum. The others were a good deal injured, and we did not recognise them.—†——*Anonymous.*—The plant is a Phytolacca, and apparently P. acinosa; its berries dye a most beautiful claret colour, but they are emetic. The hardiest Eucalypti are those from Van Diemen's Land—such as E. globulus, pulverulenta, and cordata. ——*A Constant Reader.*—Your Pears: are 1, Beurré Rance; 3, Moorfowl Egg; 4, Uvedale's St. Germain; 6, something worthless; 13, Easter Bergamot; 31, 54, Brown Beurré; 55, Williams's Bon Chrétien; 42, White Doyenné; 61, Beurré Diel. The Apples are: 4, Beachamwell; 13, Pearson's Plate, 16, 18, Golden Reinette; 21, Braddick's Nonpareil; 53, Old Nonpareil; 63, Turk's Cap; 64, Royal Russet; 73, Yorkshire Greening; 82, King of the Pippins; 84, Franklin's Golden Pippin; 91, Golden Harvey; 92, Golden Pippin.—‖——*M. C.*—Your Pears are: 1, Chaumontel; 2, Crassane; 3, Glout Morceau; 4, Brown Beurré. The Apples are: 5, Norfolk Beaufin; 6, New Golden Pippin. Your Crassane Pear, of which the fruit has generally cracked, has doubtless suffered from drought at one period of the season: when such is the case, fruit is apt to crack after an abundant supply of rain.—‖——*A Constant Reader.*—Your Pears are: 1, Passe Colmar; 2, 5, Beurré Diel; 3, 10, Duchesse d'Angoulême; Bon Chrétien Fondante; 6, Easter Beurré: White Doyenné; 8, Bèzi de Montigny; 9, Winter Nelis; 11, St. Germain. —‖——*A. S. M. F.*—Your Pears are: 1, Yutti; 3, Swan's Egg; 4, Uvedale's St. Germain; 7, Grey Doyenné; 8, 10, Easter Bergamot; 9, St. Germain; 11, Glout Morceau; 12, Bèzi d'Héri; 13, Duchesse d'Angoulême; 14, Passe Colmar; 15, Colmar; 17, Aston Town. The Apples are: 5, Norfolk Beaufin; 6, White Winter Calville.—‖——*M. E.*—Your Pears are: 1, White Doyenné; 2, 5, 6, 8, Glout Morceau; 3, Passe Colmar; 4, Catillac; 7, Seckle; 10, Easter Beurré; 11, St. Germain; 12, Colmar; 3, Beurré d'Aremberg.—‖——*J. Allman.*—Your Pears are: 1, Gansell's Bergamot: 2, White Doyenné. The late Plum, which you state hangs frequently good on the tree till Christmas, is Coe's Fine Late Red, the St. Martin Rouge of the French.—‖——*W. S.*—Your Pears are: 1, Louise Bonne; 2, Beurré Diel; 3 is not known.—‖——*Charles Kershaw.*—The Seedling Apples you sent we do not consider to be worthy of cultivation.—‖——*J. Abell.*—Your Pears are: 14, Marie Louise; 25 is probably the Doyenné Gris, from a late blossom. The Grape is the Black Frontignan.—‖——*A. V.*—Your Ribes is R. petræum, commonly called the Woolly-leaved Red Currant.—¶——*Bromley.*—Yes. It is the Fulham Oak.—¶——*J. C.*—Your Apples are: 2, Yellow Ingestrie; 3, Fearn's Pippin; 5, Blenheim Pippin; 7, Golden Reinette.—‖——*G. O'Grady.*—Your Pears are: 1, Napoleon; 2, St. Germain; 3, Uvedale's St. Germain; 4, Louise Bonne; 5, Seckle; 6 and 8, Brown Beurré; 7, Beurré Diel; 10, Easter Beurré; 11, Beurré Diel. Apples: 1, Golden Reinette; 2, Syke house Russet; 3, Hall-door; 5, Stagg's Nonpareil; 6, Alfriston.—‖——*Hardwick.*—Your Pears are: 1, Passe Colmar; 2, Swan's Egg. Apples: 4, Golden Reinette; 5, Scarlet Crofton; 6, Autumn Pearmain; 7, Bowyer's Russet; 8, Wyken Pippin, 9, Worthless; 10, Hall-door; 11, Famagusta; 12, Worthless. 3 is a tolerably good Apple not known. You may substitute better sorts for Nos. 7 and 10; the Swan's Egg Pear also is now apt to canker.—‖——*J. R. C.*—The No. for 10th April, 1841, may be procured through a bookseller. A complete set of the Nos. for 1842 cannot be had.

As usual, many letters have arrived too late for answers this week.

NEWS OF THE WEEK.

The rumoured disasters in Affghanistan published in an evening paper of Friday last, and noticed in our last Number, have been proved by circumstantial evidence to be unworthy of any credit, and we may therefore conclude that they are not, as at first supposed, exaggerated rumours of a new reverse, but are entirely unfounded in fact. Letters have been received of a date more recent than that which professed to give the particulars of these disasters; they make no mention of the circumstance, and from statements published in other quarters, there is little doubt that the name of the officer attached to the document has been used by some designing person as a means of personal annoyance.—The news from Canada contains further particulars of the late changes in the Government. The importance of the measure adopted by the Governor-General in carrying out the principles of a responsible Legislature is admitted by all parties, and the change is generally regarded as a new experiment in the system of Colonial Government. The first opponents of the measure acknowledge that the accession of the French Canadians to a due share in the Executive is likely to neutralise the disaffection of their party; and the House of Assembly, by a large majority, has voted an address to Sir C. Bagot thanking him for the measure, and hailing the event as one calculated to heal the unhappy dissensions which have hitherto prevented the colony from advancing in a career of prosperity commensurate with its natural advantages. —From France we have nothing of any interest beyond the details of the revenue for the three last quarters, and the discussion of the commercial union with Belgium. The revenue returns show an increase on every item, although considerable reductions have taken place in the custom-house tariff and on almost all the indirect taxes. The papers congratulate the country that these results have not been obtained from any extraordinary system of taxation, and that the increase has been on articles consumed by the poorer classes. The Belgium union makes little progress; although supported by the war party on political grounds, it is opposed so warmly by the commercial and manufacturing interests, that the possibility of effecting the union in the present state of the country is extremely doubtful. The propositions made by the French Government to our own Post-office, for a revision of the post tariff, have been favourably received; a considerable reduction in the cost of postage between France and England is already agreed on, and the French authorities propose to reduce the charges for the transit of letters through France to the East Indies and other parts. In addition to this, the Marseilles road has been thrown open to the English expresses, and there is no probability of a renewal of those impediments which have so often interfered with the due arrival of the India mail.—In Spain a decree has been published by the Regent, extending the benefit of last year's amnesty to the Carlists not included in the convention of Bergara. The measure has given great satisfaction to the Carlist party, but the exclusion of the Christinos from this act of mercy is the subject of severe complaint among those who regard the amnesty as a means of consolidating the power of the Government.

At home, the conclusion of the Special Commission leaves little subject for comment. At the close of the trials the Judges expressed the satisfaction they had experienced at the manner in which the different juries had discharged their duties, thanking them for the care and deliberation they had bestowed on the cases, and for the propriety of all their verdicts. They pointed out the miseries to which turn-outs have invariably led, both in this country and in France, and Mr. Justice Cresswell expressed his hope that as long as he sat on the bench he might never be called on to try such cases as those they had then disposed of. In this wish there is no doubt that every right-minded person in the empire will cordially concur.

CITY.

Money Market, Friday.—The funds have exhibited a good deal of activity during the week, and prices in general have advanced. Consols for money are at $93\frac{5}{8}$ to $\frac{3}{4}$; and for the account, $93\frac{3}{4}$ to $\frac{7}{8}$. Three per Cents. Reduced left off 93 to $93\frac{1}{8}$; Three and a Half per Cents. Reduced, $100\frac{3}{4}$ to $\frac{7}{8}$; New Three and a Half per Cents., $101\frac{3}{4}$ to $\frac{7}{8}$; Exchequer Bills, 56s. to 58s. prem.; and Bank Stock, $165\frac{1}{2}$ to $166\frac{1}{2}$.

Metropolis and its Vicinity.

Stock Exchange.—On Monday a meeting was held of the merchants, brokers, and others interested in obtaining an alteration of the hours during which Exchange business is usually carried on; Mr. Joshua Bates, of the house of Baring & Co., in the chair. Many of the most influential persons in the City were present. After a brief statement of the objects of the meeting, Mr. Lionel Rothschild moved the first resolution—"That, in consequence of much inconvenience having arisen from the late hour of meeting and remaining on 'Change, it is desirable that henceforth the Exchange be holden from three to four o'clock P.M., to close precisely at the last-named hour." He said that he had great pleasure in proposing the resolution for the adoption of the merchants and others present, as he was sure that it would be found to suit the convenience, not only of the firm with which he was connected, but of most other parties. Mr. Moffatt seconded the resolution. The merchants of London assembled for 'Change later than those of any commercial marts on the Continent, or of those of Liverpool, Bristol, and other places. He was quite at a loss to discover why this should be the case, the more so as the merchants of the city of London ought to set the example to other places. Mr. Simpson expressed some objection on the part of merchants engaged in certain branches of business dependent on the usual hours of the Docks and Custom House, and argued, that those in particular who were concerned in the timber trade could not complete their transactions by 4 o'clock. This was the only objection started, but it did not find a seconder, and therefore fell to the ground. Mr. Dallas then moved a resolution for the appointment of a committee to carry out the objects of the meeting. He concurred in the proposal for shutting the gates at four o'clock, as in winter weather, at the present 'Change hours, the merchants could hardly see one another. At Frankfort, Vienna, and other principal places on the Continent, 'Change hours were earlier than they were here. He was fully satisfied that great convenience would result from the proposed alteration being carried into effect. He therefore moved, "That a committee be appointed to carry the foregoing resolution and other matters connected therewith into effect." This resolution was seconded by Mr. Hutchins, and carried unanimously. A committee was then appointed, under whose superintendence the business of the Exchange will henceforth be transacted at the new hours.—In connexion with this subject, we may state that a proposal has been made to shorten the usual banking hours from 5 to 4 o'clock. The propriety of the change has been much debated, and its legality has even been called in question. The chief argument in favour of the change is the laborious duty which remains to be performed by the bankers' clerks after the close of business, the balancing of the daily accounts in some of the leading houses requiring their attendance as late as 10 o'clock at night. Many of the City bankers have declared themselves in favour of the alteration; but it is opposed by many influential parties, who are apprehensive that the loss of an hour at the close of the day may interfere with the due performance of business. At the West End it is opposed by Messrs. Drummond and other houses, who are apprehensive that if they shut their counter business at four o'clock, it would be inconvenient to those customers who are members of both houses of Parliament, who call at their bankers on their way to attend their public duties at five o'clock, during the sitting of Parliament. The Bank of England has not declared its views, and there is an impression that the measure will be delayed or abandoned in deference to the objections of the West-End houses. The agitation of these questions appears to have led to other reforms of the kind suggested in other quarters. It is announced that arrangements have been made by which the business at Mark-lane will be concluded an hour earlier than usual; and many tradesmen, in various parts of town, have agreed to close their shops at an early hour in the evening during the winter months. The wharfingers, also, in the neighbourhood of Tooley-street and the Tower, have come to a resolution of closing their warehouses at 6 in the evening, instead of 7, as at present.

Metropolitan Improvements.—The vacant ground in Wellington-street North, in the Strand, is at length about to be built upon. It is said that the reason the new street has been allowed to remain so long unfinished was, that there was some dispute arising out of a question of property between the Marquess of Exeter and the Woods and Forests, which has at length been amicably settled.—That part of Leadenhall-market belonging to the corporation is now in course of demolition, preparatory to the erection of a new and more convenient building. The old market, built entirely of wood, has stood for upwards of fifty years, and from the lowness of the roof and the want of proper ventilation was found seriously to affect the health of the dealers. The new building is to be built entirely of iron, having a concrete flooring; the roof will be lofty and light, and the benches are to be re-arranged, so as to allow of greater advantages to the salesmen and the public.

Middlesex Sessions.—The Sessions were held on Monday, for the purpose of receiving the Annual Returns of the Rentals of the different parishes. It appeared that the whole rental of the county is 5,990,000*l.*, being an increase on the returns of last year of 81,282*l.* Of this amount, no less than 1,975,000*l.* was situated in the three parishes of Marylebone, St. George's, Hanover-square, and St. Pancras. The return for Marylebone was 825,535*l.*, being an increase on last year of 17,819*l.*; that for St. Pancras was 557,040*l.*, an increase of 15,840*l.*; that for St. George's Hanover-square, 592,797*l.*, an increase of 7,509*l.*; and that for St. James's, 229,623*l.*, an increase of 183*l.* The return for St. Martin's-in-the-Fields was 241,950*l.* In Islington the rental has increased 5,626*l.*, the whole amount being 209,859*l.* In Whitechapel the increase was only about 800*l.*, the rental being 91,647*l.* The return from Shoreditch was 172,909*l.*; that from Hackney, 135,031*l.*; that from Limehouse, 41,619*l.*; that from Clerkenwell, 173,452*l.*; that from Shadwell, 20,398*l.*; and that from St. Luke, 130,472*l.*

Meeting of Magistrates.—On Thursday a numerous meeting of the magistrates of the county was held at the Sessions-house, to hear and determine upon applications for licenses for public dancing, music, or other entertainments of the like kind. The chairman, Mr. Sergeant Adams, presided. The only part of the proceedings which calls for notice, was the speech of Sergeant Adams in reference to the propriety of renewing a license to a place of public entertainment, at which the lower orders were able to obtain amusement of a harmless kind at a trifling cost. Several magistrates bore testimony to the respectable manner in which it was conducted, but some opposition had been offered, in consequence of money being taken at the doors on Sundays, although the house was on those days used only as an ordinary tavern. Sergeant Adams said that the evil of which some of his brother magistrates had complained, when speaking of, and very properly lamenting, the demoralisation of the lower classes of the Metropolis, was unfortunately of too deep a root to be within the reach of that Court. The Act of Parliament under which that Court had, for years past, been in the habit of granting music licenses to the proprietors of taverns and tea-gardens in the neighbourhood of the Metropolis, was hastily framed about ninety years ago, and under peculiar circumstances, arising out of the then political state of the country, and to prevent the holding of meetings for jacobinical purposes. Looking, however, at the district embraced by the Act of Parliament, extending as it did to twenty-six miles around the Metropolis, and the evident objects of which were to prevent a daily communication between the parties frequenting those assemblies, it was evident that such an object could not be attained in the present day, when the means of communication were so different and so rapid to what they were, and therefore it was an absurdity to suppose that such an Act could now be carried out in the manner, or have the effect contemplated, by the parties by whom it was framed; indeed, such had been the changes that had since taken place, that the Act itself, as far as regarded the object for which it was passed, was altogether inoperative. It had been well said by George III., that he hoped the day would come when every one of his subjects would be able to read his Bible. No person could more cordially join in that sentiment than himself; but it should be borne in mind, that whilst they gave every one the means of reading the Bible, they at the same time gave them the means of reading other works. The result of this was, that the great mass of the people had become more intellectual,—more intellectual in mind, more intellectual in inclination, more intellectual in spirit, and more intellectual in the nature and character of their pursuits. The people, then, having become more intellectual, it became the duty of those who had the means of doing so to provide them with some intellectual amusements. If such amusements were not thrown open to them, the Court might rely upon it that the people would seek and find them for themselves. The old system of sitting and sotting in a public-house was, thank God, happily being abandoned by the lower orders of society, and rational and intellectual entertainments must, therefore, be provided for them. The great evil was, that there was no act of Parliament authorising the opening of proper places only for the performance of music, except that which compelled the magistrates, on regular application being made to them by respectable parties, to grant these licenses to taverns and public-houses. What they wanted was a proper act of Parliament—an act suited to the exigencies of the day. He did not wish to name any particular place, but it at that moment occurred to his mind that some such room as that of Warnum's Music-hall, which was, he believed, entirely devoted to music and musical purposes, was the sort of thing that was required. They wanted these places separate and distinct from public-houses. He derived much delight upon one or two occasions in having witnessed the vast multitudes who had flocked to the Musard Concerts at the theatres. The crowds he had seen there had filled him with wonder, but not more so than had the excellent conduct of the mass who were present. But this was one of the admirable results of education. All, therefore, they had to do was to find places where the large masses of the intellectual inhabitants of the country could be accommodated with a view to their rational and moral edification and amusement. Let them, now that they had removed the blinkers from the eyes of mankind, take care that they were provided with such food in the shape of entertainment and profitable amusement for their minds, that the day might never arrive when that which had been intended to be a blessing to the people—namely, their education and enlightenment—should lead to evil results. He trusted that another session would not be permitted to pass without some legislative measure, the effect of which should put an end to the difficulties with which in these matters they were surrounded. When he saw the Victoria Park, when he saw the Cemeteries, each tending to the production of greater healthfulness and greater cheerfulness amongst the lower classes, he could not help feeling that they were calculated to carry men from "gazing on nature, up to nature's God himself;" and eventually to lead them to a pure contemplation of the revelations of religion. This address was much applauded by the meeting, and the licence was granted by a majority of 22 to 2.

Anti-Slavery Society.—On Tuesday last an address was presented to Lord Palmerston by a numerous deputation of the British and Foreign Anti-Slavery Society, expressive of their views of the eminent services rendered by him to the anti-slavery cause whilst in office as Secretary for Foreign Affairs. The address stated, that it was with unusual satisfaction that the committee (widely as they have differed from his Lordship on some not unimportant questions) felt themselves called upon publicly to record their high sense of the eminent services he had rendered to the anti-slavery cause, when occupying the office of Foreign Secretary under the late Government; and to tender to him, in behalf of the great body of abolitionists they represent, and of the millions now held in bondage, the tribute of their respect and gratitude. It expressed their satisfaction that amidst the exciting conflicts of party, and the laborious engagements of his high office, Lord Palmerston was not unmindful of the wrongs of Africa, nor of the claim which her enslaved children have on the sympathy and assistance of this country; and it referred to the recent papers relative to the slave-trade presented to both Houses of Parliament by her Majesty's command, "as a monument of the great ability, the untiring industry, and the generous zeal displayed by his Lordship in the cause of human freedom and happiness." Lord Palmerston, in his reply, stated, that if the powers who are bound by treaty with this country could be persuaded to act with good faith, the suppression of the slave-trade would in a great measure be accomplished. "The power and influence of England," he said, "is great, greater perhaps than many persons in this country are aware of. If that power and influence are steadily and vigorously exerted by the Executive Government, as I am sure that in this matter they will be; and if the Executive Government is well backed up and supported by public opinion and national feeling, of which in this case there can be no doubt; I am convinced that the unanimous determination of the British Government and British nation to obtain from foreign powers a faithful and complete execution of the engagements which those powers have entered into with Great Britain for the suppression of the slave-trade, will in the end be crowned with success. But for this purpose we must be firm and decided; we must not mind if we give offence to the guilty parties whose crimes we are endeavouring to punish or prevent; and we must not be stopped by clamour raised against us by those who are interested in the perpetration of these enormities which we are striving to put down. But, above all, we must not recede and go back in our course, for any symptoms of faltering on our part would give new courage and fresh hopes to the miscreants who commit these crimes." In conclusion, his Lordship said that he should always consider it as one of his first duties, as a public man, to do all that may lie in his power to promote the attainment of those great ends for the accomplishment of which the association has been formed.

Custom House.—The daily papers announce the sudden termination of the inquiry into the charges of fraud brought against the officers of the landing department of the Customs, at least so far as the Board of Customs is concerned, it having been intimated to this body by the Lords of the Treasury that it was the intention of Government at once to appoint a commission to investigate not only the truth of the present charges, but fully to analyse the whole constitution of the establishment. It appears that this early termination of the labours of the commissioners has been brought about in consequence of its having been intimated to the Secretary of State that it was the intention of the Board to suspend no less than seven other landing-waiters, men of character and of many years' service, upon the charge of having given credit or accommodation to importers, although the charge, as we stated in our last, was supported only by the evidence of a very doubtful witness.

The Tunnel.—A medal has been struck to commemorate the completion of the Thames Tunnel. It is executed by Mr. Taylor, from the designs of Mr. Warrington. The obverse presents a characteristic likeness in profile of Sir Isambard Brunel. On the reverse is an inscription mentioning the length of the tunnel, and its cost in the proportions paid by the shareholders and the country, with the dates of its commencement and recommencement. The size of the medal is about two inches in diameter.

St. Pancras.—On Friday, Messrs. Tremenheere and Twisleton, Assistant Poor-law Commissioners, commenced an investigation into the mode in which education, and particularly religious instruction, has been hitherto afforded to the pauper children of the parish of St. Pancras, under the direction of the parochial offices. The inquiry seems to have been specially directed to the proceedings at a recent examination of the pauper children, at which a Mr. Williams had interfered by putting questions calculated in the opinion of some of the parishioners to bring the religious education of the children into contempt. The particular points to which the investigation was directed, were the nature of the general education, the especial character of the religious instruction afforded to the children, the books commonly in use in the schools, the number and character of the teachers, their competency for imparting instruction, this affair to be looked into, and it is not such as you represent it. Who can look back upon his young days without finding such faults, and even greater ones? In fine, you complain that Dr. Hoevernik is too much devoted to the evangelical religion; I tell you I am very much devoted to it also. I have fallen into several errors in my life, and I have at last returned to that religion. I am proud of it, and as long as I govern, I will be its defender. You have not sufficiently looked into the circumstances which took place between Professor Hoevernik and his students; the guilty ought to have been punished. I am so much annoyed by this affair, that I would have given up the rectorate of the university, if agreeable reminiscences did not attach me to it, for I have frequented lectures in your town."—The *Leipzig Gazette* contradicts the statement of the Cartel convention for the mutual surrender of deserters between Russia and Prussia having been renewed even for one year. On the contrary, it states that the Viceroy of Poland has ordered the frontier authorities not to re-demand or give up any deserter in consequence of the expiration of the Cartel treaty.—A letter from Dresden informs us that, on the 4th inst., the Earl of Wilton, Sir C. Young the Garter King at Arms, Lord C. Wellesley, and Mr. Mellish, the secretary of the special mission for investing the King of Saxony with the Order of the Garter, had the honour of dining with his Majesty. The insignia, consisting of the garter, the ribbon, and badge, the cap and sword, were sent to the palace in four carriages, escorted by a double line of infantry. The ceremony of investiture took place on the following day, in the lesser hall of the palace. The King was seated on his throne, attended by the Queen, Prince John, and the Duchess Dowager of Mecklenburg Schwerin, who went to Dresden expressly to be present, and surrounded by his ministers. The Hon. F. R. Forbes, the British resident minister, was also present. On presenting the diploma, the Earl of Wilton delivered an address to his Majesty in French, to which the King made a reply in the same language. The ceremonials having been performed, the usual proclamation was made. In the afternoon there was a grand court dinner in the throne-room, during which toasts were given in honour of Queen Victoria and the King and Queen of Saxony.—In regard to the Overland Mail from India, it is now stated that the arrangements which have been pending for some time between Lord Lowther, the Postmaster-General, and the Austrian Director-General, for the transmission of the Overland Mail from India, *viâ* Suez and Alexandria, by way of Trieste, Vienna, Hamburgh, and Ostend, have been concluded. This new arrangement with regard to receiving the Overland Mail will in no manner affect the present treaty of sending *viâ* Marseilles to Malta, Egypt, and India, on the 4th of each month, and by the French mail-packets leaving that port on the 1st, 11th, and 25th of the month.

Italy.—The *Augsburg Gazette* of the 14th inst. states that a commercial treaty with Great Britain had been concluded at Naples. Under this arrangement British produce would pay 15 per cent. less than under the present tariff. It was not known what concessions had been made by the British Government.—Every traveller who has been in Italy in recent years has seen the beautiful picture of the Magdalen in the possession of Signor Vallati, the celebrated painter of wild-boar hunts. This picture, a repetition of the Magdalen of the Dresden Gallery, has been for six years the subject of constant litigation. It now appears that the Rota, the supreme court of the Papal States for both civil and ecclesiastical affairs, has pronounced judgment, by which it establishes a principle as to the selling of pictures, which has caused a great sensation among the picture-dealers of Rome. The history of the case is this:—On the 15th of November, 1836, one of the Roman princes made a public sale of several pictures, then in the gallery of the Odescalchi Palace. Among others, there was one of them in such a state of dilapidation that the subject could hardly be distinguished. This picture was bought for fifteen Roman crowns by S. Vallati, then a picture-dealer, living at Rome. The same day he made known to the public that he had just acquired a picture, representing the Magdalen, by Correggio, which surpassed in beauty that of the same master in the Dresden Museum, and which was bought for the sum of 15.000 sequins. He stuck up bills also, announcing that this masterpiece might be seen the following day at his house, as he was then occupied in cleaning and putting a new frame to it. On the 18th, just as S. Vallati's house was full of admirers, contemplating this picture, and which connoisseurs thought a real Correggio, two cursori (bailiffs) entered and seized the picture, at the request of the Prince, alleging for their motive that this picture had been bought at a vile price by S. Vallati, although he knew it to be a Correggio of considerable value. The Tribunal of Commerce, where this affair was judged, S. Vallati being a dealer, declared the sale of the picture good, and condemned the prosecutor to pay all the expenses. This judgment was confirmed in the Court of Segnatura, by appeal, with the exception of the payment of the expenses. The Prince appealed against this decision to the Roman Rota, which has pronounced the following sentence: "If a precious painting is discovered underneath a painting, which covered the former so as to conceal it entirely, it is to remain the property of the purchaser, particularly if he has gone to the trouble of cleaning it. If, on the contrary, in spite of the bad state of a picture, it reveals its great value, it must remain the property of him who sold it. The latter is the present case."—The Bologna papers contain distressing accounts of the effects of the storm which laid waste the whole of Romagna during the last days of September. Several villages had been actually converted into lakes; but the inhabitants had miraculously escaped, owing to the wise measures adopted by the authorities. The country everywhere presented a frightful picture of desolation.

Russia.—Letters from St. Petersburg give accounts of another dreadful fire in the Russian territory. It occurred on the 4th August in the town of Troitek, in the government of Orenburg, a place long celebrated for its extensive commercial intercourse with neighbouring Asiatic nations. The fire was caused by the long-continued drought and the great heat, during which a dry west wind blew without interruption. The barracks, the custom-house, the school, the prison, and 246 private houses, were destroyed. The principal Greek church and two Mahometan mosques were much injured. The high wind, which filled the air with clouds of sand, made it impossible to save any effects or domestic animals, all of which fell a prey to the flames. Two separate subscriptions had been set on foot at St. Petersburg, for the sufferers at Kasan, one by the Philanthropic Society, the other by the merchants. The Philanthropic Society headed the first subscription with 8,000 silver rubles. The subscription of the merchants amounted in one day to 94,000 rubles. A multitude of reports are in circulation respecting the Kasan fire, which the alarmists ascribe to a conspiracy of the Tartars against Russia. Some troubles have taken place in the Ukraine, where, it is said, a conspiracy against the Russian authorities has also been discovered.—Some curious statistics of the Russian Universities in 1841 have just been published in an official form. It appears that the University of St. Petersburg in that year had 58 professors, 400 students, and a library of 27,975 volumes; Moscow, 106 professors, 798 students, and a library of 65,927 volumes. Charcow, 77 professors, 391 students, and a library of 36,682 vols.; Kasan, so recently destroyed, 79 professors, 225 students, and a library of 34,748 volumes; Dorpat, 65 professors, 525 students, and a library of 64,776 volumes; and Kiew, 54 professors, 126 students, and a library of 52,157 volumes; so that the whole six Universities of Russia have 439 professors, 2,465 students, and libraries containing 282,265 volumes.

Turkey.—Letters from Constantinople to the 28th ult. state, that after all the negotiations so long pending in regard to Syria, European diplomacy had been foiled by the obstinacy of the Porte in refusing to yield to the demands made for the pacification of that country. The Porte addressed a note to the representatives of the Five Powers, on the 26th ult., in which it confirms the maintenance of the *statu quo* in Syria, and declines to make any other concession than the removal of the Albanian troops, whose presence in the Lebanon is declared to have been no longer necessary. Since that day the Porte had published a hatti-scheriff, in which, without having taken into consideration the representations of the European Powers, it establishes an administration for the Maronites and Druses purely Turkish, and appoints Essaad Pacha Governor of the Lebanon and Anti-Lebanon, with two Governors under his orders, one for the Druses and the other for the Maronites. It is added that an *ultimatum* had been forwarded to Persia. No news had been received from Servia. The *Augsburgh Gazette* of the 12th, in its correspondence of the 8th, from the Turkish frontiers, asserts that terror was the order of the day in Servia since the late revolution. Property and personal safety were menaced—continual arrests were made, a bishop being included in the number—whilst great excitement prevailed relative to the conspiracy to poison Prince Michael.—Letters from the frontiers, of the 5th, announce that the extraordinary commission charged by the new Servian Government to examine the administrative system of the ex-Minister Raschewitz had terminated its labours, and condemned him to a year's imprisonment in the fortress of Kienbzia, which sentence had been carried into execution, although the reigning party did not seem to have much confidence as to the future.—It is said that on the 28th, the representatives of Russia, Austria, Prussia, France, and England had a conference on the affairs of Servia and Syria, which lasted several hours. If we are to attach credit to this statement, the European Powers had declared against the new order of things, and were resolved to support Prince Michael. Russia is exonerated from all participation in the outbreak, and the blame is thrown on the Turkish Pachas, one of whom—Chekib Effendi, formerly Minister in England—is said to have received 50,000 ducats from Watschitsch as a bribe to report favourably of the revolution.

India.—The reported disasters in Affghanistan, and the alleged destruction of the 41st Regiment, prove, as we stated in our last, to be entirely without foundation. A letter has been received in town from Capt. Wetherall, of the 41st Regiment, which the letter published in the *Standard* last Friday represents as "cut to pieces." Capt. Wetherall is in command of a detachment of the regiment at Bombay. The letter is dated Bombay, Aug. 24, and is addressed to Mr. Wynn Williams, of the Temple. It says—"We are about to make an attack on Hydrabad after the monsoon, with 5,000 men, under Sir C. Napier. I shall have about 400 or 500 men of the 40th and 41st, I expect, under my command. The Ameers are possessed of immense wealth, and the place, though strong for natives, cannot resist cannon long, the walls being very high, but weakened by being so much loop-holed. We expect to go from this about the 10th of September." In addition to this, Colonel Derenzy, commanding the 86th Regiment at Bombay, has addressed a letter to his brother in London, which bears the same date as Major Messiter's. The Colonel says nothing whatever of the disastrous account given in the pretended letter of Major Messiter. Colonel Derenzy merely mentions the loss he has sustained by the death from cholera of his band-master, one officer, and twenty-six privates. A still more important fact is supplied by a letter received at Woolwich last week from Major Messiter himself, written a few days after his arrival in India from New South Wales, but there is not the slightest allusion in it to the 41st Regiment; and the near relations of the Major at Woolwich cannot imagine how such an account, as is said to have emanated from him, could have found its way into the columns of the *Standard*. In reference to this part of the subject, Mr. Curtis, of Glazen Wood, at Coggeshall, Essex, has addressed a letter to the daily papers, stating his belief that Major Messiter's name has been made use of by some designing person, as a means of annoyance to that officer. Mr. Curtis says, that "when Colonel (then Major) Messiter was stationed on detachment at Bathurst, in New South Wales, his death was formally announced in one of the Sydney papers. This had the effect of throwing his family into mourning for him in England. Last year, his marriage with a lady resident in Bathurst was as formally announced in the *Australian* newspaper. Upon this occasion I accompanied him to the office of that paper, for the purpose of contradicting the report, and endeavouring to discover the author of it. Now, as these reports were the productions of some mischief-making and impertinent idler, it may be possible that the present communication is of a similar character."

United States.—The mail steamer Acadia arrived at Liverpool on Friday night. She sailed from Boston late on the afternoon of the 1st inst., and from Halifax on that of the 3d, and has made the voyage under 14 days. She brought 33 passengers. The papers received by her are one day later from New York than those brought by the Great Western, but they contain nothing of interest, except the speech delivered by Mr. Webster, the Secretary of State, before his fellow-citizens of Boston, which had excited great attention as an able exposition of that statesman's opinions upon almost every topic of American politics, embracing the whole scope of his recent political career, touching on the late negotiations between Great Britain and America, pledging himself again to the "great national principle" of protection, and dwelling with emphasis on the criminal conduct of the "repudiating" States. Several other topics were introduced by Mr. Webster, as the Caroline and Macleod affairs, the bank question, &c.; but the most important point was that relating to the unprincipled doctrine of repudiation. Mr. Webster entered, with much feeling, on the deplorable state of the public credit, describing what he believed would be the concern of such men as Washington, Madison, John Adams, and other illustrious names in the history of the country, could they have an opportunity of witnessing it. He then proceeded to characterise the new system in language well calculated to shame his fellow-citizens into a more honest and reputable line of conduct, declaring the doctrine of repudiation "a stain which they ought to feel worse than a wound." Mr. Webster stated that he was ready to co-operate with those who have the patriotism to join him in removing as much as possible the foul stigma from the name of America, be the party to which they belong what it may. In regard to the relations with England, he alluded with satisfaction to the acknowledgment made on both sides to the principles of public law, and to the determination of the two countries to regulate their diplomatic correspondence in accordance with the dictates of justice. He repeated what he had before declared at a meeting in England, his firm persuasion that in any controversy between the United States and England, the only eminent advantage which either side will possess will be in the rectitude of its cause. "With right on our side," he said, "we should be a match for England—with right on hers, she would be a match for us, or for anybody."—The papers allude to the first arrest under the new treaty, a man named M'Kingey having been apprehended on the charge of robbing two tradesmen in Glasgow to a considerable amount. The new treaty provides for all such offenders, and in virtue of its provisions the prisoner has been delivered to the British authorities.—The following is an extract from a letter, dated New York, Sept. 29, giving an account of the progress of "American piracy by express:"—"I send with this a new novel, published in London, called 'Perceval Keene.' The first copy was received by the Great Western, and republished in 33 hours after its arrival here, and sold for 12½ cents (about 6*d.*) all over our city, in a paper called the *New World*."

Canada.—We have further news from Canada by the Acadia. The papers are filled with remarks on the revolution effected in that colony. Several new appointments had been made, amongst which is that of Mr. T. C. Aylwin, M.P. for Portneuf, to the Solicitor-Generalship of Canada East. It was expected that a general amnesty would be authorised by the Government towards all those who were banished for political offences during the rebellion, excepting, perhaps, Mr. Papineau. Questions were daily asked in the Legislative Assembly by Sir A. M'Nab and others, as to where the seat of Government was to be fixed, which were not resolved until the 26th ult., when a despatch from Lord Stanley was laid before the Assembly, in which the Home Government refused its consent to change the Legislative capital of Canada from Kingston to Toronto or Quebec. In reference to the late proceeding of the Governor-General, the House of Assembly had voted, by a majority of 55 to 5, an address to Sir Charles Bagot, expressing their thanks that his Excellency has invited that large portion of their fellow-subjects who are of French origin to share in the Government of the country, and thereby to carry into effect the just designs of the Imperial authority. The address also stated that the House hailed the event as one calculated to heal the unhappy dissensions by which Canada has been prevented from advancing in a career of prosperity commensurate with the advantages which Providence has placed at its disposal.

got under. A large quantity of the turpentine and cotton, however, was destroyed. On the first outbreak, some hundreds of barrels of turpentine in the shed, ready to be carted away, were saved. The fire was smouldering on Wednesday, although it is now three weeks since the first outbreak. The following detailed account of the damage done by the late conflagration is published in the local papers:—40,797 bales cotton, 12,987 barrels turpentine, 150 barrels rosin, 39 casks tallow, 60 tuns oil, 145 tons hemp, 14½ tons flax, 200 casks beef, 3,224 barrels flour, 800 sacks flour, 5 tons coffee, 5 tierces coffee, 57 casks tincal, 14 cases tincal. 108 cases quercitron bark, 60 casks horn tips, 37 tons logwood, 54 double bales madder, 416 barrels Indian corn, 6 packages Indian rubber, 3 crates teasels, and several packages and parcels of drugs.—Within the last week information has been received by the police which seems to leave no doubt respecting the fate of Mr. Bibby, who was found drowned in July 1840. Mr. Bibby was an eminent merchant, and a director of the Royal Bank in this city, and was much respected in commercial circles. It appears that three men, since convicted and transported, were concerned in the affair, and that one of them has recently confessed and made known the particulars. They confess to the robbery merely; but there is said to be no doubt, that after having robbed the unfortunate gentleman, they carried him off the road into the adjoining field and ultimately threw him into the pond.

Maidstone.—We are happy to learn that, notwithstanding the serious apprehensions entertained for the safety of Sir W. Geary, after the extraordinary accident noticed in our last, the Hon. Baronet is now considered out of danger. The wound in his throat is fast healing, he has recovered his sight, and many important functions which had been deranged have been restored. The interest excited by his serious accident has not been confined to this county—her Majesty and Prince Albert have graciously sent to make inquiries, and the anxiety for his recovery shown by all classes in Kent continues unabated.

Manchester.—On Friday the Annual Meeting of the Shareholders of the Manchester Bank took place, and was attended by so large a number of persons, that it was necessary to adjourn to more commodious premises. The report disclosed a more extraordinary system of mismanagement than has ever before been brought to light in connexion with joint-stock banking. Within a very short period, no less than 800,000*l.* has been lost; and, notwithstanding this, an additional call of 2*l.* per share is required for the purpose of making good deficiencies, without any reasonable prospect of an ultimate return. It appeared from the report that the direct liabilities of the bank amounted to 1,810,462*l.* 18*s.* 11*d.*, while the estimated net assets were 1,791,214*l.* 11*s.* 11*d.*, showing a deficiency of 16,248*l.* 7*s.*, exclusive of the entire capital of 741,030*l.*, and the reserved surplus funds and profit for the year, amounting in the aggregate to 43,609*l.* 8*s.* 9*d.*; these three items making together a total loss of 800,887*l.* 15*s.* 9*d.* The Directors concluded their report by stating officially, that Mr. Burdekin, the late manager, had absconded, and misapplied the endorsement of the bank to his own purposes. They admitted that they have exposed themselves to the severest animadversions, for having so fatally misplaced their confidence in a managing committee; and the only argument which they offered in proof of their having themselves been deceived, and in extenuation thereof, was the fact that they have been, and are still, among the largest shareholders, and consequently among the heaviest sufferers. A long discussion ensued, during which many shareholders expressed their belief that Mr. Burdekin's flight must have been connived at by other parties; and after much angry recrimination the report was adopted. In the course of the proceedings the chairman informed the shareholders that he should be deceiving them if he were to hold out the remotest hope that they would ever recover back any of their capital invested in the bank; but he thought that if the assets turned out in any way as he hoped they would, they might expect a portion of the present call of 2*l.* per share to be repaid.

Newcastle.—We learn by the *Newcastle Journal* that Grace Darling, the well-known heroine of the wreck of the Forfarshire steamer, is at present in a doubtful state of health. It appears that she caught a severe cold from exposure to rain during the spring, and has continued gradually to get worse. She was removed from the Fern Island Lighthouse to Bamburgh, and subsequently to Wooler, with a view to deriving benefit from a change of air, but her illness not giving way she was removed to Alnwick. Her father went soon afterwards to convey her home, and called at the castle to acknowledge his respects to his Grace the Duke of Northumberland, who had taken an interest in her welfare. The subject of his daughter's illness was mentioned, when his Grace immediately expressed a wish that she should not be removed, and forthwith caused comfortable lodgings to be provided for her and her sister, at the same time ordering medical advice, and everything calculated to promote her recovery. The Duchess, with Miss Percy, evinced their regard for her, and frequently visited her during her stay. No improvement, however, taking place, the young woman—who seems to be universally respected for her exemplary character—has been removed to Bamburgh, to be nearer her parents, where she is still seriously indisposed.

Oxford.—A discovery has recently been made which has led to the apprehension of two men, supposed to be the murderers of Mr. Bromhead, a manufacturer of agricultural implements, who was found drowned in the Ray, near Blackthorne, in October of last year. One of the prisoners was apprehended on suspicion some months since, but the trial fell to the ground from the absence of a material witness. The evidence is said to leave no doubt of the fate of the unfortunate gentleman; but, in the present stage of the proceedings, the details, of course, have not transpired.

Portsmouth.—On Thursday of last week the Admirals and Captains of this station, and the officers of the Austrian frigate Bellona, assembled in the dockyard to witness the experiments of Mr. Snow Harris with the lightning conductors, recently applied by the Admiralty on his plan to the ships of the Navy. The importance of these experiments is proved by the great number of vessels which have been destroyed by lightning, and by the serious injury sustained annually by all classes of shipping in different parts of the world. For the purpose of the experiments, the Orestes, 18, was moored about 100 yards from the jetty, midway between which and the ship a barge was placed, containing a carronade. A wire leading from the positive side of a powerful electrical battery in the Semaphore was attached to a cup of gunpowder on her main truck. Another wire leading from the negative side of the battery was attached to the gun in the boat. A short wire was placed on the touch-hole of the gun, and led over the gunwale of the boat to the surface only of the water, on the side nearest the Orestes. There was no communication between the ship and barge. The object was to show, that immediately an electrical discharge reached the mast-head, it passed down to, and was dispersed in, the water by means of the continuous line of conductors. This was proved thus:—the electric battery in the Semaphore was discharged; the discharge passed along the copper wire from the metallic plate on the interior of the jar to the mast-head; its presence there was rendered apparent by the ignition of the gunpowder in the cup; it passed thence down the conductor on the mast into the hull of the ship, and along the conductors on the hull into the sea. That it had arrived in the sea was proved by the ignition of the powder over the touch-hole of the gun in the boat, and the consequent discharge of the gun, because the only means by which this gunpowder could be ignited was the passage of the electricity up the short copper wire which connected the touch-hole of the gun with the sea; so that not only must the electric fluid have arrived in the sea, but it must have passed through it to this short copper wire in the boat. It is almost needless to add, that so rapid was the passage of the electric fluid, that the report of the discharge of the battery, the ignition of the powder at the mast-head, of that over the touch-hole of the gun, and the report of the gun itself, appeared simultaneous, notwithstanding the great distance traversed by the electricity. Mr. Harris then explained the action of the electricity. It had, he said, been generally supposed that metals were attractive of lightning in virtue of some inherent affinity for the electrical agency. But he combated this supposition, and showed that the laws of electrical discharges were reducible to mere resistance or distance; that, in fact, the discharge, through an imperfect circuit or conductor, as an unprotected ship, merely picked out such pieces of metal as happened to lie in a line or lines of least resistance to its course. This was illustrated by passing an electric shock over small masses of gold distributed fortuitously on paper; some of these were burnt up, others remained untouched. The last experiment which was performed, was with a view to prove at once the complete protection afforded by the continuous conductor, and the apparent impossibility of the least action taking place on metallic bodies out of it, thus practically refuting the supposition of any lateral discharge taking place. A model of a mast, about ten feet in length, was made in parts, and an *interrupted* line of metal placed in the heart of it. Percussion powder, which, it is well known, will inflame with the least spark of electricity, was placed between these interruptions. On the outer surface of the mast a continuous conductor was placed, the extremities of which were connected at each end of the model of the mast with the extremities of the interior and interrupted line of metal. In order to make the experiment more complete, bands of metallic leaf were made here and there to surround the mast, as hoops, together with other metallic bodies which could enter into the mast itself and touch the internal line of metal. An intense shock of electricity was allowed to fall upon the upper extremity of the mast where both lines of metal were in conjunction, with the view of discovering (since the electric matter had thus, it may be said, the choice of two lines) whether it would pass upon the metal within, or whether it would be dispersed between the two lines, and pass down each, or whether it would only pass down the exterior line, and whether, in passing down that line, it could cause a lateral discharge to enter the mast, or in any way to affect the interior. This was a severe test, from the highly inflammable nature of the percussion powder, and it succeeded perfectly. As long as the continuous external conductor remained perfect, the discharges of electricity were innoxious. When, however, the exterior conductor was removed and a similar charge was thrown over the model, the mast was blown to pieces by the ignition of the percussion powder, evidently proving that if the previous discharges had in any way, or under any form, pervaded the interior, this effect would have resulted in the very first instance. After Mr. Harris had concluded his experiments, Sir Edward Codrington said, that after what he had witnessed, he thought it but right publicly to observe that he felt perfectly convinced of the efficacy of the conductors upon Mr. Harris's plan, which, after the conclusive and satisfactory tests they had that day undergone, would no doubt be generally adopted. —Yesterday being the anniversary of the victory obtained by Lord Nelson over the combined fleets of France and Spain, off Cape Trafalgar, on the 21st of October, 1805, the Victory, lying in this harbour as the ordinary guardship exhibited upon the occasion a scene of extreme interest. The vessel was decked with flags and other naval insignia, and a profusion of laurels and evergreens. A dinner was given on board, at which the Admiral presided in person, and the day was celebrated on board all the other ships in harbour with the usual honours.

Preston.—It will be recollected that a woman named Eliza Bailey, and a male acquaintance, were some time since examined on several occasions, at Union-hall, upon a charge of robbing Mr. John Marquis, of Accrington, of notes to the amount of 2,000*l.* during the late Preston guild. The police reports state that she has recently been convicted at the Quarter Sessions at Birkinhead, and sentenced to transportation for 7 years.

Salford.—A man was brought up at the Police Court of this town, charged with an attempt to set fire to Lord Francis Egerton's house, at Worsley. It appeared that he had been instigated to the act by certain parties in Salford. The examination lasted for several hours, and eventually the prisoner was remanded.

Silchester.—The Berkshire papers have recently given to this town, so long famous for its Roman ruins, the title of the Anti-matrimonial parish. They state that it is worthy of being made celebrated for the numbers of bachelors and spinsters it contains. Some time since, at a vestry dinner held there, there was not a married man amongst the party; and on a recent occasion, when a gentleman from a distant county, by way of example, led one of the damsels of the neighbourhood to the altar, the minister could not tell him the amount of the fees, declaring, that though he had been in office for ten years, this was the first marriage by license that had taken place.

Southampton.—On Sunday the Peninsular steamer arrived from Gibraltar, Lisbon, and Vigo, with a large quantity of fruit, and another supply of cattle in better condition than those last imported. A sailing vessel has also arrived with a cargo of 50 oxen, from Vigo. Their cost at Vigo averages from 5*l.* to 7*l.*; freight and railway expenses amount to 4*l.*; and they have fetched on an average 15*l.* to 16*l.* each, some as much as 25*l.*, in Smithfield Market.—Letters from New York mention that the British Queen, which sailed from Cowes last month for New York, encountered a tempest on the 19th ult., which lasted for ten hours. Numbers on board, who had crossed the Atlantic, declared that they never experienced a more dreadful storm. Every one on board expected that the ship would founder. The British Queen is now on her voyage to this country, and is expected here about the 25th.

Tamworth.—We learn from the *Standard* that Dr. Buckland, Dr. Lyon Playfair the translator of Liebig, and Mr. George Stephenson the civil engineer, have been lately on a visit to Drayton Manor. Sir Robert Peel invited his principal tenants and the leading agriculturists in the neighbourhood to meet them at breakfast, in order that they might profit by the opportunity of personal intercourse with men of so much eminence. A party of nearly 30 persons was assembled. Conversations took place in the course of the morning of the most interesting nature on various subjects connected with the improvement of agriculture—on the necessity of draining, as the foundation of all other improvements—on the use of lime as a manure—on the feeding of cattle—and the importance of warmth as well as food, &c. &c. The party separated about two o'clock, having derived the greatest satisfaction from their visit.

Windsor.—In consequence of the fatal cases of fever which occurred at Esher a few weeks since, her Majesty has, for the present, abandoned her intention of visiting Claremont. This circumstance has caused her Majesty to determine on paying a visit to Brighton before, instead of after, Christmas, as had been previously intended. The period mentioned for the departure of the Court is the 1st November. Her Majesty is expected to remain at Brighton about a month.—Mr. G. E. Anson, treasurer to Prince Albert, met with an accident on Thursday morning, which has confined him to his residence at Cumberland-lodge. Mr. Anson was proceeding with his Royal Highness and Sir E. Bowater to the Great Park to hunt with the Prince's beagles, and before he had proceeded above 100 yards from the Royal residence, his horse stumbled and threw him, injuring his right hip so severely that some time is expected to elapse before he will recover its effects. —The new stables and riding-house, for defraying the expense of which Parliament voted the sum of 70,000*l.* shortly after her Majesty's accession, have just been completed. The sum expended was brought within the amount of the parliamentary grant. The buildings were constructed from the original designs of the late Sir J. Wyatville, under the superintendence of Mr. Ashton, his successor.

Railways.—The following are the returns of railways for the past week:—Hull and Selby, 1,122*l.*; Edinburgh and Glasgow, 1,917*l.*; Eastern Counties, 1,073*l.*; Northern and Eastern, 1,454*l.*; London and Birmingham, 17,111*l.*; Birmingham and Gloucester, 2,036*l.*; South-Western, 6,701*l.*; Midland Counties, 3,285*l.*; Brighton, 4,636*l.*; North Midland, 4,707*l.*; Grand Junction, 7,862*l.*; Blackwall, 652*l.*; Birmingham and Derby, 1,499*l.*; York and North Midland, 1,946*l.*; Great Western, 14,188*l.*; Greenwich, 840*l.*—At a meeting of the Durham and Sunderland company, a dividend of 10*s.* per share was declared; the traffic had been much affected by the depressed state of the trading interests, but the difficulties are gradually decreasing, and the concern promises a progressive improvement.—The Clarence company, as we mentioned in a former Number, has got into difficulties with the Exchequer Loan Commissioners, who have seized upon the railway, and announced it for public sale in the course of the ensuing month, unless a proportion of the money borrowed from Government, amounting, with interest, to the number of hours or the particular times set apart for religious instruction, and chiefly to ascertain whether the practice in the parish had or had not been in conformity with those principles on which the education of pauper children has been conducted under the Poor-law Amendment Act. The evidence related principally to the interference of Mr. Williams and to the questions put by him on religious subjects. The witnesses were by no means agreed on the main facts, but it appeared that remarks had been made by Mr. Williams which were considered highly improper by the clergyman present, and that angry disputes had arisen between them which the chairman made no attempt to check. It appeared also that Mr. Williams had put several questions to the children on subjects connected with geography and naval tactics, many of which they could not have been expected to answer. There seems to be no doubt that the means of instruction were inadequate, and the inquiry, therefore, may do good, by increasing the efficiency of the teachers. Since the conclusion of the commission, the directors and guardians of the parish have held a meeting to consider various questions arising out of its appointment, and particularly the refusal of the commissioners to hear counsel on behalf of the vestry. After some desultory conversation, it was resolved, "That it appears to this board that the special commissioners appointed by the Poor-law Commissioners to inquire into the education of the children in St. Pancras workhouse have refused to admit counsel to appear on behalf of the vestrymen and directors of the poor; that it also appears by the instructions of the Poor-law Commissioners, that the conduct of the vestrymen and directors is the subject of that inquiry, and one of the objects thereof: this board is, therefore, of opinion that such refusal is illegal and unjust to the parties concerned."—On Wednesday the Commissioners attended at the Workhouse, for the purpose of concluding their inquiry by entering into a minute personal examination of the education of the children. The churchwardens, together with a great number of the directors, guardians, and vestrymen, were present to watch the proceedings of the Commissioners. The examination lasted several hours, and, at its conclusion, the Commissioners expressed their satisfaction at the way in which the children had answered most of the questions put to them, and Mr. Twisselton is stated to have observed to some of the guardians, that out of the number of persons who had made application to the Poor-law Commissioners for situations as masters of pauper schools, there had been fifteen who knew less than some of the boys who had that day been under examination.

Spitalfields.—On Monday an adjourned meeting of Spitalfields weavers took place, for the purpose of determining what course they should adopt in consequence of the discovery of the frauds committed at the Custom-house on the importation of foreign silks. At a previous meeting it was agreed that a committee should wait on the master manufacturers, to know what steps they would take for the protection of the trade. The committee having made their report, stating that some immediate plan should be adopted, so as to prevent the smuggling of French and foreign silks through the Custom-house, added that a notice had appeared in the public journals which had the appearance of being official, intimating that it was the intention of Government to prosecute the inquiries into the fraudulent transactions at the Custom-house, under the authority of a special commission. A lengthened discussion ensued, in the course of which it was stated that very important information had been obtained of the practices at the Custom-house, when it was resolved for the present not to call any meeting of the trade, but to wait to ascertain the result of any investigation instituted by the Government. It was also resolved that the committee should make inquiries as to the extent of the frauds in the importation of French silks, and the mode adopted by which foreign silk goods were brought into the home market.

Southwark.—In consequence of the near approach of the contest for the office of High Bailiff, one of the most lucrative appointments in the gift of the Common Council, the tactics of the candidates are beginning to attract the notice of the daily papers. It is said that the majority of the Common Council have generally abstained from making any but conditional promises, so that it is extremely difficult to calculate upon the success of any particular candidate. The impression is, however, that the great struggle will be between Mr. D. W. Harvey and Mr. Pritchard. Alderman Sir W. Heygate commenced his canvass by declaring that he merely looked to the honour of the appointment, and was so far from considering emolument a desideratum, that he made reduction of the salary a *sine quâ non* in the terms upon which he would accept the office. From this declaration, it is not expected that those who are of opinion that the necessities of a candidate should form a ground of claim will rally round him. Mr. Harvey, Mr. Payne, and Mr. Pritchard admit that they have no objection whatever to the emoluments of the office.

Accidents.—We regret to state that a serious accident happened on Monday afternoon to Sir C. Nugent. As the Admiral was leaving Messrs. Drummond's bank, at Charing-cross, he stopped to take a view of the Nelson Monument. Whilst in the act of looking at its progress, his foot slipped, and the gallant officer fell on the curbstone, by which the thigh-bone was fractured near the hip. Admiral Nugent was immediately conveyed to Charing-cross Hospital, where he is going on very favourably, but at the advanced age of 85 his recovery must be very slow. No dangerous result is at present expected.

Police.—We learn by the daily papers, that the boy Jones, who on several occasions obtained an extraordinary entrance into Buckingham Palace, has again made his appearance in London. After his last examination at the Home-office, the boy was sent to Portsmouth, where he was put on board the Warspite, which carried Lord Ashburton to the United States. His conduct was orderly and regular. It appears that on the return of the Warspite to Portsmouth he decamped and came to London, when instructions were given to take him into custody, and on Wednesday morning he was apprehended at his father's house in Westminster. Notice of the prisoner being in custody was sent to the police offices, and in the course of the afternoon a Government Order was received, directing that the boy should be at once taken back to Portsmouth, as it was not considered necessary that any inquiry should be instituted in town.

Hampton Court.—On Thursday the magistrates at Staines were occupied for several hours in investigating the circumstances connected with a robbery of valuable plate and other articles, committed on the night of Friday last, at Hampton Court Palace. The portion of the palace which was entered was the apartment of Mrs. Sheridan and that of Lady Dufferin. The prisoners in custody are, Henry Grover, a jobbing gardener of dissolute habits, living at Hampton-wick; his wife, and a young woman formerly in the service of Mrs. Sheridan. These parties were charged with the burglary and robbery, and another woman was charged with having received part of the property knowing it to have been stolen. After a lengthened examination, the prisoners were fully committed for trial.

Provincial News.

St. Alban's.—On Friday last the Bishop of London consecrated the chapel of the Holy Trinity in the parish of St. Stephen. After the ceremony, his Lordship preached a sermon appropriate to the occasion, and consecrated a new burial-ground for the parish. On the previous day the Bishop consecrated a new burial-ground for the Abbey, and delivered his charge to the clergy of the Archdeaconry. This is, of course, the same as that delivered in St. Paul's last week, and noticed in our last; but as the charge has since been published, we may notice a few points which were doubtfully stated in the preceding report of this very remarkable document. In reference to the Oxford divines the Bishop unites with the Bishops of Oxford, Exeter, and Salisbury, in giving his official judgment in favour of their teaching, upon every fundamental point of doctrine, and upon a great majority of practical questions. At the same time, he guards himself against being supposed to approve of any perversion or misrepresentation of the doctrines in question, by warning his clergy against exaggerated views imputed to the Oxford divines by their adversaries, but which are either not to be found in their writings, or are the tenets of a very few. In regard to the constitution and authority of the Church, the Bishop says that if the view he has taken of the subject be correct, "it follows as a necessary influence, that in this country the clergy of the national Church, and they alone, are entitled to the respect and obedience of the people, as their lawful guides and governors in spiritual things. They alone are duly commissioned to preach the word of God, and to minister his holy sacraments." He strongly insists on attention to the rubric; its observance in his judgment ought to be complete, and the clergy are bound thereto in the plainest manner. He commends the practice of daily services, and frequent communions. "I think," he says, "that in every parish there ought to be *at least* monthly communion." He urges the observance of the canons, except where they have been virtually dispensed with by universal disuse, stating the only distinction between canons and rubrics to be, that the former may be dispensed with, the latter cannot. He recommends the clergy to preach the morning sermon in their surplices; sanctions the use of candles upon the altar, and such other devotional postures and practices as have any written authority of the Church of England to recommend them; but condemns the introduction of novelties, for which no such authority can be pleaded. He expresses a wish that some simple distinctive dress should be appointed by proper authority for the clergy; but discourages any attempt, on the part of individuals, to re-establish the use of a now obsolete costume. The other topics treated of are the duty of obedience and reverence to the Church of England; the great impropriety of speaking disparagingly of the Liturgy; the corruptions of Popery, against which the clergy are strongly warned; at the same time the Church of Rome is admitted to be a true branch of the Church Catholic, and the Exeter-hall system of agitation peremptorily discountenanced.

Abergavenny.—The meeting of bards and minstrels, the national *Eisteddvod*, took place in this town last week, Mr. Rhys Powell, of Wonaston, being the president for the year. The awarding of the prizes to successful candidates was the most interesting feature of the meeting, a great number being for compositions on various historical and poetical subjects. The prize for the best essay "On the place the Welsh language occupies among the languages of the Celtic family" was awarded to a Prussian professor, Herr Carl Mayer, who not being present, Lieutenant Bunsen (son of the Prussian Ambassador) appeared as his representative, and was invested with a costly ring, and a purse of fifty guineas. The contest among the harpers, for new triple harps, was highly interesting; there were nine candidates, and the first prize was won by a female musician. The celebration of next year is expected to be held at Carmarthen.

Bath.—At a meeting of creditors of the separate estate of Mr. H. W. Hobhouse, held in this city on Saturday, the commissioners declared a dividend of 20*s.* in the pound. It is understood that after this dividend is paid, a handsome surplus will be left for the benefit of the creditors of the joint estate.

Bristol.—On Monday afternoon the Great Western steam-ship was offered for sale by public auction in this city. The bidding was very spirited, but she was ultimately bought in at 40,000*l.*—Information was received here last week of the loss of the Brigand, iron steamer, which had only been built about two years, at a cost of 32,000*l.* She was on her way from Liverpool to London, for the purpose of making her last voyage for the season from the Thames to St. Petersburg. She struck on the rocks off the St. Agnes Light, on Monday week, and went down shortly afterwards. It is said that, like most iron vessels, she was built in four compartments, and that if she had not struck a complete broadside, which stove in almost at the same moment both compartments on that side, she would undoubtedly have been saved; she kept above water for two hours and a half, giving the crew plenty of time to save their clothes as well as their lives; whereas, if she had been built of wood, it is believed that she must have gone down instantly, as was the case with the Thames, in January 1841, on which occasion 67 souls perished, within about 3½ miles of the same spot.—Another meeting under the bankruptcy of Messrs. Acraman was held last week. The commissioners, after hearing further arguments, decided against the validity of the deed of gift, by which decision the produce of the late sale of pictures, &c., is declared to be the private estate of Mr. D. W. Acraman.

Cambridge.—It is stated in the local papers that the following Divines are likely to be candidates for the important office of Regius Professor of Divinity:—The Rev. Dr. Graham, Master of Christ's; the Rev. Dr. Lee, of Queen's, Professor of Hebrew, and Prebendary of Bristol; the Rev. W. H. Mill, D.D., of Trinity, late Principal of Bishop's College, Calcutta, and Chaplain to the Archbishop of Canterbury; the Rev. Christopher Wordsworth, D.D., of Trinity, and Head Master of Harrow.

Cheltenham.—Public attention has lately been directed to the treatment of the prisoners in the Northleach House of Correction, and many facts have been brought to light which have been severely commented on by the daily papers. Last week, a man named Feale, who had been recently liberated from the House of Correction after having undergone six months' imprisonment and hard labour, died under circumstances which induced the coroner to hold an inquest on the body. It appears from the evidence that he was in a dying state when he left the prison, and that he declared he had been killed by the treatment he received. Mr. Hollis, one of the Guardians of the Cheltenham Union, deposed that, in a conversation which passed between the deceased and the Guardians, the man stated that he had been kept in a cold damp cell for fourteen hours a day during two successive days; that he was placed there for the purpose of picking potatoes, being too ill to work at the tread-mill; that he had previously been forced into another damp cell while heated by working at the mill; that he was allowed only half a pound of mutton daily; and that his health was perfectly good when he entered the prison. Another witness, a fellow-prisoner, stated that deceased was strong and healthy at the commencement of his imprisonment; that he was kept on the wheel for two months at first; that both deceased and witness preferred the wheel to the damp cells, which were of cold stones, with stone seats, and a brook running under them; that they were placed there when completely heated and exhausted by the mill, and were so famished for want of sufficient food, that deceased had eaten nearly half-a-peck of raw potatoes while in the cellar. He had seen many prisoners faint and fall down in the yard from exhaustion, produced by the wheel; and in rainy weather the wet had often run down the walls. One of the surgeons of the hospital deposed, that deceased died of consumption in an advanced state, produced, in his opinion, by being placed in a cold damp situation when in a state of perspiration; he also seemed to dwell particularly on the diet administered in the prison, which he considered likely to aggravate the disease. The inquest was adjourned for further evidence, and is not yet concluded.

Liverpool.—On Tuesday evening the inhabitants of this town were alarmed at the report that the property saved from the late great fire in the Waterloo-road had again, for the third time, ignited, and was burning with great fury. Shortly afterwards that part of the town was illuminated, the fire-bells were rung, and the engines immediately proceeded to the spot. The report proved to be true, the interior of a cotton-shed, in the cellars of which were large quantities of turpentine and cotton, having again taken fire, the flames ascending in immense volumes. Many thousands of spectators were speedily congregated, and notwithstanding the loss of life which took place on the first outbreak, it was with much difficulty they could be kept back from the shed. It appears that the property which had ignited, had, ever since the great fire, been covered with the bricks and timbers of the late buildings; and during the last fortnight workmen have been employed in clearing away the rubbish, and excavating the barrels of turpentine and cotton buried underneath. They had just finished their day's work and left the premises when the property took fire. The wind was high at the time, and fears were entertained for the safety of the neighbouring property, lest the sparks, which were carried to a considerable distance, should be the means of furthering their progress. All the buildings which surrounded the scene of this conflagration having been previously destroyed, no further damage but that of the destruction of the salvage property could be sustained by the sparks; and the firemen playing on the ruins had only to observe the fury of the fire expend itself in the open space, and in the course of a few hours it was acre is 1*l.* 7*s.*, and in Lancashire 1*l.* 5*s.* The county in which land is of the lowest value is Westmoreland, where the average annual value per acre is only 9*s.* 1*d.*; in Northumberland it is 12*s.* 9*d.*, and in Sussex it is 13*s.* 6*d.* The total annual value of real property in Wales assessed to the poor-rates is 2,854,618*l.*, of which 2,206,146*l.* consists of landed property, 394,929*l.* of dwelling-houses, and 253,543*l.* of all other kinds of property. The total sum levied in Wales for poor-rates for the year ended Lady-day, 1841, was 342,264*l.* The average rate in the pound for the whole country is higher than in England, it being 2*s.* in the latter, and 2*s.* 5*d.* in Wales. The poor-rates are highest in Carnarvonshire—namely, 3*s.* 2*d.* in the pound, and lowest in Brecon, 1*s.* 7*d.* The area of Wales in English statute acres is 4,752,000. The average annual value per acre for the whole country is 9*s.* 3*d.* The land is most valuable in Anglesea, where the average value is 19*s.*; and least valuable in Merionethshire, where the average value is 4*s.* 8*d.*

Scandinavian Antiquities.—A letter from Copenhagen states that a peasant of Boeslund, in the island of Zealand, whilst ploughing, discovered two gold urns filled with ashes, chased with foliage and fruits, and bearing on the top of the cover a figure of Odin, the Jupiter of the Scandinavians. This figure is represented standing, bearing on one shoulder the two crows Hunin (Thought) and Munin (Memory), and, at its feet, two wolves, symbols of his power. These urns are exactly alike, in good preservation, and admirably wrought. The gold is exceedingly thin, except at the edges; they are about six inches in diameter, and nine inches in height (comprising the cover, but not the figure), and their weight is a little more than 2lb. The peasant has delivered them to the Government, which paid him the value of the gold, and ordered them to be deposited in the museum of Copenhagen. They are supposed to belong to the fifth century.

Law.

Special Commission, Stafford.—The special commission closed on Saturday evening, after one of the most laborious sittings on record in the midland counties. It had been rumoured on the previous evening that their Lordships were resolved to terminate their labours on Saturday; but it was generally supposed that even after a fortnight's sitting from half-past eight in the morning to the same hour at night, it would be impossible to conclude the commission on that day. However, in consequence of the judges sitting beyond the usual hour on Friday and Saturday, the business of the commission was concluded. Had not O Neil, Cooper, Richards, and others traversed, there is no doubt that the commission would not have terminated before the 23d. Baron Rolfe was the last Judge who closed his court on Saturday. Baron Parke rose about four o'clock, and the Lord Chief Justice at twelve. But both those learned Judges had sat on the previous two days till ten and eleven o'clock at night. The grand jury have adjourned till Monday, the 24th, when they will re-assemble. The object of the adjournment is merely to meet any emergency that may occur. Not a single bill was ignored, and they found 130, including in each bill 10 or 15 persons. About 50 prisoners have been sentenced to transportation for life, and 21 for 10 and 7 years. The acquittals were very few. It was stated on good authority during the commission that it is intended by Government to have a general winter assizes throughout the kingdom, to commence in the early part of December.

Lancashire Commission.—This commission terminated on Thursday, at an early hour, and the judges immediately after took their departure by a special train for London. The quantity of business got through by their Lordships, and the care and attention bestowed on every case, are adverted to by the local papers as a confirmation of the truth of Baron Alderson's assertion, that "There are no harder-worked labourers than the Judges of the land." In the Nisi Prius Court, after Lord Abinger had gone through his list of cases, he proceeded to address the jury. He said he was happy to inform them that they were now discharged, and he thought it right to express the satisfaction he felt at the manner in which they, and those others who had sat in that box, had discharged their duties—for the deliberate and temperate attention they had paid to the cases, and the propriety of all the verdicts they had given. It must have given them very great pain to have witnessed the transactions which had taken place: and he must say that the prosecutions had been conducted with as much leniency and forbearance as was possible, consistently with public safety. In the Crown Court, Baron Alderson concluded the proceedings by passing sentence on 20 prisoners who had been previously convicted. After a most impressive address, in which he forcibly pointed out the miseries to which "turn outs" had led, both in this country and in France, his Lordship sentenced the prisoners to various terms of confinement and hard labour. In the magistrates' room, Mr. Justice Cresswell, after disposing of all his cases, discharged the jury, at the same time expressing his hope that as long as he sat on the bench he might never be called on to try cases such as had now been disposed of. This terminated the special commission, our account of which would be incomplete if we did not mention that the care, attention, and impartiality of the learned Judges, and the ability and moderation with which the counsel for the Crown conducted the numerous prosecutions entrusted to them, were universally spoken off and admired by persons of all shades of political opinion. The sentences give the following results:—5 transported for 15 years; 6 for 7 years; 6 imprisoned for 18 months; 1 for 15 months; 63 for a year; 1 for 10 months; 10 for 9 months; 28 for 6 months; 1 for 4 months; 5 for 3 months; and 29 traversed to next Assizes. Of the hundred and twenty-four prisoners who were tried, only six are described in the calendar as being able to read and write well; whilst thirty-seven are unable either to read or write at all: the rest of them are only able to do so very imperfectly.

SPORTING.

Newmarket Second October Meeting.

Friday.—*Matches.*—Lord Eglinton's Melior (Lye) beat Lord Albemarle's Nuncio; T.Y.C., 200, h. ft. 5 to 4 on Melior. Won by a neck.

Lord Albemarle's Ralph (Robinson) beat Lord Eglinton's Dr. Caius; R.M.; 200, h. ft. Betting, 5 to 4 on Ralph. Won by six lengths.

Duke of Bedford's Oakley (Robinson) beat Lord Rosslyn's Camelino; T.Y.C.; 100 h. ft. 7 to 4 on Oakley, who won easily by a length.

The Prendergast Stakes of 50 sovs. each, h. ft., for 2 yrs old; T.Y.C. 17 subs.—Won by Col. Peel's Murat (Nat), beating Colonel Anson's Napier and Lord Exeter's c. by Beiram. Betting, 6 to 4 on Napier, and 6 to 4 agst Murat. Murat took the lead, made all the running, beat the Marinella colt off at the ropes, and won easily by a length, Napier never having caught him. After the race, Murat was backed for the Derby at 20 to 1.

Match, 200, h. ft. T.Y.C. Lord Exeter's Celia received forfeit from Mr. Thornhill's Eringo.

Handicap Sweepstakes of 20 sovs. each for 3 yrs old and upwards. 5 ft., if declared, T.Y.C. 9 subs.—Won by Mr. Etwall's Discord (J. Day), beating Mr. F. Clarke's Currycomb, Mr. Pettit's Langolee, Mr. Forth's Lucy Banks, Captain Ives's Folly, and Lord Exeter's Abydos. Betting, 11 to 5 agst Currycomb, 3 to 1 agst Langolee, 4 to 1 agst Folly, 6 to 1 agst Abydos, and 6 to 1 agst Discord. Currycomb made running at a good pace, and at the cords had disposed of all his opponents except Discord, who challenged him half way up, and won a splendid race by a head.

Lord Eglinton's Pompey (Lye), beat Mr. Payne's Cecil. Last half of Ab M. 100, h. ft. Betting, 6 to 4 on Cecil, who was defeated by a length.

Match, 100, h. ft. T.Y.C.—Lord Albemarle's Buffalo (Robinson) beat Mr. Payne's f. by Muley Moloch, Bessy Bedlam (Nat). Betting, 6 to 4 on the filly. A dead heat.

Handicap Sweepstakes, of 15 sovs. each, 10 ft, for 2 yrs old and 3 yrs old. T Y.C. 9 subs.—Won by Mr. Etwall's Palladium (J. Day), beating Mr. Pettit's Ends and Odds, Mr. Phillimore's Solomon. The following also started, but were not placed: Col. Peel's Archy, Mr. Bowes's The Lady of Silverkeld Well, Mr. W. S. Stanley's f by Bizarre out of Flambeau's dam, Lord Eglinton's Augury. Betting, 5 to 2 agst Palladium, 3 to 1 agst Archy, 4 to 1 agst Bizarre filly, 4 to 1 agst Ends and Odds, and 4 to 1 agst Solomon. Won cleverly.

Mr. Phillimore's Solomon received forfeit from Duke of Bedford's Magog; 100, h. ft. T.Y.C.

Lord Eglinton's Augury received forfeit from Lord Kelburne's He-has-a-name; first half of Ab. M. 100.

The attendance was very full, the weather favourable, and the racing excellent. The Houghton week is expected to be unusually brilliant.

TATTERSALL'S, Thursday.—*The Cambridgeshire Stakes.*—A report that the Knight of the Whistle had pulled up lame after a gallop has once more blighted the hopes of his backers; instead of 5 to 1, which would have been his price in the afternoon had he kept sound, he figures below at 20 to 1, and is friendless. By this secession, Florence was left at the head of the list, Ralph following with a slight interval, the layers and takers being pretty equally balanced. The betting touched upon some six or eight other horses, but was carried on in small amounts, and without any material impression upon the odds. It is calculated that 18 or 20 will run.

DERBY.

20 to 1 agst Colonel Peel's Murat.
20 to 1 — Mr. Bowes's Cotherstone.
25 to 1 — Mr. Bell's Winesour (tak. and afterwards offrd.).
1000 to 35 — Lord Chesterfield's Progress Colt (taken).
40 to 1 — Colonel Peel's Canton (tak. and afterwards offd.).
40 to 1 — Sir G. Heathcote's Sirikol.
50 to 1 — Mr. St. Paul's Cheviot.
1000 to 10 — A British Yeoman winning the Derby, Maria Day the Oaks, and Nutwith the St. Leger (taken).

MARK LANE, Friday, Oct. 21.—Although there was not much English Wheat at Market, the sales that were made were rather lower than on Monday.—Foreign was held on the same terms, and the business transacted was to a limited extent.—Barley is a dull sale at Monday's quotations, and there is no alteration in Peas and Beans.—Old English Oats sell quite as well, but new Irish are 1*s.* cheaper.

GAZETTE OF THE WEEK.

INSOLVENTS.—W. Lyon, jun., Woodford, Essex, chemist—J. Breakenridge and J. Reid, Liverpool, tailors.

BANKRUPTS.—E. Fennell and R. Fennell, Aldermanbury, warehousemen—J. Coats, St. John-street, draper—T. G. Martin, Great Winchester-street, wine-merchant—C. Allen, Devizes, cattle-dealer—W. Hall, Tredington, Worcestershire, and Robert Rainbow, Stratford-upon Avon, corn merchants—W. Pugh, Bristol, cabinet-maker—W. Gorsuch, Liverpool, hotel-keeper—J. C. Rawdon, Leeds and Huddersfield, wool merchant—H. Barton, jun., Liverpool, merchant—W. Starie, Cutler-street, Houndsditch, carpenter—S. Simson, Shirley, watchmaker—W. East, Spalding, Lincolnshire, builder—C. O'Neil, R. Saikeld, and G. S. Digby, Brinder Works, near Margam, Glamorganshire, iron founders—D. Brandon, Barbican, shoe-manufacturer—J. Cooper, Liverpool, provision dealer—M. Harris and S. A. Hart, Cullum-street, Fenchurch-street, merchants—W. Roworth, Wellingborough, Northamptonshire, confectioner.

SCOTCH SEQUESTRATIONS.—A. Halket, Affleck, dairyman—A. Steel, Sorn, Ayrshire, coal-contractor—W. Neilson, Hamilton, spirit dealer—W. Smith, Glasgow, wright—D. Forbes, sen., and D. Forbes, jun., Little Dunke'd, graziers—C. Gibb, or Anderson, Dunfermline, baker—W. Allan and Co., Leith, merchants.

BIRTHS.—At Stoke Rochford, on the 16th inst., the Lady Caroline Turner, of a son—On the 18th inst, at No. 6, Connaught place, the Lady Louisa Finch, of a son—On the 11th inst., at Battersea, the lady of Dr. Connor, of a son—On the 14th inst., at Dartford Vicarage, Kent, the lady of the Rev. F. B Grant, of a daughter—On the [illegible] inst., at Tackley, Oxfordshire, the wife of the Rev. L. A. Sharpe, of a son—On the 17th inst., at Pullmeyric Lodge, Monmouthshire, Mrs. Arthur Stewart, of a daughter.

MARRIED.—On the 6th inst., at Walcot Church, Bath, the Rev. E. Elton, M.A., of Baliol College, Oxford, to Harriet Vashon, younger daughter of the late Rear Admiral Volant Vashon Ballard, C.B.—On the 8th inst., at Trinity Church, Bath, E. L. Bigshawe, Esq., son of the late Sir W. Bigshawe, of the Oaks, Derbyshire, and of Bath, to Elizabeth Anne, only daughter of J. Actes, Esq., of the same place—At Hagley, on the 13th inst., Capt. W. W. Chambers, R.N., only son of Capt. Chambers, R.N., of her Majesty's ship Monarch, to Eliza Ann, only child of T. W. Hodgetts, Esq., of Hagley, Worcestershire—On the 17th inst., at All Saints', Barton, Lancashire, G. A. Shee, Esq., son of Sir M. A. Shee, President of the Royal Academy, to Jane Seymour, third daughter of Sir T. J. De Trafford, Bart., of Trafford Park, in the county of Lancaster—At Colombo, Ceylon, on the 29th of July, E. H. Smedley, Esq., of Her Majesty's Civil Service, son of the late Rev. E. Smedley, of Dulwich, Surrey, to Clara, third daughter of the late S. Curgenven, Esq., for many years naval storekeeper at Trincomalee.

DIED.—At Bangor Castle, Downshire, Lady Charlotte Matilda Ward, daughter of Robert, first Marquis of Londonderry, and sister of the present Marquis—At Norwood, on Wednesday, after a short illness, Georgiana Elizabeth, Countess of Bradford, aged 52 years—On Sunday, at his residence, in Berkshire, General the Hon. John Brodrick, youngest son of George, third Viscount Midleton, and consequently uncle of the present Viscount—On the 16th inst., at his house in Queen square, Westminster, D. W. Gregorie, Esq., senior magistrate of Queen-square Police—On the 13th inst. at his seat, Crowcombe Court, Somersetshire, G. H. Carew, Esq.—At Easton Hall, Northamptonshire, on the 14th ult., Capt. J. M. Maitland, late of the Grenadier Guards, and eldest son of Gen. Maitland, of Hollywich, East Grinstead—On the 17th inst., at Pagoda house, Richmond, Surrey, aged 67, Letitia Frances, the wife of W. Selwyn, Esq., Q.C.—On Wednesday last, at St. Catherine's, the Right Hon. Sir William Rae, Bart., Lord Advocate of Scotland.

TO GARDENERS AND OTHERS.

TO BE LET ON LEASE, a very excellent Piece of Land, in a very desirable Situation, in the parish of Hackney, well inclosed, with every convenience needful. The present Stock to be taken.—For particulars, apply to Mr. J. King, James' Place, Hackney Road.

TO BE DISPOSED OF, and entered upon at Christmas next, an Old Established Business in the Seed and Fruit line, in a populous town in the Country. Further particulars may be known on application to Messrs. Bunyard and Metcalf, Seedsmen, City Road, London.

GARDNER'S PATENT TURNIP-CUTTING MACHINES, Banbury, Oxon.—These celebrated Machines possess singular efficacy and simplicity. They are used by all the leading agriculturists of the day, and are esteemed a first-rate invention for the purpose. They have been used many seasons in succession, without the cutting part of the machine sustaining the slightest injury: the mere operation of cutting Turnips, however firm their texture may be, or however hard they may be frozen, can never injure the cutting part of the Machine; it is from stones and dirt only the knives can sustain injury. Turnips of the hardest kind are cut with ease and expedition, and a stout boy will cut about two bushels of Turnips per minute, if the Machine be supplied for him at that rate.

30-Knife Machine, to cut ⅜ of an inch wide and ½ an inch thick, 5*l.* 10*s.*; extra Knives for ditto, per doz., 10*s.*

Delivered carriage-free in London, Liverpool, and Bristol.

TO FARMING GARDENERS.—TO BE LET, as from Michaelmas-day last, with immediate possession, all that FARM, called Earl's Court Farm, situated at Earl's Court, Kensington, late in the occupation of Samuel Hutchins, Esq., (with other lands recently let to other parties,) containing in the whole 90a. 3r. 26p.:—77a. 2r. 4p., or thereabouts, part thereof, being situate immediately west of Earl's Court Lane, and bounded north by the Kensington Sewer, south partly by Rich Terrace and lands let to Stephen Bird, Esq., and partly by the Earl's Court and Fulham turnpike road, and west by the Kensington Canal towing-path; and 13a. 1r. 22p., the remainder thereof, being situate immediately east of Earl's Court Lane aforesaid, opposite part of the above. There are excellent Buildings and a good Farm-house on the first-named portion.

TO BE LET, also, separate from the above, Earl's Court Mansion House, with the Garden belonging thereto.

For particulars, and terms of letting, apply to Messrs. Whittaker & Tatham, 10, Lincoln's Inn.

SHIP FOR NEW ZEALAND, under Charter to the New Zealand Company, to sail as under mentioned, viz.—

FOR WELLINGTON AND NELSON.

PHŒBE, 471 Tons, from London, 15th November.

For further particulars apply at the New Zealand House, Broad-street Buildings.

HODGSON and ABBOTT'S PALE ALE.—The above celebrated Beer, so strongly recommended by the Faculty, is to be procured only from E. Abbott, Brewery, Bow, Middlesex. The Trade not being supplied, the Pale Ale cannot be genuine if procured elsewhere.

City Office, 98, Gracechurch-street.

WHEAT-SOWING.

POTTER'S ARTIFICIAL GUANO MANURE.—TESTIMONIAL:—"The Artificial Guano Manure was applied with great effect to a heavy land, on the estate of A. Cotton, Esq, Hildersham Hall, Cambridge, on a Field of Barley; it produced a marked effect—the finest crop for years, and the produce, Six Quarters of Barley to the acre. The space marked out was conspicuous, being some inches higher than that from common Manure. On part of a Grass Field the application, which was but lightly made, produced at least double the proportion of Hay compared to the part otherwise manured. A portion of it was applied to the Orange Globe Mangel Wurzel, the roots of which were of very large size—double that of others,—and its effects on a bed of Parsneps was extraordinary, producing a crop exceeding any before seen. The exact weight per square yard, compared with those of ordinary culture, will be estimated when gathered. In the instance of the Parsneps, the Manure was mixed with earth, and deposited over the seed; a mode of culture recommended in the practice of Mangel Wurzel. Although much higher in price than the common Manure, the profit was materially greater."

Works, Upper Fore-street, London.

KEENE'S PATENT CEMENT.

THIS CEMENT is harder than any other known, and is especially fitted for the Walls of Hothouses, Conservatories, &c., as it neither cracks nor vegetates, and is perfectly impenetrable by insects.

The entire range of Hothouses erecting by the Government at Frogmore are about being stuccoed with it, and the price ranges nearly equally with the Cements in ordinary use for floors, and it forms a paving harder and cheaper than Portland Stone.

Patentees and Manufacturers, J. B. WHITE and SONS, Millbank, Westminster.

THE PATENT ASPHALTE PROTECTING MATERIAL, spoken so highly of in the *Gardeners' Chronicle* for 1841, p. 100, 415, 530, and p. 8, for 1842, may be obtained in Sheets—32 inches by 32 inches, 32 inches by 64 inches, 32 inches by 96 inches, of Thos. Jno. Croggon, 8, Ingram-court, Fenchurch-street. A liberal discount to Hothouse Builders, Nurserymen, &c.

SHEEP NETTING, RABBIT NETS, FISHING NETS.—Strong tarred rope Sheep Net, 4½*d.* per yard, 3½ feet high, much approved for sheep-folding and for fences. Rabbit and Hare Nets on Cords, 50, 80 and 100 yards each, suitable for the purpose. Rabbit and poultry fence net, 1 yard high, tarred, 2*d.* per yard. Net for enclosing Pheasants, fowls, &c. Fishing Nets, viz., Flues, Trammels, Drags, and other Nets, from 4 to 400 yards long, ready for use. Net, 1-inch mesh, 1½*d.* per yard. Nets made to order of all kinds. ROBERT RICHARDSON, Net and Tent maker, 21, Tonbridge-place, New-road. N.B. 2,000 Second-hand Police Capes, for Labourers and Farm Servants, at 1*s.* 9*d.* and 2*s.* each, waterproof.

CAUTION TO FAMILIES.—The high reputation and consequent great demand of the undermentioned Articles have excited the avarice of some Shopkeepers, who, to get a trifle more profit, attempt to impose on the Public *highly-pernicious* Compounds as the real MACASSAR OIL for the hair, and KALYDOR for the complexion: they copy the labels and bills of the original Articles, substituting either an *assumed* name, or the word GENUINE in the place of ROWLAND'S.—*** To frustrate such imposition it is necessary, on purchasing either Article, to see that the word "Rowland's" is on the wrapper as follows:—ROWLAND'S MACASSAR OIL, price 3*s.* 6*d.*; 7*s.*; or Family Bottles (containing four small), 10*s.* 6*d.*; and double that size, 21*s.* per bottle. ROWLAND'S KALYDOR for the Skin and Complexion—Price 4*s.* 6*d.* and 8*s.* 6*d.* per bottle. "A. Rowland and Son, 20, Hatton Garden, London," is written in red on the wrappers of the MACASSAR OIL and KALYDOR, and engraven on the Government Stamp affixed on the Kalydor. Be sure to ask for ROWLAND'S ARTICLES. Sold by them and by respectable Chemists and Perfumers.

Printed by Messrs. Bradbury and Evans, Lombard-street, Fleet-street, in the Precinct of Whitefriars, in the City of London, and Published by them at the Office, 3, Charles-street, Covent Garden, in the County of Middlesex, where all Advertisements and Communications are to be addressed to the Editor.—Saturday, October 22, 1842.

about 155,000*l.*, be repaid in the month of November. The directors have held a meeting to consider the course to be adopted under these circumstances; the proceedings were private, but an advertisement has since been issued, containing proposals for an issue of new scrip shares or loan notes of 10*l.* each, bearing interest at the rate of 6 per cent. per annum, giving the subscribers the preference over all other shareholders, and stating that the present revenue of the company shows a clear profit of 12,000*l.* per annum, with a prospect of a large increase, to be made over to the subscribers as a guarantee for the payment of the interest on the money to be raised. The directors look to this measure as the means of raising the sum demanded by Government, but they offer no statement of the accounts of the company, and the public, consequently, have no opportunity of ascertaining how far the prospects held out are likely to be realised.—Some further particulars of the rating of the Great Western Railway have been published. It appears that two parishes in the neighbourhood of Reading, Pangbourne and Tilehurst, having rated the railway at a great advance, in consequence of the recent decision in the Mitcheldever case, the company gave notice of appeal; but the two cases have been settled amicably by an assessment at the rate of 600*l.* per mile being agreed to by the parishes. We lately announced that in the parish of Corsham, the company were assessed at 1,450*l.* per mile, but the magistrates in petty sessions reduced it to 900*l.* per mile, at which it now remains.—The directors of the South-Eastern Company, attended by Mr. Cubitt, have visited Dover, for the purpose of fixing the Dover terminus. They have had some interviews with Mr. Hardwick, the surveyor to the harbour estates, and it is conjectured the station will occupy the site of Beach-street and Fisherman's-row, being the line from Archcliff Fort to Cheesman's Head, which appears to be generally approved of as convenient to the harbour and pier, and perhaps the least expensive of any that could have been found suitable for the purpose.

IRELAND.

Dublin.—The Bishopric of Meath is at length disposed of; the appointment has devolved upon the Ven. Edward Stopford, Archdeacon of Armagh. The new Bishop has for many years taken an active part in all the ecclesiastical measures introduced into Parliament with reference to the Irish Church; he is a strong opponent of the national system of education, and of Presbyterian marriages, and has for some years been chaplain to the Lord Primate. The valuable living of Caledon, worth 2000*l.* a-year, and held by the Archdeacon, will be for this time in the gift of Government.—Accounts have reached town of the death of Mr. Pollock, clerk of the Crown for 12 counties, which will now be conferrèd on 12 different individuals. The situations average 500*l.* a year each, but it is understood that this office will be consolidated with the clerkship of the peace under a new Bill to be brought forward next session.—The Riband of the Garter, vacant by the demise of the Marquess Wellesley, has been, it is said, conferred by her Majesty on Earl de Grey.—The Court of Delegates, at a recent meeting, fixed yesterday the 21st, for hearing counsel on the long-litigated election to the Deanery of St. Patrick's.—Mrs. Ellen Byrne has been again before the public, the relations of her late husband having arrested her and her sons on the charge of feloniously abstracting various articles, the property of the husband. After a protracted hearing, the magistrates refused to entertain the case. It appeared in evidence, that the defendants acted on the advice of counsel, so the charge at once fell to the ground. It further appeared that Mrs. Byrne did not accompany the persons who removed the articles from the premises of her late husband.—Mr. M'Clelland, a lecturer on agriculture in connexion with the National Board of Education, is now engaged in delivering lectures upon the improved system of tillage, especially by a judicious rotation of crops, in the National School of Loughrea. In consequence of notice on the subject having been given to the peasantry, by Dr. Coen, the Roman Catholic Bishop of the district, there was a numerous attendance of small farmers, the class particularly interested, at the first lecture on Thursday last.—The usual Repeal meeting took place on Monday, when the rent for the week was announced to be 235*l.* 16*s.* 6*d.*—It is reported in the Ministerial papers, that Lord Lyndhurst is about to retire from the Chancellorship in England, to be succeeded by Sir Edward Sugden; that Mr. Pennefather, Chief Justice of the Queen's Bench, is to get the Irish seals, as the successor of Sir Edward; that Mr. Blackburne is to be the new Chief Justice of the Queen's Bench, and Mr. Sergeant Warren Master of the Rolls.—Letters patent have passed the Great Seal of Ireland, appointing Lord Dunsany Custos Rotulorum of the county Meath, in the room of the late Marquess Wellesley.

King's County.—On Sunday week, a notice was posted at Laughton, the residence of Lord Bloomfield, threatening that nobleman with instant death, unless he forthwith discharged his agent, Mr. C. Garvey. Another notice was posted at the residence of a man named Sadleir, gardener to Lord Bloomfield, threatening him with death if he attempted to take the farm held by the late Mr. Roberts, who was shot at this place some few months ago. A shot was also fired into the dwelling-house of a farmer, named Gavin, near the same place. On the following day, a man from Foxborough was met near Cloughjordan, by a man armed with a pistol, who snapped it at him, and desired him "not to be telling stories to the police." In consequence of these occurrences, Lord Bloomfield has left Laughton for England.

Wexford.—The local papers, as a proof of the spread of temperance, state that Father Mathew attended at Bree, in this county, a few days since, and in the course of his address to the people stated the following remarkable facts:—"In Meath, seventy-six priests had joined the ranks of teetotalism; and this day fortnight Sir Richard Musgrave, one of the most amiable men in Ireland, took the pledge in the presence of thousands. The Earl of Erne, at the cattle show in Cork, the other day, took it; and in Dublin more than six hundred ladies, headed by the Countess of Clanricarde, also joined their ranks. They took it as an act of self-denial, and in order to afford a good example to others." After referring to the enthusiastic reception he met recently in Glasgow, he administered the pledge to 4,000 persons, amongst whom were several highly-respectable individuals.

SCOTLAND.

Aberdeen.—The Church of Scotland has experienced an important movement during the past week, and may now be considered to be fairly divided, the Synod of Aberdeen having set itself against the General Assembly. It will be remembered that the General Assembly, in May last, passed a resolution, suspending Dr. Grant and ten other clergymen from their judicial functions, for the alleged crime of assisting the Strathbogie ministers in the administration of the Lord's Supper. Among that number were the Rev. J. Robertson, of Ellon; Rev. G. Peter, of Kenmay; and the Rev. A. Cushny, of Rayne; all in the presbytery of Garloch. Accordingly, at the half-yearly meeting of the Synod of Aberdeen, held last week, objections were taken to the names of these gentlemen appearing on the roll of members. Similar objections were also taken to the names of the Rev. Mr. Middleton (whose settlement in the parish of Culsamond was declared void by a vote of last Assembly), and Mr. James Middleton, the elder. The Synod, however, by a majority of 81 to 71, have refused to give effect to the sentences of the Assembly with respect to these gentlemen, and have retained their names on their roll. In another instance, when a motion was made relating to the independence of the Church, as affected by the decision of the House of Lords in the Auchterarder case, the motion was lost by a majority of 74 to 64. These results are regarded with great interest in Scotland, and the movements of the General Assembly are looked for with some curiosity. There has never before been so large a number of contumacious members, and it is not supposed that the Assembly will attempt to suspend or depose 81 persons. In consequence of the separation of the Synod, there are now two Established Churches in Scotland, and it remains to be seen how far the other synods will unite with that of Aberdeen, or adhere to the Assembly.

Dundee.—The Scotch papers give long accounts of an attempt made last week by a north-country grazier, named M'Kenzie, to murder a person called Duff, with whom he had been travelling in this neighbourhood. It seems that Mr. Duff had 1000*l.* of his property in his possession at the time, and that M'Kenzie shot him with a pistol a short distance from this city, and left him, as he supposed, dead on the road. The unfortunate man is still alive, but very slight hopes are entertained of his recovery. He has, however, identified M'Kenzie, who was apprehended a few days afterwards, chiefly through the exertions of Lord Duncan and Capt. Mackison. The prisoner will of course remain in custody, and be committed to take his trial.

Glasgow.—In consequence of an application from the sub-committee of the Wellington Testimonial, the directors of the Royal Exchange have agreed to give a site in front of that building for the erection of the equestrian statue in honour of the Duke. It is understood that the statue is expected to be finished, and in Glasgow by the 1st of May next, the Duke's birthday.—The Glasgow papers tell us that there is at the present moment a merchant vessel of a very handsome build lying in Greenock harbour, which in its time has played many parts. At one period it was a favourite pleasure-yacht of Napoleon, but finding there was need for all the vessels that could be procured to keep up the demand, the French Government converted the Imperial yacht into a 10-gun brig, which was soon captured by the British. After various adventures, it is now quietly engaged in trading pursuits, and sails under the modest title of the Thomas.

THEATRICALS.

DRURY-LANE.—On Tuesday Holcroft's play of the *Road to Ruin* was produced at this theatre, after having been long a stranger to the stage. It was brought out with Mr. Macready's usual judgment, and was cordially received. The characters were strongly cast. The elder *Dornton* was ably represented by Mr. Phelps, and *Harry Dornton* by Mr. Anderson; Mr. Compton completely realised the character of the hypocrite and usurer in *Silky*, and Mr. C. Mathews appeared as *Goldfinch*. The *Sophia* of Mrs. Stirling was one of her most successful personations, perhaps on the whole the best character she has yet sustained; but the principal performance of the evening was the *Widow Warren* of Mrs. C. Jones, whose acting on most occasions is a comedy in itself. The revival of these old plays, which have been forgotten by most playgoers of the present generation, is a satisfactory proof of Mr. Macready's efforts in behalf of the national drama.

Miscellaneous.

Statistics of London.—London is the largest and richest city in the world; occupies a surface of 32 square miles, thickly planted with houses, mostly three, four, and five stories high. It consists of London city, Westminster city, Finsbury, Marylebone, Tower Hamlets, Southwark, and Lambeth districts; the two latter are on the south side of the Thames. It contains 300 churches and chapels of the establishment; 364 Dissenters' chapels, 22 foreign chapels; 250 public schools, 1,500 private schools; 150 hospitals, 156 almshouses, besides 205 other institutions; 550 public offices, 14 prisons, 22 theatres, 24 markets. Consumes annually 110,000 bullocks, 776,000 sheep, 250,000 lambs, 250,000 calves and 270,000 pigs, 11,000 tons of butter, 13,000 tons of cheese, 10,000,000 gallons of milk, 1,000,000 quarters of wheat or 64,000,000 of quartern loaves, 65,000 pipes of wine, 2,000,000 gallons of spirits, and 2,000,000 barrels of porter and ale. Employs 16,502 shoemakers, 14,552 tailors, 2,391 blacksmiths, 2,013 whitesmiths, 5,030 house-painters, 1,076 fish-dealers, 2,662 hatters and hosiers, 13,208 carpenters, 6,822 bricklayers, &c., 5,416 cabinet-makers, 1,005 wheelwrights, 2,180 sawyers, 2,807 jewellers, 1,172 old-clothesmen (chiefly Jews), 3,628 compositors, 700 pressmen, 1,393 stationers, 2,633 watch and clock makers, 4,227 grocers, 1,430 milkmen, 5,655 bakers, 2,091 barbers, 1,040 brokers, 4,322 butchers, 1,586 cheesemongers, 1,082 chemists, 4,199 clothiers and linen-drapers, 2,167 coach-makers, 1,367 coal-merchants, 2,133 coopers, 1,381 dyers, 2,319 plumbers, 907 pastrycooks, 869 sadlers, 1,246 tinmen, 803 tobacconists, 1,470 turners, 556 undertakers. (The above are all males above 20 years of age.) 10,000 private families of fashion, &c. About 77,000 establishments of trade and industry, 4,400 public-houses, 330 hotels, 470 beer-shops, 960 spirit and wine shops. There are six bridges over the Thames at London. London Docks cover 20 acres: 14 tobacco warehouses, 14 acres; and the wine-cellars, 3 acres, containing 22,000 pipes. The two West Indian Docks cover 51 acres; St. Katharine's Docks cover 24 acres; the Surrey Docks, on the opposite side, are also very large. There are generally about 5,000 vessels and 3,090 boats on the river, employing 8,000 watermen and 4,000 labourers. London pays about one-third the window-duty in England, the number of houses assessed being about 120,000, rated at upwards of 5,000,000*l.* sterling. The house rental is probably 7,000,000*l.* or 8,000,000*l.*—*Knight's London.*

Fire Insurance.—The total amount of property insured against loss by fire in England, Scotland, and Ireland, during the year 1841, was 735,000,000*l.*, of which scarcely more than 50,000,000*l.* was in Ireland. 30,000,000*l.* of insurance was effected in Yorkshire. The gross amount of farming stock insured is 50,000,000*l.*

Coal Mines of Lancashire.—The Preston papers state, that it has been calculated that the available coal-beds in Lancashire amount, in weight, to the enormous sum of 8,400,000,000 tons: the total annual consumption of this coal, it has been estimated, amounts to 3,400,120 tons. Hence it is inferred that the coal-field of Lancashire, at the present rate of consumption, will last 2,470 years.

Real Property of the Kingdom.—According to a return made to an order of the House of Commons last session, it appears that the total annual value of real property assessed to the poor-rates in England is 59,685,412*l.*, of which 30,448,991*l.* consisted of landed property, 22,991,472*l.* of dwelling-houses, and 6,244,949*l.* of all other kinds of property. Middlesex, although the smallest county but one, namely, Rutland, comprising as it does the greater part of London, is, as might be expected, the richest county of the kingdom, its total annual value of real property assessed amounting to no less than 7,293,369*l.* This sum is thus distributed:—Landed property, 304,653*l.*; dwelling-houses, 6,680,202*l.*; all other kinds of property, 308,514*l.* Yorkshire ranks next to Middlesex in point of wealth, its total annual value of assessed property being 5,448,494*l.*, distributed as follows:—Landed property, 3,865,496*l.*; dwelling-houses, 1,817,739*l.*; all other kinds of property, 575,259*l.* Lancashire comes next. The total annual value of real property assessed in the county of Lancaster is 5,266,606*l*, made up as follows:—Landed property, 1,402,208*l.*; dwelling-houses, 2,449,196*l.*; all other kinds of property, 1,415,222*l.* Rutland, as it is the smallest, so is it also the least wealthy county, its total annual value of real property being only 119,134*l.*, composed as follows:—Landed property, 106,119*l.*; dwelling-houses, 9,104*l.*; all other kinds of property, 3,911*l.* Westmoreland is the next least wealthy county, the total annual value of its real property assessed being 266,335*l.*; made up of real property, 221,054*l.*; dwelling-houses, 37,374*l.*; all other kinds of property, 7,907*l.* Huntingdon is next, the total annual value of its real property assessed being 317,718*l.*, made up as follows:—Landed property, 236,633*l.*; dwelling-houses, 71,221*l.*; all other kinds of property, 9,864*l.* The sum levied for poor-rates in England for the year ending Lady-day, 1841, was 6,009,564*l.* The rate in the pound on the annual value of real property assessed in 1841 was, for the whole of England, 2*s.* It is a circumstance worthy of notice, that the rates are highest in those parts of the country which we are not accustomed to refer to as the most distressed. The highest-rated county is Wilts, in which the rate amounts to 3*s.* in the pound. In Sussex the rate is only 1*d.* in the pound less than in Wiltshire—namely, 2*s.* 11*d.* In Buckinghamshire, Suffolk, and Surrey, the rate is 2*s.* 9*d.* in the pound; in Essex, Dorset, Gloucester, and Southampton, it is 2*s.* 8*d.*; whilst in Yorkshire it is only 1*s.* 11*d.*, and in Lancashire 1*s.* 8*d.* The rate per head of annual value of real property is, for the whole kingdom, 3*l.* 19*s.* 7*d.* The rate per head is highest in Herefordshire—namely, 5*l.* 19*s.* 1*d.*, and lowest in Cornwall—namely, 2*l.* 13*s.* 4*d.* The area of England in English statute acres is 31,770,615. The average annual value per acre for the whole kingdom is 19*s.* 2*d.* Middlesex is the county in which the value reaches the highest point—the average value there is 1*l.* 14*s.* per acre. In Leicestershire the annual value per

TO GENTLEMEN, FLORISTS, AND OTHERS.

MESSRS. PROTHEROE and MORRIS are instructed to sell by Auction, at the Auction Mart, Bartholomew-lane, on THURSDAY, Nov. 10, 1842, at 12 o'clock, the genuine Stock of Miscellaneous Stove, and Greenhouse Plants, Orchidaceæ, Succulents, Ferns, Climbers, &c., the property of a Lady changing her residence. The collection comprises fine specimens of Camellias, Azalea indica, Epacris, Witsenia, Chorizema, Gompholobium, Fuchsia, Iris bicolor, Bletia, Epidendrum, Gongora, Myanthus, Oncidium, Stanhopea, &c. May be viewed the morning of Sale. Catalogues may be had at the Mart, and of the Auctioneers, American Nursery, Leytonstone.

COUNTY FIRE OFFICE and PROVIDENT LIFE OFFICE, 50, Regent-street, Piccadilly. Established 1807.

TRUSTEES AND DIRECTORS.

His Grace the Duke of Rutland, K G.
The Marquis of Northampton
The Right Hon. Lord Northwick
The Earl of Macclesfield
Sir William Earle Welby, Bart.
Sir John Osborn, Bart.
Sir R. Duckworth King, Bart.
Sir Henry Pynn
Sir Fred. A. Roe, Bart.
Alexander Henderson, M.D.
John Edward Conant, Esq.
Andrew Maclew, Esq.
Frederick Squire, Esq.
George Pryme, Esq.
Glynne Earle Welby, Esq. M.P.

The advantages offered to the Public by the above Offices are such as result from a course of uninterrupted prosperity, the fruits of a prudent and economical management for a period of 35 years.

At the present time so many establishments exist, vieing with each other in the *profession of benefits* to the public, which numerous failures and consequent ruin to thousands of industrious families have proved to be fallacious, that the Directors think they will best discharge their duty to the Proprietors and to the Public by a simple statement of the advantages which have been *realised* by these Offices.

The COUNTY FIRE OFFICE has not only settled all claims with promptitude and liberality, but has, from its first establishment, made large Returns to the Insured. These amount at the present time to 125,000*l*.

The PROVIDENT LIFE OFFICE has at each septennial period divided the whole of the profits, subject to a deduction of about a twentieth part only, among the insured. The *benefits* actually *secured* to lives insured in this Office may be judged of by the following Table.

No. of Policy	Age	Bonus in 1813 & 1820			Bonus in 1827 & 1834			Bonus in 1841.			Total of Bonuses.			Sum Insured.

JOHN A. BEAUMONT, Managing Director.

HOT-WATER APPARATUS FOR HEATING HORTICULTURAL BUILDINGS, DWELLING-HOUSES, CHURCHES, and MANUFACTORIES, upon improved principles, and at very moderate charges, erected by DANIEL and EDWARD BAILEY, 272, HOLBORN.

D. and E. BAILEY having devoted much time to the consideration of this subject, and had much experience in the erection of apparatus for the above-mentioned purposes, have, by improvements suggested in their practice, rendered their mode of heating not only very efficient, but very simple, and have combined durability in the apparatus with economy in the charge. They have erected apparatus in England, Scotland, and Ireland, for many noblemen and gentlemen, and have had the honour to be employed by the Horticultural Society of London, in executing the works of their splendid Conservatory, lately erected at Chiswick.

D. and E. BAILEY also construct in metal all descriptions of Horticultural Buildings and Sashes, and invite noblemen, gentlemen, and the public to an inspection of their various drawings and models, at 272, Holborn, where they have the opportunity of exhibiting, amongst other metal works, an extremely complete and convenient kitchen apparatus, or range, adapted for the continued supply of hot water, and an arrangement of the oven more complete than has hitherto been brought before the public.

D. and E. BAILEY were the first to introduce metallic curvilinear houses to horticulturists, and can refer to the Conservatory attached to the Pantheon as one of their works, besides many others in this country and on the Continent.

D. and E. BAILEY have prepared a quantity of the Galvanic Plant Protectors, which are now ready for immediate delivery; they beg to introduce to public notice a new Trough Pipe, for Orchidaceous or other Houses where vapour is constantly, or at intervals, required, and which may be seen at their Manufactory.

HOT-WATER APPARATUS, for Horticultural and other Buildings.—STEPHENSON and Co., Agents for the Old Park Iron-works, and Manufacturers, 61, Gracechurch-street, London, solicit an inspection of their improved Conical Boiler. (See Editor's description, *Gardeners' Chronicle*, March 12, p. 175.) To Amateurs these Boilers will be found invaluable. They are complete without furnaces or setting in brickwork, movable at pleasure, very ornamental in appearance, and require attention only once in 14 or 15 hours, price 5*l*. 5*s*. and upwards. Further particulars, with plans and estimates for heating any description of building, may be obtained as above; where also may be seen the improved Wrought-iron Boiler, as applied with Chanter's Smoke-consuming Furnaces at Chatsworth, and many other of the Nobility's Seats. Iron Fencing, Hurdles, Bedsteads, Ornamental Wire-work, Garden Implements, &c. &c. The trade supplied with Hot-water Socket-pipes.

N.B.—WAYTE's New Patent Land-presses and Drills.

HOTHOUSES, CONSERVATORIES, &c., made and fixed complete, in all parts of the Kingdom. 1, 2, and 3-light Cucumbers and Melon Boxes, and Lights of all sizes, kept ready for immediate use, packed, and sent to all parts of the Kingdom: warranted of the best material. 2-light Boxes and Lights complete, from 1*l*. 8*s*. Garden Lights of every description made and glazed complete, at Jas. Watt's Sash Manufactory, Claremont-place, Old Kent Road. Reference given.

THE CONICAL HOT-WATER BOILERS invented by J. ROGERS, Esq., may be obtained of any size from JOHN SHEWEN, Ironmonger, &c., Sevenoaks, Kent.

J. SHEWEN having had every opportunity afforded him by an extensive practice to bring this apparatus to perfection, begs to offer it as most efficient and economical: it may be seen at Messrs. Chandler & Sons' Nursery, Vauxhall; Messrs. Loddiges', Hackney; Messrs. Henderson's, Pineapple-place; Mr. Knight's, King's road, Chelsea; Messrs. Veitch and Son's, Exeter; and at the Gardens of the Horticultural Society of London.

SLATE WORKS, ISLEWORTH, MIDDLESEX.

EDWARD BECK informs Horticulturists generally, that the Cisterns, Tanks, Shelves, Stages, Conservatory Tubs, Flower-boxes, Edging for Garden-paths, &c., manufactured by him in Slate, may be seen in use at Worton Cottage, upon application to the Gardener (Sundays excepted).

Letters of inquiry will receive every attention.

Just published, the 2nd Edition, with Additions, price 6*s*. 6*d*., cloth, gilt edges,

THE LADIES' COMPANION TO THE FLOWER GARDEN.

Being an Alphabetical Arrangement of all the Ornamental Plants usually grown in Gardens and Shrubberies; with full directions for their Culture. By Mrs. LOUDON.

London: Published by William Smith, 113, Fleet-street.

PART III.—(To Schoolmasters and Schoolmistresses).—5. Mary Thompson's Cottage Walls. Price 6*d*. each, or 5*s*. per doz.

Just Published, in One Volume 8vo., with upwards of 380 Engravings, price 16*s*.,

THE SUBURBAN HORTICULTURIST; or, an Attempt to Teach the Science of Horticulture, and the Management of the Fruit, Kitchen, and Forcing Garden, to Persons who have had no previous Knowledge or Experience in these Departments, by J. C. LOUDON, F.L.S., H.S., &c.

London: William Smith, 113, Fleet Street; Fraser & Co., Edinburgh; Curry & Co., Dublin.

LOUDON'S "ARBORETUM ET FRUTICETUM BRITANNICUM," Abridged for Gardeners, Planters, and Nurserymen.

AN ENCYCLOPÆDIA OF TREES AND SHRUBS; being the "Arboretum et Fruticetum Britannicum" abridged; containing the Hardy Trees and Shrubs of Great Britain, Native and Foreign, scientifically and popularly described: with their Propagation, Culture, and Uses in the Arts; and with engraved Figures of nearly all the Species. Adapted for the use of Nurserymen, Gardeners, and Foresters. By J. C. LOUDON, F.L.S., &c. 1 Thick vol. 8vo (1842), pp. 1234, with upwards of 2,000 Engravings on Wood, 2*l*. 10*s*. cloth.

"We very frankly and warmly advise all Gardeners, Nurserymen, and the Proprietors of Gardens or Land, to procure this valuable Abridgment of Mr. Loudon's. We are sure they will find themselves abundantly repaid for its cost."—*Paxton's Magazine of Botany.*

⁂ The original Work, THE ARBORETUM ET FRUTICETUM BRITANNICUM. in Eight Volumes, Four of Letterpress (8vo, 1838), illustrated by above 2,500 Engravings, and Four of octavo and quarto Plates, may still be had, 10*l*. cloth.

London: Longman, Brown, Green, and Longmans.

THE GARDENER AND PRACTICAL FLORIST.—In Weekly Numbers, Price 3*d*., and in Monthly Parts, Price 1*s*., containing all that is new and valuable in Gardening and Floriculture. Published by R. Groombridge, Paternoster Row, by whom Advertisements and Communications for the Editor are received.—Sold by all Booksellers and Newsmen.

In Monthly Nos., 8vo, with Four beautifully-coloured Plates. Price 2*s*. 6*d*.

PAXTON'S MAGAZINE OF BOTANY. The Number for October, 1842, contains highly-finished drawings of *Sophronitis grandiflora, Erica Neillii, Pentstemon crassifolius*, and *Echites atropurpurea*; likewise Papers on Gardening as a science; on Planting Shrubs in Beds; and the Preservation of Half-hardy Plants through the Winter. Floricultural Notices of new or beautiful Plants figured in the leading Botanical Periodicals for September; together with a complete Calendar of Monthly Operations for the Garden.

This work comprises, monthly, four admirably-coloured plates, and twenty-four pages of interesting and useful letter-press. The admirers of flowers are requested to observe—

1. That all the drawings are taken from nature, and are consequently made from plants which have flowered in Britain.

2. That, with few exceptions, they are all done by one artist, whose abilities are of the highest order, and who travels himself to the places where the plants are in flower.

3. That they are lithographed by the same individual, and, being coloured in a superior manner, have all the spirit and elegance, and much of the finish, of the original drawing.

4. That about one-half of the drawings are from plants which have never before been figured in this country, the rest representing the most popular novelties, as well as the more neglected, though sometimes far handsomer, old species; the majority being such as can be cultivated by every one possessing a flower-border and a greenhouse or frame.

It may, in conclusion, be safely asserted that, both for the beauty of its embellishments, and the utility of its contents, this work is well adapted to the wants of all who delight in gardening; and as the improved system of having the plates lithographed commenced with the present year, and as it is intended that each volume shall now be perfect in itself, the present is a desirable opportunity for those who wish to become subscribers.

London: W. S. Orr and Co., Paternoster-row.

NEW HARDY TREES and SHRUBS.—Mr. Loudon being about to prepare, for the December No. of the *Gardener's Magazine*, his Annual Report on the new HARDY TREES and SHRUBS which have been introduced in the course of the present year, will feel obliged to those Nurserymen, Curators of Botanic Gardens, and others, who may possess such plants, if they will send him an account of them, not later than a fortnight from the present date.—Bayswater, Oct. 24th, 1842.

SHIP FOR NEW ZEALAND, under Charter to the New Zealand Company, to sail as under mentioned, viz.—

FOR WELLINGTON AND NELSON.

PHŒBE, 471 Tons, from London, 15th November.

For further particulars apply at the New Zealand House, Broad-street Buildings.

THE PATENT ASPHALTE PROTECTING MATERIAL, spoken so highly of in the *Gardeners' Chronicle* for 1841, p. 100, 415, 530, and p. 8, for 1842, may be obtained in Sheets—32 inches by 32 inches, 32 inches by 64 inches, 32 inches by 96 inches, of THOS. JNO. CROGGON, 8, Ingram-court, Fenchurch-street. A liberal discount to Hothouse Builders, Nurserymen, &c.

KEENE'S PATENT CEMENT.

THIS CEMENT is harder than any other known, and is especially fitted for the Walls of Hothouses, Conservatories, &c., as it neither cracks nor vegetates, and is perfectly impenetrable by insects.

The entire range of Hothouses erecting by the Government at Frogmore are about being stuccoed with it, and the price ranges nearly equally with the Cements in ordinary use for floors, and it forms a paving harder and cheaper than Portland Stone.

Patentees and Manufacturers, J. B. WHITE and SONS, Millbank, Westminster.

WANTED, as HEAD GARDENER, a steady, sober, and honest married Man, without incumbrance; a member of the Church of England, who thoroughly understands his business, such as forcing Grapes, Melons, &c., likewise the cultivation of Orchidaceæ and Stove and Greenhouse Plants, as well as the training of Wall-trees, and the management of Flower and Kitchen Garden. Unexceptionable references as to the above qualifications will be required.—Address by letter to A. B. C., care of Mr. Egley, Bookseller, 69, New Bond-street, stating terms, &c.

WANTED a GARDENER and his WIFE without incumbrance. The Man must milk and assist indoors—the Wife a good Cook. Wages moderate.—Apply at Scott's Library, Stockwell Terrace, Clapham Road.

WANTS a SITUATION as GARDENER, a middle-aged married Man, who understands Greenhouse Forcing, Flower and Kitchen Garden, and Pasture Land if required. The Wife can take charge of a small Dairy. Can be highly recommended with nine years' character.—Direct, post paid, S. W., Somerset Lodge, North Brixton, Surrey.

WANTS a SITUATION as GARDENER, a married Man, aged 29, who well understands his business, just from the country, leaving on account of the place being let, Can have a most unexceptionable character. A comfortable single-handed place would not be objected to.—Address, T. D., at Mr. Spencer's, 16, Flint street, Walworth, London.

WANTS a SITUATION as GARDENER, a respectable middle-aged Man in a gentleman's family. He is a widower without incumbrance, and can have testimonials both as to character and ability. Salary is not so much an object as the prospect of a comfortable and permanent engagement.—Address X. Y. Z. (prepaid), to the care of the Rev. Edward Irish, Dartford.

NEW ORGAN FOR THE ROLLS CHURCH, CHANCERY-LANE

SEVERAL Clergymen and Gentlemen having expressed a wish to hear his Organ when completed, Mr. H. C. Lincoln regrets that, as the 16th inst. was the day named for the opening at the Rolls Church, it was impossible for him to exhibit its power, as he had proposed, prior to its removal.

MR. H. C. LINCOLN, Organ-Builder, by appointment, to Her Most Gracious Majesty the Queen, and to their late Majesties George IV. and William IV., respectfully announces that he has been commissioned to erect the Mendelssohn Organ for the New Church, Withington, Manchester,—that he is also engaged on a new Organ for Crosby Hall, to be built on the plan introduced into this country by Mr. Gauntlett,—and that he has just received the commands of the Dean and Chapter of St. David's to erect a new Organ in their Cathedral. As all Organs constructed by Mr. Lincoln are of the model of the most celebrated German Organs, and include the latest improvements, he will give notice when the above are completed, and, if time permits, exhibit their powers, for a day or two, before they leave his premises.

MR. LINCOLN directs attention to his entirely new plan of Finger and Barrel Organs, being a combination of stops never before attempted in this class of instrument, whereby the weight and grandeur of effect of a large church organ are obtained in a comparatively small compass. An instrument on this plan, with two barrels, each playing ten tunes, correctly harmonised, containing seven stops, an octave of pedals, &c. in an elegant case, with gilt speaking front pipes, can be constructed for 150*l*.

196, High Holborn.

SHIPPING AGENCY AT LIVERPOOL.

WILLMER and SMITH, Shipping and Forwarding Agents, announce to Gardeners, Florists, and Nurserymen, that they undertake to ship with great care from the Port of Liverpool, to all parts of North and South America, the West Indies &c., Packages of Seeds, Plants, Shrubs, and every article used in British Husbandry. They also attend to the landing and forwarding of Packages which arrive at the Port of Liverpool. The most respectable references can be given to Shippers who may please to favour them with their commands.

TO NURSERYMEN AND OTHERS.

TO BE DISPOSED OF, about 1000 DWARF MAIDENS, consisting of the most approved sorts of Peaches, Nectarines, Apricots, Cherries, Apples, and Pears, in fine condition; the above will be found worthy the attention of those about planting. Address, post-paid, to J. B., Knight's Coffee-house, Budge Row, City.

HODGSON and ABBOTT'S PALE ALE.—The above celebrated Beer, so strongly recommended by the Faculty, is to be procured only from E. ABBOTT, Brewery, Bow, Middlesex. The Trade not being supplied, the Pale Ale cannot be genuine if procured elsewhere.

City Office, 98, Gracechurch-street.

WHEAT-SOWING.

POTTER'S ARTIFICIAL GUANO MANURE.—TESTIMONIAL:—"The ARTIFICIAL GUANO MANURE was applied with great effect to a heavy land, on the estate of A. Cotton, Esq., Hildersham Hall, Cambridge, on a Field of Barley; it produced a marked effect—the finest crop for years, and the produce, Six Quarters of Barley to the acre. The space marked out was conspicuous, being some inches higher than that from common Manure. On part of a Grass Field the application, which was but lightly made, produced at least double the proportion of Hay compared to the part otherwise manured. A portion of it was applied to the Orange Globe Mangel Wurzel, the roots of which were of very large size—double that of others,—and its effects on a bed of Parsneps was extraordinary, producing a crop exceeding any before seen. The exact weight per square yard, compared with those of ordinary culture, will be estimated when gathered. In the instance of the Parsneps, the Manure was mixed with earth, and deposited over the seed; a mode of culture recommended in the practice of Mangel Wurzel. Although much higher in price than the common Manure, the profit was materially greater."

Works, Upper Fore-street, London.

CAUTION TO FAMILIES.—The high reputation and consequent great demand of the undermentioned Articles have excited the avarice of some Shopkeepers, who, to get a trifle more profit, attempt to impose on the Public *highly-pernicious* Compounds as the real MACASSAR OIL for the hair, and KALYDOR for the complexion: they copy the labels and bills of the original Articles, substituting either an *assumed* name, or the word GENUINE in the place of ROWLAND'S —⁂ To frustrate such imposition it is necessary, on purchasing either Article, to see that the word "Rowland's" is on the wrapper as follows:—ROWLAND'S MACASSAR OIL, price 3*s*. 6*d*.; 7*s*.; or Family Bottles (containing four small), 10*s* 6*d*.; and double that size, 21*s*. per bottle. ROWLAND'S KALYDOR for the Skin and Complexion—Price 4*s*. 6*d*. and 8*s*. 6*d*. per bottle. "A. Rowland and Son, 20, Hatton Garden, London," is written in red on the wrappers of the MACASSAR OIL and KALYDOR, and engraven on the Government Stamp affixed on the Kalydor. Be sure to ask for ROWLAND'S ARTICLES. Sold by them and by respectable Chemists and Perfumers.

THE GARDENERS' CHRONICLE.

A STAMPED NEWSPAPER OF RURAL ECONOMY AND GENERAL NEWS.

THE HORTICULTURAL PART EDITED BY PROFESSOR LINDLEY.

No. 44—1842. SATURDAY, OCTOBER 29. PRICE 6d.

INDEX OF THE PRINCIPAL HORTICULTURAL SUBJECTS IN THE LAST NUMBER.

Acacia, remarks on . . . 709 b
Acorn, its metamorphosis from leaves . . . 707 b

Vines, to prune . . . 712 c
Wheat, Lammas, its produce . 710 a
Woodhall, noticed . . . 711 b

THE MOST SUPERB DARK CHINA ROSE EVER OFFERED TO PUBLIC NOTICE—"MIELLEY'S PRINÇE OF WALES."

WM. WOOD & SON have the honour to announce to their Friends and Amateurs in general, that they have purchased the entire stock of the above most magnificent Rose, and intend sending it out early in November, price for Dwarf Plants (on their roots) 10s. 6d. each.

The colour is of the deepest rich dark velvety purple violet, most perfect shape, beautifully cupped, large and very double, producing its elegant flowers on very strong footstalks; the habit is luxuriant and pleasing, with fine glossy foliage; it is perfectly hardy, and may certainly be depended upon as a Show Rose of first-rate excellence.

A discount of one-third will be allowed to the trade if 6 plants or more are taken at once. Early orders are respectfully solicited, which will be executed in rotation as received.

A remittance or reference will be required from unknown correspondents.

Woodlands Nursery, Maresfield, near Uckfield, Sussex.

CAMELLIAS.

CHANDLER and SONS, Nurserymen, Vauxhall, London, beg to state that they have young healthy plants of Camellia nitida now ready to send out at 3l. 3s. each. This is an imported variety, the flowers of a rose colour, with a white streak through each petal, and very double and compact.

C. and SONS can also supply good plants of C. Albertus at 1l. 1s. each, also fine healthy young plants of the following sorts, in collections of 1 dozen, viz.:—

Double White, Double Striped, Pompone, Pæoniæflora, Press's Eclipse, Fimbriata, speciosa, splendens, Chandlerii, Colvillii, Hume's Blush, florida—for 2l., package included.

Elegans, Althæiflora, Corallina, eximia, imbricata, coronata, Spofforthiana, Woodsii, Rossii, miniata, Haylockii, Fordii—for 3l., package included.

Bealeii, tricolor, Donkelaerii, serratifolia, regalis, triumphans, albicans, imbricata alba, Francofurtensis, rosea, elata, Colvillii striata—for 4l., package included.

If individual sorts are selected from the above, the price of plants from the first collection will be 3s. 6d. each; from the second, 5s. each; and from the third, 7s. 6d. each.—A remittance, or reference for payment in London, will be expected from unknown correspondents.

WHALES' SEEDLING DAHLIA, "HERO OF STONEHENGE," will be sent out in Dry Roots, in excellent condition, at 5l. 5s. each, if a sufficient number of subscribers; if not, it will be sent out in Plants in May, of which due notice will be given. The Flower has been seen by most of the principal growers, having been exhibited at the principal exhibitions, viz., Stonehenge, or Salisbury Plain, where it obtained the 1st prize; 1st at Devon and Exeter; 2d at Marlborough, and in a winning stand of 12; prize at Salthill, and at the Metropolitan Show, Sept. 26th. It is a flower of great substance, being from 16 to 18 petals deep, and 5 in. diameter, when full up—and perfectly constant the whole season; colour, a dark mulberry. For cash only to unknown correspondents.

Elcot, Newbury, Oct. 25, 1842.

NEW CAPE ERICAS.

T. JACKSON, Nurseryman, Seedsman, &c., Kingston, Surrey, begs most respectfully to inform the admirers of CAPE ERICAS, that he is now sending out his Two Superb New Varieties, viz.:

ERICA ARISTATA VITTATA.—It is a variety between E. aristata major and E. linnæoides; it was exhibited to the Horticultural Society of London, and awarded a Banksian Medal, when it was kindly named by Dr. Lindley. It is favourably noticed in "Paxton's Magazine of Botany," in comparison with E. Neillii, where it is remarked, "We have also noticed another hybrid at Mr. Jackson's. It is very similar to the present, but approaches a shade or two nearer to E. aristata, and is extremely beautiful £1 1 0

ERICA JACKSONII is a hybrid between E. retorta and E. Irbyana, combining the elegant growth of the latter with the splendid flowers of the former. Figured in "Paxton's Magazine of Botany," Vol. 7, p. 149 . 1 1 0

T. J. respectfully invites an inspection of his extensive and healthy stock, from which he can furnish Collections at the following low prices:

			£	s.	d.
100 Cape Ericas	in 100	distinct kinds	£5	0	0
100 do.	do.	choice do.	10	0	0
200 do.	200	do.	15	0	0
12 Epacris	12	do.	1	1	0
20 Camellias	20	do.	5	0	0

Superior Evergreen and Flowering Shrubs, Standard and Trained Fruit-Trees, Ornamental and Forest-Trees, and Nursery Stock of all Descriptions.

N. B.—About 2,000 English Yews, from 3 to 5 ft. high, of good colour, and with fine roots.—Kingston Nursery, Oct. 27, 1842.

DRIED PLANTS.—An Original Subscriber to the Wurtemburg Botanical Society (Unio Itineraria) wishes to dispose of his several Sets of Dried Plants; any of the Collections may be had separately: they are those from Abyssinia, Arabia, the Georgian Caucasus, Nubia, &c. &c. Price and particulars of William Pamplin, 9, Queen-street, Soho-square, London.

Also an extensive and valuable Herbarium of European Plants for sale.

*** No letters will be attended to unless they contain a Postage Stamp for the reply.

T. & C. LOCKHART, FLORISTS, 156, Cheapside, London, have the following SEEDS now ready for sale:—

		s.	d.
The new Spotted Digitalis	per packet	3s.	6d.
Hybrid Gloxinia, between candida and rubra	do.	2	6
Phlox Drummondi, new scarlet	do.	2	6
Clintonia pulchella	do.	1	0
Portulaca Thellussoni	do.	2	6
Rhodanthe Manglesii	do.	1	0
Balsam, a splendid mottled Hybrid	do.	2	6

The above will be forwarded, Post free.—A List of Seeds is now preparing, and will be published about the end of December.

SPLENDID NEW CACTUS (CONWAY'S GIANT).

PHILIP CONWAY begs to inform his Friends and the Public, that he intends sending out this unequalled Production the second week in April, at 2 guineas each. See Dr. Lindley's opinion of the above in the *Gardeners' Chronicle* of July 4th, page 267, as follows:—

"A new seedling Cactus, of most extraordinary beauty, has just been sent us by Mr. Conway, Nurseryman, Old Brompton. It is a cross between speciosissimus and Ackermanni, having the large size of the former, and the rich scarlet colour of the latter, with only a tinge of violet inside. Although the plant has only now flowered for the first time and is quite small, the blossoms measure eight inches in diameter. The petals have a fine broad oblong outline, and the stigma is a bright violet. It is much the handsomest sort yet raised. It is to be called Conway's Giant, and its name is no exaggeration."

P. C. begs further to intimate that his Stock is not large, and early orders will ensure the strongest plants, as they are to be executed in rotation. A remittance or reference will be required from unknown correspondents. No allowance to the Trade, the Stock being limited.—Old Brompton, Oct. 27th, 1842.

MESSRS. YOUELL and Co. beg to announce the following:—

FUCHSIA ST. CLARE. — This, the most Splendid FUCHSIA yet introduced to public notice, will be ready for sending out in the 2nd week of April next, at 10s. 6d. per plant, postage free, to any part of the United Kingdom, by YOUELL and Co., who possess the entire stock of it. Dr. Lindley's opinion of it will be found in the *Gardeners' Chronicle* of the 14th of May last, as follows:—

"Your Seedling Fuchsia is by far the finest hybrid we have seen; the flower being three inches in length, with the tube and sepals of a bright carmine colour, and the petals of a rosy purple. If, as you say, it is a strong grower and a free bloomer, it will prove a valuable addition to this beautiful genus:—"

Which two latter qualities it possesses in the extreme. All orders, as well as those from the Continent, will receive every care in packing, so as to ensure their perfect safety. The usual discount to the Trade, where not less than six plants are ordered. For further particulars see their advertisement in the *Gardeners' Chronicle* of the 8th inst.

CARNATIONS AND PICOTEES.—A Superb Collection of the above are now being sent out at the following prices:

			£	s.	d.
25 pairs	of extra fine first-rate Show flowers,		£5	0	0
12 ,,	do. do.	do.	2	10	0
25 ,,	of fine Show flowers,		3	0	0
12 ,,	do. do.		1	10	0
25 ,,	of extra fine Show Pinks,		1	4	0
12 ,,	do. do.		0	12	0

The selection being left to Y. & Co.

Who, should it meet the wishes of those favouring them with their orders, will send them free to any part of the United Kingdom, at the extra charge of 2s. per dozen-pairs.

A Post-office order, or reference, is respectfully requested from unknown correspondents.

Their Catalogue, containing every known variety worthy of cultivation, may be had by enclosing two postage stamps.

ARAUCARIA IMBRICATA.—Y. and Co., who possess by far the largest stock in the country of the above most noble Hardy Plant, which is in course of planting by most of the Nobility, are executing orders for it in fine strong healthy Plants, at 60s. per dozen.

Great Yarmouth Nursery, Oct. 27th, 1842.

ALEX. SMITH, NURSERY AND SEEDSMAN, Cirencester, begs leave to inform the Nobility, Gentry, and Public in general, that, being obliged to clear part of his Nursery this season, (the ground being wanted for another purpose,) he is disposed to sell the Stock at very reduced prices: it consists of about 360,000 Forest Trees, 228,764 Thorn Quick, 2,054 yards of Box Edging, 237,800 Evergreen and Flowering Shrubs, with a fine assortment of Fruit Trees, &c. &c. Catalogues may be had on application.—Oct. 26th, 1842.

FANNY KEMBLE AND PANDORA TULIPS.

MR. GOLDHAM having been frequently solicited to part with the above TULIPS, and having now sufficient Stock to do so, begs to inform FLORISTS, &c., that he will this season dispose of 10 Bulbs of the former at 10l. 10s., upon obtaining 10 Subscribers; and should this number not be obained, it will not be parted with this season; and with the latter at 8l. 8s., not being limited to the number of Subscribers.—Address, Albion Cottage, Thornhill Road, Islington.

TO PANSY GROWERS.

J. FRYER begs to offer his Superb Seedling Pansy "EMPRESS" at 7s. 6d. each—Dr. Lindley's opinion of which may be seen in last week's *Gardeners' Chronicle* as follows:—

"Your Seedling Pansy, named Empress, is a flower of fine form, and delicate yellow ground, with a fine distinct dark eye: it is decidedly a good flower."

J. F. can also supply a few other Seedlings of merit, and strong healthy plants of most of the leading varieties in cultivation, at 12s. per doz., and good sorts from 6s. to 9s. per doz., package included. Pansy Seed, from best varieties, 2s. 6d. to 5s. per packet; from good ditto, 1s. per packet; and a few packets of extra fine Carnation and Picotee Seed, from a very superior stock, at 3s. 6d. and 5s. each, which will be sent Post free. A choice collection of Dutch Roots, Hyacinths, named and mixed Tulips, Anemones, Ranunculuses, &c. at moderate prices—Any orders for which, accompanied by a Post-office order, shall be punctually attended to.

Clarendon Nursery, Camberwell, Oct. 26th, 1842.

HERBACEOUS PLANTS.

JOHN POPE & SONS beg to call attention to their very extensive Collection of Herbaceous Plants, &c., Catalogues of which may be had on application. J. P. & Sons offer 100 showy Herbaceous Plants (if left to their selection) for 4l., or 50 do. do. for 2l. 5s., package included; 100 Plants adapted for Rock-work for 2l. 10s.—Money orders or reference required from strangers.

Handsworth Nursery, near Birmingham.

NEW PELARGONIUMS.

LUCOMBE, PINCE, and CO., have now ready to send out the following fine distinct and desirable Varieties of PELARGONIUMS:—

	£	s.	d.
Beauty of Winslade (Elms')	£3	3	0
Claude Lorraine (Pince's)	3	3	0
Rosalind (Pince's)	3	3	0
Cornish Diamond (Bassett's)	2	2	0
Triumph (Bassett's)	2	2	0

*** Beauty of Winslade gained the first Seedling Prize at the Exeter Horticultural Society, and Rosalind obtained the Seedling Prize at the Bath Horticultural Exhibition in May last. The usual allowance to the Trade. Exeter Nursery, Oct. 26th, 1842.

PRINCE ALBERT PEA.

CORMACK and OLIVER, SEEDSMEN and NURSERYMEN, New Cross, near the Croydon Railway Station, and Bedford Conservatory, Covent Garden, London, have the honour to offer to the notice of Noblemen, Gentlemen, and others, the above new PEA, as one of the earliest and best sorts extant; in proof thereof, a quantity put into the open ground on the 14th of March last was ready for use the 25th of April following, being only *forty-two days from the period of sowing to the date of gathering for the table*; it is moreover a good bearer, of excellent flavour, and highly advantageous for early forcing. —Packets, containing a quart, 5s. each.—September 30, 1842.

WOODLANDS NURSERY, MARESFIELD, NEAR UCKFIELD, SUSSEX.

WILLIAM WOOD & SON beg leave to inform their numerous Patrons, and Rose Amateurs in general, that their NEW CATALOGUE OF ROSES, for the present season, is now ready for distribution, and will be sent, GRATIS, on application.

The immense Stock of Roses at Maresfield are this season finer and more luxuriant than ever; no pains or expense have been spared to render the collection as rich and unique as possible.—Also Trees and Plants of all kinds packed with the greatest care for exportation.

The General Catalogue of Nursery Stock and Trade List of Roses, &c., are ready for distribution.—Sept. 21st.

MESSRS. DICKSON, NURSERYMEN AND FLORISTS, Acre Lane, Brixton, beg to inform Amateurs and Florists, that their Catalogue of Carnations, Picotees, Auriculas, &c., is now ready, and may be had on application to them, or Messrs. Warner and Warner, Seedsmen, &c., Cornhill, London.

MICHAEL BREWER, Nursery, London-road, Cambridge, begs respectfully to call the attention of the Nobility, Gentry, and the Public to that invaluable new Strawberry, the EMPEROR. It is a strong grower, a great bearer, and has a fine flavour, with large scarlet fruit superior to Keen's Seedling, with the great advantage of being ripe a fortnight earlier.—Fine strong plants are now ready at 30s. per 100.

Brewer's perpetual scarlet-flowering BRITANNIA Pelargonium, dwarf habit, dark-green foliage, and the brightest scarlet grown, 12s. and 18s. per doz. Strong-flowering Plants of RUSSIAN VIOLETS, 4s. per doz. Brewer's fine early hybrid SEEDLING RHUBARB, from the Siberian, not surpassed for earliness and flavour, strong Roots, 9s. per doz.

M. B. has also a large Stock of IRIS SUSIANA and splendid mixed PERSIAN IRISES to dispose of.

HYACINTHS, TULIPS, &c.

H. GROOM, Clapham Rise, near London (removed from Walworth), by Appointment Florist to her Majesty, respectfully informs the Nobility and Gentry that this is the proper season for planting the above bulbs, and that his Catalogue is ready and may be had on application.

"OBERON."

SAMUEL HODGES begs to inform the admirers of the PELARGONIUM that he intends to send out in strong Plants, at 42s. each, the above-named Pelargonium early next month; it was exhibited at Chiswick in June and July, at the Horticultural Show; also at the Crown and Anchor, Tavern, Strand; at the Cheltenham and Gloucestershire Shows, and was greatly admired; it is allowed to be a beautiful and new variety.

Cheltenham Imperial Nursery, 20th October.

N. GAINES begs to inform the Nobility, Gentry, and Trade in general, that his LIST of first-rate Pelargoniums, Pansies, Calceolarias, Fuchsias, Verbenas, Chrysanthemums, Cinerarias, Auriculas, &c., may be obtained by application at the Nursery.

SPOTTED DIGITALIS.—Seed of this Splendid Flower, which received a Medal at the June Meeting of the Horticultural Society at Chiswick, can be obtained in small packets at 5s. each —also some fine Pansy-Seed, at 2s. 6d. do.—Surrey-lane, Battersea, 20th Oct., 1842.

W. LYNN, NURSERY AND SEEDSMAN, late of Henley-on-Thames, begs to offer to the Trade, and Public in general, the following articles, which are good and fine:—viz., Maiden Cherries, ditto Stocks, 4 to 6 ft.; 14 varieties of Dwarf Trained Plums; Standard Plum Stocks, 6 to 8 ft.; Standard Walnuts; Red Cedars, 1 to 2 ft.; Arbor Vitæ, 4 to 6 ft.; Box-trees, 2 ft.; Spiræa bella; Camellias, 1 to 2 ft., set for bloom Auriculas; Myrtles, 2 ft.; Gesnera fragrans, 2 ft.; Hoya carnosa; Pelargoniums; Lobelia ignea; also a small stock of his new Dwarf Wrinkled Marrow Peas, at 2s. 6d. per quart: this Pea has given universal satisfaction in the neighbourhood of Henley—it is superior to the Knight's Marrows, and much more advantageous, especially in small gardens, its height being 3 to 4 ft.; it is the most prolific Pea the advertiser ever saw, perpetual in its bearing, quite full, and of most delicious flavour, even when nearly ripe. New White Reading Onion—seed of own growth; Long and Short Prickly Cucumbers; fine Curled Parsley; Vegetable Marrow; Walnut-leaved Kidney Potatoes, and Knight's Seedling Early Frame ditto:—For which early applications are requested. All orders and communications addressed (pre-paid), No. 9, Lower Homerton Terrace, Homerton, will be punctually attended to.

TO NOBLEMEN, GENTLEMEN, AND OTHERS.

MESSRS. PROTHEROE and MORRIS are instructed by the Trustees of Messrs. ADAMSON and SON, to submit to public competition, by Auction, on the premises, Stoke Newington Common, on MONDAY, 31st Oct., 1842, and following days, at 11 o'clock, the whole of the Valuable NURSERY-STOCK on 30 acres, consisting of Fruit and Forest-trees, Evergreens, American Plants, Deciduous and Ornamental Shrubs, of every variety, in considerable quantities. Also about 5,000 of MYATT'S BRITISH QUEEN STRAWBERRY (acknowledged by superior judges to be the finest in cultivation), Rhubarb for forcing, &c., &c. The Stock may be viewed prior to Sale. Catalogues 1s. each, returnable to purchasers, may be had on the premises, of the principal Seedsmen, and of the Auctioneers, American Nursery, Leytonstone.

sumed in such enormous quantities; but in some private woods they still abound. Nearly all those majestic Oaks which grow in North Stoneham Park, in Hampshire, are the Durmast; and some of the finest Oak timber that now goes into her Majesty's Dockyard is from thence. There can be no doubt that Oaks raised from the Acorns of these noble trees are infinitely to be preferred to such as are obtained in the nurseries from Acorns gathered at random from trees of all sorts of constitution, none of which, perhaps, are really above the average in point of stature.

Let us hope that our remarks will have the effect of drawing the attention of planters to these very important considerations. As a Shetland pony is not likely to be the parent of a drayhorse, so a pigmy Oak cannot be expected to produce anything better than a pigmy race of seedlings.

A SECOND MEMOIR ON MANURE.—By Messrs. Boussingault and Payen.

(*Abridged from the French.*)

Our previous memoir upon the relative strength of different manures having been well received by practical men, we have been induced to complete our task by analysing every sort of manure which we have been able to collect. Let us, in the first place, repeat our former definition of what constitutes a powerful manure; for it appears to convey an accurate expression of well-established facts :—"The value of manure is in proportion to the abundance of nitrogen in its organic materials, more especially with relation to the organic materials which do not contain nitrogen : moreover, the decomposition of quaternary substances takes place gradually, and best corresponds with the progress of vegetation."* That was our original statement. It was applied to those manures which are suitable to cultivated lands, containing the residue of preceding crops; and which, although deficient in nitrogen, are rich in ternary organic materials. In order that the manure, which is spread upon land, may *of itself* supply sufficient nutriment to plants, it is necessary that it should contain all those organic and inorganic constituents which, without being borrowed from the atmosphere, may be assimilated during the life of a plant, and contained in the crop. In this case, the manure should vary with the nature of the soil, climate, season, and the kind of plants cultivated, as well as the situation and slope of the ground —not forgetting the nature of the subsoil and the matters left by previous crops. But it is impossible to act in practice upon this principle. The adaptation of manure would become so very complicated and variable, that it would be impossible to lay down any general rules, and scientific data would be useless, because the requisite materials could never be collected sufficiently cheap. The old mode of classing manures under a few separate heads is therefore the best.

There are inorganic compounds which add fertility to the land by mechanically changing it, independently of their chemical action; thus supplying the soil with mineral substances indispensable to the perfect growth of the crop: such as saline substances, peculiarly favourable to the growth of certain tribes—as, for example, gypsum to leguminous plants; lime, the salts of potash and soda, wood-ashes, &c., which are found advantageous to vegetation in almost every soil. These useful substances may be termed *improvers* and *stimulants*.

Manures, properly so called, are of organic origin; they supply the deficiency of that gaseous or soluble food which plants are able to assimilate. It has been hitherto imagined that those manures which yield the greatest amount of carbonic acid are the most valuable; this is, however, a mistaken notion, for land in constant cultivation always contains a superfluity of such matters. It is those putrescent substances which abound in nitrogen, and which undergo the most rapid decay, that ought to be constantly restored to the soil: for it is they which are incessantly consumed by the crops. This is now a fact that admits of no question.

We know that some kinds of compost act, at one and the same time, as improvers and stimulants, and also furnish a supply of water and organic matter, containing more or less nitrogen. Most excrementitious substances are of this nature, and therefore, from the many offices they perform, are suitable to all sorts of land—*cool*, for dry and sandy soil; *heating*, for heavy, wet, and cold land.

As for those rich manures which are capable of being conveyed to great distances, they may be beneficially applied upon any soil, and for any purpose; provided that their action is assisted, and that the active properties of the land are brought out, by irrigating and working it well.

This will be rendered clearer by the following example: —Instead of extremely wet manures which had always succeeded perfectly upon a dry and sandy piece of ground, an attempt was made to substitute an equal value of dry blood. The result might easily have been foreseen,—the crop failed in consequence. Are we to conclude from this that a rich manure, abounding in nitrogen, is useless or injurious upon light land? Certainly not; for the same substance mixed in small quantities with cool manure, so as to create in the mass the same amount of nitrogen, yielded a finer and more abundant crop than in former years, when cool manure alone was employed. This is the reason why green manure, or mere irrigation, ensures the action of heating manure upon light and sandy soils.

The dried blood which is found so useful in the Colonies as a manure for Sugar-canes, owes its excellence, when applied to that crop, to its furnishing nitrogenized matter without introducing into the soil any mineral salts, which are often too abundant in other kinds of manure, and which only create a difficulty in extracting the sugar.

These observations will explain the nature and value of the evidence that is furnished by our analyses, concerning which we next proceed to offer some special observations.

(*To be continued.*)

---

* It is therefore the nitrogen that is in combination in a substance that is useful, and the amount of its dose indicates the quality of manure.

ON ANIMAL MANURES.—No. VI.

(By Professor Charles Sprengel. Translated from the German).

(*Concluded from page 708*).

11. *Feathers.*—In countries where much poultry is reared, as, for instance, geese in Alsace, the quills are employed as manure. On one Magdeburg acre of land, 9 to 10 sacks, of about 400 to 500 lbs. each, are used. Feathers contain the same substances as horn, and consequently possess the same powerful qualities.

12. *May-flies* (Ephemera vulgata).—They are used in some marshy parts of Hungary and Carinthia as manure. This strange substance is of some importance in those countries, as one farmer uses, in some seasons, more than 30 cart-loads.

13. *Chrysalids of Silk-worms.*—When the cocoons of silk-worms have been spun off, the chrysalids left behind are used in some parts of Italy and the South of France as a manure. Chaptal asserts them to be of excellent quality, of which there can be no doubt, for, like other animal substances, they are known to contain much nitrogen.

14. *Cockchafers.*—In seasons where Cockchafers appear in such vast numbers as to devour nearly all the foliage of trees, it will be well worth while to collect them; and after they have been killed by hot water or such like, they may be used as manure. They, like everything animal, contain much nitrogen, and possess a great manuring quantity. The destruction of Cockchafers has also another advantage for the farmer, as it prevents the multiplying of their grubs, which injure the crops, and, at times, even the grass of the meadows, to a considerable amount.

To the agriculturist who is in the habit of conveying every year thousands of loads of manure on his fields, many of the substances last mentioned may appear trifling. Nevertheless they deserve attention, and possess considerable importance for the small farmer.

FAMILIAR BOTANY.—No. XI.

Le signal est donné sans tumulte et sans bruit.

The fall of the Leaf.—The signal is indeed given without one sound to warn us of the event, except the rustling of the foliage as it quietly drops from the branches it has decorated all the long, long summer. Yesterday, every bush was verdant, or if the leafy honours of the forest had yellowed, and reddened, and browned, beneath the influence of a declining sun, producing

——A crowded umbrage, dusk and dun,
Of every hue from wan-declining green
To sooty dusk,

it was only as if to change into new blossoms of the autumn. To-day, the ground is silently strewed with dead and dying leaves, and those which remain on the branches are quietly preparing for their fall. And how is this? Is it that the leaves have shrunk beneath the icy embrace of an autumnal frost, and have perished in the struggle to avoid it? Or has old age overtaken them, and are they only participating in the universal lot of living things, sinking into the grave because their hour is come?

The fall of the leaf is a most curious circumstance and has puzzled many a wise philosopher. It cannot be merely because of the cold to which the leaf is exposed, for when a frost in June blackens our hedgerows and desolates our gardens, the leaves do not then fall off; they only wither and die. It may be because of the arrival of old age; but this is a phrase which explains nothing. One would naturally ask, moreover, why some leaves remain on a tree the whole winter, though others fall so early. To understand these things we must first learn what the leaf is, and how it is joined to the branch.

A leaf is a thin part of the outer layer of bark pushed outwards, and stiffened by tough fibres which pass into it from the wood and liber and form its veins. By these means a simple and very curious apparatus is constructed, the green or bark part of which, consisting of millions of small bladders, acts as a stomach to digest with, and lungs to breathe with, while the fibres convey food and air from the branch into the stomach and lungs. Now, when the leaf is first formed its bladders and fibres have very thin sides, and whatever is introduced into them is readily returned again; and if the water they receive was quite pure, it is not improbable that they would go on receiving and returning for a long time. But the fluids of plants are not water; on the contrary, they contain a great deal of earth, and other matters, which they deposit every time they pass over a surface. We know that when a kettle first comes home from the ironmonger, its inside is bright and clean; but as soon as we have boiled any water in it, the inside becomes a little furred; and when water has been boiled a great many times, it becomes very much furred, till at last it is quite lined with a substance like hard earthenware. Something of this sort takes place in the inside of the bladders and fibres of a leaf; they are at first quite clean, but by degrees they are furred over, till their sides are rendered so thick that the fluid on which the leaf feeds can no longer pass through them readily. As soon as this happens, the leaf begins to be starved, and to leave off growing; want of food renders it weak; a sort of indigestion takes place, and at last it altogether dies. In the summer time, leaves are always falling off as they die; those on the lowest part of the branches fall first; but we do not remark it, because the falling leaves are hidden by the live ones. Now, the reason why a leaf falls off when it is dead seems to be this: the bark to which it is attached goes on growing and expands; the leaf-stalk, as it dies, shrivels and contracts, the consequence of which is, that the one separates from the other. It is, in fact, just what happens when a piece of iron is heated and then cooled; the outer part, which is an oxide, cools much quicker than the other part, which is not an oxide; in cooling, the metal contracts; but as the metal and the surface cool at a different rate, they also contract at a different rate, and so separate. Such is the case in the summer time; and when the frost comes in the autumn, something of the same sort takes place. At that time the leaves are generally in a dying state, for the reasons already explained; a partial separation has, in fact, taken place between them and their branches. When the cold comes, it acts more on the half-dead leaves than on the living branch, contracting all the fibres and bladders of the former much more than the corresponding fibres and bladders of the bark; and the necessary result is their separation. Indeed, we see the same thing continually happening in furniture: a carpenter glues together two pieces of wood; they are brought into a dry room—one contracts more than the other, and the consequence is, that the joint is broken.

As to those leaves which are called evergreen, they undergo the same fate exactly as other leaves, only at a later period. Their interior is not so soon clogged up by a sediment from their sap, and they go on growing all the winter. But in time, usually about May, their leaves are affected by the same causes as the leaves of deciduous trees; at that season the branches make a rapid growth, the bark expands, the leaves cannot keep pace with it in their growth, and the result again is, separation and death.

Such are a part of the admirable contrivances by which the great phenomena of nature are accomplished; such are the simple mysteries which shroud the operations of the material world, until they are revealed to the patient student of their causes.—*R. E.*

AMATEUR'S GARDEN.—No. XLIV.

When the weather is fine, there are various operations in the Kitchen and Fruit Garden which may now be performed. Vacant ground may be dug or roughly trenched, and left exposed in this manner to be pulverised by the frost of winter. What is termed "ridging" is one of the best ways in which this can be done, because a greater surface of ground is by this means exposed than when dug in the common level way. For the information of those who may not be acquainted with this method, I may mention the way in which it is commonly done. Suppose a piece of ground is to be ridged; it is first of all divided at each end into a certain number of parts, each two feet three inches, or two feet six inches wide; the line is then stretched across the ground, and these spaces are marked out with the spade from end to end. After this is done, an opening is taken out at the end of the first space so marked out, and the soil carried to the end of the last one. The workman then digs up one and down another until the whole piece is finished, making a ridge of each as he proceeds. When the ground is trenched, the trenches may be thrown up in ridges if the ground is stiff, for the reasons already given. Lime rubbish and ashes are both very useful when dug into stiff clay. I recollect digging a quantity of the latter into a piece of ground planted with Gooseberry trees, which was always difficult to work, owing to the stiffness of the soil; in after years, however, the work was much lighter owing to the action of the ashes upon the soil.

Borders for wall-trees may be made as soon as possible; where the subsoil is cold and wet, it ought to be well drained, and some means should be used to prevent the roots from going too deep. The amateur cannot do better than peruse carefully the excellent observations connected with this subject, by Mr. Whiting, in the Calendar of last week.

Amongst other operations which are going on at this season of the year, I wish particularly to direct attention to efficient drainage. This is as important to land as manure is; and although the Amateur may not possess a large estate upon which to try his skill, yet he may produce the best results upon his kitchen-garden, his pleasure-grounds, or his field. Whenever the ground is wet and spongy, it soon tells upon the trees and crops which do not grow naturally upon a swampy soil. In the south of Scotland, and in those parts of England where agriculture is most advanced, the enlightened farmer has contributed most essentially to this improvement, by the care with which he has drained his land. There are several systems of draining, all of which are applicable to a small garden, as well as to an extensive farm, the object in both places being the same, namely, to draw off superfluous water from the soil. The patent tile system of draining is very much used; but where the Amateur has plenty of stones, he can make a cheap and efficient drain with them in the same manner as is done in many of the agricultural districts. All that is necessary is to dig the drain to the required depth, taking care to give a good fall to the bottom, for which the best stones should be chosen, laying them one against the other in the form of an arch or triangle, to leave a clear course for the water to run away. When this is done, fill up the drain to a certain height with stones, and cover them with turf, heath, straw, or some material of that description, to prevent the soil, which is afterwards put upon the surface, from sinking amongst the stones and choking the drain. The stagnant water is thus drawn into the drain, from both sides, and carried away to a ditch or stream, upon a lower level than the field or garden in which the drain is made.—*R. F.*

TO BOOKSELLERS, &c. — Wanted clean good Copies of Bulliard on "Fungi," Schæffer on "Fungi," and Théodore de Saussure's "Recherches sur la Végétation." Apply by letter, prepaid, stating price, to Mr. Alison, 3, Charles-street, Covent Garden.

The Gardeners' Chronicle.

SATURDAY, OCTOBER 29, 1842.

MEETINGS FOR THE TWO FOLLOWING WEEKS.

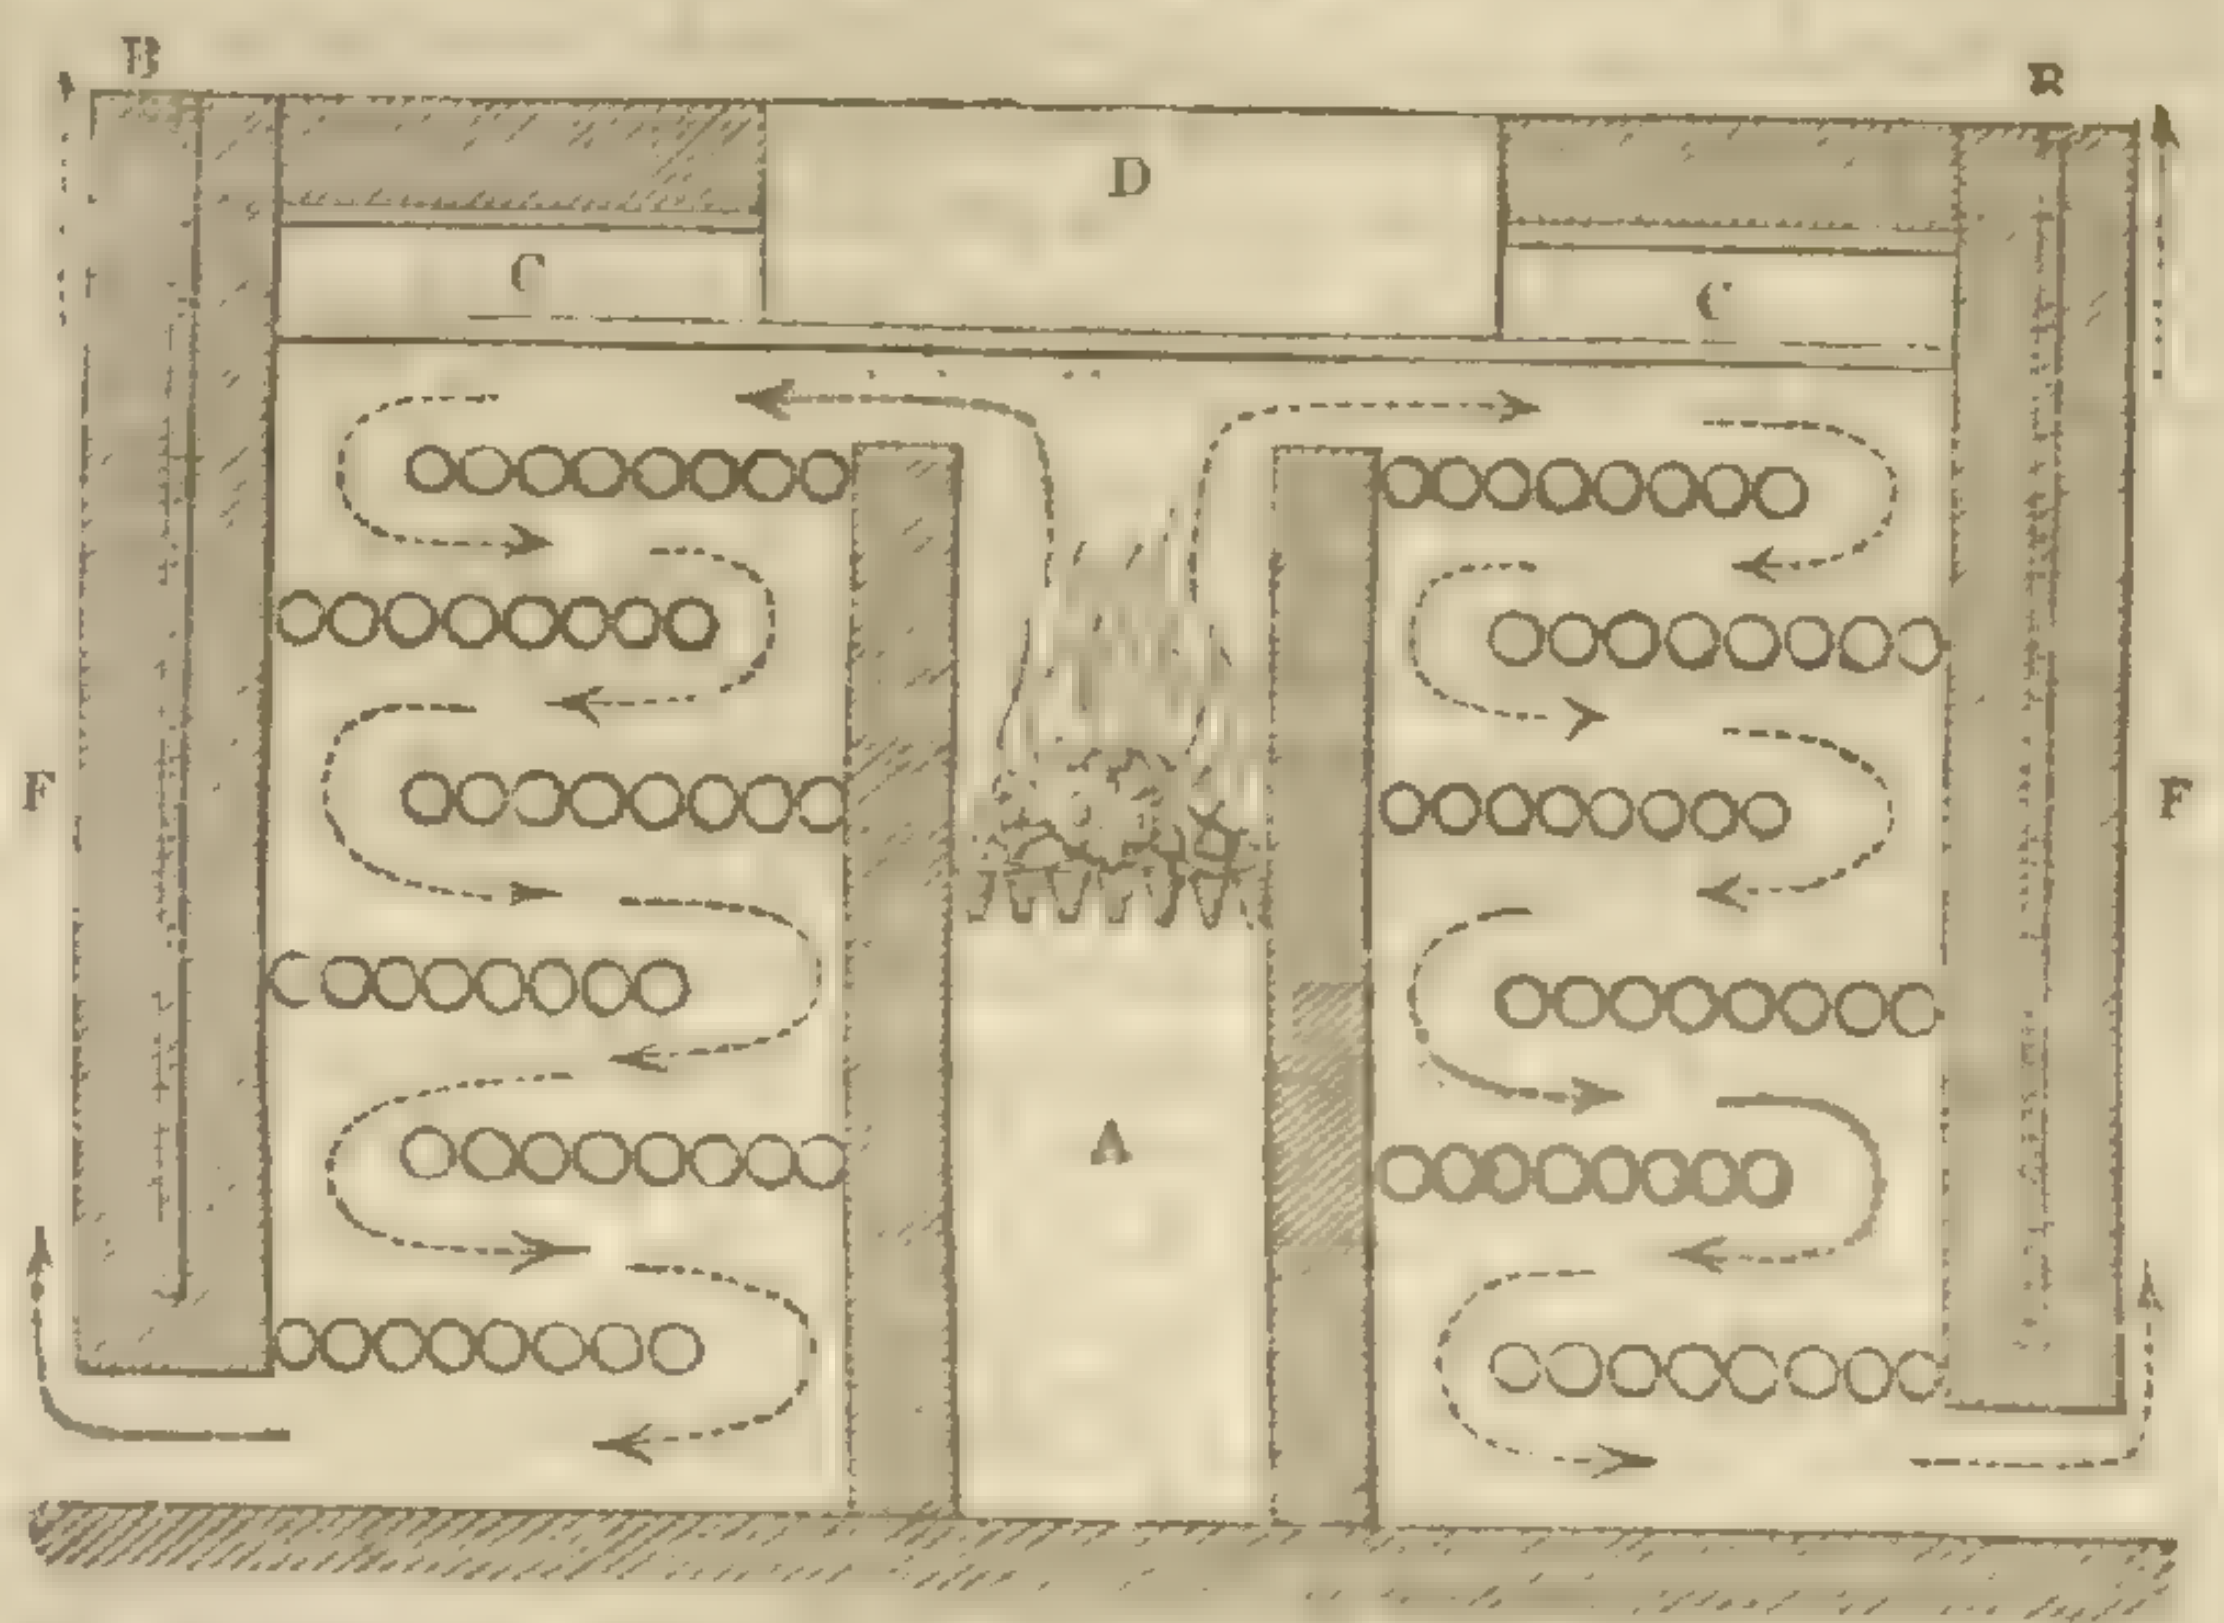
Tuesday, Nov. 1	Horticultural	2 P.M.
	Floricultural	7½ P.M.
	Linnean	8 P.M.
Wednesday, Nov. 2	Geological	8½ P.M.
Saturday, Nov. 12	Royal Botanic	3¾ P.M.

WE have lately become acquainted with a heating apparatus which, for its novelty, seems to deserve some special notice. It has been erected, and used for one winter, in a stove, 40 ft. long and 26 ft. wide, belonging to Mrs. Daniel Tysson, of Foulden, in Norfolk. It was put up at the suggestion of Mr J. B. Lawes, who had employed a nearly similar arrangement for warming his own house; and, according to the reports of all the parties acquainted with it, it has been remarkably successful.

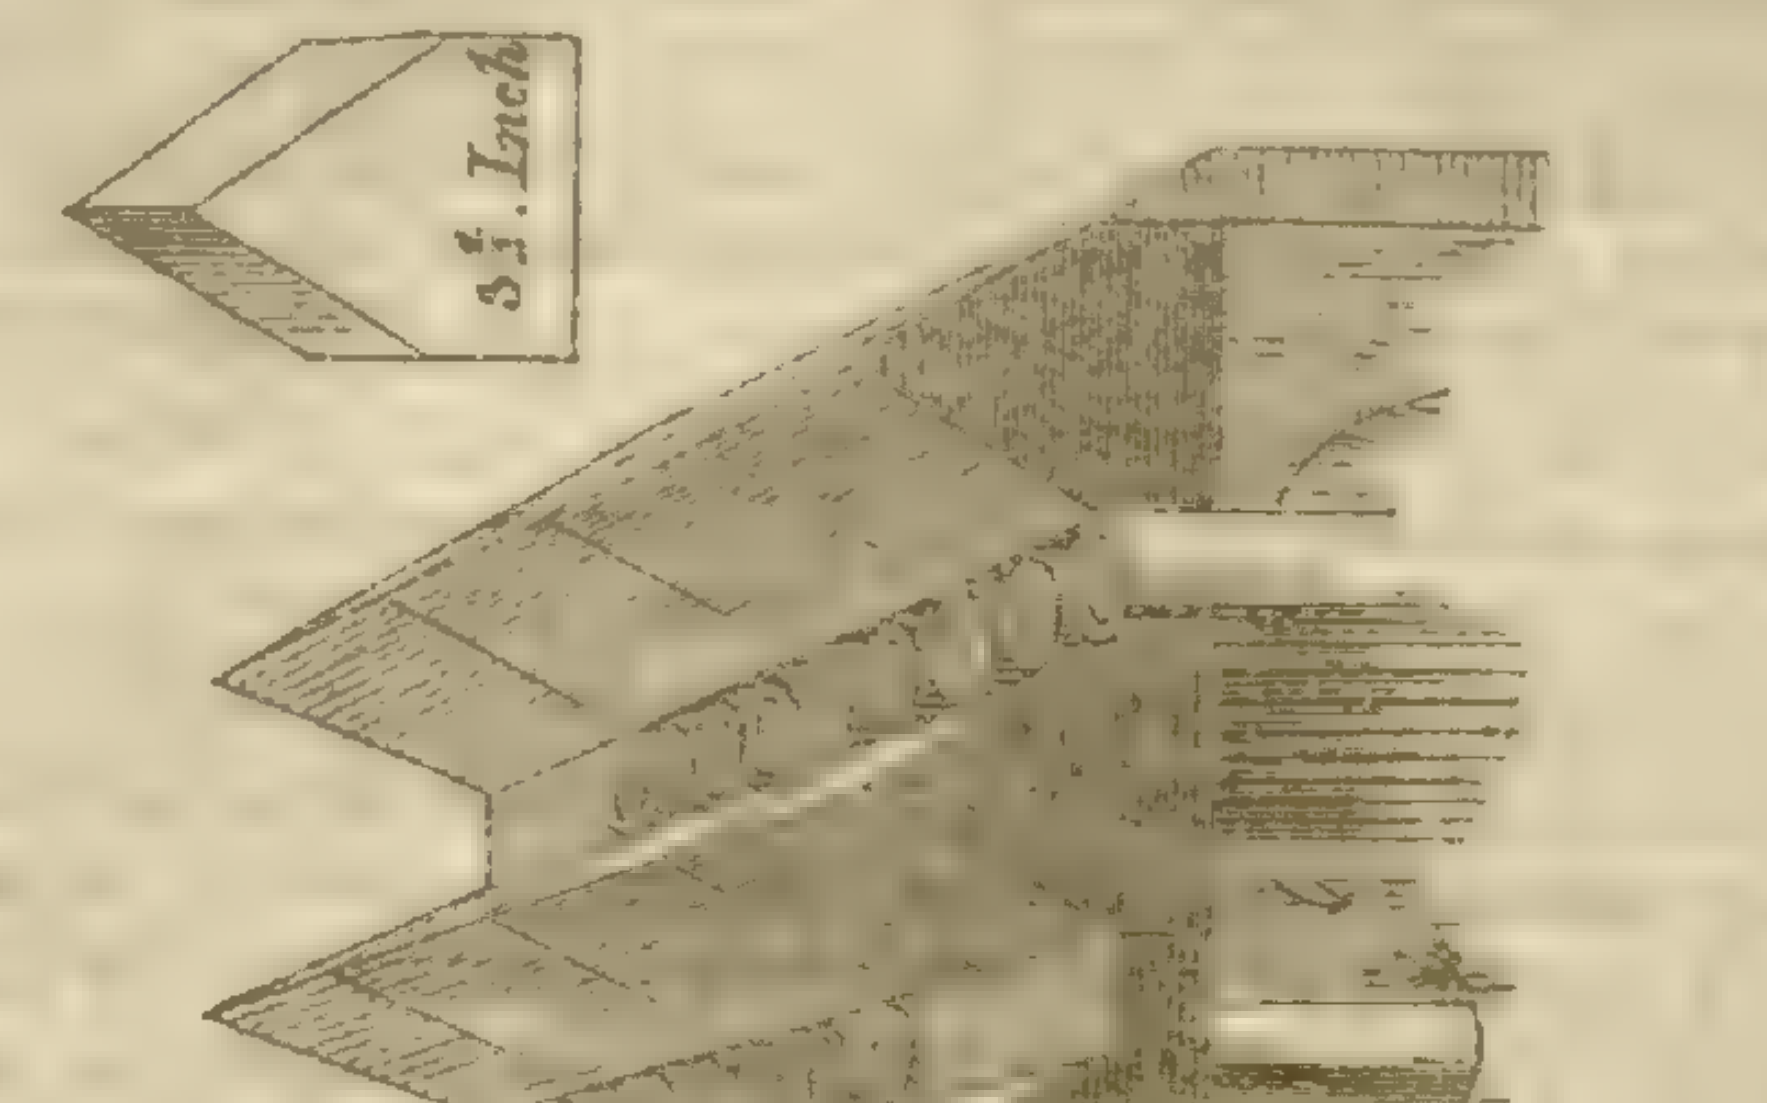
Mrs. T. states, that "the great advantage of this stove is the extreme purity of the air conveyed by it either to a conservatory or dwelling-house. By experiments tried with a hygrometer, it appears, when heated, to retain the same degree of moisture as the outer air; at least the hygrometer varies in the house according to the outer damp, and the steam has never been required in the conservatory from any dryness proceeding from the warm air, which appears to pass so swiftly through the pipes as to be totally unaltered, except in temperature. The house did not require a single window to be opened throughout the winter; and when the wind from the north was very high, the rush of warmed air through the pipes has been so great as not only to wave every plant about, but even to burst open the doors into the drawing-room if only closed as usual, without being barred. A thermometer, kept directly opposite to and within three feet of the brass regulator, has never been found to exceed by ten degrees the temperature of one kept by the glass at the front of the house, at the greatest possible distance from the regulators. The heat can instantly be raised or lowered, by means of the dampers and regulators, to the greatest possible nicety. Within a quarter of an hour after lighting the fire, the warm air comes in, and the house is never so long as an hour in acquiring the exact temperature desired. The fire requires attending to about once in eight or nine hours, if a constant high temperature is wanted; but if left to die away, it is much longer before heat is extinct. In the spring, all the plants had the appearance of having spent their winter out of doors in a warm climate; many planted late in the autumn continued to grow and flower, though the temperature was hardly ever allowed to exceed 45°. This did not vary with the outer air, unless it was that the heat was greater within the house, from the extreme rush of cold air to the pipes when the wind was either north, east, north-east or north-west. When a south wind blew, scarcely any cold air found its way through, and the warmth came in gently and gradually: the stove, therefore, in a great measure regulated itself. Two sets of apparatus have been erected; one in a dwelling-house, which for three years has been found most healthy and unfailing in warmth and comfort; the other in a conservatory, which was found equally salubrious for plants, while the total absence of all closeness or smell gave the conservatory the feeling and freshness of an April or May day abroad. The air near the regulators could be breathed, when it has been passing in at the temperature of 120°, without any of the unpleasant feeling always found in a hothouse raised artificially even to 70°. The hot air disperses so instantly all over the house, that a thermometer, hung directly facing the regulator and close to it, has been above 120°; another within three feet, 58°; and one at the further extremity of the house, 50°. The plants growing on the trellis, within three feet, were not in any way scorched or affected by the air: they simply grew a little more than those further off, and are particularly healthy and strong this summer."

We are further informed that the apparatus previously in use was a hot-water circulation, which had cost a hundred pounds, and which was not able to elevate the temperature of the house more than two degrees above the external air. Now it is certain that a hundred pounds' worth of hot-water pipes and boiler, which were not fully efficient for a house like that under notice, must have been wretchedly defective, and may perhaps account for a little warmth of eulogy. Nevertheless, making every allowance on this score, there is still so much of novelty and ingenuity in the plan, that we feel under very great obligations to Mrs. Tysson for the trouble she has taken in making for us a remarkably clear and comprehensive set of drawings, with descriptions of every part of the contrivance. We are thus enabled to follow up our intention of presenting our readers in turn with every suggestion and improvement connected with the heating of horticultural buildings. Among the variety thus offered, there will be at least the opportunity of selecting that which best suits the purse or the locality, or, perhaps, the prejudices of the party; and there can be little doubt that the apparatus now to be explained has the important merit of being inexpensive in the first instance.

The annexed engraving shows a section across the furnace, of which the fire-bars are seen immediately above the ash-pit A. On each side of the furnace is a large chamber, contained within the double walls B B; which chambers are divided horizontally by a series of round earthen tubes, 20 inches long, and 1¼ in diameter; the ends of which are built into the front and back walls of the chamber, yet so as to keep them quite open. The tubes are also arranged to leave a space alternately to the right and left, thus forming a zig-zag passage for the flame and smoke, which, after traversing the whole of the chambers, and coming in contact with the outside of all the tubes, as shown by the dotted arrows, escape into the main flues F F. The tubes, thus heated, are made the channels through which all the fresh air is admitted into the house; and it is easy to imagine that there is a cold-air chamber externally, and a warm-air chamber within, together with valves and gratings to facilitate and control the passage of the air, and to regulate the temperature. The double walls B are filled in with pounded coke, and there are air-spaces, C C, all well adapted to prevent the loss of heat at improper places. There is also a boiler, D, with steam and other pipes to command any required supply of moisture.

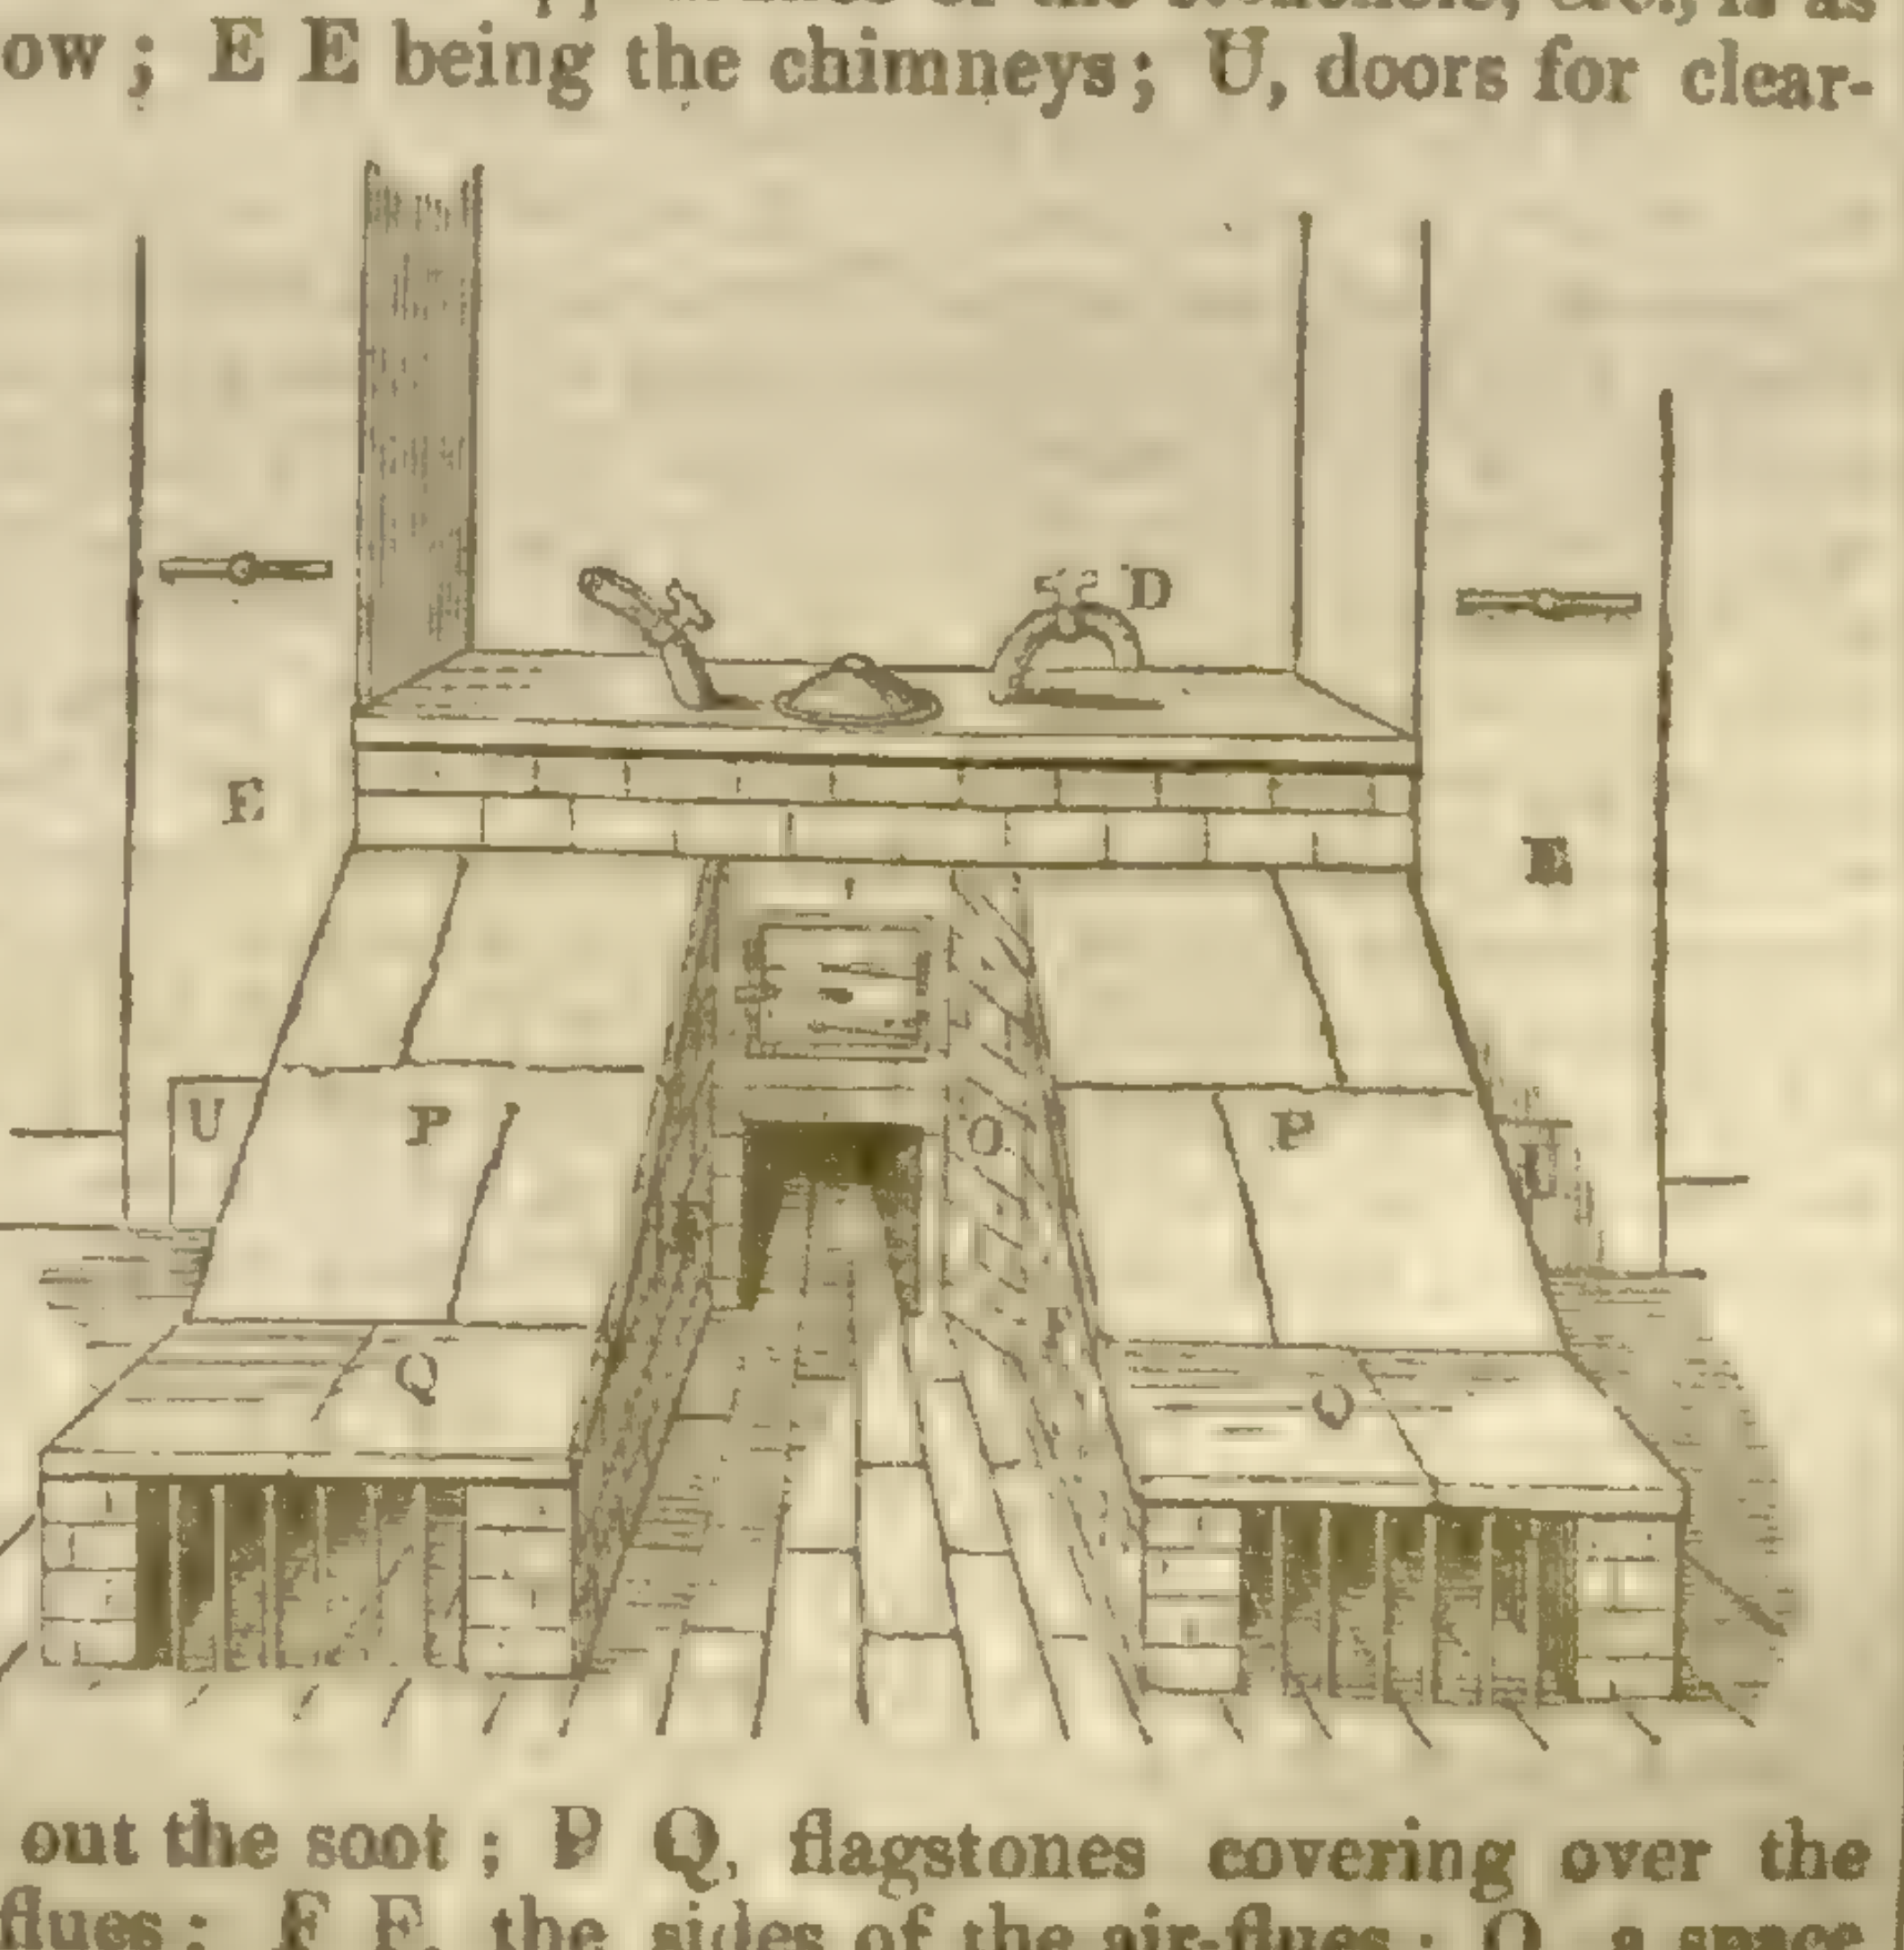


The ends of the pipes are separated by fire-bricks cut into the form, and arranged in the manner, below represented:



The apertures in the inside of the house, through which the warm air is admitted, are as at B B;

The external appearance of the stokehole, &c., is as below; E E being the chimneys; U, doors for clearing out the soot; P Q, flagstones covering over the air-flues; F F, the sides of the air-flues; O, a space left in order to enable the furnace-door to open; and D, a pipe from the boiler, by means of which steam is admitted into the interior when necessary.



From these descriptions, we think that any intelligent workman could construct the whole affair; and we hope we shall hear of further experiments. The furnace and chambers may be placed immediately in the north wall of the house, or a little without; the stoke-hole may, of course, be exterior, as well with this as with common flues.

We must confess, however, that we are somewhat less sanguine as to the superiority of this device, ingenious as it is, than the fair lady to whose kindness we are so much indebted. We cannot forget the important distinction between air-heating and radiant heating, so fully and well explained by Mr. Ainger in earlier Numbers, which left on our minds an impression unfavourable to the former, as regards both economy and the imitation of natural climates. We should be sorry, nevertheless, to prejudge what has been so graciously communicated to us, and shall have much pleasure in recording the results of the ensuing winter's experience.

So much has of late years been written about the quality of our native Oaks that the subject may seem exhausted. There is, however, one point of view that has been scarcely noticed. All evidence tends, we think, to prove that, *in general*, the sessile-fruited Oak grows, under equal circumstances, about one third faster than the stalk fruited species, and that the timber of the first is at least as good as that of the second; therefore, it would seem that the sessile-fruited is the most worth planting, although it has of late years been so much neglected.

But among Oaks, as among mankind, there are individuals which, however healthy and robust their parents, are sickly and blighted; so weak in constitution, as only to be reared with the greatest care, and when reared, deficient in all the vigour that had belonged to their predecessors. Others, on the contrary, spring up like giants from their bed, with a strength far beyond that of ordinary mortals, and go on growing at a rate which makes them eventually the Colossi of their race. If the former produce offspring, they are rickety and sapless, like the parent; the latter will originate a race even more gigantic than themselves. Constant propagation from sickly individuals ends in an exhaustion of all the vital energies; but from the healthy and robust, it terminates in a fixed constitutional energy. We see this in the common vegetables of the kitchen-garden, as in the dwarf Spanish Pea, on the one hand, and the giant Marrowfat on the other; and in a hundred other instances familiar to everybody. What is true of vegetables is true of trees—and, of course, therefore, of the Oak. A sickly sessile-fruited tree will yield Acorns producing seedlings with a much worse constitution than the general run of stalk-fruited Oaks; and so, also, a very vigorous Oak of the latter kind may bear Acorns whose offspring will exceed in powers of growth the average specimens of the sessile-fruited.

Planters, then, should take the utmost care to ensure a supply of seedling Oaks from trees remarkable for their large size and healthy state. A farmer would not think of sowing his fields with seed saved from the stunted little Stone Turnip of gardeners; but he will have it from the largest and finest Swedes, Norfolk Whites, Tankards, and Yellow Scotch that he can hear of. Planters should do so likewise. As it now is, they regard an Oak as an Oak, without ever thinking, except in a few rare cases, of inquiring what park or wood has furnished the Acorns; and the consequence is, that when their plantations begin to grow, half the young trees are bushy-headed, stunted, and stubbornly crooked. Then the knife, and the axe, and all the nostrums of timber doctors are resorted to, and with such varying results, that people can come to no conclusion as to whether their practice is wrong or right. No doubt, of the stunted young Oaks to be found in all plantations, some are rendered so by the original mutilation of their roots; but others, and they by far the larger number, may be reasonably supposed to be constitutionally bad. The best way to proceed in all such cases is to cut them down to the ground; then, if they shoot up vigorously, they will soon form handsome stems; if, on the contrary, they continue stunted, they will do no harm by choking up better things.

We have been led to these remarks by an advertisement, which has lately appeared in our columns, of Durmast Oaks for sale, by Messrs. Rogers and Co., of Southampton. This Durmast Oak is a variety of the stalk-fruited Oak, possessing great vigour of constitution and a very fine foliage—the one, indeed, being the consequence of the other. These Oaks, when in flower, have a grey or greenish appearance—such being the hue of their male catkins; while the common stalk-fruited Oak is a brownish red; and by this mark they are readily to be distinguished. Durmast Oaks are rare now in the New Forest, where they once were common; the best of them having been felled during the late war, when Navy Oak was con-of this salt may have helped the effect this dry season. From all the observations I could make here, the maggot does not appear to enter, as is stated, at the neck of the Onion; the fibres of the root are first noticed to fail, and afterwards the interior of the root has the appearance of being eaten into from the bottom of the bulb near the fibres. Some early Carrots which I examined had no maggots on those roots which were merely beginning to spot with disease; while on the others they might be seen in all stages, from the insect on the outside eating its way into the root, to those having five or six worms in them. It appears that disease first attracts the insects, though afterwards they may attack healthy roots. Peaty and sandy soils have seldom worm in the Carrots; qy. what could prevent the insect breeding there?—*R. Lymburn.*

To Preserve Mangel Wurzel.—I have found no method of preserving this root so convenient and efficacious as stacking it, after the manner of cord-wood, in cords or stacks about 2 ft. in thickness, and of such a length and height as the shed in which it is stacked will admit. I leave an interval of about 6 inches between the stacks, for ventilation, and I afterwards cover the whole with stubble, as I have found this root keeps best in the dark. I have often seen the roots frozen in these stacks, so that the surface exhibited a crystallised appearance, from the spiculæ of ice formed by the juices of the root; yet, upon thawing, they were found uninjured. I consider the exclusion of light important, as this root, when frozen in the light, frequently decays. The value of Mangel Wurzel for fattening stock is very superior to that of the Swedish Turnip, as I fully proved many years ago, by a fairly-conducted experiment on about 30 oxen. The advantage in favour of the Mangel Wurzel was somewhere about 30 per cent., ton for ton.—*Lusor.*—[The injurious effect of light upon frozen plants is known to gardeners, who lose their tender vegetables if suddenly exposed to light on a south aspect, but which, if facing the north, may be preserved.]

To Preserve Dahlia Roots.—It may be interesting to those growers who, like myself, are apprehensive that severe weather may overtake the tubers in the soil, to know that the plants may be raised without injury immediately after the blooms are cut off by the frost, providing that they are hung up in a dry and ordinarily-protected situation, with, the roots uppermost, if care is taken to leave six or seven inches of the stem attached to each tuber: this may be done without the slightest fear of their withering from having been lifted in a green state. As the winter advances, and the tubers become matured and firm, the ordinary modes of protection against frost may be resorted to.—*I. K. S.*

Aberthaw Lime.—This lime is burnt from the blue lyas of Glamorganshire, which forms a high cliff, extending for many miles along the coast. It is principally shipped at the small port of Aberthaw, from whence the name is derived. It possesses in an eminent degree the quality of hardening under water; it is equal, if not superior, to Roman cement for water-work, and is much cheaper.—*Lusor.*

Ceanothus azúreus.—I have occasionally seen a question in the *Chronicle* as to the hardiness of Ceanothus azúreus; but without knowing in what part of Great Britain your correspondents reside, it would be impossible to give them an answer. On referring to an article in the last volume of the Transactions of the Horticultural Society, it appears that several plants in their garden were killed to the ground in the severe winter of 1837-38; while at North Stoneham, in Hampshire, they were entirely destroyed; and at Carclew they merely lost the tips of their shoots: so that, in three different places, the effects varied, from complete destruction to a trifling injury. In Dublin, and at Kilkenny, the plants do not appear to have suffered *at all.* My own experience confirms what happened at Carclew in that severe winter; for a plant, which I turned out of its pot in the autumn of 1837, in my garden in Surrey, has never suffered more than in the tips of its shoots, either in the winter of 1837-38, or in that of 1840-41. It was planted against a south wall, but, owing to some alterations in my garden, it has since been transferred to one with a western aspect. The extreme drought of last spring (the first since its removal) was rather trying to it, but it has completely recovered.—*W. F. G. F.*—[It is of the first importance to this plant that the border in which it grows should be *thoroughly* drained.]

Fúchsia Riccartónia.—I think it very probable that *H. K. M.'s* Fuchsia is F. Riccartónia. Last winter I left a plant of that species on the wall of my house, quite unprotected, save by a little manure spread over the roots. The extreme tips only of the branches were injured; and it has flowered beautifully throughout the summer. The aspect is south-west; but this place is high and exposed.—*J. M. Smythe, Vicarage, Tamworth.*

Assam Tea.—This Tea certainly seems to differ somewhat from that of China. The leaf is much thinner and broader; the serrated edges, too, are rather different; the flowers I have never seen. I find, however, the relative amount of gallic acid, tannin, &c., similar to that of Captain Pidding's Howqua, the most genuine Tea I am acquainted with. The specimen of Assam Tea which I examined was from some imported by Capt. P. I take it for granted, that the difference between Green and Black Tea, namely, that Thea víridis and T. bóhea are distinct species, is now universally recognised; and it is only strange that they should ever have been confounded. I do not know whether the Paraguay Tea has ever been correctly ascertained. Its leaf, if I remember rightly, seemed to me to resemble somewhat that of Cássia acutifólia, and the flavour was nearly that of common Tea. It is infused in a tea-cup by the natives of Paraguay, and sucked through a silver or other metallic tube.—*J. Murray.* [It is the Ilex paraguensis, and has been figured in the "London Journal of Botany," t. 1 and 2.]

Ivy.—I see you are of opinion that Ivy does not make a house, on which it grows, damp. As it is a question of experience, I must take the liberty of differing from that opinion. I have lived four years in a house partially covered with Ivy, and I find two cupboards next the outside wall so damp as to be useless, and, moreover, possessing an exceedingly foul smell. I thought the late dry season might have improved matters, but on opening one of the cupboards after a fortnight's absence, I do not find that to be the case; in other parts of the house covered by the Ivy, books are much affected by the damp; the paper on the outside walls is also stained. I hope I may be pardoned mentioning my experience on this point, which affects our personal comforts so much.—*An Original Subscriber.*—[We suspect that in this case the dampness was in the walls before the Ivy covered them, or that it arises from some other cause.]

Weeping Willow.—With this you will receive some shoots of a Willow sent to me from the Continent some few years since as Salix péndula nova and S. americana péndula. On its own roots it is almost prostrate; but when grafted on standards, as my plants are from whence I gathered these shoots, it forms one of the most beautiful weeping trees ever seen. It will, I think, be preferred to the common Weeping Willow, as it does not suffer either from winter or spring frosts, which so often disfigure, and sometimes nearly kill, the trees of that species. The leaves of the enclosed kind are also beautifully glaucous on the under surface, and its shoots are so gracefully attenuated, that they descend almost perpendicularly from the crown of the tree.—*T. Rivers, Sawbridgeworth.* [We suspect this to be a variety of Salix purpúrea; it, however, has singularly falcate leaves, which puzzles us.]

Oak-trees.—Many Oak-trees, both here and elsewhere, are shedding not only their leaves, but the small lateral shoots of the last three or four years' growth. These shoots, and in some instances even the leading ones, or axes of growth, fall to pieces at the successive annual joints, the separation of the different parts being precisely similar to that of the footstalk from the branch, or the acorn from its cup. Is this common in all seasons? or is it caused by any peculiar effect of the late hot and dry summer? I never observed it before; but it seems to be remarkable, as illustrating the analogy between the acorn and the shoot, showing, also, that at the season at which some peculiar state of the secretions causes a separation between the fruit and the branch, a like tendency to separate exists in the branches themselves at those points which in preceding years might have been footstalks. The ground under several Oaks which I have observed was quite strewed with twigs; none of them bore marks of violence, and many of them came to pieces in the hand, on the application of a slight degree of force.—*J. R.*—[This is a very singular fact. We never before heard of it in the Oak; but it occurs not unfrequently with frosted Vines.]

Secale cornutum.—I have seen the Secale cornutum attached to an ear of Rye, as formidable in Worcestershire as on the Continent. The "dry gangrene" consequent on the use of "spurred Rye" is a dreadful disease. —*J. Murray.*

COUNTRY SHOWS.

Birmingham and Midland Floral and Horticultural Society, Oct. 6.—The fourth and last exhibition of this society for the present season was held at the Town Hall. There was an extensive collection of Dahlias, many of the blooms being remarkably fine, both in colour and form; but the flowers which possessed these qualities in the highest degree were generally those varieties which have been for some years in cultivation. Several promising seedlings were exhibited. The following is a list of the prizes awarded:—Dahlias—*Premier:* Rouge et Noire, Mr. Earl. *Crimson and Puce:* 1, President of the West, Mr. Mussell; 2, Girling's Indispensable, Mr. C. Kimberley; 3, Metella, Mr. J. Moore. *Purple and Dark:* 1, Girling's Ploughboy, Mr. Earl; 2, President of the West, Mr. Coudrey; 3, Pickwick, Mr. C. Kimberley. *White and Blush:* 1, Lady Woodhouse, Mr. Brown; 2, Brown's Worcester Rival, Mr. Brown; 3, Lewisham Rival, Mr. Earl. *Primrose, Yellow, and Buff:* 1, Yellow Defiance, Mr. Davis; 2, Nicholas Nickleby, Mr. Earl; 3, Marquess of Lansdowne, Mr. C. Kimberley. *Striped and Shaded:* 1, Rouge et Noire, Mr. C. Kimberley; 2, Beauty of the Plain, Mr. Brown; 3, Maid of Bath, Mr. H. Pope. *Lilac and Rose:* 1, Wheeler's Maria, Mr. C. Kimberley, 2, Grande Baudine, Mr. E. Phillips; 3, Rose Unique, Mr. Earl. *Orange and Scarlet:* 1, Catleugh's Eclipse, Mr. Earl; 2, Danecroft Rival, Mr. E. Phillips; 3, Widnall's Eclipse, Mr. E. Phillips. *Seedlings:* 1, Mr. J. Davis; 2, Mr. Earl; 3, Mr. Kimberley. A seedling exhibited by Mr. Sadler was much praised by the judges. It was white, edged with pink: the colours distinct, and form good. It appeared to be considered by the growers present as a desirable addition to the flowers in this class already in cultivation. Stove Plants—1, J. Gough, Esq.; 2, J. Gough, Esq. Greenhouse Plants—1, Mr. J. Moore; 2, Mr. Mussell. Ericas—1, Messrs. Pope and Sons; 2, Mr. J. Moore. Roses in Pots—1, Mr. H. Pope; 2, Mr. J. Moore. Roses—1, Mr. Mussell; 2, Messrs. Pope & Sons. Hardy Shrubs—1, Messrs. Pope and Sons. Herbaceous or Frame Plants—1, Mr. J. Moore; 2, Mr. E. Phillips; 3, J. Gough, Esq.; 4, Mr. J. Moore. Herbaceous or Frame Plants, *Cut Specimens*—1 and 2, Messrs. Pope and Sons. Annuals in Pots—1, Mr. J. Moore. Six Varieties of Annuals, *Cut Specimens*—1, Mr. Mussell. Hollyhocks—1, Mr. J. Coudrey; 2, Mr. J. Coudrey. Asters—Mr. Brown. Devices of Cut Flowers—1, Mr. J. Coudrey; 2, Mr. Chinn; 3, Mr. J. Coudrey. Grapes—Black Hamburgh, Mr. Mussell. Plums—1, Washington, Mr. Bower. Cucumbers—1, Matchless Frame, Mr. Brown; 2, Early Warwick, Mr. Rodway. Apples, *Dessert:* 1, Paradise Pippin, Mr. Rodway; 2, Winter Queening, Mr. Earl. *Culinary:* 1, Greenock Pippin, Mr. Rodway; 2, Emperor Alexander, Mr. Rodway. Pears—1, Mr. Rodway; 2, Marie Louise, J. Gough, Esq. Potatoes—1, Red-nosed Kidney, Mr. Bower; 2, White Bread Fruit, Mr. Chinn. Onions—1, Globe, Mr. Mellon; 2, White Spanish, Mr. Bower. Carrots—1, Altringham, Mr. Baker; 2, Mr. Baker. Turnips—1, Early Stone, Mr. Mussell. Celery—1, Giant, Mr. Chinn; 2, Giant, Mr. Bower. Orange Tree—Mr. J. Moore.—*Midland Counties Herald.*

Dunfermline Horticultural Society, Sept. 20.—The last exhibition for the season was held in the large Hall, Spire Hotel. The prizes were awarded as follows:—Mr. J. Gavin, *best black Hamburgh and Muscat of Alexandria Grapes; best bunch of any other sort; best Peaches, Pears, Stocks, Cockscombs, China Asters, and Marygolds; second-best Exotics and Phloxes.* Mr. A. Forrest, *best Greengage Plums.* Mr. J. Roxburgh, *best Plums; second-best dessert Apples.* Mr. J. Ferrier, *best dessert Apples and Swedish Turnips; second-best Greengage Plums, Jargonelle Pears, Cockscombs, and best Celery.* Mr. Lister, *second-best black Hamburgh Grapes and Gooseberries.* Mr. Alex. Turbayne, *best Exotics and Heaths; second-best China Asters and Marygolds.* Mr. Alex. Miller, *second best Peaches.* Mr. J. Keir, *best Jargonelle Pears and second-best Carrots.* Mr. J. Scott, *second best Pears (Jargonelle excepted).* Mr. J. Munro, *best Gooseberries.* Mr. Anderson, *best Floral Device.* Mr. J. Henderson, *second Floral Device.* Mr. W. Allison, *best Fúchsias; second best Exotics in pots and Celery.* Mr. R. Ogg, *best 12 Dahlias.* Mr. J. Fotheringham, *heaviest Red Cabbage; second-best 12 Dahlias.* Mr. Finlayson, *best Seedling Dahlia.* Mr. W. Stewart, *best Hollyhocks.* Mr. D. Hutchison, *second-best Hollyhocks.* Mr. J. T. Smith, *best Phloxes; second-best Stocks and Red Cabbage.* Mr. J. Reid, *best Carnations.* Mr. Smith, *second-best Carnations.* Mr. N. Munro, *heaviest Onions; second-heaviest Savoys.* Mr. D. Meldrum, *2nd for Onions.* Mr. J. Reid, *heaviest Carrots, Savoys, and Cabbage.* Mr. F. Crombie, *2nd for late Cabbage.* Mr. J. Crombie, *2nd for Swedish Turnips.* Amateurs, J. Struthers, Esq., *best 6 Dahlias.* Provost Morris, *2nd for Dahlias and Hollyhocks.* J. S. Ronaldson, Esq., *best 3 Hollyhocks.* H. R. Russell, Esq., *best Stocks and Jargonelle Pears.* The Rev. A. Sutherland, *2nd for Jargonelle Pears.* Numerous Cottagers' prizes were also awarded.—*Edinburgh Evening Courant.*

Guernsey Horticultural Society, Oct. 12.—This exhibition was exceedingly well attended, notwithstanding the unfavourable expectations which had been entertained concerning it. The prizes were as follows:—Honorary Prizes—Large Challengeable Medals, Mr. H. Dobree, jun., for 12 *varieties of Apples, 6 specimens of each;* Capt. Appleton, for *Basket of Vegetables.* Small Medals, Mr. J. S. Black, for *Royal Albert Grapes;* Mr. J. Hubert, for *Black Hamburgh Grapes.* Flowers—Dahlias. *Best 36 blooms,* Mr. J. Vidamour, for Duchess of Richmond, Hylas, Virgin Queen, Challenger, Frances, Lee's Bloomsbury, Beauty of the Plain, Grande Baudine, Coronal, Blandina, Argo, Charles XII., Maria, Glory of Plymouth, Thompson's Rival, Will Watch, Bowman's Premier, Napoleon, Royal Standard, Bishop of Salisbury, Danecroft Rival, Topaz, King of Roses, Mrs. Colt, Fanny Keynes, Grand Tournament, Yellow Defiance, Suffolk Hero, Hope, Grace Darling, Ansell's Unique, Bayadere, Miss Nooks, Lewisham Rival, Wells' Lilac Perfection, Springfield Rival. *Best Seedling,* Mrs. Ram. *Best variety,* Mr. C. De Jersey. *Best twelve,* 1 and 2, Mr. J. Vidamour. *Best six,* 1 and 2, Mr. J. Vidamour. Best Collection of China Asters, Mr. J. Vidamour. German ditto, Mr. J. Vidamour. Best Device in Flowers, 1, Sir O. Carey; 2, Mrs. Ram. Camellia japonica, Mr. J. S. Brock. French Marygolds, 1 and 2, Mr. J. Vidamour. African ditto, Mr. J. Vidamour. Extra Prizes—*Dahlias,* Mrs. Ram. *Muscat of Alexandria,* Mr. G. W. Hoyle. Fruits—Best Black Grapes, *not forced,* Messrs. Brock and Hubert, (medal each). Best White, *grown in open air,* Mr. T. Dumaresq. Black, *ditto,* Mr. T. Dumaresq. Melon, Mr. Le Mottee. Seedling Apples, Mr. C. De Jersey. Dessert ditto, 1, Mr. J. Vidamour; 2, Mr. H. Dobree, jun. Kitchen ditto, 1, Mr. H. Dobree, jun.; 2, Mr. P. Martin. Best 6, *Ribstone Pippins,* Mr. T. Andros; *London ditto,* Mr. Le Mottee; *Scarlet ditto,* Mr. J. Hubert; *Royal Pearmains,* Mr. J. Hubert; *Green ditto,* Mr. H. W. Rideout; *Aromatic Russets,* Mr. J. Vidamour; *Reinette Franche,* Mr. H. W. Rideout; *Calville Blanche,* Mr. F. De Jersey; *Mollet's Guernsey Pippins,* Mr. H. Dobree, jun.; *Old Golden ditto,* Mr. J. Hubert; *Court of Wick ditto,* Mr. J. Hubert; *Margils,* Mr. J. Vidamour; *Dutch Reinettes,* Mr. G. W. Hoyle; *New Town Pippins,* Mr. J. Hubert. Pears, *Best 6 Chaumontel, grown against a wall,* Mr. Nicholas; *Ditto, from an espalier,* Mr. J. Vidamour; *Best 6, Duchesse d'Angoulême,* Mr. C. De Jersey; *Beurré d'Aremberg,* Mr. H. Dobree, jun.; *Brown Beurré,* Mr. J. Vidamour; *Belle et Bonne,* Mr. J. Vidamour; *Crassane,* Mr. T. Andros; *St. Germain,* Mr. Laine; *Colmar,* Mr. J. Vidamour; *Seckel,* Mr. H. Dobree, jun.; *Louise Bonne,* Mrs. Laine; *Baking,* Mr. J. Vidamour. Best 6 Oranges, *grown in the open air,* Sir O. Carey. Medlars, 1, Mr. C. De Jersey; 2, Mr T. Andros. Turnips, Sir O. Carey. Carrots, Mr. J. Vidamour. Parsneps, Mr. Cockburn. White Onions, Mr. H. Dobree, jun.; Portugal or Deptford ditto, Mr. J. Hubert. White Celery, Mr. C. Lefevre. Red ditto, Mr. H. Dobree, jun. White, Red, and Blue Potatoes, Mr. J. Vidamour. Seedling Late Potatoe, Mr. P. Martin. Tomatoes, Sir O. Carey. Batavian Endive, Capt. Appleton. Curled ditto, Sir O. Carey. Extra Prizes—*White Grapes, out-door,* Sir O. Carey; *Apples,* Mr. Luff; *Roberts' Russet,* Mr. H. W. Rideout; *Beurré d'Aremberg,* Mr. Carey (Castle); *Fortuné Belge,* Mr. C. De Jersey; *Surrey Pearmain,* Mr. T. Andros; *Raspberries,* Mr. J. Vidamour; *Apples,* Mr. P. Martin; *Potatoes, Red Bangors,* Mr. P. Martin; *Basket of Vegetables, 15 varieties,* Mr. C. De Jersey. A great variety of prizes were bestowed upon Cottagers, for Flowers, Fruits, and Vegetables.—*Guernsey Star.*

Hexham Floral and Horticultural Society.—At a meeting of the committee held May 7th, 1842, the following resolutions were passed, viz.: The want of a properly-constituted Board in this district for determining the merits of seedling productions having been severely felt by members of this Society and others, it was moved by Mr. Thos. Watson, of the Spittal, and seconded by Mr. H. Dewar, of Beaufront—1st, That a Board be formed for the purpose of testing and determining the merits of all Floral and Horticultural Seedling productions, in order to warrant their being offered to the public under proper characters. 2d—That the Board consist of 17 members, with power to add to their number. 3d—That the Board consist of the following persons, viz: H. Marshal, Esq., Durham; Mr. H. Newton, Newcastle; Mr. Fenny, Gateshead; Mr. J. Robson, Hexham; Mr. R. Charlton, Wall, near Hexham; Mr. Thos. Watson, the Spittal; Mr. Thos. Watson, Nunwick; Mr. A. Gaskin, Brunton; Mr. H. Dewar, Beaufront; Mr. W. Taylor, Chesters; Mr. J. Scott, Sandor; Mr. N. W. Forster; Mr. Thos. Aitchison, Bywell; Mr. W. Watson, Hexham; Mr. J. Gowan, Newbiggin; Mr. Jos. Robson, jun., Hexham; and Mr. Thos. Shotton. The committee met again on the 18th May, and adopted the rules for the guidance of the Board; the following is a report of its proceedings since that period. "The Board of the Hexham Floral and Horticultural Society, 'for testing and determining the merits of all Floral and Horticultural Seedling Productions, &c.' terminated its sittings on Wednesday the 12th Oct., 1842. During the short time of its being in operation 12 different articles have been submitted to its scrutinising ordeal, the names and properties of which, copied from the minutes, are as follows:—First, a Pansy *(Queen of the Tyne),* by Mr. Rob. Charlton, Nurseryman, Wall: upper petals, round and well proportioned, stiff, and of a dark velvety purple; side petals similar; centre creamy white, edged with the same as the upper petals; under petal of a good form, and of a creamy colour; eye dark; rays regular; form good; very round; class of quality first; shown June 8th, 1842. Second, a Pansy, by the same; set aside as worthless. Third, a Rhubarb, by Mr. Thos. Watson, gr. to J. Kirsopp, Esq., The Spittal; set aside for the present. Fourth, a Seedling Raspberry, of 1837, by the same: colour red; size of fruit medium; shape roundish at the end; flavour not rich; bearing prolific; class of quality second; shown July 13th. Fifth, a Pelargonium (Symmetry superb) by Mr. H. Dewar, gr. to Wm. Cuthbert, Esq., Beaufront: upper petals clouded, very dark, shaded off to a beautiful rose colour, running round the edge ¼ of an inch broad; under petals pale rose, beautifully pencilled; eye clear white; texture of the petals thick, stiff, and good; edge smooth; size 2¼ inches diameter; form nearly circular; class of quality first; shown July 13th. Sixth, a Pelargonium (Mary Constance), by Mr. H. Dewar;

HOME CORRESPONDENCE.

The Salcombe Aloes.—Believing that there is no part of England where so many plants of the Agave americana have grown to maturity in the open ground without the slightest protection, I am induced to send you a brief statement of the specimens that have flowered at Salcombe, a small sea-port, near Kingsbridge, in the south of Devon. The first on record bloomed in 1774, being then only twenty-eight years old; it grew in the garden of Cliff House, a residence situated, as its name implies, within a few yards of the sea. In the middle of June, the plant was first observed to have shot forth a flower stem, which grew rapidly, and advanced about nine inches daily, until, at the end of September, it had attained the height of 28 feet, bearing innumerable flowers on forty-two branches; its leaves were nine feet long and six inches wide. In 1820, a second Aloe flowered at Woodville, the seat of the late James Yates, Esq., which obtained the height of 27 feet, and produced forty flowering branches, bearing 16,000 flowers; this plant is fully described in the 5th vol. of the Transactions of the Horticultural Society. In 1832, a third flowered at the Moult, the seat of W. Jackson, Esq., which was 28 feet high. The lawn at Woodville was again ornamented in 1835, with the almost countless blossoms of this stately exotic; the stem of this specimen was 24 ft. 9 in. in height, forming the fourth Aloe that had flowered here. In the autumn of 1840, a fifth flowered at the Moult, and was 27 ft. in height; this plant was transplanted the previous year, which, perhaps, threw it into bloom, as the leaves were not quite so large as those of its predecessors. At the present time, a sixth Aloe is coming into bloom at Cliff House, the residence of Mrs. Prideaux. This plant is between 30 and 35 years of age, and is inferior in beauty to the others that have bloomed at Salcombe; as, instead of sending up a central flower-stem, seven stalks have protruded themselves from different parts, the principal of which are about ten feet high. From this circumstance, the peculiar character of the plant is lost, and it is at present a mass of stems and flower stalks, upon which only one or two blossoms have yet expanded. At each of the places mentioned, many fine young Aloes of large size are growing luxuriantly; and in another small garden, overhanging the sea, and constantly exposed, in stormy weather, to the spray, five magnificent specimens are manifesting more than ordinary vigour. It may not, perhaps, be out of place to speak of Salcombe itself, and the other tender plants that flourish there. It is a populous village, carrying on a considerable trade, and situated between Torquay and Plymouth. At the west end are Cliff House, and the mansion of Lord Kinsale, with other respectable abodes; and towards the entrance of the harbour, which is about a mile from the village, are placed, in the midst of these wooded grounds, the delightful residences of Woodville and the Moult. From the south-west gales, which in this part of Devon blow with such resistless violence, the harbour is entirely protected by the magnificent head-land called the Bolt Head, and from storms from other quarters by lofty hills on almost every side. In point of picturesque scenery, there are few portions of the coast that exceed it, while the various tender plants which it displays render it a spot of no ordinary interest to the Horticulturist. At Woodville there is a wall of thriving Orange, Lemon, and Citron trees, protected only by temporary frames of Reed. Near them stood, a few years since, a large Olive-tree, trained also against a wall, but wholly unprotected, and there is still a specimen in the grounds. The luxuriance of the New Zealand Flax is remarkable, some immense masses being more than seven feet high. The beauty of these plants is great, as they evince the strongest health, and are uninjured by the severest Devonshire winters. Two smaller plants have blossomed, the flower stalks being between two and three feet higher than the leaves. At the Moult a great number of Exotics have been planted in the open air, and the grounds at the present moment are gay with Dáhlias, Sálvias, Petúnias, Senécios, Sóllyas, Bouvárdias, Pelargóniums, and Brugmánsias. The last-named shrubs stand the winters well, and though often cut down to the ground, form strong plants by the end of the summer. There are also some fine specimens of Cássia and New Holland Acácias; an interesting species of Euaclyptus, raised from seed, marked "White Gum;" a still finer species called "the Blue Gum," the fragrance of which was very perceptible after rain, was killed by the severity of the winter of 1840—1. Various herbaceous plants from Mexico, particularly Stévias, are perfectly acclimatized, and a species of Phytolacca is conspicuous from its numerous spikes of deep purple berries. Until the intense cold which we experienced a few years since, the varieties of Cape Pelargónium had formed immense bushes, and were everywhere rising from self-sown seeds. A splendid Ipomœa, apparently allied to, if not identical with, I. tyrianthina, raised from South American seeds, flourished for several years at the foot of a wall, but was destroyed by the incessant rain of last winter. It had a fleshy root, and its twining stems, which perished in December, bore an abundance of rich purple flowers of large size. At Coombe Royal, the seat of J. Luscombe, Esq., situated a mile from the head of the estuary of which Salcombe is the entrance, are fine specimens of Orange, Citron, Shaddock Limes and Lemons; they are protected only in winter, by frames either of wood or reed, and one tree, a Seville Orange, is known to have attained the age of 200 years.—*A Devonian.*

Grafting Cacti.—The following method of grafting Cacti I find to be very ornamental. Last year, having several plants of Pereskia aculeata, from 8 to 10 feet high, which had previously been grafted at the top with Cereus flagelliformis, I inserted at various heights upon the latter grafts of different kinds of Epiphyllum, such as Ackermanni and truncatum, with Cereus speciosus and C. triumphans. The beauty in June last of a plant of this kind which had been grafted in the previous autumn, I cannot describe. In grafting them, I make, with the point of the knife, an incision upwards, into which I insert small grafts, pared a little on both sides, of the kinds required. A small piece of matting is bound round the wounded stem, to keep the grafts tight until they have taken hold, which generally is the case in three weeks' time; the bast is then untied. Where room is no object, I think it preferable to graft E. truncatum upon specimens by itself, as it flowers in the autumn, whereas the other kinds bloom in the spring and summer. The pendulous habit of Cereus flagelliformis allows of its being trained in any form, according to the fancy of the owner. I have grafted Cacti at all seasons of the year, but I find that the best time is from the end of September until November*; probably owing to the plants being in a more dormant state. I apply no fire to the house during this period, unless to dry up damp or exclude frost. One specimen of Pereskia aculeata, 9 feet high, which was grafted two years ago with E. truncatum, the grafts being inserted 3 inches apart, along the whole height of the stem, and alternately on each side, has now the appearance of a pillar, and in about six weeks' time will be covered with many hundred flowers. It is advisable in grafting these plants to insert the scion upside down, especially if worked upon the main stem; in which case I remove a small piece of the bark from the stock, and fit a thin piece of the desired kind upon it. If this is bound up so as to prevent air from entering between the parts, it will take quite as well as if grafted in the usual way. Where this operation is performed upon spurs, the latter should be trained downwards previously to being grafted, otherwise the grafts, especially those with fleshy leaves, are apt to break off when they attain to any size. I have also grafted E. truncatum upon a stock of Cactus braziliensis, which makes an excellent standard, as from its robust habit it does not require any support. E. truncatum succeeds better if suspended, with a ball of earth about its roots, in a wire basket filled with moss than when grown in a pot. Another ornamental plan is to get a large specimen of Cereus flagelliformis on its own roots, and turn it out of the pot with the ball entire; then to plant it in a wire globe basket tightly filled with moss, so that the earth may neither run through nor be seen. Stud the plant all over with grafts of E. truncatum, and when they have taken hold, tie down the Cereus neatly all over the ball or basket; the E. truncatum will soon cover it, so that it cannot be seen, and it will amply repay any one for the trouble.—*Henry Ford.*

Gardening practised by the Fair Sex.—I do not know whether Mrs. Loudon's Gardening for Ladies, or your recommendation of it in the *Chronicle*, or the example set by Her Majesty in Scotland, has had the effect of setting ladies to work in the garden; but certain it is, they are commencing in earnest. I could not help, the other day, admiring two young ladies at work, one with a Dutch hoe, and the other with a rake. Many a one that has served an apprenticeship to the business could not have used those tools to better purpose. It was delightful to witness the graceful manner in which they performed their work; for they appeared far more pleasant and happy than in the stiff and starched manner in which they are generally seen. By-and-by there will be no need for saying, what Adam said to Eve in Milton's Paradise Lost,—

> Awake! the morning shines, and the fresh field
> Calls us; we lose the prime to mark how spring
> Our tended plants, how blows the citron grove,
> What drops the myrrh, and what the balmy reed,
> How nature paints her colours, how the bee
> Sits on the bloom, extracting liquid sweet.

Peter Mackenzie.

Preserving Fungi.—Perhaps "Agarica" may like to know how to preserve specimens of her Fungi. A pickle, formed of one part of acetic acid and four parts of water, will preserve them unchanged for a very long time. I have now before me a Peziza, preserved in this manner about 18 years ago, which is still quite fresh.—*Lusor.*

Effect of Ammoniacal Vapour upon Vines.—When Vines are growing in closely-glazed houses at a period of the year by nature not assigned to them, the quantity of ammonia which they receive is but small, and that little is often excluded by the houses being sometimes kept shut for days together. As ammonia enters so largely into the system of plants by their leaves, as well as by their roots, I thought it necessary that they should be supplied with it as liberally as possible, I, therefore, hung a quantity of small tin cans, containing ammoniacal liquor, from the gas-works, in different parts of the house, and at times sprinkled the stone pathway with the same. In about 48 hours after the application, the leaves had become of a very dark green; the Vines also began to form wood with great rapidity. I had a good crop, though, strange to say, a fortnight later than usual, although the house was started at the same time as it had been for several years (January 1), and with the advantage of a better season. I certainly was not troubled with those vexatious defects generally attending early forcing, such as bunches going blind, leaves shanking off, bunches of a bad colour, &c. These defects I believe to be caused by the excess of thin, poor fluid, taken up by the roots from a border saturated and cold, as it generally is at that period of the year; and by the deficiency of that essential agent —light, to elaborate the same. Plants cannot select their food, but are compelled, like a sponge, to charge themselves with whatever is presented to them in the shape of a fluid. These causes combined, I am of opinion, generally produce those defects so often complained of by early forcers of Grapes. I tried the same experiment with a late house, and the same benefit in proportion resulted therefrom. The berries were large, and of that intense blue, with dark green shanks, so indispensable to fruit of first-rate quality. There is, however, another essential requisite to make my experiment complete, viz., carbon; which I propose to give by burning a small quantity of charcoal at different times in a flower-pot, in the bottom of the house; and by doing this, I shall be bringing back, in miniature, the extraordinary fertility which our climate possessed a thousand years since.—*James Milne, Drayton Manor.* [We fear the charcoal-burning will do more harm than good. It appears, that although *while exposed to light*, plants can consume more carbonic acid than the atmosphere usually contains, yet, as they must necessarily be subjected to alternate periods of darkness, the additional quantity does them mischief.]

Grapes.—In answer to the inquiries of a Dublin correspondent, I will suggest the probability of the failure of a portion of his Grapes having been caused by too high a temperature, during the intense hot weather of the late season. I form this opinion from the following incident; —In consequence of the unparalleled number of wasps which have infested the country during the past summer, I deemed it necessary to fix some blinds in the openings of the sashes of a late vinery, on which the wasps had commenced an attack upon the Grapes. Having banished the wasps from the house, I shut it up and fixed the front blinds; but not being able to fasten up those intended for the top openings until late in the following day, which proved intensely hot, some of the bunches towards the top of the house were scorched. These never attained maturity, and produced an effect similar in appearance to that described by your Dublin subscriber. Part of the bunches were of a bad or reddish colour, the rest were as black as jet and of an excellent flavour, while the others were *quite foxy.* I deem it but fair to state, that "the cause" in my case was sufficiently clear, inasmuch as the leaves showed it as well as the fruit.—*R., Leyton, Essex.*

Large Apple.—An Apple called the King, which weighed 21½ oz. and was 16¼ inches in circumference, was lately grown by T. Bagshaw, Esq., on a small standard tree, which produced altogether a bushel and a half of fine fruit; this may readily be inferred from the fact, that ten Apples from the same tree were exhibited, whose average weight was 16 oz. each.—*M. Saul, Garstang.*

Heavy Pine-apples.—Two Providence Pine-apples were cut on the 27th Sept., 1842, by Mr. J. Miller, gardener to the Earl of Zetland, at Aske, near Richmond, in Yorkshire, the larger of which weighed 9lb. 4oz., and was 12 inches long; the smaller weighed 6lb. 8¼oz.—*James Backhouse, York.*

Growth of Asparagus.—In page 670 of the *Chronicle*, Mr. Sharp says that he had cut several shoots of Asparagus above seven feet high; and again, at page 577, "A. F." states that he had cut one above eight feet in height. I have lately measured some of mine, and have found them to exceed eight feet. One stem was above nine feet; at an inch from the ground it was 2¾ inches in circumference, and at 4 inches 2¼. The shoot was cut from a bed made some years since, and cut every season; but I have made it a practice annually to pick off all the seed-vessels. This year, as recommended in the *Chronicle*, I stripped off all the flowers, by drawing the shoots briskly through the hand, which is a great saving of labour. As seeing is believing, I forward you a portion of the lower part of the shoot.—*W. D., Chichester.*—[The dimensions of the portion sent correspond with those above stated.]

Effects of Salt on Celery.—Having tried several experiments this season with salt, to ascertain whether it was conducive to the growth of vegetables, I beg to state that I do not consider it to possess any of the advantages which have been ascribed to it. I tried it more particularly on Celery; the salt was twice applied to a part of five separate ridges, at different times. The first application was made after they were beginning to grow tolerably well; the second, previously to their being earthed up. Each time as much salt was given as was considered safe, and during the whole season I have not perceived the least difference in the growth or size of the plants from others which have not been so treated, the preparation of the ground having been in every respect the same. I have observed in the last *Chronicle* that a correspondent mentions the great advantages of salt when applied to this vegetable; but I do not consider that he has proved his Celery to have been improved by it, as the height is no certain rule to judge of its quality. I have always understood weight and solidity to be the best guides, as may be seen from the report of Covent Garden market, in your last number. I weighed two heads yesterday that were dug up for use, without being in any way selected for that purpose: the two heads weighed 13lbs. with the leaves on; but, when trimmed for use, they weighed rather above 6lbs.—*A. M.*—[As this correspondent gives no information as to the quantity of salt he used, and the nature of his soil, no conclusion can be drawn from his experiment. He probably used too much salt.]

The Onion Maggot.—This has been very prevalent here this season, perhaps rather owing to the sickly state of the roots inducing the fly to deposit its eggs where its most favourite food is to be found, than from the warmth of the season. Most maggots incline to feed on decaying, in preference to healthy living plants. Some Onions which I observed at Shewallen, the seat of the Lord Justice-General, had escaped the ravages of the insect on some healthy beds dressed with nitrate of soda; while other beds alongside that which got no dressing were much more injured. At Crossbasket, near Glasgow, the seat of J. Downie, Esq., the crop had been all treated with nitrate of soda, and was very superior. Perhaps the deliquescent nature studies from the interminable library of Nature, and from the examples so brought before him learns to exercise towards his fellows, however imperfectly, that beneficence and compassion, and that unwearied solicitude, which he sees is extended by his Maker to the meanest insect that crosses his path.—*Swainson.*

16. The Potatoe is a plant calculated to furnish numerous resources. Its stalk, considered as a textile plant, produces in Austria a cottony flax; in Sweden, sugar is extracted from its root; by combustion its different parts yield a very considerable quantity of potass; its apples, when ripe, ferment and yield vinegar by exposure, or spirit by distillation; its tubercles, made into a pulp, are substitutes for soap in bleaching; cooked by steam, the Potatoe is the most wholesome and nutritious, and at the same time the most economical of all vegetable aliments; by different manipulations, it furnishes two kinds of flour, a gruel, and a parenchyma, which in times of scarcity may be made into bread, or applied to increase the bulk of bread made from grain: to the invalid it furnishes both aliment and medicine; its starch is not in the least inferior to the Indian Arrow-root; and Dr. Latham has shown that an extract may be prepared from its leaves and flowers, which possesses valuable properties as an anodyne medicine.—*Dr. Paris.*

17. Dr. Clarke, in his Travels, observes that, on his way from Lubeck to Eutin, the greatest novelty he noticed was the loud and incessant chorus of myriads of frogs. He says—"To call it croaking would convey a very erroneous idea of it, because it was really harmonious, and we gave to these reptiles the name of Holstein nightingales. Those who have not heard it would hardly believe it to be possible for any number of frogs to produce such a powerful and predominating clamour. The effect of it, however, is certainly not unpleasing, especially after sunset, when all the rest of animated nature is silent, and seems to be at rest. The noise of any one of them singly, as we sometimes heard it near the road, was, as usual, disagreeable, and might be compared to the loudest quacking of a duck; but when, as it generally happened, tens of thousands sang together, it was a choral vibration varied only by cadences of sound, sometimes like those produced upon musical glasses; and it accorded with the uniformity which twilight cast over the woods and waters."

Reviews.

The British Flora, in Two Volumes. Vol. I. Comprising the Phænoganous or Flowering Plants and Ferns. By Sir W. Jackson Hooker, K.H. 8vo. Longman. The Fifth Edition.

Magna est veritas et prævalebit. Great indeed is the power of truth, and never was it more strikingly exemplified than in the progress of Botany in this country. Twenty years ago nobody would look at the Natural System of Classification, except a very small number of the initiated; to the public it was, at the best, a chimera, a folly, a phantom—if, indeed, it was not regarded as an audacious scheme for radically upsetting all preconceived ideas. Among the loudest of those whose voice was raised against it were the late Sir Jas. Edward Smith and his clique, who very naturally decried that which they did not understand; and as they had unhappily great influence all through the country, their opinions were adopted by the mass without inquiry. We all know how difficult it is to remove erroneous impressions; and in this case, almost half a century has only just sufficed to substitute the philosophical views of Jussieu for the Linnean system.

The victory is, however, won at last. The incessant attacks that have been made upon the Linnean system since the year 1820, the entire discontinuance of it by the great Botanists of the present day, and the facilities that have been given to students for acquiring a knowledge of the natural system, in which the writer of this is proud of having borne a part, have terminated in its final expulsion from our popular works. Sir W. Hooker's excellent British Flora was its last defence, which, so late as 1838, was repaired and strengthened; and, lo! it is now toppled over, and the natural system is quietly admitted into its place. Henceforward no popular work of the smallest reputation will be produced upon the Linnean system, the existence of which has become a mere matter of history.

We need not say that we hail the appearance of this the new edition of the British Flora with unmingled satisfaction; it has always been a book excellent in spite of its bad arrangement; now that the vice of its system is removed, there is nothing left for us to do except to praise it.

The work is too well known as a clear account of all our wild plants to require much further notice of its contents. We must, however, state that the present edition is enriched with some most useful figures, illustrating the structure of Composite plants and Ferns, in addition to others previously published in explanation of the genera of umbelliferous plants and Grasses.

No student of British plants can dispense with this edition.

Lane and Son's Catalogue of Roses.—This little pamphlet will be found useful. In addition to the prices and short descriptions usually affixed to each variety, those kinds are distinguished which succeed best as pillar Roses. The Catalogue would have been more complete, however, if some distinctive mark had been attached to those flowers which possess the desirable property of fragrance. Nevertheless, we can recommend it to the admirers of this beautiful genus.

CALENDAR OF OPERATIONS *for the ensuing week.*

It will be advisable now to get ready the necessary coverings for tender shrubs and young trees that need protection; for although continuous severe frost does not usually set in much before Christmas, we may shortly expect sudden falls of temperature to occur, of sufficient intensity to injure tender plants, whose young shoots have as yet scarcely ceased to grow. With regard to the material employed, one of the most efficient, and, at the same time, the least expensive coverings, is straw, fixed in the way of thatch, to a light frame-work of wood, one part of which should be so constructed that it might readily be opened in mild weather. Such a covering, however, is proper only for the tenderest plants; species of more hardy constitutions, but which still require some protection, might be sheltered simply by bending some sticks over them, upon which a bast mat or two is to be spread in severe weather; the principle to be observed being, not to afford more shelter than is absolutely necessary for the preservation of the plants. In the case of timber-trees, however, the trouble and expense of yearly coverings, after they reach a certain age, is so much time and money mis-spent. Handsome flowering shrubs, which are too tender to withstand the vicissitudes of our climate, deserve protection; but trees that in their native country attain to a large size, such as the Fir-tribe, are of no value whatever, unless they are hardy enough to thrive in the open air. Any kinds of recent introduction, which have endured several winters with the aid of such protection as above mentioned, should, therefore, in the approaching one, be tested by greater, or even perfect exposure.

I.—KITCHEN-GARDEN AND ORCHARD.

In-door Department.

Pinery.—Where the pits are heated by linings, a quantity of leaves should be collected and mixed with the dung for that purpose. Such a mixture will produce a more moderate and lasting heat than stable-dung alone. Syringing should be discontinued in houses where a high temperature is not maintained; but evaporating vessels ought still to be retained on the heating apparatus. Let those houses in which the bark-beds have been recently renewed be kept warmer than usual if the heat does not rise in the beds as desired.

Vinery.—If not yet done, let the houses intended for early work be peeled and washed immediately, in order that any accidental wounds of the inner bark may become dry, and therefore incapable of bleeding when the sap is set in motion. Late Grapes will now demand more particular attention, the ensuing month being generally the dullest and dampest in the whole year.

Peach-house.—Take advantage of rainy weather to prune, wash, and tie those trees which have not already undergone these operations. A species of Coccus, which is difficult to eradicate, is sometimes exceedingly troublesome in Peach-houses. Dressing the trees with glue-water would most likely destroy the insects by stifling them.

Mushroom-house.—When fires are made, the flues, &c., should be sprinkled, or other means used to moisten the air of the house; the beds will not then require much water, which always injures the young crop. Beds should be made up and spawned in rotation, that there might be no failure in the winter supplies. If soil of a binding quality, and rather wet than dry, is used for earthing the beds, the Mushrooms will grow closer, or more buttony.

Cucumbers.—Look sharply after woodlice, which sometimes do much mischief in little time to young plants. A cooked Potato put into a flower-pot and covered with hay or moss, is one of the best traps for them. Bearing-plants in pots and boxes must be top-dressed with rich soil, adding a small portion at a time as the roots grow to the surface.

Prepare a substantial heap of dung and leaves by turning and mixing, to be in readiness for Asparagus forcing; leaves ought also to be collected now for forcing Sea-kale.

Out-door Department.

Broccoli.—As these, or Cauliflowers, become fit for use, the plants should be taken up and set in some place out of the reach of frost when such weather threatens.

Cardoons should be finally earthed when the ground is not wet; throw away all that are running to flower.

Kidney Beans.—These, being killed, ought now to be cleared off the ground. All the ripe pods of the small white runner should be gathered and shelled for winter use; these make an excellent dish when green vegetables are scarce.

Leeks may be blanched, if necessary, by earthing up the stems; or if they are growing in close rows, some half-rotten leaves from the pits might be laid among them for that purpose.

Onions, especially the Tripoli and the Potato kinds, will require to be often looked over: the latter may be planted now.

Potatoes.—All that are still in the ground should be immediately taken up. When these are stored in heaps out-of-doors, a thick layer of straw or dry fern under the mould will be found the best protection from frost. In case any were planted in the beginning of August with the intention of obtaining a late supply of young Potatoes, the produce should now be taken up and laid by in sand.

Sea-kale.—Clear away the leaves from those beds which are intended to be first forced. If this vegetable is wanted early, a bed may now be covered with tree-leaves, laying some long litter over the top to prevent them from being blown about. Leaves are preferable to dung, which if it ferment at all, is apt to heat too violently. If earthen pots or wooden boxes are not obtainable, the crowns may be covered with fine coal-ashes.

Orchard.—Whenever the ground is not too wet, the formation of fruit-tree borders and the transplanting of trees should be persevered in to the exclusion of other work. Pruning can be done at times when the ground is not in a fit state to be worked. In pruning Raspberry trees, it is a very prevalent fault to retain too much bearing-wood, by which the plants are weakened without a corresponding advantage in an increased quantity of fruit. For training this plant, we recommend the mode described at p. 24. If, however, there is no work to be done of greater immediate consequence, pruning should be forwarded while the weather is open.

II.—FLOWER-GARDEN AND SHRUBBERY.

In-door Department.

Stove.—Take care that the air of the house does not get too dry; to prevent this, let the troughs on the hot-water pipes be kept continually full of water. When flues are used, run some cement along the edges to hold water for the same purpose. Very little air will now be required, and that only on fine sunny days; shut up early in the afternoon, in order that less fire-heat may be wanted.

Greenhouse and Conservatory.—Let the plants have air at all favourable opportunities, closing the sashes early in the afternoon when a clear sky indicates frost; this precaution will often prevent the necessity of making fires to these houses. Withered leaves and flowers must be constantly picked off, and the plants should be occasionally turned round so as to present a different face to the light. Give water sparingly, especially to plants which are impatient of wet, such as Calceolárias, young Mignonette, &c.

Pits and Frames.—Bring forward, in succession, bulbs and other plants for forcing. Carnations, Auriculas, and other Prímulas in pots should, if practicable, be set together; because during winter they require similar treatment, viz., plenty of air, very little water, and protection only in severe weather. Prick out seedling Calceolárias, &c., that are large enough; those that are not had better remain in the seed-pans till spring. A gentle heat will encourage the potted plants to get roothold; but damp must be expressly guarded against.

Out-door Department.

The recent frosts having destroyed the beauty of the Dahlias, the roots ought to be immediately taken up. Set them to dry with the bottom upwards for a day or two, and then lay them by in a dry cellar or other place out of the reach of frost, covering the tubers with dry sand. Common sorts that are only used for shrubberies and rough places may be stacked in the ground, like Potatoes. Chrysánthemums that are trained against walls or palings should be closely nailed in. Boards might be fixed above the plants, like coping, to keep off the frost; and in very cold nights, mats may be hung in front of them. A little additional trouble will be well bestowed to ensure a fine bloom of this valuable flower. The falling leaves make it impossible to keep the lawns and walks clean; nevertheless, the places that are most seen and the walks that are most frequented should be often swept. Mowing ought not to be attempted on frosty mornings.

NURSERY AND FOREST DEPARTMENT.

Nursery.—Continue to take off and plant rooted layers; likewise to row out seedlings that are large enough. Cuttings of Willows, and other trees which strike readily, may now be put in. Young trees of tender kinds which are growing in pots should be removed to their winter quarters.

Forest and Coppice Woods.—Persevere in planting.—*J. B. Whiting, The Deepdene.*

State of the Weather near London for the Week ending Oct. 27, 1842, as observed at the Horticultural Garden, Chiswick.

Oct.	Barometer.		Thermometer.			Wind.	Rain.
	Max.	Min.	Max.	Min.	Mean.		
Friday 21	29.980	29.883	50	20	35.0	N.W.	
Saturday 22	29.723	29.025	48	38	43.0	S.W.	.50
Sunday 23	28.956	28.802	52	30	41.0	S.W.	.07
Monday 24	29.546	29.171	46	27	36.5	S.W.	
Tuesday 25	29.623	29.333	47	27	37.0	S.W.	.72
Wednesday 26	29.625	29.572	45	36	40.5	S.W.	.02
Thursday 27	29.691	29.677	52	33	42.5	W.	
Average	29.592	29.352	48.6	30.1	39.3		

Oct. 21. Sharp frost; fine; clear and frosty at night.

22. Densely overcast; heavy rain with strong wind; cloudy.

23. Showery; heavy rain at 1 p.m.; cloudy.

24. Fine; boisterous with showers; clear and fine.

25. Rain, more or less throughout the day, commenced falling in torrents between 8 and 9 p.m.

26. Very clear; fine; cloudy at night.

27. Overcast; very fine; cloudy; uniformly overcast.

Mean temperature of the week 10° below the average.

State of the Weather at Chiswick during the last 16 years, for the ensuing Week ending Nov. 5, 1842.

Oct.	Aver. Highest Temp.	Aver. Lowest Temp.	Mean Temp	No. of Years in which it Rained.	Greatest quantity of Rain.	Prevailing Winds.							
						N.	N.E.	E.	S.E.	S.	S.W.	W.	N.W.
Sun. 30	54.0	39.3	46.7	7	0.50 in.	2	3	—	3	—	6	1	1
Mon. 31	53.2	39.3	46.3	10	0.84	—	1	1	2	—	5	4	3
Tues. 1	54.5	40.6	47.5	9	0.30	1	1	1	—	2	3	6	2
Wed. 2	54.2	40.5	47.4	6	0.80	—	1	1	2	1	7	2	2
Thurs. 3	53.3	39.8	46.5	9	0.83	1	—	4	—	3	3	5	—
Fri. 4	52.1	38.3	45.2	9	1.44	—	1	2	1	3	5	3	1
Sat. 5	52.7	39.4	46.0	6	0.23	1	1	—	3	2	6	1	2

The highest temperature during the above period occurred on the 30th, in 1833—thermometer 67°; and the lowest on the 30th, in 1826—thermometer 23°.

REPORT ON COVENT GARDEN MARKET,

For the week ending Oct. 28, 1842.

The market has been abundantly supplied during the past week, but the demand has been comparatively trifling; trade in general is very dull. *Fruit:* Amongst the Pines there are some good fruit, which are selling from 4*s*. to 6*s*. per lb. Grapes appear to be on the rise; good samples of the Black Hamburgh selling from 2*s*. 6*d*. to 4*s*. per lb.; there are but few Muscats offered. Pomegranates are plentiful, from 2*s*. to 4*s*. per dozen. The principal dessert Pears are the Marie Louise and Louise bonne; both from 3*s*. 6*d*. to 5*s*. per half-sieve; some good samples of the Chaumontel from Jersey have made their appearance, from 1*s*. to 5*s*. per dozen. Dessert Apples seem to be principally confined to Golden and Ribstone Pippins; the former of which fetch from 2*s*. to 3*s*. per half-sieve, the latter from 4*s*. to 5*s*. per half-sieve. Quinces are plentiful, from 1*s*. 6*d*. to 4*s*. per half-sieve. A few Imperatrice Plums may be obtained at 1*s*. per punnet; culinary Plums are from 2*s*. 6*d*. to 3*s*. per half-sieve. Damsons are considerably dearer, and fetch from 3*s*. to 4*s*. per half-sieve. Nuts of all kinds are plentiful; Walnuts are selling from 1*s*. to 3*s*. per 100. *Vegetables:* The prices of most kinds remain nearly the same as in our last report; if anything, Cauliflowers are a trifle cheaper. The late severe frosts have completely stopped the supply of French Beans and Vegetable Marrows. A few samples of Chapman's Autumn Potato have made their appearance at 1*s*. per lb. Celery of good quality continues to be well supplied, from 9*d*. to 1*s*. 6*d*. per bundle. A few Tomatoes may be obtained, from 2*s*. 6*d*. to 3*s*. 6*d*. per half-sieve. Mushrooms are tolerably abundant, from 10*d*. to 1*s*. 6*d* per pottle. *Flowers:* There has been considerable variety amongst the cut flowers during the past week; amongst them we observed blooms of the Double Chinese Primrose, Leschenaúltia formosa, Epiphyllum truncatum and E. Ackermanni, several Auriculas, with Cinerárias, Amaryllises, Pansies, Roses, Camellias, Heliotrope, and Neapolitan Violets.

PRICES, Saturday, Oct. 29, 1842.—FRUITS:—

Pine Apple, per lb. 4*s* to 6*s*
Grapes, per pound, 1*s* 6*d* to 4*s*
— Spanish, 9*d* to 1*s*
— Portugal 9*d* to 1*s* 6*d*
Plums, dessert, per punnet, 1*s*
Damsons, per hf. sieve, 3*s* to 4*s*
Apples, dessert, per bush., 2*s* 6*d* to 7*s*
— Kitchen, 2*s* 6*d* to 5*s*
Pears, dessert, per hf.-sieve, 1*s* 6*d* to 6*s*
Berberries, per hf.-sieve, 4*s* to 5*s*
Pomegranates, per doz. 2*s* to 4*s*
Cucumbers, per doz., 2*s* to 3*s*
Oranges, per doz., 1*s* to 3*s*
Oranges, per 100, 5*s* to 20
Lemons, per doz. 1*s* to 2*s* 6*d*
— per 100, 6*s* to 16*s*
Almonds, per peck, 6*s* to 7*s*
Sweet Almonds, per pound, 2*s* 6*d* to 3*s*
Chesnuts, per peck, 3*s* to 8*s*
Walnuts, per bush, shelled, 12*s* 20*s*
Filberts, English, per 100 lbs. 55*s* to 70*s*
Cob Nuts, per 100 lb., 80*s* to 90*s*
Nuts, per bushel—
— Brazil, 16*s* to 20*s*
— Spanish, 20*s*
— Barcelona, 24*s*

VEGETABLES.

Savoys, per doz. 9*d* to 1*s*.
Cabbage, per doz. 6*d* to 1*s* 6*d*
— plants, per doz. 1*s* 6*d* to 2*s*
— Red, for pickling, 1*s* 6*d* to 2*s* 6*d*
Brussels Sprouts, per hf.-sv. 1*s* 6*d* to 2*s*
Broccoli, per bunch, 8*d* to 1*s*
Cauliflowers, per doz., 1*s* to 3*s*
Potatoes, per ton, 50*s* to 70*s*
— per cwt. 2*s* 6*d* to 3*s* 6*d*
— per bushel, 1*s* 6*d* to 2*s*
— Kidney, per bu., 2*s*
— Scotch, per ton, 55*s* to 60*s*
— New autumn, per lb., 1*s*
Jerusalem Artichokes, per half-sieve, 1*s* 3*d* to 2*s*
Turnips, per doz bun., 1*s* 6*d* to 3*s*
Carrots, per doz. bun., 3*s* to 5*s*
Red Beet, per dozen, 9*d* to 1*s*
Scorzonera, per bundle, 1*s* 3*d* to 1*s* 6*d*
Salsafy, per bundle, 1*s* 3*d* to 1*s* 6*d*
Horse Radish, per bundle, 1*s* 6*d* to 4*s* 6*d*
Radish, per doz. hands (24 to 30 each) 9*d* to 1*s*
Radish, Turnip, p. doz. bch., 1*s* to 1*s* 6*d*
Parsneps, per dozen, 9*d* to 1*s*
Spinach, per sieve, 1*s* to 1*s* 6*d*
Leeks, per doz. bun., 1*s* 6*d* to 2*s*
Onions, per bushel, 4*s* to 5*s* 6*d*
— Green, p. doz. bun 3*s* 6*d* to 4*s*
— Spanish, per doz. 1*s* 6*d* to 4*s*
Garlic, per lb. 6*d* to 8*d*
Shallots, per lb., 1*s*
Lettuce, Cabbage, p. sc., 6*d* to 1*s*
— Cos, 9*d* to 1*s* 6*d*
Endive, per score, 9*d* to 1*s* 6*d*
Celery, p. bd., (12 to 15) 6*d* to 1*s* 9*d*
Small Salads, per punnet, 2*d* to 3*d*
Watercress, per doz. sm. bun. 4*d* to 6*d*
Parsley, per doz. bun., 1*s* 6*d* to 2*s* 6*d*
Tarragon, per doz bun., 2*s* to 3*s*
Sage, per doz. bunches, 1*s* 6*d* to 2*s*
Mint, per doz. bunches, 2*s*
Tomatoes, per hf. sv. 2*s* to 3*s* 6*d*
Capsicums, Ripe, per 100, 3*s* 6*d* to 4*s* 6*d*
Mushrooms, per pottle, 10*d* to 1*s* 6*d*

Notices to Correspondents.

We shall be obliged if our Correspondents, in their future communications, will take care that no general question relating to *different* subjects is asked in the same paragraph, and that each question is headed with the principal subject. *One side only of the paper should be written on*, so that we may separate each question. If these directions are observed, it will greatly facilitate our obtaining answers, and will enable us to arrange our Correspondence under general heads, separating those questions and answers which are of interest merely to individuals, from such as are of general interest.

Aberthaw Lime.—This is one of the best limes in use, much employed for hydraulic purposes, and found on the Welch coast.

upper petals clouded; dark claret colour, shaded off to the edge by pencilled rays of a crimson colour, ending in pale pink; under petals blush white; texture good; edge smooth; eye good; size 2⅝ by 2⅜ inches; form good, and a fine trusser; class of quality first; shown July 13th and 20th. Seventh, a Gooseberry (Prince Albert), by Mr. Thos. Watson: colour red; shape like the Turkey Red, but much larger in size, and in every respect a first-rate dessert Gooseberry; habit of plant upright, a free grower, and a great bearer; shown 17th Aug. Eighth, a Dahlia (Retriever), by Mr. H. Dewar: colour ruby crimson; petals stiff, neatly cupped, and well arranged; eye good; size above medium; shape good, being very round in the front; class of quality first; shown Aug. 31st and Sept. 7th. Ninth, a Dahlia (Sylph), by Mr. H. Dewar: colour white; petals stiff; neatly cupped, and of firm texture; size medium; form good; shoulder good; eye not up; to be shown again. Shown again Sept. 7th, former properties confirmed: eye not up; to be shown again before a final decision can be come to. Tenth, a Dahlia (Claudine), by Mr. N. W. Forster, gr. to Wm. Donkin, Esq., Sandoe: colour white; tipped with rosy pink; petals strong, neatly cupped, and of good shape; eye dark and good; shape good, being very spherical; size medium; general arrangement good; class of quality first; shown Aug. 31st. Eleventh, a Dahlia (Imogene), by Mr. H. Dewar: colour lilac; petals stiff, cupped, and of a good depth; form good; size large; class of quality first, being decidedly superior to any of the same colour yet before the public; shown Sept. 7th, 1842. Twelfth, a Dahlia (Cumberland Hero), by Messrs. Little and Ballantyne, Nurserymen, Carlisle: colour yellow; the specimen sent for testing unfortunately got damaged in the carriage, consequently the Board could not decide upon its merits, and requested that more blooms might be sent.

Sunderland Horticultural Exhibition, Sept. 27.—The last exhibition took place in the Athenæum, Fawcett-street. The following prizes were awarded:—Fruits—Pine-apple, Mr. J. Ross, gr. to R. Pemberton, Esq. Grapes, 1, Black Hamburgh, Grizzly Frontignan, Constantia, Syrian—Mr. R. Gibson, gr. to W. Bell, Esq.; 2, W. Featherstonhaugh, Esq. Peaches, W. Featherstonhaugh, Esq. Nectarines, Mr. R. Gibson. Apples, *Dessert*, W. Featherstonhaugh, Esq. *Kitchen*, Mr. J. Ross. Best Collection of Pears, Mr. T. Cook, gr. to Sir H. Williamson, Bart. Vegetables—Celery, Mr. J. Ross. Onions, Mr. G. Allan, gr. to W. R. Robinson, Esq. Red Beet, Mr. R. Cloughton. Parsneps, Mr. G. Allan. Carrots, Mr. J. Ross. Turnips, Mr. J. Clarke, gr. to J. Simpson, Esq. Cabbages, Mr. G. Allan. Jerusalem Artichokes, Mr. R. Cloughton. Collection of Potatoes, Brougham Early, Golden Drop, Thompson's 2d Early, Foxes' Seedling, Ash-leaved Kidney, American Early—Mr. G. Allan. Kidney Beans, Mr. R. Cloughton. Cucumbers, Mr. G. Allan. Stove Plant, Russélia júncea—Mr. J. Ross. 3 Stove Plants, Mr. T. Cook. Greenhouse Plants, Mr. T. Cook. Cockscomb, Mr. T. Cook. Bouquet of German Asters, Mr. G. Allan. Bouquet of Dahlias, Mr. J. Ross. Dahlias, 18 *varieties*, Nimrod, Miss Scroope, Lee's Bloomsbury, Phenomenon, Marshal Soult, Beauty of the Plain, Grace Darling, Marquess of Lothian, Hope, Topaz, Lady Middleton, Rienzi, Rouge et Noire, Metella, Lewisham Rival, Advancer, Marchioness of Tavistock, Cox's Washington—Mr. T. Pattison, gr. to Mrs. Richardson. *Best* 12, Hope, Grace Darling, Lee's Bloomsbury, Advancer, Cox's Washington, Beauty of the Plain, Rienzi, Seedling, Pickwick, Duchess of Richmond, Maria, Phenomenon—Mr. G. Allan. Floral Device, Mr. T. Pattison. Bouquet of Flowers, 1 and 2, Mr. R. Cloughton. Dahlias—Amateurs—*Self-coloured*, Pickwick—Mr. J. Mallin. 3 *ditto*, Pickwick, Maria, Lewisham Rival—Mr. J. Mallin. 6 *ditto*, Lee's Bloomsbury, Pickwick, Lady Middleton, Lewisham Rival, Eclipse, Miss Scroope—Mr. J. Mallin. *Best* 3 *Striped or Tipped*, Phenomenon, Duchess of Richmond, Beauty of the Plain—Mr. J. Mallin. *Best* 6 *ditto*, Duchess of Richmond, Beauty of the Plain, Phenomenon, Rienzi, Unique—Mr. J. Mallin. Hardy Herbaceous Flowers, Misses Watson. Gardeners—*Best Self-coloured Dahlia*, Pickwick—Mr. G. Allan. *Best* 3 *ditto*, Argo, Lee's Bloomsbury, Maria—Mr. G. Allan. *Best* 6 *ditto*, Scarlet le Grand, Metella, Pickwick, Miss Johnson, Grace Darling, Rival Sussex—Mr. Jos. Dagg. *Best Striped or Tipped*, Phenomenon—Mr. T. Cook. *Best* 3 *ditto*, Beauty of the Plain, Phenomenon, Grand Tournament—Mr. G. Allan. *Best* 6 *ditto*, Beauty of the Plain, Marchioness of Tavistock, Phenomenon, Lady Maclean, Grand Tournament, Duchess of Richmond—Mr. T. Pattison. Hardy Herbaceous Flowers, Mr. G. Allan. Extra Prizes—To Mr. T. Cook, for a *Collection of Grapes*; to Mr. G. Dale, gr. to R. A. Davison, Esq., for a *Collection of Greenhouse and Stove Plants*; to J. Watson, Esq., for *King Apples*; to Mr. D. Gibson, for a *Floral Device*; to Mr. T. Cook, for *Bouquet of Select Flowers*; to H. Gibson and Son, for a *Collection of Apples*. Dahlias—open to all England—Nurserymen—*Best* 36, Attila, Catleugh's Eclipse, Widnall's Eclipse, Admiral Stopford, Hope, Maria, Cox's Defiance, Duke of Cornwall, Pickwick, Miss Abbott, Twyford Perfection, Widnall's Queen, Egyptian Prince, Unrivalled of South Hants, President of the West, Bridesmaid, Admirable, Princess Royal, Regina, Seedling, Lewisham Rival, Argo, Miracle, Grace Darling, Seedling, Dodd's Prince of Wales, Lady Glentwith, Adam's Prince Albert, Northern Beauty, Haidee, Andrew Hofer, Phenomenon, Sir F. Johnson, Girling's Ploughboy, Lee's Bloomsbury, White Defiance—Mr. J. Harrison, York. *Best* 24, Rouge et Noire, Exquisite, Catleugh's Eclipse, Maid of Bath, Indispensable, Marchioness of Lansdown, President of the West, Lewisham Rival, Pamplin's Bloomsbury, Maria, Argo, Widnall's Queen, Bridesmaid, Ansell's Unique, Duchess of Richmond, Magnet, Pickwick, Cox's Defiance, Grande Baudine, Phenomenon, Conservative, Princess Royal, Essex Rival, Prince of Wales—Mr. H. Newton, Newcastle. *Best* 18, Mr. Edwards, York. Amateurs—*Best* 24, Rival Lilac, Admirable, Pamplin's Bloomsbury, Haidee, Prince of Wales, Highgate Rival, Duke of Richmond, Low's Indispensable, Euclid, Princess Royal, Ariel, Conqueror of the World, Attila, Fanny Keynes, Northern Beauty, Rouge et Noire, Satirist, Bridesmaid, Lee's Bloomsbury, Tournament, Unknown, Pickwick, Cox's Defiance, Union—H. Marshall, Esq. *Best* 18, Haidee, Lewisham Rival, Scarlet Defiance, Euclid, Argo, Admirable, Unknown, Prince of Wales, Princess Royal, Francis, Beauty of the North, Bloomsbury, Pickwick, Magnet, Phenomenon, Tournament, President, Admiral Stopford—H. Marshall, Esq. *Best* 12, Mrs. Berkeley, Pickwick, Haidee, Bloomsbury, Widnall's Eclipse, Conqueror of the World, Fanny Keynes, Suffolk Hero, Princess Royal, Prince of Wales, Catleugh's Eclipse, Cox's Defiance—Mr. Caldcleugh. *Best* 6, Grace Darling, Rival Lilac, Phenomenon, Pickwick, Maria, Pamplin's Bloomsbury—Mr. Caldcleugh. *Best* 3, Metella, Cox's Defiance, Pickwick—Mr. Jos. Dagg. Open to all—*Best bloom*, Pickwick—Mr. H. Newton, Newcastle. *A First-Class Seedling*, named Mrs. Richardson, was exhibited by Mr. Edwards, of York; this was a splendid flower, and excited much attention, being a large and superior show flower.—*Sunderland Herald.*

Wrexham Horticultural Society, Sept. 27.—The last exhibition was held in the Savings' Bank room, Wrexham.—The prizes were awarded as follows:—Plants.—Most Ornamental Plant, J. Fitzhugh, Esq. Best Stove Plant, J. Williams, Esq.; 2, J. Williams, Esq. Best Greenhouse Plant, J. Townshend, Esq.; 2, J. Williams, Esq.; 3, Miss Cunliffe; 4, J. Townshend, Esq.; 5, C. B. T. Roper, Esq.; 6, J. Williams, Esq. Best Hardy Plant, J. Williams, Esq.; 2, Miss Cunliffe. Best Collection of 6 Plants, J. Townshend Esq. Best Design in Cut Flowers, Mr. Forbes, gr. to Sir W. W. Wynn, Bart., M.P.; 2, J. Townshend, Esq. Roses.—*Best* 24 *varieties*, J. Williams, Esq. *Best* 12 *ditto*, J. Townshend, Esq. Dahlias.—*Best* 24 *varieties*, Conqueror of the Plain, Argo, Bridesmaid, Admirable, Princess Royal, Lady Cooper, Eclipse, Monarch, Duchess of Richmond, Metella, Miss Chester, Unique, Lee's Bloomsbury, Grande Baudine, President of the West, Euclid, Highgate Rival, Rouge et Noire, Burnham Hero, Conductor, Climax, Regina, Pickwick, Maria, Mr. Gething; 2, T. Fitzhugh, Esq. *Best* 18 *varieties*, Argo, Regina, Phenomenon, Springfield Rival, Maria, Squibb's Defiance, Hope, Grace Darling, Metella, Cervantes, Danecroft Rival, Parson's Beauty, Rosa, President of the West, Burnham Hero, Exquisite, Egyptian Prince, Grenadier, J. Williams, Esq.; 2, Mr. Forbes. *Best* 12 *varieties*, Maid of Bath, Pickwick, Duchess of Richmond, Lee's Bloomsbury, Suffolk Hero, Grande Baudine, Phenomenon, Lewisham Rival, Argo, Hope, President of the West, Admirable, Mr. Forbes; 2, T. Fitzhugh, Esq. Best Dahlia of any Class, President of the West, Mr. Forbes. *Best Seedling*, a creamy White, Mr. Forbes. Fruit.—Pineapple, *Black Jamaica*, 1 and 2, J. Williams, Esq. Best Bunch of Grapes, *Muscat of Alexandria*, R. Thompson, Esq.; *Black*, T. Fitzhugh, Esq.; 2, J. Williams, Esq.; *White*, 1 and 2, T. Fitzhugh, Esq. Melons, Mr. Forbes; 2, Mr. Forbes. Nectarines, *Red Roman*, R. Thompson, Esq. Peaches, *late purple*, Mr. Jones; 2, *Royal George*, R. Briscoe, Esq. Plums, *Magnum Bonum*, R. Thompson, Esq. Dessert Pears, *Aston Town*, R. Thompson, Esq. Apples, *Ribstone Pippin*, T. Fitzhugh, Esq.; *Culinary, French Codlin*, Mr. McLevi. Best Tray of Fruit, 8 *varieties*, T. Fitzhugh, Esq.; 2, Mr. Forbes. Vegetables.—Cucumbers, Mr. Forbes. Celery, &c., an Extra Prize, *Brown's Superb*, Mr. T. Jones; 2, *Solid Red*, Mrs. Parker. Peas, *Knight's Marrow*, Mr. Jones. French Beans, Mr. Jones. Cauliflowers, Mr. McLevi. Onions, W. Jones, Esq.; 2, Mr. McLevi. Carrots, Mr. Jones; 2, Mr. McLevi. Best Tray of Vegetables, Mr. Jones; 2, Rev. J. H. M. Luxmore. Amateur Prizes.—Best Design in Cut Flowers, Mr. Harrison, Sen.; 2, Mr. Johnson. Dahlias, *best* 12 *varieties*, Cox's Defiance, Pickwick, President of the West, Lady Cooper, Lee's Bloomsbury, Bridesmaid, Exquisite, Burnham Hero, Grand Tournament, Ne Plus Ultra, Indispensable, Marquess of Lothian, Mr. Woods; 2, Mr. Marshall. *Best* 6 *varieties*, Danecroft Rival, Lady Kinnaird, Climax, President of the West, Grace Darling, Suffolk Hero, Mr. W. Jones; 2, Mr. Marshall. Fruit.—Dessert Apples, Mrs. Foulkes; *culinary*, Mr. Treen. Best Tray of Fruit, Mr. Tomkinson; 2, Mr. Harrison, Sen. Vegetables.—Cucumbers, Mr. Gethen. French Beans, Mr. W. Jones. Celery, Mr. Morris; 2, Mr. W. Jones. Onions, Mr. Morris; 2, Mr. Marshall. Carrots, Mr. Woods; 2, Mr. Marshall. Best Collection of Vegetables, Mr. Marshall; 2, Mr. Morris. Numerous Cottagers' prizes were also awarded.

MISCELLANEOUS.

Secrets of Cider Making.—Herefordshire being but with one exception the greatest fruit-growing county in England, a few remarks on the management of cider cannot fail of being acceptable to the majority of your readers. The generality of cider-makers scarcely make any attempt to check acetous fermentation, the consequences of which are, that the cleansing from filth is not complete, and by the raging fermentation the cider becomes harsh and crabbed in a few months, if not ground exceedingly well and made from excellent fruit. The labourers of Herefordshire and Devon, however, think themselves happy with even this beverage, if it possesses strength enough to animate their spirits. I remember hearing an anecdote of a person who was particularly fond of harsh and strong cider, and who, some forty or fifty years ago, was — of —. Laton's Hope was then noted for very harsh cider, which exactly suited the palate of this old gentleman, and in no other place could he so well enjoy himself, although waited on with great fastidiousness. At length, at a certain place, they brought this old veteran vinegar, which, when he had tasted, his eyes sparkled with delight; he was now at home—this was the real stuff—this was right Laton's Hope cider. Cider harsh and strong can be easily attained; that of a pleasant, fruity, and generous flavour, is very difficult of attainment, all the expedients as yet resorted to for that purpose having failed. Farm-house cellars, stowed with two or three hundred hogsheads, seldom contain a single cask "fit for bottling;" a portion of this cider is certainly palatable, and strong enough, but it is not exactly the thing to ensure a liberal price, although capable of gratifying the delectable tastes of tap-room frequenters. Those parts of England distant from Herefordshire and Devon obtain their supplies of cider through the medium of cider-merchants, who employ a great number of men to watch the working of the cider, and to be ready to draw it off at the very moment when it stands in need of racking. It is received into their warehouses in a muddy state, and racked again and again so soon as they perceive signs of the commencement of acetous fermentation, until all the grosser impurities are separated from it. When that has been accomplished, if fermentation again ensues (which it will be sure to do if the cider be not clear as amber), isinglass, prepared to the amount of an ounce, is introduced into an empty hogshead with about eight or nine gallons of the cider; a strip of paper about eighteen inches long, three parts of which have been dipped in brimstone, is lighted and lowered through the bunghole for about sixteen inches; the bung is hard driven in to prevent the match from falling into the cider and the escape of sulphur, and when the brimstone has done burning, the vessel is well shaken for fifteen minutes, and after being filled up the bung is driven in. Within two or three days the isinglass sinks to the bottom, the more subtle parts of the remaining impurities adhering to it in its descent. The cider is then drawn off into another cask, where it remains until bunged up, if fermentation does not render racking and the addition of isinglass again necessary. A little blood is mixed with the first grounds, which sticks to the sides of the bags, the cider filtering through it; this is, however, needless, when isinglass is amongst the sediment. The isinglass, before fit for use, is well pounded, then put in a bucket and whisked up twice or thrice a day in a little cider, in which it remains until completely dissolved. There is sad perplexity attending this method; night and day the cider must be watched, and racked at the critical moment; notwithstanding all this trouble it not unfrequently turns out bad. Cold has unquestionably the property of checking acetous fermentation; therefore what I recommend is, that means may be adopted by Herefordshire farmers for reducing the temperature of their fining cellar to nearly the freezing point. I observed in your Journal that a substance resembling ice is to be seen in London during the mid-day heat of summer, the temperature in its immediate vicinity being colder considerably than that of other places in the shade. This artificial mixture may be made of greater utility than for merely skating on; how useful would it be if brewers had the advantage of cool cellarage in summer! and how extremely advantageous will it be for apple growers if, through its instrumentality, the temperature of their cellars can be lowered to the desired point! their cider will then require but one racking, and if made from the best fruit, will be superior to much French wine. The only question is, can the temperature be brought sufficiently low? If we have discovered, or do discover simple effectual means for checking the hurtful fermentation in new cider, we shall annually draw from the other counties to the amount of some thousands of pounds, to the manifest advantage of the fruit-growing districts. I call upon Herefordshire gentlemen to investigate this subject, for it will be a lasting scandal to the county if anything by so simple a method can be done, if it does not emanate from them. I once placed a wooden bottle of perry, fresh from the mill, under water, and there suffered it to remain for three months, at the end of which time I tapped it by boring a hole in the bottle's side; the contents flew out with the greatest fury, filling a small jug with foam ere it was a quarter full of perry. I mentioned this circumstance to a chemist, who assured me the perry could attain no strength if entirely debarred from the action of external air; accordingly, being completely ignorant of chemistry, I thought no more of that affair. This would be a fine, splendid, sparkling drink for teetotallers, superior to ginger beer, seidlitz powders, &c., and probably equal to "Sampson."—*Hereford Journal.*

Botanic Garden, Copenhagen.—We learn that Mr. Mörch, for many years gardener to the Botanic Garden of Copenhagen, has lately died, and has been succeeded by Mr. A. Weilbach, with whom many of our readers became acquainted while he was in the garden of the Horticultural Society.

The Assam Tea Company.—The following passage appears in the *Asiatic Journal*:—"The report of the Assam Tea Company for the past year is published. It states that the order of Government for making over two-thirds of the experimental gardens and means of manufacture at Jeypore and its neighbourhood had been carried into effect, but that the exertions of Mr. Bruce the superintendant had been baffled by want of labourers. The Chinese sent from Singapore, who were selected without discretion, and were not under proper control, quarrelled with the natives at Pubna, and became riotous; part were sent to gaol, and the rest refused to proceed to Assam. On arriving at Calcutta they were guilty of outrages, and were sent to the Mauritius, where the planters joyfully engaged them. The society then engaged a body of Dhangar Coles; but the cholera broke out amongst 650; many of whom died, and the remainder absconded. Disease had also thinned the other labourers, and destroyed or disabled seven Europeans. The product of last year, owing to these causes, was only 10,212lbs., which had been shipped to England. The total quantity of land fully cleared partially amounts to about 7000 acres. The quantity of native tea-land cleared, cropped, and in actual production, amounts to 2638 acres, capable of producing, when the trees are ripe and in full bearing, at a quarter of a pound of tea per tree, 312,000lbs. The company have set up a saw-mill to assist in the manufacture of chests and other requisite articles. A little steamer, intended to ply between Calcutta and Assam, had arrived in the country. The expenditure, during the year, in England and India, was Rs. 5,49,460, of which the value of stock in steam-boat, saw-mill, boats, and implements, is Rs. 1,51,941, and the labour lost and unproductive amounts to Rs. 1,23,275. The estimate of the prospective return of tea for the next five years, when it is supposed that the tea-lands will be in full perfection, is as follows:—1841, 40,000 lbs.; 1842, 80,000 lbs.; 1843, 160,000 lbs.; and so on, increasing 80,000 lbs.; each year."—Upon this statement the editor of the *Planters' Journal*, a Calcutta newspaper, observes that the alleged misconduct of the Chinese labourers is very much overstated, and that it was owing in part to their being ill-treated, and in part to the want of skill in the original selection of them. We understand upon the first authority, that the quality of the best samples of Assam Tea that have lately reached this country is improved—in fact, much superior to any previously received.

To Cook Potatoes the Lyons Fashion.—When the Potatoes are boiled, cut them into slices and put them in a saucepan; pour some onion broth over them; then add a piece of butter; keep the Potatoes hot without boiling. Slice eight Onions, and set them on the fire; when they are tender take a large spoonful of flour, which is to be well mixed with them: add salt, coarse pepper, a small table-spoonful of broth or water, and a dash of vinegar. Let the Onions gently simmer for a quarter of an hour, place them on the Potatoes, and keep them hot till served.

THE NATURALIST'S CORNER.—No. IV.

(*Continued from p.* 655.)

15. If the material world may be considered as replete with proofs, innumerable and unanswerable, not only of the being of a God, but of His infinite power, wisdom, and bounty; and if, above all, these temporal things speak to us, as in parables, of those eternal destinies with which man is inseparably linked: the study of the visible creation is second only in importance to that of the spiritual. Ancient literature, whatever may be its advantages—however it may, judiciously selected, refine the taste, improve the diction, or inform the understanding—cannot for a moment be brought into equal comparison with the sublimity, the pureness, and the exalting nature of Natural History. The student of the one draws his materials of thought from the works and deeds of man; the other

from the Cape of Good Hope announce the cessation of hostilities at Port Natal; the insurgent Boers have been completely defeated, and have made unqualified submission to the *British* rule.

Home News.

Court.—Her Majesty, Prince Albert, the Prince of Wales, and the Princess Royal, continue at Windsor Castle, and are quite well. The daily papers state that Her Majesty's situation leaves no doubt that an addition to the Royal Family may be shortly expected.—The Duke and Duchess of Cambridge, the Princesses Augusta and Mary of Cambridge, and His Royal Highness the Hereditary Grand Duke of Mecklenburg Strelitz, have arrived at Windsor, on a visit to Her Majesty. His Royal Highness the Duke of Sussex and the Duchess of Inverness have arrived at Howick Hall, on a visit to the Earl and Countess Grey, from Auckland Castle, the Palace of the Bishop of Durham, where the Royal Duke made a short stay from Upleatham Hall, the seat of the Earl of Zetland. It is stated that his Royal Highness intends to continue his tour of visits in the North until early in the new year, when he will return to Kensington Palace. Her Royal Highness the Duchess of Gloucester arrived at Drayton Manor, on a visit to Sir Robert and Lady Peel, on Thursday.—His Imperial Highness the Archduke Frederick of Austria has made an extensive tour in Scotland since our last, visiting Stirling Castle, Blair Atholl, Inverness, and Glasgow.

Privy Council.—Notices were issued to the members of the Government, and the chief members of the Household, on Monday, postponing the Privy Council, originally intended to be held this week, until Wednesday next, the 2d November. The whole of the Cabinet ministers are then expected to be in town at the council, and the day for the assembling of Parliament will be determined on.

Gazette Announcements.—A supplement to the London Gazette was published on Saturday, containing Sir Charles Young's Official Report of the Investiture of His Majesty the King of Saxony with the insignia and habit of the Order of the Garter, on the 8th inst., at Dresden, by the Earl of Wilton, under Her Majesty's commission.

Pensions.—Our readers will be gratified to learn that her Majesty has conferred a pension of 300*l.* a year on Mr. Wordsworth, the poet.

Parliamentary Movements.—It is generally rumoured that Parliament will assemble for the despatch of business early in January, but nothing definite can be known until after the Privy Council which will be held, as stated above, on Wednesday next.—Two gentlemen, Sir H. Hervey Bruce and Dr. Boyd, both on Conservative principles—the latter particularly identified with the Presbyterian interests, have come forward as candidates for the representation of Coleraine.—It is said that the Hon. James Stuart Wortley, third son of Lord Wharncliffe, intends to offer himself for the representation of Buteshire, vacant by the death of the Lord Advocate.

Foreign.

France.—The French papers have been discussing for some days a letter addressed by Lord Aberdeen to the Admiralty, dated Foreign-Office, May 20, 1842, relative to the mode in which our naval officers had executed the instructions for the effectual suppression of the Slave Trade. This letter was evidently never intended to be made public, but has come before the world in an appendix to some Parliamentary Report ordered during the last session. The disapproval given by Lord Aberdeen in regard to the Admiralty instructions is seized upon with avidity by the Paris Journalists, as a complete confirmation of all their invectives respecting our execution of the Right of Search Treaties. The Republican *National*, the Conservative *Presse*, and the Liberal organs, without exception, exult at the publication of a document in which the British Government shows its determination that the Right of Search Treaties shall be executed strictly according to law and the rights of nations. Lord Aberdeen states in his letter that her Majesty's Advocate-General, to whom certain papers in reference to the proceedings of British naval officers on the coast have been submitted, has reported that "he cannot take upon himself to advise that all the proceedings described as having taken place at Gallinas, New Cestos, and Sea Bar, are strictly justifiable, or that the instructions to her Majesty's naval officers, as referred to in these papers, are such as can with perfect legality be carried into execution. The Queen's Advocate is of opinion that the blockading rivers, landing and destroying buildings, and carrying off persons held in slavery in countries with which Great Britain is not at war, cannot be considered as sanctioned by the law of nations, or by the provisions of any existing treaties; and that however desirable it may be to put an end to the Slave Trade, a good, however eminent, should not be obtained otherwise than by lawful means." The manner in which this document has been received by the French papers has assumed so much violence of language that the Ministerial *Journal des Débats* has thought it necessary to protest against it. "We consider it our duty," it says, "to protest on our own account, and at our risk and peril, and even in the interest of the French press, against the manner in which certain journals, whether belonging to the Opposition or otherwise, have treated the letter addressed by Lord Aberdeen to the Lords of the Admiralty, which has lately appeared. We protest, first on the principle of fair argument. Were we at war with England—was the English nation a nation of men without honour and worthy of extermination, and her Government a Government of pirates, it would not be a reason, when an act of justice escaped such a nation and such a Government, to disfigure such act, and to make it serve as a text for a volume of insult and declamation. Lord Aberdeen acknowledges candidly that abuses had taken place in the execution of the means employed to suppress the Slave Trade. He points them out to the Admiralty. He requests the latter to prevent their repetition by instructions to the officers of the British Navy more precise and more conformable to the rights of nations. This letter (we will repeat it, were it to draw upon us an avalanche of calumny and insult) is stamped with a tone of moderation and sincerity which does honour to the British Minister. There is a real dignity in confessing one's wrongs, and in taking the necessary measures to repair them; and this is the opportunity that certain journals take to raise a cry of 'Death and hatred to the English and their Government!' It is not good policy which they preach, it is hatred and rage that they pour forth; believing, no doubt, that they would render an eminent service to France if they could induce her to participate in the blind passions which they feel. We repeat, that even if France were at war with England, it would be still worthy of two great nations to respect each other, and do each other justice." The journals avail themselves of this affair to renew their demands for a repeal of the existing treaties; and it is currently reported that the French Government not only will not ratify the treaty of the 20th December, but, if it have not actually been yet sent, will forward immediately to that of Great Britain a formal notice that the treaty will not be ratified, and that the other parties to it are at liberty to close the protocol, which had been left open waiting the acquiescence of France.—Subsequent advices inform us that Lord Palmerston and the *Débats* are the objects of loud vituperations on the part of the French Liberal journals; the former for having said, in reply to the address of the Anti-Slavery Society, noticed in our last, that firmness was requisite for carrying on the measures for the suppression of the Slave Trade; the latter is attacked for having lauded Lord Aberdeen's letter to the Admiralty. These advices contradict the report that new negotiations for a commercial treaty were on the point of being opened between this country and France, and state that the attempts made to effect a customs' union between Belgium and France have failed, and that King Leopold will leave St. Cloud for Brussels on the 7th November. It is also said that M. Guizot has at length consented, on behalf of Louis Philippe's government, to refer the claims of British merchants on France, arising out of the illegal blockade of Portendic, to the decision of the King of Prussia; and that Lord Aberdeen has likewise agreed to such a reference. The terms of the reference are not yet settled, but it is understood that there are few difficulties in the way of the settlement.—On Thursday evening his Majesty received General Ventura, who has taken his departure for Marseilles, on his return to India, to resume his command in Lahore. The French General is charged with various presents by the King of the French. These facts are mentioned as a proof of the renewed activity of France to open a new communication with India.—It is rumoured that Simon Deutz, who betrayed the Duchess of Berry into the hands of the police, is to be conveyed to Australia, where the French Government will provide him with means of existence.—The Paris papers of Monday publish the address of General Jacqueminot, on taking the command of the National Guards, vacated by the retirement of Marshal Gérard. The General expresses his regret at Marshal Gérard's retirement, and expresses his determination to follow in his footsteps, calling for the co-operation of his comrades to support the revolution of 1830.

The Provinces.—Letters from Havre mention that the operations for raising the wreck of Le Télémaque have fairly commenced, and that the vessel has been raised about two feet. In the course of another week it is expected that the wreck will be divested of the mystery which has hidden it for half a century.—The Avignon papers of the 16th inst. state that the Rhone, which a fortnight previously had overflowed its banks, and inundated the lower quarters of the town, was then so low that the steamboats could not run.—The journals give the following particulars of the late Scientific Congress at Strasburg:—The president was M. Caumont, of Caen, member of the Institute of France. The vice-presidents were Dr. Bertini, of Turin; Herr Schadow, director of the academy at Dusseldorf; and M. Julien, of Paris, founder of the *Revue Encylopédique*. 1,457 persons, by letter, announced their subscriptions to the association; 1,008 were present, of whom 490 were inhabitants of Strasburg, and 618 strangers: these consisted of 309 French, 139 Germans, 33 Swiss, 11 Italians, 6 English, 5 Belgians, 5 Russians, 3 Hungarians, 2 Poles, 1 Swede, 1 Norwegian, 1 Dutchman, 1 Spaniard, and 1 American. The Congress sat 11 working days, and held 11 general and 29 sectional meetings. Before separating, they passed 21 resolutions in the form of recommendations to the French Government. Several of them particularly referred to education, but the most important and interesting to Europe generally were the following:—"That it was advisable to reduce all prohibitive duties to a moderate protective rate, and to reduce the French tariffs generally. That it was advisable to reduce the price of salt for the benefit of agriculture, salt being now a Government monopoly. That a division of landed property into farms of less than 10, 15, or 20 acres, was highly injurious. That it was advisable to establish agricultural schools. That an encyclopædical society should be established at Strasburg in correspondence with the towns and universities of France and Germany, and especially with Metz, Nancy, Besançon, Mulhausen, Friburg, Heidelberg, Mentz, and Bonn." The next meeting of the congress will take place at Angers.—The Marseilles papers state that a ship, laden with dyewood, had recently arrived in that port, and that a venomous serpent was found concealed among the timber, which was not captured without much difficulty. It is, however, suspected that the story was got up to frighten the custom-house officers and enable the crew to land some contraband goods.

Spain.—Our advices from Madrid state that the Christina organs of the 15th appeared in mourning on that day, being the anniversary of the execution of General Diego Leon. Three other papers had articles on the shooting of this unfortunate insurgent, by no means flattering to the Regent. The church of St. Louis, where a mass was celebrated to the memory of Diego Leon, was crowded by Moderados of all ranks. It was reported that the Regent had resolved on prosecuting some of the journals which had attacked him so violently, as well as the curate of the parish, for not having informed the authorities that a religious manifestation was to take place.—The Barcelona papers mention that further executions had taken place in Gerona by order of Gen. Zurbano, but state that it is his intention to grant an amnesty to all the individuals detained in the prisons of the province for having given shelter or assistance to the rebels.—A Madrid letter states that there have been discovered, in the archives of Salamina, documents relating to the experiments on the application of steam to navigation made at Barcelona, as long ago as 1543, by a naval officer named Blasco de Garray. These experiments were made in the presence of Charles V., who, although the idea was not adopted by the government, made the inventor a present of a considerable sum of money.

Portugal.—We have Lisbon news to the 17th instant. The new administration was proceeding vigorously with its financial measures. New commissions were appointed, and new regulations laid down, for the more effective administration of justice. The negotiations with the Court of Rome had arrived at a very critical period, the liberties of the Lusitanian Church being now completely at issue. The Crown had appointed eight prelates, of whom the Internuncio proposed to accept three, or at most four, substituting Papal appointments for the remainder. The Court was disposed to give way, but the Government appeared actuated by a strong spirit of resistance. No progress has been made with the tariff convention. The accounts from Madeira and Oporto were of the most melancholy description.

Belgium.—The railroad from Courtray to Tournay is expected to be opened to the public about the end of the present month, and the whole line will be in active operation in November. A Belgian paper states that there has been recently found, amongst a heap of old books, purchased at St. Trond, the sixth known copy of the first Bible printed at Mentz. One copy was purchased in 1816 by Louis XVIII. for 20,000f.

Germany.—His Excellency Prince Esterhazy, for many years the Austrian Ambassador at the English Court, has finally taken his departure from London, having at length resigned his appointment as Ambassador. His Excellency, since his recent return from Austria, has suffered from ill health, which no doubt accelerated his departure. The Prince left Chandos-house last week on his return to Vienna.—The Berlin papers contain an interesting account of the opening of the Session of the Committees of the Prussian States-General on the 18th. Count D'Arnim, the Minister of the Interior, delivered a speech on the occasion, to which the Prince de Solms replied, as the Marshal of the United Committees of the Provincial States. Great enthusiasm prevailed, and the sitting was then adjourned till the 21st, when a reduction of taxation and the railroad system were to be the subjects discussed.—The Provincial States have adopted a resolution calculated to produce the most beneficial results for the prosperity of that country. On the proposition of the King, the committee of those assemblies has decided that the sums obtained by a reduction in the taxes should be applied to the construction of railroads. The diminution in the taxes amounted, for the present year, to 1,500,000 thalers (208,000*l.*)—Letters from Frankfort state that in the evening of the 13th inst. a shock of an earthquake, attended with considerable noise, was felt at Coblentz.—The distinguished German sculptor, Ruhl, well known by his illustrations of Shakspeare, died at Cassel, in the first week of the present month, at the age of 77. Ruhl was the preceptor of Rauch, of Berlin, and held the appointment of Professor at the Academy of Arts of Cassel.—We learn from Munich, that the Crown Princess arrived in that capital on the 11th inst., and that on the following day the marriage ceremony was performed, according to the rites of the Roman Catholic Church, by the Archbishop Baron Von Gebsattel. On the occasion of the marriage, the inhabitants of the Bavarian Palatinate have contributed to purchase the Castle of Hambach, and to present it to his Royal Highness as a wedding-day gift. The King has allowed the Crown Prince to accept the gift, and the Castle of Hambach, henceforth a Royal residence, will bear in future the appellation of Maxburg.—Letters from Ratisbon of the 18th announce that the Walhalla, the magnificent temple built by the King of Bavaria on the model of the Parthenon at Athens, in commemoration of distinguished Germans, was solemnly inaugurated on that day. The whole Court arrived from Munich, and the town was crowded with persons of rank. When the procession arrived at the foot of the hill above the Danube, on which the temple is erected, the King alighted from his carriage and ascended the steps, accompanied by Princess William of Prussia, followed by different members of the Royal Family in the following order:—Prince William of Prussia, with Queen Theresa; the Prince Royal with his Consort; Prince Leo-

Manure.—*J. G. H.* to two loads of frame-dung, just taken from the Cucumber-bed, has added several large waterpots-full of ammoniacal water, diluted with three times the bulk of water, the ammonia being previously fixed with sulphuric acid. He inquires, if six barrows of the dung in its original state be sufficient for a certain piece of ground, how much would the same piece require of the manure in its present state? It is very difficult to say, much depending upon the strength of the gas-water; but, in all probability, about one-third. It is not, however, economical to add ammoniacal liquor to rotten dung. A much better plan is to pour it on sawdust, or upon the mowings of a lawn, weeds, and similar garden rubbish. If they are then covered over with a few inches of mould, so as to confine the heat, the whole mass will speedily become rotten and of most admirable quality. In this case, however, gypsum should be added as soon as fermentation has taken place, or oil of vitriol, unless sawdust was mixed with the rubbish, in which case that material will absorb the ammonia.—†

Salt.—*S. S.*—The quantity of salt which may be applied to Asparagus-beds is 2 lb. per square yard.—‡

Cropping.—*An Original Subscriber.*—By the application of judicious trenching and manuring, the same kind of crop may be obtained successively for years without diminution; but your piece of ground which has been under Potato crops for the last seven years ought certainly to be cropped with something else. A corn crop will be proper enough in the first instance; afterwards it may be laid to rest with grass.—‖

Heating.—*Z.*—We conceive that heating by hot water is cheaper than by dung, where the latter has to be brought and carted far; it is also very much better. The internal diameter of the smallest of Shewen's boilers is nine inches, and its height 22 inches; weighing about 1 cwt. 3 qrs. The price of such a boiler, with the necessary fittings, will be 4*l.* 10*s.*—†

Grapes.—If *A Subscriber* has allowed the red spider to attack his Vines, it will account for his West's St. Peter's Grapes being deficient in flavour, and not ripening in ordinary perfection.—‡——*W. S.*—Your remarks on the problem offered for solution by our Dublin correspondent are not to the purpose. In the first place, it does not appear that the Vines in question were attacked by red spider at all; and you have no right to take that for granted. In the next place, if red spider *had* attacked the Vines, the branches would all have suffered equally, which you are expressly told was not the case. Thus you see, although you think the problem of such easy solution that "no gardener of practical experience could ever need to ask such a question," you have not been able to answer it yourself.—†

Vines.—*H. T. S.*—As you intend to grow plants in your Vinery, the best method of training the Vines which you can adopt is, to allow a single stem under each rafter. By pruning them afterwards on the short spur system, they will not obstruct the light materially.—‡

Lupinus Hartwegii.—*H. D.*—This is only an annual; if it has once flowered, it will not live through the winter in the open border, although protected with a handglass. Mr. Hartweg states that it is only an annual in Mexico, where it is found growing in corn-fields; it is half-hardy.—¶

Banksian Rose.—*Jacobus.*—If the roots of your Rose have penetrated into a wet or strong soil, that, in conjunction with its being trained upon an eastern aspect, will account for its not producing flowers. By severing some of the largest of the descending roots, and raising the rest nearer the surface, you may, perhaps, induce the plant to flower.—‡

Half-hardy Plants.—*A Devonian.*—In such a climate as Salcombe, we should try any plants from New Zealand, Van Diemen's Land, Mexico, Chili, or California; such as Pines, Ceanothus azúreus, various species of Acacia, Francoas, Araucária, Escallónias, Duvauas, Leptospermums, Melaleucas, Epácrises, Cratægus mexicana, Camellias, Hybrid Rhododendrons, Rhododendron arboreum and campanulatum, Fabiana imbricata, Cercis Siliquastrum, Chinese Bamboos, and even some of the Mexican and Chilian Cacti. It is also by no means improbable that Eucalyptus pulverulenta and some other species would stand the winter in such a place.—†

Double Yellow Persian Rose.—*R.*—This is a good Rose, and in appearance bears a great resemblance to the Old Yellow. It is, however, a much stronger grower, a better bloomer, and may be flowered freely in a pot. The flowers also open perfect, which is seldom the case with the Old Yellow.—¶

Hare's-foot Fern.—*C. A.*—Polypódium aúreum and Davállia canariensis are both known as the Hare's-foot Fern; but the latter is most frequently called so.—‡

Azaleas.—*Z.*—Pot Azaleas now.— †

Protection for Plants.—*Z.*—Asphalte covering is well suited for this purpose. It is not fixed on boards, but nailed to open frames made of rails. A wooden shutter will, no doubt, do as well; but is, in this country, more expensive. Probably what is called felt at Boulogne is the same material as the asphalte boards.—†

Camellias.—*Jacobus.*—These plants, when in a growing state, should be liberally supplied with water; that is, if the pots are properly drained. At this season of the year Caméllias are nearly in a dormant state, and, consequently, the supply of water should be diminished, but the soil must never be allowed to become dry. They will be rather benefited than otherwise by the temperature of the house being kept between 40° and 50°, as it will forward the blossom-buds, and bring them into bloom early in spring.—‡

Climbers.—*Cl.*—Climbers can be shifted at once out of small pots into large ones; for, as you justly observe, it would not do to fasten an iron trellis to a pot, and train the plant to it, and then have to shift it afterwards. Climbers, generally, should be well established in small pots before they are turned out into large ones; but during the time necessary for this purpose, the stems can be supported with a wooden stake.—§

Hedy'chium Gardnerianum.—*Botanicus.*—If you have the means of planting out your Hedychium Gardnerianum in the border of the conservatory, it will flower finely every year. When planted out in this manner it is much more hardy than is generally supposed. It is a common error to keep it in the stove, the temperature of which is too hot for it in winter, when it should be resting.—§

Bignónia venusta.—*Botanicus.*—This plant should be cut back in spring, after it has flowered; it blossoms both in autumn and spring.—§

Hibiscus sinensis.—*Botanicus.*—You will not injure this plant by cutting in the straggling shoots; but you will, on the contrary, do it a great deal of good.—§

Vegetable Ivory.—*N. S. H.*—The nut of the Tagua Palm, or Phytelephas macrocarpa, is now used by turners as a substitute for Ivory. It is a native of the country near Carthagena, whence it was originally brought to Liverpool.—†

Pancra'tium speciosum.—*R.* will be obliged to any correspondent who will acquaint him with the treatment necessary to induce Pancrátium speciosum to flower freely.

Banksia Solandri.—*Jacobus.*—Are you sure that the stem of Bánksia Solandri, which has lost all its leaves, is alive? Examine the bark at the neck of the stem, and if that is dead, you may throw the plant away. If you find it alive, you may repot the plant in loamy soil, and keep it in a warm greenhouse, giving it very little water until new leaves are formed. We, however, give you scarcely any hope of its recovery.—§

The Dahlia.—*J. M.*—The phenomenon you mention of a Dahlia bearing on the same stem two distinctly-coloured blossoms in the garden of Mr. Milne, dyer, Arbroath, does not at all surprise us. If scarlet and a purplish rose colour are united on one and the same stem, it is no more than occurs with the Chinese Chrysanthemum, which very often bears orange and dark purple flowers on the same plant.—†

Bulbous Irises.—*J. G. H.*—Providing that the soil of your garden is of a light and dry nature, there is no occasion to dig it out from the beds in which you intend to plant your Irises. Leaf-mould is preferable to dung for mixing with the soil, as the latter is liable to cause the bulbs to decay in wet weather. You may plant them with a dibber six inches apart and three inches deep.—‡

Bulbs.—*Z.*—Place the bulbs of Cyrtanthus on a shelf in the stove as near as possible to the glass. Do not withhold water entirely, but administer it very sparingly.—†

Pears.—*C. Austin.*—The Downton Pear is a good bearer; the fruit is very juicy, but the flavour has a peculiar astringency, palatable only to some persons. Your Glout Morceau, that is not well-flavoured on a west aspect, will prove much better as a standard. The Délices d'Hiver is not known. The Gros Dillen is the same as Beurré Diel.—‖

Gooseberries.—*Brighton.*—The following is a list of 20 sorts of of Gooseberries, of good flavour and size, those of each colour being placed in the order of ripening:—*Red:* Keen's Seedling, Melling's Crown Bob, Leigh's Rifleman, Boardman's British Crown, Red Warrington. *White:* Taylor's Bright Venus, Wellington's Glory, Saunders's Cheshire Lass, Woodward's Whitesmith, Cook's White Eagle. *Green:* Parkinson's Laurel, Large Smooth Green, Collier's Jolly Angler, Massey's Heart of Oak, Edwards's Jolly Tar. *Yellow:* Dixon's Golden Yellow, Prophet's Regulator, Prophet's Rockwood, Brotherton's Golden Sovereign, and Pilot. If flavour, independent of size, had been the object, the list would, of course, have been very different.—‖

Apples.—*Pomum.*—The Apples you mention are all dessert kinds, and become fit for use in the following order:—Maclean's Favourite, Pearson's Plate, Court of Wick, Reinette du Canada, Boston Russet, New Rock Pippin, Court-pendu Plat, and Sturmer Pippin: the whole affording a supply from the present time till June.—‖

Sea-kale.—*Poluphloisbos.*—Sea-kale plants do not require any covering if they are not intended for forcing, the plant being perfectly hardy.—†

M'Ewen Cabbage.—*An Original Subscriber.*—We do not know anything about the M'Ewen Cabbage.—‖

Books.—*R.*—The little work on chess that you inquire about is called "Chess Exemplified in a concise and easy notation," and has just been published by Messrs. Longman & Co. It is an excellent book for practice, and well suited to beginners. But it is requisite, in the first place, to master the author's peculiar manner of designating the pieces and squares, which, we fear, will be found troublesome. The result will, however, be worth the pains.——*L.*—You cannot do better than provide yourself with Paxton's Botanical Dictionary, if you want a very neat, and very portable, and very good Catalogue of Garden Plants.—†

Horticultural Society.—*Q.*—There is but one meeting held by this society in November, and that takes place on the 1st instant. The meeting commences at two o'clock in the afternoon; any person is allowed to exhibit, provided his productions possess sufficient merit.—‡

Microscopes.—*A Constant Reader* will find what is called an Ellis's microscope the most useful in pursuing his botanical studies. An excellent one can be had for 4*l.* or 5*l.*, only he must be careful to procure it from a *first-rate* optician. We cannot, however, recommend one tradesman in preference to another.—†

Old Seed.—*A Subscriber.*—It is very unusual for Cabbage-seed thirteen years old to grow as well as new seed. Could you inform us how it was kept?—†

Mortality of the Metropolis.—*Mr. Smith, of Darnick Cottage*, is informed that the Tables from which the mortality of the Metropolis is given are published in the daily papers, by authority, and that the average is calculated, not for the single week, but for the whole year. These Tables do not appear regularly, and hence their value as a series of observations is much diminished.—*B.*

Miscellaneous.—*J. R.*—The Fern from Mexico is Adiantum radiatum.——*Mr. Ford* will oblige us much by communicating the result of his experiments on Potatoes, &c.——*G. R.*—We cannot form an opinion upon the Ipomœa from the inspection of a drawing. The species are difficult to determine, and require the examination of very good and complete specimens.——*Z.*—You should write on *one* side *only* of your paper.——*Zaccheus* is to us unintelligible.—†——*W. Ab.*—Your greenhouse climber is Canavália bonariensis.—‡——*C. A.*—The letter G *is* sounded in Brugmansia.—†——*A Constant Reader.*—Your plants are—1. Sálvia involucrata; 2. Aster Novæ Angliæ; 3. A. lævis; 4. A. amplexicaulis; 5. Cacália hastata.—†——*F. . .*—Your delicate little Fern is the rare Hymenophyllum tunbridgense.—†——*H. H.*—Mr. A. Mackenzie must be mistaken in his reference to Nos. 34 and 35 of the *Chronicle* for a detail of his method of growing the Gladiólus cardinális. The only statements from him on this subject which we are able to discover are contained at p. 253, in No. 16 of this year, in which he refers to an article upon the cultivation of Gladióli, which had appeared in the "Gardener's Magazine" of last year; and at p. 582, in No. 36 of the *Chronicle* of last year.—‡——*Phthrow.*—Your Pears are—1, White Doyenné; 2, Spanish Bon Chrétien; 3, Gansell's Bergamot; 4, St. Germain; 6, Bishop's Thumb; 7, Seckel. The Apples are—5, Pearson's Plate; 8, Hollandbury; 9, King of the Pippins.—‖——*Thaddeus.*—The following are the names of the different species of Cistus which you have sent:—1, villosus, var.; 2, laxus; 3, hirsutus, var.; 4, ladaníferus; 5, purpúrens; 6, incanus; 7, álbidus; 8, monspeliensis; 10, undulatus, var.; 11, platysépalus, var.; 12, Cupanianus; 13, florentinus; 14, undulatus; 15, heterophyllus; 16, canescens, var.; 17, populifólius minor; 18, purpúreus, var.—¶——*Z.*—Your Apples are—1, Kirke's Lord Nelson; 2, Cornish Gilliflower; 5, 13, Cockle Pippin; 6, Robinson's Pippin; 8, Pearson's Plate; 10, Hawthornden; 11, Newtown Pippin; 15, Blenheim Pippin; 16, Margil; 17, 21, Golden Reinette; 18, Hall Door; 20, of no merit; 29, Alfriston. The Pears are—23, Glout Morceau; 24, Duchesse d'Angoulême.—‖——*A. Z.*—Your Pears are—1, Duchesse d'Angoulême; 2, Passe Colmar; 3, Crassane; 4, Seckel.—‖——*T. C. C.*—Your Apple is Newbold's Duke of York.—‖——*Burnham.*—Your Apples are—1, Beauty of Kent, and 2, Belle Harvey.—‖——*Mr. Raven's* Apple is the Gravenstein.—‖——*An Original Subscriber.*—We are much obliged for your Pear, which we shall notice soon, along with other productions of the same sort. It is not, however triple, as you conjecture; it is quite simple, as we shall explain by-and-by. The Dahlia seems curious; compare it with the Hen and Chickens Daisy.—†——*R. N.*—Your Pear *is* the Seckel.——*Louisa.*—Your plants are—1, Symphória glomerata; 2, Genista tinctória; 4, Coronilla émerus.—†——*R. D.*—Your communication shall appear next week.—‡——*Z.*—Three of the Numbers may be had; Feb. 12th is out of print.——*René Langelier.*—The blooms of your Dahlia, named White Defiance, arrived in good condition. The flower is not a pure white, and the centre is much disfigured by the dirty yellowish colour of the petals; the eye is also thin and filled with upright florets, which expand imperfectly; it is inferior to most of the whites cultivated in England.—*No.* 4, 1842:—This bloom was considerably damaged, but what remained would not induce us to think very favourably of it; the centre is low, and the petals in this part of the flower expand irregularly.—*——*W. J. Ward.*—Your Pansy, named Socrates, is a bold and fine flower; the eye is good, and the deep blue margin round the lower petals broad and decided. There is rather too much of the top petals seen, and the indenture on the lower ones is a slight defect in its general appearance; it is a clear, fine, full-sized flower.—*——*J. W., Bath.*—The eye of your Pansy is very fine; but in no other respect can we praise it. The petals are thin, and the colours common; the side petals also are too small.—*——*T. Shermore.*—The eye of your Pansy is the best point about it. The form is imperfect, being too long; the side petals are also small in comparison with the size of the flower.—*——*J. W.*—Your seedling yellow Dahlia is decidedly worth trying another season; the colour is clear and fine, and there is promise about the other qualities of the flower.—*——*C. M.*—The varieties of Apples which you enumerate are all suitable for dwarfs. For espaliers you may substitute the Blenheim Pippin for the King of the Pippins. You will find a list of excellent varieties at p. 641, arranged in the order of their ripening, or nearly so; and from it you will be able to select the additional number you require, whether for dessert or kitchen use, of Apples, Pears, Plums, and Cherries.—‖——*Apis.*—Your Pears are: 1, Aston Town; 2, Bishop's Thumb; 3, Brown Beurré; 25, Chaumontel. Your Apples are: 2, 10, Margil; 6, Nonpareil: 7, Syke House Russet; 3, 8, 9, 16, 17, Court of Wick; 11, White Costin; 14, Ribstone Pippin; 15, Downton.—‖——*Poluphloisbos.*—We suppose your ammonia must have been the carbonate. Pray send us a little; ¼ oz. is enough.——*Amicus.*—Your plants are—1, Saxifraga Geum; 6, S. muscoides; 2, Potentilla reptans; 4, Silene nutans; 7, Ervum hirsutum; 8, Aspídium spinulosum; 9, A. Filix mas; 10, 11, Asplénium Filix fœ'mina; 12, Stellária uliginosa; 14, Lámium purpúreum.—‡——*A Subscriber.*—A Blackbird is called black because it *is* black.—†——*N. B., Brixton.*—Your Apple appears to be the Minchal Crab, but arrived in a state of decay.—‖——*A Subscriber from the commencement* will find the information which he requires at p. 609 of this year's *Chronicle.*—‡

Mr. PAXTON'S COTTAGER'S CALENDAR is now reprinted in the form of a small volume, for general distribution, price 3*d.* each copy; it may be ordered of all Booksellers. Gentlemen wishing to distribute copies among their cottage tenantry may have them *delivered in any part of London* by remitting a Post-office order to this Office, at the rate of 5*s.* for every 25 copies.

As usual, many letters have arrived too late for answers this week.

NEWS OF THE WEEK.

The question of the Right of Search has been again brought prominently into notice, by the publication of a Letter, addressed by Lord Aberdeen to the Lords of the Admiralty, in reference to the proceedings of British Naval Officers engaged in the suppression of the Slave Trade. It appears that Her Majesty's Advocate-General, to whom the papers relating to these events had been submitted, has expressed his doubts of the legality, not only of the acts themselves, but of the instructions under which they have been executed, declaring that many of the proceedings cannot be considered as sanctioned by the law of nations or by the provisions of existing treaties. Lord Aberdeen's letter, calling the attention of the Admiralty to these facts, was published in the Appendix to a recent Parliamentary Report, and has been eagerly seized by the French papers as a complete confirmation of all their statements respecting the manner in which the Right of Search Treaties have been executed by British cruisers. On no former occasion have these journals expressed more hostility towards England than in their discussions on this letter; they renew their demands for an immediate repeal of the existing treaties, and declare that no convention in which the Right of Search forms a part can henceforth be ratified. This is in some measure confirmed by the rumour that the French Ministry has sent a formal notice to the British Government that the treaty of last December will not be ratified, and that the other Powers who are parties to it are at liberty to close the protocol which has so long been kept open for the acquiescence of France.—The Spanish news mentions the manifestation of public feeling towards the memory of General Diego Leon on the recent anniversary of his execution: our readers will remember that he was one of the most gallant officers of Spain, and that he suffered death as the principal leader of the Christino insurrection. This manifestation was so general, that the journals indulged in violent comments on the Government, and attacked the Regent with great personal animosity. The affair seems to have been unexpected by the authorities, and a severe retaliation is expected.—Our Lisbon news mentions several important reforms in the financial department, as a proof that the new administration is proceeding vigorously with its measures; the tariff is still unsettled, and is likely to make little progress until the questions at issue with the Pope respecting Church affairs be definitively settled.—From Germany we have accounts of the opening of the Session of the Committees of the Prussian States-General convened by the King to confer with the Supreme Government on matters of national interest. This assembly is the first important step which Germany has taken towards a representative system, and its influence on the other States cannot fail to be beneficial. We have also news of the ceremonies at the opening of the Walhalla, the national Pantheon of Germany, erected by the King of Bavaria with all the appliances of art and taste on the banks of the Danube. This magnificent building has been many years in progress, and is intended to commemorate the illustrious men of all those countries in which at any period of their history the German language has been spoken as the native tongue. The circumstances attending its erection and the speech of King Lewis at the recent opening are significant indications of that spirit of German union which derived such impulse from the proceedings of the King of Prussia at the late ceremonies at Cologne.—From the Levant we have little news of interest, the great feast of Ramazan having thrown into the shade all matters of diplomatic business and political intrigue. There is, however, no doubt that the Porte will persist in maintaining Turkish Governors in the Lebanon, in spite of the opposition of the Ambassadors. The affairs of Servia continue in the same unsettled state, and the deposed Prince is still waiting the decision of Europe and of the Sultan, which is expected to be in his favour.—Despatches sheep 180, pigs 21; from Holland, oxen 446, cows 141, pigs 608; from Spain, oxen 305, cows 64, sheep 180; making altogether 2,715 heads.

St. Pancras.—The directors and guardians of the poor of this parish have agreed to a Report to be presented to the Vestry, relative to the special inquiry lately instituted by the poor-law commissioners into the mode in which education, and particularly religious instruction, has been hitherto afforded to the pauper children. It states that among the poor supported in the workhouse, there are annually between 200 and 300 children not exceeding 14 years of age. Whilst the parish was under the management of a self-elected vestry, the education of the pauper children was almost totally neglected, and they were let out on hire to work in a cotton factory and other employments; but since the vestry has been elected by the ratepayers that system has been abandoned, and the children are instructed in the elementary branches of useful knowledge, combined with moral and religious instruction. The report enters at some length into the questions arising out of the late commission; but they have been so recently before our readers that it is not necessary to particularise the details. With respect to the state of the workhouse schools, and the religious and other instruction afforded to the pauper children, the report expresses the opinion of the guardians—"that this special inquiry will satisfy the public at large, as well as the poor-law commissioners, that for a long time past there has been no want of zeal and attention on the part of the directors of the poor with respect to moral and religious education, and suitable instruction in the rudiments of useful learning; and when it is understood that there is now erecting, and nearly finished, a new and spacious school, with dormitories and offices detached from the workhouse, similar to that of the boys, at a cost of 2000*l.*, for the exclusive use of the female children, it must be manifest that the directors of the poor, and the vestry of this parish, are sparing neither in trouble nor expense in order to promote the comfort and welfare, as well as the religious and general education, of the pauper children who are domiciled in the workhouse of this parish."

St. Andrew's, Holborn.—On Monday a meeting of the parishioners was convened at the Mechanics' Institution, in Southampton-buildings, Mr. Wakley in the Chair, to consider the conduct of the Rector, in instituting 14 bills in Chancery for the recovery of tithes. The following resolution, which was adopted after some discussion, gives the substance of the arguments advanced, and explains the case at issue, so far as the views of the complaining parties are concerned:—"That this meeting views with deep regret the course pursued by the Rev. J. T. Robinson, the Rector of this parish, in having filed separate bills in Chancery against 14 of his parishioners, for trifling amounts of tithe due to him, notwithstanding the provisions of the Act of Parliament, 5th and 6th Will. IV., c. 74, which gives an incumbent a cheap and summary remedy for the recovery of all tithes under 10*l.* in amount, to which remedy such incumbent is restricted, unless his title to the tithe claimed shall be *boná fide* in question; and the parishioners now assembled hereby record their disapprobation of such conduct of the said Rector." Another resolution was subsequently carried, pledging the meeting to support the defendants, and defray the expenses of the Chancery suits by a general subscription among the inhabitants.

Marylebone.—On Saturday, at a meeting of the Marylebone Vestry, a long debate took place on the report of a committee appointed to consider the propriety of granting a site in the parish for a monumental column to the memory of the Scottish Reformers of 1793-4—viz., Muir, Palmer, Skirving, Gerrald, and Margarot. The proposal originated with Mr. Joseph Hume, who had placed the sum of 500*l.* at the disposal of the committee for the purpose. The report stated that the committee were unanimously of opinion that it was expedient to accede to the propositions of Mr. Hume, in providing a site for the column; that the most desirable place was the Regent-circus, in Oxford-street; and the committee recommended that site for the approval of the vestry. The spot, however, being under the control of the Commissioners of Woods and Forests, so far as uniformity of paving and lighting was concerned, the report concluded by recommending that application be made to the commissioners for their sanction. The report was warmly opposed, and an amendment was moved for its recommittal, on the ground that the vestry, by asking permission to erect the monument, would make themselves parties to the acts of the Scottish Reformers. After a very stormy discussion a division took place, when there appeared—for the motion, 14; for the amendment, 16. The report is therefore recommited.

Chartist Meetings.—On Monday night a festival was given at the hall of the National Association, to Mr. Duncombe, M.P. for Finsbury, the object being to testify to that gentleman the feelings of his constituents, in regard to his exertions in the House of Commons on behalf of the labouring classes. There was a large assemblage of persons of both sexes, and tea having been served, the business of the evening was commenced. Colonel Thompson took the chair. After the adoption of resolutions in favour of the principles of the charter, Mr. T. Duncombe addressed the meeting. He took a review of the policy of the late Government, and alluded to the recent session of Parliament. "There never was," he said, "a session so discreditable to the Tories, so inglorious to the Whigs, and I may add so unsatisfactory to the people. I was looking this morning at the return of the number of hours during which Parliament sat in the course of the last session, and I find that from February to August they sat 1,008 hours, and 125 of those hours were after midnight, in mutual crimination. He said he had warned the House of the consequences of their refusal to afford relief to the manufacturing districts, and contended that Chartism was the offspring of oppression. He referred to the late trials and condemned with great severity the conduct of Lord Abinger, declaring his intention to bring it before Parliament. The meeting concluded with resolutions in favour of the charter and equal political rights.—On Sunday evening and on another occasion in the course of last week a meeting of female Chartists was held in the Old Bailey, for the purpose of forming a Female Chartist Association. After some preliminary matters had been disposed of, a Mr. Cohen declared that he "could not help saying that woman, in his opinion, would be more in her proper character and station at home, where she was the pride and ornament of 'the domestic hearth,' than in the political arena. He acknowledged the high and useful talents of Miss Martineau, but he did not consider that nature intended woman to partake of political rights. She was not, physically considered, intended for it. He had the highest respect for the character of woman, and sense of what was due to her in every point of consideration; but he would put it to the mothers present, whether they did not find themselves more happy in the peacefulness and usefulness of the domestic hearth than in coming forth in public, and aspiring after political rights." This speech was replied to by a Miss Mary Ann Walker, who, amidst the cheers of the men and the waving of handkerchiefs from the women, combated the arguments it advanced, in language of no measured character. The proceeding has attracted the attention of the daily papers by its novelty, and the principal speakers have thereby acquired a notoriety from the exhibition, to which they hardly seem to have at first aspired.

Robberies.—We mentioned in a recent Number the robbery of a box of diamonds, valued at 9,000*l.*, from the person of Mr. Wolff, a foreign merchant, while in Covent Garden Theatre. Circumstances have since occurred to throw considerable doubt upon the facts; and from inquiries instituted by the police, it is supposed that the whole story was an invention. Mr. Wolff disappeared soon after the occurrence, and has been traced to Brussels by some parties to whom he was largely indebted; he was there arrested, and the whole affair will now undergo a legal investigation.

Mortality of the Metropolis.—The number of deaths registered in the week ending Saturday, the 15th inst., was 824. Males, 411; females, 413. Average weekly deaths 1838-9-40-41, males, 467; females, 445. The distribution of this mortality over the different districts wad as follows:—West Districts 114, North Districts 149, Central Districts 174, East Districts 193, South Districts 194.

Deptford.—On Sunday afternoon, a small species of whale was captured in the Thames near Deptford Pier. It was first seen passing down the river between the pier and the Dreadnought Hospital Ship, and was immediately attacked by the watermen, who secured it without much difficulty. The length of the animal is about 20 feet, his circumference 10 feet, and his weight nearly two tons. It was recognised, by persons accustomed to the whale fishery, as a fin-back.

Woolwich.—It is now certain that Woolwich is to be one of the Metropolitan stations of the Foot Guards, and that the barracks will be occupied about the 1st of next month by the 3d battalion of the Grenadier Guards from Manchester, to which place the corps was sent during the late riots. The Guards are said to be much gratified with the prospect of Woolwich being added to the Metropolitan stations, as it is known to be healthy; and from its vicinity to the Metropolis possesses the advantage of being near head-quarters, and at the same time has all the advantages of a country station.

Chatham.—On Friday, being the anniversary of the Battle of Trafalgar, the Cumberland, 70 guns, was launched at this dock-yard, in the presence of an immense concourse of spectators. The ship was named by Mrs. Airy, the wife of the Astronomer Royal, and the launch took place without the occurrence of any accident. The length of the Cumberland is 180 feet, extreme breadth 54 feet 3 inches, burden 2,244 tons.

Provincial News.

Birmingham.—It is understood that it is the intention of Government to place all able-bodied pensioners, who are willing to assist the civil authorities, under drill at stated intervals; and that arms and accoutrements for 200 of these veterans are shortly expected at the barracks in this town. The Consecration of the Rev. Dr. Wilson, as the Roman Catholic bishop of Hobart Town, Van Diemen's Land, was appointed to take place yesterday, in St. Chad's cathedral in this town, the titular archbishop of Sydney performing the ceremony, assisted by Dr. Wiseman and Dr. Walsh.

Chester.—The Macclesfield papers mention as a proof of the defective education in Cheshire, that out of 114 prisoners tried last week at the Knutsford quarter-sessions, one-half could neither read nor write, 32 could read and write imperfectly, 24 could read, and only one could read and write well!—It is stated that so considerable a reduction in the price of cheese has taken place in this county, in consequence of the distressed state of the labouring classes, that farmers are beginning to give up the manufacture altogether; and one living near Crewe is mentioned, who has made a contract with the railway company, by which he sends his milk for sale every day to Liverpool, a distance of 43 miles. The winter has set in with some severity in this county; on all the hills around Macclesfield, and in other parts still further north, snow was visible last week.

Deal.—We regret to state that the caisson recently constructed on the Goodwin Sands has been destroyed by a melancholy disaster, a ship laden with timber having run upon it during the storm of Saturday night, and occasioned its destruction, with the loss of all hands on board the vessel, and three workmen on the caisson. Both these events are matters for regret. The contrivance for the "Light for all Nations" was extremely ingenious, and it required no ordinary amount of perseverance to carry it into execution on such a spot as the Goodwin Sands. It is also remarkable that it was destroyed, not by adverse weather, but by one of the very objects for whose protection it was devised; and if the undertaking had been so far advanced as to have borne a light, it is very probable that the loss of the ship would have been prevented. The event does not affect the merits of the invention, and is one of those casualties which no foresight could have controlled. The vessel which occasioned its destruction has since been ascertained to be the Nancy, a barque: the Coast Guard found her near the site of the caisson, but were unable to approach the wreck on account of the surf on the Sands. The boats were still attached to the wreck, so that there is no doubt of the fate of the crew. On another part of the Sands, on the same night, a barque called the Hope was wrecked: she belonged to London, and was on her homeward voyage from Quebec. She had struck on the outside of the Goodwin Sands, and was breaking up rapidly. There were no persons on board, which at first led to a supposition that the crew had been washed off by the sea, which was making a complete breach over her, but it was ascertained that they had been saved by a vessel belonging to Broadstairs. It appears from the accounts given by the crew that the ship struck shortly after midnight, when running for the mouth of the Thames. The wreck has since entirely disappeared; her loss is estimated at between 5,000*l.* and 6,000*l.* During the morning, and whilst the storm was at its height, his Belgian Majesty's man-of-war, the Comte de Flandres, 18 guns, Captain Hyde, had a narrow escape off the same Sands. The ship, which had but a day or two before sailed from Ostend on a voyage of discovery round the world, was bearing down through the North Foreland when taken by the storm, and driven back on the Sands. For a length of time her situation was extremely perilous. After cutting away the foremast, and otherwise lightening the ship, she floated off, and was subsequently brought to an anchor in Ramsgate roads. On Sunday afternoon, upon the storm somewhat abating, she was got under weigh, and reached Ramsgate in the course of the evening, where she still remains to repair damages.

Durham.—The advantage of befriending a neighbour has been lately shown in this neighbourhood in a remarkable manner. It appears from the *Durham Chronicle*, that in 1811, George Wilson, of Biddick, in this county, emigrated to North America, having previously borrowed 20*s.* from Thomas Robson, a neighbour, to assist him in effecting that object, under a promise to remember him if ever he had it in his power. Robson was then a banksman; but he has lately been employed in pumping water in Cassop pit. On Monday week he received a letter from the executors of Wilson, apprising him that he had recently died at Philadelphia, United States, and bequeathed him money and property to the value of about 7,000*l.*! The party who has reaped this ample return for his generosity is now about 70 years of age, but fortunately for his wife, about half a year ago he married a female not more than 40.

Hereford.—The Autumnal Meeting of the Herefordshire Agricultural Society took place last week. The exhibition of stock was not equal to the average in number, but was of a superior quality. In the evening about two hundred gentlemen dined together in the Shire Hall, Earl Somers in the chair. The principal feature of the meeting was the discussion of the prospects of agriculture, which seem to have been considered without reference to party politics. Mr. Barneby, M.P., in a long speech upon this subject, noticed the recent measures of Ministers. "Whether those measures," he said, "will succeed, or whether they will fail, it is impossible for us to say; but let us exert ourselves to support them to the best of our ability, so that we may do our best to keep our station, in order that we may not become poorer and deal harshly with others who may benefit by them. That the prices of our stock have been materially reduced, has been fully felt to-day; but I believe the reduction of prices has not amounted to the great reduction that was experienced some ten or twelve years ago; and the depression may be partly attributable to those misfortunes which have taken place in other counties, the late disturbances in the manufacturing districts. I will not advert to these topics further. I most fully agree with what has been stated by some of my friends, that the more these agricultural meetings are extended and divided in every part of the country, the more good will be derived from them. I cannot view these meetings in that limited way which some persons do, in reference to the production of stock for the show; for I think that, in these times, we should turn our thoughts to the improvement of land in general, and that we should make every attempt to improve the soil, whether it be arable or pasture; and there are some improvements which I have witnessed which have caused great benefit to landlord and tenant. I allude particularly to draining. I think great benefit would follow if carried out in the following manner, namely, that the landlord should pay for the draining upon his different estates, but that the tenant should pay five per cent. on the outlay. By this, I think, the landlord's property would be much improved, and he would get five per cent. interest for his outlay; while the interpold with his sister, the Grand Duchess of Hesse; and Prince Charles with the Duchess of Wurtemberg. A band of musicians and a chorus, posted on the second terrace, began a hymn the moment the company entered within the gates. The slow movement of the procession in ascending the numerous steps which lead to the portico of the temple formed a highly interesting spectacle. When the King reached the entrance, the President of the Government addressed His Majesty in a speech in which he dwelt on the national importance of this great work to Germany. He said—"The Walhalla will be the palladium of modern Germany, and the name of its royal founder will, until the most remote ages, fill a large place in the recollection of every one who has a German heart, and wishes for the welfare of his country." His Majesty replied, "May the Walhalla contribute to extend and consolidate the feelings of German nationality! May all Germans of every race henceforth feel they have a common fatherland—a country of which they may be proud, and let each individual labour according to his faculties to promote its glory." In addition to this interesting ceremony, the Augsburg papers of the 22d give some particulars of the proceedings of the King of Bavaria in laying the first stone of the monument erected at Kellheim, in memory of the establishment of the national independence. The King, on this occasion, spoke on the subject of German unity, to which so much interest has been given by the King of Prussia's recent speech at Cologne. At the close of his address, King Lewis pronounced the following remarkable words:—"Let us never forget what preceded the War of Independence, and created the necessity for it, and which gave us the victory. Let us banish all dissensions, and never forget to honour the memory of the heroes who fell fighting for their country. Germany united is invincible."—A rich mine of yellow amber, of a hardness equal to rock crystal, has just been discovered in the neighbourhood of the town of Zehderick, near Potsdam. This discovery is the more remarkable, as up to the present time yellow amber has only been found in the Baltic, or on the shores of that sea.

RUSSIA.—Letters from St. Petersburgh mention the return of the Emperor, after having postponed his intended visit to Berlin. By an order of the day, dated the 18th (30th) September, the Emperor has accepted Gen. Grabbe's resignation of the command of the Caucasus, and has conferred the command on Lieutenant-General Gourko. The debilitated state of General Grabbe's health is assigned as the motive for his retirement, but the real cause is supposed to be the decided advantages lately obtained over him by the Circassians of the mountains. General Grabbe is, however, to retain his rank as aide-de-camp general.—It is stated in the papers that the Grand Duchy of Finland, which, 30 years ago, at the period of its cession to Russia, knew no other religion than the Episcopalian Lutheranism of Sweden, now contains a population of 35,000 souls professing the Greek religion of Russia.—An official report has been transmitted by Lieut, Sigholt, Commander of the North Cape steamer, to the Finance Department, in reference to the late wreck of the Russian man-of-war noticed by us in former Numbers. It states that, according to the returns of Captain Treffin, there were on board the Ingermannland 32 officers, besides the captain, 830 foremastmen, 24 women, and 9 children—in all 896 persons. Such of them as were saved, and reached Norway, disembarked, on the 3d of October, at Christiansand. Among these were the Captain, 13 officers, 472 men, 6 women, and 1 child; making altogether 493 persons. It is also known that some have been saved by English cruisers. It is, however, ascertained that about 400 men have been drowned.

ITALY.—Letters from Rome of the 11th inst. state that the rumour that the Russian Government intended to break off all diplomatic communications with the Holy See is incorrect, a Russian courier having arrived at Rome from St. Petersburgh a few days previously, with important despatches, in order to make overtures for new negotiations. Nevertheless, it was generally believed that the Russian ambassador, M. Potemkin, would leave Rome, and that his place would be filled, for some time, only by a chargé d'affaires.—It appears that some technical informality has been discovered in the will of Cardinal Fesch, the uncle of Napoleon, who had bequeathed a large portion of his estates, part of his celebrated picture-gallery, and a considerable sum of money to the city of Ajaccio in Corsica. Among the items of this bequest was a clause directing the erection of a convent and church at Ajaccio, within which was to be formed a tomb for the interment of the Bonaparte family. It now appears that the Cardinal by his will nominated his nephew, Joseph ex-King of Spain, as his residuary legatee, to whom all this valuable property consequently lapsed. Under these circumstances the city of Ajaccio made an appeal to the liberality of the Count de Survilliers, who has met it with a truly noble spirit. On the 2d of last month he executed an act of donation, whereby he secured to the native city of his uncle nearly all the late Cardinal intended to endow it with. He, besides, gave a full-length statue of Napoleon, and further granted, out of the gallery bequeathed to him by his uncle, numerous additional paintings, to be distributed among the great towns of his native island, viz.—100 to be placed in the Royal College of Bastia, 50 in the town of Corte, in which he himself was born, and 150 to be divided by lot among other towns. But with regard to the church in which was to be constructed the tomb for the Bonaparte family, he deferred its completion as long as that family should remain proscribed from France, considering it to be useless to erect a receptacle which might never be occupied.—Letters from Bologna contain an account of another testamentary document. They state that Rossini has placed in the hands of a notary of that city, a sealed packet, which is only to be opened after his death. This packet is said to contain an opera, which the *maestro* leaves, with all his fortune, to a lady of Bologna. Rossini is 51 years of age, having been born Feb. 29, 1792.

MALTA.—The Malta papers are filled with discussions on a Court-Martial at Valetta, which has terminated in the dismissal from the Navy of Lieut. Alston, of the Cambridge, who was tried on the 11th for marked indifference in the execution of the orders of his Captain and Commander, and for having beaten a volunteer of the first class at Besika. The Court was composed of the captains of four line-of-battle ships, with Rear-Admiral Sir John Louis as President.

TURKEY.—The Levant Mail brings news from Constantinople to the 7th inst. The Ramazan, which commenced on the 4th, had interrupted the activity of the Councils, and of diplomatic negotiations. The Grand Vizier presided at a Council on the 3d, to consider the reply of the representatives of the five great powers on the subject of the communication, dated the 26th ult., made to them by the Porte, as to the government of the Lebanon. In this document the Porte declared that, though it would recall Omer Pacha and the Albanians, still it would persist in maintaining Turkish Kaimakans over both Maronites and Druses. The Ambassadors of France, England, and Austria protested against this policy, while Russia and Prussia are said to have acceded to the arrangement.—The accounts from Syria describe the outrages of the Albanians as being past all endurance, the Europeans being robbed or assaulted in the most open manner.—In regard to Servia, it is stated that the Russian Consul at Belgrade has been severely blamed by his Government for having signed the collective note of the Consuls of September 7th, and that the St. Petersburgh Cabinet is consequently resolved to pursue a different course from the other powers. Prince Michael remained at Semlin, waiting for the decision of the Ottoman Porte and of Europe, which was expected to be in his favour.—The German papers mention, among the signs of the times in the Levant, that the writings of *Boz* have recently been translated into the Turkish language.—The Smyrna papers of the 8th inst. mention the death of M. Boulanger, the eminent painter, forming part of the Scientific Commission which, under the direction of M. Texier, had been sent by the French Government to examine the remains of Magnesia, near the Meander. M. Boulanger's death was produced by a brain fever, caused by the great heat which prevailed during the labours of the Commission in getting the remains of the Temple of Diana excavated. On the 24th Sept. his body was removed to Nova Scala, and was buried in the Greek church in the presence of all the foreign consuls, the officers on the coast, and an immense concourse of the native authorities.

UNITED STATES AND CANADA.—The packet-ship Rochester, which sailed from New York on the 4th inst., arrived at Liverpool on Thursday night. The papers brought by her are three days later than those previously received. They contain little news of interest from the United States. Mr. Webster's speech at Boston was still the chief topic of discussion and of conversation.—From Canada, the news relates chiefly to the recent Ministerial changes, which are still discussed with considerable warmth. The *Toronto Patriot* enumerates 20 Canadian papers which denounce the present Cabinet in no equivocal language. The same paper states that M. Girouard has declined the office tendered to him by the Governor. In consequence of the new appointments, so many vacancies have occurred in the Provincial Parliament, as to render a recess inevitable; consequently a prorogation is about to take place for two or three months, and in the mean time the vacancies will be filled. "At present," says the *Patriot*, "the new Cabinet possesses a large majority, and unbounded confidence in its own durability."—There had been an arrival at New Orleans from Yucatan. The Mexicans had not arrived off Campeachy, where active preparations were making to give the invaders a warm reception. It was feared, however, that the Mexicans would succeed in reducing the peninsula to obedience.

CAPE OF GOOD HOPE.—Cape papers to August 7 have been received this week. They contain long details of the military operations connected with the Natal expedition, the success of which has been in all respects complete, the refractory Boers yielding at length the most unqualified obedience to the British authorities. The arrival at Simon's Bay of a part of the troops employed in this arduous service furnished occasion for much congratulation, and a testimonial of some kind to mark the sense entertained by the colonists of the admirable conduct of Capt. Smith and his party was in contemplation. The papers notice the proclamation of the Governor, announcing the arrangement made by Lieut. Col. Cloete, who has recognised the "existing administration and civil institutions of the Boers," which is, they contend, illegal and in direct contravention of the Act of Parliament. Colonel Cloete's proclamation grants a general amnesty to all the rebels, with the exception of the four ringleaders, and declares "that all private property would be respected; that the emigrant farmers should be allowed to return to their farms, with their guns and horses—that they should be defended from any attack by the Zoolahs—that the tenure of their lands should not be interfered with, pending the determination and settlement of her Majesty's Government—that beyond the limits fixed for the military occupation, their existing administration and civil institutions should not be interfered with, till the pleasure of her Majesty should be made known—that the Caffers should not be molested in the occupation of the lands on which they were settled at the date of the arrival of her Majesty's troops—subject to such future arrangements as may be made for general security by her Majesty." This document is severely censured by all the colonial papers, which contend that the insurgents, who deserved severe punishment for their revolt, have been treated with too much leniency, and that the proclamation is little better than a capitulation.

CITY.

Money Market, Friday.—Consols for money and the account closed 93¾ to ⅞; Exchequer Bills, 58s. to 60s. prem.; Bank Stock, 165½ to 6½; India Stock, 253 to 54; Three per Cents. Reduced, 93 to ⅛; Three and a Half per Cents. Reduced 100⅝ to ¾; New Three and a Half per Cents., 101⅝ to ¾; Long Annuities, 12⅛ to 5-16; and India Bonds, 48s. to 50s.

Metropolis and its Vicinity.

Court of Aldermen.—A vacancy has occurred in the representation of Broad-street Ward by the death of Alderman Sir John Cowan, which took place last week. On the occurrence of this event, several friends of Mr. Pilcher, the present Sheriff, brought him forward as a candidate, and a meeting of his supporters took place on Tuesday for the purpose of securing his return. It was then, however, stated, that the Sheriff having ascertained the sentiments of the inhabitants of that ward, did not think it right to prejudice the claims of Mr. Musgrove, who had announced himself as a candidate; and feeling that that gentleman had a prior claim upon the inhabitants, he would not proceed to a contest, but resign in his favour. It is generally supposed that the election of Mr. Musgrove will not be contested. Sir John Cowan, the late Alderman, was Lord Mayor in 1837, and was created a Baronet in honour of Her Majesty's visit to the City during his Mayoralty.

St. Paul's.—The statue to the memory of the late Sir Pulteney Malcolm, K.C.B., by Mr. Baily, was last week placed in this Cathedral, adjoining the monument to Earl St. Vincent. The cost was 1000*l.*, subscribed by the friends of the late admiral.

The Temple Church.—The restoration of this fine national monument is nearly completed, and in a few weeks the workmen will have brought to a close the extensive changes which have been in progress for the last two years. The interior has been cleaned of the whitewash and wainscot coating which had for years concealed the original beauty of the edifice; and the monuments which encumbered the walls have been removed to a more appropriate situation in the triforium of the circular church. The seats are arranged on the cathedral plan, with separate stalls for the benchers. The church is expected to be opened for divine service to-morrow week.

Metropolitan Improvements.—The City commissioners of sewers, on Tuesday last, received a deputation of the residents of Cheapside, with a petition, signed by upwards of 120 of the most influential firms, praying that their street might be paved with wood, to obviate the incessant noise; the commissioners complied with the request, and stated that the improvement should be effected when the weather permitted.

Metropolitan Drainage.—The official accounts of the Commissioners of Sewers north of the Thames give the following results.—Westminster, &c., commission, 2,788,190*l.*; Holborn and Finsbury, 1,316,013*l.*; Tower Hamlets, 888,596*l.*; City of London, 792,904*l.*; Poplar, 78,411*l.*; St. Katharine's, 12,964*l.* Total, 5,877,078. The City of London having sent in no return, the above amount is taken from their return to the House of Commons in August 1834.

Sisters of Mercy.—The ceremony of admitting a novice into this sisterhood took place last week at the new Roman Catholic church in the Bermondsey-road, in the presence of a great concourse of persons. The young lady who on this occasion withdrew herself from the world, is Miss Buxton, said to be a relation of the well-known brewers. She has been resident in the convent more than 6 months, and by this ceremony was invested with the white veil of the order, preparatory to receiving the religious or black habit, for which a probation of two years is generally required. The ceremony was performed by the Rev. Dr. Griffiths, Vicar-Apostolic of the London district. After the forms usually observed on such occasions, the novice was invested with the religious habit and veil of the order, and was formally admitted into the sisterhood.

Metropolitan Banks.—The question of closing the London banks at 4 instead of 5 P.M. continues to be agitated in the City. It appears that out of 50 banking-houses, 43 have signed an agreement to adopt the alteration proposed. Of the 7 remaining firms, 6 have signified their approbation, although they decline to affix their signatures without the express concurrence of Messrs. Drummonds and Co., of Charing-cross. It is said that these gentlemen are not now averse to it, if they were so before, but will adopt it, if all the other bankers resolve to do so. The subject is therefore considered to be in a proper state to be submitted to the Directors of the Bank of England at their next meeting.

The Markets.—The daily papers state, that for the last fortnight a considerable falling off, compared with many preceding weeks, has been apparent in the importations of live stock, not only for Smithfield Market, but also for the outports, while the general quality of the receipts has proved by no means good, nearly the whole of the beasts and most of the sheep and cows being, in addition to their light weights, seriously affected with the prevailing epidemic. From a tabular statement of the importations under the new tariff, it appears that the numbers imported into England from the passing of the Act to Oct. 22 have been as follows:—From Germany, oxen 677, cows 283, Law Appointments, that an answer has been received from Chief Justice Pennefather, declining to exchange into the Rolls Court from the Queen's Bench. In consequence of this decision, Mr. Blackburne takes the Mastership of the Rolls. The other law appointments—Mr. Smith as Attorney-General, Mr. Greene as Solicitor-General, and Mr. Brewster as third Sergeant-at-Law—will be at once gazetted.—The Lord-Lieutenant has conferred the living of Ferns, vacant by the elevation of Dr. Newland to the deanery, upon the Rev. Walter Hore, brother-in-law of the Right Hon. F. Shaw. The archdeaconry of Armagh is not yet disposed of.—The works upon the new line of atmospheric railway, from Kingstown to Dalkey, are proceeding with great rapidity, and several hundred men are daily employed in sinking and clearing the road.—At the Head Police-office, a few days since, Robert Lyndsay Crawford, who claims to be entitled to the Earldom of Crawford and Lyndsay, was brought up in custody, charged with having returned from transportation before the period specified by his sentence had expired. The charge had been preferred against the prisoner in one of the London police-offices, but the magistrates there, finding that he could not be identified, communicated with the magistrates of the Irish office, in consequence of which a policeman was despatched to London, by whom the prisoner was arrested and brought to Dublin. The prisoner was fully identified by Mr. Lambert, the Governor of Enniskillen gaol, and late governor of the hulk. It appeared that the prisoner had been under the care of witness on board the hulk, previously to the sailing of the convict-ship in which he was transported from Ireland. He could not be mistaken as to his identity, because he had heard he laid claim to a Scottish peerage, and therefore paid him more attention than he otherwise would have done. The magistrates committed the prisoner for trial.—The national repeal meeting took place on Monday. The only feature of the meeting was the suspension of the standing orders, for the purpose of enabling Mr. O'Connell to move—"That a petition be presented to Parliament, praying for the removal of the present Poor-law Commissioners, and for the appointment of men in their place free from the taint of bigotry." Several persons spoke in condemnation of the Commissioners, and the motion was carried. Mr. O'Connell reviewed the position of the present ministry, and said he felt confident that they would soon want the assistance of Ireland, which should be granted only if they would give the bribe of repeal. The week's rent was announced to be *74l. 3s. 3d.*

SCOTLAND.

Edinburgh.—It is announced in last night's *Gazette* that Mr. Duncan M'Neill, the Solicitor-General, will be the successor of the late Sir William Rae, as Lord Advocate; and it is supposed that Mr. Adam Anderson, Advocate, will be appointed Solicitor-General. — The non-intrusionists have summoned their adherents from every part of Scotland, to assemble in Convention at Edinburgh, on Thursday, the 17th November, and deliberate on the distresses and grievances of the Kirk. The Convention is expected to last for several days.—On Wednesday week the friends and admirers of Mr. David Roberts, the Royal Academician, having resolved to take an opportunity of congratulating him on his return from Syria and the Holy Land, entertained him at a public dinner in the Hopetoun-rooms. About ninety gentlemen were present. The Hon. Lord Cockburn occupied the chair, supported by Mr. Roberts, Sir Wm. Allan, Sir Henry Bishop, Bishop Gillis, Professor Wilson, and other persons of eminence in literature and art.—The accounts from all parts of Scotland portend an early and severe winter. From Braechat to Ben Uaish all the mountains are thickly coated with snow. In Caithness snow has fallen with hail, and winter has fairly set in. The Dumfries papers mention a similar change in that quarter; the Queensferry and Moffat range of hills is capped with snow, and the whole aspect of the country is that of winter.

Dundee.—We learn by the local papers that the man M'Kenzie, who had been arrested for a murderous assault on a grazier named Duff, has been committed for trial. The wounded man is still alive, but his recovery is doubtful.

Dunfermline.—The strike still continues among the collieries in this district, and with little prospect of termination. On the 12th a meeting of delegates was held at Crossgates, for the purpose of drawing out a code of rules and regulations for the future guidance of their constituents. The turn-outs continue peaceable, and no cases of depredation are likely to occur again, as the fields are now quite bare, and the vigilance of the police prevents anything like violent plunder. Many families are in a wretched condition; and, were it not for the potatoes which they grow upon their own account, they would be in a state of actual starvation.

THEATRICALS.

Drury-Lane.—On Monday night "King John" was produced at this theatre, with greater effect than has attended any of Mr. Macready's previous revivals of Shakspeare. On no former occasion has so complete a picture of baronial life been presented on the English stage. It was not merely the beautiful and appropriate scenery, or the strict attention to the costume of the leading characters, which made this representation so remarkable, but the air of reality given to the whole by the introduction of accessory groups, and various incidents which served to carry on the illusion, and render the immediate effect still more striking to the senses. Without being open to the objections of a mere spectacle, the play, as now produced, is the most picturesque illustration of Shakspeare which has ever been accomplished by the genius of the actor. The costumes seemed to have been taken from some contemporary hall of feudal times, so perfectly did they accord with historical truth. The armour of the barons, the robes of the ecclesiastics, the accoutrements of the troops, and the dresses of all the minor characters of the play, were given with the utmost fidelity. The armorial bearings of the knights, the brilliant banners, and the crowds of subordinate persons, who mixed in the different scenes as if they were the ordinary affairs of life, contributed to increase the interest of the drama, and to ensure success. Of the acting it is scarcely necessary to say much. Mr. Macready's "King John" is well known; but he seems on this occasion to have invested the character with more feeling than has usually been assigned to it. In some portions of the play his personation is extremely touching; he makes the spectator feel an interest in the King, and regard the progress of his catastrophe as the different stages of a great moral lesson. Miss H. Faucit appeared as *Lady Constance*, a character perhaps beyond her physical powers; but she had the sympathies of the audience, who evinced their approbation by continued plaudits. Mr. Phelps' *Hubert* was one of the best efforts of the evening —true to nature, and free from the conventional villainy given by stage tradition to the character. *Falconbridge* was played by Mr. Anderson, who, with one or two exceptions, proved an efficient representative. Miss Newcombe's *Prince Arthur* was full of pathos, and remarkable as a specimen of child-acting. At the close of the play Mr. Macready, Mr. Anderson, Mr. Phelps, Miss H. Faucit, and Miss Newcombe were called for, and the announcement that the play will be repeated twice a week was welcomed with vociferous applause.

Covent Garden.—The principal novelty at this theatre has been the revival of "Macbeth," and the re-appearance on the stage of Mrs. Salzberg, a favourite actress, formerly well known as Miss Phillips. She appeared on Monday as *Lady Macbeth*, but was not well supported by the other characters of the play. Mr. C. Pitt's *Macduff* was the only one which calls for observation. It was marked by great, perhaps too great energy, and was well received. The opera of "Semiramide" continues to be performed on the alternate nights, Miss A. Kemble and Mrs. Alfred Shaw sustaining the principal characters.

Adelphi.—On Monday, a new piece was produced at this theatre, under the name of the "Miser's Daughter," being an adaptation of Mr. Harrison Ainsworth's novel of that name. As an additional attraction, a series of *tableaux vivants*, illustrating the different scenes, was got up under the immediate superintendence of Mr. George Cruikshank. As the story has been already before the public in the magazines, it is unnecessary to enter into details of the plot, or an enumeration of the characters which were sustained by Mr. Stirling, Mr. O. Smith, Mr. Wilkinson, Mr. Paul Bedford, Mrs. Beverley, and Miss Murray. These arrangements display the whole strength of the Adelphi company to great advantage. Some of the scenes were beautiful, and there is no doubt that the piece owes much of its success to their effect. Among the most remarkable were Ranelagh Gardens in 1744, and Vauxhall as it was a century ago. The piece was successful, and was announced for repetition.

Miscellaneous.

The Pyrenees.—The following are the details of the ascent of the peak of Nethon, the highest point of Maladetta, in the Pyrenees, which we recently noticed in our foreign news. This peak, the Mont Blanc of the Pyrenees, had hitherto remained impracticable even to the boldest hunters. M. de Tchitacheff, formerly an officer in the Russian service, set out on the 16th July, with four experienced guides, and a young French gentleman named De Franqueville. On the third day, after dreadful fatigue and dangers, they reached the most eastern part of the peak, in the midst of a thick fog and violent wind. The thermometer stood at three degrees centrigrade above zero. They erected a little building of the pieces of granite lying about, which can be seen with the telescope at the port of Benasque. On the 23d M. Tchitacheff set out a second time for Maladetta, provided with instruments, lent to him by Dr. Fontan, and attempted the ascent by the great northern glacier, near the place where, in 1824, Barrau, the head of the guides at Luchon, perished in a crevice when conducting two pupils of the Ecole des Mines. M. de Tchitacheff gained the summit, accompanied by M. Laurent, Professor of Chemistry at Bordeaux, and three guides. The barometric admeasurement gave 3,370 min. 9 deg. for the absolute elevation of the highest point, which figure differs by 34 min. 1 deg. from that (3,404 min.) obtained by the general survey of the Pyrenees made in 1825-6 and 1827, by Colonel Caraboeuf, who was enabled to be much more exact than the calculations of Reboul and Vidal. The difference between the first admeasurement and that of M. Tchitacheff may be attributed principally to the nature of this latter gentleman's instruments, the construction and precision of which were not specially suited to hypsometrical operations, as well as the vicissitudes of temperature which they were forced to undergo in such an ascent. It is said that this traveller is preparing a paper for the Institute of France, relative to this ascent.

Statistics of Malta.—The Governor-General of Malta having issued an order in council for a census to be taken of the inhabitants of Malta, the following has been given as the result:—The population amounts to 114,499; but as the garrison and the crews of the ships of war on the station are not included, the number may be considered to be not less than 120,000. It has been ascertained that of the 114,499 persons there are not less than 44,192 individuals of the lower classes of society without any ostensible means of subsistence, whilst there are 566 professional beggars, making one-third of the whole population dependant on the other two-thirds for maintenance. The clergy amount to 1,280, including nuns; the nobility and gentry, holders of land, to 813; persons acting as brokers, 172; police, 208. Notwithstanding the immense number of persons in the lower classes without employment, the criminals during the year amounted only to 437 males and 37 females, 153 of whom were liberated, not being convicted on their trials. In the total number of criminals are included 85 English, and four foreigners. The population of 114,499 consists of Maltese—males, 54,156; females, 58,344. English—males, 530; females, 630. Foreigners—males, 481; females, 357. The number of English is of course much greater, the garrison and crews of vessels being, as before stated, to be added.

American Antiquities.—A paper was recently read before the Geographical Society by Mr. H. R. Schoolcraft, describing a curious inscription on a small tabular stone, found in one of the large tumuli in the Ohio valley. It consists of 24 characters, arranged between parallel lines. Several of these correspond with the Runic, others bear a resemblance to the old Etruscan or Pelasgic. A copy of this inscription has been put into the hands of a person learned in the ancient Druidical characters of Britain; and another forwarded to the Royal Society of Northern Antiquarians at Copenhagen, in the hope of its being read, and of thus throwing light on the history of America prior to the discovery of Columbus. Many other articles were found in this tumulus, which is situate at Grave Creek, in Western Virginia; particularly a large number of small sea-shells, bone or ivory beads, perforated plates of mica, and several copper ornaments, together with the remains of three skeletons, in a state of almost complete decay.

Falls of Niagara.—We extract the following graphic descriptions from Mr. Dickens's new work, "American Notes for General Circulation:"—"Between five and six in the morning we arrived at Buffalo, where we breakfasted, and being too near the Great Falls to wait patiently anywhere else, we set off by the train the same morning at nine. * * * Whenever the train halted I listened for the roar; and was constantly straining my eyes in the direction where I knew the Falls must be, from seeing the river rolling on towards them; every moment expecting to behold the spray. Within a few minutes of my stopping, I saw two great white clouds rising up slowly and majestically from the depths of the earth. That was all. At length we alighted: and then, for the first time, I heard the mighty rush of water, and felt the ground tremble underneath my feet. The bank was very steep, and was slippery with rain and half-melted ice. I hardly know how I got down, but I was soon at the bottom, and climbing with two English officers who were crossing, and had joined me, over some broken rocks, deafened by the noise, half-blinded by the spray, and wet to the skin. We were at the foot of the American fall. I could see an immense torrent of water tearing headlong down from some great height, but had no idea of shape, or situation, or anything but vague immensity. When we were seated in the little ferry-boat, and were crossing the swollen river immediately before both cataracts, I began to feel what it was; but I was in a manner stunned, and unable to comprehend the vastness of the scene. It was not until I came on Table Rock and looked—great heaven! on what a fall of bright green water!—that it came upon me in its full might and majesty. Then, when I felt how near to my Creator I was standing—the first effect, and the enduring one—instant and lasting—of the tremendous spectacle was peace—peace of mind—tranquillity—calm recollection of the dead—great thoughts of eternal rest and happiness—nothing of gloom or terror. Niagara was at once stamped upon my heart an image of beauty—to remain there changeless and indelible until its pulses cease to beat for ever. Oh, how strife and trouble of our daily life receded from my view and lessened in the distance during the ten memorable days we passed on that enchanted ground! What voices spoke from out the thundering water; what faces faded from the earth looked out upon me from its gleaming depths; what heavenly promise glistened in those angel's tears, the drops of many hues that showered around and twined themselves about the gorgeous arches which the changing rainbows made! I never stirred in all that time from the Canadian side, whither I had gone at first. I never crossed the river again, for I knew there were people on the other shore, and in such a place it is natural to shun strange company. To wander to and fro all day, and see the cataracts from all points of view; to stand upon the edge of the Great Horse-Shoe Fall, marking the hurried water gathering strength as it approaches the verge, yet seeming, too, to pause before it shot into the gulf below; to gaze upon the river's level up at the torrent, as it came streaming down; to climb the neighbouring heights, and watch it through the trees, and see the wreathing water to the rapids hurrying on to take its fearful plunge; to linger in the shadow of the solemn rocks three miles below; watching the river as, stirred by no visible cause, it heaved and eddied, and awoke the echoes, being troubled yet far down beneath the surface by its giant leap; to have Niagara before me lighted by the sun and by the moon, red in the day's decline, and grey as evening slowly fell upon it; to look upon it every day, and awake up in the night and hear its ceaseless voice: this was enough!"

American Curiosity.—Mr. Dickens gives the following amusing illustration of this national failing:—"There was a man on board this boat with a light fresh-coloured face, and a pepper-and-salt suit of clothes, who was the most ests of the tenant would be promoted." Sir Robert Price followed, and said he was afraid there was too much truth in what his friend, Mr. Barneby, had said—that agriculturists have difficulties to contend with. He hoped that they would be able to go through them, and that they would have no troubles which the spirit and enterprise of the British agriculturist are not able to surmount.

Hertford.—We regret to state that Lord Melbourne has been seriously indisposed at Brocket Hall. It appears that on Sunday morning his Lordship was attacked by symptoms which caused considerable alarm to Lord and Lady Beauvale, who were staying with him at the time, and an express was immediately despatched to Lady Palmerston, the noble Viscount's sister, to apprise her of his illness. Lord and Lady Palmerston on Sunday evening departed for Brocket, followed shortly after by Dr. Holland. On Monday his Lordship was exceedingly unwell, but has since continued to improve, and is now in a state of convalescence.

Hull.—At the town sessions last week, Francis Fortune, late cashier of the Agricultural Bank at Hull, was found guilty of having stolen a parcel containing 870*l.* in bank notes, which he had been entrusted to take to the post-office at Hull to send to York in July last, and was sentenced to be transported for seven years.

Liverpool.—The new American treaty being now in force in regard to the apprehension of criminals, a man named Joseph Hall has been arrested in this town on a charge of stealing a large sum of money at Boston from a Mr. Thomas Montfort, an English emigrant. He was examined before the magistrates at Warrington last week, and remanded for further evidence.—Deck passengers are now taken between Dublin and this port by the steamers for one shilling each!—A long examination has taken place before the magistrates in a case of suspected arson, in which Mr. Thomas Henry, a linendraper in St. James's-place, was accused of the serious crime of having set fire to his shop on Friday week. Numerous circumstances were adduced in evidence, tending to raise the suspicion on which the accusation was grounded. It appeared from the evidence, that the prisoner, on the night in question, after closing his shop, wrote a letter, and despatched his shop-boy with it to the post-office, leaving the premises at the same time with one gas-light burning. The servant was in the kitchen, and the assistant had not been there during the whole day. Mr. Henry locked the shop when he went out with the boy, but shortly afterwards he was seen to come out of it again, and to lock the door, when he walked away in the direction of Great George-street. Five minutes afterwards the interior of the shop was seen to be in flames, and the police, who burst open the doors, immediately found that the fire was blazing fiercely. The engines were sent for, and with much difficulty the fire was extinguished. Mr. Henry did not make his appearance till past ten o'clock, the fire having been discovered at nine. He was insured for 1,000*l.* in the Phœnix, and had immediately made a claim for the full amount of his policy. Some discrepancies were shown between his statements to the officers and to the insurance agents, and it was testified that his stock and furniture were of little value; neither were the remnants of the goods burned such as he had represented his stock to consist of. The evidence of the different witnesses was in many respects contradictory, but the magistrates saw reason to remand the prisoner for further inquiry.

Manchester.—The local papers contain the particulars of a correspondence between Sir R. Peel and Mr. Westhead, in regard to Mr. J. C. Prince, author of a volume of poems, entitled, "Hours with the Muses." It appears that Mr. Westhead forwarded a copy of Mr. Prince's poems to Sir Robert Peel, with a letter explaining the circumstances of the author, and suggesting that it would be an act of kindness to place him in some situation where he might enjoy a moderate salary, and have sufficient time to allow of his cultivating his favourite pursuit. The following is the reply of the Premier to the application:—"I beg leave to acknowledge the receipt of your letter, and of the volume which accompanied it. It does not occur to me that I have the means of procuring for Mr. Prince any situation of the description of that to which you refer. I transmit to you, from a fund which I am at liberty to apply to such a purpose, the sum of 50*l.*, and request you to apply it in such a manner as may be most for the interest of Mr. Prince."

Monmouth.—Snow fell in this city and its neighbourhood last week, and the hills near Hereford and around Abergavenny are covered with snow. Wild geese have also made their appearance in different parts of the principality, foreboding an early winter.

Newcastle.—We alluded in our last to the illness of Grace Darling, and her removal from Alnwick to Bamburgh, in consequence of the rapid progress of her malady. We regret to see by the local papers that she died on Thursday the 20th inst., in her 25th year, of confirmed pulmonary consumption. Few persons in her class of life have received so large a share of public estimation; her personal heroism at the wreck of the Forfarshire steamer will long make her name remembered among the seamen of the North, and her exemplary character has fully justified the consideration she received during her illness from all classes in her immediate neighbourhood. A public subscription which was got up at the time of the wreck had placed her in comfortable circumstances, and it is not unlikely that another subscription may be commenced, for the purpose of perpetuating her memory by a public monument.

Northleach.—The adjourned inquest at the Northleach House of Correction has been resumed three times since the notice in our last. The evidence of all the witnesses substantiated the facts there mentioned, particularly in relation to the damp cells, and the general treatment of the prisoners. The details differed in no material point from those already given. On Wednesday the jury proceeded, in the custody of the officer left in charge of them, to the Bellevue Hotel, where the Coroner was, and delivered the following verdict: "That Charles Beale died of disease of the lungs, brought on and aggravated by the punishment and mode of treatment he received whilst a prisoner in Northleach House of Correction, and the jury express their unanimous disapprobation of the conduct of the governor, Townsend; the surgeon, Bedwell; and the underturnkey, Harding." A memorial to the Secretary of State, Sir James Graham praying him to cause an investigation into the treatment of prisoners confined in, and the discipline of, Northleach House of Correction, and the other prisons of the county, was signed by all the jurors, and forwarded to the Home Office.

Saffron Walden.—The tenth anniversary of the Agricultural Society of this town took place last week. After the distribution of prizes, about 150 gentlemen dined together in the Hall of the Institution, Lord Braybrooke in the Chair, supported by the Marquess of Downshire, the Earl of Carnarvon, Lord Rayleigh, Professor Henslow, &c. Lord Braybrooke, in proposing success to the Society, adverted to the recent ministerial measures as they affect the prospects of agriculture. "He was not," he said, "one of those croakers who preached that the sun of British agriculture had set; or, as he had heard it remarked, that they had reason, like potatoes which were nipped with the frost, to hang their heads, as if ashamed of themselves. He would not touch upon the tariff or sliding-scale, because he was sure that if he were to do so, one hundred voices would immediately assure him that it was a slippery subject; but he would say, the total number of cattle imported to the 15th of October, was only 1,151 oxen, 550 cows, 50 calves, 467 sheep, and 10 swine—making a total of 1,228 head—not sufficient, he thought, to make an impression in Essex alone. But their enemies had got hold and made a handle of them, and driven them through the country; and now, instead of the fashionable arrivals hitherto gazetted in the *Morning Post*, they would frequently find such as this—'Six oxen in Cambridgeshire from the Peninsula.' He denounced these reports as coming from men in buckram, to whom he would say, as to Falstaff's ragged regiment, 'I will not march through Saffron Walden with you, and that's flat.' It being one of the objects of that society, to raise the industrious labourer, to ameliorate his condition, and make him a useful member of society, he would advise them to hold out work to them, and thereby enable them to eat the bread of industry, and retain their good character, as there was no farm that was not capable of improvement."—The Earl of Carnarvon also expressed his conviction, "that there was no ground for the alarm which had lately arisen like a panic among the agricultural community, for agriculture was yet far from having reached the height of perfection, to which, under the blessing of Divine Providence, it might attain, now that all classes were joining hand in hand for its encouragement."—Sir John Tyrrell gave a similar opinion, and entered more largely into the question of the tariff.—The chairman had said that they had been threatened with the bellowing of foreign bulls, the bleating of foreign sheep, and the grunting of foreign pigs; but he could tell them that Mr. Everett had himself acknowledged that not the slightest comparison existed between the American and English beef and pork. He had all along felt the importance of the fear of that competition being removed, and he hoped he was not passing the boundary laid down by the rules of the society, when he said that in the boiling of the American pork a diminution of one-half took place. He did not rise to overstate anything, and he could tell them that except in a very few instances the American sheep were worth nothing, except for the fleece and the skin. Mr. Everett had also stated that in America it was impossible to grow either turnips or mangel-wurzel, in consequence of the great drought. He would give them another reason why the pork was unpalatable, and that was, because the pigs preyed on the sheep. He was not aware of this previously, but he could assure them it was a positive fact. In pursuing the course lately taken, both he and his parliamentary colleagues had been actuated alone by a sincere desire to uphold the prosperity of the agricultural interest.

Scarborough.—A fatal accident took place at Middlesborough on the morning of Tuesday, the 18th, in consequence of the high-pressure steam-boiler belonging to the iron manufactory of Messrs. Bulcho and Co. exploding; the roof of the building was blown up, and the principal part fell upon the men at work, who had just arrived from breakfast. Two of them were killed on the spot, and nineteen severely injured.

Southampton.—A French steamer, the Morlaisien, arrived here last week, from Morlaix, with a cargo of French cattle, including 105 cows, 6 oxen, 12 calves, and a quantity of chesnuts. After landing her cargo in good condition at the quay, the Morlaisien sailed for Havre, having on board 64 passengers from Morlaix for that port, consisting chiefly of French soldiers on leave to join their families. Since the arrival of the Morlaisien, the Beeswing, of Hull, has arrived from Vigo, with a freight of Spanish oxen. She shipped 71, out of which number six died from the length and severity of the passage.

Stafford.—The noblemen and gentlemen connected with this county have come forward with liberal subscriptions to liquidate the expenses incurred by the Staffordshire Yeomanry during the late disturbances above the allowance made for the maintenance of that corps by Government.—In consequence of the Stafford Grand Jury having adjourned their sittings to the 24th, an erroneous opinion has gone abroad that a winter assize for clearing the gaols will be held in December. But such will not be the case, as the Grand Jury had adjourned to the 24th for the sole purpose of meeting any emergency that might arise from the arrival of fresh prisoners, who were in the early part of the month daily arriving from the potteries. Before the Judge's departure from Stafford, their Lordships directed that legal proceedings, at the suit of the Crown, should be peremptorily taken against those attorneys who took money from the prisoners' friends and then neglected to defend the prisoners. One of those men received 9*l.*, the produce of the sale of a poor woman's furniture, for defending her son, and then left him to his fate, which was transportation.

Windsor.—On Sunday last St. George's Chapel was reopened for divine service, after having been closed for some days to enable the workmen to complete the large west window, and another of stained glass in the choir. The large window has been entirely restored from the designs of Mr. Williment. Within the arched head the four principal compartments are filled by the initials. crown, and badges, of Edward III., the founder of the Order of the Garter; of Edward IV., who began the erection of the present chapel; of Henry VIII., who completed it; and of Queen Elizabeth, in whose reign so many additions were made to the Castle. The smaller openings are strewn with the Tudor devices on rich grounds, and in the centre, above a sculptured panel of the royal arms, are placed in stained glass the arms of the patron saint. The other window exhibits the armorial bearings of the Prince of Wales, the Kings of Prussia and Saxony, the Dukes of Sutherland, Beaufort, Buckingham, and Cleveland, the Marquesses of Westminster, and Salisbury. These alterations have been executed in the best taste, and have produced a striking effect on the architecture of the Chapel.—The Royal Humane Society have presented Prince Albert with one of the Society's double breaker ice ladders, for use when his Royal Highness skates upon the lake at Frogmore or Virginia Water.

York.—We learn by the local papers that on Sunday last the Archbishop of York preached in the chapel at Bishopsthorpe, to a numerous congregation. The chapel was full, as it was understood to be the last sermon his Grace intended to preach, in consequence of his very advanced age, having on Monday last completed his 85th year. The text was well chosen—"The night cometh when no man can work;" from which the venerable Archbishop delivered a discourse appropriate to the occasion.

Railways.—The following are the receipts of the principal railways for the past week:—London and Birmingham, 16,400*l.*; Great Western, 13,994*l.*; Birmingham and Derby, 2,077*l.*; Brighton, 4.646*l.*; Great North of England, 1,467*l*,; Hull and Selby, 1,280*l.*; Eastern Counties, 1,056*l.*; Grand Junction, 7,954*l*; Northern and Eastern, 1,486*l.*; South-Western, 6,441*l.*; Midland Counties, 3,004*l.*; Edinburgh and Glasgow, 2,149*l.*; North Midland, 4,521*l.*; Greenwich, 836*l.*; Blackwall, 593*l.*; Croydon, 297*l.*; York and North Midland, 1805*l.*; South Eastern, 1489*l.* The committee appointed to examine the position and future management of the North Midland Railway have reported that a large reduction may be made in the current expenses of the concern, and that much may be accomplished by a better management of the goods' traffic, and by a reconsideration of the passenger fares. The largest amount of saving recommended is in the locomotive and carriage establishment, in the number of servants, salaries, and wages, amounting in all to the sum of nearly 10,000*l* per annum. The saving proposed in the whole working of the company exceeds 17,000*l.* per annum. A meeting, when the directors have had sufficient time to go into the details furnished, will be called, at which the expediency of these reductions will be discussed.—The decline in the receipts of the Greenwich Company is attributed to the increase of the fares to 8*d.* in the second class, although no additional accommodation is provided for passengers. The disputes with the Croydon Company and the raising of the fares have operated prejudicially on the receipts.—A meeting of the West London shareholders took place last week. The creditors of the railway have liberally come forward to compound their debts by the acceptance of shares, and matters have been so far arranged that the greater portion of the preferential shares are subscribed for, so that the undertaking, which has for a long while past remained in abeyance in consequence of the apathy of the late directors, will now be brought to a completion.—On Sunday the down-train, which leaves London for Birmingham at six o'clock, met with an accident within a short distance of the Leighton Station, in consequence of its coming in contact with a bull that had jumped a hedge, and was crossing the line. Three carriages were thrown off the rails by the concussion; but fortunately the passengers escaped without injury. The animal died almost instantaneously. The up-train was delayed for more than an hour, as well as the trains that left London subsequently.—On Monday evening an alarming accident occurred on the Brandling Junction Railway; the whole passenger train from Sunderland to Newcastle having been thrown off the line, and the carriages tumbled over an embankment eight or nine feet high; but fortunately the passengers, of whom there were between forty and fifty, escaped without the slightest injury. The accident was occasioned by a horse having strayed upon the line from the adjoining fields, so that the engine was thrown off the rails; at the first shock the connecting rod between the tender and the first carriage broke and thus separated the engine from the train, or the consequences, no doubt, would have been much more serious.

IRELAND.

Dublin.—The papers state, in reference to the New they must prove by calling witnesses. It was sufficient if they could, from the facts of the case, show by a reasonable inference that they had such lawful excuse. The jury, after a few minutes' deliberation, returned a verdict, *acquitting* both prisoners. There were other indictments against them, which were to be proceeded with at a later period of the sessions.

Post-Office Robberies.—Thomas Holloway, postman, was placed at the bar on an indictment charging him with stealing 56 post letters, the property of the Postmaster general, he being a letter-carrier.—Mr. Payne, for the prisoner, applied to the Court for permission that the prisoner might plead guilty to a misdemeanour, having pleaded not guilty to the charges of felony. The Court having granted the application, the Attorney-General addressed the jury, and said that it appearing clearly that the prisoner had no intention of stealing the letters or their contents, or that he had any guilty intention otherwise than the detention of the letters to avoid the trouble of delivering them, it was not the wish of the Post-office authorities to proceed with the charges of felony. The jury accordingly acquitted the prisoner of the felony. Mr. Justice Erskine then sentenced the prisoner, for the misdemeanour in detaining the letters, to six months' imprisonment, with hard labour, in the House of Correction.

William Russell, postman and letter-carrier, was indicted for stealing one post letter, containing money, value 30*s.* The Attorney-General, Mr. Sheppard, Q.C., and Mr. Adolphus conducted the prosecution. This case resembled some which were tried at former sessions, being a trap laid by some of the chief clerks in the Post-office to detect carriers suspected of robbing post letters. A sovereign and a half-sovereign were marked, and placed in a letter, which was handed with others to the prisoner, it having been directed to a person in his walk. The letter was not received by the person to whom it was directed, and the prisoner was searched on suspicion. The marked sovereign and some shillings were found on his person. For the defence, it was proved that the prisoner had an assistant, who was but four weeks in office at the time of the transaction; and on that day the assistant had signed his name at a house, different from that at which he should have done it. The prisoner had also, in the morning of that day, handed a sovereign to the chief clerk, which he said had fallen out of a letter during the sorting, and it was suggested that he might have exchanged the coins by mistake. Mr. Justice Erskine summed up; the jury returned a verdict of "guilty," and the prisoner was sentenced to transportation for seven years.

Robbery of Tradesmen.—Louisa Grange, and Rossiet Lennon, described as a labourer, were placed at the bar, Grange charged with stealing four diamond rings, value 100*l.* the property of John Metcalf, and Lennon with inciting and harbouring the female prisoner, and receiving the property, well knowing it to have been stolen. It appeared from the evidence, that the prisoners have been for some time going about to several lodgings, passing under various titles. One witness knew the male prisoner about two years since. He then passed as the "Count de Tracy." In August last the two prisoners took lodgings for three weeks in Duke street, Manchester-square, where they passed as the "Viscount and Viscountess Grange." On leaving the apartments, the trunks which they left behind were searched, and found to contain only some old rubbish, bits of iron, &c. They then went to a house in Southwick street, Hyde-park, where they gave the title of "Count and Countess Noailles," and the male prisoner gave his address as "Count de Noailles," attaché to the French Embassy." On inquiry, the address was found to be false. Subsequently, the female prisoner went to a house, 39, Albion-street, Hyde-Park, where also she gave the title and address of Countess Noailles, French Embassy, and having returned twice in the course of the same day in a handsome carriage, she finally came in the evening about six o'clock, and just at the same time a Mr. Welchman, from Mr. Metcalfe, a jeweller, in Pall-mall, came and inquired for her. He was shown up stairs to the drawing-room, where the pretended countess was. She came down twice with some frivolous pretence, and then drove away. Shortly after Mr. Welchman, on inquiring, discovered that he had been duped, and that the *countess* had departed with four diamond rings, worth 100*l.*, which he had brought according to orders which she had given to Mr. Metcalfe in the course of the day. She had given her address to Mr. Metcalfe as 39, Albion-street; and to Mr. Welchman she pretended that she was merely going down stairs to consult the count, her husband. The driver of the carriage she had hired proved that the male prisoner had been with her twice during the day, and a cabman proved having driven them both to the station of the Southampton Railway in the evening, after the hour at which the female had discharged the carriage. The constable who arrested the female prisoner in Dublin, to which city she had absconded, produced a letter written in French from the male prisoner, which alluded to certain transactions with some jeweller, and also with Messrs. Swan and Edgar, who had placed both of them (the prisoners) in danger from the law. One only of the rings stolen from Mr. Metcalfe was found at a pawnbroker's, near Leicester-square. The jury returned a verdict of guilty on the 2d and 4th counts of the indictment; those in which the male prisoner was charged with instigating and inciting the female prisoner to steal the articles, and harbouring her after the felony. The Common-Serjeant, in passing sentence, observed that he was at first disposed to think the female had been the mere dupe of the male prisoner, but he found that there was a former conviction against her for a similar transaction, which left no doubt that both the parties were regularly embarked in this mode of life. He then sentenced both prisoners to ten years' transportation.

SPORTING.

Newmarket Houghton Meeting.

The arrivals for these races had nearly filled the town in the beginning of the week, and raised lodgings to a premium, but the weather was wet and stormy; hacks, flies, postchaises, and every variety of waterproof and winter clothing were in constant requisition. For the first time, at Newmarket, a card was printed with the colours of the riders, an improvement which every one appreciated.

Handicap Sweepstakes of 25 sov. each for 3 yrs olds. D.M. (8 subs., three of whom paid 10 sov. each.)—Won by Mr. Boyce's c. by Hymen (Pettit), beating Mr. Etwall's Discord, Mr. Goodman's The Shadow, Lord Exeter's Bosphorus, and Col. Peel's Archy. Betting, 2 to 1 agst Discord, 3 to 1 agst The Shadow, and 3 to 1 agst the winner. Bosphorus made play to the new ground, where the Shadow displaced, and carried the running into the cords, Discord and the Hymen colt following her; they then challenged, and a splendid race with the two ended in favour of the Hymen colt by a head. The Shadow was a very close third; the others were beaten off.

Match, 50, h. ft. T.Y.C.—Lord Rosslyn's Camelino (F. Butler) beat Col. Anson's Marquise. Even betting. A dead heat.

Mr. Osbaldeston's Devil-among-the-Tailors (F. Butler) beat Lord Albemarle's Buffalo. T.Y.C. 100, h. ft. 6 to 5 on Buffalo. Won by a length.

Duke of Bedford's Monœda (E. Edwards), beat Mr. Payne's Johnny; D.M. 300, h. ft. 6 to 5 on Johnny, who was defeated by two lengths.

The Criterion Stakes of 30 sov. each, 20 ft. From the Turn of the Lands in; the second saves his stake. (21 subs.)—Won by Lord G. Bentinck's Gaper (Rogers), beating Mr. Watts's c. by Yaxley, and Mr. J. Sadler's Testy. The following also started, but were not placed: Lord Exeter's f. by Jerry, Lord Orford's f. by Emilius, Col. Peel's Canton, Mr. Bowes's Cotherstone, and Mr. Goodman's Bother'em. Betting, 5 to 2 agst Cotherstone, 5 to 2 agst the Yaxley colt, 3 to 1 agst Canton, and 8 to 1 agst Gaper. Gaper jumped off with the lead, made all the running, and won easy by a length. A fine race for second; Lord Exeter's filly about two lengths behind, Cotherstone close up with the latter, and the others beaten off.

The Cambridgeshire Stakes of 25 sov. each, 10 ft. and only 5 ft. if declared, with 100*l.* added by the inhabitants. Last mile and a dis. of B.C. (88 subs., 34 declared).—Won by Lord Albemarle's Ralph (Robinson), beating Duke of Grafton's Florence, and Lord Jersey's Lady Adela. The following also started, but were not placed: Mr. Holmes's Vulcan, Mr. Graydon's Roscius, Col. Peel's Garry Owen, Mr. Sadler's Bellissima, Lord Chesterfield's Knight of the Whistle, Sir W. Stanley's Forester, Mr. Ramsay's Cabrera, Mr. F. Walker's Billingham Lass, Duke of Rutland's The Genius, Lord Eglinton's Melior, Lord Orford's c. by Jerry out of Petulance, Col. Peel's I-am-not-aware, Mr. Dixon's Hawk, Duke of Portland's The Gleaner, and Mr. I. Day's m. by Nimrod out of Busk. Betting, 4 to 1 agst Florence, [illegible] agst Ralph, 11 to 1 agst Melior, 13 to 1 agst Lady Adela, 13 to 1 agst Cabrera, 13 to 1 agst Garry Owen, 17 to 1 agst Hawk, 17 to 1 agst Knight of the Whistle, 17 to 1 agst Roscius, 20 to 1 agst Vulcan, and 20 to 1 agst Busk mare. The race commenced, after two failures, about half-an-hour after the appointed time, the lead being taken at a good pace by the Busk mare, the Gleaner, Lady Adela, and several others following in the track. At the turn of the lands Bellissima deprived the Busk mare of the lead, and, attended by the two fillies, Garry Owen, Knight of the Whistle, Florence, and three or four others, went on with the running to the Duke's stand, where she gave up and Florence took the lead, and, with Garry Owen, Knight of the Whistle, and Ralph closely laid up, made strong play into the cords; Ralph then drew up, passed Florence forty yards from the chair, and won easy at last by a length; Lady Adela was two lengths from Florence, and was not a neck before Garry Owen, who had a similar advantage over Bellissima; the Knight of the Whistle was sixth, and I-am-not-aware seventh; Melior, the Gleaner, Billingham Lass, and Forester were beaten off a long way. Value of the stakes, 1,055*l.*

Tuesday.—The settling for the Criterion and Cambridgeshire stakes occupied the whole of the morning, and, in the absence of complaint, may be put down as a good one; the balances were not heavy. The weather was not so cold and rainy as on Monday, but was showery enough to make close carriages desirable.

Handicap Plate of 100*l.* D. I. Won by Mr. Pettit's St. Francis (Chifney), beating Mr. Gregory's Una, Mr. W. Sadler's Bellissima, Mr. J. Day's Tamburini, Mr. F. Clark's Arcanus, Lord Jersey's Snowdrop, Mr. Ongley's Fama, and Mr. Graydon's Roscius. Betting, 5 to 2 agst Bellissima, 3 to 1 agst St. Francis, 4 to 1 agst Una, and 6 to 1 agst Arcanus. Roscius made the running for the first half-mile, followed by Fama and Bellissima; he then gave way, and Bellissima went on with a good lead at a severe pace, Una and Snowdrop lying up with her, Arcanus and St. Francis in the rear; Bellissima lasted to the cords, and then dropped astern; St. Francis now drew towards Una, left her a few strides from the chair, and won very easy by a length; Bellissima a very bad third, and the others tailed off.

Duke of Bedford's John o'Gaunt (Robinson) beat Lord Eglinton's Dr. Caius; A.F.; 300, h. ft. Betting: 3 to 1 on John o'Gaunt, who won by eight lengths.

Sweepstakes of 10 sovs. each; last half of Ab. M. The winner to be sold for 80*l.*, &c. 10 subs.—Mr. Payne's Rapture (Nat) beat Duke of Bedford's King of the Peak. The following also started, but were not placed:—Mr. Kimber's Chilson, Sir S. Spry's Jewess, Mr. Etwell's Pelerine, Mr. E. R. Clarke's Sister to Glencoe, Lord Orford's Bridal, Mr. Pettit's Sweetmeat, Mr. Rush's c. by Plenipotentiary, out of Maresfield's dam, and Mr. Sare's Badwell Ash. Betting: 6 to 4 agst King of the Peak, 6 to 1 agst Pelerine, 6 to 1 agst Sister to Glencoe, 6 to 1 agst Bridal, and 6 to 1 agst Sweetmeat. After two or three false starts King of the Peak went off with a good lead at a rattling pace, followed by Bridal, all lying up except Rapture and Chilson. At the ropes the two drew upon the leading horses, and Rapture passing them in rapid succession, caught King of the Peak a few yards from the chair and beat him by a neck. Bridal, Badwell Ash, and Jewess were well up. The winner was claimed.

Lord Eglinton's Pompey (Lye) beat Lord Orford's Barmaid, T.Y.C.; 100, h. ft.; 13 to 8 on Pompey. Won by a length easy.

Lord Orford's c. by St. Patrick, out of Wild Duck (Nat), beat Capt. Ive's c. by Onus, out of Mopsy; T.Y.C.; 100, h. ft.; 2 to 1 on Lord Orford's colt. Won by 6 lengths.

Fifty Pounds. Last three miles of B. C. Winner to be sold for 300 gs. if demanded, &c. Won by Mr. Nightingale's Ajax (Sly), beating Duke of Rutland's f. by Bizarre, and Mr. Bouverie's b. c. by Bolero. The following also started, but were not placed:—Mr. Dawson's The Biddy, Mr. Bowes's The Lady of Silverkeld Well, Mr. Rogers's Prosody, Lord G. Bentinck's Topsail, Lord Stradbroke's Nylghau, and Lord Chesterfield's Barbarina. Nearly the whole of the running was made by Topsail, the Bolero colt, Barbarina, Ajax, and The Biddy following her, and the Bizarre filly waiting in the rear. The pace was bad for the first mile, but was good enough along the flat to make The Biddy, Lady of Silverkeld Well, and Nylghau quite harmless, when they were fairly round the turn of the lands. Topsail declined at the Duke's stand, and Barbarina was left in possession of the lead; about a distance from home, however, the Bolero colt took up the running, followed by Ajax and the Bizarre filly; the two latter waited on her into the cords, and closing with her there, made a severe but very unsatisfactory race home, the award being in favour of Ajax by a neck; the Bolero colt being almost level with the Bizarre filly; Barbarina a bad fourth. After the race the plate was claimed for the Duke of Rutland, on the ground that Ajax had run against his filly, and prevented her winning. The case was gone into before the stewards, who declared that although the Bolero colt had forced Ajax out of his line, and that the filly had therefore been driven out of hers, he had not run against her; they therefore awarded the plate to Ajax.

Wednesday.—*A Sweepstakes* of 300 sov. each, h. ft. R. M. (4 Subs.) Lord Exeter's br. f. Valance, walked over.

Handicap Plate of 50*l.* A.F. Won by Mr. Etwall's Palladium (J. Howlett), beating Capt. Berkeley's Portrait, Lord Chesterfield's Knight of the Whistle, Mr. F. Walker's Billingham Lass, and Mr. Stephenson's Ghuznee. Betting, 7 to 4 agst Knight of the Whistle (taken), 7 to 2 agst Billingham Lass, 3 to 1 agst Palladium, and 6 to 1 agst Ghuznee. Portrait made the running, followed by Billingham Lass and Ghuznee, the others waiting; in the Ab. M. Bottom Palladium took the lead from Portrait, kept it to the end, and won cleverly by a length; the favourite came at the last, and made a dead heat for second with Portrait. Billingham Lass was a good fourth.

Lord Albemarle's Minaret (Robinson) beat Mr. Phillimore's Solomon. T.Y.C. 50. Won in a canter by four lengths.

Subscription of 50*l.* T.Y.C. The winner to be sold for 350*l.*, &c. Won by Lord Stradbroke's Jeremy Diddler (Nat), beating Mr. Eddison's Prince of Wales and Mr. Dixon's Hawk. The following also started, but were not placed:—Baron Rothschild's c. by Sir Hercules, Mr. Stebbing's Edmund, Mr. Crockford's f. by Buzzard, and Lord Exeter's c. by Beiram. Betting, even on Jeremy, 5 to 1 agst Emma filly, and 8 to 1 agst Prince of Wales. The Emma filly led for the first 200 yards; the lot then closed, the Worthless colt leading, and the favourite lying off; at the new ground Hawk took up the running, followed by Lord Exeter's colt and Prince of Wales to the ropes, where Marinella declined; half way up Jeremy Diddler went to the two leading horses, and, Hawk giving way, after a short struggle the two blue jackets were left together; the race in was very close, and was won only by a head—Hawk a good third, and nothing else up.

Lord Albemarle's Buffalo (Robinson) beat Lord Eglinton's Augury. First half of Ab. M., 100*l.*, h. ft. 7 to 4 on Buffalo, who won easily by a length and a half.

Sweepstakes of 10 sov. each. The winner to be sold for 150*l.*, &c. (12 Subs.) Won by Mr. Dixon's Hawk (Nat), beating Lord Jersey's f. by Bay Middleton and Lord Lowther's c. by Bay Middleton. The following also started, but were not placed:—Mr. Phillimore's Solomon, Mr. Dawson's The Biddy, Mr. Osbaldeston's Woldsman, Lord G. Bentinck's Topsail, Mr. E. R. Clark's Lady Harriet (the Octina filly), Lord Exeter's the Buck, Mr. Boyce's c. by Gilbert out of Gitana, Colonel Peel's Hartshorn, and Mr. Goodman's Bother'em. Betting, 5 to 2 agst Trampoline filly, 4 to 1 agst Hawk, 4 to 1 agst Topsail, and 6 to 1 agst Lord Lowther's colt. Topsail made play to the new ground, where he broke down, and the Trampoline filly, which had been second, took up the running, followed by The Buck; at the ropes Hawk joined the leading horses, left them in a few strides, and won easy by a length; the Silvertail colt was beaten a neck for second, The Buck was fourth, Topsail and Hartshorn fifth and sixth; Lady Harriet was beaten off. The winner was claimed.

Thursday.—The fineness of the weather in the morning induced most of the visitors to attend a coursing match on the flat between Capt. Daintree's blue bitch Knab and Mr. Fryson's black bitch Fairy, for 50*l.* a side; it came off about 11 o'clock, and was won, after two undecided courses, by Fairy. This event in some degree compensated for the deficiency of the card, which presented only four races, of which one only, the 50 sov. Stakes, excited any interest.

Sweepstakes of 10 sov. each. T.Y.C. Winner to be sold for 80*l.*, &c. (5 Subs.) Won by Mr. J. Aplin's f. by Ishmael or Achmet (S. Darling, jun.), beating Mr. Bowes's The Lady of Silverkeld Well, Mr. Shelley's Blazer, Mr. Stebbing's Edmund, and Mr. Stevens's f. by Carew, dam by Lambtonian. Betting, 10 to 6 agst Lady of Silverkeld Well, 7 to 4 agst Edmund (taken), and 3 to 1 agst Blazer. They ran head and head at a poor pace to the new ground, where Blazer and the Lady went in front, and kept so till within a few strides of the finish; the Dewdrop colt then went up, and won a short-run race by a head. The Carew filly was beaten off.

Sweepstakes of 50 sov. each, h. ft. Ab. M. (9 Subs.) Won by Col. Peel's Murat (Nat), beating Mr. J. Sadler's Testy. 4 to 1 on Murat. Murat made all the running, the mare lying a length behind to the bushes, and thence into the cords at his quarters; she then made her push, and got near enough to be beaten by a neck. During the race Murat was backed for the Derby at 16 to 1. 20 to 1 was offered after it was over.

Duke of Bedford's John o'Gaunt (Robinson) beat Lord Eglinton's Jamie Forest. Cesarewitch Course. 200, h. ft. 6 to 1 on John o'Gaunt. Won easy by two lengths.

Subscription Handicap Plate of 50*l.*, for 3-yr-olds, &c. D. I. Won by Sir W. Stanley's Forester (Lye), beating Mr. Isaac Day's Tamburini, Mr. Nightingale's Ajax, Mr. E. R. Clark's Ellen, Lord Jersey's Snowdrop, Mr. W. Sadler's Bellissima, and Mr. Stephenson's Ghuznee. Betting, 7 to 4 agst Tamburini (taken), 3 to 1 agst Forester, 4 to 1 agst Bellissima, 5 to 1 agst Ajax, 5 to 1 agst Snowdrop, and 8 to 1 agst Ellen. Won by two lengths.

Col. Peel's Canton received forfeit from Lord Kelburne's He-has-a-Name; First half of Ab. M.; 200, h. ft.

Criterion Stakes.—This race has been claimed for Mr. Watt, on the ground that Lord George Bentinck has not paid his forfeits for the Produce Stakes at Blandford. It appears that his Lordship, the Hon. S. Herbert, and Mr. Gregory, refuse to pay their orfeits to the owner of Eleus for this reason, that the stake was subscribed to on the understanding that the Blandford races would take place at the usual time—a week after Salisbury: that they did not so take place; and that their having been afterwards appointed for October, without the consent of the subscribers, made the race void. A case arising out of this race, as well as Mr. Watt's case, is now before the stewards of the Jockey Club.

MARK LANE, Friday, Oct. 28.—There are no fresh arrivals of English Wheat, and prices remain nominally the same as on Monday; during the week the demand for Foreign has increased, and a larger sale has taken place than for some time, yet we cannot quote much improvement in prices, excepting as relates to fine Baltic Red Wheat, which being scarce, might command 1*s.* more. Barley has not altered since Monday's currency.—White and Grey Peas are wanted at full prices.—Beans remain at our last quotations.—Old Oats support late rates, new are 1*s.* cheaper.

GAZETTE OF THE WEEK.

INSOLVENTS.—J. B. Lodge, 23, New Bond-street, bath-proprietor—J. Brown and R. H. Barrett, High-street-place, White Horse-lane, Stepney, machinists—G. Richmond, Cowley, Oxfordshire, corn-dealer.

BANKRUPTS.—R. Evans, J. Foster, S. Z. Langton, and T. Foster, Barge-yard, Bucklersbury, City, East India-merchants—J. Allen, Much Wymondley, Hertfordshire, dealer in cattle—H. Blackman, Cranbrook, Kent, grocer—J. Wyatt, Plymouth, Devonshire, upholsterer—J. Davison, Marton, farmer, and Middlesbrough, Yorkshire, earthenware-manufacturer—T. Allen, Macclesfield, silkman—J. Alexander and H. Gibbons, Wolverhampton, chemists—H. Hedger and J. Hedger, Coventry, watch-manufacturers—S. White, Lamb's Conduit-street, surgeon—T. Cornish, Great Marlborough-street, wine-merchant—W. Thorpe, Thorne, Yorkshire, scrivener—J. Pepper, Wotton-under-Edge, tailor and draper—J. Greaves, Campsall, Yorkshire, factor—J. Buckley, Higher Compton, near Oldham, Lancashire, coal-master—H. Fullford, Birmingham, draper—E. Bussey, Sheffield, broker—W. Lyon, jun., Woodford, Essex, chemist—A. M. Terry, New Broad-street, City, confectioner.

SCOTCH SEQUESTRATIONS.—E. Steven and J. Walker, Glasgow, merchants—J. Fairlie, Edinburgh, cabinet-maker—A. M'Donald, late of Dundee, ironmonger—A. Dunlop, Esq., of Keppoch.

BIRTHS.—At Summer-hill, Birmingham, on the 22d inst., the wife of Lieut. Hopkins, R.N., of a daughter, still-born—On the 25th inst., Elizabeth, the wife of the Rev. J. W. Buckley, of Brighton, of a son, which survived his birth only a few hours.—On the 26th inst., at the Grove, Harrow, the lady of the Rev. T. H. Steel, of a daughter.—On the 27th inst., at the residence, St. James's Chapel, Hampstead-road, the lady of the Rev. H. Stebbing, D.D., of a son.—On the 27th inst., at No. 40, Russell square, the lady of J. Russell, Esq., of a daughter—On the 21st inst, at Culverthorpe, the Hon. Mrs. Handley, of a son.

MARRIED.—On the 25th inst., at Stratford-upon-Avon, T. W. Weston, Esq., of New-hall, in the county of Worcester, son of the late J. Weston, Esq., of Hare-hall, Essex, to Isabella Elizabeth Mary, eldest daughter of J. B. Freer, Esq.—On the 25th inst., at Southampton, R. Gillespie, jun., Esq., of London, to Louisa Maria, third daughter of the late Captain W. Dowers, R.N.—On the 26th inst. at St. Mary's, Woolwich, G. P. St. Barbe, Esq., of Lymington, Hants, to Henrietta Maria, youngest daughter of Col. Cleaveland, Royal Horse Artillery.

DIED.—At Cheltenham, on the 22d inst., Major-General John Nicholas Smith, aged 83—On the 16th inst., at his house, in St. Giles's, Norwich, John Herring, Esq., one of Her Majesty's Justices of the Peace for the county of Norfolk, in the 69th year of his age—At Haslar Hospital, Gosport, on the 16th inst., Lieut. F. Pragnall, R.N., aged 52, late of Alresford, Hants, and Kilworth, county of Cork—On the 26th inst., at Northampton, of scarlet fever, aged 16, L. L. W. Tebbutt, eldest son of the Rev. F. Tebbutt, of Hanwell, Middlesex—On the 27th inst, in Portman-street, Portman square, T. B. Bowen, Esq., Commissioner of the Insolvent Debtors' Court, in his [illegible] year.

Printed by Messrs. Bradbury and Evans, Lombard-street, Fleet-street, in the Precinct of Whitefriars, in the City of London, and Published by them at the Office, 3, Charles-street, Covent Garden, in the County of Middlesex, where all Advertisements and Communications are to be addressed to the Editor.—Saturday, October 29, 1842.

inquisitive fellow that can possibly be imagined. He never spoke otherwise than interrogatively. He was an embodied inquiry. Sitting down or standing up, still or moving, walking the deck or taking his meals, there he was, with a great note of interrogation in each eye, two in his cocked ears, two more in his turned-up nose and chin, at least half-a-dozen more about the corners of his mouth, and the largest one of all in his hair, which was brushed partly off his forehead in a flaxen clump. Every button in his clothes said, 'Eh? What's that? Did you speak? Say that again, will you?' He was always wide awake, like the enchanted bride who drove her husband frantic; always restless; always thirsting for answers; perpetually seeking and never finding. There never was such a curious man. I wore a fur coat at that time, and before we were well clear of the wharf, he questioned me concerning it, and its price, and where I bought it, and when, and what fur it was, and what it weighed, and what it cost. Then he took notice of my watch, and asked what that cost, and whether it was a French watch, and where I got it, and how I got it, and how it went, and where the key-hole was, and when I wound it, every night or every morning, and whether I ever forgot to wind it at all, and if I did, what then? Where I had been to last, and where was I going next, and where was I going after that; and had I seen the President, and what did he say, and what did I say, and what did he say when I had said that? 'Eh? Lor now! Do tell!'"

Boston.—The following is Mr. Dickens's characteristic account of the external appearance of this city:—"When I got into the streets upon this Sunday morning, the air was so clear, the houses were so bright and gay; the sign-boards were painted in such gaudy colours, the gilded letters were so very golden, the bricks were so very red, the stone was so very white, the blinds and area railings were so very green, the knobs and plates upon the street doors so marvellously bright and twinkling, and all so slight and unsubstantial in appearance—that every thoroughfare in the city looked exactly like a scene in a pantomime. It rarely happens in the business streets that a tradesman, if I may venture to call anybody a tradesman where everybody is a merchant, resides above his store, so that many occupations are often carried on in one house, and the whole front is covered with boards and inscriptions. As I walked along I kept glancing up at these boards, confidently expecting to see a few of them change into something; and I never turned a corner suddenly without looking out for the clown and pantaloon, who, I had no doubt, were hiding in a doorway, or behind some pillar close at hand. As to Harlequin and Columbine, I discovered immediately that they lodged (they are always looking after lodgings in a pantomime) at a very small clock-maker's, one story high, near the hotel; which, in addition to various symbols and devices, almost covering the whole front, had a great dial hanging out—to be jumped through, of course. The suburbs are, if possible, even more unsubstantial-looking than the city. The white wooden houses (so white, that it makes one wink to look at them), with their green jalousie blinds, are so sprinkled and dropped about in all directions, without seeming to have any root at all in the ground—and the small churches and chapels are so prim, and bright, and highly varnished, that I almost believed the whole affair could be taken up piecemeal like a child's toy, and crammed into a little box."

American Railroad.—"I made acquaintance," says Boz, "with an American railroad, on this occasion, for the first time. As these works are pretty much alike all through the States, their general characteristics are easily described. There are no first and second class carriages, as with us; but there is a gentlemen's car and a ladies' car—the main distinction between which is, that in the first everybody smokes, and in the second nobody does. As a black man never travels with a white one, there is also a negro car, which is a great blundering clumsy chest, such as Gulliver put to sea in from the kingdom of Brobdignag. There is a great deal of jolting, a great deal of noise, a gread deal of wall, not much window, a locomotive engine, a shriek, and a bell. The cars are like shabby omnibuses, but larger—holding thirty, forty, fifty people. The seats, instead of stretching from end to end, are placed crosswise. Each seat holds two persons. There is a long row of them on each side of the caravan, a narrow passage up the middle, and a door at both ends. In the centre of the carriage there is usually a stove, fed with charcoal or anthracite coal, which is for the most part red-hot. It is insufferably close, and you see the hot air fluttering between yourself and any other object you may happen to look at, like the ghost of smoke. In the ladies' car there are a great many gentlemen who have ladies with them. There are also a great many ladies who have nobody with them; for any lady may travel alone from one end of the United States to the other, and be certain of the most courteous and considerate treatment everywhere. The conductor or check-taker, or guard, or whatever he may be, wears no uniform. He walks up and down the car, and in and out of it, as his fancy dictates, leans against the door with his hands in his pockets and stares at you, if you chance to be a stranger; or enters into conversation with the passengers about him. A great many newspapers are pulled out, and a few of them are read. Everybody talks to you, or to anybody else who hits his fancy. If you are an Englishman, he expects that that railroad is pretty much like an English railroad. If you say 'No,' he says 'Yes?' (interrogatively), and asks in what respect they differ. You enumerate the heads of difference, one by one, and he says 'Yes?' (still interrogatively) to each. Then he guesses that you don't travel faster in England; and on your replying that you do, says 'Yes?' again (still interrogatively), and, it is quite evident, don't believe it. After a long pause he remarks, partly to you, and partly to the knob on the top of his stick, that 'Yankees are reckoned to be considerable of a go-a-head people too;' upon which *you* say 'Yes,' and then *he* says 'Yes' again (affirmatively this time); and upon your looking out of the window tells you that behind that hill, and some three miles from the next station, there is a clever town in a smart lo-ca-tion, where he expects you have con-cluded to stop. Your answer in the negative naturally leads to more questions in reference to your intended route (always pronounced *rout*); and wherever you are going, you invariably learn that you can't get there without immense difficulty and danger, and that all the great sights are somewhere else. If a lady take a fancy to any male passenger's seat, the gentleman who accompanies her gives him notice of the fact, and he immediately vacates it with great politeness. Politics are much discussed, so are banks, so is cotton. Quiet people avoid the question of the Presidency, for there will be a new election in three years and a half, and party feeling runs very high: the great constitutional feature of this institution being, that directly the acrimony of the last election is over, the acrimony of the next one begins; which is an unspeakable comfort to all strong politicians and true lovers of their country—that is to say, to ninety-nine men and boys out of every ninety-nine and a quarter."

An American Bootmaker.—I wanted a pair of boots at a certain town, for I had none to travel in but those with the memorable cork soles, which were too hot for the fiery decks of a steamboat. I therefore sent a message to an artist in boots, importing, with my compliments, that I should be happy to see him, if he would do me the polite favour to call. He very kindly returned for an answer, that he would "look round" at 6 o'clock that evening. I was lying on the sofa, with a book and a wine-glass, at about that time, when the door opened, and a gentleman with a stiff cravat, within a year or two on either side of 30, entered, in his hat and gloves; walked up to the looking-glass; arranged his hair; took off his gloves; slowly produced a measure from the uttermost depths of his coat-pocket; and requested me, in a languid tone, to "unfix" my straps. I complied, but looked with some curiosity at his hat, which was still upon his head. It might have been that, or it might have been the heat—but he took it off. Then, he sat himself down on a chair opposite to me; rested an arm on each knee; and, leaning forward very much, took from the ground, by a great effort, the specimen of metropolitan workmanship which I had just pulled off—whistling pleasantly as he did so. He turned it over and over; surveyed it with a contempt no language can express; and inquired if I wished him to fix me a boot like that? I courteously replied, that provided the boots were large enough, I would leave the rest to him: that if convenient and practicable, I should not object to their bearing some resemblance to the model then before him; but that I would be entirely guided by, and would beg to leave the whole subject to his judgment and discretion. "You an't partickler about this scoop in the heel, I suppose, then?" says he; "we don't foller that here." I repeated my last observation. He looked at himself in the glass again; went closer to it to dash a grain or two of dust out of the corner of his eye; and settled his cravat. All this time my leg and foot were in the air. "Nearly ready, Sir?" I inquired. "Well, pretty nigh," he said, "keep steady." I kept as steady as I could, both in foot and face; and having by this time got the dust out, and found his pencil-case, he measured me, and made the necessary notes. When he had finished, he fell into his old attitude, and, taking up the boot again, mused for some time. "And this," he said, at last, "is an English boot, is it? This is a London boot, eh?"—"That, Sir," I replied, "is a London boot." He mused over it again, after the manner of Hamlet with Yorick's skull; nodded his head, as who should say, "I pity the institutions that led to the production of this boot!" rose, put up his pencil, notes, and paper—glancing at himself in the glass all the time—put on his hat, drew on his gloves very slowly, and finally walked out. When he had been gone about a minute, the door re-opened, and his hat and his head reappeared. He looked round the room, and at the boot again, which was still lying on the floor—appeared thoughtful for a minute, and then said, "Well, good arternoon." "Good afternoon, Sir," said I; and that was the end of the interview.—*Boz.*

The Strasburg Clock.—At the present moment, when public attention has been attracted to the wonders of Strasburg, by the scientific meeting recently held in that fine old city, the following particulars of the famous astronomical clock may be interesting. For many years the traveller in Alsace has looked upon its immense dials with wonder and regret—the dust of ages had accumulated upon it, its hands had long ceased to move, and it was looked upon as a useless wonder. It stands in the *interior* of the celebrated cathedral, and has recently been cleaned and restored, with great skill, by M. Schwilgué. It is composed of three parts, respectively indicating the time of the day, the day of the month and year, and the movements of the constellations. The central moving power, which is another and very exact timepiece, shows on the face the hour and its subdivisions, strikes the hours and the quarters, and puts in motion several curious allegorical figures. The cock-crow, which had been mute since 1789, has been reproduced, and a procession of the apostles takes place daily at noon. The calendar shows the months, the days, and the Dominical letter, as well as the Catholic calendar, showing every Saint's day in the year. The plate or face on which these figures and signs appear, makes one revolution in 365 days for the common, and 366 for the bissextile year, always reproducing the irregularity which takes place three times in every four secular years. The moving fasts and feasts are shown by an extremely ingenious process. On the 31st of December, at midnight, Easter-day and the other moving feasts for the year appear on the calendar. The third division is the triumph of the artist's skill. A complete orrery after the Copernican system is produced. The movements of all the planets visible to the naked eye are represented. The earth is shown accompanied by her satellite, the moon, which accomplishes her revolution in one month. The different phases of the moon are represented on a different and separate globe. Another globe represents the apparent movement of the heavens, making one revolution in the sidereal day. This movement is subjected to that almost imperceptible power, known by the name of the precession of the equinoxes. The mechanism, besides many other things, shows the apparent movements of the sun and moon with wonderful precision, and for an indefinite period, so that the rising and setting of the sun, its passage to the meridian, the eclipses of the sun and moon, &c., are all represented on the face of the apparent time in a most ingenious manner.

Law.

STAFFORD SPECIAL COMMISSION.—Since our last notice of the commission the following results have been published:—Of the whole number of prisoners tried, no fewer than 54 have been transported. Out of these 11 have been transported for life, 13 for 21 years—among them William Ellis, one of the Chartist leaders in the Potteries—9 for 15 years, 18 for 10 years, and 3 for 7 years. A very large proportion of the remainder have been sentenced to imprisonment and hard labour. There are in all 146 prisoners who will have to undergo this kind of punishment. Nine are sentenced to imprisonment and hard labour for the term of 2 years, 1 for 20 calendar months, 9 for 18 months, 6 for 15 months, 33 for 1 year, 3 for 9 months, 7 for 8 months, 33 for 6 months, 8 for 4 months, 14 for 3 months, 15 for 2 months, 1 for 1 month, 6 for 14 days, and 1 for 10 days. Eight have been sentenced to various terms of imprisonment without hard labour, and among these are Linney and Cappur, the Chartist agitators, the former of whom will have to remain in prison 2 years and 5 months, and the latter 2 years. Fifty-five prisoners were acquitted, 2 were discharged on entering into recognizances, 6 were discharged by proclamation, and 3 have traversed till the next assizes, these 3 being O'Neil, Cooper, and Richards. The whole number of prisoners for trial was 274.

CENTRAL CRIMINAL COURT.—The quarterly session commenced on Monday before the Recorder and the City authorities. The calendar contained a list of 288 prisoners, but, with few exceptions, the cases were not of general interest.

The Robbery at Hampton Court.—Henry Grover, Martha Grover, and Mary Ann Goatley, were indicted for breaking into the dwelling of the Queen, and stealing therefrom a quantity of silver plate, value 30*l.*, the property of the Hon. C. H. Sheridan; and Susan Foster was indicted for receiving the same, well knowing it to have been stolen. The particulars of this case were given under the Metropolitan news in our last. Foster was acquitted; the other prisoners were convicted and sentenced—Henry Grover and M. A. Goatley to ten years' transportation. Martha Grover was sent back, and judgment respited, in order to give her time to produce her certificate, and prove her marriage to the male prisoner. This was proved at the next sitting, and the prisoner was discharged.

Embezzlement.—George Bell Carter, a collecting clerk, was indicted for embezzling the sum of 25*l.*, which he had received on account of Newington and Sander, glass dealers, by whom he was employed as a clerk. Another indictment charged the prisoner with embezzling three other sums, also the property of his employers. The prisoner pleaded guilty to both charges. The Common-Serjeant asked the prosecutor if he had anything to say in favour of the prisoner?—Mr. Newington replied that he had not. Since the prisoner had been in his service money to the amount of 400*l.* or 500*l.* had disappeared, and had not been accounted for.—The Common-Serjeant, in passing sentence, said that the present case was one which demanded the most exemplary punishment. There was not one feature in the case which spoke in favour of the prisoner. The sentence of the Court therefore was, that upon the first indictment, he be transported for the term of seven years, and that upon the expiration of that term he remain in transportation for seven years longer. From the arrangements made by the colonial law this sentence is much more severe than 14 years' transportation inflicted at once.

Forgery.—Edward Banister and James Campbell were indicted for having in their possession 100 forged bank notes, value 500*l.* each, well knowing the same to be forged. The Attorney-General stated the case for the prosecution. John Roll, a police officer, stated that in consequence of information received he went to 4, Grocers' Hall-court, and found the two prisoners there, and in their possession a quantity of Bank of England notes, and an engraved plate in the hand of Campbell. Witness asked the prisoner Banister, "what he was going to do with the notes?" After a pause of a moment or two, he said, "He was not going to do anything wrong with them." Witness next searched the desk, and found a quantity of papers, and amongst them an agreement. Banister afterwards said, "He intended to give them to hawkers, as a kind of attraction." Witness then took him into custody. The agreement alluded to was produced and read. It was an undertaking to print a fac-simile of a Bank of England note. Joshua Freeman, an inspector of notes at the Bank of England, deposed that the note produced was certainly not genuine. It did not purport to be signed by the cashier of the Bank of England or any one else. With the exception of the signature, it was a resemblance of a bank note, word for word, and such a resemblance as would be calculated to deceive any person into whose hands it might fall. G. W. Collins, a copperplate engraver, deposed to the fact that the prisoner Campbell called on and agreed with him for printing the plate, which he said was to be sent to New Zealand. Witness communicated with Mr. Bush, the solicitor to the Associated Bankers. Witness asked him if he was not running great risk in the business? Prisoner's reply was in the negative, as they were not signed. He said he came from Mr. Banister, of Grocers' Hall-court, and when the plate was finished, an impression was struck off and taken to Banister. He said it was of no use to him unless they could produce the water mark. Witness said that was impossible, but stated afterwards that he could introduce the water-mark. Witnesses having been called to substantiate this evidence, Mr. Bodkin addressed the jury on behalf of the prisoner Banister, and contended, that in the strict letter of the law under which the prisoners were indicted, they had neither purchased, received, nor had in possession the notes in question. Mr. Ballantine addressed the jury for the prisoner Campbell, who, he said, had acted throughout the matter as the servant of Banister, and there was not a tittle of evidence to show that he had so acted with any guilty intention. Moreover, he had never had possession of the forged notes at all; if there was any guilty possession, it was a guilty possession on the part of the master; if there was any guilty purchase, it was on the part of the master, and not on the part of this poor man, his servant, who had hitherto borne a good character. Both the prisoners received characters for previous good conduct. Mr. Justice Maule summed up, and said the question for the jury was, whether the prisoners, both or either of them, had the blank note in their possession; and if they were satisfied upon the point that they had it in their possession, it would be for them next to say whether without a lawful excuse, which the Act provides

ALEX. SMITH, NURSERY AND SEEDSMAN, Cirencester, begs leave to inform the Nobility, Gentry, and Public in general, that, being obliged to clear part of his Nursery this season, (the ground being wanted for another purpose,) he is disposed to sell the Stock at very reduced prices: it consists of about 360,000 Forest Trees, 228,764 Thorn Quick, 2,054 yards of Box Edging, 237,800 Evergreen and Flowering Shrubs, with a fine assortment of Fruit Trees, &c. &c. Catalogues may be had on application.—Oct. 26th, 1842.

MESSRS. DICKSON, NURSERYMEN AND FLORISTS, Acre Lane, Brixton, beg to inform Amateurs and Florists, that their Catalogue of Carnations, Picotees, Auriculas, &c., is now ready, and may be had on application to them, or Messrs. Warner and Warner, Seedsmen, &c., Cornhill, London.

W. LYNN, NURSERY AND SEEDSMAN, late of Henley-on-Thames, begs to offer to the Trade, and Public in general, the following articles, which are good and fine:—viz., Maiden Cherries, ditto Stocks, 4 to 6 ft.; 14 varieties of Dwarf Trained Plums; Standard Plum Stocks, 6 to 8 ft.; Standard Walnuts; Red Cedars, 1 to 2 ft.; Arbor Vitæ, 4 to 6 ft.; Box-trees, 2 ft.; Spiræa bella; Camellias, 1 to 2 ft., set for bloom-Auriculas; Myrtles, 2 ft.; Gesnera fragrans, 2 ft.; Hoya carnosa; Pelargoniums; Lobelia ignea; also a small stock of his new Dwarf Wrinkled Marrow Peas, at 2*s.* 6*d.* per quart: this Pea has given universal satisfaction in the neighbourhood of Henley—it is superior to the Knight's Marrows, and much more advantageous, especially in small gardens, its height being 3 to 4 ft.; it is the most prolific Pea the advertiser ever saw, perpetual in its bearing, quite full, and of most delicious flavour, even when nearly ripe. New White Reading Onion—seed of own growth; Long and Short Prickly Cucumbers; fine Curled Parsley; Vegetable Marrow; Walnut-leaved Kidney Potatoes, and Knight's Seedling Early Frame ditto:—For which early applications are requested. All orders and communications addressed (pre-paid), No. 9, Lower Homerton Terrace, Homerton, will be punctually attended to.

READING NURSERY.—Messrs. SUTTON and SONS respectfully call attention to their large importation of Dutch Roots, of which they have still some of each kind in excellent condition, at the annexed low prices.

Hyacinths, the finest sorts known by name, 15*s.* per doz.
Do. very fine do., 9*s.* per doz.
Do. good do., 6*s.* per doz.
Irises, a few collections of 30 very superior varieties, for 21*s.*
Anemones, superb Dutch, large kinds, by name, 9*s.* per doz.
Do. do., in mixture, 16*s.* per 100.
Ranunculuses, choice, by name, 3*d.* each, or 50 varieties for 12*s.*
Do. in mixture, per 100, 3*s.* 6*d.*
Crocus, the new multiflora, in 20 beautiful sorts, by name, 6 of each of the 20 for 5*s.*
Crocuses, Tulips, &c., for borders, at low prices.

In the Nursery will be found a very fine stock of trained and other Fruit-trees, Shrubs, Roses, Laurels, Quicks, &c. &c., of which priced lists will be forwarded on application.

Nov. 4, 1842.

ECONOMIC LIFE ASSURANCE SOCIETY, No. 34, BRIDGE-STREET, BLACKFRIARS, LONDON. Established 1823. Empowered by Act of Parliament, 3 William IV.

LOWER RATES OF PREMIUM THAN THOSE OF ANY OTHER OFFICE, that entitle the assured *to participate in the profits*, as follows:—

Age.	15	20	25	30	35	40	45	50
Annual Premium per cent.	1 10 8	1 14 7	1 19 0	2 4 3	2 10 11	2 19 9	3 11 9	4 8 0

The BONUS declared in 1834 amounted upon an average to 16*l.* per cent. on the premiums then paid; and in 1839 a second BONUS was awarded, amounting on the average to 31*l.* per cent. on the premiums paid during the preceding five years.

No extra charge for residence in any part of Europe, nor for proceeding (in a decked, sailing, or steam vessel) from any one Port thereof to another during peace, to Assurers, not being seafaring men by profession. Licenses are granted to go to any part of the world upon terms proportionate to the risks.

Policies on the lives of persons dying by suicide, duelling, or by the hands of justice, are not void as respects the interests of parties to whom they may have been legally assigned.

Assurances may be effected on any and every day.

By order of the Board of Directors,
CAMPBELL JAMES DOWNER, Secretary.

TO GENTLEMEN, FLORISTS, AND OTHERS.

MESSRS. PROTHEROE and MORRIS are instructed to sell by Auction, at the Auction Mart, Bartholomew-lane, on THURSDAY, Nov. 10, 1842, at 12 o'clock, the genuine Stock of Miscellaneous Stove and Greenhouse Plants, Orchidaceæ, Succulents, Ferns, Climbers, &c., the property of a Lady changing her residence. The collection comprises fine specimens of Camellias, Azalea indica, Epacris, Witsenia, Chorizema, Gompholobium, Fuchsia, Iris bicolor, Bletia, Epidendrum, Gongora, Myanthus, Oncidium, Stanhopea, &c. May be viewed the morning of Sale. Catalogues may be had at the Mart, and of the Auctioneers, American Nursery, Leytonstone.

PROTHEROE and MORRIS beg to announce that the SALE of Messrs. Adamson & Son's celebrated NURSERY STOCK at Stoke Newington Common, by order of the Trustees, will continue on Monday, Nov. 7th, and following day.

TO GENTLEMEN, FLORISTS, AND OTHERS.

MESSRS. PROTHEROE and MORRIS will submit to public competition, at the Auction Mart, Bartholomew-lane, on Friday, Nov. 11th, 1842, at 12 o'clock, a very rich Collection of STANDARD and DWARF ROSES; also a fine Bed of TULIPS, comprising Louis XVIth, Milo, Polyphemus, &c.; a fine assortment of DUTCH BULBS.

May be viewed the morning of Sale. Catalogues may be had at the Mart, and of the Auctioneers, American Nursery, Leytonstone.

NOTICE OF SALE.

MR. J. KING begs to acquaint Gentlemen, Gardeners, and others, that he has instructions to sell by AUCTION on MONDAY, 21st Nov., at 11 precisely, on the Premises, Cambridge-row, Hackney-road, the Stock and Crops on the Land, comprising Greenhouses, Frames, Lights, Plants in pots, Fruit-trees, Shrubs, Carts and Horse, and Implements, &c., &c. The Premises to be let on lease (4 Acres). For information apply to J. King, Auctioneer, Hackney Road.

ACRE LANE, BRIXTON.—EXTENSIVE NURSERY STOCK, &c., BY ORDER OF THE MORTGAGEE.

MR. VIGERS will sell by AUCTION on the Premises, Acre Lane, Brixton, on FRIDAY, Nov. 11th, at 11 o'clock, without reserve, the STOCK of a NURSERYMAN, comprising Evergreens, Standard Rose-trees, young Fruit-trees, Bulbous and other Flower-roots, a large quantity of Box-trees, Edgings, &c. May be viewed the day prior to the sale. Catalogues may be had on the premises, and at the Auctioneer's Offices, 22, Chancery Lane, and Clapham Road.

HOT-WATER APPARATUS FOR HEATING HORTICULTURAL BUILDINGS, DWELLING-HOUSES, CHURCHES, and MANUFACTORIES, upon improved principles, and at very moderate charges, erected by DANIEL and EDWARD BAILEY, 272, HOLBORN.

D. and E. BAILEY having devoted much time to the consideration of this subject, and had much experience in the erection of apparatus for the above-mentioned purposes, have, by improvements suggested in their practice, rendered their mode of heating not only very efficient, but very simple, and have combined durability in the apparatus with economy in the charge. They have erected apparatus in England, Scotland, and Ireland, for many noblemen and gentlemen, and have had the honour to be employed by the Horticultural Society of London, in executing the works of their splendid Conservatory, lately erected at Chiswick.

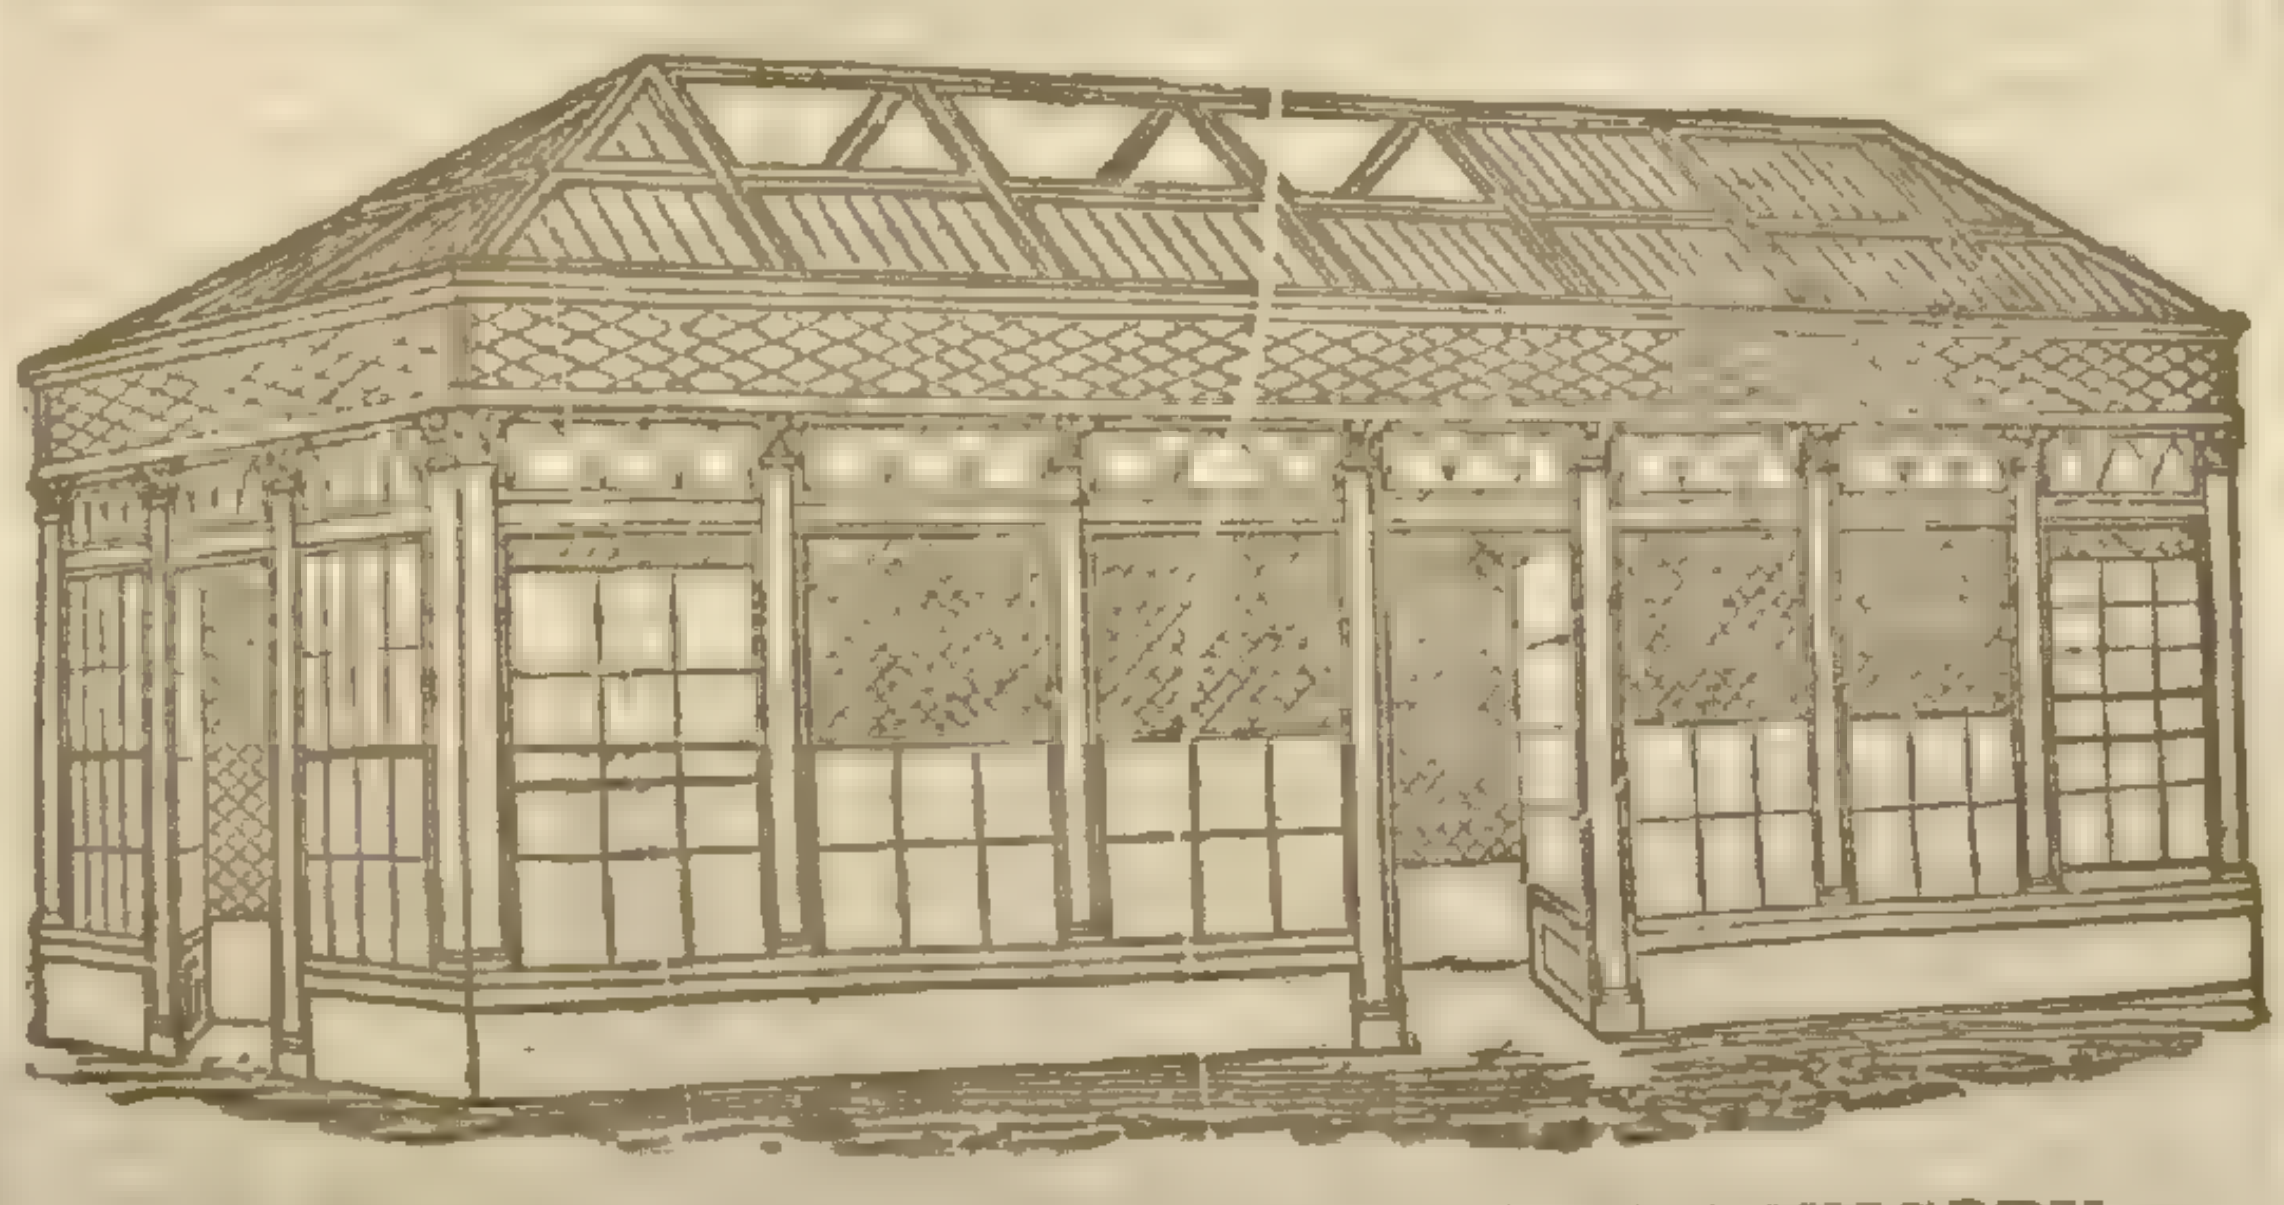
D. and E. BAILEY also construct in metal all descriptions of Horticultural Buildings and Sashes, and invite noblemen, gentlemen, and the public to an inspection of their various drawings and models, at 272, Holborn, where they have the opportunity of exhibiting, amongst other metal works, an extremely complete and convenient kitchen apparatus, or range, adapted for the continued supply of hot water, and an arrangement of the oven more complete than has hitherto been brought before the public.

D. and E. BAILEY were the first to introduce metallic curvilinear houses to horticulturists, and can refer to the Conservatory attached to the Pantheon as one of their works, besides many others in this country and on the Continent.

D. and E. BAILEY have prepared a quantity of the Galvanic Plant Protectors, which are now ready for immediate delivery; they beg to introduce to public notice a new Trough Pipe, for Orchidaceous or other Houses where vapour is constantly, or at intervals, required, and which may be seen at their Manufactory.

HOT-WATER APPARATUS, for Horticultural and other Buildings.—STEPHENSON and Co., Agents for the Old Park Iron-works, and Manufacturers, 61, Gracechurch-street, London, solicit an inspection of their improved Conical Boiler. (See Editor's description, *Gardeners' Chronicle*, March 12, p. 175.) To Amateurs these Boilers will be found invaluable. They are complete without furnaces or setting in brickwork, movable at pleasure, very ornamental in appearance, and require attention only once in 14 or 15 hours, price 5*l.* 5*s.* and upwards. Further particulars, with plans and estimates for heating any description of building, may be obtained as above; where also may be seen the improved Wrought-iron Boiler, as applied with Chanter's Smoke-consuming Furnaces at Chatsworth, and many other of the Nobility's Seats. Iron Fencing, Hurdles, Bedsteads, Ornamental Wire-work, Garden Implements, &c. &c. The trade supplied with Hot-water Socket-pipes.

N.B.—WAYTE's New Patent Land-presses and Drills.



HORTICULTURAL BUILDING AND HEATING BY HOT WATER.

J. WEEKS and Co., ARCHITECTS, &c., GLOUCESTER-PLACE, KING'S-ROAD, CHELSEA, Hothouse Builders and Hot-water Apparatus Manufacturers, beg leave to inform the Nobility and Gentry that their business, which has been extensive throughout the country for many years, is entirely confined to the BUILDING OF HORTICULTURAL ERECTIONS of every description, and the HEATING of them by HOT WATER.

CONICAL and other BOILERS of all sizes; their largest consumes but a small quantity of fuel, only requiring attention once in 10 hours, and will heat a range of Forcing Houses 300 ft. in length.

Their improved plan of BOTTOM HEAT FOR PITS, by means of an open trough under the bed, is now being universally adopted.

References may be had, and their works seen at most of the Nobility and Gentlemen's Seats in the country, nearly the whole of the London Nurseries, and a great variety of Horticultural Erections and Hot-water Apparatus, Models, Plans, Estimates, &c., at their Horticultural Manufactory, Gloucester-place, Chelsea, near Sloane-square.

EDWARD BECK invites the attention of Horticulturists to the different articles manufactured by him in SLATE. They may be seen in use at WORTON COTTAGE, ISLEWORTH, upon application to the gardener—*Sundays excepted.*

Just published, the 2nd Edition, with Additions, price 6*s.* 6*d.*, cloth, gilt edges,

THE LADIES' COMPANION TO THE FLOWER GARDEN.

Being an Alphabetical Arrangement of all the Ornamental Plants usually grown in Gardens and Shrubberies; with full directions for their Culture. By Mrs. LOUDON.

London: Published by William Smith, 113, Fleet-street.

Just Published, in One Volume 8vo., with upwards of 380 Engravings, price 16*s.*,

THE SUBURBAN HORTICULTURIST; or, an Attempt to Teach the Science of Horticulture, and the Management of the Fruit, Kitchen, and Forcing Garden, to Persons who have had no previous Knowledge or Experience in these Departments. By J. C. LOUDON, F.L.S., H.S., &c.

London: William Smith, 113, Fleet Street; Fraser & Co., Edinburgh; Curry & Co., Dublin.

NEW AGRICULTURAL ALMANACK.

On November 24 will be published by the Stationers' Company, price 1*s.*, comprising nearly 100 closely-printed pages.

THE FARMERS' CALENDAR AND DIARY OF GENERAL INSTRUCTION IN THE MOST IMPROVED MODES OF AGRICULTURE AND GARDENING; being an Almanack of Daily and Useful Information for the United Kingdom, for the Year 1843. To be continued Annually. By an EXPERIENCED AGRICULTURIST.

London: printed for the Company of Stationers; and sold by G. Greenhill, at their Hall, Ludgate-street; and by all Booksellers throughout the Kingdom.

⁂ Besides a complete Calendar for the year, including the Risings and Settings of the Sun, Moon, and Planets, the Eclipses, and other Diurnal Occurrences, it will comprise Monthly Directions in Agriculture and in Gardening: a great variety of useful topics connected with these important pursuits; the Fairs of England, Scotland, and Ireland; numerous Tables, &c. Also the Royal Family, the Ministry, Houses of Parliament, and the Principal Official Persons in the Law Departments, Public Offices, &c.

WANTED in an Excellent Retail Seed Establishment at a Market-Town, within 50 miles of London, a young Man as Under Shopman, who has had experience in the business, with some knowledge of Plants, who writes a good hand, and can produce satisfactory testimonials for honesty and sobriety. Apply by letter only to Messrs. Beck and Co., Seedsmen, 67, Strand, London, stating the lowest terms, &c.

TO GARDENERS.—A young Man wishes to engage himself as UNDER-GARDENER, in or out of the house; will be found useful, as he has had eight years' practice. Direct A. M., Mrs. Cleverly's, Lower Cheam, Surrey.

WANTS a SITUATION as GARDENER, or GARDENER and BAILIFF, a middle-aged man, who perfectly understands Horticulture in all its branches; is also well acquainted with the border system of husbandry. References as to character and abilities may be had on application to the Right Hon. the Earl of Tankerville; to William Lowry, Esq., Barmoor, Northumberland; and Messrs. Dickson & Co., Nursery and Seedsmen, Edinburgh.

WANTS a SITUATION as GARDENER, a married man, 35 years of age, with a family of three, who thoroughly understands his business in all the different departments; can have an excellent character from his present employer for the last three years. Wages, 55*l.* a year and a cottage. If by letter, direct A. B., care of Mr. Stains, grocer, Sevenoaks, Kent.

A HISTORY OF BRITISH FOREST-TREES, indigenous and introduced. By PRIDEAUX JOHN SELBY, of Twizell, Esq. This volume gives an account of the useful and ornamental properties, best modes of culture, of the various Forest-trees now grown in Great Britain. It forms a manual for the planter, and an interesting and informing volume for the general reader. Each species is historically described and figured. The Engravings, amounting to nearly 200, represent the perfect tree, and details of the flowers, leaves, and fruit. Demy 8vo, 28*s.*; royal 8vo, 2*l.* 16*s.*

John Van Voorst, 1, Paternoster-row.

THE GARDENER AND PRACTICAL FLORIST.—In Weekly Numbers, Price 3*d.*, and in Monthly Parts, Price 1*s.*, containing all that is new and valuable in Gardening and Floriculture. Published by R. Groombridge, Paternoster Row, by whom Advertisements and Communications for the Editor are received.—Sold by all Booksellers and Newsmen.

In Monthly Nos., 8vo, with Four beautifully-coloured Plates. Price 2*s.* 6*d.*

PAXTON'S MAGAZINE OF BOTANY.

The Number for November, 1842, contains highly-finished drawings of *Rondeletia longiflora*, *Mesembryanthemum tricolor*, *Acacia biflora*, and *Siphocampylus betulæfolia*; likewise Papers on Gardening as a science; on Shrubs fitted for Planting in Beds; and Hints on Potting and Planting: Floricultural Notices of new or beautiful Plants figured in the leading Botanical Periodicals for October; together with a compete Calendar of Monthly Operations for the Garden.

This work comprises, monthly, four admirably-coloured plates, and twenty-four pages of interesting and useful letter-press. The admirers of flowers are requested to observe—

1. That all the drawings are taken from nature, and are consequently made from plants which have flowered in Britain.
2. That, with few exceptions, they are all done by one artist, whose abilities are of the highest order, and who travels himself to the places where the plants are in flower.
3. That they are lithographed by the same individual, and, being coloured in a superior manner, have all the spirit and elegance, and much of the finish, of the original drawing.
4. That about one-half of the drawings are from plants which have never before been figured in this country, the rest representing the most popular novelties, as well as the more neglected, though sometimes far handsomer, old species; the majority being such as can be cultivated by every one possessing a flower-border and a greenhouse or frame.

It may, in conclusion, be safely asserted that, both for the beauty of its embellishments, and the utility of its contents, this work is well adapted to the wants of all who delight in gardening; and as the improved system of having the plates lithographed commenced with the present year, and as it is intended that each volume shall now be perfect in itself, the present is a desirable opportunity for those who wish to become subscribers.

London: W. S. Orr and Co., Paternoster-row.

GUANO ON SALE.—Any Quantity of this valuable MANURE can be had from the bonded stores of the Importer, either in London or Liverpool, on application to Cotesworth, Powell, and Pryor, St. Helen's-place, London; Edwards, Danson, and Co., Liverpool; or Wm. Jos. Myers and Co., Importers, Liverpool.

WHEAT-SOWING.

POTTER'S ARTIFICIAL GUANO MANURE.—TESTIMONIAL:—"The ARTIFICIAL GUANO MANURE was applied with great effect to a light land, on the estate of A. Cotton, Esq., Hildersham Hall, Cambridge, on a Field of Barley; it produced a marked effect—the finest crop for years, and the produce, Six Quarters of Barley to the acre. The space marked out was conspicuous, being some inches higher than that from common Manure. On part of a Grass Field the application, which was but lightly made, produced at least double the proportion of Hay compared to the part otherwise manured. A portion of it was applied to the Orange Globe Mangel Wurzel, the roots of which were of very large size—double that of others,—and its effects on a bed of Parsneps was extraordinary, producing a crop exceeding any before seen. The exact weight per square yard, compared with those of ordinary culture, will be estimated when gathered. In the instance of the Parsneps, the Manure was mixed with earth, and deposited over the seed; a mode of culture recommended in the practice of Mangel Wurzel. Although much higher in price than the common Manure, the profit was materially greater."

Works, Upper Fore-street, London.

TO BE LET, upwards of 13 Acres of Land, in the parish of Acton, well stocked with Fruit-trees. Apply to Mr. Alex. Russell, Lawn-terrace, Turnham-green.

TO NURSERYMEN AND OTHERS.—To be Let, on very advantageous terms, in a very excellent situation, about six miles from London, eight acres, part in Nursery, Flowers, Fruit, and Vegetables; at a low rent, held on lease for 22 years unexpired. Dwelling-house, Greenhouses, Pits, Frames, &c. &c. The stock of Plants, &c. to be taken by valuation, in the usual way. For particulars apply to Mr. John King, Auctioneer, Hackney-road.

TO MARKET-GARDENERS AND OTHERS.—To be Let, a MARKET-GARDEN, containing 20 acres of good Land, in fine cultivation, in a very convenient situation, within a short distance of the London markets; a good Dwelling-house, very convenient and suitable offices for carrying on the business. For particulars apply to Mr. Lake, Seedsman, Bishopsgate-street.

THE GARDENERS' CHRONICLE.

A STAMPED NEWSPAPER OF RURAL ECONOMY AND GENERAL NEWS.
THE HORTICULTURAL PART EDITED BY PROFESSOR LINDLEY.

No. 45—1842. SATURDAY, NOVEMBER 5. PRICE 6d.

INDEX OF THE PRINCIPAL HORTICULTURAL SUBJECTS IN THE LAST NUMBER.

Aberthaw Lime . . . . 726 a

Salt, quantity to apply to Asparagus . . . . . 729 a
Secale cornutum . . . 726 b
Willow, handsome Weeping, described . . . . 726 b

TRENFIELD'S "ADMIRAL STOPFORD," one of the best 12 Dahlias sent out in 1842; darkest yet out; fine shape, and petal constant. Good ground and pot roots of the above Dahlia can be had of J. Meade, jun., Lion and Lamb, Lewisham, Kent. Ground Roots, 1l. 10s.; Pot do., 15s. A remittance from unknown correspondents.

NEW CATALOGUE OF FLORISTS' FLOWERS.

MESSRS. TYSO and SON'S Descriptive Priced CATALOGUE of Ranunculuses, Tulips, Pelargoniums, Carnations, Picotees, Pinks, &c. for 1843, may now be had Gratis on prepaid application, enclosing a twopenny postage label. Address, Messrs. Tyso & Son, Wallingford, Berks.

SPLENDID DOUBLE HOLLYHOCKS.

WILLIAM MAY begs to intimate to the admirers of this justly popular plant that he has been collecting and originating for the last 20 years a Collection of Hollyhocks, not surpassed (he ventures to say) by any in Europe, comprising upwards of 100 shades of colour, from the very dark (called black) to paper white, and the present season being proper for their being planted, he offers them on the following very moderate terms, viz., 100 varieties for 2l. 2s., 75 vars. for 30s., 50 vars. for 25s., 20 vars. for 10s. Also, packets containing 200 seeds, at 2s. 6d.; do. do. 500 seeds at 5s. each; all warranted collected from double flowers.

N.B.—Also May's new large, late Victoria Red Currant, at 20s. per doz.—See Dr. Lindley's remarks *Gardeners' Chronicle* for Oct. 8.

Hope Nursery, Leeming-lane, near Bedale, Yorkshire,
Nov. 1, 1842.

CAMELLIAS, PELARGONIUMS, FUCHSIAS, VERBENAS, &c.

A. J. STEWART, FLORIST, &c., Salthill, has the honour to announce to his Patrons and Friends that he can furnish the following Plants, in fine healthy condition, at the prices affixed, including package.

CAMELLIAS.

Amabilis, Brookii, Cocquettii, Cœlestina, Duchesse d'Orleans, Eliza, fasciculata alba, Forbesii, Henri Favre, Hookerii, Saccoi nova, and Turnbullii, from 15s. to 21s. each, or 7l. the dozen.

Alba Londinensis, Colletii, Cooperii, Dahliæflora ignea, Emilie; grandiflora, Frederic le Grand, Hosackii, Lendrethii, ochroleuca, Palmer's Perfection, picturata, and Susannah, at 10s. each, or 5l. the dozen.

Beallii, Bruciana, elata, Francofurtensis, Grunellii, imbricata alba, Leana superba, pulcherrima, Roulinii, spectabilis, maculata, The King, and tricolor, at 7s. 6d. each, or 4l. the dozen.

Delicatissima, Elphinstonia, Fordii, Futtung, Gillesii, imbricata, minuta, punctata major, Spofforthiana, Sweetiana, triumphans, and Victoria Antwerpensis, at 5s. each, or 2l. 15s. the dozen.

Colvillii, Double White, Double Striped, elegans, Eclipse, fimbriata, Invincible, Pæoniæflora, Rossii, rubrocaulis, speciosa, and Youngii, at 3s. 6d. each, or 2l. the dozen.

PELARGONIUMS.

Wilson's Anna, Enchantress, and Van Amburgh—Lyne's Consort, Circassian, and Magnificent — Foster's Gipsy, Garth's Douglas, Kinghorn's Grand Monarch, Stewart's Prince Albert, Wood's Ivanhoe, and Nairne's Gem of the West, at 10s. 6d. each, or 5l. the dozen.

Foster's Mrs. Garth, Nymph, and Beauty—Garth's Flash and Arabella—Ingram's Ringdove, Gaskell's Dulcinea and Magnet, Stewart's Duke of Wellington, Gaines' Prince Albert, Exquisite, and Mabel, from 5s. to 7s. 6d. each, or 3l. the dozen.

Garth's Amethyst, King John, and Jupiter—Stewart's Tamburini and Miss Hawtrey, Hodges' Caroline, Foster's Lifeguardsman and Vulcan, Fox's Duke of Cornwall, Parsons' Queen, Eyre's Cyrus and Sirius, at 3s. 6d. each, or 30s. the doz.

Gaines' Cerito, Indian Chief, and purpurea grandiflora—Stewart's Mary Guy, Garth's Bridesmaid, Duenna, Elizabeth, and Nonesuch—Foster's Annette, Nun, Janus, and Bridegroom, at 2s. 6d. each, or 24s. the dozen.

FUCHSIAS.

Aurantia, excelsa, Flora, ilicifolia, Moneypennii, princeps, pulchella, roseo alba, stylosa elegans, Thyniana, Venus victrix, and Williamsonii, at 3s. 6d. each, or 30s. the dozen.

Bruntii, conspicua, dependens, formosa (Kelland's), grandis, inflata fulgida, Invincible, mirabilis, splendens, Stewartii, Usherii, and Youellii, at 2s. 6d. each, or 1l. the dozen.

VERBENAS.

Antwerpensis, Barnardii, Burleyana, Chandlerii, Charlwoodii, Grenvillii, Groomeana, Ingramii, Iveryana, lilacina, rosea magniflora, rubra, sanguinea, speciosa, Smith's Superb, Thomsoniana, triumphans, and Unique, at 1s. 6d. each, or 1l. the 18.

Hybrid Rhododendrons, 12 splendid varieties for 3l.
Ghent Azaleas, 12 do. do. for 30s.
Isle de Bourbon and Tea-scented Roses, in pots, 12 do. do. for 15s.
Bengal and Noisette Roses, in pots, 12 do. do. for 10s.
French Roses (dwarf), 50 fine sorts for 25s.
Picotees, 20 fine sorts, one pair of each, for 30s.
Chrysanthemums, 20 first-rate kinds for 20s.
Paulovnia imperialis, each, 21s.

A. J. STEWART respectfully solicits the favour of early orders for the above, and begs to assure those ladies and gentlemen who kindly entrust him with their commands, that the strictest attention will be paid, both in selecting and packing the plants.

A. J. S. can also supply most of the leading sorts of Dahlias, fine ground roots, at very moderate prices.

SPLENDID MULBERRY-TREES, GOOSEBERRY-TREES, PILLAR, STANDARD, and DWARF ROSES, AUCUBA JAPONICA, &c., &c., &c.

W. DENNIS and Co., beg to remind the Nobility, Gentry, and Public generally, that their Plants and Trees of the above articles are unrivalled for size, beauty, and superior quality; and as the season for planting is now excellent, they solicit a share of their favours, assuring them that their kind orders will be promptly and truly executed.—King's-road, Chelsea.

SUPERB SEEDLING PELARGONIUMS, now ready for delivery —Gaines' Duchess of Sutherland, Orange Perfection, Amulet, Pride of Surrey, Lady Duncannon, Royal Adelaide, Prince of Wales, Countess of Eldon, Princess Royal, Graciosa, Emperor, Superb, and Lady Sale. His first-rate Catalogue of Pelargoniums, Pansies, Calceolarias, Fuchsias, Verbenas, Chrysanthemums, Cinerarias, Auriculas, &c., may be obtained by applying to N. Gaines, Florist, Surrey-lane, Battersea.

SOUTHAMPTON NURSERY GROUNDS.—The attention of Noblemen, Gentlemen, Planters, and the Trade, is respectfully directed to the following List of Transplanted and Seedling FOREST TREES, FRUIT TREES, SHRUBS, &c., which are of the finest quality, and will be delivered by Railway or Steam-vessel in London or coastwise, carriage free. The great extent of these Grounds affording a never-failing supply of every description of Nursery Stock, purchasers, however varied or extensive their orders, may rely on their being executed with despatch and punctuality. Waste Lands planted in any part of the kingdom, by contract, engaging to replace failures, for 3l., 5l., 7l., 10l., and upwards, per acre. Capitalists and Trustees contemplating planting for investment, will find this a safe and desirable means of effecting their object.

SEEDLING FOREST TREES, PER 1,000.	1 year.	2 years.

Raspberries, true double-bearing	8 0	per 100
Raspberries, true Yellow Autumn ditto	8 0	„
Raspberries, Red ditto	8 0	„

Trained Peaches, Nectarines, Apricots, Pears, Plums, Cherries, and Apples, of the most esteemed kinds, as described in the "Fruit Cultivator," by J. Rogers, Southampton, 2s. 6d., 3s. 6d., and 5s. each.

Currants and Gooseberries, 12s. 6d. per 100.

Vines, 6d., 1s., and 2s. 6d. each

Sea-Kale Plants	4s. per 100, 8s. per 100.
Asparagus do.,	2s. and 4s. per 100.
New Victoria Rhubarb	12s. per dozen.

* That there are in this country two distinct species of the British Oak, is well known to those who have carefully attended to their respective qualities—one being red-wooded, the other white-wooded, more generally known in the New Forest as the "Durmast," and considered as the most valuable species, producing timber of the largest dimensions. A knowledge of these important facts led W. R., senr., some years since, to ascertain correctly the means of discriminating between the two species, which were found so well defined as to enable him to collect the seed of the desired kind with unerring precision, and likewise to communicate his observations thereon to the Bath and West of England Agricultural Society, who ordered them to be printed in their "Transactions," and their vote of thanks to be recorded for what they were pleased to term most valuable, and, in a national point of view, important information.

Large Trees, for ornament or immediate effect, may be had of every description, from 5 to 10 feet high.

Priced Catalogues forwarded by Post to applicants stating the size and description of stock required.

WM. ROGERS & SON,
Nurserymen, Landscape-Gardeners, and Contracting Planters,
Southampton.

WHITE HART HOTEL AND HORTICULTURAL GROUNDS, BROMLEY, KENT.

W. PAWLEY begs most respectfully to call the attention of the Nobility and Gentry wishing to purchase specimens of Stove and Greenhouse Plants for exhibition to his Collection, which is equal, and not to be surpassed by any Nurseryman in the neighbourhood of London. Catalogues of the Stock will be sent Gratis on application. W. P. also begs to state that the above Hotel has the advantage over many, as the apartments open into the grounds, with additional conservatories attached, rendering it in every respect desirable for Families and parties wishing for a retreat at a convenient distance from the Metropolis, where they may ensure every accommodation and comfort upon moderate terms. Bromley is particularly healthy, and beautifully situated in an excellent neighbourhood ten miles from town.

CHARLES LAWTON & SON, SEEDSMEN AND FLORISTS, Etruria Gardens, Staffordshire Potteries, beg to announce that they have now ready for delivery Strong Plants of their New Seedling PELARGONIUMS, which they can with confidence recommend as first-rate kinds, and distinct from any yet offered:—

Archduke	£2	2	0
Admirable	2	2	0
Enchantress	2	2	0
Delectum	1	1	0
Queen of Sarum	1	1	0

C. L. & SON can supply Strong Healthy Plants of their much-admired Seedlings sent out last autumn—

Queen Dowager	£0	7	6
Elegans	0	10	6
White Lady	0	10	6
Bee's Wing	0	10	6
Fair Maid of Etruria	0	7	6
Eximium	0	10	6
Insigne	0	10	6

Catalogues may be had on application.

DON JOHN and MARTIN'S SPLENDID.—As Mr. Twitchett and Mr. Martin have made so much noise about their CARNATIONS DON JOHN and SPLENDID, will either of them accept a Challenge from the Growers in the neighbourhood of Birmingham to show 20 blooms of GAME-BOY against 20 blooms of either of their flowers respectively for 20l.?—*P.*

T. & C. LOCKHART, FLORISTS, 156, Cheapside, London, have the following SEEDS now ready for sale:—

		s.	d.
The new Spotted Digitalis	per packet	3s.	6d.
Hybrid Gloxinia, between candida and rubra	do.	2	6
Phlox Drummondi, new scarlet	do.	2	6
Clintonia pulchella	do.	1	0
Portulaca Thellussoni	do.	2	6
Rhodanthe Manglesii	do.	1	0
Balsam, a splendid mottled Hybrid	do.	2	6
Lobelia heterophylla	do.	2	6
Heartsease, of the best quality	do.	2	6
Picotee and Carnation	do.	2	6

The above will be forwarded, Post free.—A List of Seeds is now preparing, and will be published about the end of December.

IRISH YEWS.

S. FARRELL and Co. offer to the Trade a large Stock of Irish Yews, from eight inches to three feet high; the Plants are strong and well rooted, and would be disposed of on moderate terms.—Belfast, Nov. 1, 1842.

MICHAEL BREWER, Nursery, London-road, Cambridge, begs respectfully to call the attention of the Nobility, Gentry, and the Public to that invaluable new Strawberry, the EMPEROR. It is a strong grower, a great bearer, and has a fine flavour, with large scarlet fruit superior to Keen's Seedling, with the great advantage of being ripe a fortnight earlier.—Fine strong plants are now ready at 30s. per 100.

Brewer's perpetual scarlet-flowering BRITANNIA Pelargonium, dwarf habit, dark-green foliage, and the brightest scarlet grown, 12s. and 18s. per doz. Strong-flowering Plants of RUSSIAN VIOLETS, 4s. per doz. Brewer's fine early hybrid SEEDLING RHUBARB, from the Siberian, not surpassed for earliness and flavour, strong Roots, 9s. per doz.

M. B. has also a large Stock of IRIS SUSIANA and splendid mixed PERSIAN IRISES to dispose of.

MESSRS. YOUELL and Co. beg to announce the following:—

FUCHSIA ST. CLARE.—This, the most Splendid FUCHSIA yet introduced to public notice, will be ready for sending out in the 2nd week of April next, at 10s. 6d. per plant, postage free, to any part of the United Kingdom, by YOUELL and Co., who possess the entire stock of it. Dr. Lindley's opinion of it will be found in the *Gardeners' Chronicle* of the 14th of May last, as follows:—

"Your Seedling Fuchsia is by far the finest hybrid we have seen; the flower being three inches in length, with the tube and sepals of a bright carmine colour, and the petals of a rosy purple. If, as you say, it is a strong grower and a free bloomer, it will prove a valuable addition to this beautiful genus:—"

Which two latter qualities it possesses in the extreme. All orders, as well as those from the Continent, will receive every care in packing, so as to ensure their perfect safety. The usual discount to the Trade, where not less than six plants are ordered. For further particulars see their advertisement in the *Gardeners' Chronicle* of the 8th inst.

CARNATIONS AND PICOTEES.—A Superb Collection of the above are now being sent out at the following prices

25 pairs	of extra fine first-rate Show flowers,	£5	0	0
12 „	do. do. do.	2	10	0
25 „	of fine Show flowers,	3	0	0
12 „	do. do.	1	10	0
25 „	of extra fine Show Pinks,	1	4	0
12 „	do. do.	0	12	0

The selection being left to Y. & Co.

Who, should it meet the wishes of those favouring them with their orders, will send them free to any part of the United Kingdom, at the extra charge of 2s. per dozen pairs.

A Post-office order, or reference, is respectfully requested from unknown correspondents.

Their Catalogue, containing every known variety worthy of cultivation, may be had by enclosing two postage stamps.

ARAUCARIA IMBRICATA.—Y. and Co., who possess by far the largest stock in the country of the above most noble Hardy Plant, which is in course of planting by most of the Nobility, are executing orders for it in fine strong healthy Plants, at 60s. per dozen.

Great Yarmouth Nursery, Oct. 27th, 1842.

analysis clearly proved it to be, even in the fresh state, a manure of the greatest value.

Madia sativa seems excellent for a green manure; such, at least, is the opinion of M. Bazin. In two months, during favourable weather, and upon tolerable soil, the plant comes into flower—that being the time at which it should be turned into the ground. At that period of its growth, M. Bazin sent us an average specimen of the plant with roots, leaves, flowers, &c.; when analysed, its value proved to exceed, in a slight degree, that of farm-yard manure.[*] A weight of this crop, equal, according to M. Bazin, to 12,500 kilogrammes per hectare, might be readily obtained on moderately good land, during a season which was moister and more favourable to the growth of herbaceous plants than that of 1842.

Branches and Leaves of Box.—We have analysed the young branches of Box, with the shoots and leaves upon them, such as are cut, according to M. de Gasparin, in the south of Europe. This green manure is in some places prepared by being scattered in the streets to be crushed by the horses' feet, and by the wheels of carriages. The amount of nitrogen contained in this manure is very near that of Oak and Beech leaves.

Refuse of the Cider Mill.—With many farmers it is a matter of doubt, whether the crushed remains of Apples may be considered as manure, or whether on the contrary they may not be more injurious than otherwise: both opinons are founded upon positive facts. In soils containing only a small portion of carbonate of lime, their application has generally produced ill effects; and pernicious results have been observed on other land, when the Apple refuse has been buried too near the roots of plants. This unfavourable effect appears to be caused by the acid reaction of the soluble part of such remains; and in fact, if a sufficient quantity of wood-ashes are added to produce a perceptible alkaline reaction, this apparent anomaly is at an end, and the useful qualities of this manure are brought into play, in proportion to the nitrogen which it contains. The liquid with which it is united, and with which it enters into close combination, gives it the property of a green manure, more particularly applicable to sandy land. In Alsace, upon clayey and tolerably calcareous soils, Jerusalem Artichokes have been successfully manured with Apple refuse mixed with the Grape-skins: most commonly Cider refuse is best mixed with the dunghill; in which case, as is usual with all acid substances, it becomes useful in fixing the ammonia.

Exhausted Hops.—This refuse of brewhouses, which but a short time since was everywhere rejected, is now made use of in many places for lightening heavy land. It is greatly improved by allowing it to dry, and by mixing it afterwards with stable-dung. In that state it soaks up the urine, and the quantity of nitrogen being thus increased, it is rendered more beneficial, and helps to counteract the influence of that portion of the organic matter which contains no nitrogen.

Scum from the fabrication of Beet Sugar.—The scum obtained in the manufacturing of Sugar from Beet, is composed of albuminous matters, coagulated by the united effect of heat and lime. This manure produces a decided alkaline reaction; the organic matter which it contains is more rich in nitrogen than dung itself: its reaction and chemical constituents are favourable to the growth of plants. Practical experiments have proved this; when pressed in its moist and unaltered state, 7465 kilogrammes are equivalent to 10,000 kilogrammes of farm-yard manure. The scum, when brought from the press, has a viscous character, which renders it difficult to spread uniformly upon land. To remedy this, it is better to let it dry until it is just friable, when it may be easily crushed by means of a rammer or a vertical mill-stone: it may then be spread in the same way as other pulverulent manures. During the season in which the manufacture of Sugar from Beet-root is carried on (from the end of Sept. until Jan.), the process of drying the scum would be tedious and expensive. It is cheaper to dilute it with water, until it is brought to the consistence of thin soup, when it may be readily mixed with dung; or, if preferable, it might be spread by means of a large scoop, in the same way as liquid manure.

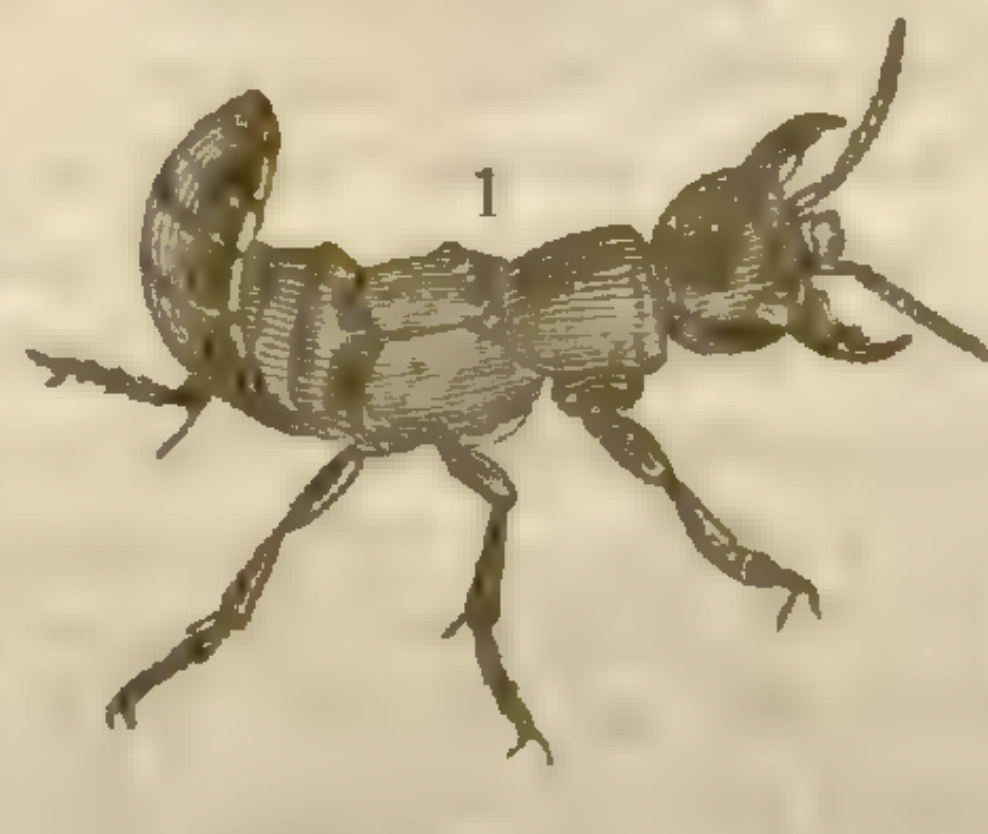
Slices of Beet-root after Maceration.—This refuse is much less rich in nitrogen than the pulp which issues from the press, and it likewise contains a much greater quantity of water; its value, therefore, as a manure is very small. About forty times more Beet-root than dung is required for manuring equal quantities of land. Experiments conducted on a large scale yield the same results. In all cases this has proved a weak manure, and the expense of carriage will, in most instances, render it of little value.

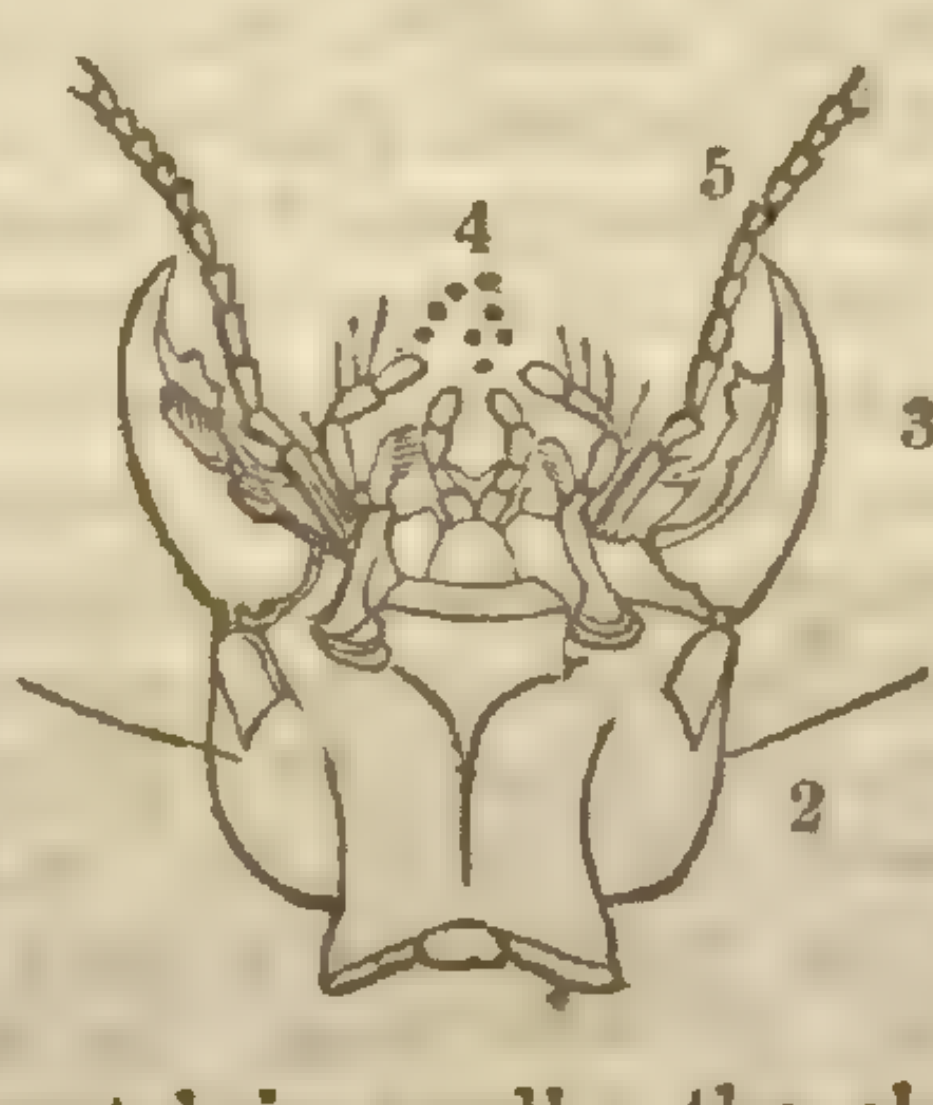
Oilcake.—The most valuable of these which we have lately analysed, are those of the Camelina, Poppies, and Walnuts, which are nearly equal. Next to these are the cakes of Hemp, Cotton, and Beech-mast. The latter, which is very woody, is frequently used as fuel; its produce in oil is very variable. In France the extraction and purification of cotton oil is a recent branch of labour, the refuse of which is likely to prove useful in agriculture; its value, as a manure, being nearly ten times greater than that of common dung.

(*To be continued.*)

ENTOMOLOGY.—No. XXXVI.

Staphylinus olens, the fetid Rove-beetle.—There is an insect which often crosses our path, of such a forbidding aspect, that it ought to have been named Beelzebub; indeed, the common appellation of the peasantry is much more significant in this respect than the nomenclature of the naturalist; for in the country it is generally designated "the Devil's Coach-horse," and certainly if the bulk of this creature were commensurate to its strength and ferocity, it might be well qualified for such an office. When assaulted, or even at the approach of any one, his anger and courage are instantly manifested; he assumes a most formidable attitude, and is ready to defy even man himself: with his broad head erected, and his terrific jaws wide expanded, his six legs spread out, and his tail curled up (fig. 1), he becomes at once an object of terror to the young and ignorant, and indeed to those who have unhappily neglected to make themselves acquainted with the habits of the insect world. However, in the common affairs of life, we must not be carried away altogether by outside appearances; and, vicious as this little animal may be, despised or feared by all, and trampled upon by every one as an odious being not fit to live, it has nevertheless its virtues, its saving qualities, and probably many a gardener will be surprised when he is told that the Devil's Coach-horse is one of his best friends. This will shortly be seen by the history and economy of the insect before us, which is called by naturalists, Staphylinus (Ocypus) olens, a name applied to it by Fabricius, from its disgorging a dark fetid liquor from its mouth when irritated. It is of a dead black colour, thickly punctured all over with the minutest points, and densely clothed with very short but stiff and fine black hairs, which in the sun become iridescent; the head is very broad and depressed, as well as the rest of the body (fig 2, the under side); the eyes are small, and become grey after death; the two horns are rather short, a little tapering, pubescent, hairy at the base, and 11-jointed; the 1st joint being long, the apical one somewhat clawed at the tip (5); the jaws are uncommonly strong and powerful, they can be opened very wide, are curved, with an edge for cutting; and there are two teeth on the inside of each, with a fringed leathery appendage near the middle (3); the upper and under lips, and the maxillæ, form the rest of the mouth, together with the four feelers, which are hairy and jointed; the external or maxillary having 4, the others or labial, which are much smaller, only 3 joints (4)[*]; the thorax is somewhat orbicular; the scutel is small; the elytra when closed are nearly quadrate, and cover the two wings, which are much shorter than the abdomen, and folded up in repose; they are stiff, yellowish, with a few nervures, and are not sufficiently ample to enable the animal to fly; the abdomen is more than half the entire length of the beetle, and tapers towards the apex, being composed of 6 segments, the male I believe having a 7th, with a little hairy process on each side; the 6 legs are strong, the anterior coxæ are very stout and powerful; the thighs and shanks are short; the latter have spines at the apex, and are bristly all over, excepting the first pair, which have spines only on the outside. The feet are 5-jointed; the anterior are short, ovate, dilated, and very velvety or cushioned beneath; the first four joints are heart-shaped, the fifth is slender and clavate, terminated by two claws; the other feet are linear; the basal joint is the longest; length sometimes 1¼ inch.





The larvæ of this beetle are equally courageous, and feed entirely upon animal matter; they live principally under-ground, and in digging the garden I have often met with them in April and May. The perfect beetles are abundant during the whole of September in meadows and wherever Grass grows, and they continue so in some seasons until the middle of October, when we see them in roads and foot-paths, in fields and pastures, where they are often trodden upon during the night, at which period they come out from under stones and other hiding-places, to ramble about for prey. There can be no doubt that many of them live through the winter, as we find them occasionally in the month of March; it is one of the largest Rove-beetles, as the Staphylinidæ are called, in Europe; but it seems to be principally an inhabitant of the more temperate parts; and it is very remarkable that it was never found in Sweden either by Linnæus, to whom it seemed to have been unknown, or to the Baron De Geer; it is said at the present day to be rare in that country, and is only met with in the southern provinces.

Having heard that our Rove-beetle was the natural enemy of the earwigs, I placed one with a few of these insects under a tumbler-glass. It commenced by running round the inside, now and then resting, but it soon seized an immature earwig by the middle, and a full-grown one soon after, just behind the forceps, the back being uppermost; and in an hour and a half it had eaten six earwigs. I observed that it used its fore feet for arranging the fragments of its victims, which it carefully picked, as well as for brushing its mouth, and the antennæ were incessantly vibrating; in about five minutes it had eaten off the abdomen and cleared out the apical segments, the earwig being as full of life as it it was when first caught, and struggling with its feet to get away from its enemy, who turned it round in an instant, and fixing its jaws on each side of the neck, despatched the earwig at once, by separating, in all probability, the spinal cord; it then began to suck out the contents of the thorax, and thus proceeded, dismembering the body, and scattering around the horny and indigestible fragments.

Whatever our prejudices may be, I hope that the foregoing remarks will prevent gardeners at least from any longer persecuting one of their best friends; and it seems probable, if these beetles were collected and placed on beds of Dahlias, &c., which suffer so much in the autumn from the attacks of earwigs, that they would prove the best agents for keeping down those destructive insects, unless they began to destroy each other, which would be less likely to happen where food was abundant; and in digging the borders the larvæ should not be killed, as there can be little doubt that they feed upon the earwigs and other noxious insects.—*Ruricola.*

ON THE CULTIVATION OF THE HYACINTH.

[Directions furnished by Mr. Theodore Storm, of Haarlem, to an English gentleman.]

The Hyacinth is subject to a disease which occasions the destruction of so many bulbs, that the amateur is tempted to abandon the cultivation of this beautiful flower, from the small hopes which he entertains of ever seeing his endeavours crowned with success. Without once taking the trouble to ascertain the truth of his opinion, he imagines that the climate of Holland alone is favourable to the culture of the Hyacinth. I trust, however, that I shall be able to convince him that such is not the case; and that if he will follow the directions here given, he will be able to bring them to such perfection that they will equal those raised in Holland, both in strength and beauty.

The disease incidental to the Hyacinth is a putrefaction of the sap, and the reason of it may be attributed to the following causes: 1st, the want of proper compost; 2dly, too much moisture; and 3dly, want of due perspiration.

Soil.—I shall in the first place describe the best manner of preparing the soil, not with the idea of its being the only proper one, but to give the amateur a rule, by which he may form a suitable compost of such materials as are within the reach of most persons. This should be composed of white river-sand, or such as the hills near Highgate and Hampstead abound with—of well-decayed leaves and cowdung, and of old tanners' bark. The latter must have been previously used by the tanners, and laid in a heap for at least one year, that all the heat may be exhausted. These materials should be well mixed together and frequently turned before they are used.

By what has been said, it may be observed that the soil must be light, fresh, and well mixed, all points of great consequence. Those who have a heavy soil, and cannot easily procure such materials as sand and rotten leaves, may supply the deficiency by mixing one-fourth of their soil with the same quantity of decayed tan; those who cannot obtain tan may increase the proportion of sand or of leaves, either of which articles will supply the deficiency. In the quantity of the light materials employed, you must be guided by the strength or lightness of your soil.

Having prepared a spot according to the foregoing directions, you may plant it with Greens during the summer, or Beans may be sown in preference; because the last serve to mix and unite the particles of the soil, which is a desirable object, since all composts which are not well mixed are of little or no use in gardening.

Moisture.—This being the most destructive agent against which the amateur has to guard, great care should be taken to protect Hyacinths from it, by selecting the most elevated spot in his garden. If this is surrounded by a shallow trench a little distance off, it will be useful; and the bed should also be raised seven or eight inches above the ground level. It must not be imagined that this precaution is useless because many parts of England are more elevated and lie drier than Holland; an opinion too prevalent among foreign amateurs, which occasions them the loss of many bulbs.

In all the treatises that have appeared on the culture of the Hyacinth, this important circumstance has been almost wholly overlooked, from the supposition that foreign countries have nothing to fear from damp. I shall, therefore, point out in what manner moisture is more detrimental in these countries than in Holland. The truth is, the soil, being prepared after the foregoing directions, is very light, and consequently more disposed to absorb the rain and snow which falls between the months of November and March. The paths around the beds being more close and compact, do not absorb the moisture so quickly, which lodges upon the beds, and renders them so wet that they absolutely become like mud to the depth of sixteen or twenty inches. The bulbs having by that time formed roots eight or twelve inches in length, their extremities are continually immersed in water, which, from want of a slope to carry it off, causes the roots to putrify, and to communicate a disease to the bulbs which either totally destroys them, or renders the flowers poor and small. The bulb becomes weak, and when taken up will be found shrivelled and separating into scales. To prevent this, we would advise the amateur, in case of heavy rains or melting snows, to make a gentle descent around the beds to drain off the wet—or to dig small trenches round them, as I have before recommended. The surface of the beds should also be at least seven or eight inches above the common path.

Planting.—When the soil of your garden is dry or elevated, the bulbs may be planted seven or eight inches deep; but if you prefer a strong and vigorous flower to a large and well-nourished bulb, five or six inches will be sufficient. Those who have gardens in towns, where a descent is less practicable, and where the air is more loaded with vapour, should plant them only five or six inches deep. The deeper your soil will permit you to

---

[*] When this green manure is incinerated, its strength is 2¼ times greater than that of the dried straw, analysed after the plant has produced seeds.

[*] Curtis's Brit. Ent., pl. and fol. 758, may be consulted for more detailed dissections and characters of the genus Staphylinus.

MEETINGS FOR THE TWO FOLLOWING WEEKS.

Tuesday, Nov. 15 . . .	Floricultural	6½ P.M.
	Linnean	8 P.M.
Wednesday, Nov. 16 . .	Geological	8½ P.M.
Saturday, Nov. 12 . . .	Royal Botanic	8¾ P.M.

At a recent meeting of the Microscopical Society, a paper was brought forward having so much interest in relation to Horticultural matters that we deviate from our ordinary practice in regard to the proceedings of Societies, by giving it a prominent place in our columns.

The paper was by Arthur Hill **Hassall**, Esq., and was entitled "An Explanation of the Cause of the Rapid Decay of many Fruits, more especially of those of the Apple Tribe." After some preliminary observations, the author stated that, on placing a portion of decayed Apple on the field of the microscope, he was much surprised to observe vast numbers of ramified filaments passing in all directions between and around the cells of the parenchyma of the fruit. "Herein, then," observed the author, "I at once perceived that a satisfactory explanation was afforded of the phenomenon of the decay of fruits, that is, supposing the presence of the ramified filaments to be constant." * * "The ramified filaments were to be regarded as those of a minute fungus, or of fungi, which, by insinuating themselves between the cells of the pulp of the fruit, detached them from their connexion with each other, thus producing a chain of effects as follows: the relation of the cells being disturbed, the process of endosmose can no longer be carried on, and the circulation through the fruit becomes as a consequence either enfeebled or destroyed; the cells themselves being isolated and detached, and the circulation through them interrupted or altogether annihilated, are now unable to maintain an independent existence, and their vitality becoming enfeebled, the laws of chemical affinity are called into operation, gases are generated in the interior of the cells, producing, finally, their rupture, and a decomposition of their contents. Thus, therefore, by the simple and mechanical operation of the fungus alluded to, is the destruction of fruit insured, and a satisfactory explanation afforded of the rapid decay of certain kinds."

"But," continues the author, "it may be asked, is not the fungus, to which allusion has been made, an *effect*, and not a *cause*, of the decay? I am of opinion, for reasons presently to be stated, that it cannot be regarded in any other light than as a cause—not the only one, indeed, but as the principal and exciting cause—of the phenomenon of decay in fruit. All the causes, for there are several minor ones which concur in producing decay in fruits, may be divided into the predisposing, the exciting, and the proximate. Among the predisposing, may be mentioned imperfect development of the fruit, an over-ripe state of it, or a lax condition of the parenchyma, or pulp. The exciting causes are injuries, more especially bruises or contusions, but, above all, the fungus or fungi spoken of, while the immediate cause is impeded circulation, which brings with it the results above detailed."

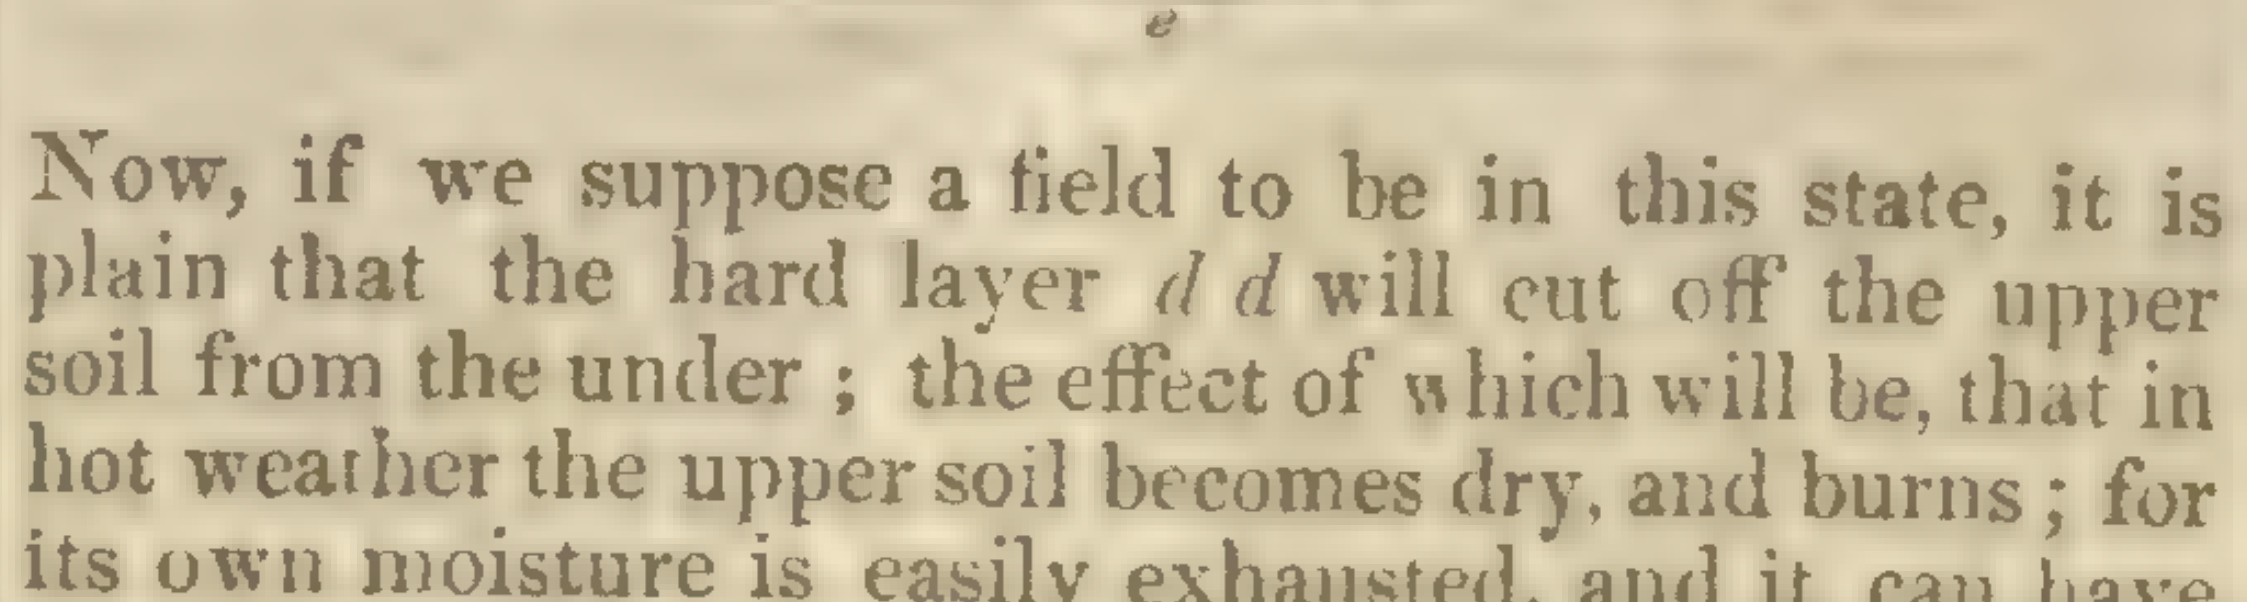
The author next drew a parallel between mortification occurring in the animal frame, and that peculiar form of decay in fruit arising from the presence of a fungoid production, which form he proposed to designate *vegetable* mortification—the only difference between the two forms of mortification consisting in the manner in which the circulation becomes affected in each: in the animal form, it being the result of a vital process, inflammation and its consequences; while in the vegetable form it is the effect of the operation of a mechanical cause, or impediment to the circulation arising from the presence of the fungus.

In order to show how far the presence of the fungus is necessary for the production of decay in fruit, the author endeavoured to explain the phenomenon without reference to it. He said that the decay "affected the soundest and finest fruit, as well as that of an opposite description;" and from this he concluded that the cause, whatever it might be, was of a local, and not a constitutional character. The supposition therefore, that the decay, in those instances in which it occurs in sound fruit, arises from enfeebled vitality of the whole fruit affected, could not afford a satisfactory explanation; since, if that were the case, every part of a fruit, an Apple or Pear, for example, about to pass to decay, ought to be equally and simultaneously involved. Neither would the opinion, that the decay was the result of diminished vital energy in the bruised or injured portion of the fruit, be any more satisfactory; unless it were argued that fruits were subject to an inflammatory process: for how otherwise could the extension of the decay to the sound portion of the fruit be accounted for? "But a third attempt at an explanation," he said, "might be made, on the ground that atmospheric air enters more readily through the bruised portion of the fruit, and that its oxygen, combining with the elements of the contents of the injured cells, formed deleterious compounds, which effect the decomposition of the sound parenchyma; but the falsity of this view is easily proved by the fact, that air is rather unfavourable to the form of decomposition here spoken of, as may be demonstrated by a simple experiment: if Apples divided by a knife be exposed to the air, together with such as are bruised, the skin not being ruptured, the decay of the bruised fruit will result more quickly than that of the simply incised fruit." Mr. Hassall, therefore, seeing the deficiencies of the only explanations which, it appeared to him, could be suggested of the particular form of decay which so generally affects fruits of the Apple and Pear tribes, stated that he was compelled to have recourse, for a consistent explanation, to the fungus which he had that evening introduced to the notice of the Microscopical Society.

Mr. Hassall then described the several stages of development of the fungus, or rather fungi, for several species concur in producing the same phenomenon; dwelt upon the distinction between the ordinary processes of decomposition and that peculiar form of decay which he had denominated vegetable mortification; and, finally, concluded the communication by a reference to the mode of entrance of the fungi within the fruit, and a repudiation of the doctrine of spontaneous generation.

Now that all the great operations of planting are about to commence, it will not be amiss to call our readers' attention to the extreme importance of thoroughly breaking up the land that is to be planted, wherever that is practicable. No error can be more fatal to the success of plantations in many parts of the country, than to imagine, because the surface soil is loose and works easily, that therefore no further disturbance of the land is required. How often we hear of lamentations over plantations perishing because the land burns in the summer, or because it is full of springs and pools in winter, although it is so light!

A frequent cause of these evils is the presence of a hard "pan," a short distance below the surface, such as is represented in the accompanying cut at *d d*.



Now, if we suppose a field to be in this state, it is plain that the hard layer *d d* will cut off the upper soil from the under; the effect of which will be, that in hot weather the upper soil becomes dry, and burns; for its own moisture is easily exhausted, and it can have no assistance from the under soil, all communication with which is intercepted by *d d*. On the other hand, in wet weather the water lodges in the upper stratum, and is equally hindered from getting away. To plant in land of this sort, is a very common occurrence, and may be not unaptly compared to setting timber in a washhand-basin. The crop fails, and the land is abused for being poor, or hungry, or sour, or something else, while the whole blame lies with the landlord. Few things can grow in shallow sand on an iron pan; most trees will do very well on sandy land that is deep. The reason of this too is equally obvious.

Let *e e* represent a section of this land, the pan of which has been broken through by deep ploughing or some such means, so that its fragments are mixed with the soil. In that case it will not burn, because as fast as the moisture on the surface *e* flies off, more is attracted upwards from the inexhaustible supply at *e*. Neither can water lodge in pools in such soil, the nature of which is, on the contrary, most favourable to the washing down of rain and its mingling with the general mass.

Let it not, however, be supposed that the mere breaking up of land, where a pan exists beneath the surface, is sufficient preparation for a plantation. It is perfectly indispensable, but still more is required. There must be drainage—not a few superficial gutters, along which a little water may now and then be seen trickling; but deep, wide drains, with a good fall, and a sufficient number of them to rid the land entirely of stagnant water. Plants cannot succeed, unless they are amphibious, like the Alder-tree, if their roots have not free access to the air; such access is cut off when the roots are clogged with stagnant water. Moreover, a wet swampy soil produces watery shoots and spongy timber, which is long in consolidating, and which is sure to suffer from hard winters or late frosts, even although it may be Ash, and Oak, and Elm.

Some persons may cry out at the expense of such preparations for planting as we are thus urging them to adopt. They may assure us, that, "in extensive operations, they are quite out of the question, and so forth." But they cannot be more entirely mistaken. Planting in any way necessarily involves a long and considerable outlay of capital; and it is a most unwise economy which leads a man, after having incurred a heavy charge, to refuse so much more in addition as *will insure success*, especially when withholding it is *to insure failure*. It is infinitely better not to plant at all, than without all those reasonable precautions which the nature of so important an operation demands. If we ever permitted ourselves to be personal in our remarks of this nature, we could at once point to instances enough where thousands of acres are as naked now as they were twenty years ago, although they have been all planted and replanted at a vast expense, but, unfortunately, without subsoil ploughing and effectual draining. Anybody who knows the country near the Southampton Railway may find such instances without great trouble.

It is not for us to tell the gentlemen of England what the cost per acre of subsoil ploughing may be, for that they know much better than we do; but we may take the liberty of explaining that, so far as the operation of draining is concerned, nothing more than open trenches need be formed, the soil from which can be cast on the intervening surface right and left. It is easy to keep such trenches open when the labourers are engaged in hoeing up the weeds, an operation which is also much more necessary when plants are young, than seems to be supposed, if we are to judge from many young plantations, which are more like the garden of the sluggard than anything else we can compare them to.

We some time since, at p. 603, gave a short account of the leading points of Mr. George Crawshay's method of managing the Vine. We there stated that the roots received no encouragement from manure of any kind, but depended entirely for their support upon the goodness of the natural soil.

From this statement, many persons may be led to suppose, that the preparation of Vine borders is a matter of secondary importance, and that if Vines will grow luxuriantly in one place without the natural soil being disturbed, they will thrive equally well in another. But we entertain no such opinion. The superiority of Mr. Crawshay's Grapes only shows what judicious treatment, united with a favourable situation, can effect. The soil of that gentleman's garden is of a strong loamy nature; and if such a soil is properly drained, it is difficult to name one better suited for gardening purposes in general; but without attention to that essential point, luxuriant vegetation would vainly be expected. The formation of Vine borders, therefore, remains of the greatest importance, when either the situation or the natural soil is unfavourable.

We have lately had another opportunity of inspecting Mr. Crawshay's Grapes, and we find our former assertions of their excellence to be fully borne out by their present appearance. The regularity and size of the berries are remarkable; their ripeness and flavour are all that can be desired; and they exhibit that ruggedness of skin which is one of the principal characteristics of a good Black Hamburgh.

At this season of the year, the open spaces between the laps of glass are of essential benefit; the currents of air passing through them preventing that condensation of moisture upon the glass, which always takes place in closely-glazed Vineries when shut up at night.

The following is the treatment which is adopted now that the Grapes are ripe: air is admitted to the houses every morning between 8 and 9 o'clock—in fine weather, both in front and at the top; in rainy days, by means of the front sashes only. When a frost occurs of sufficient intensity to render fire-heat necessary, just so much is applied as will keep the temperature of the house at 35°.

Some of our readers have doubtless had an opportunity of inspecting the Grapes in question, at the meeting of the Horticultural Society on Tuesday last; Mr. Crawshay, however, invites those persons who were unable to see them at Regent-street, to view them upon the Vines at Colney Hatch.

A SECOND MEMOIR ON MANURE.—By Messrs. Boussingault and Payen.

(Abridged from the French).—Continued from p. 724.

Leaves in Autumn.—We have chosen the season at which leaves fall from the trees, because that is when they effect their purpose as a manure. Amongst forest-trees, the leaves of the Oak and Beech are of the same value; they are equal to at least three times their weight of common dung. This shows, 1st, The improvement which is effected upon the surface of the earth by the natural decay of leaves; 2d, The injury done by their removal; 3d, The powerful inducement thus held out for conveying them upon land which it is desirable to render fertile. The value of leaves as a manure is established beyond all doubt in Alsace, in the villages adjoining the forests. In those places the cattle get no other litter; and did most good, the plant treated with it coming into flower latest, growing and blooming stronger, and continuing longest in flower: the others, as they followed in succession, were all superior to one watered with pure water only. One dressed with ¼ inch of the dung of domestic fowls was inferior to those dressed with the saline substances, but superior to the one with pure water; while another watered with a solution of the same twice a week, was little improved. The plants were all very fine, and displayed the effects of superior cultivation. As a proof of the avidity of this plant for nutriment, I may mention one which I saw at Sir Wm. Maxwell's, of Calderwood, this season, which had been grown on an old spent hotbed, and instead of the roots being confined in a pot, they luxuriated amongst the rotted manure. It formed an immense large bush several feet in circumference, the whole being one mass of bloom.—*R. Lymburn.*

Experiments upon striking Cuttings in Brickdust.—I beg leave to communicate for the benefit of your readers a successful experiment which I have practised; viz., rooting cuttings of exotic plants in common bricks reduced to powder. In a memoir upon the cultivation of French Pears in Scotland, my late father, G. Drummond, twenty years gardener to Sir R. Preston, Bart., has shown, when the soil in fruit-tree borders is copiously mingled with lime, plaster, brickbats, white sandstone, whinstone, and other stony matter not impregnated with iron, it has induced an early and more abundant produce; causing also the emission of an abundance of fibrous rootlets. The latter occurrence is also strikingly discernible when such substances are either mingled with the soil in which plants are to be potted, or when used as drainage. Whether such substances act as a manure, as some authors assert, or whether they retain moisture alone, I will not pretend to decide; but certain it is the roots adhere to them with avidity. From these facts it occurred to me, that cuttings properly prepared might root freely in these substances; in which expectation I was not disappointed. My first trial was with the Heliotrope, for which I used common bricks that had not been over-burned, first reducing them to powder, and filling a shallow seed-pan fifteen inches in diameter, the coarser particles being placed at the bottom as drainage; the cuttings were then planted over the whole surface. These were firmly rooted in a shorter time than others planted amongst sand, loam and sand, or leaf-mould and sand, although receiving the same treatment, with this difference—that those in the brickdust required less water. Brickdust, being an absorber and retainer of moisture, requires but a small quantity of moisture; therefore, the larger the pan is, the more holes there should be in the bottom, and the coarser should be the substances used for drainage. Should the brickdust become too damp, it may be partly remedied by placing the pan on slate, or any other black body, without abstracting the heat, as a black substance absorbs heat freely, but readily parts with it to surrounding bodies. If a cutting-pot or pan were blackened, it would perhaps be greatly in favour of the young plant; but this experiment I have not yet tried. From the success attending the cuttings of the Heliotrope, I ventured to try those of various plants, such as Pelargóniums, Fúchsias, Roses, Euphórbia jacquiniflora, Ipomœa Léarii, and Passiflora Loudonii, all of which rooted freely. I had intended to try cuttings of Epacrises, Ericas, and other hard-wooded plants; but having left my situation, I have not at present the opportunity of carrying on such experiments; any person, however, who has it in his power to extend this experiment, will perhaps insert the results in the *Gardeners' Chronicle*. If approved of, and brought into general use, a saving of heating material will be the consequence, because more cuttings can be rooted in less space. When brickdust is used, it matters not what the diameter of the pan may be; the cuttings can be planted over the whole surface with little fear of their damping off. The pan should be plunged to the rim in leaf-mould, and freely exposed to the sun in a hot frame, that the brickdust may acquire a certain degree of heat and moisture before the cuttings are put in, and when planted, they should be immediately taken back to the frame. If the hotbed is made on the same construction as for early Melons or Cucumbers, rather rough leaf-mould, to the depth of four inches, may be spread upon the surface, and upon that three inches of pounded bricks; if this is rendered firm and level, the cuttings may be planted out upon it in rows. This method is well adapted to extensive places where a great number of plants are required in spring to decorate the flower-garden. It must be remembered that shading is essentially necessary.—*Robert Drummond, late flower-gardener, Howick Hall, Northumberland.*

Effects of the late Hot Summer.—This season has had a remarkable effect upon some of our early-flowering plants; many that were not expected to be seen before next spring have appeared in autumn. We have had a beautiful bloom from the double-flowering Caltha palustris, Tróllius europæus, double Hepaticas, Lupinus polyphyllus, &c.; nor has the flowering been altogether confined to herbaceous plants, an Apple-tree of the Ribstone Pippin, with an abundant crop upon it, having in various parts put forth its blossoms. The appearance of the tree is beautiful, bearing a plentiful crop of Apples decorated with flowers.—*Peter Mackenzie.*

Guano.—While in the Isle of Man a few weeks ago, I witnessed the peculiar effects of guano on various vegetable products. On the White Belgian and other Carrots the action was decidedly bad; on Mangel Wurzel and Turnips it was extremely favourable; and on various Grasses the effects were astonishingly good, and the produce seemed to be altogether extraordinary.—*J. Murray.*

Soot, &c.—You express a doubt in your "Notices to Correspondents" touching the adulteration of Soot. One would, certainly, least of all, suspect adulteration in this article; but I am informed, on good authority, that this is effected to a remarkable extent. You suggest the application of acid for the detection of lime, when mixed artificially with bone dust, a phosphate of lime; but this test would yield no effervescence with "quicklime," and would only apply in the case of a carbonate, such as chalk, &c.—*J. Murray.* [We are not aware that quicklime is ever mixed with bones. It is, we believe, in all cases some salt of lime.]

Test for the presence of Ammonia.—As, in the operation of "fixing" ammonia in liquid manures, trusting to the absence of the ammoniacal smell is a very uncertain proof of the saturation of the ammonia by the sulphuric acid, the waste of acid may be readily avoided by the use of a strip of paper which has previously been rubbed over with the petals of the common Mallow, Malva sylvestris. When this paper is dipped in the liquid manure, the dull red stain of the paper will turn green if the ammonia predominates; but of a bright red if too much acid has been added. These changes may be seen notwithstanding the stain from the manure water. As a test paper for chemical purposes, I prefer this to all others.—*Lusor.*

Cultivation of the Potato.—I was induced to try the plan of planting some Potatoes with the eyes burnt, as directed by your correspondent at p. 253, and some others untouched, at the same time. The latter gave by far the greatest produce. Perhaps other correspondents may have tried the same experiment. The following is, I think, a further proof of the burning process being injurious:—The gardener of Mr. J. H. Webb, at Winstanley House, Walton-le-Dale, planted 20 Potatoes of the Kemp kind, whole, and without any extra care in the cultivation. The produce has been nearly 200 lbs., being little short of an average of 10 lbs. a set. One of the sets produced 16 lbs. weight; and 10 of the Potatoes, taken from the lot, weighed upwards of 12 lbs. Many of the roots were extremely prolific, and numbered considerably above 100 Potatoes to each. The question of planting whole sets has been much canvassed of late: this may be taken as an instance in which the plan has been successfully adopted.—*Facile.*

Old Cabbage Seed.—Before troubling you with the question about the "Old Cabbage Seed," p. 729, I took great pains to learn what I could respecting it from its possessor, in whose garden I saw the plants growing. I am, therefore, able to tell you, that he keeps the seed in half-pint glass bottles, taking care to put it in very dry, and when warm. The bottles are sealed, and only opened when the seed is wanted. Although he saves seed every year, he always sows a pinch of that saved in 1829, of which there appeared to be an ounce or two left. He says that he cannot trust the newer seed. The Cabbage raised from old seed has the merit of never running until it has been once cut, and has so much local celebrity, that the grower is reported to make 15*l.* or 16*l.* a year by it, at 6*d.* a hundred. I believe he never parts with the seed.—*An Original Subscriber, Farnham.*

LADIES TURNED GARDENERS.—(See p. 725.)

Not so, Mr. Peter Mackenzie—I vow
I saw the fair maids take their stand;
'Twas Betty, the housemaid, with besom, I trow,
And cook, with her ladle in hand.

I saw—though you couldn't—the carpet they bore,
To be beat by the gard'ner and groom;
And I loved their bright eyes and red elbows the more,
As they brandish'd the ladle and broom.

The mistress, the while, sits in bower and hall,
Her needle and scissors to ply,
Directs and controls the whole household withal,
Finding brains for the awkward and shy.

And such be our Eden—not Milton's, I own,
Where each finds his proper estate;
The man to the plough, and the maid to the loom,
And the mistress watch early and late.

Let Adams go delve, and the Eves learn to spin,
And banish the hoes and the rakes;
Then Eden—a nice tidy home—we shall win,
Whilst we play for this best of all stakes. P. P.

To Bloom the Coral-tree in the Open Air.—I expect that many of your readers will be glad to hear that this beautiful plant can be successfully flowered in the open ground. In the spring of last year I planted a young plant of Erythrina laurifólia against a wall, in a sheltered south-east border; where it threw up two shoots about two feet high, and flowered freely. Before winter it was cut down to the root, and well covered with peat-mould, which was removed in the spring; after it had been uncovered for some time, a small hand-glass was placed over it, to hasten its growth. It threw up two strong shoots, one 4 feet high and 2¾ inches in circumference, the other a few inches shorter; which bore upwards of 120 flowers, for size and depth of colouring exceeding those grown under glass. As the E. laurifólia flowers more freely than the E. Crista-galli, it is better suited for out-door cultivation.—*J. Abell, Limerick.*

Stocks for Roses.—I strongly recommend all amateur Rose-fanciers to use the Bengalensis as a stock to bud upon, in preference to the Briar; the former has the advantage of being an exceedingly free grower, easily propagated by cuttings, and not apt to canker. The Briar, when at an advanced age, is liable to become bark-bound and diseased, which I have found is not the case with the Bengalensis. This climbing sort is perfectly hardy, but difficult to bloom well; when it does blossom kindly, it has magnificent flowers, very large and double, the centre being of a beautiful blush colour. I have heard it called also the Boursault: the former is the most familiar name. When the Bengalensis is to be worked upon, any soil will suit it; but when it is required for blooming, it should be grown in a warm situation in earth of a loose gravelly nature, and upon a single stem.—*W. W.*—[We are aware that the *Boursault* Rose makes an excellent stock to bud upon.]

Goats' Milk.—With regard to an article in a late number, a correspondent informs us, that it was formerly—and for aught he knows, may still be—customary for families in Bombay to keep one or two goats to supply milk for tea. The milk of goats is greatly preferred to that of cows; the cow being supposed to be a very uncleanly-feeding animal. The butter-makers manufacture their butter from cows' milk. No English family kept a cow for that, or any other purpose. Buffaloes' milk was much used by the Natives, and was not disliked by the English. It was reckoned to contain more saccharine matter than that of cows. Another recommendation is, that the buffalo is a very cleanly animal. Goat mutton is not much eaten by the English; the kids are a very delicate meat, and are held in great estimation. Our correspondent adds that, when at the Cape of Good Hope, he knew an infant child of an officer in the E. I. Company's Service, which was for several weeks suckled by a goat, the mother being unable: he thinks that the goat also wet-nursed the child on the passage to Bombay. On the subject of milk, our correspondent further informs us, that, having at Poonah a sucking calf-elephant, he had a mind to taste the milk of that animal; and with that view he stooped under the dam, and proceeded to suck. The calf, however, perceiving the process, and suspecting, peradventure, some invasion of his rights, trotted briskly towards the invader, who, apprehending a rough interruption of his proceeding (for his back offered a very inviting surface for the application of the young one's trunk), stepped as briskly aside under, if he recollects rightly, the belly of the patient dam. The calf resumed uncontested possession of his rights and place, and sucked with his mouth, like any other calf, not with his trunk, as some may suppose. As far as the intruder could judge, and can recollect, the milk of the elephant is very sweet and viscous.

Ivy on Houses.—In confirmation of *your* opinion on the above, I state that I have lived ten years in a house partly covered with Ivy, and I find the covered parts to be the driest, warmest, and coolest inside the house. *Outside*, beneath the Ivy, the flower-border is like dust in winter; and the grass-lawn is not green in spring, from absence of moisture, which the drip conveys many inches from the wall. For my own part, as regards dryness, warmth, and coolness, I would as soon have a well-ivied wall as an extra half-brick, or a coat of cement.—*John Henry Turlitt, Vicar of Powick, Worcester.*

PROCEEDINGS OF SOCIETIES.

HORTICULTURAL SOCIETY.

R. W. Barchard, Esq., in the chair. R. Barclay and T. Bridges, Esqrs., were elected Fellows. A communication was read relative to a new plan of constructing pits for the growth of Cucumbers, &c., from Mr. Berry, gr. to the Right Hon. C. S. Lefevre. The pit in question differs from the common pigeon-hole pit in having, instead of that contrivance, a warm air chamber or close flue, which commences at the foundation and is continued all round the pit to the height of three feet—the depth of the pit below the ground level. In building this flue, a cross brick is now and then laid in, to give stability to the wall. The back and end flue are covered in with a course of brick on bed laid across, which projects one inch beyond the other brickwork on the outside, and serves as a rest for the boarding, which conceals the lining. The front flue is covered by one brick laid across and one lengthwise alternately on the outside course; thus an opening is left between each cross-brick for the egress and ingress of air to the cavity of the flue. In order that the air may take an inward direction, and also to prevent rubbish from falling into the flue, narrow pieces of slate are fixed in the joint above the cross bricks. In the back flue and under the centre of each light, an opening, about a foot long, is left; upon which, the ventilation passage, in the shape of a thin box, is formed by the back wall and two pieces of slate, so placed as to discharge the warm air towards the plants at six inches' distance from the glass. Below each rafter, a nine-inch duct is sunk in the floor, which communicates with the bottom of the cavity in front of the back flue; so that a current of air from the duct may supply the place of the warm air, which makes its escape to the surface amongst the plants. This pit, which has received the name of the Heckfield pit, has given great satisfaction in the culture of Cucumbers, Melons, and young Pine plants.—Mention was also made of a fine-looking Grape, called the Royal Albert, received on the 13th of October last, from Mr. J. S. Brock. The bunch sent weighed 2 lb. 2 oz.; the berries were large inclining to oval, purple, and possessed a fine bloom; the skin was moderately thin, flesh juicy with a little crispness; scarcely so rich as a well-ripened black Hamburgh, but could perhaps be grown to equal perfection with that variety.—The principal objects of exhibition were a collection of plants from Mr. Goode, gr. to Mrs. Lawrence, consisting of a handsome specimen of Aphelandra cristata, with six heads of bright scarlet flowers; Erica hyemalis, bearing a countless number of its delicate tubes of rosy purple and white; the showy Gesnera zebrina, one of the best of its genus; the well-known Helichrysum proliferum, and a cut specimen of Passiflora quadrangularis. A Banksian medal was awarded for the Aphelandra and Gesnera. From Mr. Jackson, six well-grown Heaths, viz., E. caffra, covered with a profusion of diminutive white bells; E. transparens superba, with pellucid flowers of pink and greenish white; E. acuminata longiflora, light crimson; E. Sebana purpúrea, with curious prominent stamens; E. virescens and E. cerinthoides. Mr. Appleby, gr. to T. Brocklehurst, Esq., sent a very interesting collection of cut Orchidaceous flowers; amongst which were a splendid specimen of the showy Cattleya labiata, the rich violet of the perianth being strongly contrasted with the bright claret colour of the labellum; a spike of the lovely little Saccolábium guttatum; Bolbophyllum barbigerum, a most singular plant, whose flowers are of a deep chocolate colour and of diminutive size; one part protruding in the form of a chin, and bearing upon its extremity a long and finely-feathered beard, which begins wagging upon the slightest breath of air passing over it: there were, moreover, a large specimen of Oncidium Wentworthianum; Miltónia Clowesii, with chocolate markings upon a dull yellow ground, the central parts of the labellum being of a deep purple gradually passing off into white towards the margin at the first expansion of the flower, but afterwards changing to a light salmon colour; and several others. A Knightian medal was awarded for them. C. B. Warner, Esq., exhibited a species of Tillándsia, pretty on account of the pleasing contrast between the scarlet colour of the bracts and the yellow tint of the unexpanded flowers; a certificate was awarded for it. From Sir C. B. Monck, of Belsay Castle, were small branches of Abies Douglásii, bearing cones, supposed to contain perfect seed; should such be the case, this valuable timber tree will in a few years become more abundant than could otherwise have been the case, on account of the difficulty met with in procuring the seeds from foreign trees; with these were also specimens of the cones plant, the better and stronger your bulb will be; but in no soil ought the depth to exceed eight inches.

Frost.—Frost is alone detrimental when it comes in contact with the bulbs; therefore they should be protected in proportion to its intensity. Those who have bulbs of great value may lay thin planks of wood over the surface when the frost is very intense; but care must be taken not to cover them too deep, especially with the leaves of trees; because these coverings retain the vapour which arises from the soil, and hinders the air from entering and purifying it.

A frost that penetrates only three or four inches deep, is preferable to too mild a winter, or to the injury and inconvenience sustained by too much covering.

Those who have valuable collections tie up the stalks to small sticks, and put an awning over the bed to shade the plants during the hottest period of the day, thereby preserving the beauty of the flowers, especially those of a bright red colour. At the same time, they take the precaution not to extend it over the whole bed, and only to use it from nine or ten o'clock in the morning until four or five in the afternoon; because whatever contributes to lengthen the stalk and leaves, weakens the bulbs and renders them poor and small.

(To be continued.)

WEIGHTS OF FINE HORTICULTURAL PRODUCTIONS.

Pine-apple, *Queen:* No. 1, weight 4 lbs. 4 oz.; length, 7 inches; breadth, 5½ inches; number of pips in depth, 9.—Nos. 2 and 3, weight of each, 3 lbs. 14 oz.; length, 7 inches; breadth, 5 inches; number of pips deep, 9—crown, in all cases, small. Grown by Mr. C. Judd, gr. to Geo. Knott, Esq., Barnet, Hertfordshire.

Grapes, *Muscat of Alexandria:* weight of bunch, 2 lbs. 1 oz.; estimated number of berries, 190; average weight of each, 2¾ drs. This, with three other bunches of equal excellence, was grown by Mr. Roberts, gr. to M. Wilson, Esq., of Eshton Hall, Skipton, Yorkshire.

Grapes, *Black Hamburgh:* weight of bunch, 1 lb. 2 oz.; estimated number of berries, 60, giving an average weight of 3 drs. each. Grown, without fire-heat, by Geo. Crawshay, Esq., Colney Hatch, near Muswell Hill.

Grapes, *White Nice:* weight of bunch, 4 lbs. 3 oz.; being about 16 inches long, and the same width across the shoulders. Grown by Mr. Roberts.

Pear, *Marie Louise:* weight, 12 oz. 5 drs.; length, 4½ inches; breadth, 3½ inches; well formed. Grown by J. Silver, Esq., jun., St. John's Wood.*

Pear, *Althorpe Crassane:* weight, 12 oz.; length, 3¼ inches; breadth, 4 inches. A handsome fruit, from a standard, grown at Delamere House, Northwich, Cheshire.

Apple, *Beauty of Kent:* weight, 16 oz. 2 drs.; length, 4¼ inches; breadth, 4¼ inches. Grown by J. Silver, Esq.*

Apple, *Mayfield Pippin:* No. 1, weight, 17½ oz.; length, 4 inches; breadth, 4 inches—No. 2, weight, 14¼ oz.; length, 3¾ inches; breadth, 3½ inches. Grown by Col. Willard, Eastbourne.*

Apple, *Northern Greening:* No. 1, weighing 13 oz.—No. 2, 12¾ oz.—and No. 3, 12 oz.—all perfectly-formed fruit. Grown by Col. Willard.*

N.B. The Apple and Pear mentioned in our last notice of these productions under the name of G. O'Grady, were grown by Mr. T. Buttery, gr. to F. R. Symonds, Esq., Norbiton Park, Kingston.

AMATEUR'S GARDEN.—No. XLV.

The lovers of gardening, as well as the painter, have doubtless admired the varied and beautiful tints which a forest of deciduous trees presents to the eye before the fall of the leaf in autumn; indeed, that taste must be of a rude and uncultivated kind which can *only* admire gorgeous flowers. I would therefore recommend a few plants to the notice of the amateur, who may now be making alterations in his pleasure-ground or shrubberies, which are particularly striking and ornamental on account of the beautiful colours of their foliage in autumn. There are various kinds, common in all the nurseries, from which a selection can be made; their leaves changing to yellow, red, purple, and all the intermediate shades, and contrasting finely with the deep green of Rhododendrons, Laurels, and shrubs of that description. The common Virginian Creeper (Ampelopsis hederácea) is well known, and is one of the best for the purpose when a trailing plant is required. Then there are some of the Rhus tribe, such as R. radicans and R. Cotinus, which are shrubs of great beauty; the latter, in particular, produces tufts of curious and very ornamental flowers. Rhus typhina, the Stag's-horn or Virginian Sumach, grows from 12 to 20 feet high, bearing large pinnate leaves, which are very ornamental throughout the summer, as well as when they change colour in the autumn. The "Toothache tree" (Xanthóxylum fraxíneum) is another plant, which, with many others with which the amateur is acquainted, can be planted with the same view as those already noticed. A very few plants of this description will produce the desired effect; but they must be arranged with some degree of taste, for much depends upon this. In some corner of the shrubbery, for example, at a considerable distance from the windows of the sitting-room or other point of view, an object of this kind is extremely striking and interesting; but this in a great measure must be left to the good sense of the amateur, for it is not possible, here, to give anything else than general directions, so much necessarily depending upon surrounding circumstances. By attending to these hints, however, the varied changes in nature may be more fully enjoyed;—in the declining year, as well as when the leaves are fresh and green in April and May. I have in some of the former Numbers already alluded to the ornamental appearance of the fruit of some of the varieties of Hawthorn and other things in the autumn months, which may be selected and planted now.

In all those parts of the country where the late frost has destroyed the beauty of the flower-borders, such plants as Verbenas, Petúnias, Heliotropes, &c. may be cleared away and the ground made ready for digging. Sálvia patens, where it will not stand the winter, should be taken up and packed away like Dahlias, or in a box amongst dry sand. Where the propagation of any of the pretty flower-garden things has not been successful—such as Anagallises, for example, which are apt to flower too freely, and prevent good cuttings from being got,—the old plants may be taken up and kept until spring, when young ones can easily be struck. The same remark applies to many other plants.

Fires must now be used to keep the frost from greenhouse plants. Whenever the thermometer sinks below forty degrees at eight or nine o'clock in the evening, the fire should be lighted. Give abundance of air during the day, but always shut up early in the afternoon whenever there is any danger of frost: if the sun shines, the house in this way becomes warm, and less fire is required. —*R. F.*

HOME CORRESPONDENCE.

Pruning Apple and Pear Trees.—In Mr. Hayward's communication, page 709, he says—"My Pear-trees are on Quince stocks. I have never pruned the roots, nor do I ever shorten the branches, and I have no wood-spurs. My dwarf espaliers stand about 4 feet high, and the head is about 4 feet in circumference. My wall-trees occupy about 200 superficial feet of wall. I have just gathered from a dwarf standard above 200 Pears." Mr. Hayward will, I am sure, excuse me if I say I do not understand the whole of the above extract, and I should feel obliged for further information from him. What is the diameter of the head of the dwarf standard? How many wall-trees occupy about 200 superficial feet of wall, and what are their kinds? what is meant by the head of an espalier being "about four feet in circumference?" and in what manner would he train, and to what dimensions limit, dwarf standard Pear-trees, grafted on Pear stocks, if he would never prune the roots or shorten the branches? It is said that many Pears will not do so well on Quince stocks; some, I know, will not, and almost all mine are on Pear stocks. These indicate no disposition to confine themselves within anything approximating the limits of Mr. Hayward's trees, nor of my wishes. I repeat therefore, that I shall feel obliged to Mr. Hayward if he will answer my questions, and also put me in the way of setting bounds to my trees without root-pruning or shortening the branches. In the same article, Mr. Hayward says—"I have, in two different publications, explained what experience induced me to conclude" were the laws which determine fructification. I possess his "Science of Horticulture," and his "Science of Agriculture." Is there any other alluded to?—*Ravenswood.*

Borders for Wall-trees.—Our weekly instructor, Mr. Whiting, in the last *Chronicle*, gave us some good, plain, and easily-understood remarks on the structure and substance of borders for wall-trees. Among other things, he says that no stimulating manures are required for them. In that I should be ready to agree with him, did he not quite overlook one very prevalent evil which is gaining ground nearly everywhere, namely, cropping the borders with other things, for which stimulating manure is absolutely requisite, such as Peas, Cauliflowers, Lettuces, Endive, French Beans, &c. How, in such cases, is manuring to be avoided? It is well known that not one gardener in a hundred can avoid using his wall-borders for such purposes; and yet that is not the worst of the matter. A nobleman or gentleman builds expensive walls, makes expensive borders (if need be), plants expensive trees, and expects abundant and delicious fruits; yet, with all this, the border must be loaded annually with other crops, to produce which not only manuring, but digging is absolutely necessary. I cannot here argue the point, in what degree—or whether at all—Peas, Cauliflowers, or Lettuces absorb the peculiar nourishment which a Peach or Apricot tree requires; nor is it necessary: my chief objection is to the digging. Mr. Whiting begins his remarks by stating, that "of late years the beneficial effect of confining the roots near the surface has begun to be appreciated." Such beneficial effects have been appreciated for many years; but the difficulty lies in realising this important point. The general practice is, to take particular care that no wall-tree root gets nearer to the surface than a spade's length,—say, 10 inches or a foot,—and to load the surface with green crops, as if in terror that the delicate fibrous roots of our wall-trees should imbibe the pernicious influences of light and air!! It is the digging I protest against; and yet I do it yearly, and many times in the year—I cannot help it. Yet many of us, with all this absurdity and ill-usage constantly staring us in the face, and committed by our own hands, will wonder, and grumble because our trees do not do well, after all the trouble and expense of walls, and borders, and what not. Why, really, the wonder is they generally do so well as they do; and under such management, in some soils, it is not consistent with common sense to expect success. Now, the question is, How is all this to be remedied?—I opine it would require a "Radical Reform" in the extent and management of gardens; but the question I do not mean to answer; I rather leave it with yourself, Mr. Whiting, or others of your intelligent correspondents.—*Quercus, Oct.* 27, 1842.

American Blight.—If Mr. Thomson had tried the American blight with sulphuric acid dissolved in seven times its quantity of water, I think it would have proved effectual. When well rubbed into all the crevices, which showed whiteness, in the spring, it has banished the blight from all plants; formerly, we had to burn those trees which were infested.—*R. Lymburn.*

Preservation of Fine Wall-fruit.—I herewith transmit a specimen of a purse or bag, for preserving fruit from wasps; it is made from open gauze (called leno, I believe, in the shops), its price being about 6*d.* the square yard, from which quantity at least 30 bags may be made; these have a running string along their margin for fixing them to the stalk. I have used them for more than three years, with never-failing protection from every insect: for if one should have gained entrance from the open mesh of the gauze, it is soon disposed of by pressure, without removing the bag. I ought to state that I have only used this kind of bag for Coe's Golden Drop Plum, which fruit, hanging late upon the tree, is more subject to the continued depredation of insects. I send a few of those Plums, recently gathered, in the bags which were placed over them early in the season; the running string is fastened round the stalk with a sliding tie, and the ends are then tied to the spur of the tree, which secures the ripe fruit when separated from the stalk. I have no doubt but this method may be made applicable to all kinds of Wall-fruit. The only fruit-destroyer which my plan is not quite proof against is the snail, which can by suction obtain a portion of the strong syrup exuded from the Plum, which causes it to adhere to the bag, leaving the fruit exposed to its attacks.—*S. H.* [The Plums were in very fair condition.]

Growth of Pansies in Charcoal.—Last year I planted some cuttings of Pansies in charcoal-dust; they struck very readily, and were suffered to remain in the same pot (a 48), where they bloomed this spring. I observed no other difference in the blooms from others of the same variety, than that (I thought) the colours were more vivid. —*Lusor.*

Charcoal Burning in Forcing Houses.—In consequence of seeing in your last a communication signed "James Milne," wherein he proposes burning charcoal in his Vinery to obtain carbonic acid, I am induced to say that I once saw some small fires of charcoal made in a Peach-house from necessity; they did not affect the foliage of the trees, but the wood became prematurely hard and wiry, and the whole of the fruit fell off in a few days. I would, therefore, caution Mr. Milne and others not be too sanguine about the beneficial effects of charcoal in Vineries; for the same cause which affected the fruit of Peach-trees, may make the bunches on a Vine "go blind."—*John Stewart, Middleton Hall, Derbyshire.*

Vines.—I suspect that the cause of failure in *A Dublin Subscriber's* Vines lies chiefly with himself, and that he has allowed too much fruit to remain on the plant. "Last year," he says, "the fruit on one tree was large and abundant, and this year the crop is equally great." Vines will not long continue, year after year, to bear very abundant crops, and at the same time good fruit. In my neighbourhood is a vinery, which, in 1839, bore very little fruit, but that little was very good; in 1840, the same plants bore a heavy crop, but the half of that crop was, in place of black, what your correspondent terms, "of a brownish colour." Again, in 1841, the Vines did not bear more than an eighth part of the preceding year's crop; and this year, they are laden with a large crop, some of which are black, but the greater part of them are light brown. So true it is, that if two bunches are left where only one should be, both of them will be of inferior quality, small-berried, thin-juiced, and (if a black variety) light-coloured—that if too many are left upon one shoot (even although all the rest of the plant may only have a moderate crop), those on that shoot will be defective. So apposite is Dr. Neill's remark on this subject, that I never see Vines overloaded with half-swelled, ill-coloured fruit without thinking of it. "Avarice," he says, "not unfrequently cheats itself in this matter; and it generally happens in the vinery, as elsewhere, that *not* he who desires most obtains most."—*A Moderate.*——May not the cause of the unhappy condition of your Dublin Subscriber's Vines lie in the root? I had occasion last winter to turn my Vine border, in consequence of continued want of success, which I attributed, justly, I believe, to the want of drainage, the ground sloping towards the house instead of from it. I found the roots rotted off within three feet of the wall, thus accounting at once for my repeated disappointments. I have now cut a deep drain round the outside of the Vine border, and already see the advantage of it. The symptoms complained of by your correspondent agree so exactly with the state of my Vines before the alteration, that I suspect he is suffering from the same cause.—*T. P., Cornwall.*

Heating by Hot Air.—With reference to a late article upon this subject, p. 723, an Isleworth correspondent informs us, that this system of heating is not of such recent invention as has been imagined, since he has seen it adopted in several places. In every instance, however, it has been found congenial with the growth of plants, and highly economical. We have also received a letter from Mr. Shewen upon the same subject, in which he states that, in Dr. Ure's Dictionary of Arts and Manufactures, under the article "Stove," a drawing is given very similar to that which appeared in our last Number.

Experiments upon Balsams.—Mr. Sangster, the flower-gardener at Caprington Castle, has practised the following experiments upon Balsams:—They were grown in a compost of one-third rotted manure, one-third rotted leaves, and one-third peat-earth, with a little sand. He applied the following manures in quantities of 2 oz. each, mixed with mould, and spread on the surface of the soil, fourteen days after shifting into pots of one foot diameter: viz.—sulphate of soda, nitrate of soda, British guano, natural guano, and urate. The last killed the plant the first night. The first most recent critics have been collected and arranged in so agreeable a manner, that even discussions, otherwise dry and formal, cannot fail to interest even the unlearned reader. As a specimen of the work, we will take the whole of the article on the Calamus, or Sweet Cane :—

"The Sweet Cane of Isaiah is the Calamus of Exodus, the Calamus of the Canticles and of Ezekiel, the difference being only in the translation.

"It was reckoned among the principal spices and perfumes of which the precious oil for the service of the tabernacle was composed, and the want of it in sacrifice is one of the sins with which Isaiah reproaches the backsliding Jews. 'Thou hast bought me no Sweet Cane with money, neither hast thou filled me with the fat of thy sacrifices.'

"Yet though the name of Sweet Calamus was handed down by the Greek and Latin botanists and physicians, and though apothecaries continued to use what they called Sweet Cane, neither botanist nor simpler has absolutely discovered the very Calamus aromaticus. Like the Spikenard, it has been much sought after, and, if found at all, it is only of very late days.

"The apothecaries in the West of Europe, in the 16th century, certainly used the sweet acorus, which they cultivated in their gardens for the purpose, as a cure for those maladies in which the Sweet Calamus had been thought useful by the ancients.

"Clusius, in the researches he made concerning the medicinal plants of the far East, was of course anxious to ascertain the country of the true Sweet Calamus, and to obtain a sight of the plant. His success was small. That it was brought from India, or its borders, seemed certain; for the Venetians, who used it in the composition of their famous treacle, made no secret of the places whence they got it, and those were the markets to which the Arabs trading to India resorted. In 1595, the Frisian physician, Bernhard Paludanus, gave Clusius a fragment of the Sweet Cane, which he himself had brought from the East. Clusius figured it in his work, and Gerard has represented it in his *Herbal*, probably from the same wood-block. It just suffices to show that it was a small cane, but there is no indication of the species; and Gerard says that another piece Clusius had from Antony Colina, the learned apothecary, was not more satisfactory.

"The merchants, of whom Clusius enquired, told him that their Sweet Cane was reported to grow about Libanus and Anti-Libanus; and certainly there is a sweet rush or schœnus, called Camel's Hay, which is very fragrant and abounds there. But this cannot be the Sweet Calamus from a far country, equal with the best spices spoken of in Scripture; nor does the Arabian camel's hay which Hasselquist calls a Schœnanthus, and tells us grows near Limbo in Arabia Petræa, fulfil the conditions on which we can accept it as the true Calamus aromaticus. But the Andropogon, which Royle calls Calamus aromaticus, and which Sir Gilbert Blane and his brother believed to be spikenard, does so in every particular. It is from a far country; it is very fragrant in itself, and the aromatic oil obtained from it would contribute to the odour of the costly perfume which Moses was enjoined to make, according to the art of the apothecary, for the service of the tabernacle.

"Arrian's story, if true, that the Phœnician soldiers in Alexander's army, when on the borders of India, gathered the sweet-scented grass which the soldiers trod under foot, and carried it to their own country for merchandise, applies at least as well to the Sweet Calamus as to the spikenard, for they were sought after almost in an equal degree by the ancient apothecaries; and the modern Europeans, down to a late period, perhaps even preferred the Sweet Cane, as it was an ingredient in their favourite theriacum.

"There are numerous aromatic canes and grasses in India, besides the Andropogon in question; one of the most remarkable of which is the koosa grass, of which so much use is made, both by natives and Europeans, to temper the hard hot winds in the warm season. The roots are woven for this purpose very neatly and ingeniously into screens or mats, which are sprinkled with water and suspended before the open doors or windows, so that the breeze in passing through them is cooled, and regains a portion of its healthy elasticity, while a slight but very agreeable fragrance is diffused around.

"The roots of koosa grass have the property of repelling insects, and are therefore laid among clothes of every kind, and the whole plant is highly valued and much cultivated in Brahim villages. In that ancient fable book the *Hetopadesa*, the koosa is considered as an emblem of sanctity; and, wherever a tiger is made to play the hypocrite, he always approaches his intended victim with a blade of koosa grass in his hand, which he holds out as a kind of flag of truce.

"Besides these, Dr. Royle mentions several grasses from which fragrant and medicinal oils are extracted, and hints at more not yet perfectly known to European botanists, who are constantly thwarted in their enquiries concerning the plants yielding the drugs of commerce, by the jealousy of the traffickers in those matters."

Having thus produced a favourable specimen of Lady Callcott's work, we will next take an example of the great difficulty that attends the determination of even those Scripture plants about which one would think there is the least uncertainty.

"Behold the Lilies of the field, how they grow!" Lady Callcott here adopts the common opinion, that the White Lily of our gardens, the Lilium candidum, was the plant to which our Saviour referred in the Sermon on the Mount. To sustain this opinion, it is of course essential to prove that the White Lily is a Syrian plant. So far, however, are we from being able to do this, that there are some who doubt its being a native of the Old World at all. We, like the late Sir James Smith, can find no other evidence of its existing in Asia Minor than the assertion of Gronovius, the editor of Rauwolf's "Flora Orientalis," who states, that that traveller found it about Tripoli and Joppa, on the sea-coast. But, according to Smith, Rauwolf was at Joppa late in the autumn, when the White Lily must have been withered up; so that his evidence is inconclusive: and against it we have to set the remarkable fact, that no botanist seems to have found it since in Palestine. It is not noticed among the collections formed in Syria by Bové, who examined the country from Sinai to Mount Lebanon, at the season when the White Lily must have been in flower, had it been there, and who hardly would have missed so remarkable a plant.

The European origin of the White Lily is inferred from its having been mentioned, as it is thought, by the ancient Greek and Latin writers. Dioscorides is supposed to have indicated it by his κρινον; but it is impossible to draw any conclusion from his mere medical account. All that can be gathered from him is, that his κρινον was a garland flower. Besides, Pliny says it was red. Pliny's description of Lilium applies to the White Lily; but he says that no flower was taller, that it was weak-stemmed and unable to bear the weight of its head, and, moreover, that a single root would produce fifty bulbs: these are not characters of the White Lily. In modern times the only trace of a wild station for it in Europe is in the Vale of Tempe, where the late Mr. Hawkins is said to have found it: but this seems to require confirmation, surrounded as it is by so much conflicting testimony.

On the other hand, it is wild, to all appearance, in some parts of Spanish America, as near Cusco, where Mr. Pentland found it, and in Guatemala, as we know from the testimony of Mr. Skinner; and this has led to the conjecture that it is really an American plant, introduced by the Spaniards, notwithstanding the more common belief that the Crusaders brought it back with them from the East. This notion cannot, however, be sustained, because the White Lily occurs in an engraving of the Annunciation, executed somewhere about 1480, by Martin Schongauer; and the first voyage of Columbus did not take place till 1492. In this very rare print, the Lily is represented as growing in an ornamental vase—as if it were cultivated as a curious object.

We therefore regard the White Lily as being unquestionably a native of the Old World; but it does not on that account follow that it is a native of Palestine. It may be, but the proof is wanting; and it ought to be a very common plant to have offered a familiar object of comparison to our Saviour. Struck by this difficulty, Sir James Smith conjectured that the plant alluded to by our Saviour, in his Sermon on the Mount, was the Oporanthus luteus, or Yellow Autumn Amaryllis, which is no doubt wild in the mountains of Syria; but this flower, dwarf, and half-hidden among leaves, is hardly of sufficient beauty to be appealed to as the Lily is in the language of Scripture. We conceive it to be much more probable that the plant intended by our Saviour was the Ixiolirion montanum, a plant allied to the Amaryllis, of very great beauty, with a slender stem, and clusters of the most delicate violet flowers, abounding in Palestine, where Col. Chesney found it in the most brilliant profusion.

But our space forbids our pursuing this question further.

CALENDAR OF OPERATIONS *for the ensuing week.*

When very early Grapes are required, forcing is generally begun about this time; a few general remarks upon early forcing may, therefore, not be inopportune now. One of the principal causes of failure is, the great and often sudden differences of temperature, in which the root and the top of the plants are placed; this not unfrequently amounts to fifty degrees, when in early spring a night of rain or sleet is succeeded by a sharp frosty morning, and then by a bright sunny day. Under such circumstances, the delicate young leaves may, for a time, be surrounded by air, heated to 80° or upwards, while the scarcely less tender young roots, whose office it is to supply those leaves with the moisture they then perspire in great excess, are paralysed by being enclosed in soil which is saturated with wet only a few degrees warmer than ice. The natural consequence is,—partial or total failure. This might be obviated in some degree by covering the border with litter, to absorb the rain and shut out frost; and this will be effective in proportion to its thickness. We have seen stable-dung, in sufficient quantity to maintain a moderate degree of fermentation, laid upon a Vine-border, and then covered with boards, old sashes, &c.; in this case, a good crop of fruit was ripened in March. These and similar expedients must necessarily be resorted to when the roots are outside of the house; when they grow inside, where the roots of Vines intended for early forcing ought always to be, failure from this cause cannot happen. Another error is, giving too much fire-heat in the beginning, and thus forcing the buds to break weakly and irregularly, instead of inducing them to expand by gentle means and slow degrees. There is some difficulty in causing Vines to break much earlier than they have been accustomed to; when this is necessary to be done, they should be freely exposed to cold for some time previously to the application of fires, which will greatly increase their excitability, especially if two or three sharp frosts should occur. By early forcing for a few successive years, a new habit is given to plants, and they become naturally inclined to vegetate at their accustomed period. A moist atmosphere assists Vines to break; it is, therefore, a good practice, in addition to syringing, to introduce a mass of fermenting dung into the house, which would also be beneficial in other ways.—(*To be continued.*)

I.—KITCHEN-GARDEN AND ORCHARD.

In-door Department.

Pinery.—As the growing season is now past, the efforts of the cultivator should be directed to the preservation of his plants in a healthy state through the dark months of winter, neither exciting them into unnatural growth by a high temperature, nor reducing them to such a state of torpor that they would be liable to start into fruit upon a slight increase of heat in spring. Aim at an artificial temperature of 60°; a few degrees lower is sufficient for small plants, but that should be the standard for fruiting and succession ones. The heat at the bottom of the pots ought not to exceed 80°; when it does, draw more of the bark away from them, to be replaced as the heat declines to 75°. A bottom heat many degrees lower than this (from 66° to 70°) is talked of by some, but it is not easy to understand how they manage to prolong that low state of fermentation through the winter months in the bed of a common Pine stove. When water is required, it should be slightly warmed and given very sparingly. Guard also against drip from the roof.

Vinery.—To have ripe Grapes in April, forcing should now be commenced; there is, however, so much risk and expense attending very early forcing, that we would by no means advise it to be attempted. Vines set in motion in the beginning of next month will, under ordinary circumstances, ripen their fruit early in May; very little time would therefore be lost, and a more abundant crop of better fruit would most likely be gained by the delay.

Peach-house.—Any of these or other forcing houses that are not intended to be set in action before spring, may be made useful during winter for the protection of Cauliflower, Strawberry, and other plants in pots which merely require shelter from wet and severe frost.

Cucumbers.—Attend closely to these; a little neglect in bad weather would render all previous pains and labour nugatory. Give air every day if the weather permits, but invariably shut up warm. Use additional covering in cold nights, which will save fuel and be better for the plants.

Kidney-beans.—Pay attention in watering, &c., to the first crop, which will now probably be in bearing. When there is plenty of room, it is a good plan to put in a successional crop once in three weeks or a month. The pots may be set upon the return flue, or close to the pipes, till the plants come up, when they must be removed nearer to the light.

Asparagus.—A bed should be immediately prepared, if this vegetable is wanted at Christmas. A mixture of dung and leaves, in which the latter predominate, is the best material; and as only a moderate warmth is required, the bed should not be made too high. Set a frame and lights upon it to draw up the heat; the roots need not be planted till next week.

Lettuces, Carrots, Radishes, Cauliflowers, &c., in frames, should have the lights taken off every fine day; but the plants should not be exposed to rain or frost.

Out-door Department.

Let winter and spring crops of vegetables be properly thinned, and cleared of weeds, before bad weather sets in. The manuring and ridging of vacant ground should likewise be proceeded with while the season is favourable.

Earth up Celery and tie Endive on dry days; and prepare in every way against winter. It is a common custom to sow Peas and Beans about this time on a warm south border, but they are subject to so many casualties during the winter and early spring that a much more economical way is to sow early in spring, in pots and boxes, under glass, and transplant when cold weather is past. Those, however, who have not the necessary means to follow this method should sow now in the open ground.

Orchard.—Wall Fig-trees should be stripped of their remaining leaves and prepared for covering, by unnailing the branches and tying them up in bundles. Straw, or dried fern, tied over the branches in the way of thatch, will be found a very efficient protection; but this need not be put on till frosty weather sets in. If the removal of trees is completed, wall Plum and Pear-trees should be pruned and nailed. Such work ought to be forwarded as much as possible while the weather is mild.

II.—FLOWER-GARDEN AND SHRUBBERY.

In-door Department.

Stove.—Succulent plants, such as Cacti, which are kept in the stove, should be watered sparingly, and only when the soil becomes very dry; Mammillárias, in particular, require this treatment. Where flues are used for heating, the temperature at night should be as low as is consistent with the safety of the plants, otherwise the air is apt to become too dry. Continue to give a little air on fine days, and close the ventilators early in the afternoon.

Greenhouse and Conservatory.—Give air liberally to these houses by opening the sashes early on fine days; but as frost sometimes comes unexpectedly at this time of the year, it will be safer to shut up every evening. Pelargóniums must not be over-watered. Keep them free from dead leaves, and if two or three strong shoots take precedence of the others, they should be stopped. Large plants of Chrysánthemums will require liquid manure occasionally; or the leaves will be liable to turn yellow, and the flowers to be undersized, for want of sufficient food. If the plants are profusely stocked with blossom-buds, part of them should be taken off to strengthen the remainder. The blossom-buds of Caméllias ought also to be thinned if too numerous.

Pits and Frames.—The half-hardy plants which these contain must likewise be freely exposed by drawing off the sashes whenever the weather is favourable. The more tender things must be guarded against damp, which is frequently as injurious as cold to plants of a succulent nature. If a pit is devoted wholly to forcing flowers, the body of it should be filled with fresh tree-leaves, over which a layer of spent bark or half-decayed leaves might be spread to receive the pots. Chinese Primroses sown last spring should be encouraged, that they may blossom about Christmas. These are extremely subject to suffer from damp; they ought, consequently, to occupy a dry and airy situation during winter.

Out-door Department.

The beauty of the flower-garden is over for this year; all, therefore, that can now be done to please the eye here, is to maintain as great a degree of neatness as is consistent with the season. Clear away all plants that have been killed by frost, and neatly rake the beds they occupied. Pot Lobélias, and take up the roots of Sálvia patens, which, it is said, may be preserved through the winter in the same manner as Dahlias. Finish directly the planting of all bulbs that are intended to be put in before winter. A little sand round each will assist in preserving them from wet.

NURSERY AND FOREST DEPARTMENT.

Nursery.—Hoops should be fixed across beds of seedlings that are considered not hardy enough to stand the winter: upon these mats may be spread, or branches of evergreen trees thickly laid in severe weather. This excellent season for transplanting should be made the most of.

Forest and Coppice Woods.—See last week.—*J. B. Whiting, The Deepdene.*

State of the Weather near London for the Week ending Nov. 3, 1842, as observed at the Horticultural Garden, Chiswick.

The highest temperature during the above period occurred on the 12th, in 1841—thermometer 63°; and the lowest on the 11th, in 1828—thermometer 21°.

REPORT ON COVENT GARDEN MARKET,

For the week ending Nov. 4, 1842.

The supplies of fruit have not been so large during the past week, and trade in that department has been rather more brisk; in most instances, however, the prices remain the same. *Fruit:* Of Pines there is a fair supply. Black Hamburgh Grapes are selling from 1*s.* 6*d.* to 3*s.* per lb., while Muscats have risen to 3*s.* and 5*s.* per lb. Pomegranates are plentiful, and fetch about 4*s.* per dozen. Amongst dessert Pears the supply of Marie Louise and Gansell's Bergamot is becoming limited; good samples of the former sell from 6*s.* to 10*s.* per half-sieve; and of the latter, from 2*s.* to 4*s.* per dozen. Jersey Chaumontels appear to be very good, from 1*s.* to 6*s.* per doz.; there are also fair samples of the Beurré Diel, from 1*s.* to 2*s.*; and of the Duchesse d'Angoulême, at 1*s.* 6*d.* per doz. Dessert Apples are of various kinds; the best are the Ribstone and Golden Pippins, from 5*s.* to 8*s.* per bushel; with the Court of Wick and King of the Pippins, from 4*s.* to 6*s.* per bushel. Medlars and Quinces are abundant; the former from 2*s.* 6*d.* to 3*s.* per half-sieve; the latter about 2*s.* 6*d.* per half-sieve. A few culinary Plums may be obtained, at 4*s.* per half-sieve; but dessert kinds are quite over. Cucumbers are daily becoming more scarce, and fetch from 4*s.* to 6*s.* per doz. *Vegetables:* Broccoli and Cabbages have advanced a little in price since our last Report; the quality of both is very good. Brussels Sprouts are improving, and fetch from 1*s.* 3*d.* to 2*s.* per half-sieve. Turnips and Carrots are excellent; the former from 1*s.* to 2*s.* 6*d.* per dozen bunches; the latter from 3*s.* to 5*s.* per dozen bunches.

of Pinus Banksiana, P. pumilio, and P. uncinata. The letter which accompanied these contained also an account of some successful experiments which had been tried upon the brown scale, by hanging branches of Chamomile upon Orange trees infested with that insect. In about a fortnight after the Chamomile was placed upon the plants, the young scales, which were nearly half grown, began to turn black, and dried up. The experiment was further tried, by making a strong infusion of Chamomile, with which some infested trees were subsequently syringed. This was performed last autumn, and in the spring but few stragglers were observable, and those few were very weak. This experiment is well worthy of being repeated, by those who have an opportunity of so doing, in order to confirm it further. Three remarkably well-swelled Queen Pine-apples were exhibited by Mr. C. Judd, gr. to Geo. Knott, Esq., one of which weighed 4 lb. 4 oz., the others 3 lb. 14 oz. each: a Banksian medal was awarded for the former. Mr. G. Fleming, gr. to the Duke of Sutherland, sent a fine specimen of the Otaheite, weighing 4 lb. 10 oz.; and another Pine-apple, weighing 3 lb. 10 oz., and called the Trentham Seedling, but apparently not different from the Enville. A certificate was awarded to the Otaheite. From R. Thompson, Esq., two specimens of the Black Jamaica Pine-apple, grown upon plants 18 months old; one fruit weighing 2 lb. 3 oz., the other 1 lb. 14 oz. Mr. Goodbrand, gr. to Geo. Crawshay, Esq., exhibited six bunches of remarkably fine Black Hamburgh Grapes, grown under glass, without the aid of fire-heat, for which a Banksian medal was awarded. From Mr. J. Roberts, gr. to M. Wilson, Esq., 4 very good bunches of White Muscat Grapes, one weighing 2 lb. 1 oz., another 1 lb. 15 oz., and two upon the same shoot 2 lb. 11 oz.; these were accompanied by an exceedingly large bunch of the White Nice, weighing 4 lb. 3 oz., being about 16 inches in length, and as much in width across the shoulders; this Grape is usually considered of little value, but when well grown, and allowed to hang upon the Vine until thoroughly ripe, at which time the berries are of a bright amber colour, it is one of the best kinds known. All the bunches sent by Mr. Roberts were cut from Vines which were planted 3 years ago, and which have been pruned on the spur system: the Nice had perfected 13 bunches of the size of the one sent. The Vines are planted on the outside of the house (a Pine stove), and are pruned as early in the autumn as the clearing of the fruit, with the perfect maturation of the wood, will allow; and are withdrawn from the heat of the house as soon as the wounds are healed. If the fruit remains uncut longer than is desirable, the spurs are entirely disbudded, with the exception of the bud to which the shoot is headed back: the border at the same time receiving a light top-dressing of powerful manure and compost, covered with a few inches of half-decomposed dung; the fertilising properties of which are carried down to the roots of the Vines by the rains of autumn. From the time that forcing is commenced, until the Grapes are cut, the Vines receive no more water at the root either naturally or artificially. A Banksian medal was awarded to Mr. Roberts, for his Grapes. From J. Williams, Esq., of Pitmaston, one bunch of white, and another of black Grapes, of hybrid origin, grown upon the open wall: for out-door Grapes they were very good, their great merit consisting in their ripening well out of doors, during ordinary summers. Mr. T. Parkin, gr. to P. D. Cooke, Esq., also exhibited a collection of out-door Grapes, which, having been ripened in the open air, near Doncaster, were far from being destitute of interest. From G. Wilbraham, Esq., was a collection of Pears, consisting of the Marie Louise, Beurré d'Aremberg, Urbaniste, Althorpe Crassane, and the Flemish Beauty; which were fine specimens of their respective kinds, more particularly the Althorpe Crassanes from a standard, one fruit of which weighed 12 oz. Col. Willard sent some large specimens of the Mayfield Pippin and Northern Greening Apples. From S. H. some Coe's Golden Drop Plums, sent to exhibit the manner in which they had been preserved from wasps and other insects: viz., in bags of leno or open green gauze, secured to the spurs, upon which the fruit grows, by means of a running string. The Rev. S. Thornton exhibited a very large specimen of the Concourzelle, weighing 25lbs, 2oz.: this fruit bears a great resemblance to the common Vegetable Marrow, and is extensively grown for the same purposes in the garden of the King of the French, whose cook prefers it to all other kinds; it was introduced into England, and seeds of it were distributed by the Horticultural Society, 3 or 4 years ago. From Mr. G. Cockburn were some very fine roots of Oxalis Déppii, and a good sample of the Ash-leaved Kidney Potato, the latter raised from tubers planted May 7th, and having all the appearance of young Potatoes. A certificate was awarded for the roots of Oxalis. From the Garden of the Society was a small collection of Orchidaceous plants—comprising the showy Cattleya labiata; a handsome specimen of the delicate Oncidium ciliatum; Odontoglossum bictonense, having olive-green flowers, with a purplish lilac labellum; Maxillaria foveata, and Brasavola venosa. The collection of Pears and Apples from the Garden was extensive; the best kinds amongst the former being the Forelle, which although not rich is juicy and melting; Althorpe Crassane, from a standard, equal in flavour to fruit of the Old Crassane from a wall; Winter Nelis, rather earlier this season than usual, but uncommonly good; Beurré Bosc and Burgermeester. The Apples consisted of the Syke House Russet, Golden Reinette, Margil, and several others; but the flavour of many kinds is considerably impaired by the excessive heat of the summer during their growing season, and by the wet which fell when they approached maturity.

LINNEAN SOCIETY.

Nov. 1st.—Dr. R. Brown in the chair. Specimens, in flower, of Bánksia média, spinulosa, Cunninghámii, speciosa, and ericifólia, with Dryandra cuneata, from the Royal Garden, Kew, were exhibited by Mr. Smith. A letter was read from the late secretary, J. E. Bicheno, Esq., stating that he was about to leave the country, and requesting the acceptance of his portrait. Professor Owen exhibited an entire specimen of the Nautilus, as confirmatory of his views of the structure of that animal derived from imperfect specimens. A paper was read from Dr. Clarke, of Sierra Leone, giving an account of a new Grass, called Fundee by the Africans, the grain of which is used extensively as food. The plant was described by Mr. Kippist as a new species of Paspalum. A paper from Mr. Hope was read on some new species of Indian Moths and Butterflies. A note was read from Mr. Ward, stating that Mr. Williams, the missionary, had taken out in 1840 in one of his cases a fine plant of Musa Cavendishii to the South Sea Islands; that several suckers had already been produced by this plant, and that it was likely to become a valuable boon to the inhabitants.

PORT NICHOLSON HORTICULTURAL SOCIETY, NEW ZEALAND.

We learn from the New Zealand Gazette of March 26, that a second Horticultural exhibition has taken place at Port Nicholson. We subjoin the following list of prize articles, for the information of such readers as take an interest in the horticultural proceedings of so distant a quarter of the globe. Peas: 12 *pods,* 1, Mr. D. Wilkinson; 2, Mr. Scutcheon. Beans: 6 *pods,* 1, E. Johnson, Esq.; 2, G. Hunter, Esq. Cabbages: 1, Capt. Smith; 2, Col. Wakefield. Turnips: 1, Mrs. Miller; 2, Mr. D. Wilkinson. Carrots: 1, Col. Wakefield; 2, Capt. Smith. Tomatoes, Capt. Smith. Lettuces: Mr. Scutcheon. Onions: 1, Capt. Smith; 2, Col. Wakefield. Leeks: Capt. Smith. Beet: 1, F. A. Molesworth, Esq.; 2, Mr. D. Wilkinson. Mangel Wurzel: 1 (*yellow*), 2 (*red*), F. A. Molesworth, Esq. Collection of Pot-herbs: R. Stokes, Esq. Horse-radish: Capt. Smith. Melon: 1, R. Stokes, Esq.; 2, Col. Wakefield. Cucumber: 1, R. Stokes, Esq.; 2, F. A. Molesworth, Esq. Pumpkin: 1, F. A. Molesworth, Esq.; 2, Mr. Henry. Vegetable Marrow: R. Stokes, Esq. Flowers: 12 Annuals, Capt. Smith. 3 Balsams, E. Johnson, Esq. Seedling Pansy: Mr. Hunt. Seedling Pelargonium: Capt. Smith. 6 Roses: Capt. Smith. Bouquet: 1, Capt. Smith; 2, Dr. Featherstone. Device: Mr. D. Wilkinson. Dahlia: Mr. D. Wilkinson. Best Four Varieties of Vegetables: Mr. Baines. Extra Prizes: *Cabbages, Turnips, Carrots,* and *sample of Tobacco,* F. A. Molesworth, Esq.; *Portugal Onions* and *Cape Gooseberries,* Capt. Smith, *Carrots* and *Apple-tree (from seed),* G. Hunter, Esq.; *Celery,* Mr. D. Lewis; *Artichokes,* Rev. — M'Farlane; *Apples,* Baron Alzdorf; *Barley,* Mr. Retur; *Lavender,* Major Baker.

Warrington Dahlia Show, Sept. 29.—The annual meeting of this Society took place at the Town Hall, when the following prizes were awarded. Best Dahlia of any Colour: Pickwick, Mr. J. Wright. Classes, *Dark or Maroon:* 1, Rouge et Noire—2, Regina, Mr. J. Wright; 3, Conqueror, Mr. J. Clark. *Purple, Light, or Dark:* 1, Pickwick, Mr Hardy; 2, Uxbridge Magnet, Mr. J. Wright; 3, Bishop of Winchester, Mr. Hardy. *Crimson or Ruby:* 1, President of the West—2, Advocate, Mr. J. Wright; 3, Unknown, Dr. Davies. *Scarlet or Red:* 1, Tournament, Mr. J. Wright; 2, Fire-ball, Mr. T. Penketh, Jun.; 3, Bloomsbury, Mr. J. Wright. *Rose or Pink:* 1, Hope, Mr. J. Clark; 2, Maria, Mr. Hardy; 3, Mrs. Neeld, Mr. J. Wright. *Lilac:* 1, Widnall's Queen, Mr. J. Wright; 2, Conservative, Mr. Hardy; 3, Dowager Lady Cooper, Mr. J. Clark. *White or Blush:* 1, Lewisham Rival—2, Walter's Unique—3, Virgin Queen, Mr. J. Wright. *Yellow:* 1, Defiance—2, Prince of Wales—3, Argo, Mr. J. Wright. *Orange, Buff, or Bronze:* 1, Grace Darling—2, Nicholas Nickleby—3, Duchess of Richmond, Mr. J. Wright. *Light Striped, Edged or Mottled.* 1, Phenomenon—2, Beauty of the Plain—3, Bridesmaid, Mr. J. Wright. *Yellow or Buff Striped, Edged or Tipped:* 1, Ansell's Unique, Mr. R. Nunnerley; 2, Princess Royal, Mr. J. Wright; 3, Conqueror of the World, Mr. Hardy. *Dark Striped, Edged or Mottled:* 1, Rouge et Noire, Mr. J. Clark; 2, Rienzi, Mr. T. Penketh, jun.; 3, Fanny Keynes, Mr. J. Wright. Seedlings: 1, *Maroon,* Dr. Davies; 2, *Purple,* Mr. J. Wright; 3, *Purple,* Dr. Davies. In addition to the above, there was a good display of Stove, Greenhouse, and Herbaceous Plants, Fruits, Vegetables, &c.

NOTICES OF NEW PLANTS WHICH ARE EITHER USEFUL OR ORNAMENTAL.

Echites atropurpu'rea. Dark purple-flowered Echites. (*Stove Climber.*) Apocynáceæ. Pentandria Monogynia.—This pleasing new species was introduced by Messrs. Veitch, of Exeter, from Brazil. It bloomed for the first time in the month of July last; and its name refers to the deep brownish purple hue of the blossoms. It is a slender climbing or twining plant, apparently like E. suberecta in habit, with equally distant foliage, and flowers of about the same dimensions, but of a widely dissimilar hue. The blossoms are borne on long and graceful axillary peduncles, two or more appearing on each. They have a tube nearly two inches in length, expanding, about half-way from the base, into a wide throat, which has an ample and spreading limb, an inch and a half across. In the earlier stages of their development, they have a pleasant odour, which enhances the interest of the species. It requires the temperature of a stove, and may be trained to the rafters of the house, or to a wire trellis spread entirely over the roof. The plant may be kept in a large pot, or planted in a prepared pit or compartment, which is duly exposed to light, and not liable to become too wet. For soil, the ordinary mixture of sandy loam and heath-mould will be appropriate. From the weakness of its shoots, it will need pruning in the winter, and may perhaps be improved by having its branches stopped while they are growing; they should be trained very closely on account of the scantiness of its foliage; and if, after they have reached the prescribed height, they are turned back over the previous coils, the trellis will become well covered, and a good display will assuredly be the result. Cuttings of the young wood root freely, when treated in the usual way.—*Paxton's Bot. Mag.*

Dendróbium macranthum. Large-flowered Dendróbium. (*Stove Epiphyte.*) Orchidáceæ. Gynándria Monándria.—No pencil can do justice to the beauty of the blossoms of this charming plant, which flowered with D. Llewelyn, Esq., in April last. It has also bloomed in the collection of Messrs. Loddiges, who appear to have introduced it from Manilla. The extreme width of the flowers is five inches; they are of a delicate, rich lilac colour, with darker nerves. The labellum is also of the same colour, with a broad deep blotch within the side lobes. The flowers are solitary, and are produced from the axils of the leaves.—*Curtis's Bot. Mag.*

Gloxi'nia tubiflora. Tube-flowered Gloxinia. (*Stove Herbaceous Plant.*) Gesneriáceæ. Didynámia Angiospérmia).—This fine and new plant is one of the many interesting novelties reared by Mr. Moore, of the Glasnevin Botanic Garden, from seeds sent by Mr. Tweedie from Buenos Ayres. The flowers are pure white, downy, and are produced in panicles, several together. The tube is four inches long, a little enlarged, and curved upwards, at the base above, with a very conspicuous broad spur or gibbosity: the limb is an inch and a half broad, spreading, and equally five-lobed. The stem is short and leafy; the leaves are opposite.—*Curtis's Bot. Mag.*

GARDEN MEMORANDA.

Kingston, the residence of Sir J. D. Broughton.—This place is situated on the banks of the Thames, and within a mile of Kingston. It is principally celebrated for its collections of Camellias, especially a large specimen of C. reticulata: but in other respects it is highly deserving of notice. The glass consists of an Azalea-house recently built, a stove, a large conservatory, a Camellia-house for plants in pots, another for specimens planted out, a Pelargónium-house, a house on a north aspect for plants which require shade in the growing season, and a quantity of pits and frames. The Azálea-house contains good specimens of the most valuable kinds, which promise an abundant bloom. Of several choice varieties, raised by Mr. Smith, Sir John possesses the whole stock, having bought the plants when they first flowered in a seedling state. In the stove, Passiflora Kermesina was blooming in great splendour, and another kind, called by Mr. Redding P. Buonapártea, was also producing its flowers in great profusion. Whether this is distinct from P. alata and quadrangularis we will not pretend to say; but certainly the flowers are darker than we ever observed them in those species, and the plant, from the freedom with which it flowers, is well worthy of extensive cultivation. The collection of Camellias contains specimens of all the best kinds, and in a fine state of health. The foliage is of the most intense and glossy green, and the flower-buds look bold and healthy. Some specimens which were growing in tubs, and trained on the back-wall, were, if possible, more healthy than those in pots; showing, as Mr. Redding justly observed, the advantage of a cool situation and a little shade for this tribe of plants during the growing season. One feature of Mr. R.'s management is worthy of being generally known, and more extensively practised. It is the system of thinning the blossom-buds previously to placing the plants in their winter quarters. He never allows even the largest specimens to produce more than one flower on a branch; and on weakly plants the thinning is carried even to a greater extent. From the large specimen of C. reticulata, which is eight feet high, and as many feet in diameter, completely feathered to the ground, he had taken 1000 buds, and a greater number are still left remaining. The consequence of this treatment is, that the flowers individually are much larger than they would be if a greater number were retained. Some flowers of C. reticulata exhibited at Regent-street last spring were eight inches in diameter, and other kinds were in like proportion. In the Pelargonium-house 50 of the most esteemed varieties are grown, but the pots used are never larger than those known as sixteens. In the front of the range forming the Pelargónium and Camellia houses, there is a symmetrical flower-garden, partly on grass and partly on gravel. The beds on gravel are edged with stone projecting about two inches, and of about the same width. For flower-beds, in our opinion, nothing can equal a neat Box edging, not exceeding two inches in height. Even for architectural gardens, where, of course, stone or slate must be used the edgings ought to be much lighter than is generally the case. The beds were stocked with a collection of the most choice kinds of Verbena and other grouping plants. There were also some fine specimens of choice Roses: among which a bed of Gloire de Rosemène, with its brilliant velvety dark scarlet flowers, was very conspicuous. Some clumps of Smith's Emperor Scarlet Pelargonium, nearly six feet high, had a particularly grand effect; and, as Mr. Redding's method of obtaining plants of this size may not be uninteresting to the readers of the *Chronicle*, it may not be amiss to state it. The tallest of the plants that have made one season's growth in the open ground are taken up, potted in pots suitable to their size, and carefully protected through the winter. In the spring they are encouraged to make robust growth, and in May, after being gradually hardened, are turned out into beds of rich compost: of course placing the tallest plants in the centre, and allowing the others to decline gradually to the sides. The effect might, perhaps, be heightened by stopping the young shoots before each truss of flowers, and thus, by concentrating the energies of the plant, much larger flower-trusses would be produced. In the grouping of other plants we observed the prevailing error of associating plants in accordance with their complementary colours, without reference to their height. The adaptation of tall plants to small beds, and *vice versa,* produces a worse effect than the want of harmony in the arrangement of colours, because even an uncultivated mind will notice a want of proportion in the heights of the plants, while many, professing refined taste, would not observe the other defect. Among the Verbenas we noticed the following distinct and desirable colours: Ruby—a beautiful ruby-coloured variety, of good habit; Ne plus ultra—carmine, with a bright pink eye, V. Vangendii—blush lilac, very distinct; V. antwerpensis—white; V. Murrayana—which Mr. Redding described as the best blue yet raised; and the Queen—white, which possesses a delicious scent, as well as a fine habit. Among the beds interspersed over the lawn were some groups of climbing or pillar Roses, which must have a fine effect when in bloom. They were trained to strong iron columns, securely fixed in the ground by triangular feet; the plants were trained in a pyramidal shape. As an earnest of the spirit with which flower-gardening is carried on at this place, we may mention that on the lawn there were large clumps of many of the most choice Pelargóniums, such as Conservative, Erectum, Sultan, Gaines's King, Matilda, Lady Carlisle, Prima Donna, and other scarce varieties, which numerous cultivators consider themselves fortunate in possessing one or two specimens of. The pits and frames were principally stocked with young plants for the ensuing season. The practice of preserving old plants is only sufferable where large specimens are indispensable; but when a dozen or more plants may be grown through the winter in a large 48-sized pot, we think it trouble to no purpose to take up Verbenas, Petúnias, &c., to encumber the houses through the winter. The mansion commands an extensive view over the Thames, towards Hampton Court; and Kingston bridge forms an interesting object from some parts of the lawn."—*W. P. Ayres, October 13th.*

Reviews.

A Scripture Herbal. By Maria Callcott. 8vo. Longman. 1842.

When the earliest attempts were made to ascertain of what plants the inspired writers spoke in their parables, and histories and descriptions of the living objects of the East, Natural History was in so low a state as to render the task impracticable. If, as is by many believed, the human race took its origin in Candahar and Cashmere, migrating westerly till the Israelites settled in Palestine, it is to be supposed that many of the plants, and drugs, and herbs, of which we read in the Sacred Writings as employed among that people, had also an Eastern derivation. So long as the Jews retained their prosperity, these things were well known among them; but when they were scattered, and the Eastern world was buried in ruin by its Mahomedan conquerors, commerce was annihilated, and with their religion the nature of many objects once familiar among them was forgotten. To the biblical naturalist, then, who should even have been familiar with the East, upon the revival of learning, almost insuperable difficulties would have occurred in the attempt at ascertaining the exact nature of many of the plants spoken of in the Scriptures; but the old commentators knew nothing of the Natural History of Asia, and they attempted to refer all the plants of Jewish history to the European species with which they were acquainted. At a later period, however, the necessity of actually examining the countries of the East became obvious; and European travellers began to visit it expressly for the purpose of investigating its Natural History. Hasselquist, Rauwolf, Pococke, Alpini, Forskähl, and others, collected by degrees a large quantity of positive testimony of great value to the inquirer into these subjects; and, among later writers, Rosenmüller, as a learned compiler, and Professor Royle, as an original observer and very skilful critic, have thrown great light upon much that had previously been obscure. The field of Scripture Botany is, however, far from having been—we do not say gleaned over—but even reaped; and there is a plentiful harvest left for the botanist who has that diligence, learning, critical acumen, and scientific attainment which are required for the study; but it demands a very considerable amount of all these requisites, more especially of exact botanical knowledge, without which all the learning in the world will only lead from twilight into darkness. To illustrate the Natural History of the Holy Scriptures as it ought to be illustrated, is a task that would be most honourable to any man.

Such is our opinion of the qualifications required by a critic of Biblical Botany: but we shall not test Lady Callcott's work by so severe a standard. The authoress informs us in the very outset, that her "chief object and aim in writing this little book has been, to induce those who read, and love God's written word, to read and love the *great unwritten book which He has everywhere spread abroad for our learning.*" We find, too, with sorrow, that the work itself has been in part prepared as a solace to a bed of sickness; and we should have no heart to be critical upon a book produced with such intentions and under such circumstances, even if we were called upon to be so. We shall, therefore, at once assure our readers that the volume before us is a beautiful octavo of 544 pages, handsomely printed, and illustrated with a considerable number of woodcuts, executed from drawings made by Lady Callcott herself. It is, moreover, the best account we are acquainted with of Scripture plants. The opinions of the tlement. — The arrival of the British Queen from New York, which had been overdue for several days, has relieved the public from great anxiety; it was generally feared that she had shared the fate of the President, and her long detention had begun seriously to affect the insurances. The intelligence from New York relates chiefly to the election of President, and local matters. The news from Canada states that the Parliament was prorogued on the 12th; that Mr. Baldwin, the newly-appointed Attorney-General for Western Canada, had been defeated at the election by the Conservative candidate; but that his colleague, Mr. Lafontaine, had been returned by his old constituency by a small majority.

At home there is little to notice beyond the formal prorogation of Parliament from Thursday next to the 13th December; it is expected to be then again prorogued to January, at which time it is said that both Houses will meet for the despatch of business.

Home News.

Court.—Her Majesty, Prince Albert, the Prince of Wales, and the Princess Royal are at Windsor Castle, and are quite well. The 10th is the day named for the departure of the Court from Windsor. Her Majesty and the Prince will first proceed to Walmer Castle, on a visit to the Duke of Wellington: and will then go to Brighton. The Queen held a Privy Council on Tuesday, which was attended by all the Ministers. Parliament was ordered to be further prorogued from Thursday the 10th instant, until the 13th December; and her Majesty's consent was given to the marriage of her Royal Highness the Princess Augusta of Cambridge with the Hereditary Grand Duke of Mecklenburg Strelitz.— Lord Charles Wellesley (Clerk Marshal) has relieved Colonel Arbuthnot in the duties of Equerry in Waiting on the Queen; and Colonel Wylde has relieved Major-General Sir Edward Bowater as the Equerry in Waiting on Prince Albert. —His Imperial Highness the Archduke Frederick of Austria arrived at Liverpool on Thursday week, from Glasgow; and, after visiting the public buildings, proceeded to Manchester, and examined the different manufactories. His Imperial Highness left for Chester on Monday, to make a tour in Wales; and intends to return to town next week, by way of Birmingham and Oxford.

Church Preferment.—The Venerable W. H. Hale, of Oriel College, archdeacon of Middlesex and canon of St. Paul's, has been presented to the archdeaconry of London.—The Rev. R. H. Barham, minor canon of St. Paul's, has been presented by the dean and chapter to the rectory of St. Augustine and St. Faith, London.

Law Appointments.—A rumour has been current this week that Lord Lyndhurst will shortly retire from the woolsack; and that he will be temporarily succeeded by Lord Abinger, who will shortly afterwards retire in favour of Sir William Follett. It was also said that these changes will involve the elevation of the present Attorney-general to the dignity of Chief Baron, and, in all probability, the promotion of Mr. Fitzroy Kelly and Mr. Creswell; but the statement is not supported by authority, and is considered to require confirmation.—It is announced that Mr. David Pollock, brother of the Attorney-general, will be appointed to the commissionership of Insolvency vacant by the death of Mr. Bowen. Mr. Bond, recorder of Poole, has been appointed magistrate at the Queen-square police-court, vacant by the death of Mr. Gregorie. The valuable appointment of counsel to the East India Company is now vacant by the death of Mr. Serjeant Spankie. Mr. Enfield, who has for many years held an important situation in the lunacy department, under the Lord Chancellor, has been appointed to the secretaryship of the new commission of Lunacy, with a salary of 1000*l.* per annum.

Foreign.

France.—The Paris papers are still occupied with the question of the right of search, the slave-trade treaties of 1831 and 1833, and the treaty of commerce with Belgium. There is said to be no doubt that the French Government has officially and formally communicated to Lord Aberdeen, that the treaty of the 20th of December, 1841, will not be ratified. The Ministerial papers admit that the attempt to effect a treaty of commerce between France and Belgium had failed, and attribute that fact to the interference of the deputies engaged or interested in manufactures. They intimate, however, that the Government still entertain the idea, and will return to it at the first favourable moment. The manufacturers of Elbœuf, Valenciennes, Rouen, Lille, &c., have all sent addresses to the King against the treaty with Belgium, while those of Lyons attribute the present disastrous state of the French silk manufacture to reprisals, ordained by the Governments of foreign markets, in revenge for French prohibition. It is announced that the committee appointed to examine and report upon the state of the gum trade at Senegal had concluded its labours, and had recommended, 1st, That the trade in gum should be free in future; 2d, That in order to establish a fund for the benefit of the traders, a duty of 5 per cent. should be levied on all purchases. —Subsequent accounts state that the reference of the Portendic affair to the mediation of the King of Prussia had, it was hoped, deprived that question of all its danger; but there was still abroad an undefined impression that the relations of the two countries were not of the friendly nature that had characterized them for some time previously.—In regard to the right of search treaty, it is said that in announcing the refusal of his Government to ratify the treaty of the 20th December, 1841, M. Guizot declared that the King, the Ministers, and the country were unanimous respecting it. Upon the proposed modification of the treaties of 1831 and 1833, it is believed that similar unanimity does not prevail. Those treaties have been ratified and acted upon, and there are, moreover, other parties to them than France and England, whom it might not be desirable to offend.

The Capital.—The chief topic of interest in Paris is the dismissal of Gen. Pajol from the post of commander of the first military division. It appears that he had attained the age for his retirement, and had been offered the situation of Aide-de-Camp to the King, and the Governorship of the Louvre, with a salary of 30,000fr. a year; which he refused, on the ground that they were offered as compensations for an act of injustice and disgrace. The letter of Marshal Soult, notifying the dismissal, is severely commented on, as an insult to one of the bravest soldiers of the republic and the empire, whose name has been associated with the military history of France for 52 years, during 30 of which he has been a Lieut.-general. In acknowledging Marshal Soult's letter announcing his dismissal, Gen. Pajol says,—"I was not prepared for this decision; but it is a satisfaction to me to reflect that it will be come to after order and the greatest tranquillity have reigned in Paris for more than three years. My sense of my own personal dignity has never allowed me to set any value on my services, and if for a moment I call your attention to them, it is not—I earnestly beg you to believe—to protest against an unmerited disgrace. Having been a soldier for fifty-two years—of which I have been a Lieutenant-general for the last thirty years—I was, in the three last campaigns of the empire, so happy as to obtain signal successes at the head of numerous corps of the army; and it is well known that I was in the first line of Generals-in-chief for whom the Great Captain destined the baton of Marshal. I might, perhaps, have been warranted in hoping that the Government of July would grant me this reward, and thus realise an intention openly manifested by the Emperor. Far from acknowledging these claims, M. le Maréchal, you seem disposed to deprive me suddenly of a post in which I have, during twelve years, passed through great difficulties. A retreat, thus preceded, has nothing redoubtable in my eyes. I have already known adversity. My long career will not have been without glory. My fellow-citizens will ever do me the justice of testifying that I have constantly served my country with the most disinterested devotion. Therefore, however rigorous may be the lot which awaits me, I shall meet with resignation the sentence with which I am threatened."—According to a return of the elections of 1839 and 1842, the Chamber of Deputies is thus composed:—86 administrators, 70 judges or magistrates, 65 lawyers or ministerial officers, 61 officers of the army and navy, 53 mayors, 36 merchants and manufacturers, 24 literary men, artists, or *savans;* and 8 physicians.—The *Commerce* states that "the superficies of Paris contained within the present wall is 34,398,800 square yards. When the continued wall at present in progress of construction is completed, the superficies will be 267,558,000 square yards, nearly as great as the superficies of the city of London." The population of Paris, according to the census taken in 1841, amounted to 912,330 inhabitants: to which being added the troops of the garrison and strangers, would increase the population to 1,035,000.—Mr. Balfe, the English composer, is now residing in Paris, to superintend the rehearsals of his new opera, in preparation at the Opéra Comique.

The Provinces.—The Havre papers state that the wreck of the Télémaque is within 3 feet of the surface at low water, and that the tackle holds strong and steady in that position. A man has walked on her side as she lies, from one end of her to the other, having the water no higher than his waist. At the date of the last accounts, Mr. Taylor was engaged in arranging the apparatus so as to act with greater force, and is said to have declared that in four days the hull would be above water.—On the 25th ult. the relics of St. Augustin were conveyed with great pomp on board the Gassendi steamer, in which the Archbishop of Bordeaux and eight other prelates took passage for Algiers.—We learn from Marseilles that the workmen employed in widening the quay of the Old Tower have discovered the torso of a colossal statue, supposed to have been sculptured about the time of the first foundation of the city, and to be the remains of a statue of Diana, the classical patroness of Marseilles.—The Paris papers state that there are at present a number of commercial travellers in the South of France engaged in purchasing female hair. This trade, which was formerly confined to a part of Normandy, Brittany, and Auvergne, has now been extended to the south. The quantity of this article which comes annually under the scissors is estimated at 200,000lbs. weight, and is purchased from the female peasantry at the rate of 5fr. the pound. It is then forwarded to Paris, where it is sold at 10fr. the pound to the hairdressers, and afterwards resold by them at the rate of 40fr. It is sufficient to state that a wig which cost 35f. weighs but three ounces.

Spain.—Advices from Madrid state, that the Cortes will probably be opened on the 14th without a speech. The rumours of a pretended conspiracy to establish the Constitution of 1812, in order to prolong the Queen's minority until she has attained her 18th year, had entirely ceased, the secret societies which had taken the initiative in the project having fallen out as to the means of carrying it into execution. One of the reports current at the Puerta del Sol is that the Archduke Frederick of Austria, now in England, is destined by diplomacy to be the husband of Queen Isabella. The Government pays little attention to the schemes of the Infante Don Francisco de Paulo, who is now intriguing with the Saragossa Republicans. General Zurbano has been appointed Inspector-general, both by land and sea, of the smugglers in Catalonia.—Subsequent advices state that a rumour was current at Madrid, to the effect that Señor Gonzales was about to be restored to office through the influence of the British Minister. The Official Gazette of the 26th ult. announces, that the Regent was desirous to reward the officers and soldiers who, after having fought for liberty in 1823, desired to remain prisoners of war rather than join the antinational party, which, with the assistance of a foreign army, had restored a system of absolute power. He had therefore issued a decree, granting a cross of distinction to these officers and soldiers, that for the officers being made of gold and that for the privates of silver. The Regent has granted the Infante Don Francisco de Paulo permission to take up his abode in Andalusia, passing by Valencia, Saragossa, and Madrid.

Portugal.—Letters from Lisbon of the 24th, mention the arrival of the Prince de Joinville and the Duc d'Aumale in the Belle Poule frigate, with the Coquette corvette and Asmodée steam-frigate of the first class. The steamer was expected to take the Duc d'Aumale to Algiers; and the other ships, with the Ville de Marseilles three-decker, expected from Toulon, were to go with the Prince de Joinville to Brazil. The Princes held a levee at Belem Palace on the 22d, at which all the ambassadors were present. Lord Howard had had further interviews with the Duke of Palmella on the tariff question: there was great opposition both from the Portuguese and foreign diplomatists, and no hopes were entertained of reductions being made on woollen manufactures; but on cottons, which constitute the great bulk of the British imports into Portugal, considerable reductions were offered. The affairs with the Pope's nuncio were not going on satisfactorily. Monsignor Cappuccini was said to have realised nearly 60 contos of reis by issuing dispensations; but the Government had at last put a stop to the proceeding. Sir C. Napier had arrived at Lisbon, and was saluted by the Portuguese forts on coming into the Tagus. The papers give further particulars of the Madeira news: for many years the island had been able to pay its expenses, and remit a considerable sum to the home government; but it has lost so much of its prosperity that it no longer realizes enough to meet the ordinary charges of its own administration, and distress is severely felt among all classes in the island.

Belgium.—A letter from Ostend, of Oct. 23, says, that the society which was formed here last year for the purpose of establishing a Belgian colony in the province of Vera-Paz, in Guatemala (South America), and which was warmly seconded by the Government, has just embarked at that port its first batch of colonists, consisting of 200 labourers, intended to cut down timber and clear the land in the district purchased by the Company. The second division is to be sent out in spring, and at the same time the families of the present set will be conveyed to the colony.

Switzerland.—A Swiss journal states that there is some intention of constructing a railroad from the Lake of Neufchâtel to the Lake of Geneva, and from the latter to Chambéry; and adds that it will facilitate the transport of goods from Marseilles, which pass through Lyons, and cross Switzerland to reach the Rhine. On the night of Oct. 19, snow fell in sufficient quantities to whiten the Jura, and on the 23d it fell on several points of Revermont.

Hanover.—Letters of the 23d state that the indisposition of His Majesty continues, with short interruptions, and that the intended visit to the Duke of Brunswick, for a hunting party at Blankenburg, is given up, as well as the journey to Rattinskischen. On that day, however, His Majesty received a deputation of the citizens, who came to offer their congratulations on the marriage of the Crown Prince, and on His Majesty's recovery. The hopes of the deputation, that His Majesty would listen to their petition for the re-instalment of M. Rumann, were disappointed, His Majesty having answered, in the most positive terms, that this was not to be thought of, and that justice must take its course. It was rumoured that the King would visit England in the course of the present month.

Germany.—The first sitting of the Provincial States Commission took place at Berlin, on the 21st ult. The question of the 1½ million of the tax, which the King is to diminish from the expenditure, and by which he proposes to diminish the salt tax, came before the sitting. The diminution in the revenue—in the salt duty, and the railroad question, are almost the only questions for consideration. The Commission will, probably, not sit more than a fortnight. The *Prussian State Gazette* of the 28th ult. publishes the decree laying down the rules to be observed in the deliberations of the States. There are 19 articles; the most important one being the 3d, declaring that all questions for debate must emanate from the Government, as the institution was consultative, and not legislative, so as to enable the King of Prussia to come to accurate decisions, guided by the enlightened wisdom of the States.—The result of the conference at Stuttgard into the affairs of the Customs Union, connected with the new tariff, has been laid before the respective governments for their approbation. It recommends the augmentation of the import duty on all French cutlery, jewellery, articles in gold, silver, and bronze, from 50 rix dollars to 100 rix dollars per cwt. The motive for this step is attributed to the treaties lately concluded by France with some neighbouring states, not members of the union, to the prejudice of German manufactures.—The University of Halle, and indeed the whole learned world, has just suffered a severe loss, by the death of Professor Gessenius. He died on the 23d ult., in the 57th year of his age.—Letters from Vienna mention the enthusiasm with which the well-known dancer, Fanny Elsler, has been treated in that city. On her departure

The few Tomatoes remaining are selling from 3s. 6d. to 4s. per half-sieve. *Flowers:* We observed some handsome plants of Ericas in pots, as well as a few Chrysánthemums; the cut flowers consist of Cereus Jenkinsoni, Combretum purpúreum, Cypripédium insigne, Mignonette, Chrysánthemums, Azáleas, Caméllias, &c.

PRICES, SATURDAY, Nov. 5, 1842.—FRUITS:—

Pine Apple, per lb. 4s to 6s
Grapes, per pound, 1s 6d to 3s
— Muscats, 3s to 5s
— Spanish, 9d to 1s
— Portugal 1s to 1s 6d
Plums, dessert, per hf. sieve, 4s
Apples, dessert, per bush., 2s 6d to 6s
— Kitchen, 2s to 5s
Pears, dessert, per hf.-sieve, 2s to 7s
Medlars, per hf. sieve, 2s 6d to 3s
Quinces, per hf. sieve, 2s 6d
Berberries, per hf.-sieve, 4s to 5s
Pomegranates, per doz. 4s
Cucumbers, per doz., 4s to 6s

Oranges, per doz., 1s to 3s
— per 100, 4s to 24s
Lemons, per doz. 1s to 3s
— per 100, 6s to 18s
Almonds, per peck, 6s to 7s
Sweet Almonds, per pound, 3s
Chesnuts, per peck, 4s to 7s
Walnuts, per bush., shelled, 12s 20s
Filberts, English, per 100 lbs. 60s to 70s
Cob Nuts, per peck, 85s to 90s
Nuts, per bushel—
— Brazil, 16s to 20s
— Spanish, 20s
— Barcelona, 20s to 24s

VEGETABLES.

Savoys, per doz. 10d to 1s. 3d
Cabbage, per doz. 1s to 1s 6d
— plants, per doz. 1s 6d to 2s 6d
— Red, for pickling, 1s 6d to 2s 6d
Brussels Sprouts, per hf.-sv. 1s 3d to 2s
Broccoli, per bunch, 1s to 1s 6d
Cauliflowers, per doz., 2s to 4s
Potatoes, per ton, 40s to 80s
— per cwt. 2s to 4s
— per bushel, 1s 6d to 2s
— Kidney, per bu., 2s to 2s 6d
— New autumn, per lb., 1s
Jerusalem Artichokes, per half-sieve, 9d to 1s 6d
Turnips, per doz bun., 1s to 2s 6d
Carrots, per doz. bun., 3s to 5s
Red Beet, per dozen, 9d to 1s
Scorzonera, per bundle, 1s 3d to 1s 6d
Salsafy, per bundle, 1s 3d to 1s 6d
Horse Radish, per bundle, 1s 6d to 4s 6d
Radish, per doz. hands (24 to 30 each) 9d to 1s

Radish, Turnip, p. doz. bch., 1s to 1s 6d
Parsneps, per dozen, 9d to 1s
Spinach, per sieve, 1s 6d to 2s
Leeks, per doz. bun., 1s 6d to 2s
Onions, per bushel, 4s to 5s 6d
— Green, p. doz. bun. 3s 6d to 4s
— Spanish, per doz. 1s 6d to 5s
Garlic, per lb. 6d to 8d
Shallots, per lb., 1s
Lettuce, Cabbage, p. sc., 9d to 1s
— Cos, 1s
Endive, per score, 9d to 1s 6d
Celery, p. bd., (12 to 15) 6d to 1s 9d
Small Salads, per punnet, 2d to 3d
Watercress, per doz. sm. bun. 4d to 6d
Parsley, per doz. bun., 1s 6d to 2s
Tarragon, per doz. bun., 2s to 3s
Sage, per doz. bunches, 1s 6d to 2s
Mint, per doz. bunches, 2s
Tomatoes, per hf. sv. 3s to 4s
Chilies, per 100, 1s to 2s
Mushrooms, per pottle, 1s to 1s 3d

Notices to Correspondents.

WE shall be obliged if our Correspondents, in their future communications, will take care that no general question relating to *different* subjects is asked in the same paragraph, and that each question is headed with the principal subject. *One side only of the paper should be written on*, so that we may separate each question. If these directions are observed, it will greatly facilitate our obtaining answers, and will enable us to arrange our Correspondence under general heads, separating those questions and answers which are of interest merely to individuals, from such as are of general interest.

MANURES.—*J. G. H.* says—"Sea-weed and farm-yard manure, well worked together, are the sources of fertility in his neighbourhood. Scarcity of stock, however, renders the latter a dear article. It appears to him that an admirable substitute might be found in gas-water, which may easily and cheaply be procured, and in any quantity. Suppose a mixhill (the term for dunghill used here) be built thus:—Let the foundation consist of sea-weed, upon which gas-water may be poured, then a fresh layer of sea-weed and more gas-water, and so on until the heap is thought sufficiently large. Upon the top and sides strew a layer of mould to keep the heat in; and when fermentation has taken place, strew a sufficient quantity of gypsum to fix the ammonia. Would this not prove an admirable fertiliser to a light clay soil?" No doubt; but it would be as well to add to the heap all sorts of vegetable refuse, sawdust included; and, if practicable, a good deal of urine.†——*M. W. K.*—You must take the gas-water of the strength at which the gas-works sell it. In this respect it is variable. Use it quite fresh upon your Dahlia-stalks and other rubbish. Just as much is requisite as will *wet* the mass; cover the latter over with earth, to keep in the heat, and when quite hot turn it over, sprinkling it with a little oil of vitriol and water, till the pungent smell of the mixture is diminished; then cover the whole again with earth as before, and leave it for a few weeks.†

GUANO.—*R. W. J.*—Guano is most effective when applied in wet weather, and either in October or March. †

OPEN GUTTERS.—*A Reader.*—There is little doubt but a brick smoke flue, at present used in a small house, and which is 6 inches wide by 9 inches deep inside, will do for a hot-water trough, if the tiles are removed from the top and the inside is well plastered with Roman cement.‡

ROGERS' CONICAL BOILERS.—*A Reader.*—The fire in these boilers is in immediate contact with the metallic plate of the boiler. The thickness of the body of water surrounding the fire in those of the small size is about 2 inches. A boiler of this form constructed of the strongest tin plate would, perhaps, last a year or two.‡

CUCUMBERS IN POTS.—*A Reader.*—The reason why Horticultural writers recommend the pots in which Cucumbers are grown to be plunged for half their depth in mould is, that the roots may be less liable to suffer from want of moisture, and that when they have protruded through the bottom of the pot, they may still have some material to encourage their growth. We should imagine that Cucumber plants, especially when grown in pots, ought not to be watered with a solution of nitrate of soda more frequently than once in a month or six weeks.‡

PEACHES.—*T. P.*—The best sorts for forcing are the Noblesse and Royal George. The manner in which a Peach-house is constructed, is of less importance than the management of the trees during the different stages of their growth. The best paper upon this subject which we have seen, is that from Mr. Errington, which appeared in No. 9 of the Proceedings of the Horticultural Society, for 1840. A brief extract of the most material points is given at p. 7 of the *Chronicle* for last year.‡

PINE-APPLES.—*A Young Gardener* cannot do better than attend to the directions given in our weekly Calendar of Operations. When Pine plants are in flower, or after they have blossomed, every root should be carefully preserved. To disroot them at that period would undoubtedly destroy the after-swelling of the fruit.‡

STA'TICE ARBO'REA.—*E. W.*—When practicable, this plant should be turned out in the border of a conservatory; it may, however, be grown to great perfection in a pot, if the roots are allowed plenty of room. The soil should consist of equal parts of turfy loam and peat or vegetable mould.‡

THUNBE'RGIA ALATA.—*A Subscriber.*—As you have no place in which you can preserve your plants of Thunbérgia alata except a pit, from which the frost is but just excluded during winter, it will be better for you to treat this plant as an annual, and to sow seeds of it, early in spring, in a pot plunged in a hotbed. If kept at so low a temperature as you speak of, the plants are sure to die off; they also require to be kept in a warm greenhouse to make them produce seed freely.‡

NELUMBIUM.—*C. H.*—Place the seed in a little loam, and plunge it in water of the temperature of 85°. When it has germinated, and struck its root into the loam, shift it carefully into a larger pot, and increase the latter as the plant requires it. At the end of the season rest it, by keeping it nearly dry and lowering the temperature to 50°. All the time it is growing the water about its roots ought to be at 85°.†

HYACINTHS.—*A Regular Subscriber.*—To grow these in moss, it is necessary to fill the Hyacinth glasses with that substance, moderately damp, to such a height that the bottoms of the bulbs may rest upon it. They should be kept in the dark until the bulbs have begun to form roots; after which they may be placed as near the light as possible, and the quantity of water may be increased. If the moss is made too wet before the roots have begun to form, the bulbs are liable to decay.‡

PEARS.—*A Constant Subscriber.*—The ten varieties of Pears for a west-wall, in addition to the twenty-seven you already possess, may consist of the following:—Forelle, Beurré Bosc, Thompson's, Knight's Monarch, Fondante du Bois, Van Mons Léon le Clerc, Old Colmar, Jean de Witte, March Bergamot, Holland Bergamot.‖——*Clericus* asks if we can suggest any mode to prevent certain of his Espalier Pears from decaying before they become ripe, and whilst quite hard, as is almost always the case with the Flemish Beauty, Duchesse d'Angoulême, and Bon Chrétien Fondante. The soil is deep and strong, but not wet. [The varieties alluded to, especially the two first, having thin skins, are very liable to be attacked by wasps; and from a single puncture, decay is induced throughout the whole substance of the fruit.‖]

PLUM-TREES.—*Clericus.*—Plum-trees bear naturally on spurs, and not like the Peach, which in general produces fruit only on shoots of the preceding season. You must, therefore, encourage spurs; instead of dying off, these will become productive if you rightly manage the summer pruning.‖

FRUIT-TREE BORDERS.—*H. H.*—Borders for Fruit-trees should be made sufficiently rich to induce a free, but not an over-luxuriant growth. By stimulating manure must be understood such as would produce the latter effect. Presuming that the soil of your border is naturally good, the addition you propose of fresh hazel loam and some pulverised bog-earth will probably be sufficient. A little rich compost about the roots will be proper, in order to start the trees in the first instance.‖

SEEDS OF FRUITS.—*O. S.*—Seeds of the Apple, Pear, and Quince may be sown in autumn, in well-prepared ground; or they may be kept till spring in brown paper. If, as is generally the case, the latter smell of tar, so much the better; it will act as a preservative against the attacks of insects. You may also bury the fruit two inches deep, and afterwards thin the plants as may be necessary. Plum and Cherry stones are best laid between layers of sand till spring.‖

ACORNS.—*E. M.*—Acorns should either be sown soon after being gathered, or mixed with sand and made into heaps during the winter; otherwise they are very apt to perish. If you had dropped them in the autumn among newly-raised fences, taking care that they were buried about an inch, not much more, all would have grown that the mice did not eat.†

HORSE-CHESNUTS.—*S. C.*—These are greedily eaten by Deer. The Turks are said to feed their horses upon them. They also contain much potash, and would probably make a good addition to a compost-heap, if broken before being added.†

SEA-KALE.—*Rus.*—There is little danger of leaves heating to such an excess as to injure Sea kale, unless an immoderate quantity of them is used. By keeping trial-sticks inserted in different parts of the bed, you may easily discover whether the heat is too great. The method which you have adopted for covering them is perfectly right.‡

TURNIPS.—*Rus.*—We doubt not but you will find the method, recommended at p. 726 in last week's *Chronicle*, for keeping Mangel Wurzel, equally applicable to the preservation of Turnips. They are, however, best ridged out of doors.‡

BOOKS.—*A Subscriber.*—The titles of the works mentioned by Mr. Hayward at p. 709 are—"The Science of Horticulture," and "An Inquiry into the Causes of the Fruitfulness and Barrenness of Trees and Plants."‡

GARDENERS.—We do not see why *An Admirer of Fair-dealing* should object to a gardener selling seeds, provided his master permits him to do so. It is a common practice, and is frequently intended as a little piece of encouragement to a diligent man. If, however, he sells them without permission, he commits a robbery; and then there are other means of dealing with him than through a newspaper. The law has much longer arms and a tighter gripe than the *Gardeners' Chronicle.*†

WATER.—*H. Famdell.*—If the water of a well be tolerably pure, that is to say, free from decaying vegetable or animal matters of any kind, as the water from deep wells generally is, there does not seem to be any reason to suppose that it cannot be preserved for many months in properly-constructed tanks. The earthy impurities, existing in greater or less quantity in all water, do not in any way render it liable to become foul. Unless great care is taken to collect pure rain-water, and to preserve it in very clean vessels, it is far more likely to become foul than spring-water is.—E.

BRITISH WINE.—*Fidelis.*—We regret to be obliged to retain our opinion that *good* wine cannot be made from unripe Grapes. Wine may be drinkable, without being good. Perhaps we are fastidious, but we really cannot admit that the sample you have been so very obliging as to send us proves the contrary.†

MISCELLANEOUS.—*C. T. H.*—Your plant is Geissoméria longiflora.‡——*Botley.*—The Durmast Oak is not an evergreen.†——*M. C.*—The specimen sent is Fúchsia virgata.§——*A. H.*—Your Pear is the Brown Beurré.——*J. R. U.*—Send six P. O. Labels to the Office, and the Number for 10th April 1841 shall be sent you.——*A Moderate.*—Your Heath appears to be Erica verticillata.‡——*P. B.*—Your plant is Rhipsalis crispata.†——*W. B. B.*—The Sálvia is S. pulchella.†——*Ignoramus.*—Your plants are Hedýchium coronárium; 3, Dracæna Draco; 4, Maranta bicolor; 5, Plumbago capensis; and 6, a Stapélia.†——*Y. D.*—The Sycamore blight is produced by a parasitical fungus, and is of no importance.——*J. G. H.*—Myatt's British Queen Strawberry does not require protection during winter.——*Mr. Errington's* plant is a very pretty variety of Brasavola venosa, with flowers much more spotted than usual.†——*E. M.*—We can assure you that the circumstance alluded to by "J. R." in connexion with Oaks has no relation to what you speak of, but is a very curious fact, respecting which we shall have something to say before long; we having seen specimens of the Oaks in question.†——*A Constant Reader.*—Your Pears are, 3, Gansel's Bergamot; 4, St. Germain; 5, Uvedale's St. Germain; 6, Buchanan's Spring Beurré; 7, of the nature of a Perry Pear; 8, Bêzi de Caissoy; 9, Passe Colmar. 1 appears to be only fit for stewing. The Apples are, 1, Salopian; 3, 16, Embroidered Pippin; 4, Hollandbury; 5, Newbold's Duke of York; 6, Black Borsdörffer; 7, 12, King of the Pippins; 8, Yellow Ingestrie; 9, Court of Wick; 10, Court-pendu Plat; 13, Stagg's Nonpareil; 14, Ribstone Pippin.‖——*Liscard.*—Your Apples, 1 and 2, are not known in the neighbourhood of London; 3, is Gloria Mundi; 4, Yorkshire Greening; 5, Syke House Russet; 6, not Loan's Pearmain; 7, Everlasting Pearmain; 8, not Dutch Codlin, but an Apple called by some the Fall Pippin.——*H. H. W.*—Your Apples are, 1, Blenheim Pippin; 2, Stagg's Nonpareil. The Pears are, 3, Glout Morceau; 4, St. Germain.‖——*J. L. O. P.*—Your Pears are, 2, Beurré Diel; 3, Beurré Bosc; 4, Brown Beurré; 5, Urbaniste; 6, White Doyenné; 7, very like Althorpe Crassane; 8, 24, Winter Nelis; 9, 14, Beurré Rance; 11, Flemish Beauty; 13, Vicar of Winkfield; 15, 16, Marie Louise; 17, 29, Duchesse d'Angoulême; 18, 27, Napoléon; 19, St. Germain; 20, Beurré de Capiaumont; 21, White Doyenné; 23, Doyenné Gris; 25, Easter Beurré; 26, Glout Morceau; 28, Beurré Diel; 30, Moorfowl Egg. Of the Apples, 1, which you state keeps till June, is Reinette du Canada; 3, Kirke's Lord Nelson.‖——*A Constant Reader.*—Your Apples are—1, Padley's Pippin; 2, King of the Pippins; 3, Yellow Ingestrie; 4, Downton; 5, Powell's Russet; 7, Court of Wick; 8, Wyken Pippin; 9, French Reinette; 10, Court-pendu Plat; 11, Fearn's Pippin; 12, Pomme de Neige; 13, Beauty of Kent; 14, Devonshire Buckland: 15, Blenheim Pippin: 16, Hollandbury; 17, Ribstone Pippin; 18, Nonesuch; 19, Norfolk Paradise; 20, Kentish Fillbasket; 23, London Pippin. The Pears are—24, St. Germain; 25, Gansel's Bergamot; 26, Beurré de Capiaumont.‖——*Peter Humphrey.*—Your Apples are—3, Rhode Island Greening; 4, Golden Reinette; 6, Blenheim Pippin; 7, Margil; 13, Pitmaston Nonpareil. The others are not known.‖——*A. Z. A.*—Your Pears are—1, 25, 37, 39, Beurré Diel; 2, 26, 34, 40, Beurré Rance; 28, 31, 41, Glout Morceau; 30, Moorfowl Egg; 27, Beurré Bosc; 29, Seckle; 32, 42, 33, 63, Easter Beurré. The Apples are—100, Kirke's Lord Nelson; 101, Marmalade Pippin; 102, 106, Fearn's Pippin; 103, Baxter's Pearmain; 104, Hollandbury; 107, Autumn Pearmain; 105, Wormsley Pippin; 108, Lemon Pippin.‖——*S. S. S.*—Your Pears are—1, Uvedale's St. Germain; 2, Buchanan's Spring Beurré; 3, Napoleon. The Apples are—1, Lemon Pippin; 3, Stagg's Nonpareil; 4, Fearn's Pippin.——*W.*—Your Pear is Henri Quatre.——*A Constant Subscriber.*—Your Apples are—1, Easter Pippin or French Crab; 2, Chester Pearmain.‡——*Oct. 15.*—Your Apple is not known: although handsome, its flavour is not rich.‡——*A regular Subscriber.*—Your Pansy is a bright and pleasing flower, of good form and substance: it is distinct in having the deep blue margin round the lower petals darker in colour than any variety which we have seen. The yellow centre is bright and uniform, and the eye good; the margin leaving off abruptly at the top of the side petals is an imperfection.*——*C. T.*—Much obliged, but we would rather manage the subject of morphology ourselves. It is too difficult for inexperienced writers.†——*Eboracum.*—We are making inquiries, but it is very difficult to get information that can be *relied* on.†——*T. P.*—Your Oncidium is On. bifólium.†——*R. W. J.*—You had better consult Johnson's "Farmer's Encyclopædia."‡——*Clericus.*—The specimens of fruit marked with the following numbers are correctly named in your list, viz.:—Pears, 6. Apples, 15, 20, 21, 22. The others are as follows:—8, Duchesse d'Angoulême; 11, White Doyenné; 14, American Mammoth, or Gloria Mundi; 16, Reinette du Canada: 1, Easter Beurré; 2, White Doyenné; 3, Autumn Bergamot; 4, Gansel's Bergamot; 5, Beurré de Capiaumont; 7, appears to be the Flemish Beauty, certainly not the Brown Beurré; 9, Bon Chrétien Fondante; 10, Chaumontel; 13, Kirke's Lord Nelson; 17, True Old Golden Pippin, certainly very different from the Cornish Gilliflower; 18, Downton Pippin: 19, Ribstone Pippin; 24, Downton; 26 is not the French Reinette, but most probably the Alexander, notwithstanding the almost uniform salmon colour it has assumed. The specimen named Alexander is correct. The Flemish Beauty ought to have been gathered earlier; if left till it readily parts from the tree, it never becomes perfectly melting.——*D. Judd.*—Of the Apples you sent, No. 1 is Brabant Bellefleur; 3, 6, Wormsley Pippin; 5, Acklam's Russet; 7, Pearson's Plate; 8, Syke House Russet; 9, Franklin's Golden Pippin; 10, King of the Pippins; 12, 13, Old Nonpareil; 14, Beauty of Kent; 17, Nonesuch; 19, Alfriston; 20, the Pear, is Hacon's Incomparable.‖——*Y. Y.*—We cannot inform you.——*R. C.*—Your plant is Phlox procumbens.‡

As usual, many letters have arrived too late for answers this week.

NEWS OF THE WEEK.

THE French papers are still occupied with the discussion of the Right of Search and of the Slave-Trade Treaties now in force between this country and France. There appears to be no doubt that the Ministry have acceded to the popular feeling in regard to the Treaty of December 1841, and have officially communicated to Lord Aberdeen that the Treaty will not be ratified. The Ministerial papers admit the failure of the attempt to effect a Treaty of Commerce between France and Belgium, and attribute it to the opposition of the deputies interested in manufactures. The chief topic of interest in Paris is the dismissal of General Pajol from the post of Commander of the First Military Division permanently stationed in the Capital. The General had distinguished himself in all the campaigns of Napoleon, and had contributed, in a great measure, to the success of the revolution of 1830; his dismissal, under these circumstances, is severely censured by the Liberal journals as an insult to a gallant soldier, who for fifty-two years has been associated with the military administration of France.—From Spain we learn that the Cortes will probably be opened on the 14th; and that a report was current that Señor Gonzales is likely to be restored to office through the influence of the British Minister. The rumours of an intended conspiracy to prolong the Queen's minority had entirely ceased, and the Archduke Ferdinand of Austria, now in England, was openly mentioned as the Prince destined by diplomacy to be the husband of her Majesty. Gen. Zurbano's successes in Catalonia in suppressing the contraband traffic has procured for him the appointment of Inspector-general of the smugglers of that province.—From Portugal the accounts of the Tariff question are still unsatisfactory; the Portuguese and the foreign diplomatists offer considerable opposition, and no hopes of a reduction on woollens are entertained; but some important reductions are offered on cotton manufactures, which constitute the great bulk of British imports into Portugal. The first sitting of the Prussian Commission of the Provincial States took place on the 21st. The diminution of the Expenditure, the Salt Duty, and the Railroad questions are the only topics for the consideration of the Commission, which was not expected to sit longer than a fortnight.—The Russian papers confirm the announcement made some weeks since, that the convention with Prussia is no longer in force, and that the officers on the frontier have received orders not to receive any deserters or recruits delivered by the Prussian authorities. The statement of the withdrawal of the troops from the Caucasus is also confirmed, and it appears that Russia has for the present ceased to act upon the offensive, maintaining only such a number of troops as may be necessary to garrison the fortresses already captured from the Circassians.—From Turkey, we learn that the Porte, after hearing an exact report of the events which led to the late Servian revolution, has sanctioned the deposition of Prince Michael, and formally signified its approval of the new Sovereign. This result, which is said to be entirely the act of the Sultan, appears to have been unexpected, and to have taken the Ambassadors by surprise. It is also announced, that Persia has accepted the mediation of this country, and that the differences with the Turkish Government are in a fair way of setvestigate the charges made against him with respect to the Talacre Mining Company.

East India House.—At a late meeting of the Court of Directors, it was resolved to present a gold medal to the distinguished native Dwarkanauth Tagore, who has recently visited this country. In their letter conveying this mark of respect, the Chairman and Deputy Chairman state that it is intended by the Directors as a testimonial of their esteem, and of the approbation with which they regard the public benefits conferred by him upon British India, by the liberal encouragement he has afforded to the diffusion of education, and to the introduction of the arts and sciences; and by the generous support he has given to the charitable institutions of Calcutta, whether established for the relief of the Hindoo or of the British community. They further express the hope of the Court, that the noble course which he has pursued will have the effect of contributing to the accomplishment of that object which it has ever been their anxious desire to promote —viz., the identification of the feelings and interests of the native and European population committed to their government, and thus strengthening the bonds which unite India with Great Britain. In acknowledging this mark of esteem, the eminent Baboo says, "If distress and danger had beset my path, I should have considered myself more than rewarded by the distinguished honour now conferred upon me; but I felt with confidence, and not less with gratitude, that under the just and liberal rule of the Hon. Court, an honest citizen seeking to improve the condition of his country by legal and not unworthy means, had everything to hope for, and nothing to apprehend. I have worked in my humble sphere under a firm conviction that the happiness of India is best secured by her connexion with your own great and glorious country; and that the more the people of that vast empire were enlightened, the more sensible they would become of the invincible power of the protecting state, and of the excellence of a Government whose pure and benevolent intentions, whose noble solicitude for the welfare and improvement of the millions committed by Providence to its charge, may challenge the admiration of the whole world."

Chamber of Commerce.—A proposal has lately been made in the leading mercantile circles of the City, to form a Metropolitan Chamber of Commerce, governed by a committee, to superintend the general interests of trade, and form the accredited organ of communication with the executive. A Chamber of Commerce is to be found in almost every town of importance throughout the United Kingdom, with the single exception of London, where the merchants have nothing but a club and different coffee-houses in which those engaged in particular branches of commerce are in the habit of meeting from day to day. It is suggested that the formation of a Chamber of Commerce would supply a legitimate organisation of the great mercantile interests, and afford the individual members of those interests the benefit of united action. It is also urged that such a body would be of great service in establishing order and regularity in the despatch of business, in watching over the different markets, and in investigating such matters of public interest as have been brought to light in connexion with the Custom-house and other frauds.

Missionary Societies.—On Wednesday, a meeting of the City branch of the Church Missionary Society was held at Crosby-hall. The report stated that the parent society had been established forty years ago, and had done much towards converting the heathen inhabitants of the West and East Indies, of Africa, New Zealand, and several islands in the South Seas. The Bishops of Calcutta and Madras testified to the successful efforts of the society's missionaries among the idolatrous Hindoos of Southern Asia. The funds of the society had not kept pace with its expenditure, and the efforts of the missionaries must be confined to the localities of their present stations. New missions could not be undertaken at present. The actual number of missionary stations spread over the more distant countries was 107. There were 1,353 missionary labourers, of whom 117 were ordained clergymen of the Church of England. The expenditure of the parent society for the year 1841 exceeded its receipts by 20,000*l.*, so that increased subscriptions and donations would be necessary in order that that debt might be liquidated, and to enable the society to establish a reserve fund. The committee appealed to the citizens of London for such support. The citizens of the great emporium of the trade and commerce of the world were bound by two reasons, one secular and the other religious, to aid the Missionary Society. The light of Christianity brought about civilisation, and civilisation advanced commerce amongst nations heretofore benighted and limited in their wants. London would benefit by that commerce, and in return for wealth gained from distant nations by the aid of Providence, its citizens ought to send back the blessings of Christianity. The London auxiliary section was founded in 1840, and had already transmitted to the parent society 2,961*l.*, and its receipts for the past year amounted to 1,239*l.* On the motion of Mr. Labouchere the report was adopted, and a subscription entered into to promote the objects of the society.—On Monday, a meeting of the Wesleyan Missionary Society was held in the City, at which the following details of the proceedings of its missionaries during the past year were made public. It appeared that the association was formed in 1786, and, next to the Moravian mission, was the oldest society of the kind in the country. Its operations extended over Newfoundland, New Brunswick, Canada, the West Indies, the Polynesian Islands, India, Ceylon, Western Africa, New Zealand, several parts of the Continent, &c. &c. In Africa, the conversion of the native tribes was proceeding satisfactorily, and in India and Ceylon 38 missionaries were actively employed. Across the Pacific Ocean, in New Zealand, the operations of the society's ministers were proceeding favourably; and many of the native tribes, at the date of the last advices, were to be seen assembled in Christian worship. The wilds and forests of Australia had proved no obstacle to the zeal of the missionary, for numbers of the aboriginal inhabitants were now converted to Christianity. There were 266 principal missionary stations, and 380 engaged ministers, in addition to many subordinate teachers, &c. Seven printing establishments had been formed, where the work of translating the Bible into the language of the people was carried on. The number of languages into which they were already rendered was twenty. The condition of the people in the neighbourhood of all the stations was stated to be satisfactory, and the income of the society during the year had increased to 101,000*l.*

British-American Association.—The affairs of this Company have been brought prominently before the public within the last few days. It appears that the proposed object of the Company is emigration and colonisation of the territory on the north bank of the St. Lawrence, about half-way between Quebec and Montreal; that the circulars issued to the public announced the Duke of Argyll as president, several noblemen as vice-presidents, and the baronets of Scotland and Nova Scotia as its active superintendents. During the last fortnight several operatives who had given up good situations in this country, for the purpose of emigrating under the protection of the Company, have complained to the Lord Mayor that they had entered into contracts with those whom they considered to be the representatives of the association, to go to Prince Edward's Island in the ship Barbadoes, and that the terms of the contracts had not been fulfilled. His Lordship, therefore, directed that Captain D. Campbell, who owned the vessel, and Mr. Haldon, who negotiated with the emigrants, should attend to answer the charge of violation of their contracts. In the course of the statements made, a great many assertions upon the part of the complainants were denied by the representatives of the company; and the Lord Mayor considering a voyage to Prince Edward's Island at the present season of the year a suspicious circumstance, wrote to the Duke of Argyll upon the subject. It had previously been stated by the solicitor of the company that they courted inquiry as the best advertisement they could obtain, and that the Duke considered himself liable for the pecuniary transactions of the management. In answer to the Lord Mayor's letter, the Duke of Argyll replied that he had formerly taken an interest in the company, believing that it might enable some of the redundant population of the Western Highlands to emigrate advantageously to North America; but in consequence of the late proceedings, he is desirous of withdrawing his name from the concern. His Grace further states that he is not responsible for any pecuniary transactions of the management, and that he contributed 500*l.* in June last, upon the implied and understood condition that no steps involving any expenditure of money were to be undertaken on the part of the company, till the sum of 50,000*l.* was duly certified to have been subscribed, or placed to the company's credit by some means or other. He was therefore surprised to observe the question brought before the Lord Mayor as to wages, &c., to be paid to operatives and emigrants upon the company's account." After reading these letters, a gentleman who had resided in Prince Edward's Island came forward to support the Lord Mayor's observations about the climate, and stated, that if even the vessel should reach Halifax, the emigrants would have to travel 200 miles over a difficult tract, and drag their boats over nine miles of ice. The Lord Mayor said, he had not uttered a word about the climate before he had ascertained the correctness of the reports which were always current as to the intense rigour of the winter of that particular spot. He repeated, that he was induced to interfere in consequence of the representations which had been made to him by the poor men who were, in his opinion, running a very awful hazard by emigrating, under all the circumstances which had come to his knowledge.

Westminster Abbey.—The installation, or reading-in, of the newly-appointed Dean of Westminster, Dr. Turton, will, it is understood, take place in the Abbey on Tuesday next, with the usual ceremonies. The prebends and other dignitaries of the church will assist at the ceremony, to which the public will be admitted by tickets.

Metropolitan Improvements.—At the late meeting of the Court of Common Council, Mr. R. L. Jones brought up the report of the improvements' committee on the subject of the viaduct proposed by Mr. Taylor to be formed from Hatton-garden to Skinner-street. It expressed the approbation of the committee in general terms of the formation of a viaduct to counteract the difficulty of the acclivities, and admitted the ingenuity of the project. It held out no hope that funds could be speedily found to undertake so great an alteration. The expense at which Mr. Taylor estimated the cost of the viaduct was 90,000*l.*, and he did not mean to erect houses on any part of it. Mr. R. L. Jones added his hope to that expressed in the report, that the nuisance would be one day removed; but he said the Government must allow the funds for carrying the improvement into effect, for the corporation certainly could not afford to enter unassisted upon so vast an undertaking, which could not in his opinion be accomplished for less than 200,000*l.*—The Committee of the Metropolitan Improvement Society have issued circulars to the proprietors of the principal manufacturing and engineering establishments, breweries, &c., expressing their intention, in case some plans are not speedily adopted to put an end to the nuisance of smoke, to proceed against them by the common law, or enforce the provisions of Michael Angelo Taylor's Act. The Society has also served similar notices to the proprietors of the river steam-boats navigating between Richmond and London-bridge.

Record Office.—It is stated in the daily papers that Government have decided on appropriating part of the Carlton riding-house, which adjoins the Queen-Dowager's stables, for a new record office, and that workmen are now employed on the new building.

Public Meetings.—On Tuesday a meeting was held at the Hall of Science, Blackfriars-road, for the purpose of recording some expression of public feeling in regard to the conduct of Miss Martineau in refusing a pension of 300*l.* a year offered to her by the late Administration. The Hall was completely filled, upwards of 500 persons being present; Colonel Thompson in the chair. After several addresses had been delivered by speakers of both sexes, the following resolution was unanimously adopted:—"That this meeting fully appreciate the moral and political honesty which led Miss Martineau to refuse the pension offered by the late Whig Administration, though they think there has rarely occurred an instance in which the Royal bounty would have been so well bestowed."

River Steamers.—Notwithstanding the immense numbers who have been conveyed by steamboats on the river during the present year, exceeding that of any former season from the commencement of steam navigation on the Thames, some of the companies have realised no profits, others have met with severe losses, and two have been dissolved. This result is attributed to the competition, the low fares, and the number of passages made by the various steamers. The Commercial Company, and another running to Greenwich, were recently dissolved: and a few days since, at the annual meeting of the Star Gravesend Company, whose fine vessels have been running many years, it was agreed that, in consequence of the losses sustained by the competition, the company should be dissolved; a committee was appointed to wind up the affairs of the concern, sell the vessels, and effect other arrangements for the benefit of the shareholders, who have not received any dividend for two years, and are considerably in debt. It was stated, that neither the Diamond, nor any other company running to Gravesend, is likely to pay a dividend this year; and that one of the Woolwich companies has been obliged to reduce its establishment. On the other hand, it is stated, that the Waterman's Company and the iron-boats are paying a dividend of ten per cent.; so that it would appear that the new and fast boats are well supported by the public, and that the failure of the other companies is not altogether attributable to the low fares. These circumstances are interesting to those who know the value of cheap modes of communication to the inhabitants of the Metropolis.

Metropolitan Prisons.—At the recent meeting of the Middlesex Magistrates, the Annual Report of the Governor of the House of Correction was brought up. It was stated that the facts detailed in that report were of great public importance, tending to show the operation and effect of the system of prison discipline adopted. It appeared that from Michaelmas, 1841, to Michaelmas, 1842, there had been no less than 10,380 committed to that gaol; that the greatest number confined there at any one time was 1,226. Of the 10,580 prisoners, 1,856 had been once before committed, 767 had been confined there twice before, 328 had been there three times before, and 354 had been sent there for the fourth time. These facts were of importance, and had impressed upon the visiting justices the necessity of the adoption of some new system with regard to secondary punishments, and providing some means of employment for prisoners after their discharge from custody. A new system had been adopted with regard to juvenile offenders who were refractory while in prison, by whipping them with a birch rod, instead of resorting to solitary confinement, this plan had a most salutary effect, but the course had not been adopted until all other methods of keeping them in order had failed. The report stated that there are at present within the walls of this prison 1,925 prisoners; viz., 757 males and 268 females, besides 15 children.

Marylebone.—The question of erecting a monument in this parish to the memory of the Scottish Reformers was again considered on Saturday. On the minute being brought up for the recommittal of the report, Mr. Salmon moved the non-confirmation of the minute. A discussion of some length ensued, in the course of which the character of the Scottish Reformers was assailed and vindicated by the several speakers. On a division there appeared—for the non-confirmation, 13; against it, 18; giving a majority of 5 for the recommittal of the report, which is tantamount to a vote in favour of the erection of the column.

Southwark.—The Court of Common Council, on Tuesday, negatived, by a large majority, the motion for the suspension of the standing order which prevents any member of the corporation from being a candidate for any office or place in the gift of the corporation. It was proposed to suspend it in favour of Alderman Sir W. Heygate, in order that he might be a candidate for the situation of High Bailiff of this borough; but this decision of course disqualifies him.

Death of Mr. Allan Cunningham.—We regret to record the death of Mr. Allan Cunningham, a name well known in connexion with English literature and native art. He died on the night of the 29th, from paralysis and apoplexy. His health had long been precarious, and his death free from suffering. He had completed his "Life of Sir David Wilkie" only two days before his death. As the friend of Chantrey and the "honest Allan" of Sir Walter Scott, his name is likely to be long remembered.

Mortality of the Metropolis.—The number of deaths registered in the week ending Saturday, Oct. 22, was 866;

for Berlin in one of the Imperial carriages, the principal inhabitants accompanied her in their carriages, and lined the road from Schönbrunn as she passed. Previously to her departure, the Empress sent her an autograph letter, with a diadem in topaz, adorned with a cameo antique. The Emperor sent her also a bouquet in diamonds of great value.

NORWAY.—Letters from Stavanger of the 4th ult. have appeared in the daily papers, stating that there have been found in the bed of the great stream that runs through Jedderen, in the diocese of Christiansand, and which from the excessive heats became dry, a great number of bivalve shells containing pearls, some of which were so large and fine that they were valued at 1,550f. a-piece. At the beginning of the 17th century, when Norway was annexed to Denmark, the Government took the pearl fishery of this stream into its own hands, and the finest pearls were sent to Copenhagen to be deposited in the Crown treasury. After this the produce of the fishery became so low that it did not pay the expenses, and it was abandoned, but will now probably be resumed.

RUSSIA.—The *Augsburg Gazette* of the 26th ult. announces that the Russian Government, considering the convention made with Prussia for the surrender of deserters to be no longer in force, has given orders to the authorities not to receive any deserters or recruits surrendered by the Prussian Government. The Russian Government had transmitted an official copy of these orders to the Prussian authorities. The German papers confirm the report that the Russians had ceased to act on the offensive in the Caucasus. The pretended plan of surrounding the Circassians in their valleys was said to be a mere boast, by which they were endeavouring to mask their retreat, the Emperor having given orders for the withdrawal of the troops, except those necessary to garrison strongly the towns and fortresses in the possession of the Russians. —A Letter from Sebastopol, published in the Frankfort papers, states that the Russian fleet stationed in the Black Sea consists of 8 ships of the line, 6 frigates, 11 sloops, and 6 steamers, which are constantly cruising along the shores of the Caucasus, to prevent all intercourse between the Circassians and the ports of Asia Minor, whence the mountaineers procure their provisions and ammunition. The fortifications of Sebastopol are going on very rapidly. Forts Alexander and Constantine, which command the entrance into the bay, and will be mounted with 320 guns, are quite finished. Fort Nicholas, which has three ranges of bastions, to be armed with 260 guns to protect the harbour and docks, is also nearly completed. These docks, which were commenced 12 years ago, are of gigantic dimensions, of which no idea can be formed without being seen. In order to supply them with water it has been necessary to cut a canal about 14 miles in length, and construct several tunnels and aqueducts. All these works have been carried on under the direction of Mr. Hopton, an English engineer, with whom the Emperor is so highly satisfied, that he has created him a major in rank, and conferred upon him the insignia of one of the Imperial Orders.

TURKEY. — Advices from Constantinople, received through Vienna, announce that the Porte had issued a Hatti Scheriff, sanctioning the election of the new Sovereign of Servia, Prince Alexander Georgewitch, and that Persia had accepted the mediation of this country to arrange the differences with the Turkish Government.— In regard to Servia, it is stated that the Sultan had demanded an exact report of the events which led to the late revolution, and after mature deliberation had approved of the changes. The Ottoman Commissioner was expected in a few days to invest the Prince. This result appears to have caused some surprise, as the Ambassadors had no presentiment of the Porte's decision, and the Consuls were also without intimation of the fact.

EGYPT.—The Viceroy of Egypt has decided, on the application of the Consul-General of France at Alexandria, that all packages in transit from Suez to Alexandria shall be allowed to pass upon the simple declaration of their contents and the production of the bills of parcels. The duty upon these packages is, for all nations, a half per cent. upon their declared value.—Letters from Alexandria mention the discovery of a coal mine near Suez. It appears that 4*l.* 10*s.* per ton is now paid at that port for coal to supply the Bombay steamers, and that if it be supplied on the spot it will cost only seven or eight shillings per ton. The cost of steaming on the Indian seas is calculated at the rate of one guinea per mile under the present system, and the reduction of the passage fares would follow as a natural course, should the coal be obtained near Suez.

INDIA.—The French telegraph has not yet announced the arrival of the overland mail, which is now hourly expected. The following extract from a private letter has appeared in the daily papers, and attracted some attention :—"We understand that a letter from Sir Robert Sale has been received, written after the date of the last despatch from Jellalabad, and subsequent to the arrival in this country of the last Overland. It is mentioned as stating that the prisoners are actually to be exchanged for Dost Mahomed. Should such prove the fact, the plans of Lord Ellenborough as to Cabul become developed, because Dost Mahomed's liberation becomes the first step to his restoration to the throne ; the seizure of the Punjab is the next step, and the Indus and Sutlege made the western boundary of our Indian empire. An offensive and defensive treaty with Dost Mahomed, providing for the safety of the Khyber and Bolan Passes against Persia and Russia will be its basis. The concentration of such a powerful army as we read of, and the movements it is stated to have already made, is for the total subjugation of the Seiks, who have latterly been acting a treacherous part."

UNITED STATES.—The steam ship Columbia arrived at Liverpool on Saturday night. She sailed from Boston on the 16th and from Halifax on the 18th, making the voyage from the latter place in eleven days and eight hours. The Britannia arrived out in eleven days and a half, facilitating the escape of Mr. Burdekin, manager of the Manchester Bank, who took his passage and his booty by her. The death of Dr. Channing, the eminent divine, at Burlington, Vermont—a name not merely of American, but of European celebrity—is the most striking event mentioned in the papers, which are otherwise occupied with the autumn elections, and local matters. Dr. Channing died on the 2d ult., and it was expected that his funeral would take place at Boston on the 6th. He was the grandson of William Ellery, one of the signers of the Declaration of Independence, and was in his 63d year. His uncompromising opposition to slavery, which he proclaimed both in his discourses and in his writings, has classed him among the first advocates of the cause of freedom. He had long been in a feeble state of health, which had compelled him to relinquish active pastoral duties. His death was generally felt as a national bereavement. — The British Queen, Belgian steamer, from New York to Antwerp, arrived at Cowes early on Thursday morning, after a very lengthened passage of 26 days, having bore up for the Western Isles to get a fresh supply of coals. The greatest anxiety had prevailed for some days, in consequence of her non-arrival. She has brought intelligence of the loss of another of the West India Mail steamers, said to be the Solway ; but the intelligence is given in so vague and loose a manner, that many persons think that it must refer to the Medina, which was lost at Turk's Island some months ago. The arrival of the Medway, now hourly expected, will no doubt clear up the uncertainty, as the intelligence was derived from her crew while the British Queen was at anchor at Fayal. The letters and papers add little to our previous intelligence. Immense gatherings are taking place by the Whig party, in several parts of the Union, to promote the election of Mr. Henry Clay, of Kentucky, to the next Presidency. One meeting has just come off at Drayton, Ohio, at which 130,000 persons were present, who were addressed by Mr. Clay, Governor Corwin, and Messrs. Ewing and Crittenden. Resolutions were unanimously carried, nominating Mr. Clay for the Presidency, and Mr. John Davis for the Vice-Presidency. This is described as by far the most important expression of public opinion that has yet occurred in favour of Mr. Clay. It is also confidently rumoured that the democratic party are likely to agree to the nomination of Gen. Cass, the present United States minister in France. Besides this gentleman, Messrs. Calhoun, Van Buren, and Buchanan are talked of ; but the great bulk of the democratic party seems to be divided between Mr. Calhoun and Gen. Cass.

CANADA.—Accounts from Halifax state that the Parliament was prorogued on the 12th inst. by Sir Charles Bagot, with a short speech, simply thanking the Legislature for the zeal and assiduity with which they had considered and perfected the measures of the session, as well as for the supplies they had voted, and exhorting the members to use their personal influence in the several districts to promote the harmony and good feeling which it had been his endeavour to establish. The Attorney-General for Eastern Canada, Mr. Lafontaine, had been returned by his old constituency, the fourth riding of York county ; but his coadjutor, Mr. Baldwin, Attorney-General for Western Canada, had been less fortunate. He was defeated for Hastings county by the Conservative candidate, Mr. Murray, who headed him on the poll by 41. The election was accompanied by rioting so violent, that the military had to be called out, and the return will be set aside, it is said, on the ground of obstruction and illegality. Before separating, the House of Assembly had imposed a duty of 3*s.* per quarter on United States grown wheat.—The Governor-General had promulgated a letter from Lord Stanley, announcing that the Queen had refused to grant the prayer of certain petitioners, who had asked the Crown to make Toronto and Quebec alternate seats of the Provincial Government. Kingston is to remain the civil metropolis.

MEXICO AND TEXAS.—The papers brought by the Columbia state that Mexico has commenced the invasion of her revolted provinces, Texas and Yucatan, with a degree of energy little characteristic of her people. Gen. Santa Anna has two English steamers at his command, plenty of men and resources, and his troops had already taken San Antonio in Texas, arrested the principal inhabitants of the place, and proceeding to the civil court, which was sitting, seized the judge, the jury, and all the lawyers. These vigorous proceedings appear to have been quite unlooked for by the Texans, whose navy, at the date of the last accounts, was lying idle at New Orleans, and no means had been taken nearer home to repel the invaders. It was expected that Galveston, to reach which the steamers, with their small draught of water, would be very useful, would be the next point of attack. A hurricane was experienced at Galveston on the 18th September, and continued without intermission for four hours, during which period the water arose with frightful rapidity into the streets of Galveston, until the depth ranged from two to four feet in all the streets situated within 300 yards of the bay shore, in the principal business part of the city. The Episcopal church, a stately edifice, just completed, was blown from its foundation ; the unfinished Catholic church was nearly as much injured, and several large houses and stores were destroyed. The shipping in the bay suffered severely, and the total loss of property is said to have amounted to 50,000 dollars. No lives appear to have been lost.

AUSTRALIA.—The late papers from Sydney give an abstract of the monetary affairs of that colony, in the shape of the sworn returns of the average assets, liabilities, capital, and profits, of the several banks in the colony. They give for the first quarter of the present year the gross circulation of the seven establishments, viz., the Commercial, the Australasia, the Union, the New South Wales, the Sydney, the Australia, and the Port Philip, at 200,246*l.* : the deposits at 975,810*l.* ; the coin at 474,645*l.* ; and the discounts at 2,430,027*l.* ; and then a comparison of the returns for the last twelve months is made, which shows them all to be in an apparently sound and safe position. It seems that though in the nine months ending the 31st of March there had in bank accommodation been a decrease of 269,823*l.*, there nevertheless was in the last quarter an increase in the deposits of 28,460*l.*, which, with the rapid increase of coin in the three last quarters, made the gross increase 90,558*l.* In the third quarter of last year it appears the deposits decreased 31,239*l.*, and in the fourth quarter in the immense sum of 122,148*l.* ; but in the first quarter of the present year they had increased 28,460*l.* A diminution in discounts had taken place, and it is stated that this did not result from the less accommodating spirit of the banks, but from a positive falling off in the demand for such accommodation. This arose from two causes—the subsiding of speculation, and a growing conviction forced upon the public mind, by experience, that neither the profits of trade, nor those of farming and grazing, will admit of the high rate of 11 per cent. interest for the temporary use of capital. The latest accounts from Sydney advise the fact of a reduction on the part of some of the banks of their rates of discount, which is alluded to as a sign of the healthier action of business. The daily papers state that a letter has been received from William Geach, transported about twelve months since for forgery, in which he gives a description of his sufferings, and begs his friends to obtain a mitigation of them, as death would be more acceptable than life under such circumstances. He is stepson of the Chartist leader John Frost, who is also undergoing similar punishment in the same colony. He was Mr. Frost's attorney when the latter was tried for high treason, and many months did not elapse before he himself was tried at the same bar for forgery.

CITY.

Money Market, Friday.—Consols for money and the account left off, 93¾ to ⅞ ; Bank Stock, 167 to 168 ; India Stock, 253 to 255 ; Exchequer Bills, 59s. to 60s. prem. ; Three per Cents. Reduced, 93 ; Three and a Half per Cents. Reduced, 100½ to 100⅝ ; India Bonds, 50s. to 52s. prem. ; New Three and a Half per Cents., 101½ to 101⅝ ; and Long Annuities, 12⅜ to 12 5-16.

Metropolis and its Vicinity.

Presentation of the Lord Mayor.—On Wednesday the Lord Mayor elect was presented by the Recorder to the Lord Chancellor, for the purpose of being approved of as the chief magistrate by the Queen. The Lord Mayor elect was accompanied by the leading members of the Corporation. After the usual speech from the Recorder, giving an account of the Lord Mayor's history and pursuits, the Lord Chancellor said he felt much gratification in announcing Her Majesty's approbation of the choice made by the citizens of London of a Lord Mayor for the year ensuing, and her perfect conviction that Mr. Humphery would satisfactorily perform the duties of the office to which his fellow-citizens had elevated him. At the close of this ceremony the Lord Chancellor, in accordance with the usual custom on the first day of Michaelmas term, gave a *déjeûner* to the Judges and leading members of the bar.

Court of Aldermen.—A Court was held on Thursday, at which Alderman Thomas Wood applied to the Court to investigate the charges made against him. He stated that, notwithstanding the frequent applications he had made to the Court to give him an opportunity of showing that the attacks made upon him were altogether groundless and founded in malice as well as falsehood, his brother magistrates had refused to him the justice which he had reason to expect at their hands, and had finally rejected him when returned to the Court by the Livery. He had since that event searched the decisions of the Court, and he could find no record of their proceedings on the subject ; and he did not consider that the Court had done credit to itself by the course it had adopted through the whole of the transaction ; and he called upon it to say what his offence was, and to afford him an opportunity of answering any accusation which might be brought against him. His earnest wish was to have an immediate and searching investigation into his conduct. A long discussion ensued, in which several Aldermen expressed their conviction that Alderman T. Wood ought to have proceeded in the business himself as soon as the charges were made against him ; that he had been openly charged by the *Mining Journal* with having passed off coal of unexceptionable quality belonging to another mine as the Talacre mine, and that the imputation had been repeated since his rejection as a candidate for the Mayoralty. Others referred to the judgment of Lord Denman in the Court of Queen's Bench, and stated, that they had voted against Alderman Wood on the ground of that decision. Alderman T. Wood declared that he had fully answered everything in the shape of a charge against him, to the satisfaction of the Court of Queen's Bench, by an affidavit. The only grave charge brought against him, and certainly it was one of a very serious nature, was that of having substituted the coal of one mine in place of that of another. A more malignant falsehood could not be imagined than that imputation. He had denied it in the strongest manner in his affidavit, and the Court of Queen's Bench believed his denial. It was then resolved that a committee should be appointed to in-

Chief at this port, and that Lord Ingestre is to be the Flag Captain. Sir John Talbot is a distinguished officer in the service; his capture of the Rivoli, 74, when in command of the Victorious, was one of the most gallant achievements of the last war.

Reading.—The ceremony of laying the foundation stone of the Episcopal Chapel in the new cemetery of this town took place on Wednesday week. The stone was laid by Mr. Ramsbottom, M.P., the Provincial Grand Master of Berkshire, with masonic ceremonies. The brethren assembled in great numbers, and marched in procession to the spot, wearing their various orders. The local papers give long details of the ceremonies, but they have little interest for the general reader.—On Thursday a serious fire broke out at Bear Wood, the seat of Mr. Walter, M.P., which, although fortunately checked in its progress, has occasioned the loss of much valuable property, and for some hours threatened the whole mansion with destruction. It appears that the fire, which is supposed to have originated in the kitchen flue, was discovered in some rooms occupied by the servants, and forming the extremity of one wing of the mansion. It was some time before the engines could be brought into play, but the neighbours and peasantry assembled in great numbers, and removed the furniture to a place of safety. The thick wall of the conservatory resisted the progress of the flames, and the fire was eventually prevented from extending beyond the wing in which it had commenced. At 7 in the evening the fire was still smouldering, but no further danger was apprehended.

Saffron Walden.—On Tuesday week, after the Agricultural meeting noticed in our last, the Museum of this town was broken into and robbed of a quantity of rare gold and silver coins, commencing as far back as the reign of Edward IV. A reward of 50*l.* has been offered by the trustees, and a similar sum by Government, for the apprehension of the offender.

Salisbury.—The Wiltshire papers state that the Recorder, in his charge to the grand jury at the late sessions in this city, mentioned the strange anomaly that, by a charter granted in the year 1612, in the reign of James I., the Judges of Assize had no power to deliver the gaol belonging to the city of New Sarum, for the civic authorities therein mentioned had sole power to try prisoners committed for offences within their jurisdiction, and that the only alteration made by the Municipal Corporation Act was the appointing of a Recorder as sole Judge of the session. The Recorder also stated that Mr. Justice Wightman, at the summer assizes, which were held at Devizes, had set at liberty a prisoner committed for larceny, when, by the said charter, he ought not to have been liberated.

Southampton.—The arrival of the British Queen, Belgian steamer, has been the source of general congratulation, and has relieved numbers of persons from serious anxiety. It was known that she left New York on the 7th ult., her usual day of sailing, and according to the ordinary rate of passage, she ought to have arrived here last Friday week. A sailing packet, which left New York the day after her departure, arrived at Liverpool last week, and the Halifax steamer, which left nine days later, arrived in safety on Saturday. Under these circumstances, it was feared that the British Queen had shared the fate of the President, and the insurances at Lloyd's had advanced to 15 and 20 guineas per cent. An offer was made of 25 guineas, but was refused by the underwriters. The loss of the President had unfavourably influenced the minds even of experienced parties, who, finding the great delay that had taken place, began to anticipate the worst. From the report circulated of the qualifications of the Queen for traffic across the Atlantic, it appears that doubts were expressed on the subject on account of her being of the same build and construction as the unfortunate President. At Lloyd's, when the news arrived of the safety of the vessel, the underwriters and merchants engaged in the American trade were warmly congratulated, and little else was talked of in commercial circles on Thursday. It will be seen by our foreign news that the vessel put in at the Azores to get a fresh supply of coals.

Windsor.—The first public meet of her Majesty's staghounds this season took place on Tuesday at Salthill, in the presence of the Earl of Rosslyn, the master of the hunt, and a numerous field. The deer was uncarted in a field adjoining Langley-lane, crossed the Railroad-bridge, and made for Slough; passed through the village, and attempted to leap into the windows of the RedLion Inn. He then took the direction of Uxbridge, running right and left of the direct road, and was killed at Drayton, after rather more than half an hour's inferior running.—Mr. G. E. Anson, Prince Albert's treasurer, who was thrown from his horse about a fortnight since, while hunting with the Prince, was sufficiently convalescent on Monday to attend his official duties, for the first time since the accident.—On Monday an attempt was made to release two prisoners confined in Windsor Gaol, who had been sentenced at the last Quarter Sessions to transportation, the one for ten, and the other for seven years. The attempt at rescue by their confederates had so nearly succeeded, that the men outside had ascended as far as the window of the cell in which they were confined. They were, however, seen by a person passing at the time, who gave the alarm to the gaoler, by whom the attempt was frustrated, but the confederates managed to get off.

York.—The appeal made some time since for the restoration of the Minster seems to have been answered by the public in a liberal spirit, the amount already subscribed to defray the expense of restoring that portion of the edifice destroyed by fire exceeding 5,500*l.*

Railways.—The following are the returns for the past week:—London and Birmingham, 15,962*l.*; Great Western, 13,566*l.*; South-Western, 6,558*l.*; South-Eastern, 1,319*l.*; Northern and Eastern, 1,350*l.*; Brighton, 4.364*l.*; Blackwall, 524*l.*; Croydon, 262*l.*; Greenwich, 700*l.*; North Midland, 4,226*l.*; York and North Midland, 1,739*l.*; Hull and Selby, 1,202*l.*; Manchester and Leeds, 5,000*l.*—The adjourned general meeting of the Eastern Counties Railway Company was held, on the 28th ult., at Shoreditch, Mr. H. Bosanquet in the chair. This meeting was originally fixed for the 31st August; but as the engineer's report led the directors to expect that the line would be opened on the 1st of last month, it was postponed, as obstacles had arisen to prevent the opening of the line until 28th October. The directors are of opinion that it would not be prudent to open the line at present, even were it soon finished, as the traffic in the winter months must necessarily be comparatively small; and they cannot now, with confidence, fix any precise period for opening. Mr. Braithwaite, the engineer, gave a very voluminous report; and it seems that besides the sum of 206,000*l.* called for in August to finish the line, 11,000*l.* will be required for the engineer's department. A great deal of discussion ensued, both on the expenses of the line and the delays of its progress. The chairman remarked on the anomaly of the shares in the public market exhibiting so enormous a disproportion in comparison with the intrinsic value of the undertaking. The shareholders generally complained of the bad management which had from the first disclosed itself, and of the vexation again occasioned by the adjournments. The company's shares are at a discount of 15 per cent., taking the amount at present paid up of 23*l.* per share on the original issue.—A meeting of the Preston and Wyre Railway and Harbour Company was held on Monday, Sir Hesketh Fleetwood, Bart., M.P., in the chair. The report stated that the annual expense of working the line was 15,914*l.*, and of maintaining the harbour, 3,787*l.* The floating debts of the company, which were now in course of payment, had been reduced to 3,552*l.*, against which there was a set-off of 1,462*l.* There was at present due for calls in arrear, 12,121*l.* The works of the harbour were at present in abeyance, but the directors were endeavouring to obtain the assistance of Government towards carrying them out, and in connexion with which they strongly urged on the proprietors the establishment of a steam navigation company, for the purpose of keeping up a regular communication with Ireland and Scotland. Considerable discussion then ensued upon the state of the undertaking. After some remarks from a few of the principal shareholders, and an expression of confidence on the part of Mr. J. Abel Smith, M.P., on the eventual prosperity of the undertaking, a resolution was passed, appointing a committee to act in concert with the directors, for the purpose of raising, on the security of the company's property, 2,500*l.*, to pay the interest due to the Royal Exchange Insurance Company, and also to report on the future prospects of the company. Another resolution was passed empowering the solicitor to prosecute all defaulters in respect of calls in arrear.—It is announced as definitively settled that the great Caledonian Railway shall proceed from Lancaster by way of Kendal, to Carlisle; and that the London and Birmingham Railway Company have come to a resolution to promote it. Application for an Act of Parliament will be made next session, and as soon as it has been obtained, the work will be commenced simultaneously from Carlisle to Penrith, and from Lancaster to Kendal. The second portion of the project, from Carlisle to Glasgow and Edinburgh, will also, it is understood, be prosecuted as early as possible.—Two places of worship have just been erected on that portion of the London and Dover Railway now in progress between Tonbridge Wells and Folkestone, for the religious instruction of the excavators and workmen in the employ of the company. There are similar establishments on the Birmingham Railway at Wolverton, where a church is about to be erected, to be followed by another at the central station of the Grand Junction Company at Crewe.—A survey is now in progress for the continuation of the Brighton Railway, by means of a coast line, to Chichester and Worthing. As the country through which it runs is generally level, the expense of constructing the line, according to the estimates, will not exceed 15,000*l.* per mile. The project is supported by the Duke of Norfolk and by Mr. J. A. Smith, M.P. It is also stated that the Brighton Company have prepared plans and estimates, with a view of going to Parliament in the next session for an act to authorise the construction of a branch line from Croydon to Vauxhall, in order to form a west-end terminus to their railway. The line is said to be easy of formation.—At a meeting of the West London Company this week, it was stated that a considerable number of the preferential shares created under the new capital had already been appropriated, and that additional applications were daily coming in.

IRELAND.

Dublin.—On Tuesday, being the first day of term, the courts were opened with the usual formalities. The hall and the several courts were much crowded, particularly the Court of Chancery. At two o'clock Sir Edward Sugden took his seat on the Chancery bench, when Mr. T. B. C. Smith and Mr. Greene were respectively called as Attorney and Solicitor-General, and took their seats accordingly. Mr. Blackburne sat as Master of the Rolls. The vacant sergeantcy is not yet filled up; but Mr. Keating is now mentioned as likely to receive the appointment. Dr. Stopford will be consecrated to-morrow at Armagh, by the Lord Primate, the Bishop of Down, and the Bishop of Kilmore.—The election of Lord Mayor for the ensuing year took place on Tuesday, when Alderman Roe was unanimously elected. In the evening the usual entertainment was given by the new Chief Magistrate to the Town Council and their friends.—On Monday, the annual collection of the fund to compensate Mr. O'Connell took place throughout the country. The Dublin returns—the only ones, of course, yet received—present a considerable increase over the last and some previous years. In some parishes the amount is larger than upon any previous occasion: the average of St. Andrew's parish was 213*l.*; but the collection this year is 303*l.* The metropolitan parish averaged 237*l.*; this year the collection was 333*l.* The average of St. Nicholas' parish was 74*l.*; this year it is 110*l.* Other parishes are increased to a less extent, and a few are nearly the same. The total amount for Dublin and its vicinity is upwards of 2,000*l.* In reference to the contributions collected in behalf of Mr. O'Connell, a letter has recently appeared, in which that gentleman replies to the charges of the Earl of Shrewsbury on the subject of the rent, and states what he considers to be his claims on the gratitude of Ireland. "The year before emancipation," he says, "though wearing a stuff gown, and belonging to the outer bar, my professional emoluments exceeded 8,000*l.*,—an amount never before realised in Ireland, in the same space of time, by an outer barrister. Had I adhered to my profession, I must soon have been called within the bar, and obtained the precedency of a silk gown. The severity of my labour would have been at once much mitigated, whilst the emoluments would have been considerably increased. I could have done a much greater variety of business with less toil, and my professional income must have necessarily been augmented by probably one-half. If I had abandoned politics, even the honours of my profession and its highest stations lay fairly before me." After alluding to the offer made by the Marquis of Normanby, who placed the office of Lord Chief Baron of the Exchequer at his disposal, and which he refused, lest the acceptance should control his actions in regard to Ireland, he says,—"I do not think I am guilty of the least vanity when I assert, that no man ever made greater sacrifices to what he deemed the cause of his country than I have done. I care not how I may be ridiculed or maligned. I feel the proud consciousness that no public man has made more, greater, or more ready sacrifices." He concludes by saying,—"All this have I done and suffered for Ireland. And let her be grateful or ungrateful—solvent or insolvent—he who insults me for taking her pay wants the vulgar elements of morality, which teach that the labourer is worthy of his hire; he wants the higher sensations of the soul, which enable one to perceive that there are services which bear no comparison with money, and can never be recompensed by pecuniary rewards. Yes: I am—I say it proudly—I am the hired servant of Ireland, and I glory in my servitude."—The meeting of the Repeal Association took place on Monday. After several matters had been disposed of, notice of a motion was handed in by Dr. Murphy to the effect, that this society and all Ireland call upon Mr. O'Connell to retire from Parliament, and devote the energies of his mind to the repeal agitation at home. The Lord Mayor said that, although one vote would now be of little value in Parliament, still he thought that, as "both is best," he could be of service to Ireland both in and out of Parliament. He then proceeded to address the meeting on the present state and prospects of the repeal cause. He said that the hour of Ireland's regeneration was approaching. He was convinced of this when he looked to the state of England and what was going on there at present. The working classes were steeped in distress, while nothing better appeared in store for the agriculturists. What had been done for them? After six great nations had increased their tariffs for the purpose of shutting out English goods, Sir R. Peel not only threw open the English market to foreign manufactures, but he betrayed the agriculturists in the same tariff. England would soon require the entire support of Ireland, and she should have it if she acted with justice. She had been compelled to do justice to Canada, very much against her will; and if the people of Ireland only combined together in legal and peaceful bonds, but with a firm resolution to procure her domestic Parliament, England should speedily grant it. After alluding to the state of the markets, he concluded a long speech by reading a report on the state of the repeal question, which was adopted by the association. The week's rent was 102*l.* 6*s.* 4*d.*

Cork.—The provincial papers state that an English stranger visited and left this city last week, after vainly attempting forgeries to the amount of 2,600*l.* upon the Provincial Bank, and Bank of Ireland in that city. He assumed the designation of "Henry Belville," and represented himself as a man of capital about to invest largely in steam-mill operations.

SCOTLAND.

Edinburgh.—The works for the colossal statue of her Majesty, on the north front of the Royal Institution in Princes-street, are in active progress, and the stones for the basement have already been brought from the Binny quarries. It is stated that the whole structure, when completed, will weigh upwards of 90 tons.—The country papers give accounts of the rapid approach of winter. In Perth, snow has fallen in some quantities; and in the west of Scotland, the Arran mountains, Carrick-hill, the Craigs of Kyle, and all the upland districts, are covered with snow.

Dundee.—The local papers state that Mr. Alexander Duff, the unfortunate sufferer in the late case of attempted murder, is so far recovered as to have been able to leave the cottage where he found a shelter on the night in which the attempt was made, and walk a short distance to the railway on Friday last, on the way to his own home.

Glasgow.—On Friday of last week the large bonded males, 424; females, 442. Weekly average for the years 1838, 9, 40, 1: males, 467; females, 445. The distribution of this mortality over the different districts was as follows: Western districts, 136; Northern, 167; Central, 165; Eastern, 200; Southern, 189.

Police.—On Wednesday, a gentleman, who refused to state his name, was brought before the magistrate at Marlbrough-street, charged with being a deserter from the East India Company's Service. Mr. Clarkson, who attended on behalf of the East India Company, said he should produce evidence to prove that the gentleman at the bar was Captain Archibald Douglas, of the 49th Native Infantry; that he had received leave of absence from Tanjore to go to the Neilgherry hills; and that, availing himself of this circumstance, he had made his way to England in the Reliance merchantman, under the assumed name of Jackson. Having satisfactorily established the identity of Captain Douglas, it would be his duty to ask for his committal as a deserter from the Company's Service. A clerk in the India House was called, who proved that a sum of 1,000*l.* East India Stock was transferred by Captain Archibald Douglas about a fortnight ago. The transfer-book was signed Archibald Douglas, and witness believed that the accused was the party who had transferred the stock. The constable who apprehended defendant deposed, that when arrested he admitted that his name was Douglas. It was argued for the defence, that the proof of identity was incomplete, and the case was therefore adjourned to procure the attendance of other witnesses. It was stated that the defendant, in addition to his commission, held the important civil appointment of Resident at Tanjore. The case was resumed yesterday, when numerous proofs of identity were adduced, and Counsel for defendant admitted that his client was Capt. Douglas. The Magistrate, after a long hearing, said he had no alternative, and committed Capt. Douglas to prison as a deserter.

Greenwich.—On Monday afternoon an accident occurred to Lady Stopford, wife of Admiral Sir R. Stopford, and to her daughter, Miss Stopford. The ladies, with a female friend, were taking an airing in an open carriage on Blackheath, when, near the residence of the Princess Sophia, the horses shied, and sprang over a mound by the side of the road. The ladies were thrown out, but escaped with a few bruises. The horses struggled, and, breaking away with the splinter-bar, dashed down Blackheath-hill at a rapid rate, and were stopped with difficulty.

Provincial News.

Blackburn.—On Saturday night a fire broke out in the extensive mill of Mr. Eccles in this town. Although every exertion was made to check the flames, the whole building was burned to the ground. The books, &c., were with difficulty saved, and the damage is estimated at from 30,000*l.* to 40,000*l.*

Brighton.—The affair which took place in the Chapel Royal last August, when the Rev. Mr. Moore, an invalided young clergyman, was mobbed through the streets of Brighton, is immediately to come on in the Court of Common Pleas. The affair was noticed by us at the time, and our readers will recollect that the officiating clergyman, Mr. Drummond, warned his congregation against certain swindlers who were present in the chapel, and that the clergyman in question, and his relative Mr. Moore, were mistaken for the offenders. Mr. Moore, sen., has forborne his action against Mr. Drummond, in order to become a principal witness. Mr. Drummond has declined stating the origin of the outrage, or to bear any expense whatever, which is now very considerable. It is said that Serjeant Talfourd has done all he could to bring about an amicable adjustment, but has been unsuccessful.

Cambridge.—The Rev. Professor Whewell, Master of Trinity, was yesterday elected Vice-Chancellor of this University.—The Committee for managing the ball at the late installation have presented the surplus proceeds, amounting to about 200*l.*, to the treasurer of Addenbrooke's Hospital.—A monument has been erected in Trinity College, by public subscription, to the memory of the Rev. J. H. Macaulay, late head master of Repton school. The inscription, recording his great classical learning, is from the pen of the Rev. H. Thompson, of Wrington, formerly scholar of St. John's.

Chelmsford.—The *Chelmsford Chronicle* states that a meeting of the clergy of this district took place after the delivery of the Bishop of London's recent charge, when a unanimous feeling was expressed that the suggestions laid down by the Reverend Prelate should be carried out, where practicable, in the several parishes. The alterations were commenced in this town on Sunday. The usual hymn at the beginning of the service was omitted, and the clergyman gave out the psalms; he also preached in his surplice, and after the sermon proceeded to the altar, and read an offertory sentence and the prayer for Christ's church militant, as prescribed by the rubric. The rector, in his sermon, alluded to these changes, which, though he considered some of small moment, he had adopted in compliance with the wishes of his diocesan. He also announced that daily service would be performed in the church, and that the vigils of saints' days would in future be observed.

Cheltenham.—A case which excited much astonishment came on for hearing on Tuesday at the police-court, before an unusually full bench of magistrates, amongst whom were the Hon. Grantley Berkeley, M.P., Admiral Sir S. Davenport, Colonel Smith, &c. Lady Rebecca Ricketts (widow of the late Admiral Sir R. T. Ricketts), Mr. T. Wright her surgeon, George Buckman, and Edward Cousins, clerks to Mr. Straford, her Ladyship's solicitor, appeared in pursuance of a warrant issued by Colonel Wall, on the application of Mr. Augustus Newton, son-in-law of the deceased Admiral, who charged the defendants with conspiring to forge the signature of Sir R. Ricketts to a document purporting to be his will, with the intent to defraud Mr. Newton and his wife of their share of the estate, valued at 60,000*l.* Lady Ricketts and Mr. Straford were also charged with uttering a probate of the will to Mr. W. Pitt, one of the managers of the County of Gloucester Bank, on the 21st Sept., with the intent to defraud Mr. and Mrs. Newton of certain moneys in the co-partnership of the bank. Mr. Newton now applied for an adjournment in consequence of the absence of Mr. Straford, and in order to produce the will and probate. After a long discussion Capt. St. Clair, after consulting with his brother magistrates, said they felt that it was their duty, upon the oaths taken, to defer the case until the principal document is before the Court. It was finally arranged that the case should be postponed for three days, and the parties charged were bound in their own recognizances to appear—Lady Ricketts herself in 1000*l.*, Thomas Wright and George Buckman in 500*l.* each, and Edward Cousins in 100*l.*

Chester.—A sanguinary combat took place on Saturday week, between the keepers of Mr. Tollemache, M.P., of Tilston-lodge, and Mr. Corbett, of Darnhall, and a party of poachers; which resulted in the defeat of the keepers—one of whom, named Richard Chesters, died a few hours afterwards from the injuries he received. Four of the poachers were immediately apprehended, but the fifth is still at large. An inquest was held on the body of the keeper, and, after a long investigation, the jury returned a verdict of Wilful Murder against the prisoners, who were immediately committed to take their trial at the next assizes.

Deal.—It is stated that Mr. Bush, the civil engineer, is so convinced of the efficacy of his plan for the establishment of a lighthouse on the Goodwin Sands, that he is determined to proceed with its construction, notwithstanding the recent loss of the caisson. The daily papers state that the Prince Regent transport, which arrived at Woolwich on Monday with troops from Canada, was in great danger during the recent storm. On the morning of the 22d, in beating in for Dover during the gale, the ship was almost driven on the Goodwin Sands, and, had it not been for the light which burst in with the rise of morning, the vessel with its crowded company would most probably have perished.

Devizes.—The papers have given long accounts of an extraordinary match which the Hon. Grantley Berkeley has undertaken to perform on the last Tuesday in this month, at Charborough Park, the seat of Mr. Drax. He is to course, pull down, safely hobble or secure five full-headed bucks, from six to seven years old, for the purpose of stall-feeding, using but one deer greyhound and one horse for the five courses, fresh horses being only at his disposal for the singling out of the buck from the herd. He is to have no assistance in coursing, holding, throwing, and hobbling the buck save that of his dog; and he is to hold his own horse while securing the deer. To succeed in this match, Mr. Berkeley has to do the work of five men. It usually requires three men to run in, secure, and hobble a buck; a fourth to get off and hold the dogs (a brace being generally used), and a fifth to hold the horses. To hobble a deer is to bring his hind feet and fore feet together, and to bind them in that situation. The odds which Mr. Berkeley has taken against his success are three to one.

Hertford.—The daily papers state that Lord Melbourne is gradually recovering from his late illness. It appears that the attack was more serious than the first accounts led the public to suppose. His Lordship had two paralytic strokes, which affected his speech, and placed him in considerable danger for two days.

Leicester.—During the late disturbances throughout the mining districts, the conduct of the colliers employed in the extensive works of the Marquess of Hastings, near Ashby-de-la-Zouch, presented such a contrast to that of the neighbouring collieries, that the Marquess determined to show to his men that he was not unmindful of it: accordingly, on Thursday, the 20th ult., he gave an entertainment to all the men and boys employed upon his works. At Moira upwards of 500, and at Gresley about fifty miners sat down to dinner. Sir Roger Gresley and the local clergy were present, and bore testimony to the exemplary conduct of the men during the late disturbances, and to the mutual confidence established between them and their employers.

Liverpool.—The case of Mr. Thomas Henry, the linen-draper, charged with wilfully setting fire to his house, and noticed by us last week, has been again under consideration. At the last sitting, after the examination of numerous witnesses, the magistrates declared that, though the evidence was wholly circumstantial, there was enough to enable them to send the prisoner for trial, and accordingly committed him to the next assizes.—An examination took place last week at Kirkdale, into the disclosures made by a convict on the eve of transportation, respecting the death of the late Mr. Bibby, a merchant of this city. The prisoners who were apprehended in consequence of the information thus received, were brought before the court; but after a long investigation, the magistrates decided that, although a great deal of mystery hung over the transaction, and there were some strange and suspicious circumstances in the evidence, the testimony was not of such a nature as to justify them in depriving the prisoners of their liberty and sending them for trial.

Maidstone.—The local papers of Monday published a bulletin from the medical attendants of Sir W. Geary, whose accident we lately noticed. It states that he is going on favourably, that the ligature has come away from the carotid artery, and its separation has been unattended, up to the present time, by any untoward symptoms; the wound is almost healed. The paralysis of the left arm and leg remains the same.

Manchester.—We noticed, a few weeks since, a letter written by Sir Charles Shaw, the chief commissioner of police, in reference to the conduct of the mayor and magistrates of Manchester during the recent riots. This letter has called forth a reply, charging Sir C. Shaw with neglect of duty in not himself acting as a magistrate on the morning of the 9th of August. A rejoinder has, this week, been published by that gentleman, stating that while in the Town-Hall, on that morning, he explained to the military commandant that he could not act as a magistrate, as his instructions were, that he, as chief commissioner of police, must neither, as a magistrate, make a requisition for the military, nor take it upon himself to read the Riot Act, his duty being to give notice to the mayor, and in his absence to the stipendiary magistrate; in short, that he was to act solely as their executive. Upon these instructions he states that he always acted; and he is not aware that any commissioner of police, appointed under the same Act of Parliament as himself, has ever made requisitions for military, or put himself at their head, or has read the Riot Act. He repeats that the first person who received information from him on his return from Ashton, on the morning of the 9th of August, was a borough magistrate. He spoke to this gentleman about two hours before the entrance of the mob to Manchester; and the borough magistrates did not assemble to think of acting for twenty-eight hours after the mob had been in possession of the town. He also states that a member of the Town Council was most assiduous in exciting the people to resist the law, by distributing printed placards through the shops and houses, "No Income-tax—No Assessed-taxes paid here." In regard to the charge that he kept the magistrates in complete ignorance of the state of the town, he states that among the magistrates who assembled were some who could not plead ignorance, as in other places and at public meetings, they had stated that "outbreaks must take place;" and even one of the magistrates there assembled had, a short time before the outbreak, at a public meeting, moved a resolution, which was seconded, passed, and published in the *Manchester Guardian*, to the effect "that the country was on the eve of a revolution." The statement that he previously knew of the meeting on Mottram Moor, and that the rioters were coming to Manchester, he declares to be without a shadow of foundation. He concludes a long letter by attributing much of the personal feeling excited by his letter to the fact, that many of the leading rate-payers were connected either directly or indirectly with the bank of Manchester, and that, from information he had received, he had removed, some months previously, the police funds from that bank, in spite of the urgent personal remonstrances of the manager and director, who has since absconded. He refers also to the fact, that he was called upon to do much with a small force, when compared with other towns; that within a circle round Manchester, the most distant part of which is not 5 miles' distance from the Exchange, the population amounts to about 354,000, and the police force under his orders consisted only of 317 men of all ranks.—Another destructive fire broke out in this town on Thursday night at the mills of Messrs. Pooley, in Mill-street. It occurred in the centre of the building, near the principal staircase, so that the escape of the hands was cut off. Eight bodies have been removed from the ruins, and it is said that 25 are still missing

Middlesborough.—Some additional particulars have appeared this week respecting the fatal explosion at this place. Two men were killed on the spot, two have since died from the injuries sustained, and twenty-one others were severely injured. The jury at the inquest returned a verdict of "Accidental death," no evidence having been adduced to prove that more than ordinary pressure had been used, or that there had been any inattention on the part of masters or workmen.

Northleach.—We mentioned in our last the memorial transmitted to Sir James Graham by the jurors at the late inquest on a prisoner in the House of Correction at this place. This document has since been published. It states, that during the investigation, evidence relative to the treatment of the prisoners in that gaol was tendered, but could not be received upon the inquest, which, in the opinion of the jury, calls for the most searching investigation; and that the jury believe that the general treatment of the prisoners has been in many cases attended with loss of life, and most of them with loss of health. They therefore pray for an investigation, in the hope that it will lead to a change in the mode of treatment, and prevent such fatal occurrences in future. Sir James Graham, in acknowledging this memorial, informs the jury that before he received their communication, he had taken measures for having a full inquiry made into the matters to which the memorial refers.

Oxford.—The prize of 200*l.* for the best Essay in refutation of Hindooism, which was proposed in 1840 by some unknown benefactor, through the Bishop of Calcutta, has been decided by the judges in favour of the Rev. J. B. Morris, Fellow of Exeter.—The men apprehended on suspicion of being concerned in the murder of Mr. Bromhead, at Blackthorn, have been remanded, and the witnesses bound over to appear and give evidence on the part of the Crown at the March assizes.

Penrith.—The Cumberland papers mention, as a proof of the early winter in the North, that on Wednesday week the mail-cart, which runs between that town and Alston, by the violence of the wind and the great depth of snow, was completely drifted upon a bleak part of the road on Cross Fell.

Portsmouth.—It is stated in Naval circles, that Admiral Sir John Talbot is to be the new Naval Commander-in-but for what Scott should be found to have owed the parish in October, 1837, upon taking an account before the Master, and the costs should be reserved.

Court of Common Pleas.—On Wednesday, being the first day of Michaelmas term, the judges of this court, after breakfasting with the Lord Chancellor, came down in procession to Westminster-hall, and shortly before half-past one o'clock Lord Chief Justice Tindal, Mr. Justice Coltman, Mr. Justice Erskine, and Mr. Justice Maule took their seats on the bench. There was a very full attendance of serjeants, and the court was crowded to excess by spectators.

Barker v. *Birch.*—Mr. Serjeant Talfourd moved for a rule to show cause why the writ of summons in this case should not be set aside with costs. The action was brought under the Tithe Commutation Act, 6 & 7 William IV., c. 71, the 46th section of which provided that any person claiming to be interested in any lands or in the tithes thereof, who should be dissatisfied with the decision of the commissioners, might, if the yearly value of the payment to be made or withholden should exceed the sum of 20*l.*, cause an action to be brought in the courts of law at Westminster against the person in whose favour such decision should have been made, within three calendar months next after such decision should have been notified in writing, and should proceed to trial at the assizes then next or next but one after such action should have been commenced. The decision of the commissioners in the present case was notified on the 8th of March, and the writ, which was sued out in June, was not served till the 2d of September following: and the learned Serjeant, therefore, contended that the writ was spent and abandoned, because it had not been served within those calendar months prescribed by the act for the commencement of the action. The action being the creature of an act of Parliament, time, he submitted, was the essence of it.—Lord Chief Justice Tindal said, that the issuing of the writ was regular, and he thought that the defendant should make his stand when the feigned issue was delivered, and then urge his objection that the plaintiff was out of time.—Mr. Serjeant Talfourd said he would then take that course.—Rule refused.

Arches Court.—*Nunn* v. *Varty and Mopsey.*—This was an appeal from the Consistory Court of London, in a suit for subtraction of church rate in the parish of Hackney. The case was argued at great length in the court below in November of last year. The argument in this court was only part heard, and was deferred to the next court day.

Central Criminal Court.—The grand jury, at the conclusion of their labours, said that, previously to being discharged, they wished to complain of the very large number of paltry cases which had come before them in the discharge of their duty, and which might have been disposed of summarily before the magistrates. Mr. Justice Erskine said he would take care that the complaint should be represented in the proper quarter.

Forgery.—*W. H. Hoskins* was indicted for obtaining, by false pretences, a check-book, with intent to defraud the Bank of England, and for feloniously forging an order for the delivery of the check-book, with the like intent. Counsel for the defence said, that the prisoner was first charged with a misdemeanour, and in the next with a felony, and both had reference to the same transaction. It was desirable that the prisoner should plead guilty to the misdemeanour, and that the felony should stand over to the next sessions. The prisoner had been many years a porter to the Bank, and down to a recent period had conducted himself well. The Directors considered that he had been the dupe of an evil-disposed person, who wished to obtain the check-book for a purpose it was not difficult to conjecture. If the Court would respite its judgment upon the minor case, to which the prisoner was ready to plead, it was expected that he would make some disclosures before the next session, which would further the ends of public justice. This was acceded to by the Court.

Murder.—Jane Bowler, a widow, was indicted for the wilful murder of Joseph Bowler, her husband, by administering to him a quantity of arsenic. It appeared that the deceased was a chair-maker in Union-street, Borough. On Wednesday, the 14th Sept. he was taken ill, and remained so till the following Saturday, when he died. Circumstances arose which led to suspicion that the deceased had not died a natural death; an inquest was consequently held upon the body, and upon a *post-mortem* examination, a quantity of arsenic was discovered, which left no doubt on the mind of the medical man that death was caused by that poison. Suspicion fell on the wife, but the evidence was entirely circumstantial, and in many respects contradictory. The counsel for the prisoner contended that the case was not proved, and submitted that the only and fair inference to be drawn was that the deceased had destroyed himself. It was proved by several witnesses that he was a person of a melancholy disposition, that he had made attempts to destroy himself on former occasions, and that the prisoner had previously borne a good character. Mr. Justice Maule was proceeding to sum up, but was interrupted by the jury, who said they were perfectly satisfied, and acquitted the prisoner.

Robbery.—*Alice Lowe* was indicted for stealing a large quantity of valuable jewellery from the residence of Viscount Frankfort. The evidence for the prosecution rested entirely on the testimony of Lord Frankfort, who stated that the prisoner had lived for two months in his house, and that soon after her departure jewels were missed. The circumstances of the case raised a question, whether the jewels had not been given to her by Lord Frankfort himself. This was the principal fact dwelt on for the defence; and it was contended that they were actually so presented, and not feloniously abstracted. Mr. Justice Erskine, in his address to the jury, observed that no one who had heard the case could fail feeling compassion for the prisoner, or to entertain a desire that she should be acquitted if the evidence could at all warrant such a conclusion. They must not, however, allow their feelings to induce them to swerve from their duty; they must be bound by the evidence, and upon that alone should their verdict be returned. It appeared to be admitted that the articles alleged to have been stolen by the prisoner had, in point of fact, come into her possession and been pawned by her; and the defence was, that they had not been taken feloniously, but that the prosecutor had given them to the prisoner. If they thought this was the case, or that the conduct of the prosecutor was of such a character as to induce a belief in the mind of the prisoner that she might deal with them as her own, she would be entitled to her acquittal; for if she had only acted under a mistaken impression, and without any felonious intention, she could not be convicted upon the present charge. It was a dreadful imputation upon any man, much more upon one of the rank and station of Lord Frankfort, to charge him with wilfully denying, upon his oath, a fact of which he must have been cognisant if it had ever occurred; but this alternative might be avoided if the jury believed that although Lord Frankfort never in reality gave the property to the prisoner, yet that, under the peculiar circumstances of the case, the prisoner might reasonably entertain the impression that the prosecutor intended her to have the property. The Learned Judge then went through the evidence, and concluded by leaving the case in the hands of the jury. The jury, after deliberating for about ten minutes, returned a verdict of *Not Guilty.* The verdict was received with a shout of applause in the Court, and this was speedily echoed by a loud volley of cheers from the crowd assembled outside, and it was several minutes before order could be restored.

Robbery in the Parks.—*Henry Passenger* and *Alfred Lewis* were charged with a robbery on the Rev. William Bugden, and stealing from his person a purse containing money. This was one of the cases connected with the gang of offenders whom we have mentioned on former occasions as waylaying passengers in the parks. The Rev. W. Bugden deposed that he was a Roman Catholic clergyman. About half-past nine in the evening of the 22d September, he was passing through Hyde-park. Just as he came to the bridge over the Serpentine, he heard a shrill whistle, and immediately three men sprang upon him, one of whom made a blow at him with something like a life-preserver, and demanded money, which witness refused. The other two held witness by the arms, whilst the third thrust his hand into his pocket, and took out his purse, with which he ran away. Witness was greatly frightened; but he believed he called for help. This evidence was supported by other testimony; and, after an ineffectual attempt on the part of one of the prisoners to prove that he came up to the assistance of the prosecutor when he called for help, the jury found both prisoners *guilty*. The prisoner Lewis being proved to have before been convicted of felony, the Court sentenced him to be transported for life, and sentenced the other to transportation for fifteen years.

Bank-note Forgery.—*Edward Banister* and *James Campbell*, who were acquitted on Thursday last of the charge of having in their possession one hundred forged 500*l.* notes, were again placed at the bar on an indictment for a misdemeanour, arising out of the same transaction. They pleaded *guilty*. The Attorney-general, who appeared for the prosecution, said, that inasmuch as no injury appeared likely to result to the public or the Bank in the present instance, from the conduct of the prisoners, it was not his wish to press for a severe sentence. Mr. Justice Maule then cautioned the prisoners as to their future conduct, and sentenced them to pay a fine of 1*s.* each.

Swindling.—*Bonnier Kaim*, described as a labourer, was indicted for stealing two diamond rings and one pearl pin, value 30*l.*, the property of Matilda Johnson, in her dwelling-house. The prisoner, who called himself the "Baron Kaim," had called on Mrs. Johnson, under the pretence of looking for lodgings; and having thus made her acquaintance, he obtained possession of the rings and pin, under pretence of wishing to show them to Lord Forester. The jury returned a verdict of *guilty*, and the prisoner was sentenced to seven years' transportation.

SPORTING.

NEWMARKET HOUGHTON MEETING.

Friday.—*The Audley End Stakes* of 3 sovs. each, for three-yrs-old, &c. A.E.C. 4 subs.—Won by Lord Chesterfield's Rhodanthe (Nat), beating Mr. Gregory's Una, Mr. J. Day's Tamburini, and Sir W. Stanley's Vakeel.

First Class. The Nursery Stakes of 25 sovs. each, for two-yrs-olds. D.M. 8 subs.—Won by Mr. Bowes's Cotherstone (F. Butler), beating Mr. Payne's f. by Muley Moloch; a dead heat, the parties dividing the stakes.

Second Class. The Nursery Stakes of 25 sovs. each, &c. D.M. 7 subs.—Won by Mr. W. Sadler's Sister to Combat (Rogers), beating Mr. Bradford's f. by Partisan, out of Fidelity, and Mr. Ongley's Queen of the Gipsies.

Handicap Sweepstakes of 20 sovs. each, for three-yrs, &c. T.Y.C. 9 subs.; 3 paid.—Won by Lord Eglintoun's Dr. Caius (Lye), beating Mr. Etwall's Palladium, Mr. Thornhill's Equation, and Sir W. Stanley's Vakeel.

Matches.—Lord Exeter's Celia beat Col. Peel's Garry Owen; 200, h. ft. Mr. Bowes's Ladye of Silverkeld Well received forfeit from Duke of Bedford's Magog; 100 h. ft. Duke of Bedford's John o' Gaunt received forfeit from Capt. Price's Retriever; 200 h. ft.

Saturday.—*Matches.*—Lord Exeter's Celia beat Col. Peel's Camelion; 100*l.* Col. Peel's Canton beat Lord Eglintoun's Augury; 100*l.* h. ft. Lord Exeter's Celia beat Lord Stradbroke's Jeremy Diddler; 100*l.* Col. Peel's Camelion beat Mr. Osbaldestone's f. by Saddler; 100*l.* h. ft. Lord Eglintoun's Pompey beat Col. Peel's Rook's-nest:–100*l.* h. ft. Mr. Goodman's Shadow beat Col. Peel's Garry Owen; 100*l.* h. ft. Col. Peel's Hartshorn (Nat) beat Mr. Goodman's Bother'em; 50*l.* Lord Eglintoun's Melior beat Lord Albemarle's Buffalo; 100*l.* h. ft. Col. Peel's I-am-not-aware beat Lord Eglintoun's Jamie Forest; 100*l.* h. ft.

The Houghton Handicap of 15 sovs. each, for three-yrs-olds, &c. D.M. 13 subs.—Won by Mr. Stephenson's Ma Mie (Mann), beating Mr. Boyce's Corunna, and Lord Exeter's Revocation.

Sweepstakes of 5 sovs. each; winner to be sold for 25 sovs., if demanded, &c. 8 subs.—Won by Lord Chesterfield's Henri Quatre (Nat) beating Mr. Beresford's Indolence, and Mr. G. Clark's Ameine. Mr. Goodman's Shadow beat Mr. Ramsay's Cabrera; 200*l.* h. ft.

The Criterion Stakes.—At a meeting of the Jockey Club on Friday evening it was decided that Mr. Gregory was not liable to the forfeits. The effect of this decision is to make the Produce Stakes a void race, and to negative Mr. Watt's claim for the Criterion.

TATTERSALL'S, Thursday.—The only Derby bets laid were 13 to 1 to 100*l.* agst Sir G. Heathcote's lot, 25 to 1 to a small sum agst Winesour, 125 to 25 (five points less than the odds) agst the Progress colt, 500 to 20 agst Philip, 300 to 10 agst Aristides, 400 to 10 agst the Oxygen colt, 400 to 10 agst the Languish colt, 50 to 1 to 70*l.* agst Dumpling, and 1,000 to 15 agst Delightful colt. Offers of 8 to 1 agst A British Yeoman (take 17 to 2). Oaks.—9 to 1 laid to 25*l.* agst Maria Day, and 300 to 10 agst Sister to Sarcasm. As Thursday has always been a bad day of business in the winter months, it has been suggested that the room might as well be closed on that day until after Christmas, as a means of improving business on the Monday.

MARK LANE, Friday, Nov. 4.—We have had but little English Wheat at Market since Monday, and sales have been made at 1*s.* advance. There was a good demand for Foreign on Wednesday, at 1*s.* above the prices realised on Monday, and that improvement has been maintained to-day, but the quantity sold was not so large. In bonded there has been a little demand for exportation of Odessa and Mediterranean Wheat. Barley sells on the same terms. Peas and Beans are a very dull sale. The Oat Trade has improved since Monday.

GAZETTE OF THE WEEK.

INSOLVENTS.—W. Rayner and J. Rayner, Uxbridge, seed-crushers—W. Rayner, Uxbridge, surgeon—J. Rayner, Uxbridge, chemist—T. Etheridge, Hoxton Old Town, dyer—E. Lane, Cirencester, edge-tool maker—R. Lindon, Marlborough, Devonshire, corn factor.

BANKRUPTCY SUPERSEDED.—J. Mitchell, Godalming, Surrey, butcher.

BANKRUPTS.—E. Fennell and R. Fennell, Aldermanbury Postern, London, yarn-merchants—A. Fricour, St. Martin's-lane, hotel-keeper—W. Hopper, Great Queen street, Lincoln's Inn-fields, carpet-warehouseman—D. Lawson, Marylebone street, Piccadilly, woollen-draper—J. France, Manchester, cotton-manufacturer—Joshua Wood, James Wood, Joseph Wood, Richard Wood, John Wood, and Charles Wood, Denby Dale, Yorkshire, fancy-cloth-manufacturers—J. P. Starling, Blakeney, Norfolk, coal-merchant—T. Smithson, York, tobacconist—I. Hague, W. Millar, and W. T. Grant, Wapping, Middlesex, engineers—J. Brown and R. H. Barrett, High-street-place, White Horse-lane, Stepney, manufacturers of ship-controllers—J. Muddell, Freeman's-court, Cheapside, wine-merchant—J. Sorby, Sheffield, steel-manufacturer—S. Davis, Church-lane, Whitechapel, linen-draper—H. Miles, Southampton, woollen-draper—J. Hall, Winsford, Chester, grocer—S. A. Goddard and R. Hill, Birmingham, merchants—J. Beaumont, Tottenham-court-road, surgeon—W. Whapshott, Crosby-row, King-street, Southwark, engineer—H. S. Winter, Regent-street, milliner.

BIRTHS.—At Hagley Park, on Thursday, the 27th ult., the Lady Lyttelton, of a son and heir—On the 23d ult., at Stuttgard, the lady of C. C. Barton, Esq. of a daughter—On the 28th inst., in Upper Berkeley-street West, Mrs. G. de Bosco Attwood, of a daughter—On the 28th inst., the lady of the late J. Dawson, Esq., of Higham Lodge, Suffolk, of a daughter—On the 30th inst., the wife of Dr. David Burnes, Vernon-place, Bloomsbury-square, of a daughter—At Donnington Cottage, on the 28th ult., the lady of Commander C. O. Hayes, H.M.S. Wolf, of a son.

MARRIED.—On the 23d ult., at the English Church, Alexandria, J. Lilburn, M.D., her Britannic Majesty's Consul for the island of Cyprus, to Mary, only daughter of S. Woolridge, Esq., of Chichester—On the 27th ult., at Malpas, J. T. Winnington, Esq., Captain in the 11th Infantry, second son of the late Sir T. E. Winnington, of Stanford Court, Worcestershire, Bart., to Emma, third daughter of T. Protheroe, Esq., of Malpas Court, Monmouthshire—On the 15th ult., at the British Embassy at Naples, J. B. Hare, Esq., of Berkeley-square, Bristol, to Jane, daughter of the late E. Stracey, Esq., of the Bengal Civil Service.

DIED.—On Sunday, the 30th ult., after a short but severe illness, Mr. Michael Waterer, of Knap Hill Nursery, near Bagshot—On the 25th ult., at his father's house, Molineux-street, Bryanstone-square, Lieut. J. R. Welstead, I.N., aged 37 years—On the 26th ult., at Hampton Court, the Hon Berkeley Paget, one of the Commissioners of Excise—On the 31st ult., at his town residence, Russell-square, Mr. Serjeant Spankie—On the 27th ult., in Park-street, Grosvenor-square, aged 51, Isabella Eleanor, youngest daughter of the late Sir E. Nightingale, Bart., of Kneesworth Hall, Cambridgeshire—On the 30th ult., in her 25th year, Charlotte, daughter of T. Tegg, of Cheapside—On the 2d inst., in the 83d year of his age, the Rev. S. Herschell, 40 years chief rabbi.—At Mount Boone, in Devonshire, on the 31st ult., C. H. S. Hayne, Esq., of Upper Wimpole-street, second son of Sir J. H. Seale, Bart.—On the 1st inst., at Beech-hill, aged 74, R. Thicknesse, Esq., formerly M.P. for Wigan—On the 31st ult., at Nebo House, near Taunton, the Rev. R. Winsloe, M.A., of Magdalen College, Oxford, rector of Minster and Forrabury, in the county of Cornwall, and perpetual curate of Ruishton, in Somersetshire, aged 72.

TO FARMERS, GARDENERS, AND OTHERS.—SULPHATE of LIME, now in use by the Horticultural Society, being a cheap substitute for Gypsum, may be had in large or small quantities, at Samuel Carter's, 65, Blackman-street, Borough of Southwark.

THE PATENT ASPHALTE PROTECTING MATERIAL, spoken so highly of in the *Gardeners' Chronicle* for 1841, p. 100, 415, 530, and p. 8, for 1842, may be obtained in Sheets—32 inches by 32 inches, 32 inches by 64 inches, 32 inches by 96 inches, of Thos. Jno. Croggon, 8, Ingram-court, Fenchurch-street. A liberal discount to Hothouse Builders, Nurserymen, &c.

KEENE'S PATENT CEMENT.

THIS CEMENT is harder than any other known, and is especially fitted for the Walls of Hothouses, Conservatories, &c., as it neither cracks nor vegetates, and is perfectly impenetrable by insects.

The entire range of Hothouses erecting by the Government at Frogmore are about being stuccoed with it, and the price ranges nearly equally with the Cements in ordinary use for floors, and it forms a paving harder and cheaper than Portland Stone.

Patentees and Manufacturers, J. B. WHITE and SONS, Millbank, Westminster.

PIANOFORTES.—LUFF and Co.'s D'ORLEANS PIANOFORTE combines power and sweetness of tone, elegance, durability, and cheapness. Cottage, Cabinet, Piccolo, and Semi-grand Pianoforte in elegant variety, equally cheap, and packed free to all parts. None but warranted Pianofortes shown, and exchanged at any time if desired. Pianofortes a little used from hire, very cheap. Instruments taken in exchange.—Luff and Co., 103, Great Russell-street, Bloomsbury.

HODGSON and ABBOTT'S PALE ALE.—The above celebrated Beer, so strongly recommended by the Faculty, is to be procured only from E. Abbott, Brewery, Bow, Middlesex. The Trade not being supplied, the Pale Ale cannot be genuine if procured elsewhere.

City Office, 98, Gracechurch-street.

MECHI'S ELEGANCIES FOR PRESENTS AND USE.—The greatest variety for Ladies and Gentlemen, both in price and choice, is at Mechi's Manufactory and Emporium of Elegancies, No. 4, Leadenhall-street. Here may be suited the economist or the luxurious. Bagatelle-tables, 3*l.* 10*s.* to 13*l.* 10*s.*; writing-desks, 10*s.* to 20*l.*; dressing cases, 20*s.* to 100*l.*; work-boxes, 12*s.* to 20*l.*; leather writing-cases, with or without dressing-case. 18*s.* to 16*l.*; tea-chests, 7*s.* 6*d.* to 8*l.*; envelope-cases, 10*s.* to 10*l.*; ink-stands, in wood, bronze, and papier-maché, 6*s.* to 6*l.* 6*s.*; splendid papier-maché work-tables, 10*l.* 10*s.*; sets of tea-trays, 8*l.* to 20*l.*; work and cake baskets, 25*s.* to 50*s.*; card-racks, 26*s.* to 40*s.*; hand-screens, 18*s.* to 48*s.*; netting-boxes, 25*s.* to 27*s.*; card-boxes, 2*l.* to 5*l.* 5*s.*; pole-screens, 4*l.* 10*s.* per pair; ladies' folios, richly painted, 30*s.* to 3*l.* 3*s.*; ladies' companions, or pocket work-boxes, in pearl, shell, paper, and leather, at all prices; ladies' scent and toilet bottles, 7*s.* 6*d.* to 3*l.* 3*s.*; ladies' card-cases, 10*s.* to 5*l.*; elegant chess-boards and ivory chessmen, various prices, to 16*l.* 16*s.*; watch-stands, 27*s.* each; gold and silver pencil-cases, elegant cases of seven-day razors, from 25*s.* to 10*l.* 10*s.*; ivory-handled and Scotch strops, in every variety; sporting-knives, from 10*s.* to 3*l.*; splendid Wharncliffe knives; ladies' scissors, 5*s.* to 50*s.* per pair; cases of plated and silver desserts, to 25*l.*; cases of splendid table cutlery, to 40*l.*; and a variety of other articles, of which catalogues may be had gratis.—As Mechi manufactures extensively on his own premises, the quality of every article is warranted. Table Cutlery, Sheffield Plate, &c.

ROWLAND'S MACASSAR OIL, a Vegetable Production. The only article that produces and restores Hair; also Whiskers, Mustachios, and Eye-brows; prevents Hair from falling off or turning grey to the latest period of life; changes grey Hair to its original colour—frees it from scurf, and makes it beautifully soft, curly, and glossy. In dressing Hair, it keeps it firm in the Curl, uninjured by damp weather, crowded rooms, the dance, or in the exercise of riding. To Children it is invaluable, as it lays a foundation for a Beautiful Head of Hair.

Caution.—Ask for "ROWLAND'S MACASSAR OIL," and observe their Name and Address, in Red, on the Wrapper, thus:
A. ROWLAND & SON, 20, HATTON GARDEN.
Counter-signed ALEX. ROWLAND.

The lowest price is 3*s.* 6*d.*—the next 7*s.*—10*s.* 6*d.* and 21*s.* per bottle.

⁂ On the back of the Wrapper, are the words "ROWLAND'S MACASSAR OIL" engraven nearly 1,500 times, containing 29,028 letters, without which none are genuine.

(Impostors call their trash the "GENUINE," and omit the "&" in the Signature, offering it for sale under the lure of being cheap.)

ROWLAND'S MACASSAR OIL is sold by the Proprietors, as above, and by respectable Perfumers and Medicine Venders.

Printed by Messrs. Bradbury and Evans, Lombard-street, Fleet-street, in the Precinct of Whitefriars, in the City of London, and Published by them at the Office, 3, Charles-street, Covent Garden, in the County of Middlesex, where all Advertisements and Communications are to be addressed to the Editor.—Saturday, November 5, 1842.

store in Ann-street, belonging to Mr. Oliver Wingate, filled with cotton, grain, wines, tea, and other valuable goods, was destroyed by fire. At one time the flames threatened to spread into the adjoining streets, but were fortunately confined to the premises. The loss of goods alone is calculated at upwards of 5000*l.*—The formal opening of Queen's College, in this city, for the education of ladies, took place yesterday week, Sir James Campbell, Lord Provost, in the chair. The large hall of the Assembly Rooms was filled to overflowing by a highly respectable company, almost entirely composed of ladies: the gentlemen present were well known advocates of the cause of education. Professor Penny addressed the meeting on the advantages and pleasures of knowledge, and the importance of the present institution. He concluded by remarking—"Glasgow has ever been celebrated for the intelligence of its citizens; it has numbered among them men of the highest intellectual and moral attainments—nay, the very foremost in literature, science, and art; and I would ask the simple question, why the ladies of Glasgow should not be equally eminent? Every effort, every institution, which endeavours to promote the attainment of this object—which strives to correct and dispel the prejudices attached to female education—which affords the opportunity of acquiring, under one roof, knowledge in all its important, useful, and ornamental departments, is indeed worthy of consideration, encouragement, and congratulation."

Roxburgh.—The *Kelso Chronicle* states that Mr. Robertson, the tenant of Friars, by causing the ploughshare to be driven further than usual into the earth, has exposed to view the remains of the ancient city of Roxburgh. These extend in various directions, from their apparent centre, the chapel of St. James, situated upon a knoll immediately opposite to Floors Castle. The line of streets, and the site of public buildings, are distinctly marked.

Taymouth.—The Perth papers state that as Mr. John M'Kenzie, piper to the Marquess of Breadalbane, was one day last week on his way to the Castle, he was attacked by one of the red deer, with which he had a severe struggle. The animal struck him with his horns in several places and severely bruised him. After dragging him for some distance the deer let go his hold: Mr. M'Kenzie was thus released, but has since been confined to his bed from the injuries received.

THEATRICALS.

Drury-Lane.—A new farce, called "The Eton Boy," was produced at this theatre on Saturday. The *Eton Boy* is a young lady (Mrs. Stirling), who assumes the disguise, to prove the character of a gentleman, *Mr. Dabster*, who has been sent down by her father as her suitor (Mr. Keeley). Hearing that *Capt. Popham* (Mr. C. Mathews), who formerly hoaxed him into a ridiculous love affair, is coming to visit him at the young lady's house, he persuades his boyish friend to assume female attire, and pass himself off to the Captain as a woman. To do this the lady has only to assume her proper dress, and the misguided *Dabster* gives away his bride elect to his successful rival. The scenes which follow, as may be imagined, are extremely humorous, and the piece ends with the marriage of the *Eton Boy* to *Capt. Popham*. The piece was received with roars of laughter, and announced for repetition.

Covent-Garden.—On Tuesday Cimorosa's celebrated opera of the "Matrimonio Segreto" was produced at this theatre in an English dress, under the name of "The Secret Marriage." Notwithstanding the alterations introduced to adapt it to the English stage, the change of language, and the absence of Lablache, who has identified himself with the part of *Geronimo*, it was completely successful, and was cordially received by one of the most crowded houses of the season. The great deficiency was the absence of adequate male singers; but the three female characters, *Caroline*, *Elisetta*, and *Fidalma*, represented by Miss Kemble, Miss Rainforth, and Mrs. A. Shaw, were so strongly cast as to insure a favourable reception. The well-known *terzetto*, Miss Kemble's air by Paisiello, and *Fidalma's* song were encored by the audience, who called for all the singers at the close of the opera, and welcomed its announcement for repetition with great applause.—A comic drama, called "The Turf," from the pen of Mr. Mark Lemon, was produced on Monday. A scheme to drug a horse on the Derby-day at Epsom, and thereby to defraud his owner and a Cockney sportsman, which is afterwards revealed by the conscience-stricken groom, is the foundation of the plot. Mr. Bartley is a Cockney grocer, *Cloris Culpepper*, who has had a fortune left him, and has a violent fancy for sporting. Mrs. Humby is his wife, still regretting the shop in Barbican. Mr. Harley is his former porter, converted into a groom. Mr. W. Lacy and Mr. Wigan represent two fashionable swindlers, *Captain Flatooker* and *Bruce Sincy*, and Mr. Meadows is the hostler, who is persuaded to drug the horse. Of course the grocer loses his money, and a country gentleman, introduced in the progress of the piece as the father of a lady to whom *Captain Flatooker* is paying his addresses, is ruined by his bets. The trainer's uneasy conscience, and the hints of the jockey, betray the secret. The captain offers to guarantee the losings if he can but carry off the daughter; the squire rejects such offers, and sifts the affair to the foundation. The sharpers, to raise money, have induced *Culpepper* to make a compromise, by paying 3,000*l.* in a cheque, with which they are about to make off to France, when it is discovered that the grocer is not entitled to the legacy, that a stop is placed upon the money at his banker's, and the rogues are regularly caught. Not only did the drama carry with it a good moral, but it was supported by a smart dialogue, and the acting was excellent. Its announcement for repetition was received with much applause.

Olympic.—On Monday night a new farce was brought out at this theatre, entitled "My Valet and I." The plot is one of cross purposes, produced by the determination of a lady to meet her lover, the valet's master, in the disguise of her maid. The master exchanges coats with his valet, and the usual perplexities ensue, which are at last cleared up by an explanation. The main interest of the piece depends on the acting of Mr. Wild as the valet, who secured its success, and announced it for repetition.

Miscellaneous.

American Factories.—Mr. Dickens, in his new work from which we quoted largely in our last, gives an account of his visit to Lowell, the seat of American manufactures. The following extracts from this description may interest our readers:—"I happened to arrive at the first factory just as the dinner-hour was over, and the girls were returning to their work; indeed, the stairs of the mill were thronged with them as I ascended. They were all well dressed, but not, to my thinking, above their condition; for I like to see the humbler classes of society careful of their dress and appearance, and even, if they please, decorated with such little trinkets as come within the compass of their means. They had serviceable bonnets, good warm cloaks, and shawls; and were not above clogs and pattens. Moreover, there were places in the mill in which they could deposit these things without injury, and there were conveniences for washing. They were healthy in appearance, many of them remarkably so, and had the manners and deportment of young women; not of degraded brutes of burden. If I had seen in one of those mills (but I did not, though I looked for something of this kind with a sharp eye), the most lisping, mincing, affected, and ridiculous young creature that my imagination could suggest, I should have thought of the careless, moping, slatternly, degraded, dull reverse (I *have* seen that), and should have been still well pleased to look upon her. The rooms in which they worked were as well ordered as themselves. In the windows of some there were green plants, which were trained to shade the glass; in all there was as much fresh air, cleanliness, and comfort, as the nature of the occupation would possibly admit of. Out of so large a number of females, many of whom were just only then verging upon womanhood, it may be reasonably supposed that some were delicate and fragile in appearance, no doubt there were. But I solemnly declare that from all the crowd I saw in the different factories that day, I cannot recal a separate one young face that gave me a painful impression; not one young girl whom, assuming it to be matter of necessity that she should gain her daily bread by the labour of her hands, I would have removed from those works if I had had the power. They reside in various boarding-houses near at hand. The owners of the mills are particularly careful to allow no persons to enter upon the possession of these houses, whose characters have not undergone the most searching and thorough inquiry. Any complaint that is made against them by the boarders, or by any one else, is fully investigated; and if good ground of complaint be shown to exist against them, they are removed, and their occupation is handed over to some more deserving person." After stating the astounding fact, that in July, 1841, nine hundred and seventy-eight of these girls were depositors in the Lowell Savings' Bank, to the amount jointly of 100,000 dollars, or 20,000*l.* of English money. Mr. Dickens goes on to say—"I am now going to state three facts, which will startle a large class of readers on this side of the Atlantic very much. Firstly, there is a joint-stock piano in a great many of the boarding-houses. Secondly, nearly all these young ladies subscribe to circulating libraries. Thirdly, they have got up among themselves a periodical called The Lowell Offering, 'A repository of original articles, written exclusively by females actively employed in the mills,' which is duly printed, published, and sold; and whereof I brought away from Lowell four hundred good solid pages, which I have read from beginning to end. The large class of readers, startled by these facts, will exclaim with one voice, 'How very preposterous!' On my deferentially inquiring why, they will answer, 'These things are above their station.' In reply to that objection, I would beg to ask what their station is? It is their station to work, and they *do* work. They labour in these mills, upon an average, twelve hours a day, which is unquestionably work, and pretty tight work too. Perhaps it is above their station to indulge in such amusements, on any terms. Are we quite sure that we in England have not formed our ideas of the 'station' of working-people, from accustoming ourselves to the contemplation of that class as they are, and not as they might be? I think that if we examine our own feelings, we shall find that the pianos, and the circulating libraries, and even the Lowell Offering, startle us by their novelty, and not by their bearing upon any abstract question of right or wrong. For myself, I know no station in which the occupation of to-day, cheerfully done, and the occupation of to-morrow cheerfully looked to, any one of these pursuits is not most humanising and laudable. I know no station which is rendered more endurable to the person in it, or more safe to the person out of it, by having ignorance for its associate. I know no station which has a right to monopolise the means of mutual instruction, improvement, and rational entertainment; or which has ever continued to be a station very long, after seeking to do so."

New Comet.—The Paris papers mention that M. Laugier, astronomer at the Paris Observatory, discovered, about 7 in the evening of the 28th ult., in the constellation of the Dragon, a telescopic comet, extremely faint, and without any appearance of a tail. At ten minutes past ten, mean time of Paris, the right ascension of the comet was 16 hours 41 minutes, and its northern declination 68 degrees 44 minutes. The right ascension increased in 6 hours 3 minutes 34 seconds of time, and the declination diminished 20 minutes in the same interval of time.

Scandinavian Antiquities.—Some men in digging lately near the village of Pappenbuhl, in Denmark, discovered at the depth of 15 feet an antique bark, formed out of a single oak tree, and rounded at the bottom. It was much decayed by the moisture of its bed, but it is ascertained to have been 32 feet in length, 2 feet deep, and 2¼ feet broad at the middle. There were on each side several holes made with a borer, but no trace of nails or any iron-work could be found. On the spot where it lay there ran in ancient days a canal, which united the rivers Eider and Hever. This canal was dedicated to the god Oegir—the Neptune of the Scandinavians—but on the introduction of Christianity was filled up. It is, therefore, probable that this boat had its existence in the eighth, or at latest in the ninth, century. It has been purchased by the Government, with the intent of placing it among the northern antiquities of the public museum, which contains very few relics of the navigation of the aborigines of Scandinavia.

Law.

Vice-Chancellor's Court.—*Scott* v. *Pascal.*—The bill in this cause was filed by Mrs. Scott, the wife of Mr. John Scott, who had formerly filled various parochial offices in the parish of St. James, Clerkenwell, in which he had been accused of appropriating the parish funds to his own use, for the purpose of setting aside certain securities which she had been compelled to give the parish authorities under alleged duress, to answer the amount of his defalcations; and there was a cross bill for raising the entire amount for which the securities had been given. These causes were heard at great length before the long vacation, and his Honour now delivered a long and very elaborate judgment, of which the substance was as follows:—His Honour said the substantial question was, whether the deed of the 27th of October, 1837, should be set aside, or should stand as a security for what might be found due from Scott to the parish. The case in substance was this: in March, 1834, a suspicion arose that Scott, who had been filling various parochial offices, had appropriated large sums belonging to the parish to his own use, and a meeting was convened to investigate the charge. It appeared Scott felt alarmed at these proceedings on the part of the parish, and immediately executed several instruments by which he vested all his tangible property in his brother and a Mr. Turner, upon trusts, virtually for Mrs. Scott for life, with the reservation to her of a general power of appointment. This was on the 14th of April, and immediately afterwards Scott absconded to France, where he remained till October, 1837. A warrant was then taken out for his apprehension, on a criminal charge of embezzlement, and placards were issued offering a reward for his arrest; and in August, 1836, proceedings were taken to outlaw him, with the view of obtaining, through some grant from the crown, a means of getting at his property, of which Mrs. Scott continued virtually in possession, or of compelling him to return to this country. There was no doubt his position abroad was one of great distress; and in July, 1837, it was stated in the answer he had sent two letters to the parish, which had been sketched by Mr. Bodkin (but of that fact there was no evidence offered), who had been consulted by the parish during the proceedings. But even if Mr. Bodkin had sketched the letters, they did him great credit for the degree of feeling and proper regard of the circumstances of Scott and the parish, which they exhibited. One letter from Scott proposed an investigation of the amount of the debt which Scott owed the parish; but all such proposals were rejected, and the parish replied nothing would satisfy them but a security for the sum which a report, made to the parish in July, 1834, had found due from him. Upon these terms the deed was prepared by Messrs. Pownall & Cross, for securing to the parish the sum of 10,400*l.*, and the costs of preparing the deed. On the 26th of October, 1837, Scott returned from France, and a meeting was appointed for the following morning, at the chambers of the solicitors, to execute the deed. And in the early part of the same morning Scott went down to the Criminal Court, and pleaded to the indictment; upon which the outlawry was reversed. At the meeting for executing the deed, Scott, it appeared, hesitated to put his name to it. The bill alleged that Mr. Bodkin threatened, if the deed were not executed, he would have Scott immediately arrested. It appeared in evidence that what Mr. Bodkin had said was, he did not expect such hesitation at the eleventh hour; but, if Scott had any objection to execute the deed which he could not get over, Mr. Bodkin would pledge himself Scott should be at liberty to return to France unmolested. The deed was then executed by Scott and his wife, and was afterwards formally acknowledged by Mrs. Scott as a married woman. The warrant was never executed, and was, in fact, delivered up and destroyed; and on the 28th of October Scott attended the Criminal Court, where the indictment stood for trial—but, in fact, there was no trial at all. Mr. Bodkin, on the part of the parish, made a representation to the Court, and Scott's counsel made a speech; and there was an acquittal, without evidence being gone into. It appeared that Mrs. Scott, shortly after, filed a bill, one of the objects of which was to pay off the security; but she afterwards dismissed that bill, and filed the present bill,—praying the alternative, either that the deed might be set aside, or might stand as a security for what should be found due on a just account. The cross bill insisted on the execution of the trusts of the security as they appeared on the face of the deed. The sole question was, whether there had been any duress against which the Court ought to relieve, with respect to the point that there never had been any account taken to which Scott was privy. What appeared was, that after the committee of 1834 had made some progress in their investigation, which, they stated was accompanied with great difficulty, Scott appeared, and questions were put to him: and the committee stated his manner was that of a guilty man. That, however, was not the method of arriving at the truth; and though there might be good ground, from the whole course of conduct pursued by Scott, to conclude there was a large balance owing to the parish, yet nothing appeared by which the Court could arrive at the conclusion that the sum due was that stated in the report, and the committee plainly admitted they had not ascertained the amount in the only way the justice of the case required the thing should be made out. The duress against which the Court would relieve must be that which was created by the exercise of an unlawful power, or the undue exercise of a lawful power. It was perfectly true that all the parish did was lawful, in the sense of being quite in accordance with the law of the land. The question was, did they exercise their power lawfully? Although there had been no threat used by Mr. Bodkin, his Honour could not himself but think in the whole course of the transaction, that there was an undue exercise of a lawful power. It was inconsistent with common fairness for the parish to become judges in their own cause, and to assume that a debt was justly due to them which the committee who had investigated the matter had stamped with the character of uncertainty and doubt. His Honour therefore thought that the justice of the case required, not that the deed should be set aside altogether, but that it should be ordered to stand as a security, not for the 10,400*l.*

HOT-WATER APPARATUS FOR HEATING HORTICULTURAL BUILDINGS, DWELLING-HOUSES, CHURCHES, and MANUFACTORIES, upon improved principles, and at very moderate charges, erected by DANIEL and EDWARD BAILEY, 272, HOLBORN.

D. and E. BAILEY having devoted much time to the consideration of this subject, and had much experience in the erection of apparatus for the above-mentioned purposes, have, by improvements suggested in their practice, rendered their mode of heating not only very efficient, but very simple, and have combined durability in the apparatus with economy in the charge. They have erected apparatus in England, Scotland, and Ireland, for many noblemen and gentlemen, and have had the honour to be employed by the Horticultural Society of London, in executing the works of their splendid Conservatory, lately erected at Chiswick.

D. and E. BAILEY also construct in metal all descriptions of Horticultural Buildings and Sashes, and invite noblemen, gentlemen, and the public to an inspection of their various drawings and models, at 272, Holborn, where they have the opportunity of exhibiting, amongst other metal works, an extremely complete and convenient kitchen apparatus, or range, adapted for the continued supply of hot water, and an arrangement of the oven more complete than has hitherto been brought before the public.

D. and E. BAILEY were the first to introduce metallic curvilinear houses to horticulturists, and can refer to the Conservatory attached to the Pantheon as one of their works, besides many others in this country and on the Continent.

D. and E. BAILEY have prepared a quantity of the Galvanic Plant Protectors, which are now ready for immediate delivery; they beg to introduce to public notice a new Trough Pipe, for Orchidaceous or other Houses where vapour is constantly, or at intervals, required, and which may be seen at their Manufactory.

THE CONICAL HOT-WATER BOILERS invented by J. ROGERS, Esq., may be obtained of any size from JOHN SHEWEN, Ironmonger, &c., Sevenoaks, Kent.

J. SHEWEN having had every opportunity afforded him by an extensive practice to bring this apparatus to perfection, begs to offer it as most efficient and economical: it may be seen at Messrs. Chandler & Sons' Nursery, Vauxhall; Messrs. Loddiges', Hackney; Messrs. Henderson's, Pineapple-place; Mr. Knight's, King's-road, Chelsea; Messrs. Veitch and Son's, Exeter; and at the Gardens of the Horticultural Society of London.

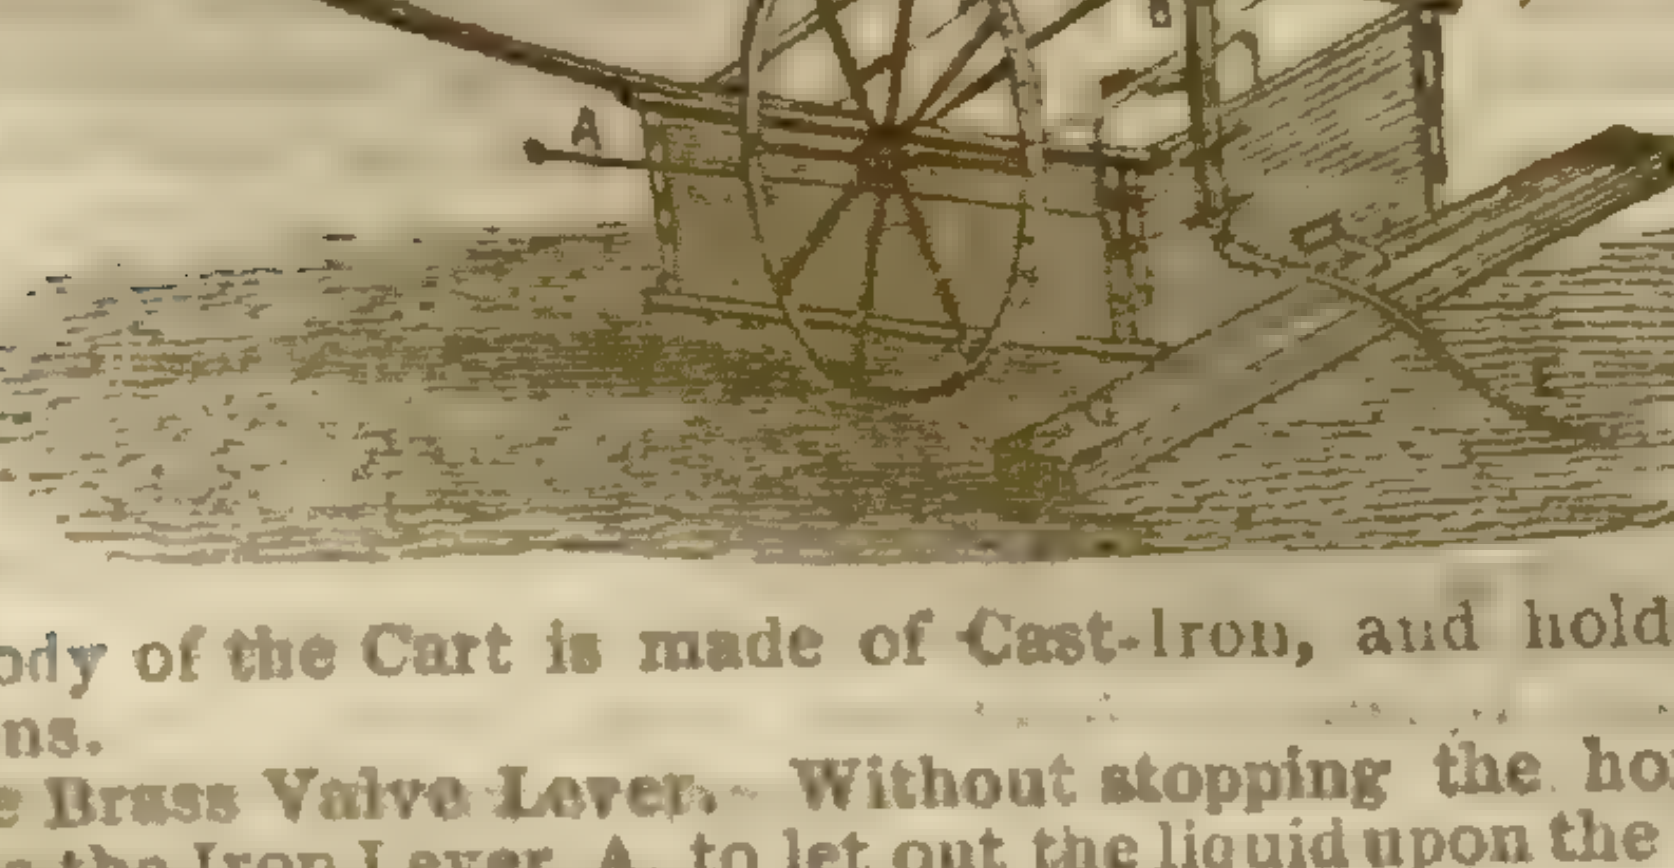
SLATE WORKS, ISLEWORTH, MIDDLESEX.

EDWARD BECK informs Horticulturists generally, that the Cisterns, Tanks, Shelves, Stages, Conservatory Tubs, Flower-boxes, Edging for Garden-paths, &c., manufactured by him in Slate, may be seen in use at Worton Cottage, upon application to the Gardener (Sundays excepted).

Letters of inquiry will receive every attention.

AGRICULTURAL MACHINE WORKS, BEVERLEY, YORKSHIRE.

CROSSKILL'S LIQUID MANURE CART, which received the Honorary Reward of the Royal Agricultural Society.



The Body of the Cart is made of Cast-Iron, and holds about 200 gallons.

A, The Brass Valve Lever. Without stopping the horse, the man pulls the Iron Lever, A, to let out the liquid upon the Spread-Board, C.

B, Patent Iron Pump, which cannot possibly choke or get out of order.

E, The Flexible Leather Pipe, 7 ft. long, with 3 ft. copper pipe at the end.

Price delivered in Hull, 25*l.*

CROSSKILL'S PORTABLE MANURE DRILL, for drilling any quantity of soot, lime, salt, &c.—will contain 8 bushels of manure—price 12*l.* 12*s.*

WHEAT-SOWING.

POTTER'S ARTIFICIAL GUANO MANURE.— TESTIMONIAL:—"The ARTIFICIAL GUANO MANURE was applied with great effect to a light land, on the estate of A. Cotton, Esq., Hildersham Hall, Cambridge, on a Field of Barley; it produced a marked effect—the finest crop for years, and the produce, Six Quarters of Barley to the acre. The space marked out was conspicuous, being some inches higher than that from common Manure. On part of a Grass Field the application, which was but lightly made, produced at least double the proportion of Hay compared to the part otherwise manured. A portion of it was applied to the Orange Globe Mangel Wurzel, the roots of which were of very large size—double that of others,—and its effects on a bed of Parsneps was extraordinary, producing a crop exceeding any before seen. The exact weight per square yard, compared with those of ordinary culture, will be estimated when gathered. In the instance of the Parsneps, the Manure was mixed with earth, and deposited over the seed; a mode of culture recommended in the practice of Mangel Wurzel. Although much higher in price than the common Manure, the profit was materially greater."

Works, Upper Fore-street, London.

GUANO ON SALE.—Any quantity of this valuable Manure can be had from the Bonded Stores of the Importer, either in London or Liverpool, on application to Cotesworth, Powell, and Pryor, St. Helen's-place, London; Edwards, Danson, and Co., Liverpool: William Joseph Myers and Co., Importers, Liverpool.

TO FARMERS, GARDENERS, AND OTHERS.— SULPHATE of LIME, now in use by the Horticultural Society, being a cheap substitute for Gypsum, may be had in large or small quantities, at Samuel Carter's, 65, Blackman-street, Borough of Southwark.

FUN FOR THE FIRESIDE!!

Bound in cloth, price 5*s.* 6*d.*,

JOE MILLER'S JEST-BOOK. A Reprint from the first and genuine edition, such omissions and alterations only having been made as were required by the greater delicacy observed in modern conversation; but, that the volume might have some substance, and be a good table or travelling book, curious additions have been made from other old volumes of Facetiæ.

Extract from the Preface.

"Another strange circumstance connected with this work is, that everybody presumes that he himself and everybody else are perfectly familiar with its contents ...... and yet, if the reader will ask his acquaintance, it will appear that not one in five hundred ever set eyes on a copy. It is in consequence of like questions that this edition is published."

London: Whittaker and Co.

NEWSPAPER
GARDENERS' CHRONICLE

On Tuesday next, with Two Plates, &c., 8vo, 6*s.*,

THE JOURNAL OF THE ROYAL AGRICULTURAL SOCIETY OF ENGLAND. Vol III., Parts II. and III., completing the Volume.—CONTENTS:—Progress of Agricultural Knowledge during the last Four Years. By Philip Pusey, M.P.—Meeting of German Landowners in 1841. By Henry Handley.—On the Marling of a Light Sandy Soil on the Duke of Bedford's Farm at Woburn. By Charles Burness.—Claying or Marling Land. By F. W. Overman.—Early Vetches. By William Jones Williams.—Cultivation of Lucerne. By Joshua Rodwell.—Agriculture of the Netherlands. By Rev. W. L. Rham. Part II.—Planting and Management of Forest Trees. By Charles Falkner.—On Wheat. By C. Hillyard, of Thorpelands.—On various Insects affecting the Turnip Crops. By John Curtis, F.L.S.—Use of Burnt Clay as a Manure for Heavy Clay Soils. By Francis Pym.—On the Failure of Red Clover. By Rev. W. Thorp.—On Measuring Cattle. By C. Hillyard, of Thorpelands.—Report on the Exhibition of Implements at the Bristol Meeting in 1842.—Institutions for the Advancement of Agricultural Science which exist in other Countries, and the Plans set on foot by individuals with a similiar intent in our own. By Charles Daubeny, M.D.—On the Dyock Oat. By Rev. R. W. Fisher.—Report on the Wheats selected for Trial at Cambridge, and on other Wheats. By W. Miles, M.P.—Report on Prize-Wheats. By G. Kimberley.—Report on Prize-Wheats. By H. Handley.—Mr. Irving's New Machine for Constructing Tiles. By W. Ford.—Agricultural Tour in Denmark, Sweden, and Russia. By James F. W. Johnston, F.R.S.

Miscellaneous Communications and Notices.—Experiments on the growth of Swedes.—Application of Clay to Moor-land.—Method of destroying Rats and Mice.—Use of Lime.—Feeding of Stock.—Chemical Constituents of Crops.—The Quantity of Minute Ingredients of Soil contained in an Acre of Land.—Experiments with Guano.—New and Economical Oil-Cake. APPENDIX, &c.

John Murray, Albemarle Street.

LOUDON'S "ARBORETUM ET FRUTICETUM BRITANNICUM,"
Abridged for Gardeners, Planters, and Nurserymen.

AN ENCYCLOPÆDIA OF TREES AND SHRUBS; being the "Arboretum et Fruticetum Britannicum" abridged; containing the Hardy Trees and Shrubs of Great Britain, Native and Foreign, scientifically and popularly described: with their Propagation, Culture, and Uses in the Arts; and with engraved Figures of nearly all the Species. Adapted for the use of Nurserymen, Gardeners, and Foresters. By J. C. LOUDON, F.L.S., &c. 1 Thick vol. 8vo (1842), pp. 1234, with upwards of 2,000 Engravings on Wood, 2*l.* 10*s.* cloth.

"We very frankly and warmly advise all Gardeners, Nurserymen, and the Proprietors of Gardens or Land, to procure this valuable Abridgment of Mr. Loudon's. We are sure they will find themselves abundantly repaid for its cost."—*Paxton's Magazine of Botany.*

*** The original Work, THE ARBORETUM ET FRUTICETUM BRITANNICUM, in Eight Volumes, Four of Letterpress (8vo, 1838), illustrated by above 2,500 Engravings, and Four of octavo and quarto Plates, may still be had, 10*l.* cloth.

London: Longman, Brown, Green, and Longmans.

THE GARDENER AND PRACTICAL FLORIST.— In Weekly Numbers, Price 3*d.*, and in Monthly Parts, Price 1*s.*, containing all that is new and valuable in Gardening and Floriculture. Published by R. Groombridge, Paternoster Row, by whom Advertisements and Communications for the Editor are received.—Sold by all Booksellers and Newsmen.

In Monthly Nos., 8vo, with Four beautifully-coloured Plates.
Price 2*s.* 6*d.*

PAXTON'S MAGAZINE OF BOTANY. The Number for November, 1842, contains highly-finished drawings of *Rondeletia longiflora, Mesembryanthemum tricolor, Acacia biflora,* and *Siphocampylus betulæfolius;* likewise Papers on Gardening as a science; on Shrubs fitted for Planting in Beds; and Hints on Potting and Planting: Floricultural Notices of new or beautiful Plants figured in the leading Botanical Periodicals for October; together with a compete Calendar of Monthly Operations for the Garden.

This work comprises, monthly, four admirably-coloured plates, and twenty-four pages of interesting and useful letter-press. The admirers of flowers are requested to observe—

1. That all the drawings are taken from nature, and are consequently made from plants which have flowered in Britain.
2. That, with few exceptions, they are all done by one artist, whose abilities are of the highest order, and who travels himself to the places where the plants are in flower.
3. That they are lithographed by the same individual, and, being coloured in a superior manner, have all the spirit and elegance, and much of the finish, of the original drawing.
4. That about one-half of the drawings are from plants which have never before been figured in this country, the rest representing the most popular novelties, as well as the more neglected, though sometimes far handsomer, old species; the majority being such as can be cultivated by every one possessing a flower-border and a greenhouse or frame.

It may, in conclusion, be safely asserted that, both for the beauty of its embellishments, and the utility of its contents, this work is well adapted to the wants of all who delight in gardening; and as the improved system of having the plates lithographed commenced with the present year, and as it is intended that each volume shall now be perfect in itself, the present is a desirable opportunity for those who wish to become subscribers.

London: W. S. Orr and Co., Paternoster-row.

DARLEY'S SCIENTIFIC LIBRARY, for the Use of Schools, Private Students, Artists, and Mechanics. It is the purpose of this Work to furnish a Series of Elementary Treatises on Mathematical Science, adapted to the wants of the Public at large. To youth of either sex at public and private schools, to persons whose education has been neglected, or whose attention has not been directed in early life to such studies, and to Artists and Mechanics, these little Works will be found particularly suited. The principles of the various Sciences are rendered as familiar and brought as near to our commonest ideas as possible; the demonstrations of propositions are made plain for the mind, and brief for the memory; and the Elements of each Science are reduced, not only to their simplest, but to their shortest form.

1. A SYSTEM OF POPULAR GEOMETRY. Containing in a few Lessons so much of the Elements of Euclid as is necessary and sufficient for a right understanding of every Art and Science in its leading Truths and general Principles. By GEORGE DARLEY, A.B. Fourth Edition, 4*s.* 6*d.* cloth.
2. COMPANION TO THE POPULAR GEOMETRY, in which the Elements of Abstract Science are familiarised, illustrated, and rendered practically useful to the various purposes of Life, with numerous Cuts. (A Second Edition is now ready.) 4*s.* 6*d.* cloth.
3. A SYSTEM OF POPULAR ALGEBRA, with a Section on Proportions and Progressions. Third Edition. 4*s.* 6*d.* cloth.
4. A SYSTEM OF POPULAR TRIGONOMETRY, both Plane and Spherical, with Popular Treatises on Logarithms, and the application of Algebra to Geometry. Second Edition, 3*s.* 6*d.* cl.

"For students who only seek this limited knowledge of these sciences, there are perhaps no treatises which can be read with more advantage than Darley's Popular Geometry and Algebra."—*Library of Useful Knowledge, Article "Mechanics."*

Taylor and Walton, Booksellers and Publishers to University College, 28, Upper Gower-street.

WANTED, as GROUND-FOREMAN in a Nursery, a person who is thoroughly conversant with his business, and can produce the most satisfactory reference as to ability, integrity, and good moral conduct. Apply, by letter only, to Mr. Knight, Exotic Nursery, King's Road, Chelsea.

WANTED by a Young Man aged 24, who has had great experience in the Seed-trade, a Situation as Shopman or Under-Shopman.—Respectable references can be given. Address P.P.—G.W.D., Mr. E. P. Dixon's, Seedsman, Hull.

WANTS a SITUATION as GARDENER, a middle-aged married man without incumbrance, who has a practical knowledge of his Business in all the various departments; can superintend land if required, and have an excellent character from the Gentleman he has lately left.—Address, A.Z. at Mrs. Fisher's Bookseller, Mitcham, Surrey.

WANTS a SITUATION as GARDENER, a young single man, age 28, who thoroughly understands his business in all its various branches, and can have a good recommendation from the gentleman he will leave at Christmas next. Direct T. W., at R. Davies's Dispensary, Macclesfield.

Now published, price 10*s.*,

A SECOND Edition of MILL'S TREATISE ON THE CULTURE OF CUCUMBERS, MELONS, SEA-KALE, and ASPARAGUS, with a descriptive Plate of his Pit, and also daily Notes of Practice from December to February inclusive.

Published by WM. SMITH, 113, Fleet-street, and sold by all Booksellers.

A HISTORY OF BRITISH FOREST-TREES, indigenous and introduced. By PRIDEAUX JOHN SELBY, of Twizell, Esq. This volume gives an account of the useful and ornamental properties, best modes of culture, of the various Forest-trees now grown in Great Britain. It forms a manual for the planter, and an interesting and informing volume for the general reader. Each species is historically described and figured. The Engravings, amounting to nearly 200, represent the perfect tree, and details of the flowers, leaves, and fruit. Demy 8vo, 28*s.*; royal 8vo, 2*l.* 16*s.*

John Van Voorst, 1, Paternoster-row.

HODGSON and ABBOTT'S PALE ALE.—The above celebrated Beer, so strongly recommended by the Faculty, is to be procured only from E. ABBOTT, Brewery, Bow, Middlesex. The Trade not being supplied, the Pale Ale cannot be genuine if procured elsewhere.

City Office, 98, Gracechurch-street.

KEENE'S PATENT CEMENT.

THIS CEMENT is harder than any other known, and is especially fitted for the Walls of Hothouses, Conservatories, &c., as it neither cracks nor vegetates, and is perfectly impenetrable by insects.

The entire range of Hothouses erecting by the Government at Frogmore are about being stuccoed with it, and the price ranges nearly equally with the Cements in ordinary use for floors, and it forms a paving harder and cheaper than Portland Stone.

Patentees and Manufacturers, J. B. WHITE and SONS, Millbank, Westminster.

THE PATENT ASPHALTE PROTECTING MATERIAL, spoken so highly of in the *Gardeners' Chronicle* for 1841, p. 100, 415, 530, and p. 8, for 1842, may be obtained in Sheets—32 inches by 32 inches, 32 inches by 64 inches, 32 inches by 96 inches, of THOS. JNO. CROGGON, 8, Ingram-court, Fenchurch-street. A liberal discount to Hothouse Builders, Nurserymen, &c.

TO NURSERYMEN, GARDENERS, &c.:—A Nurseryman and Florist, &c., situated in a respectable and improving position, a pleasant ride from London, who has recently enlarged his Business, finding the exertion necessary to carry on the same to advantage more than his health or strength will enable him to do with ease and satisfaction to himself, wishes to associate himself with one or more persons who would be able to assist him in carrying on the Business. A moderate Capital only would be required, practical and useful assistance being most needed.—Address, Post-paid, W. D., W. G. Charlewood, Seedsman, Tavistock Row, Covent Garden, London.

TO NOBLEMEN, GENTLEMEN, NURSERYMEN, and OTHERS.—SEVEN ACRES of NURSERY-STOCK, Greenhouse Plants, Household Furniture, Mare and Colt, Cow, Gig, Cart, Harness, Pits, Frames, Hand-glasses, Garden Pots, Sundry Utensils, &c.—To be SOLD BY AUCTION, by Messrs. PROTHEROE and MORRIS, on the Premises, Ingatestone, Essex, on Monday, Nov. 21st, 1842, and following days, at 11 o'clock, by order of the Trustees of the Estate of Mr. ALEXANDER HOGG, the whole of the Valuable Nursery-Stock, consisting of Fruit and Forest Trees, Evergreens, American Plants, Deciduous and Ornamental Shrubs of every variety. May be viewed a week prior to Sale. Catalogues, 6*d.* each (returnable to purchasers), may be had on the Premises; at the Black Boy, Chelmsford; Spread Eagle, Ingatestone; White Hart, Brentwood; White Hart, Romford; of the principal Seedsmen in London; and of the Auctioneers, American Nursery, Leytonstone.

INGATESTONE NURSERY.—TO BE LET, for a Term of Years, the above old-established Nursery Ground, consisting of about 4 acres, with Greenhouses, and fine bearing Fruit Trees; it is well supplied with water, and contiguous to the Eastern Counties Railway, about 20 miles from London; the rent moderate, and may be entered upon immediately. Inquire of Mr. Hogg, upon the Premises.

MECHI'S ELEGANCIES IN PAPIER MACHE' (No. 4, Leadenhall street, London) surpass everything of the kind yet produced, whether Indian or British; admirably adapted for presents; combining the most gorgeous, but still chaste painting, with the utmost elegance of form. The prices are adapted either to the economist, the luxurious, or the more general demand of a medium article—the prices varying from 13*s.* 6*d.* to 50 guineas each. They are durable in an extraordinary degree, admitting of being frequently washed with warm or cold water without in any degree impairing their beauty.

CAUTION TO FAMILIES.—The high reputation and consequent great demand of the undermentioned Articles have excited the avarice of some Shopkeepers, who, to get a trifle more profit, attempt to impose on the Public *highly-pernicious* Compounds as the real MACASSAR OIL for the hair, and KALYDOR for the complexion: they copy the labels and bills of the original Articles, substituting either an *assumed* name, or the word GENUINE in the place of ROWLAND'S —*** To frustrate such imposition it is necessary, on purchasing either Article, to see that the word "Rowland's" is on the wrapper as follows: —ROWLAND'S MACASSAR OIL, price 3*s.* 6*d.*; 7*s.*; or Family Bottles (containing four small), 10*s.* 6*d.*; and double that size, 21*s.* per bottle. ROWLAND'S KALYDOR for the Skin and Complexion—Price 4*s.* 6*d.* and 8*s.* 6*d.* per bottle. "A. Rowland and Son, 20, Hatton Garden, London," is written in red on the wrappers of the MACASSAR OIL and KALYDOR, and engraved on the Government Stamp affixed on the Kalydor. Be sure to ask for ROWLAND'S ARTICLES. Sold by them and by respectable Chemists and Perfumers.

THE GARDENERS' CHRONICLE.

A STAMPED NEWSPAPER OF RURAL ECONOMY AND GENERAL NEWS.
THE HORTICULTURAL PART EDITED BY PROFESSOR LINDLEY.
No. 46—1842. SATURDAY, NOVEMBER 12. PRICE 6*d*.

INDEX OF THE PRINCIPAL HORTICULTURAL SUBJECTS IN THE LAST NUMBER.

Acorns, to sow . . . . 745 *b*
Amateur's Garden . . . 741 *a*
Ammonia, test for . . . 742 *b*
Balsams, experiments on . . 741 *c*
Blight, American, to cure . 741 *b*
Brickdust, to strike cuttings in 742 *a*
Cabbage-seed, to preserve . . 742 *b*
Callcott's Scripture Herbal, rev. 743 *c*
Charcoal, growth of Pansies in 741 *c*
— injurious effect of burning it in forcing-houses . 741 *c*
Cucumbers treated with nitrate of soda . . . . . 745 *a*
Dendrobium macranthum . 743 *b*
Echites atropurpurea . . 743 *b*
Erythrina laurifolia, in the open border . . . . 742 *b*
Forcing, early, remarks on . 744 *b*
Fruits, cause of their decay explained . . . . . 739 *a*
Fruit-tree borders, to prepare . 745 *b*
Fruit-trees. remarks on pruning 741 *b*
Gloxinia tubiflora . . . 743 *b*
Goat's-milk, remarks on . . 742 *c*
Grape, Albert, described . . 742 *c*
Grapes, cause of their not colouring . . . . . 741 *c*
Guano, its effects on vegetables 742 *a*
— when to apply . . 745 *a*
Heating by hot air . . . 741 *c*
Heat of summer, its effects . 742 *a*
Horse Chesnuts, their use . 745 *b*
Hyacinth, its treatment . . 740 *c*
Hyacinths, to grow in moss . 745 *a*
Ivy, its effect on houses . . 742 *c*
Kingston Gardens, noticed . 743 *b*
Ladies turned gardeners . . 742 *b*
Land, necessity of its being broken up . . . . 739 *b*
Manure, Boussingault's memoir on . . . . . . 739 *c*
Nelumbium, to raise from seed 745 *a*
Peaches, good kinds for forcing 746 *a*
Pears, for a wall . . . 745 *b*
Pit at Heckfield, described . 742 *c*
Plum-trees, to prune . . 745 *b*
Potato, injured by burning the eyes . . . . . . 742 *b*
Roses, stocks for budding . 742 *b*
Scale, destroyed by Chamomile 743 *a*
Sea-kale, to force . . . 745 *b*
Seaweed, to convert into manure 745 *a*
Seeds of fruit, to sow . . 745 *b*
Soot, its adulteration . . . 742 *a*
Statice arborea, its treatment . 745 *a*
Staphylinus olens, described . 740 *a*
Thunbergia alata, its treatment 745 *a*
Turnips, to keep . . . 745 *b*
Vegetable refuse, to convert into manure . . . . 745 *a*
Vine, its management by Mr. Crawshay . . . . . 739 *c*
Wall-fruit, method of preserving 741 *c*
Wall-tree-borders, remarks on 741 *b*
Water, to keep pure . . . 745 *b*
Weights of horticultural produce . . . . . . 741 *a*
Wine, of bad quality, when made from unripe fruit . 745 *b*

ROSA DEVONIENSIS.

ABOUT 500 of the above valuable ROSE to be disposed of at J. Hally's Nursery, Blackheath, Kent. If to the trade, they will be supplied on advantageous terms. It has been proved a most excellent Rose to force for cut flowers in the winter, and its other properties are now too well known to need further eulogy. J. H. also takes the opportunity of stating that he has still on hand a few of the leading varieties of Camellias, handsome saleable Plants; well set for bloom from 1 to 3 ft. in height. Also young Plants of all the best new kinds, and several thousand 1 and 2 years' grafted Double White, Double-striped, Monarch, fimbriata, Chandlerii, corallina, tricolor, Bealii, Colvilli, Eclipse, ochroleuca, candidissima, Campbelli, elegans, perfecta, Lefèvreana, and all the leading varieties, in excellent order for packing and exportation.

J. H. begs to inform his friends in the trade who have so kindly favoured him heretofore with their orders for Stocks, that owing to the great demand he has had, he will be able to supply only a very limited number the ensuing season. J. H. has for sale a large stock of Myatt's British Queen Strawberry Plants; as also an abundant supply of Lilium lancifólium punctatum and album.

THE MOST SUPERB DARK CHINA ROSE EVER OFFERED TO PUBLIC NOTICE—"MIELLEY'S PRINCE OF WALES."

WM. WOOD & SON have the honour to announce to their Friends and Amateurs in general, that they have purchased the entire stock of the above most magnificent Rose, and intend sending it out early in November, price for Dwarf Plants (on their roots) 10*s*. 6*d*. each.

The colour is of the deepest rich dark velvety purple violet, most perfect shape, beautifully cupped, large and very double, producing its elegant flowers on very strong footstalks; the habit is luxuriant and pleasing, with fine glossy foliage; it is perfectly hardy, and may certainly be depended upon as a Show Rose of first-rate excellence.

A discount of one third will be allowed to the trade if 6 plants or more are taken at once. Early orders are respectfully solicited, which will be executed in rotation as received.

A remittance or reference will be required from unknown correspondents.

Woodlands Nursery, Maresfield, near Uckfield, Sussex.

OAKLEY'S "SURPRISE" DAHLIA.

SAMUEL GIRLING having purchased the entire Stock of this beautiful tipped Dahlia, acknowledged to be the best fancy Dahlia ever offered to the public, has no objection to part with a few roots at 5*l*. each ground root, or take in exchange roots of the kinds coming out in May 1843, that have obtained prizes at the principal shows for the season, and are classed as first-rate flowers. (For full particulars see *Gardeners' Chronicle*, Aug. 6th and 20th.) It has likewise been pronounced by the Floricultural Society of London, to be the best and most perfect Dahlia ever raised as a tipped variety: it has taken in all seven prizes this season. Plants in May 10*s*. 6*d*. each.

S. G. has, of his own, two first-rate Seedlings coming out in May; one a Lilac, the form and colour of Countess of Pembroke, but larger and constant; name, King of Lilacs. The other, named Eximia, a superior formed Pinky rose, distinct from any other rose Dahlia, of first-rate properties. Plants of these in May 10*s*. 6*d*. each. Three other very superior second-rate flowers, at 7*s*. 6*d*. each: and 6 or 8 fancy Border Dahlias, possessing great novelty, and well adapted for border-growing, at 3*s*. 6*d*. each. The stock of most of them being small, early orders will have the preference, and are particularly requested.

S. G. has likewise on sale, Ground or Pot Roots of most of the popular varieties of last season, with a few of the Northern Beauty Dahlia, which he has this year grown as good, if not superior to any edged Dahlia in cultivation, at moderate prices, as well as all the best varieties of former seasons. A few plants of his two seedling Verbenas and Pansies, and Phlox omniflora magna, to part with. Ready money or reference from unknown correspondents.—Danecroft Nursery, Stowmarket, Suffolk, November 18, 1842.

W. LYNN, NURSERY AND SEEDSMAN, late of Henley-on-Thames, begs to offer to the Trade, and Public in general, the following articles, which are good and fine:—viz., Maiden Cherries, ditto Stocks, 4 to 6 ft.; 14 varieties of Dwarf Trained Plums; Standard Plum Stocks, 6 to 8 ft.; Standard Walnuts; Red Cedars, 1 to 2 ft.; Arbor Vitæ, 4 to 6 ft.; Box-trees, 2 ft.; Spiræa bella; Camellias, 1 to 2 ft., set for bloom - Auriculas; Myrtles, 2 ft.; Gesnera fragrans, 2 ft.; Hoya carnosa; Pelargoniums; Lobelia ignea; also a small stock of his new Dwarf Wrinkled Marrow Peas, at 2*s*. 6*d*. per quart: this Pea has given universal satisfaction in the neighbourhood of Henley—it is superior to the Knight's Marrows, and much more advantageous, especially in small gardens, its height being 3 to 4 ft.; it is the most prolific Pea the advertiser ever saw, perpetual in its bearing, quite full, and of most delicious flavour, even when nearly ripe. New White Reading Onion—seed of own growth; Long and Short Prickly Cucumbers; fine Curled Parsley; Vegetable Marrow; Walnut-leaved Kidney Potatoes, and Knight's Seedling Early Frame ditto:—For which early applications are requested. All orders and communications addressed (pre-paid), No. 9, Lower Homerton Terrace, Homerton, will be punctually attended to.

SPLENDID NEW CACTUS (CONWAY'S GIANT).

PHILIP CONWAY begs to inform his Friends and the Public, that he intends sending out this unequalled Production the second week in April, at 2 guineas each. See Dr. Lindley's opinion of the above in the *Gardeners' Chronicle* of June 4th, page 367, as follows:—

"A new seedling Cactus, of most extraordinary beauty, has just been sent us by Mr. Conway, Nurseryman, Old Brompton. It is a cross between speciosissimus and Ackermanni, having the large size of the former, and the rich scarlet colour of the latter, with only a tinge of violet inside. Although the plant has only now flowered for the first time and is quite small, the blossoms measure eight inches in diameter. The petals have a fine broad oblong outline, and the stigma is a bright violet. It is much the handsomest sort yet raised. It is to be called Conway's Giant, and its name is no exaggeration."

P. C. begs further to intimate that his Stock is not large, and early orders will ensure the strongest plants, as they are to be executed in rotation. A remittance or reference will be required from unknown correspondents. No allowance to the Trade, the Stock being limited.—Old Brompton, Oct. 27th, 1842.

PRINCE ALBERT PEA.

CORMACK & OLIVER, Seedsmen and Nurserymen, New Cross and Bedford Conservatory, Covent garden, London, have the honour to offer to the notice of Noblemen, Gentlemen, and others, the above new PEA, as one of the earliest and best sorts extant; in proof thereof, a quantity put into the open ground on the 14th of March last was ready for use the 25th of April following, being only *forty-two days from the period of sowing to the date of gathering for the table*; it is moreover a good bearer, of excellent flavour, and highly advantageous for early forcing. —Packets, containing a quart, 5*s*. each. They also beg to recommend the British Queen, a new wrinkled marrow, larger and more productive than any of Knight's varieties, 3*s*. 6*d*. per quart. Likewise the new Incomparable Cos Lettuce, peculiarly crisp and juicy, perfectly hardy as a winter Lettuce, not apt to run in summer, and requiring no tying; in packets, at 1*s*. or 5*s*. per oz.

SPLENDID DOUBLE HOLLYHOCKS.

WILLIAM MAY begs to intimate to the admirers of this justly-popular plant that he has been collecting and originating for the last 20 years a Collection of Hollyhocks, not surpassed (he ventures to say) by any in Europe, comprising upwards of 100 shades of colour, from the very dark (called black) to paper white, and the present season being proper for their being planted, he offers them on the following very moderate terms, viz., 100 varieties for 2*l*. 2*s*., 75 vars. for 30*s*., 50 vars. for 25*s*., 20 vars. for 10*s*. Also, packets containing 200 seeds, at 2*s*. 6*d*.; do. do. 500 seeds at 5*s*. each; all warranted collected from double flowers.

N.B.—Also May's new large, late Victoria Red Currant, at 20*s*. per doz.—See Dr. Lindley's remarks, *Gardeners' Chronicle* for Oct. 8.

Hope Nursery, Leeming-lane, near Bedale, Yorkshire,
Nov. 1, 1842.

SHIRLEY VINEYARD, NEAR SOUTHAMPTON,—NURSERY DEPARTMENT.

CLEMENT HOARE respectfully announces that he has now on sale an extensive collection of Grape Vine Plants of superior growth, and of the most approved sorts in general cultivation, varying in price from 2*s*. 6*d*. to 7*s*. 6*d*. each.

Lately Published,
A PRACTICAL TREATISE ON THE CULTIVATION OF THE GRAPE VINE ON OPEN WALLS. By CLEMENT HOARE. 3d edition. 8vo, 7*s*. 6*d*. boards. Longman & Co., London. Sold by all Booksellers, and at the Vineyard at Shirley.

T. & C. LOCKHART, FLORISTS, 156, Cheapside, London, have the following SEEDS now ready for sale:—

		s.	*d*.
The new Spotted Digitalis . . .	per packet	3	6
Hybrid Gloxinia, between candida and rubra	do.	2	6
Phlox Drummondi, new scarlet . . .	do.	2	6
Clintonia pulchella	do.	1	0
Portulaca Thellussoni	do.	2	6
Rhodanthe Manglesii	do.	1	0
Balsam, a splendid mottled Hybrid . . .	do.	2	6
Lobelia heterophylla	do.	2	6
Heartsease, of the best quality . . .	do.	2	6
Picotee and Carnation	do.	2	6

The above will be forwarded, Post free.—A List of Seeds is now preparing, and will be published about the end of December.

MESSRS. YOUELL and Co. beg to announce the following:—

FUCHSIA ST. CLARE. — This, the most Splendid FUCHSIA yet introduced to public notice, will be ready for sending out in the 2nd week of April next, at 10*s*. 6*d*. per plant, postage free, to any part of the United Kingdom, by YOUELL and Co., who possess the entire stock of it. Dr. Lindley's opinion of it will be found in the *Gardeners' Chronicle* of the 14th of May last, as follows:—

"Your Seedling Fuchsia is by far the finest hybrid we have seen; the flower being three inches in length, with the tube and sepals of a bright carmine colour, and the petals of a rosy purple. If, as you say, it is a strong grower and a free bloomer, it will prove a valuable addition to this beautiful genus:—"

Which two latter qualities it possesses in the extreme. All orders, as well as those from the Continent, will receive every care in packing, so as to ensure their perfect safety. The usual discount to the Trade, where not less than six plants are ordered. For further particulars see their advertisement in the *Gardeners' Chronicle* of the 8th inst.

CARNATIONS AND PICOTEES.—A Superb Collection of the above are now being sent out at the following prices

		£	*s*.	*d*.
25 pairs	of extra fine first-rate Show flowers,	5	0	0
12 ,,	do. do. do.	2	10	0
25 ,,	of fine Show flowers, . . .	3	0	0
12 ,,	do. do. . . .	1	10	0
25 ,,	of extra fine Show Pinks, . . .	1	4	0
12 ,,	do. do. . . .	0	12	0

The selection being left to Y. & Co.

Who, should it meet the wishes of those favouring them with their orders, will send them free to any part of the United Kingdom, at the extra charge of 2*s*. per dozen pairs.

A Post-office order, or reference, is respectfully requested from unknown correspondents.

Their Catalogue, containing every known variety worthy of cultivation, may be had by enclosing two postage stamps.

ARAUCARIA IMBRICATA.—Y. and Co., who possess by far the largest stock in the country of the above most noble Hardy Plant, which is in course of planting by most of the Nobility, are executing orders for it in fine strong healthy Plants, at 60*s*. per dozen.

Great Yarmouth Nursery, Oct. 27th, 1842.

NEW AND SUPERB FUCHSIAS.

MESSRS. YOUELL and Co. beg to offer the following new and highly-beautiful FUCHSIAS, which they will send Post-free to any part of the United Kingdom (on the receipt of a Post-office order), at the rate of 21*s*. per doz.:—Arborea, aurantia, roseo-alba, Bruceana, conspicua arborea, cordata superba, Dalstonia, excelsa, eximia, formosa elegans, grandis, Hopverii, ilicifolia, inflata fulgida, insignis, magnifica, Middletonia, mirabilis, Monypennii, pendula terminalis, princeps, racemiflora, Riccartonia, stylosa conspicua, stylosa elegans, stylosa pulchella, Towardii, tricolor, Usherii, Youellii.

Great Yarmouth Nursery, Norfolk.

SUPERB SEEDLING PELARGONIUMS, now ready for delivery —Gaines' Duchess of Sutherland, Orange Perfection, Amulet, Pride of Surrey, Lady Duncannon, Royal Adelaide, Prince of Wales, Countess of Eldon, Princess Royal, Graciosa, Emperor, Superb, and Lady Sale. His first-rate Catalogue of Pelargoniums, Pansies, Calceolarias, Fuchsias, Verbenas, Chrysanthemums, Cinerarias, Auriculas, &c., may be obtained by applying to N. Gaines, Florist, Surrey-lane, Battersea.

SPLENDID MULBERRY - TREES, GOOSEBERRY - TREES, PILLAR, STANDARD, AND DWARF ROSES, AUCUBA JAPONICA, &c., &c., &c.

W. DENNIS & CO., beg to remind the Nobility, Gentry, and Public generally, that their Plants and Trees of the above articles are unrivalled for size, beauty, and superior quality; and as the season for planting is now excellent, they solicit a share of their favours, assuring them that their kind orders will be promptly and truly executed.—King's-road, Chelsea.

HILLIER'S "SIR FREDERICK JOHNSTONE" DAHLIA.

THE greater part of the STOCK of this desirable Show Flower is now in hand, and will be SOLD in Dry Roots at 7*s*. 6*d*. each, for the Benefit of the WIDOW AND ORPHAN CHILDREN—an early application is requested, as the best Roots will be sent out first. Also for Sale a Bed of Tulips, consisting of about 40 rows, including Louis the 16th extra, Polyphemus extra, Camuse extra, La Joie de Laurence, &c., &c., price 10 guineas. Also an excellent and nearly new span roof cover, with deal frame stand and cloths complete, for a Tulip Bed 34 feet by 7 feet 6 inches.

Further particulars may be known on application to Mr. Hobbs, 23, St. Giles's-street, Oxford.

EVANS' NORTH MIDLAND DAHLIA. — This Splendid Seedling DAHLIA, warranted the steadiest variety ever raised, is offered to the Trade, in ground roots, on very low and advantageous terms, which may be known, on post paid application to J. Evans, Florist, Rotherham, Yorkshire. It has been exhibited at four shows, and taken three first prizes; also at the Barnsley and Wapentake of Staincross Horticultural Society, the Premier Prize for the best Flower in the exhibition, where Messrs. Edwards, of York, and Atkinson, of Sheffield, were exhibitors. The *Gardeners' Chronicle*, Oct. 1, thus speaks of it after receiving 8 Blooms cut from one plant:—"The general form of your Crimson Dahlia (North Midland) is very good, the petals also are of a good shape and substance." The Stock is very limited, therefore early application is necessary to prevent disappointment, as several roots are already ordered.

Rotherham, Nov. 10, 1842.

H. CORSTEN, Florist to her Majesty and his Royal Highness Prince Albert, 19A, Davies-street, Berkeley-square, has for sale boxes at 2*l*., or half the quantity at 1*l*., containing a dozen of each of the undermentioned DUTCH BULBS: —Double Hyacinths, named sorts; ditto single; Double Duc Van Thol; single ditto; Tourne sol Tulips; Double Anemones; Double Ranunculuses; Double Jonquils; Narcissuses, white and yellow; 100 mixed Crocuses, new. A remittance required.

NOTICE OF SALE.

MR. J. KING begs to acquaint Gentlemen, Gardeners, and others, that he has instructions to sell by AUCTION on MONDAY, 21st Nov., at 11 precisely, on the Premises, Cambridge-row, Hackney-road, the Stock and Crops on the Land, comprising Greenhouses, Frames, Lights, Plants in pots, Fruit-trees, Shrubs, Carts and Horse, and Implements, &c., &c. The Premises to be let on lease (4 Acres). For information apply to J. King, Auctioneer, Hackney Road.

ANNUITIES.—In the AUSTRALIAN COLONIAL AND GENERAL LIFE ASSURANCE AND ANNUITY COMPANY, Annuitants *participate in the Profits of the Company*, and receive a rate of ANNUITY much more favourable than can be granted by any Company making its investments wholly in England. The Company is enabled securely to grant these favourable terms from the advantage it possesses of investing a portion of its Funds at a high rate of Interest.

DIRECTORS:

Edward Barnard, Esq., F.R.S.	C. E. Mangles, Esq.
Henry Buckle, Esq.	J. B. Montefiore, Esq.
John Henry Capper, Esq.	J. H. Ravenshaw, Esq.
Gideon Colquhoun, jun., Esq.	William Walker, Esq.

BANKERS—Union Bank of London.
COLONIAL BANKERS—The Bank of Australasia (incorporated by Royal Charter, 1835), No. 2, Moorgate-street.
PHYSICIAN—Patrick Fraser, Esq., M.D., 62, Guildford-street, Russell-square.
SOLICITORS—Messrs. Swain, Stevens, and Co.
SECRETARY—Edward Ryley, Esq.

Prospectuses, with Tables, Forms of Proposal for the purchase of an Annuity, or for making an Assurance, and every information, may be obtained by application at the office of the Company, No. 126, Bishopsgate-street, City.

HOT-WATER APPARATUS, for Horticultural and other Buildings.—STEPHENSON and Co., Agents for the Old Park Iron-works, and Manufacturers, 61, Gracechurch-street, London, solicit an inspection of their improved Conical Boiler. (See Editor's description, *Gardeners' Chronicle*, March 12, p. 175.) To Amateurs these Boilers will be found invaluable. They are complete without furnaces or setting in brickwork, movable at pleasure, very ornamental in appearance, and require attention only once in 14 or 15 hours, price 5*l*. 5*s*. and upwards. Further particulars, with plans and estimates for heating any description of building, may be obtained as above; where also may be seen the improved Wrought-iron Boiler, as applied with Chanter's Smoke-consuming Furnaces at Chatsworth, and many other of the Nobility's Seats. Iron Fencing, Hurdles, Bedsteads, Ornamental Wire-work, Garden Implements, &c. &c. The trade supplied with Hot-water Socket-pipes.

N.B.—WAYTE's New Patent Land-presses and Drills.

prepared in the neighbourhood of Marseilles. Two samples have given the same results, proving its value to be six times greater than that of common dung.

The authors conclude by giving a table of results, the following of which appear of most practical importance.

Substance.	Dry.		Fresh.		Observations.
	Per centage of Nitrogen.	Equivalents.	Per centage of Nitrogen.	Equivalents.	
Farm-yard dung .	1·95	100·	0.4	100	Taken for comparison.

ON THE CULTURE OF THE LO-QUAT.

(ERIOBÓTRYA JAPÓNICA.)

It is to be regretted that the Lo-quat is not more generally known and cultivated in England—being a fruit scarcely inferior to the grape in flavour, and on that account worthy of a place in our collection of tropical fruits. The plant is of most easy culture, and one that, by the abundance of fruit which it produces, amply repays any trouble that it may occasion. Undoubtedly, the best, but at the same time the most expensive, way of cultivating the Lo-quat would be, to allow it a house to itself, where, like the Peach, it might either be grown as a standard, or trained on a trellis near the glass—the latter would perhaps prove the better of the two. Light sandy loam, which is naturally rich, suits the Lo-quat well. Young plants may, I believe, be purchased of the London nurserymen; but they should be rejected if they have not been grafted on the common Méspilus germánica, or some other nearly allied genus.

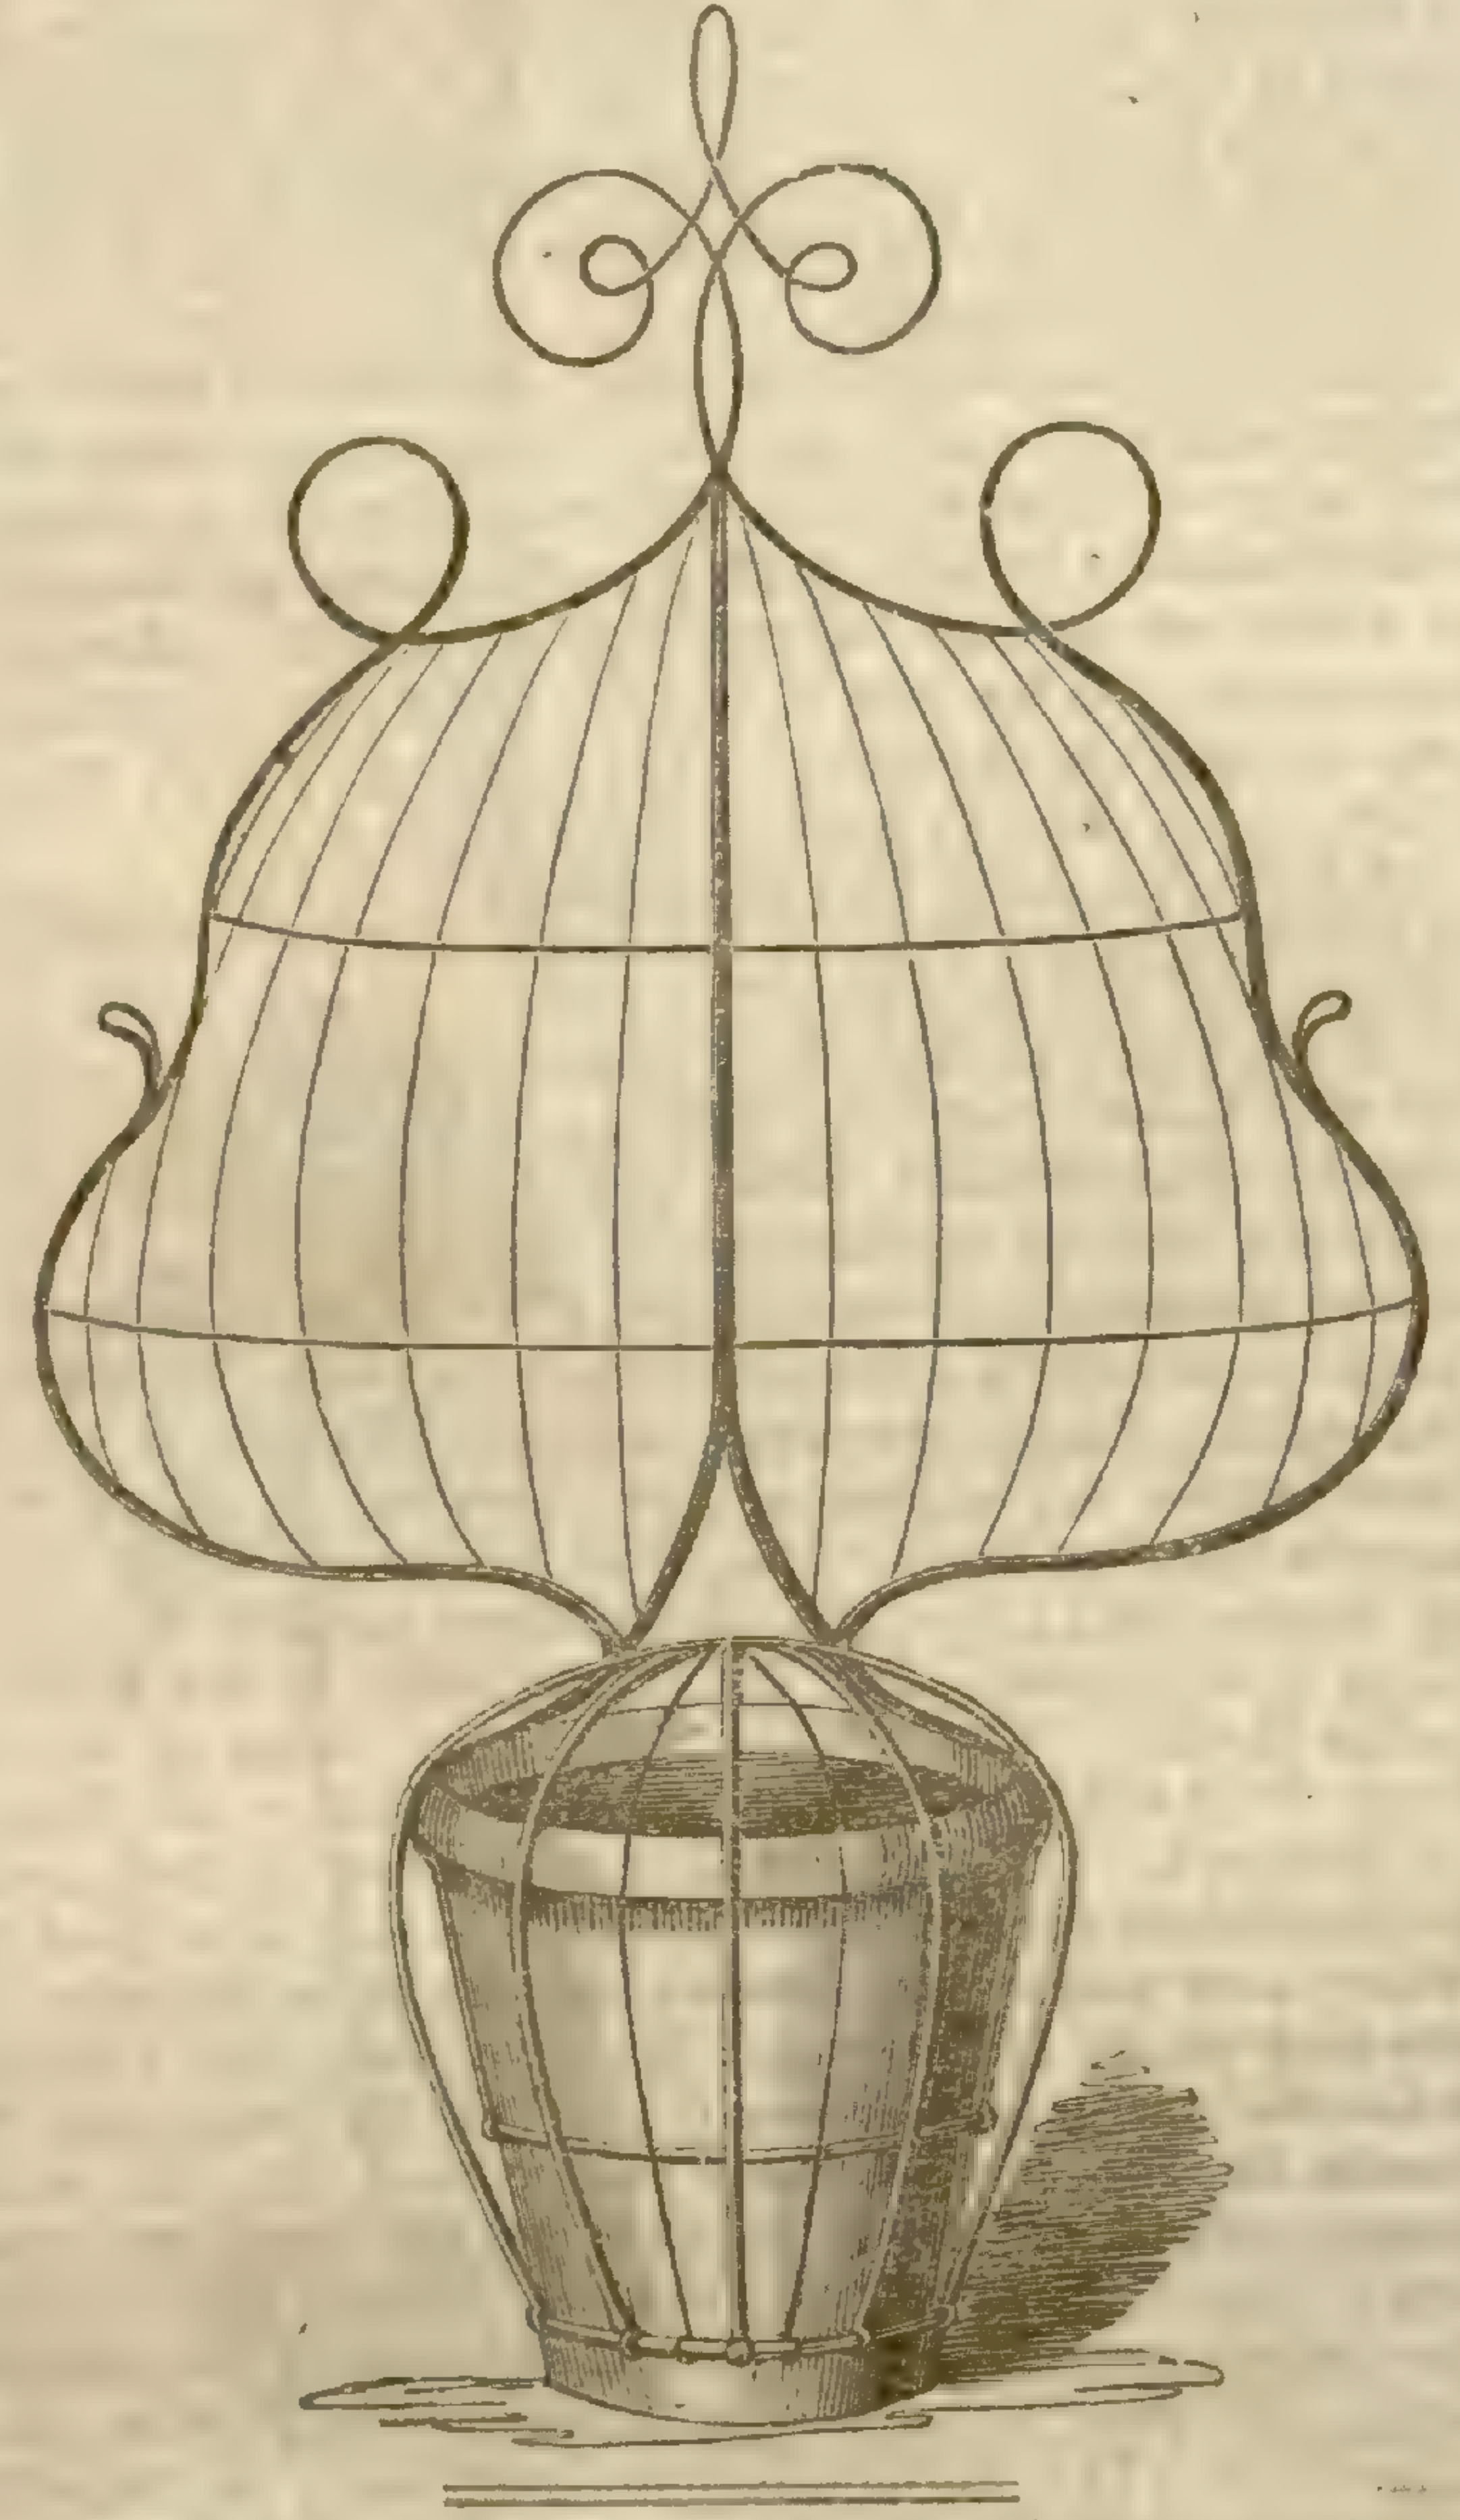
They may be propagated by seeds or layers; but if so raised, they must be afterwards grafted. They may be planted six or eight feet apart in the house; but when they become too crowded, every alternate plant should be removed. I should recommend them to be planted on small hillocks of earth, corresponding with the size of the plants; which as they advance in growth may, from time to time, have fresh earth added to their roots until the border is filled level: the advantages of such a method I need not point out. Care must be taken whilst the plants are young to make them produce the requisite quantity of branches close to the graft, by shortening the shoots, or by pinching off the tips. The Lo-quat has a disposition to form long slender branches with a few leaves only at the tips: all possible means should therefore be used to make it assume a stockiness of habit whilst it is young, as the fruit is produced at the end of the branches, which on that account cannot be shortened when the plant is in a bearing state without a manifest injury to the crop.

As the leaves are large, the branches will require more room than those of the Peach-tree. The Lo-quat is half-hardy, and it will therefore be necessary to keep a little fire in the house in winter to prevent the frost from injuring the plants. The trees bloom naturally at that season, but in this respect are almost at the command of the gardener. They may be forced into bloom in autumn, or by keeping the house very cool in winter their blooming may be retarded until spring.

The temperature during the growing season may correspond with that which is given to the Peach when forced. When the fruit is gathered, more air should be left upon the house. In autumn the sashes might be entirely removed for a short time, so long as there is no danger of frost. Though a separate house is highly desirable to cultivate the Lo-quat in, it by no means follows that it will not grow and fruit elsewhere. If it can be accommodated with the back wall of a Pine or Plant stove, with a border of two or three feet in breadth to grow in, it will succeed remarkably well. It is far from being a tender tree, or one difficult to manage; being of a robust, healthy habit, and requiring but little attention.

Some people prefer eating the fruit before it is quite ripe, at which period it has an agreeable acid flavour; but to obtain a luscious, melting, highly-flavoured fruit, it should hang on the trees until somewhat shrivelled. I think it probable that the fruit would ripen on the back wall of some greenhouses, if it had plenty of light and air: at all events, it is worth a trial. The Lo-quat may also be grown in pots or tubs, but that is an inconvenient method. If some of our wealthy English horticulturists could be induced to give this fruit-tree a small house upon trial, its good properties would become more generally known, and I doubt not but it will be more extensively cultivated.—*Observator, Prescott.*

TRELLIS FOR CLIMBING-PLANTS.



ON THE CULTIVATION OF THE HYACINTH.

[Directions furnished by Mr. Theodore Storm, of Haarlem, to an English gentleman.]

(*Concluded from page* 741.)

Taking Bulbs up.—The bulbs should be taken up as soon as the leaves have lost their verdure and begin to wither. If the garden is much elevated, and free from moisture, they may be left in the ground until the leaves are quite crisp. The general custom with the florists of Holland is to put them in the earth again as soon as they have stripped them of their leaves, in which they practise the following method. After taking up the bulbs, they make the beds quite even, and after cutting off the leaves (not too closely), they place the roots, so that they just touch each other, in a south aspect, and cover them with fine earth to the thickness of one inch. In this situation they lie for about three weeks, the mould being removed from time to time, or renewed, if it should be blown about by the wind. About the end of this period they take up the bulbs, clean them, remove the offsets, and place them upon their proper shelves.

This plan is of great service, and highly favourable to their evaporation; it renders them dry and compact, and consequently more adapted for carriage: it likewise prevents them from getting mouldy. The above method is alone practicable in a light and dry soil, that has been well turned. Where the land is strong and moist, it would be very dangerous to follow this method, as, by so doing, all the bulbs might be totally destroyed. Those who possess the above-mentioned favourable soil may take up their bulbs as soon as the leaves begin to turn yellow; and on the contrary, those who are not so fortunate must wait till the leaves entirely lose their verdure.

Evaporation.—The bulb of the Hyacinth is succulent, and full of sap; which is the reason why, from the want of due evaporation, it easily putrifies, a misfortune which must be guarded against as much as possible. To prove that the bulbs abound with sap, pick out eight or ten roots at the time they are taken up. They will then, perhaps, weigh sixteen ounces; but after they have lain on the shelves three weeks, you will find that they weigh only twelve ounces—so that they will have evaporated one-fourth part of their weight in that time. The vapour condensed either in the room, or in the deep drawers in which they may be laid to dry, has the same pernicious effects upon them as the wet or moisture has in the open ground; that is to say, it occasions putrefaction, and totally destroys the bulbs.

The place chosen for keeping the bulbs in after they are taken up ought to be very dry. For this reason greenhouses which face the south are preferable to any other place. The sashes should be open on all sides, in order that the air may have a free circulation amongst them, especially for the first two or three weeks after they have been removed there. In dull weather, and likewise in the morning and evening, the sashes should be kept shut, and every precaution taken to prevent the humid vapour from settling upon the bulbs. It is for this reason that rooms lined with wainscot or built entirely of wood are preferable to those formed of brick or stone. Stone walls, in particular, condense the humid and moist vapours: if the weather remain cloudy for two or three days together, such walls appear covered with moisture, which seldom happens to those made of wood.

In the month of September, the sap of the bulbs begins to move, and it then becomes necessary to pay particular attention to them; because at this time they are most subject to putrefaction, by imbibing the same vapour which they have evaporated in the months of July and August, if proper care has not been taken to keep them in dry and airy rooms. This remark will appear to many people absurd, but experience has taught me the truth of it; and the losses I have sustained from want of due care in this point have confirmed it. Amateurs, to prevent putrefaction, should also examine each bulb attentively before laying it on the drying-shelf; all such as appear unsound should, without exception, be rejected. This caution they should renew previously to replanting, to prevent all infection. It is a far better plan to place the bulbs separately on shelves, and in order to distinguish the different sorts, to place small marked slips of wood upon them, than to put them into a deep drawer, whose depth prevents the air from having a passage amongst them. The bulb should also be placed on its side for the first three or four weeks, to facilitate the evaporation: if seated on its base, the moisture accumulates between the old roots, and is then difficult to get rid of; or if allowed to remain, it causes their destruction from want of evaporation.

The best season for importing bulbs from Holland is in the months of August or September, because at that time they have undergone the proper evaporation, and can best endure the carriage.

If the rules in this small treatise, which is only intended to point out those things that are indispensably necessary in the successful cultivation of the Hyacinth, be implicitly followed and put into practice, I am convinced that the amateur will find the good effects of it, and that this flower will succeed in other countries better than it has hitherto done; and he may flatter himself, if he perseveres, that he will bring his Hyacinths to as great perfection as is done in Holland. The experiment will, without doubt, cost him some bulbs at first; for even in Holland, where the cultivation of this flower is attended to with the most unremitting care, they cannot save every one. Notwithstanding the experience of many years, the Hyacinth is still a difficult flower to raise; but perhaps this difficulty arises in some measure from the great dampness of our climate.

The Hyacinth must never be planted again in the same soil; but the ground should be allowed to rest for at least two or three years, or should be cultivated with Greens during that time: it should also be well mixed again, before planting, with some old cow-dung, especially if the soil is light or sandy, as Hyacinths are very fond of that manure.

The foregoing rules will give foreign amateurs some idea of the points in which they may improve their method of culture. Many soils may be found in England which, with a few additions, will answer perfectly.

AMATEUR'S GARDEN, No. XLVI.

Pelargoniums and other Greenhouse Plants are sometimes much infested with the green-fly at this season of the year, and should, therefore, be carefully examined and fumigated. Roses in pots, particularly the Chinese and Tea-scented varieties, which are now growing freely and producing flowers, are very apt to be injured by this little pest, if it is not destroyed in time. In one of the earlier Numbers, I explained the simple manner in which the aphis can be destroyed, and there is really no excuse for having plants injured by its attacks. Where the fumes of tobacco are disagreeable, a little snuff will answer nearly as well; the latter should be shaken over all the infested parts, particularly on the under side of the leaves. Tobacco-smoke, however, is the best and cleanest remedy, since it enters into all the crevices, and does not choke up the pores of the leaves.

Where the amateur has no means of procuring a supply of leaf-mould when he requires it, he ought now to save the leaves which fall from his own trees. In sweeping or raking them up, they must not be mixed with stones and rubbish, as is commonly done, but should be cleared away by themselves, and laid up in some corner out of the way, until they are fit for use.

The amateur will recollect that I pointed out to him, during the grafting season in spring, some hardy fruits which were either new or not well known, and advised them to be grafted upon trees which produced fruit of little value. It may be useful now to give general lists of the best kinds for a small collection, without reference to their date of introduction; so that those who intend to procure a few trees may be able to select the kinds which are best suited to their purposes. With regard to Apples—to which I will now advert—the following list will afford a supply in succession of first-rate kinds throughout the year. 1st, Dessert Apples:—*Golden Reinette*, a handsome middle-sized fruit; *Ribstone Pippin*, well known as one of the very best varieties; *Hughes' Golden Pippin*, small-sized, but one of the best of the Golden Pippins:

Pearson's Plate—this is a very fine Apple, and although scarcely so highly flavoured as the Golden Harvey, it is rather larger and more handsome; *Court of Wick*, small-sized, but a very pretty Apple for the table; *Herefordshire Pearmain*, rather above the middle size, handsome, and a good bearer; *Scarlet Nonpareil*, a roundish, handsome, middle-sized fruit; *Downton Nonpareil*, not so handsome as the latter, but a good variety; *Reinette du Canade*, above the middle-size, flattened, and handsome; *Sturmer Pippin*, one of the best late-keeping kinds. Where very early summer Apples are wanted, the following selection may be made:—Early Red Margaret, Summer Golden Pippin, Early Crofton, and Early Harvest. 2d, KITCHEN APPLES:—*Dutch Codlin*, *Hawthornden*, *Beauty of Kent*, *Blenheim Orange*, *Waltham Abbey Seedling*, *Dumelow's Seedling*, *Bedfordshire Foundling*, *Alfriston*, *Brabant Bellefleur*, and *Northern Greening*.

The names of the different kinds are placed as near as possible in their order of ripening, or of being fit for use; they are all first-rate sorts, and particularly well suited for persons who cannot find room for a larger collection. The Alexander Apple is a large and handsome fruit; but as it is not so good for kitchen purposes as those already named, I have not included it in the above selection.—*R. F.*

HOME CORRESPONDENCE.

The Sweet Cane of Scripture.—The "Sweet Cane" of Isaiah in the passage to which the authoress of the "Scripture Herbal" refers, cannot be the same as the Calamus of Exodus, if we are to rely upon the Septuagint version of the Bible. In the Mosaic appointments for the preparations of the sacred perfumes (Exod. xxx. 23), the Calamus, as we read it in our translation, is also *κάλαμος* in the LXX.; but the "Sweet Cane" of Isaiah is simply given as *θυσίασμα*—"a perfume," which, as the prophet adds it is to be "bought with money," seems likely to have been a foreign production; and the "Sweet Cane" of Jeremiah (vi. 20), "from a far country," is set down as *κινάμωμον*, Cinnamon. The LXX. omits all mention of the Calamus in the Tyrian markets (Ezek. xxvii. 19); but there is one other instance where this word occurs (Canticles iv. 14), when "Calamus and Cinnamon" form some of the herbs of a superb garden irrigated by streams from Lebanon; and here the LXX. write it *κάλαμος*. Although the richest aromatics, and with them the Calamus, may have been brought from Arabia, yet we have authorities enough among ancient writers for believing the true Calamus aromaticus to have been indigenous in Syria; and if it escaped Clusius in his Eastern Researches, it was not for want of sufficient accuracy in those authors in pointing out its localities. "Moreover," says Pliny (xii. 22), in the words of the version of old Holland, "within Arabia there groweth also the Sweet Calamus, which is common to the country and Syrians likewise. That of *Syria passeth all the rest*, and cometh up in a tract of that country distant from the coast of our sea fifty stadia. Between Mount Lebanon and another mountain, of no account, in a little vale beneath, near a lake, the marshes and flats whereof are drie in the summer for the space of thirtie stadia, there grow both Sweet Calamus and also Squinanth or Juncus odoratus (i. e. the Sweet Rush:) For let us speak also in this place of the said Scœnanth, &c.;"—Pliny obtained his very minute and precise account of the valley in Mount Lebanon from Theophrastus, H. P. ix. 7, whom he translates almost verbatim. Theophrastus tells us, "The Calamus and the Schœnus are met with in crossing the Libanus in a little valley between the Libanus and a certain other small mountain, not, as some say, the Antilibanus. Between these, there is a beautiful plain of considerable size which they call the Aulon; where the Calamus and Schœnus grow, there is a large lake, in front of which they are produced in a marsh dried up. They occupy a space of more than 30 stadia (4 miles). They do not smell when green, but in a dried state. In appearance they do not differ from the others. The smell is perceived instantly by anybody entering the place; the exhalation does not extend further, although some aver that the scent reaches vessels on their approach. But this place is more than 150 stadia (17 or 18 miles) from the sea." But, after all, the accounts of these eminent Botanists are surpassed by the testimony of a military philosopher, who in detailing some warlike movements in the Lebanon has incidentally given us the exact locality of the Calamus. Polybius, 150 years after Theophrastus and about the same time before our era, had probably examined the country personally, and thus describes the march of Antiochus through the mountains. I avail myself of Hampton's translation. "From Laodicea, Antiochus marched with all his army, and having passed the Desert, entered a close and narrow valley, which lies between the Libanus and Antilibanus, and is called the Vale of Marsyas. The narrowest part of the valley is covered by a lake with marshy ground, from *whence are gathered aromatic reeds*, *ἐξ ὧν ὁ μυρεψικὸς κείρεται κάλαμος*. The two sides of it are secured by two fortresses, the one of which is called Bronchi and the other Gerrha, which leave but a very inconsiderable distance between them. The king having marched some days along the valley, and in his way reduced the cities that were near, came at last to Gerrha, and finding the enemy had posted a sufficient force in both the fortresses, had fortified with trenches and with palisades the pass that led along the lake, and had placed some troops in every part that was commodious for it, he at first endeavoured to dislodge the enemy, and to force his passage; but as all the posts were then strongly fortified, he suffered great loss in the attempt, and was forced to abandon the design. The next year he again marched towards Cœlo Syria by the same route which he before had taken, passed through the Vale of Marsyas, and encamped near the fortress of Gerrha, which was situated in the extremity of the valley, upon the lake that covered the defile, giving orders to the generals to lay siege to Bronchi, the other fortress, which stood also upon the lake, and served to guard the entrance of the defile." A British officer, engaged in the late events in Syria, had opportunities of examining these positions, of great interest both to the geographer and botanist, and in a letter from Beyrout, dated Feb. 6, 1842, says—"Further down, about 20 miles, the Valley of Marsyas, or the Valley of Baalbec, becomes much narrower, and about four miles south of Zachlé the ground is now very marshy, and intersected with endless ditches to drain off the water: here, formerly, there might have been a large lake, and this ground has on one side, at the foot of the Lebanon, a very strong position, with a fort on it called Ubelias; and immediately opposite is the strongly-marked feature on the Anti-Lebanon side of the hill Medjdel (having now the ruins of a strong castle on it), with a space between of about six miles. Now, supposing nearly all this space, which is even now very swampy, to have been formerly a lake, you have the forts of Gherra and Bronchi, and the ground completely answering the appellation of a pass. This is the narrowest part of the valley, and is covered with reeds, but whether aromatic or not, I cannot say. The source of the Litam is a little lower down than the lake near Baalbec. To talk of the country about Baalbec being a defile, or a pass, is manifestly incorrect; besides, Antiochus did not reach the fortresses for some days' march from the desert. Baalbec is only two days' march from it; but Ubelias might be four days' march from it; and there is a defile, though now very wide, as the ground is practicable, and it is the narrowest part of the valley." Among the ancient authorities, that of Strabo ought not to be omitted; he says, the Calamus grows in the country of the Sabæi (xvi. 4); but, speaking of Cœlo Syria, and its mountains—Libanus and Anti-Libanus, he says (xvi. 2), "It is intersected by rivers irrigating a rich country, abounding in all things. It also contains a lake, which produces the Aromatic Rush (*σχοινος*) and Reed (*κάλαμος*). There are also marshes. The lake is called Gennasaritis. The Balsam also grows here." I am not certain whether Reeds exist upon the banks of the Lake of Gennasereth; but the officer above alluded to found them in abundance upon the Upper Lake of the Jordan, called Houlé. "The Jordan," he says, "takes its source from the Antilibanus, about three miles below the village of Hasbeya. Its source is in a large basin of rock, with perpendicular smooth sides, enclosing a still clear pool of water, into which two streams flowing from the sides of the rock empty themselves. The river flows out through a narrow opening in the south side of the basin, and its banks for two or three miles are covered with the most luxuriant Oleanders. It is close to the track-way that leads from the valley of the Bekaà. Fifteen miles below the source, is the Lake Houlé: at the east of the Jordan from this lake, there are fields of Reeds, Rushes, and Oleanders. The Jordan is here sluggish. Its rapidity commences a little above the bridge of Jacob, about half-way (four miles) between the lakes of Houlé and Tiberias. The bridge of Jacob is the passage on the grand highway between Damascus and Acre." This gentleman, upon inspecting the plate of the Calamus aromaticus, as given in "Woodville's Medical Botany," thought he recognised it as the Flag he had seen in Syria. It seems likely that any experienced botanist travelling in those countries would easily discover, in the above-named situation, both the Calamus aromaticus and the Schœnanthe.—And now, with respect to the Acorus of English growth, I have been for some time seeking for some roots south of London to introduce among my own Aquatics, but hitherto in vain. Perhaps some correspondent of yours would kindly indicate some locality of its growth, whence I might abstract them without being accused of wilful and malicious injury. It is said that in Norfolk, the Acorus, or Calamus, abounds; and that the pavement of the Cathedral of Norwich, when strewed with these Flags, and trodden under foot, during the assemblage of Music Meetings, sends up odours not unworthy of those of its Eastern congeners

> Of Araby the blest."

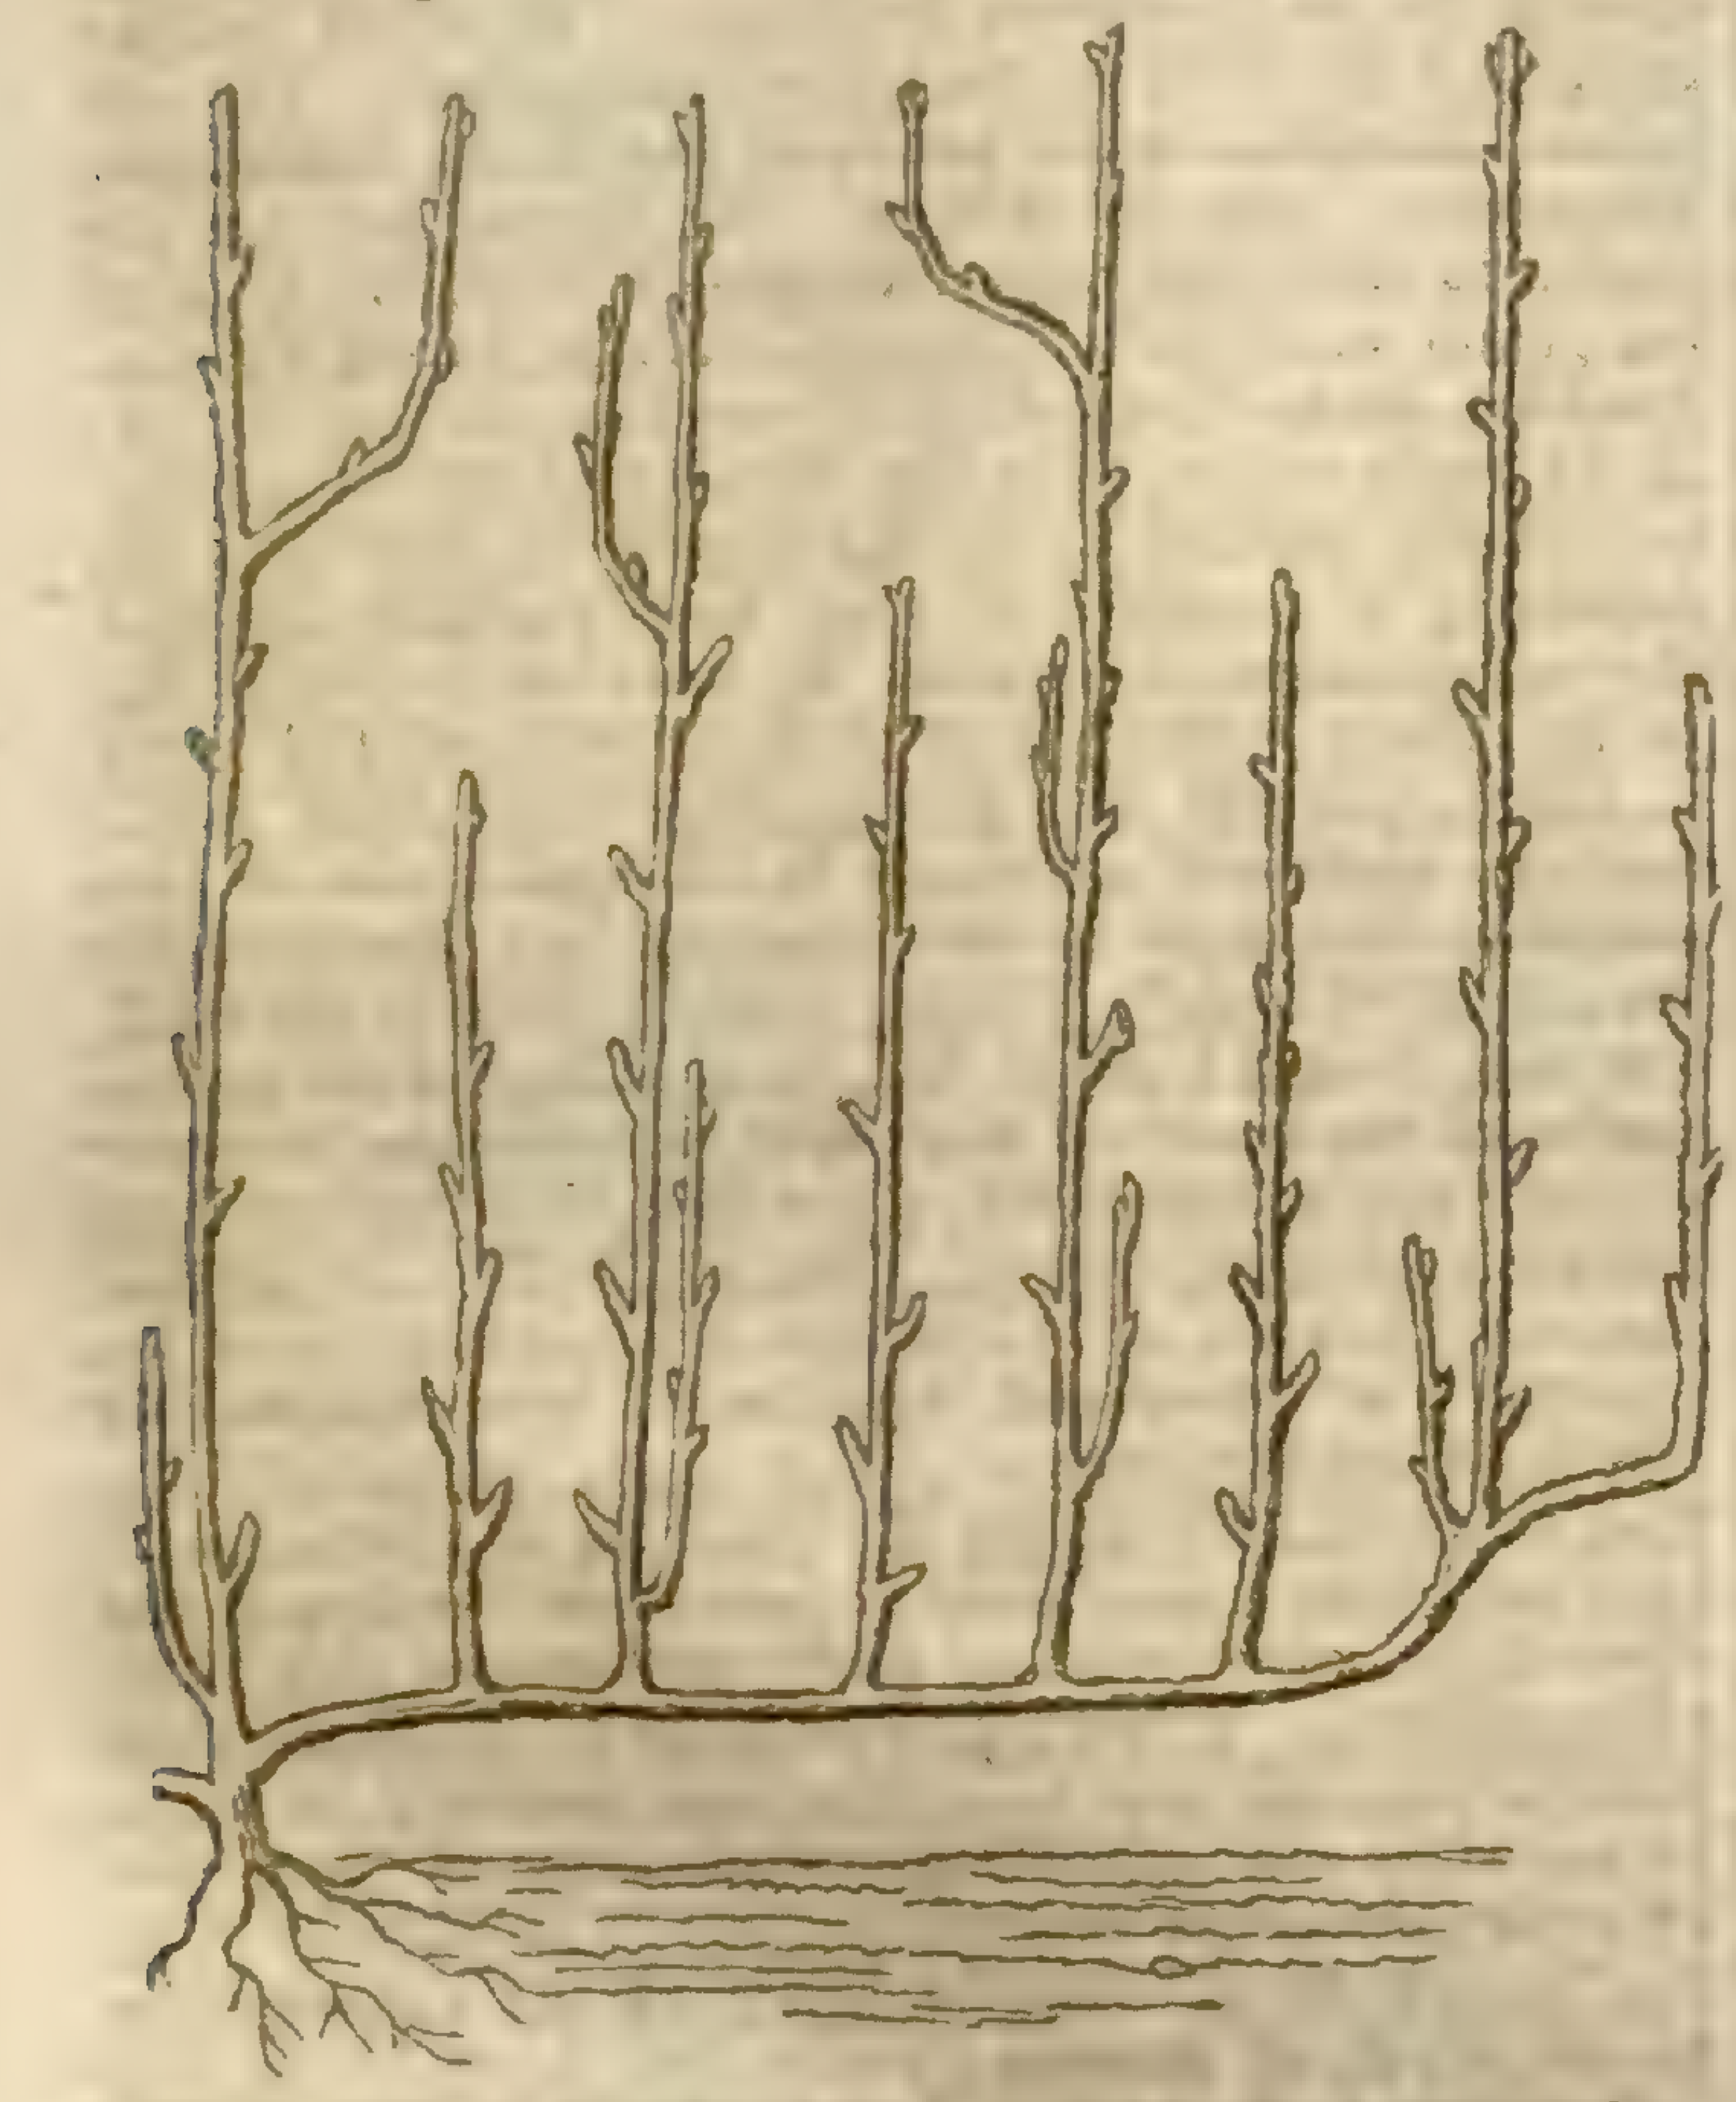
Pleias.—[If our Correspondent will favour us with his address, we will send him some.]

Heating by Hot Air.—In my former communication little mention was made of the failure of the Hot-water Apparatus, because it proceeded from the following cause:—The Conservatory being ornamental, we were desirous of keeping the means by which it was heated entirely out of sight. For this purpose, the boiler and pipes round the house (of which last there were only two, 4½ inches in diameter) were fixed under-ground, and in so large a space, that most of the warmth was absorbed before it rose through the iron gratings in the paths. The centre path (which is 6 feet wide) has no grating at all. Had there been four pipes, and those above-ground, the Hot-water would no doubt have answered. I beg leave to call attention to the fact, that with Mr. Lawes' Stove the two gratings in the back wall, through which the warm air is admitted, do not in the slightest degree interfere with the ornamental appearance of the house; no space is taken up, the paths can all be carpeted, and the desired temperature be kept up at the cost of less than 40*l.*; whereas these objects were not attained at the expense of 100*l.* before. With respect to the economy—the fuel was measured both for the hot-water and the new stove. The former consumed about a bushel of good coals in the 24 hours—the refuse of the household fires *more* than supplied Mr. Lawes' stove through the winter, and the consumption of these cinders was about a bushel in the week—not more—fire being kept up night and day. This stove can also be erected *inside* entirely, and in *any part* of a Greenhouse or Hothouse. This will of course insure a far higher degree of temperature than is produced with the stove outside—all the warmth in the shed at the back being wasted when a building purely ornamental is required. In spite of excellent theories to the contrary, this stove has answered in every respect; and the health of *all* our plants, their deep green and luxuriance which attract the attention of every one, would make it difficult to persuade us to try any other method of heating. I have just been re-perusing Mr. Ainger's excellent papers, and am so satisfied that at any rate "the ladies" were right, where their tea-pots were concerned, that I cannot do better than follow their example, and assure you that Mr. Lawes' Stove entirely answers in every respect, "because it does." Probably, when as many have been erected as there have been silver tea-pots bought, the learned will satisfy themselves as to the causes. I have only now to state, that I hope those who may wish to prove the utility of this stove will not be guided solely by the drawings and explanations in the *Chronicle* of the 29th ult., and so have it erected by any common bricklayer. It would not be giving it a fair trial, as much nicety is required. The one in our Conservatory was put up by Mr. Wells, Bricklayer, Harpenden, near St. Albans. Mr. Tyssen has no objection to allow any respectable person to see the state of the plants under this treatment.—*Mary Daniel Tyssen, Foulden, Stoke Ferry, Norfolk.*——Your account of Mrs. D. Tysson's Stove, in a late Number of the *Chronicle*, is evidently written under the impression that you are describing a novelty, as that lady probably thought she was communicating one. If, however, you will refer to Dr. Ure's "Dictionary of Manufactures" (2d edit., p. 1187), you will find it, excepting some slight modifications obviously necessary in its application to horticultural buildings, exactly described and figured under the article "Stove." I think it worth while to communicate this, though I regret that, by so doing, I must deprive parties of the credit of originality, in order that the contrivance may appear in its proper light, as a tried method, and not a mere experiment. You say, "We must confess, however, that we are somewhat less sanguine as to the superiority of this device, ingenious as it is, than the fair lady to whose kindness we are so much indebted." Dr. Ure, contemplating simply the "heating of apartments," by "supplying a vast body of genial air," writes of the stove in question, "I can safely recommend this stove to my readers. If the tubes be made of stone-ware, its construction will cost very little, and they may be made of any size, and multiplied so as to carry off the whole effective heat of the fuel, leaving merely so much of it in the burned air as to waft it fairly up the chimney."—*G. W. S., E. B. Rectory.*

Protecting Materials.—Hair and wool, bad conductors of heat, impervious to moisture, and retaining air in the cavities usually existing between their fibres, do not, when used as a protection against cold, effect this object by generating heat, but by preventing its dispersion. Probably from the earth's centre there is always arising through its crust enough heat to preserve even tender vegetable life, without further addition of heat, if the natural heat could be prevented from escaping by radiation or otherwise. Cocoa-nut fibre, a cheaper material than baked hair or wool, may perhaps be available for this purpose, covered over with a garden-pot bottom, or a shallow pan. Air enclosed in India-rubber cases may effect the same object in connexion with plants under glass. Protection by means of hot water is expensive, cumbrous, and not instantaneously available under sudden emergency. The grand objection to flues, is their destructive heat in the middle of the night, it being indispensable, in very severe weather, to leave them efficient in the early part of the morning. The heating apparatus displayed in your late Number has properties desirable for the preservation of animal health, but not needful for the health of vegetables—which latter do not consume the wholesome portions of atmospheric air, or deteriorate it by effluvia.—*C.* [We are of your opinion, that guards externally, to retain heat in forcing-houses, are in many cases preferable to either flues or hot-water apparatus. But it is extremely difficult, if not altogether impossible, to construct them so as to be sufficiently movable; and they *must* be removed during daylight, at which time, during winter, a heating apparatus becomes indispensable.]

Vines.—The problem offered by your Dublin correspondent is very likely to be solved, both by "An Amateur," in No. 43, and by "R., Layton, Essex," in No. 44; the one attributing the cause to want of sufficient air, the other to too high a temperature—the one naturally producing the other. But notwithstanding that I think the cause explained, I do not see how the example given by "An Amateur" bears out his statement. He attributes the want of colour, and not ripening of his Grapes, to want of air, and says, "the lower lights were constantly kept shut, and the upper ones open as in ordinary seasons; but that the Grapes at the top of the house, where there was most air, did not ripen; whereas those at the bottom of the house, where the lights were constantly closed, did ripen." Perhaps he will have the kindness to explain this point, so as to make his account more clear.—*A Brother Amateur.*

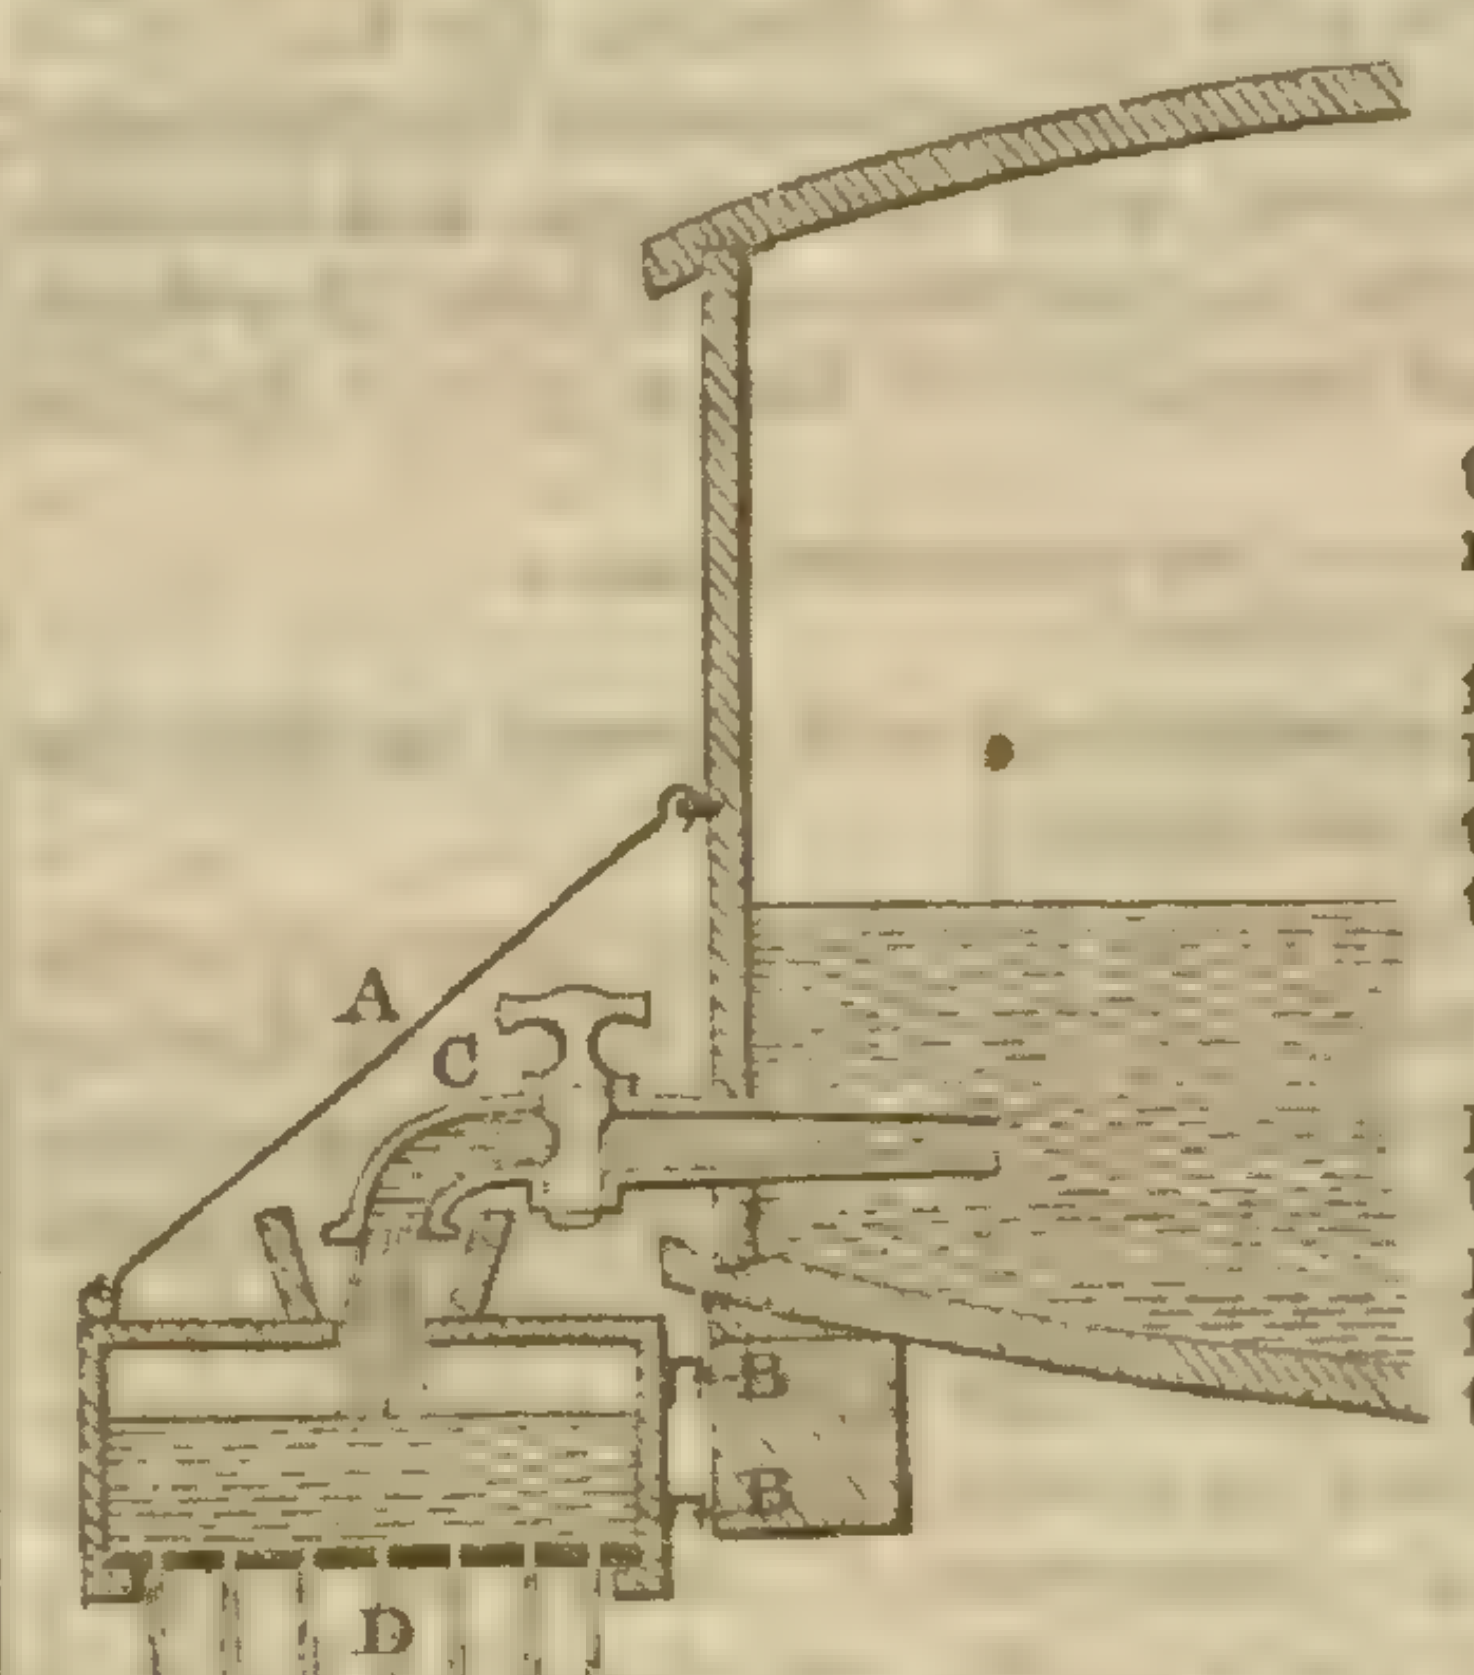
Pruning Vines.—"An Original Subscriber" having applied to us for some information respecting the method of training Vines, which is recommended in the "Cottager's Calendar," Mr. Paxton has favoured us with the following remarks:—The sketch represents a portion of the Vine when pruned in autumn on the spur system, with short rods of five or six eyes each, left at convenient intervals on the oldest branches throughout the vine. The perpendicular main shoots should not be less than two feet apart, and when pruning them, no useless eyes should be left; that is no eye should be allowed to remain but where a shoot is desired in the following season. By attending to this the vine will not have to develop (as is usually the case) an immense quantity of superfluous branches; and although this operation may appear a tedious one at the time of pruning, an immense saving of labour and time will be effected at a busier period in spring, and the quantity of fruit may be easier regulated in proportion to the strength of the vine. If this is attended to, nothing will be required in summer but securing the young fruit-bearing shoots to the wall, and shortening them at one joint above the bunch as soon as the fruit is set, excepting the leading shoots, which should not be stopped until the lower part is ripened; otherwise, the main eyes for the next season may be induced to grow prematurely. In autumn the young wood from the spurs is shortened back to one or at most two eyes, and the terminal shoots in proportion to their strength; but for the strongest wood, from 8 to 12 eyes will be found as many as will break well. When commencing to train a young vine in this manner, the side branches should not be brought to the horizontal position at first, but be lowered gradually as the number of suitable branches for upright stems are obtained; by this means they acquire strength faster than if trained horizontally at first.—*Joseph Paxton.*



Increase of Timber—Forest Trees.—My friend, Mr. Billington, in one of your late Numbers, incidentally remarks on the "True principle of increase of Timber in Forest trees," as a thing very little or not generally understood. My opinion about it is no secret—I have stated it frequently in the *Chronicle,* to be the mutual intercourse or reciprocity between the root and branches; and the greater the intercourse, the greater the increase. If I am mistaken in this, I should feel much obliged to Mr. B. if he will set me right. He can state what the "true principle" is in a sentence or two, for which I am sure you will give him room; and if I am convinced by it, I will readily tender Mr. B. my warmest acknowledgments.—*Quercus.*

Management of Ash Coppice.—In April last, an old Subscriber to the *Chronicle* requested information as to the best method of treating young Ash plantations intended for coppice-wood and poles. As his question has not been answered, I take the liberty of offering my opinion upon the subject. In the first place, I think no rule can be established as to the age at which the young trees should be first cut down, as their size must be, from various circumstances, uncertain; but to obtain a profitable after-growth, the plants should, at their first heading, be from five to seven inches in circumference at the base. I prefer their being cut off with the saw, instead of an axe, at a short distance, and in a sloping manner, from the ground, so that no disruption of the bark may take place; but if this operation is performed with an axe, the stroke should be in an upward direction and smooth. This heading-down should commence about the latter end of March, when the Ash begins to unfold its leaves; on no account should it be done in the autumn or winter. A little green cow-dung laid upon the stools will be of service in preventing the sun and wind during the spring from causing a separation between the bark and wood. Without knowing at what size the poles can be disposed of to the greatest advantage, or to what purposes they are designed, I should perhaps only misguide your correspondent were I to limit the number of shoots to be left on each stool; but, in general, I would leave at first four or five on each, rubbing off or pinching the tops of the remainder about a foot or eighteen inches from the ground, to prevent them from becoming crowded, taking care that this is done during the summer months. After the first year's growth, go annually over them in the summer, leave all the small lateral side shoots, and keep them to one leader; but if, from spring frost or other causes, the leader should be destroyed and two shoots of nearly equal size should be formed, the central bud or the very end of the worst-placed shoot should be pinched off with the finger and thumb when twelve to eighteen inches long. If too strong to be performed by pinching, or if equal to the one left, it might be removed altogether, as in some cases it would leave an unsightly bend in the pole or stem. The small lateral branches should on no account be removed; such a proceeding would prevent the stem from acquiring thickness. By stopping the strongest, more would be produced, and the poles would increase in girth without being blemished with large knots: all the poles would thus be fit for clearing, without one useless one being found amongst them. If these directions are pursued annually, during the spring and summer, until the poles are too high to be conveniently reached, there will be no occasion for the knife or bill. This is the training and preventive system of pruning. As the Ash makes but few side shoots, it will tend much to their increase if some of the strongest of them are stopped, at from twelve to twenty-four inches from the stem, by breaking out the central bud or by pinching off the end; by this means the lateral branches will be increased, and the health and vigour of the plants accelerated. After a few years' growth, when the weakest shoots have attained to one or two inches diameter and to a sufficient length, they may be thinned out: one or two only of the strongest should be left to acquire a larger size. A permanent coppice will be thus insured, as is practised also with the Oak. One caution more is necessary, and that is,—if the neighbourhood is infested with hares and rabbits, or even mice, it will be useless to attempt to raise Ash coppices from stools unless these vermin can be kept from them; wherever they abound, they are sure to bark the trees, and then farewell to all profits from Ash plantations.—*W. Billington, Underhill, Oswestry, Salop.*

Cart for Distributing Liquid Manure.—In a late Number you requested some of your correspondents to send you a description of a cart for the application of liquid manure. We have here a cart for that purpose which distributes the liquid both expeditiously and with great regularity; being simply a common water-cart, which holds 84 gallons, with a stopcock about 1½ inch diameter in the end, and a trough fixed to the end of the barrel, made of what the carpenters call three-quarters fir-wood, dovetailed together at the ends, with a recess opposite the stopcock to prevent the liquid from flying over: this recess is covered at the top; and the bottom of the trough, instead of being composed of wood, is a thin plate of sheet-iron, perforated throughout with holes rather less than a quarter of an inch in diameter. I consider zinc, however, to be preferable: it would be more lasting, and would not be so liable to oxidize as iron. The trough is about ten inches broad inside, and eight out; and just so long as not to come in contact with the wheels. The trough is secured by means of two feet-pieces of iron, fitting into two sockets in the end of the frame, on which the barrel rests: it is further secured by two small iron pins going through the socket, and a small iron rod or strong wire attached to the trough, and knocked into a staple in the end of the barrel. The enclosed sketch will serve to convey an idea of the trough; and I should say your correspondent Mr. Jonathan Labyrinth (page 654) would find such a cart to answer his purpose much better than a skeleton-wheelbarrow and a barrel, as he proposes: as to manure, two acres of meadow-land in such a manner would be a laborious task. He might purchase a good second-hand cask from a spirit-merchant for a trifling sum, but the size of the cask would have to depend upon the strength of his pony. We calculate 84 gallons for a horse to drag. As your correspondent Mr. Labyrinth has a pony-cart, it would be only necessary to remove the body of the cart, and have the barrel laid in a rough frame, which could be taken off at pleasure, and the cart used for any other purpose.—*G. G. Watson, Vicarage, Norton, near Stockton-on-Tees.*



A, a stay, hooked to the end of the barrel by means of a staple.

B B, iron loops on the frame, upon which the barrel rests, and intended to receive hooks attached to the back of the trough.

C, a stop-cock.

D, the zinc or iron plate, forming the bottom of the trough, and perforated with holes for the liquor to pass through.

Liquid Manure Cart.—A few weeks since I saw a question in the *Chronicle* as to the best mode of applying liquid manure to land. In answer to your correspondent, I beg to state that I saw at the York Agricultural Meeting, in August last, an excellent cart, invented for that purpose by Mr. Crosskill, of Beverley, in that county. In shape it resembles some of those used for watering the roads, and is fitted with a copper pump, a flexible leather pipe, and a brass valve lever, which lets the liquor out into a kind of spreading board, to which an apparatus is attached, by which two rows of Turnips might be watered any required width. The body of the cart is made of cast iron. It is impossible, however, to explain the construction of this machine at all clearly without a drawing. Not being much of a farmer myself, and never having tried it, I cannot speak of its efficiency from experience; but it seemed, from a careful examination, to be admirably adapted to the purpose.—*W. F. G. F.*—[Our readers will find a sketch of this Liquid Manure Cart, with some further explanation of its use, in our advertising columns of to-day.]

Weight of Gooseberries.—The following is the weight of the heaviest Gooseberries grown in 1842, being four of each class:—

RED.	dwt.	grs.	GREEN.	dwt.	grs.
London	31	13	Thumper	26	—
Companion	31	5	Overall	24	11
Wonderful	27	5	Peacock	23	—
Lion	25	7	Providence	21	10
YELLOW.			WHITE.		
Leader	25	10	Chorister	22	19
Pilot	24	19	Tally Ho	22	12
Catharina	24	15	Eagle	24	4
Gunner	21	16	Competition	23	1

The Gooseberries are much lighter this year than last.—*M. Saul, Garstang.*

Ivy on Houses.—It has occurred to me, that the difference of opinion which appears to exist as respects the protective power of Ivy may arise from the parties having had recourse to different kinds of Ivy. I have reason to believe that the common Ivy does not afford protection from moisture, but can positively affirm that the Irish Ivy does, having covered a damp wall in front of my own house with it above 20 years ago, which soon became dry, and has continued so ever since. It also rendered the house much warmer. Moreover, the Irish Ivy does not harbour insects, as the common Ivy does.—*Edward Bevan, Llanferry.*——I observe in one of your late Numbers a difference of opinion between yourself and a correspondent, as to whether Ivy growing against a wall makes it damp or not. I believe both sides are in the right; the fact being, that Ivy growing on the wall of a house before it reaches the roof, far from making it damp, tends much to keep it dry; but when the Ivy is allowed to climb over the roof, the rain-water can no longer drip from the eaves, but is conducted by the branches of the Ivy down the walls of the house. The consequence is, of course, extreme dampness.—*P. A. Drayton.*

Sulphur.—Your correspondent, "J. Murray," mentions several plants which he found growing in a sulphurous atmosphere. In the neighbourhood of the great copper works, near Swansea, vegetation is almost entirely destroyed by the fumes of sulphurous acid, arising from the calcination of the copperas; but I have observed the Lysimáchia vulgaris flourishing in great profusion, while no other plant has been visible near it.—*Lusor.*

Mangel Wurzel.—After the roots are carefully taken up, for which purpose a fine dry day should be chosen, remove the tops by pulling them off with the hand; a knife should never be used in removing either top or bottom. Prepare, on the surface of the land, in any convenient spot, by placing some brushwood or faggots, to the depth of six inches, a bottom, 9 feet long, and 4 feet wide, on which pile the roots 4 feet high in the centre, and in the shape of the letter V inverted. When completed, cover over the whole with any kind of dry litter, and afterwards with mould, to the depth of 6 inches. Let an opening be left at the top of the pile, to let out the steam, by placing an old chimney-pot on the top of the roots previously to putting on the litter and mould: in severe weather, the pot is to be covered over with litter. A thin covering of straw, or some other material, over the pile, when covered with mould, will greatly assist in keeping out the frost. By adopting this plan, I have kept Mangel Wurzel until May, as firm and fresh as it was when first put into the pile. I cannot conceive how your correspondent *Lusor* can keep Mangel Wurzel effectually by only covering with stubble, as the atmospheric air would have access to the roots, which undoubtedly would exhaust the saccharine matter, and particularly from those which had been accidentally bruised. I have cultivated and used Mangel Wurzel extensively for the last 8 years, so that I am not writing from theory. Having annually, for the last 7 years, tied up for stall-feeding from 40 to 60 bullocks, I have had every facility of trying the qualities of Mangel Wurzel, Swedish Turnips, and Carrots. Bullocks fed on Cut Swedes and Hay Chaff realised 50*s.* per head more than others fed on Cut Mangel and Hay Chaff: those fed with Carrots and Hay Chaff realised the same price as the above. Some I tried by feeding one week on Cut Swedes and Hay Chaff, the next week on Carrots and Hay Chaff; these realised 20*s.* per head more than the bullocks fed on Swedes and Cut Hay, and 3*l.* 10*s.* per head more than those fed on Mangel Wurzel. I also tried an equal portion of Mangel and Carrots, and Mangel and Swedes, but both failed. The bullocks were tied up to fatten on the 20th of November, and were sold in Smithfield Market the first week in March, realising a price in the proportion I have previously stated. I am perfectly satisfied, if three bullocks, "near as equal as possible," were put up to fatten at the same time, one to be fed on Swedes, one on Carrots, and the other on Mangel Wurzel, that the two former should be in better condition at the end of 3 months than the latter would be in 5 months. The best time to use Mangel Wurzel is in the spring, as it will be found, when first given to cattle, to act as a purgative, which will greatly benefit lean stock at that season. If, therefore, Mangel Wurzel be given in large quantities, it will produce diarrhœa, which would greatly injure any kind of stock intended to be fattened for market. I have proved that Mangel Wurzel is an excellent root for ewes which have lambs, as it will produce a greater flush of milk than either Swedes or Carrots. I have also given it to milch-cows, and found the supply of milk to be greater, but no increase in the weight of butter, which is another proof that Mangel Wurzel does not possess great fattening qualities. Carrots or Swedes, if given to milch-cows, will increase the weight of butter, but produce little difference in the quantity of milk; but if an equal quantity of Swedes or Carrots, and Mangel Wurzel, be given alternately, both the supply of milk and butter will be increased. By having the Mangel Wurzel put into small heaps, as before stated, the roots will never be injured by heating; and in severe weather, it will be found a better plan to clear away the contents of a small heap, than to open a large heap, as is generally the case. Your correspondent will greatly oblige many of the readers of the *Chronicle* by detailing his method of fattening cattle with Mangel Wurzel.—*A Member of the Royal Agricultural Society, Odstock, near Salisbury.*

Tropæolum tuberosum.—This plant, in 1841, flowered freely when nailed to the front of Holme House, and grew to the height of 22 feet. The soil is brown sandy loam, 1 ft. deep, and very dry, from the circumstance of Holme House being like a wise man's, founded on the rock out of which every stone in that beautiful edifice was hewn.—*Snowdrop.*

Conferva fluviátilis.—To the wonderment of numbers and the dismay of terrified superstition, large surfaces of meadow-ground in Gloucestershire were mantled with a felt-like material resembling a blanket or woollen cloth, during the autumn of last year. This singular vegetable production was the Conferva fluviátilis. I found this season, near Brechin, the same marvellous material, the product of shallow water. The quantity is amazing—more than sufficient to carpet half-a-dozen ordinary rooms. This tissue sometimes entangles a Chara, with many small specimens of the univalve called Lymnæa.—*J. Murray.*—[We have heard of waistcoats being prepared from this natural felt.]

The Dahlia.—The *à priori* remark (p. 729) touching the duplicate colour in the Dahlia is not satisfactory. I am aware of the singularity in the Chrysanthemum; and I have a Rose-bush with marbled flowers, and another class of deep red flowers constant on the same plant, and never having been budded. But I wish to ask, whether any of your correspondents have ever seen or heard of the phenomenon referred to, in the case of the Dahlia?—*J. Murray.*

Ladies Gardeners.—A correspondent has expressed his disapproval of Ladies turning Gardeners. He says it will never be the fashion while men are so plentiful, and that ladies can be better employed "in harmony with the design for which they were intended;" in which, if he means that delving, and hoeing, and raking, are not employments for the fair sex, we have no doubt that the ladies will generally agree with him.

Technical Terms.—In the Chemical Analysis of Animal Manures, by Sprengel, the word Osmazome appears several times. By referring to the dictionary, I find that it is the extractive matter of muscular fibre, which gives the peculiar smell to boiled meat, and flavour to broth and soup. Can that substance be collected and examined—or is there anything like it in vegetables? for there are some that give flavour to broth and soup. In that interesting article upon Albumen, in the *Chronicle* of October the 8th, the word Cytoblasts is used. As I do not know what it means, an explanation of it would oblige me.—*Peter Mackenzie.* [Osmazome may be obtained from all kinds of flesh by a very simple chemical process; it is a brownish red substance, easily dissolving in water or spirit of wine, and possessing a strong peculiar taste and smell of cooked meat. Some vegetables contain a substance greatly resembling osmazome; but the flavour of herbs added to soups and broth is, for the most part, very different in its nature from osmazome. Cytoblasts are small points from which the cells of plants are formed, and which often remain on the sides of the cells in the form of semi-transparent circles.]

Scarecrow.—I have lately seen a domesticated rook having so remarkable an antipathy to a white kitten as to fly away on its approach, and shun it as something to be dreaded and avoided. On the other hand, it is incessantly teasing two dark cats. Though I am altogether inimical to the destruction of the rook, if scarecrows are to be used, may I venture to affix the query—Would not the object to be attained be better accomplished by using a mock scarecrow decorated with white plumage, such as the feathers of a chicken?—*J. Murray.*

Wasps.—That the late summer has been remarkable for Wasps is a fact which all persons connected with gardening will be ready to admit. Many have no doubt been severely stung in attempting to destroy the nests of these noxious insects, and yet they have, perhaps, never thought of preventing them from breeding and increasing to such an alarming extent. For their information I will describe the method which I adopt. In the spring, when the Queens begin to make their appearance, I hang bottles partly filled with sweetened water, or with beer, against the garden walls. When the wasps come in search of food, which at that season is by no means plentiful, they are attracted by the smell of the liquid in the bottles, and are drowned in attempting to reach it. By the aforesaid means, last spring, I destroyed between two and three hundred Queen wasps: the consequence was, that I have had very few wasps to contend with, and have not had half-a-pound of grapes destroyed by them, although no artificial protection has been used.—*John Armstrong, Belmont, Durham.*

PROCEEDINGS OF SOCIETIES.

ROYAL AGRICULTURAL SOCIETY OF ENGLAND.

Nov. 2.—H. Handley, Esq. in the chair. 27 gentlemen were elected members. Mr. Handley laid before the Council the letters received in reply to those addressed to members in arrear of their subscription. These were taken into consideration, and referred, with other documents, to the Finance Committee, for a special report. Mr. Handley reported the correspondence between himself and the chairman of the Great Western Railway, in reference to complaints made by exhibitors at the Bristol meeting of the unusual charges demanded for the conveyance of their stock, &c. on that occasion. It was resolved that Mr. Handley should enter into further communication with the chairman of that board, and take such steps on the subject as might seem desirable.

BOTANICAL SOCIETY OF LONDON.

Nov. 4.—H. C. Watson, Esq., V.P., F.L.S., in the chair. Mr. R. Ranking, F.L.S., presented a monstrous specimen of Plantago coronopus, collected at Hastings, which showed the easy and natural transition from a spike to a raceme; and with it a specimen of Dáctylis glomerata, in which the glumes had become foliaceous. The chairman presented a specimen of Cnicus Fórsteri, which he stated to correspond with the cultivated one of the same species preserved in Smith's Herbarium. The specimen exhibited by Mr. W. was also a cultivated one; the root having been found near Whitemoor Pond, in Surrey, in June 1841; when flowering specimens of it were also exhibited before the Society. The wild specimens had from two to four flowers only on each stem, whilst the cultivated ones had ten or a dozen each. Mr. W. exhibited the specimens for the purpose of pointing out the differences between Cnicus Fórsteri and C. pratensis, branched specimens of the latter species having been in several instances mistaken for the former. It was announced that British plants had been received from Mr. G. W. Francis, Mr. S. P. Woodward, Mr. R. Ranking, Mr. S. Gibson, Mr. J. Thompson, and Mr B. D. Wardale. Donations to the library were announced from the American Academy of Sciences, Philadelphia, the Horticultural Society of Berlin, and Mr. S. P. Woodward. The commencement of a paper was read from George Clark, Esq. (communicated by Mr. H. W. Martin), on Lodoicea Sechellarum. The chairman announced that the Sixth Anniversary Meeting of the Society would be held on Tuesday the 29th inst., being the anniversary of the birth of the celebrated English Botanist, John Ray.

COUNTRY SHOWS.

Morningside Practical Gardeners' Society, Nov. 4th.—The following prizes were awarded: Chrysanthemums, 1, J. Young, gr. to T. Oliver, Esq.; 2, J. Downie, gr. to Gen. Robertson. Leeks, 1, J. Downie; 2, W. Denholm, gr. to Sir J. Forrest, Bart. German Greens, 1, J. Swanie, gr. to J. Anderson, Esq.; 2, J. Downie. Beet, 1, T. Turner, gr., Leven Cottage; 2, H. Gibb, gr. to J. Stark, Esq. Onions, 1, T. Wood, gr. to Alex. Falconer, Esq.; 2, J. Swanie. Red Cabbage, 1, J. Johnstone, gr., Bradesburn; 2, J. Douglas, gr. to Sir T. Dick Lauder, Bart. Carrots, 1, J. Douglas; 2, W. Denholm. Broccoli, 1, W. Denholm; 2, J. Douglas. Endive, 1, W. Ewing, gr. to J. Adam, Esq.; 2, J. Liddell, gr. to A. Thomson, Esq. Celery, 1, J. Gourlay, gr. to the Earl of Glasgow; 2, C. Jack, gr., Cansewayside. Brussels Sprouts, 1, J. Johnston; 2, T. Turner. Savoy and Leek (*Amateurs*), Mr. J. Robertson. Amongst the articles for exhibition, particular notice was taken of a good collection of well-flowered Caméllias from Newington Lodge.

Oxfordshire Horticultural Society, Sept. 22.—The last show for this season was held in Queen's College Quadrangle. The following prizes were awarded:—Dahlias, premier prize for the best stand of 18 *blooms*, the Rev. A. H. Matthews, for Grace Darling, Suffolk Hero, Nicholas Nickleby, Unique, Duchess of Richmond, Pickwick, Eclipse, Sir F. Johnstone, President of the West, Marquess of Lansdowne, Queen of Beauty, Henrietta, Springfield Rival, Tournament, Metella, Mrs. Neeld, Constancy, and Maria. Nurserymen, 24 *blooms*, 1, Mr. Soden, for Cox's Defiance, Hope, Hudson's Princess Royal, Indispensable, Maid of Bath, Burnham Hero, Bontishall, Phenomenon, Grande Baudine, Bridesmaid, President of the West, Queen, Nicholas Nickleby, Unique, Sir F. Johnstone, Admirable, Parsons' Beauty, Conductor, Rival Sussex, Beauty of the Plain, Catleugh's Eclipse, Rienzi, Duchess of Richmond, and Regina; 2, Mr. King, for Springfield Rival, Grand Tournament, Fanny Keynes, King of Roses, Hope, Indispensable, Headly's Phœnix, Grande Baudine, King's Edward, Constancy, Catleugh's Eclipse, President of the West, Suffolk Hero, Queen, Amato, King's Britannia, Lee's Bloomsbury, Grace Darling, Lady Middleton, Pickwick, Prince of Wales, Rouge et Noire, Phenomenon, and Conservative; 3, Mr. Day, for Andrew Hofer, Westbury Rival, Maid of Bath, Yellow Defiance, Sir F. Johnstone, Hero of Seven-Oaks, Yellow Climax, Hope, Suffolk Hero, Pickwick, Duchess of Richmond, Burnham Hero, Grace Darling, Royal Standard, Lewisham Rival, Conservative, Grande Baudine, Miss Scroope, Twyford Perfection, Rosa, Rienzi, Bridesmaid, Eclipse, and Rival Sussex. Amateurs, 12 *blooms*, 1, Mr. Chapman, for Euclid, Optima, Prince of Wales, Lady Middleton, Sir F. Johnstone, Westbury Rival, Indispensable, Twyford Perfection, Maria, President of the West, Cox's Defiance, and Pickwick; 2, Mr. Jas. Kirkland, for Catleugh's Eclipse, Prince of Wales, Pickwick, Widnall's Eclipse, Grande Baudine, Maria, Bridesmaid, Charles XII., Duke of Cornwall, Cox's Defiance, Sir F. Johnstone, and Tournament; 3, Mr. Molyneux, for Lewisham Rival, Springfield Rival, Phenomenon, Sir F. Johnstone, Stella, Maid of Bath, Lee's Bloomsbury, Metella, Grande Baudine, Lord Norreys, Indispensable, and Rosetta; 4, Rev. A. H. Matthews, for Cox's Defiance, Queen of Beauty, Springfield Rival, Constancy, Pickwick, King of the Roses, Metella, Duchess of Richmond, Grande Baudine, Sir F. Johnstone, Suffolk Hero, and Unique; 5, R. H. Betteridge, Esq., for Pickwick, Bridesmaid, Exquisite, Burnham Hero, President of the West, Grande Baudine, Triumph, Optima, Rienzi, Maria, Regina, and a seedling. Greenhouse Plants, 1, Mr. Bailey, gr. to the Archbishop of York, for Trevirana coccinea, Achimenes longiflora, Gloxinia rubra, and Mahérnia incisa; 2, Mr. Day. Cockscombs, 1, Jos. Parker, Esq.; 2, J. W. Henley, Esq., M.P. Heaths, Mr. Day. Fuchsias, Mr. Bailey. Thunbergias, Mr. Bailey. Specimen Plant, 1, Mr. Bailey, Siphocámpylus bicolor; 2, J. W. Henley, Esq., M.P., Erythrina Christa-galli. China Asters, 1, Mr. Pett; 2, Mr. Chapman; 3, Mr. W. Gardener; 4, Mr. S. Jeffrey. Cut Flowers, 1, R. H. Betteridge, Esq.; 2, Mr. Day. Device, 1, Mr. Day; 2, Mr. Jeffrey. Fruit—White Grapes, *Hothouse*, 1, Mr. Bailey, Cannon Hall Muscat; 2, J. W. Henley, Esq., Muscat. *Black*, 1, Mr. Bailey, Dutch Hamburgh; 2, Mr. Day, Black Hamburgh. *White (out-doors)*, 1, Mr. Horn, Sweetwater; 2, J. Johnson, Esq. *Black*, 1, J. W. Henley, Esq., St. Peters'; 2, Mr. Birch, Black Prince. Collection of Grapes (*out-doors*), Mr. Birch, Black Prince, Hamburgh, Esperione, Black Cluster, White Frontignan, Dutch Sweetwater, and Muscadine. Vine in Pot—G. V. Drury, Esq., Hamburgh. Peaches—1, Mr. Bennet, Royal George; 2, R. H. Betteridge, Esq., Late Admirable. Plums—1, Mr. Farden, Golden Drop; 2, R. H. Betteridge, Esq. Cherries—1, the Mayor of Oxford, Morello; 2, Mr. Fairbairn. Filberts—1, Mr. James Collcutt; 2, Mr. Undersnell. Apples, *Dessert*, 1, Mr. Perkins, Ribstone Pippin; 2, J. Johnson, Esq.; 3, Mr. Undershell; 4, Mr. Morris; 5, Mr. Birch; 6, the Warden of Wadham College. *Ditto, Recommendation Prize*, Mr. Plaister. *Seedling*, Mr. Evans. *Culinary*, 1, C. Peers, Esq.; Herefordshire Reinette; 2, the Warden of Wadham College, Blenheim Orange; 3, Mr. Hastings; 4, Mr. Fardon; 5, Mr. Walker; 6, Mr. Pett. Collection of Dessert Fruit—1, J. W. Henley, Esq. Pears—1, Mr. Bennet, Gansell's Bergamot; 2, Mr. Luker; 3, C. Peers, Esq., Williams' Bonchrétien; 4, G. V. Drury, Esq.; 5, the Mayor of Oxford; 6, Mr. Fairbairn. Figs—1, J. Johnson, Esq.; 2, Mr. Bailey. Mulberries—J. Johnson, Esq. Cucumbers—1, the Mayor of Oxford, Prize-Fighter. Vegetables—Collection of Chilies—G. V. Drury, Esq. Broccoli—Mr. Soden. Onions—1, Mr. Adams, White Spanish; 2, Mr. Day; 3, Mr. Bailey; 4, Mr. Fruin. Celery, *White*, 1, Mr. W. Adams; 2, G. V. Drury, Esq.; 3, the Warden of Wadham. *Red*, 1, G. V. Drury, Esq., Manchester Red; 2, Mr. Bailey. Carrots, *Long*, 1, Rev. H. Cary; 2, Mr. Day. *Short*, Mr. Molyneux. Parsneps—1, Mr. Morris; 2, Mr. Fruin. Potatoes, *Kidney*, 1, Mr. Fidler and Mr. Perkins (equal); 2, Mr. J. S. Cooke. *Round*, 1, Mr. Soden; 2, Mr. C. Hounslow. *Seedling*, Mr. Luker. Red Cabbage—1, Mr. Fruin; 2, J. W. Henley, Esq. Beet—1, Mr. Day. Lettuce—1, Mr. Fruin. Savoys—1, G. V. Drury, Esq. Peas—1, Mr. Fidler. Parsley—1, Mr. Collcutt; 2, Mr. Luker.—50 Prizes were awarded to Cottagers, for Fruit and Vegetables. The Vegetables exhibited by them were of a superior description, and in many instances far better than those exhibited by Gentlemen's Gardeners or Amateurs.

NOTICES OF NEW PLANTS WHICH ARE EITHER USEFUL OR ORNAMENTAL.

Siphoca'mpylus betulæfo'lius. Birch-leaved Siphocámpylus. (*Stove Perennial.*) Lobeliáceæ. Pentándria Monogýnia.—This elegant and graceful species, with flowers richly varied with bright red and yellow, is another of the rarities which Mr. Gardner has procured from the Organ Mountains. It flowered in July last, in the Royal Botanic Garden of Kew, where it continued for a long time in great beauty. The stem is woody at the base, branched, and two or three feet high; the flowers are solitary, between two and three inches long, of a bright vermilion red, with a deep yellow limb. It is easily propagated by cuttings, and will no doubt become a general favourite in our stoves; probably, like the S. bicolor, it may be found hardy enough to bear the greenhouse, or even the open border, in the summer months.—*Curtis's Bot. Mag.*

Aristolóchia gigas. Giant Birthwort. (*Stove Climber.*) Aristolochiáceæ. Gynándria Hexándria.—Well might this flower, although growing on a small plant in a flower-pot, excite the astonishment of the visitors to the Garden of the Horticultural Society in the months of June and July last; for certainly it is a rare event even in the prolific regions of the tropics to meet with so strange a production. If we were given to fancies, we should speculate upon the possibility of its being a cross between an Elephant and an Arum, for the colour belongs to the latter, and the ear of the former, turned inside out, is no bad imitation of its form. The seeds of this plant were received by the Horticultural Society from Guatemala, through their collector Mr. Hartweg. It flowered for the first time in the Garden at Chiswick last summer, and certainly was one of the largest and strangest forms amongst flowers ever seen in this country. It strikes readily from cuttings, and is well adapted for covering a trellis in a pot, or for training up the rafters of the cool stove. If it can be planted out in the border of the stove, or warm greenhouse, it will grow larger and stronger than when confined to a pot, and form one of the most striking objects in the house. It grows well in any free soil, such as a common mixture of heath-mould, loam, and sand. The smell of the flowers is disagreeable, but not so much so as in some of the other species.—*Bot. Reg.*

Tilla'ndsia ru'bida. Madder-coloured Tillandsia (*Stove Epiphyte.*) Bromeliáceæ. Hexándria Monogynia.—A dry stove Epiphyte, imported from Brazil by Messrs. Loddiges, with whom it flowered in February last. It is a very pretty plant, gay with madder-coloured flowers for many weeks. It will grow well if placed in a basket, and hung from the rafters of the stove. The back or end-wall of a Pine stove would suit it very well, and the general treatment should be the same as is applied to those plants.—*Bot. Reg.*

O'xalis rubro-cincta. Red-edged Wood Sorrel. (*Greenhouse Herbaceous Plant.*) Oxalidáceæ. Decándria Pentagýnia. Among the earth of Mr. Hartweg's Guatemala plants this sprang up and flowered in the Garden of the Horticultural Society, in September 1841. It is a very neat-looking species, remarkable for the appearance of its leaves, which are very succulent, brittle, having almost a crystalline fracture, and bordered with a rich purple edge, within which is a distinct row of deep purple dots, many of a similar kind being scattered over the under side of the leaf. When dried all this marking disappears. The sepals too are deserving of notice. Two of them are much larger than the others, with both their edges turned back; a third has one edge only turned back, the other seeming to be deficient; the two others are very narrow, and have no distinct edge whatever. The transparency and delicacy of the texture of this plant enables the observer to see very distinctly the beautiful arrangement provided for feeding the leaflets by sap drawn up from the root. At first sight the leaf-stalk seems to consist of a central line of fibres disposed in a confused manner, and having no particular relation to the leaflets. But if the leaf-stalk is pressed gently between two glass plates, and regarded against the light, it will be found that the central line in reality consists of six independent channels of communication, arranged in pairs; so that each leaflet communicates with the root by means of two sets of tubes, one of which feeds one half of the leaflet, and the other the other half. It is a greenhouse plant of easy cultivation, requiring to be potted in light rich soil, placed near the glass; and when growing freely, it should be liberally supplied with water. After it has perfected its flowers and leaves in the autumn, they die off, and the soil must then be kept perfectly dry until growth commences again in spring. It is easily multiplied by dividing the crowns of the roots.—*Bot. Reg.*

Gode'tia grandiflora. Large-flowered Godetia. (*Hardy Annual.*) Onagráceæ. Octándria Monogýnia.—A native of the North-west coast of North America, the country above all others rich in handsome hardy Annuals. Douglas, however, never met with it, nor does any trace of it appear among the collections published from the materials of other travellers. It is most nearly allied to G. róseo-alba, a plant the origin of which is not well ascertained. The flowers are the largest of any, and have a peculiarly delicate texture. The plant forms a bush about 2ft. high, less spreading than G. Lindleyana; it flowers in July and August. Unfortunately no seed was saved of this handsome Annual, which was raised from seeds obtained from North-west America, by the late Mr. Moreton Dyer.—*Bot. Reg.*

MISCELLANEOUS.

RURAL SONNET.—NOVEMBER.

Give to the Poor!—warm clothing—firing—food—
  At once, unsparingly, and humbly give!
Prevent the winter cough, the frame-chill'd brood
  Of throes which make it weariness to live.
For, lo! November, drench'd in fogs and rains,
  Glooms on the air, and incubates the Earth;
Days, short and fickle, nip the Labourer's gains,
  And bring increase—of suffering and of dearth.
Lucky the Woodmen who shall find employ;
  The Hinds, who stall the kine; or pen the sheep;
Plant the young tree; or, lest the floods destroy,
  Extend the drainage, and the courses keep.
The busy, and the bounteous, at this time,
Are mind and body-warm, alone, throughout our clime.

The modes of complying with two of the above exhortations in behalf of the poor are sufficiently obvious; but it may, perhaps, be of service to suggest *a general rummage of our wardrobes, and old stores,* for the purpose of bestowing what can be spared, and what is cast off, upon those to whom, in the wet and cold season now commencing, they would prove benefactions indeed. Again, on the principle of Prevention, we should *seek out*, by our own, or other discreet agency, objects for our bounty, and not wait till almost incurable want or disease has thrust them upon our notice. *Bis dat qui citò dat.*—*J. Jones, Inner Temple, Nov.* 5, 1842.

Indian News.—The Indian papers inform us of the death of Dr. H. H. Spry, Secretary to the Agricultural and Horticultural Society of India. Several candidates are mentioned as aspiring to the vacant office, amongst whom are Baboo Ram Komul Sen, Dr. Mount, Mr. Joseph Willis, Mr. H. Piddington, and Mr. G. T. Speede, the Editor of the *Indian Planter's Journal.*—At a meeting of the Agri-horticultural Society, the proposal for a bust of its founder, the late Dr. Carey, was unanimously carried.—Dr. Campbell, the Superintendent of Darjeeling, has communicated the interesting intelligence that he has at length succeeded in rearing a bed of fine healthy Tea-plants. He has also a fine crop of Rhubarb, from Himalaya seed, sent to him by Dr. Wallich.

Gas from Grapes.—The *Courrier du Midi* states that for some evenings the town of Montpellier had been lighted with gas proceeding from the lees of grapes. The light was clear and brilliant, and could not be distinguished from that of coal gas, except by a somewhat greater intensity. The journal adds, however, that the grape-lees were not used alone, but has omitted to state what was the additional substance.

Botanical News.—By letters from Geneva we learn that M. Boissier is just returned from his botanical excursion in Greece and Asia Minor. He went over a great part of Greece in the spring and summer; visited the mountains of Lydia and of a part of the ancient Caria, and the Olympus of Bithynia; and has brought home an abundant harvest, a great many good things, and, he believes, not a few new species.

Prolific Pear-tree.—In the garden of Mr. W. Harvey, of Trelissick, St. Erth, is a Pear-tree, which has this year borne four distinct crops of well-flavoured fruit, and of large size. The first crop varied in circumference from 11 inches to 14 inches, and the fourth crop, from 8½ inches to 9½ inches. This extraordinary tree has again lately blossomed, and is producing the fifth crop, many of which at present are larger than Walnuts. Should the weather prove favourable, they will no doubt be equal in size to the former. This is the third year that this remarkable tree has borne from three to five different crops.—*West Briton Newspaper.*

Reviews.

Scotch Farming in the Lothians (Ridgway) is a pamphlet by Mr. Greg, intended to arouse the farmers of some parts of England, especially of Lancashire and Cheshire, from the state of indifference to agricultural improvements in which they appear plunged. It is the opinion of the author that the farmers of England are about "to enter upon a serious crisis," and that they must "prepare themselves for lower prices of agricultural produce than have hitherto ruled in this country, at least for some years," the only remedy for which is, undoubtedly, improved methods of cultivation. Mr. Greg's object is to show wherein mismanagement exists, and to illustrate, by the Lothian farmers, of how much improvement bad English farms are susceptible. It appears that the average expense per acre of English farms is 5*l.* 12*s.* 1*d.*, but of Scotch only 4*l.* 3*s.* 4*d.*, and the produce per acre being the same, or rather greater on Scotch farms, the Scotchman puts into his pocket 1*l.* 8*s.* 9*d.* per acre more than the Englishman, which on a farm of 500 acres amounts to 718*l.* 15*s.* per annum; and this he does after paying to his landlord a higher rent than would have been paid in England. Mr. Greg's pamphlet being an excellent practical commentary upon this startling fact, it ought to be read by all landlords and tenants, for they are equally interested in the matters to which it relates.

Lingard on the Decay in Timber is a re-issue of a very foolish pamphlet printed in 1827, and seems to have been brought forth in consequence of the author having lately appeared in the character of Lecturer on the Dry-rot at the Polytechnic Institution. We had the misfortune to hear in that place an explanation of this gentleman's views —as they are called by courtesy—upon this subject, and we learned from them two things: the first, that there are no limits at all to the conceit of ignorance; and the second, that there are very wide limits to the goodnature of the officers and managers of the Polytechnic Institution.

Wood & Son's Catalogue of Roses.

We find, in addition to the usual information contained in this Catalogue, that the best varieties throughout this extensive list are designated by an asterisk. It likewise possesses another desirable quality, viz., in having those flowers distinguished which are most suitable for the purposes of exhibition.

CALENDAR OF OPERATIONS *for the ensuing week.*

In Grape-forcing, a crop is sometimes lost by too low a temperature when the embryo bunches are expanding themselves, which is, perhaps, the most critical period in their whole progress. In that rudimentary state, the young bunches differ very little from tendrils, to which they are extremely liable to revert, if not encouraged by favourable conditions to develop their then imperfectly-formed parts. As, however, this observation might possibly be misapprehended, it may be as well to state in further explanation, that we believe the embryo bunch for the next season to exist in the matured bud of the present; but that whether it advances towards the perfect state of fruit, or dwindles into a barren tendril, depends upon favourable or unfavourable circumstances at the period of its development. At that stage of its growth, therefore, the temperature of the house by fire-heat ought to be as near to 70 degrees as possible, with a moist atmosphere, and a very cautious admission of air when bright sunshine makes that necessary. When the pediceis begin to lengthen, and the little globular blossoms to separate from each other, the fruit is comparatively safe; nevertheless, watchfulness is still necessary. The general treatment of forced Vines having been given in detail in this Calendar, it need not be further reverted to here, except to remark that during the time the seeds are being formed, when the organism of the berries undergoes important changes, and an apparent cessation of growth takes place in consequence, it should never be attempted to hasten the progress of the fruit by a high temperature; a slight decrease of heat would then be beneficial rather than otherwise.

I.—KITCHEN-GARDEN AND ORCHARD.

In-door Department.

Pinery.—Uncut fruit may be kept a considerable time, even at this season of the year, without injury to it, if the plants are removed to a dry, airy, but not cold room, before the fruit is too ripe. Trim off the leaves, and give no more water to the plants. Stools of choice sorts, treated in the manner formerly described, can be preserved alive till spring; when, if encouraged by generous treatment, they will produce some valuable suckers. Manure-water should now, if given at all, be administered very sparingly to swelling fruit.

Vinery.—All *dead* leaves should be taken off the Vines upon which late fruit is hanging; this, by admitting the sun's rays to dry, and the air to circulate more freely around the Grapes, will contribute to their preservation. With the same view, carefully cut out all damaged berries.

Peach-house.—Continue to expose the trees as much as possible in open weather; the sashes need not be drawn up at night, unless it is frosty or windy.

Fig-house.—Give air constantly during mild weather, but do not let the trees be exposed to frost.

Cucumbers.—Follow strictly the directions previously given as to watering, stopping, temperature, &c. Plants in pots will of course require water oftener than those growing in larger masses of mould, such as that contained in the inside of the pits when they are filled with soil in the usual way.

Asparagus must be immediately planted on the bed made last week for that purpose. Spread five or six inches of rotten leaves or other light soil over the bed, lay the roots thickly upon it, and cover them with a couple of inches of the same material, which should afterwards be watered if dry. * The chief cause of failure in forcing Asparagus is too great a bottom-heat, by which the roots are destroyed. Between 60 and 70 deg. is all that is required, and it ought not to exceed the latter point. The temperature might be moderated by watering, and by keeping the lights off the bed; or it might be increased when necessary by close covering.

Sea-kale and Rhubarb can be forced in a similar manner, or by filling a vacant shelf in a Mushroom-house with roots. Rhubarb-roots might also be potted, or planted in a vacant corner of the bark-bed of a Pine-stove.

Out-door Department.

Artichokes.—At the approach of frost, the long leaves should be cut off the plants, which ought then to be mulched with partly-rotted leaves out of the Melon-pits, or with dry fern or litter.

Cabbage Plants may still be pricked out. Let all that are planted in rows have a little earth drawn round their stems when it is not wet.

Garlic and Shallots may also still be planted. Look over those previously put in, and make good any deficiencies which may have been caused by worms drawing the bulbs out of the ground.

Lettuce.—When the young plants stand too thick in the rows, the largest may be taken out for present use.

Onions.—Hoe among the young plants in dry weather.

Parsley.—A piece should be cleaned from weeds and leaves, and covered with a frame and lights when frosty or rainy weather sets in.

Succory.—Some roots from the first sowing may now be put into a cellar, or any dark place from which frost is excluded. Take off the long outer leaves, and set the roots in sand or mould. In taking up the roots, be careful not to leave any part in the ground, as, like those of the Dandelion, small pieces will grow again.

Orchard.—Persevere in getting wall-trees into order; the rough pruning of orchard-trees can be done in worse weather. Manure, and dig very lightly among Gooseberry, Currant, and Raspberry trees, which have been pruned. As the latter plants root very near the surface, a better practice is, not to dig at all between them, but rather to spread a layer of rotten bark or leaves over the ground, into which the roots will run freely. Make new plantations, if necessary.

II.—FLOWER-GARDEN AND SHRUBBERY.

In-door Department.

Stove.—Any spare time should be employed in looking carefully after those insects which may now infest the plants; if there is any white bug on the stems and leaves of herbaceous things which are dying off, the whole should be removed and burned. The general management with regard to temperature should be the same as formerly recommended. In the Orchidaceous house, Catasetums, and plants of that kind, which have completed their growth, may be gradually dried off and kept in this state until the return of the growing season.

Greenhouse and Conservatory.—The green fly has probably made its appearance upon some of the plants in these houses. If the insects are spread over a great number of plants, fumigate the house with tobacco; but if a few only are infested, they, with any permanent specimens in the conservatory that are dirty, should be moistened with a syringe and then dusted with snuff. Judicious watering is now of great importance to the health of the plants. Greenhouse plants ought at this time to be making little or no growth; their leaves also give off a very small portion of moisture in the form of perspiration, and the quantity of fluid taken up by the roots is, therefore, proportionately small; for this reason, coupled with the very low rate of evaporation from the soil when no fire-heat is employed, plants require much less water in the winter months than they frequently get.

Pits and Frames.—Let the forcing-pit be fumigated occasionally; the leaves of Roses and other forced shrubs may also be syringed now and then. Introduce in succession a few bulbs of Hyacinths, Crocuses, and Narcissi into gentle heat. If it has not yet been done, pot Kálmias, Rhododendrons, &c., for forcing in spring. Re-pot part of the annuals which are meant to decorate the conservatory and other houses in the spring months. These should be kept near the glass, and exposed to the air at every opportunity.

Out-door Department.

A general cleaning of this department should be deferred till the leaves are all off the trees; but in the mean time, the parts adjacent to the house, and any other conspicuous places, ought to be kept in order. Finish mowing for the last time. Proceed with new ground-work. Lay turf now on light soils, and it will establish itself well before the dry weather of spring.

NURSERY AND FOREST DEPARTMENT.

Nursery.—Proceed with the work pointed out in the last few weeks.

Forest and Coppice Woods.—We have advised planting to be carried on to the exclusion of other necessary work in the woods and coppices, for several reasons. In the first place, the autumn is certainly the best season for that important business; secondly, such work as pruning, thinning, draining, fencing, &c., can be done in more wintry weather; and thirdly, on estates where game is an object of consideration, it is not advisable to disturb it so early in the shooting season, by making a stir in all the woods and plantations. If, however, planting is finished, and the other reasons mentioned do not apply, pruning, &c., may be proceeded with at any time.—*J. B. Whiting, The Deepdene.*

State of the Weather near London for the Week ending Nov. 10, 1842, as observed at the Horticultural Garden, Chiswick.

Nov.		Barometer.		Thermometer.			Wind.	Rain.
		Max.	Min.	Max.	Min.	Mean.		
Friday	4	30.169	30.072	42	31	36.5	N.E.	.01
Saturday	5	30.177	30.104	46	32	39.0	N.E.	.01

Nov. 4. Cloudy; showery; clear at night.

5. Overcast; very slight hail and rain; slight showers; boisterous.
6. Slight showers; cloudy and fine; overcast.
7. Overcast; cloudy; slight rain; overcast at night.
8. Overcast; cloudy throughout.
9. Thickly overcast; cloudy; stormy with rain at night.
10. Rain; cloudy; rain at night.

Mean temperature of the week 2½° below the average.

State of the Weather at Chiswick during the last 16 years, for the ensuing Week ending Nov. 19, 1842.

Nov.		Aver. Highest Temp.	Aver. Lowest Temp.	Mean Temp	No. of Years in which it Rained.	Greatest quantity of Rain.	Prevailing Winds.

The highest temperature during the above period occurred on the 13th, in 1827—thermometer 60°; and the lowest on the 16th, in 1841—thermometer 15°.

REPORT ON COVENT GARDEN MARKET,

For the Week ending Nov. 11, 1842.

The supply of Fruit has been greater during the past week than in the preceding one; but the demand has been far from brisk. *Fruit:* Pines consist principally of Queens, from 3*s.* to 5*s.* per lb.; amongst them we observed a few specimens of the Montserrat. Hothouse Grapes are not so plentiful; but the supply of foreign ones is increasing. The dessert Pears are chiefly composed of the Crassane, Marie Louise, and Jersey Chaumontel; the latter from 1*s.* 6*d.* to 4*s.* per doz, the two former from 6*s.* to 8*s.* per half-sieve. Swan's Egg Pears are abundant, from 1*s.* 6*d.* to 1*s.* 9*d.* per half-sieve. Amongst the dessert Apples, the best are the Golden Pippin, from 2*s.* 6*d.* to 3*s.* per half-sieve, and the Ribstone Pippin, from 2*s.* to 2*s.* 6*d.* per half-sieve. The samples of Blenheim Orange and Royal Russet for culinary purposes are very good, from 3*s.* to 4*s.* 6*d.* per bushel; and of the Lemon Pippin, for mince-meat, from 2*s.* 6*d.* to 3*s.* 6*d.* per bushel. Medlars are abundant; the best selling from 9*d.* to 1*s.* per doz. Cucumbers appear to be over for this season. *Vegetables:* A few bunches of Asparagus have made their appearance, at 9*s.* per bunch; it is, however, very small. The prices given in our last report are in most instances applicable to this. Broccoli, Cabbages, and Brussels Sprouts are well supplied, and are of good quality. Red Cabbages vary greatly in size; the smallest fetching about 2*s.* per dozen, while some of the larger fetch as much as 6*d.* each. Endive is, generally speaking, very fine, and is selling from 9*d.* to 1*s.* 6*d.* per score. *Flowers:* The cut flowers have exhibited great variety during the past week; consisting of Pháius grandifolius, Abútilon striatum, Euphórbia splendens, Céreus truncatus, C. Ackermanni, Rondelétia speciosa, Chrysánthemums, Caméllias, Epacrises, Ericas, &c.

PRICES, Saturday, Nov. 12, 1842.—FRUITS:—

Pine Apple, per lb. 3*s* to 5*s*
Melons, Spanish, each, 2*s* 6*d* to 3*s*
Grapes, per pound, 1*s* 6*d* to 3*s*
— Spanish, 1*s* to 1*s* 6*d*
— Portugal 1*s* to 2*s*
Apples, dessert, per bush., 2*s* 6*d* to 7*s*
— Kitchen, 2*s* to 6*s*
Pears, dessert, per hf. sieve, 3*s* to 6*s*
Medlars, per hf.-sieve, 2*s* to 2*s* 6*d*
Quinces, per hf.-sieve, 2*s*
Berberries, per hf.-sieve, 5*s* to 6*s*
Oranges, per doz., 9*d* to 3*s*
— per 100, 5*s* to 24*s*
Lemons, per doz. 1*s* to 3*s*
— per 100, 6*s* to 20*s*
Almonds, per peck, 6*s* to 7*s*
Sweet Almonds, per pound, 3*s*
Chesnuts, per peck, 4*s* to 7*s*
Walnuts, per bush., shelled, 12*s* 20*s*
Filberts, English, per 100 lbs. 60*s* to 70*s*
Cob Nuts, per peck, 80*s* to 90*s*
Nuts, per bushel—
— Brazil, 16*s* to 20*s*
— Spanish, 20*s*
— Barcelona, 24*s*

VEGETABLES.

Savoys, per doz. 6*d* to 1*s*
Cabbage, per doz. 1*s* to 1*s* 6*d*
— plants, per doz. 1*s* 6*d* to 2*s* 6*d*
— Red, for pickling, 2*s* to 6*s*
Brussels Sprouts, per hf.-sv. 1*s* 3*d* to 2*s*
Broccoli, per bunch, 9*d* to 1*s* 3*d*
Cauliflowers, per doz., 2*s* to 4*s*
Potatoes, per ton, 45*s* to 80*s*
— per cwt. 2*s* 6*d* to 4*s*
— per bushel, 1*s* 6*d* to 2*s* 6*d*
— Kidney, per bu., 2*s* to 2*s* 6*d*
— New autumn, per lb., 1*s*
Jerusalem Artichokes, per half-sieve, 9*d* to 1*s* 6*d*
Turnips, per doz. bun., 1*s* 6*d* to 2*s* 6*d*
Carrots, per doz. bun., 3*s* to 5*s*
Red Beet, per dozen, 9*d* to 1*s*
Scorzonera, per bundle, 1*s* 3*d* to 1*s* 6*d*
Salsafy, per bundle, 1*s* 3*d* to 1*s* 6*d*
Horse Radish, per bundle, 1*s* 6*d* to 4*s* 6*d*
Radish, per doz. hands (24 to 30 each) 9*d* to 1*s*
— Turnip, p. doz. bch., 1*s* to 1*s* 6*d*
Parsneps, per dozen, 9*d* to 1*s*
Spinach, per sieve, 1*s* to 1*s* 6*d*
Leeks, per doz. bun., 1*s* 6*d* to 2*s*
Onions, per bushel, 4*s* to 5*s*
— Green, p. doz. bun. 2*s* 6*d* to 4*s*
— Spanish, per doz. 1*s* 6*d* to 5*s*
Garlic, per lb. 6*d* to 8*d*
Shallots, per lb., 1*s*
Asparagus, forced, per 100, 9*s*
Lettuce, Cabbage, p. sc., 9*d* to 1*s*
— Cos, 1*s* to 1*s* 3*d*
Endive, per score, 9*d* to 1*s* 6*d*
Celery, p. bd., (12 to 15) 9*d* to 1*s* 9*d*
Small Salads, per punnet, 2*d* to 3*d*
Watercress, per doz. sm. bun. 4*d* to 6*d*
Parsley, per doz. bun., 1*s* 6*d* to 2*s*
Tarragon, per doz. bun., 2*s* to 3*s*
Sage, per doz. bunches, 1*s* 6*d* to 2*s*
Mint, per doz. bunches, 2*s*
Tomatoes, per hf.-sv. 4*s*
Chilies, per 100, 1*s* to 2*s*
Mushrooms, per pottle, 1*s* to 1*s* 3*d*

Notices to Correspondents.

We shall be obliged if our Correspondents, in their future communications, will take care that no general question relating to *different* subjects is asked in the same paragraph, and that each question is headed with the principal subject. *One side only of the paper should be written on,* so that we may separate each question. If these directions are observed, it will greatly facilitate our obtaining answers, and will enable us to arrange our Correspondence under general heads, separating those questions and answers which are of interest merely to individuals, from such as are of general interest.

Unanswered Letters.—We have many replies ready, but we are obliged to omit them this week from want of room, and must crave the indulgence of those who are thus passed by.

Salt to Asparagus Beds.—*S. S.*—Salt may either be strewed over the top, and remain to be washed in by the rains, or may be dissolved in water and poured over; we should prefer the former. Two pounds of salt is too much, we apprehend, for Sea-kale beds; but that is a point to be determined by experiment hereafter. Sea-kale can certainly bear a very large quantity of nitrate of soda, but we do not know what the effect would be of excessive doses of muriate of soda (common salt). †——*J. B. H.*—Sea-sand, occasionally watered with sea-water, and mixed with one half its bulk of good mould, will form a good Asparagus bed; but it must be strongly manured. On this subject, we beg to refer you to the observations on the construction of Asparagus beds given this year at pages 159, 187, and 283. †

Cider Muck.—*J. T. H.*—You will find the best information which we can give respecting the refuse from Cider-mills at p. 740. Cider-and-water is no doubt a good manure for Vines; but it must be remembered that Cider is very different from the remains of the Apples, whose chief strength is gone when the Cider is extracted. ‡

Gas-Tar.—*M. W. K.*—Gas-tar diluted with water will not answer the same purpose as ammoniacal liquor. ‡

Manure.—*An Amateur.*—Night soil can be procured anywhere; but it is not sold that we know of. The natural repugnance which labourers evince to employing it arises from its offensive nature, and would be at once dispelled if means were taken to disinfect it, which may easily be done by mixing it with gypsum and sawdust, and incorporating them with mould. It thus proves the strongest of all known manures. †——*I. x.*—Your plan of mixing Gypsum with the fluid contents of your tank is excellent; provided you do not waste the supernatant liquid, which is the valuable part of the mixture. If you soak mould with both the fluid and gypsum, you must have a *very powerful* manure.†——*Cadwallader*.—Sulphate of lime is the same as gypsum, and bears the same price. In London it is worth about 40*s*. or 45*s*. a ton.†

Pruning Forest-trees.—*W*.—The best season for this operation is now, or before Christmas; and so it is for all sorts of Fruit-trees. But for evergreens—at least the more tender kinds—such as Laurels, &c., the end of March or April should be taken.†

Greenhouses.—*M*.—Trees to the north will do no harm, even if they come up to the wall; on the contrary, they afford shelter and are beneficial. If climbing plants are to run up pillars in the inside, the bad soil must be excavated and replaced by good earth, consisting of equal parts of peat, loam, and sand, thoroughly drained. It is easy to build brick boxes to hold this mould; but in what precise way this is done depends upon circumstances connected with the peculiar arrangements of the house.†

Hothouse Regulators.—*C*.—There are several contrivances for regulating the temperature of hothouses, but they are all too delicate, and are very apt to get out of order. Moreover, it is hardly desirable that a hothouse should be so managed as to save the gardener the necessity of attending to it; for if he can neglect one thing because it is provided for by mechanical contrivances, he is apt to neglect others not so provided against.†

Vines.—*W. Smith*.—Mr. Milne informs us that it has been his practice to sprinkle his Vinery every afternoon, when first shut up, with water, and then to throw down about a quart of ammoniacal liquor on the front pathway. When thrown on the soil, he has found that the liquor did not smell so much as when sprinkled on the stones or hard-burnt bricks. He has no doubt but this method would be sufficient without placing it in cans, if it could be applied in the morning without offence to the family. It has a bad appearance on the pathway, and no lady or gentleman would like to walk over it; its smell being bad enough, without the sight of it. He had 3 tin cans, holding about a quart each, in a house 42 feet long, and he found that in two days the liquor wasted to one-third of its usual bulk, and changed from a clear small-beer colour to a thick substance like coal tar. It was never applied to the roots of the Vines.——*M. W. K.* says, that two years since he formed a Vine border, from five to six feet deep, of old turf, stable manure, and bone-dust. The Vines were then planted; but upon forking over a part of the border lately, he finds that the roots are striking down two or three feet deep. He has covered the border over a foot thick with dung from an old Cucumber-bed, which he intends to fork in about March. [By so doing he will only increase the evil, instead of remedying it. The best plan he can pursue will be, to remove the soil to the depth of two feet and a half or three feet, to raise the roots of the Vines, and to spread a layer of broken bricks or lime rubbish six inches deep over the bottom. Let some lime rubbish be also well incorporated with the soil which has been taken out; the latter may then be filled again to within six inches of its original level, and the roots may be replaced at that distance from the surface.‡]

Ivy.—*A. A.*—Stopping the shoots of Ivy will make the lower parts of the plant more bushy, but will not increase its strength.‡

Laburnum.—*H. H.*—This tree should not be pruned.‡

Lily of the Valley.—*A. A.*—This plant delights in a moist and rather shaded situation. If your soil is tolerably light, we would recommend you to mix a small portion of fibrous loam with it, in preference to manure.‡

Fig-trees.—*Ficus*.—The situation you propose for your Fig-trees is very good. Let the soil be loose, with plenty of brick and lime rubbish. Train with a single stem, from which the branches may proceed horizontally; or if too luxuriant, they may be inclined downwards. You will find a very proper course of treatment in the last Calendar of Operations.‖

Pines.—*A Planter*.—The true Sea-Pine is that which is also called the Aleppo Pine, or P. halepensis. The French sometimes call the Pinaster the Maritime Pine. The Austrian Pine is not maritime at all. The Durmast Oak is *not* Quercus sessiliflora, but Q. pedunculatis, as we have formerly stated.†

The common Jasmine.—*A Subscriber*.—You should leave as much of this year's wood upon your Jasmine as you can conveniently lay in; shortening the ends of the shoots. The rest may be removed close to the old stem.‡

Hardy Plants.—*A Beginner*.—The following Rhododendrons are most suitable for planting in a small circular bed: R. catawbiense and R. pónticum or any of its varieties in the centre; R. hirsutum, R. ferrugíneum and R. daúricum, nearer to the edge of the bed; round the margin you may plant Erica cárnea, E. vagans, E. mediterránea, and Menziésia polifólia.‡

Gardénia florida.—*A Constant Reader*.—You may *grow* this plant in a greenhouse, but you cannot have it in perfection without subjecting it to bottom-heat and a moist atmosphere during spring. A common dung-frame will answer the purpose very well, and it should be kept there until the flower-buds are formed; it may then be removed to the greenhouse, where the flowers will continue to expand during the summer.‡

Clerodendron speciosum.—*Rector*.—The cuticle of the leaves of your Clerodendron has probably been punctured by the green fly. You should remove the infected leaves; and if the plant is very bad, it will be advisable to cut it back a little. If there is any green-fly upon it, it can easily be destroyed with tobacco. The smutty spots are often connected with a filamentous production, which seems to be the spawn of some microscopic fungus; but we do not know whether it follows or precedes the appearance.§

Cereus truncatus.—*A. A.*—To cultivate Cereus truncatus in perfection, it should be grown in a temperature not lower than 55° during winter, and should be fully exposed to the sun. We apprehend that you will find it impossible to flower it in a dwelling-room.‡

Roella ciliata.—*A New Subscriber*.—This is a Cape plant and requires a greenhouse in this country. It should be potted in light rich soil, such as a mixture of peat, leaf-mould, sand, and loam. Keep it rather dry when it is not growing, but give it plenty of water at other times.§

Chirónia decussata.—*A New Subscriber*.—This is a greenhouse plant; it should be potted in light rich soil and liberally watered during the summer months. Keep it in a good situation, near the glass, where it gets plenty of light and air. Always keep some young plants to take the places of the old ones.§

Euphorbia splendens.—*W. M.*—You are quite right; this plant should be repotted early in spring, or even in the winter, if the pot is full of roots. Although it does not require so much water in winter, yet you must not keep it quite dry, for it is always growing.§

Pelargoniums.—*A Gardener*.—It is difficult to account for the short duration of the bloom of your Pelargoniums, as you appear to take every precaution to preserve your plants in health. The growers to whom you allude have houses constructed purposely for the cultivation of Pelargóniums, as it is impossible to grow them in perfection where the house is partly devoted to another purpose. Your being obliged to place them so far from the glass is a great drawback to your success. We recommend you to see that the plants are not kept too moist; to give air at night through the bunting, weather permitting; and not to remove them into the vinery till the plants are in a more advanced state.*——*A Subscriber, Manchester*.—We recommend the following:—

1842.	1843.
Gaines's Rising Sun.	Foster's Sir Robert Peel.
Garth's Queen of the Fairies.	——— Nestor.
Kinghorne's Grand Monarch.	Pamplin's Count D'Orsay.
Lumsden's Madeleine.	Garth's Constellation.
Catleugh's Prince of Waterloo.	Lyne's Duke of Corwall.
Pamplin's Anna.	Wood's Countess of Morley.*

Gladioli.—*An Amateur*.—The best kinds for growing in the open air are Gladiolus psittacinus, byzantinus, Colvillii, tristis, blandus, floribundus, cardinalis, ramosissimus, angustus, inflatus, and cárneus. The bed in which they are grown must, however, be protected from damp and frost in winter.‡

Medlars.—*T. W.*—You must endeavour to expose your Medlar-trees to the sun's rays; the fruit should hang until the end of October, or until it parts easily from the tree. If spread on shelves, the stage of decay called bletting in this species of fruit will soon commence. If the stalk-end is dipped in a solution of common salt, it will tend to prevent the attack of a fungus to which this part of the fruit is very subject.‖

Apple and Pear-trees.—*A Correspondent*.—Mr. Hayward's trees of Poire anglaise are double-grafted on Quince stocks. The term espalier may not be critically correct as applied by Mr. H.; but in the language of gardeners he had always understood the term espalier to include all trees trained by fixtures, away from a wall. Mr. H. never having before heard of Professor Rennie's Alphabet of Gardening, cannot answer whether his works are those alluded to.

Pears.—*J. W.*—There is, correctly, only one Pear known as the Brown Beurré. It was formerly designated *par excellence* the Beurré. There are now, however, a vast number of Beurré Pears, some ripening in autumn, as the one in question; others in spring, as the Beurré Rance; to either of these two you can therefore give the preference, according as you require the fruit early or late in the season. A Jargonelle or Marie Louise will succeed better against a north aspect than those above mentioned.‖——*E. W.*—Six varieties of Pears for Espaliers, in addition to those you possess, may be the following: Beurré Bosc, Thompson's, Glout Morceau, Passe Colmar, Beurré Rance, and Easter Beurré. You will do well to substitute the Althorpe Crassane for the Old Crassane; it is very doubtful whether the latter will bear except against a wall; should it do so, it will be a very rare occurrence.‖

Gooseberries.—*Brighton*.—A selection of small Gooseberries of good flavour may consist of the following varieties:—*Red*: Red Champagne, Red Turkey, Rough Red, Ironmonger, and Rob Roy. *White*: White Champagne, White Crystal, Early White, Taylor's Bright Venus, and White Honey. *Green*: Early Green Hairy, Pitmaston Greengage, Green Walnut. *Yellow*: Yellow Champagne, and Rumbullion.‖

Potato.—*S. H.*—Knight's Yellow Kidney Potato is probably not in the market. Doubtless some of the Fellows of the Horticultural Society are in possession of it, as it was distributed some years ago.‖

Bokhara Clover.—*An Irish Subscriber*.—This plant is miscalled a Clover; it is a coarse Melilot, and in our opinion not worth growing when better crops can be had. Some account of it will be found at pp. 288, 318, and 369 of this year's *Chronicle*.†

Grass.—*A New Subscriber* has a piece of Grass, sown in the spring of 1840, which came up so coarse, that it is with the greatest difficulty that it can be mown, owing to a strong kind of Grass which forms a little mound and stops the scythe. The soil was damp, but is now drained.—[The bad quality of the Grass appears to be owing to the mixture of Cocksfoot or some other coarse species with it; and if so, there is no remedy but turning up the land and resowing it.]‡

Books.—*An Amateur*.—A most useful elementary work on farming operations, &c., is Martin Doyle's Cyclopædia of Practical Husbandry, now in course of publication; or, if a larger work were desired, Stephen's valuable "Book of the Farm."†

Softening Paint.—*A. S.*, whose stone steps have been painted over by mistake, will find caustic potash, dissolved in as small a quantity of water as possible, the best substance for softening the paint. If wetted all over with this solution over-night, the paint will next day be found quite soft. The stone-work may then be scrubbed; it is, however, a troublesome operation.‡

Motion of Sap in Plants.—*W. C.*—No doubt plants have a lateral motion of their sap. The way in which the fluids move in Exogens, under ordinary circumstances, is this: they rise from the root through the wood until they reach the leaves; from the leaves they are returned down the bark; from the bark they are given off sideways to the wood again, by means of the medullary rays (silver grain). But when wounds or accidents interfere with this arrangement, there is no doubt that trees can convey their fluids through other channels; probably even upwards through the bark. These are, however, interferences with the usual order of things.†

Floricultural Society.—*R. P.*—The reason why the two last meetings of this Society have not been reported is, that no business of general interest was transacted at them. It is a pity the Society should hold its meetings in the winter, when there can be no florists' flowers for their inspection.†

Miscellaneous.—*H. Llandilo*.—Your plant is Hypéricum Androsæmum: it is also met with in several parts of England.‡——*Tyro*.—We are unacquainted with the reticulated vegetable substance you have sent. What is the history of it?†——*J. S.*—The rule of three occurs in Cattleya. There are three sepals and three petals, the latter consisting of the two lateral inner segments and the labellum; there are also three placentæ in the ovary. The genus Cattleya is placed in Orchidaceæ in Lindley's Natural System, p. 340, and in the Index also. Four pollen-masses are the proper number.†——*G—m. G.r's* letter is an advertisement.——*A. Y.*—Your plants are—1, A Lantana; 3, Jasminum frúticans; 4, Escallónia rubra; 5, Lotus Jacobæa; 6, Chirónia peduncularis.†——*Cambriensis*.—Your Pears are—1, Napoleon; 2, Autumn Bergamot; 3, probably the Duchesse d'Angoulême; 4, White Doyenné. The Apples are—1 and 2, King of the Pippins; 3, Alexander; 4 and 5, Dutch Mignonne; 6, Yorkshire Greening; 21, Court of Wick; 22, resembles Wyker Pippin; 23, probably Loan's Pearmain; 24, King of the Pippins; 25, Golden Reinette.——*E. T.* Your Apples are—1, Alexander; 2, Waltham Abbey Seedling; 3, Blenheim Pippin; 4, King of the Pippins; 5, Beauty of Kent; 6, Kirke's Lord Nelson.‖——*J. W.*—Your plant is Maxillária Cólleyi.†——*Z.*—We see no probability of the Horticultural part of the *Gardeners' Chronicle* being reprinted.‡——*E. B. Lynn*.—Your Apples are—1, Old Golden Pippin; 2, Downton; 3 is probably the Golden Pippin from a different tree.‖——*An Old Subscriber*.—Your Pears are—1, Beurré Diel; 2, White Doyenné; 3, Winter Nelis; 4, Napoleon; 5, Glout Morceau; 6, Buchanan's Spring Beurré. The Apples are—9, King of the Pippins; 11, Golden Harvey; 12, Æsopus Spitzemberg.‖——*John Kyle*.—Your Apple 1, is probably Kirke's Lord Nelson. The Pears are—3, 10, Beurré Diel; 4, 11, Easter Bergamot; 5, Beurré Rance; 8, White Doyenné; 9, Glout Morceau; 12, St. Germain.‖——*W. K.*—The Apples are—1, Scarlet Nonpareil; 3, probably Lemon Pippin; 5, Northern Greening; 6, 11, Nonpareil; 7, Court of Wick; 8, Beauty of Kent; 10, Blenheim Pippin; 12, Robinson's Pippin. The Pears are—1, Uvedale's St. Germain; 4, probably Williams's Bon Chrétien, too far gone; 5, White Doyenné; 6, Crassane.‖——*A Cambridgeshire Subscriber*.—Your Apples are—1, Court of Wick; 3, Alexander; 4, Dumelow's Seedling; 5, Loan's Pearmain; 6, Nonesuch; 8, Golden Noble; 9, Yorkshire Greening. The Pears are—1, Passe Colmar; 2, Brown Beurré; 3, White Doyenné; 5, Flemish Beauty.‖——*T. P. S.*—The Apples are—2, Golden Noble; 3, 4, Fearn's Pippin; 5, King of the Pippins; 7, Downton; 8, Golden Harvey. The Pear, No. 6, is the Autumn Bergamot.——*F. . . .*—Your Apples are—King of the Pippins; 2, Wheeler's Russet.——*P. W. J.*—Your Apples are—1, Beauty of Kent; 2, Blenheim Pippin.‖——*Flora*.—The Pear you sent is the Verte Longue.——*A Lady's* questions are answered in a leading article of to-day.——*J. L. G.*—We will consider.†——*A. P.*—Your plants are O'lea europæa and Ceratónia siliqua.†——*Rus*.—Your Vegetable Marrow of the true kind, which measures 21¾ inches in length, and 26 inches in circumference, is of *very* unusual dimensions.†——*J. C.*—We cannot undertake to name Cryptogamic plants, especially such as have no fruit.†——*Stafford* should mention what kind of Iris he requires, whether bulbous, tuberous, or fibrous-rooted.†——Many thanks to *Mr. Hayward*, whose communication shall appear as soon as the woodcuts can be got ready.†——*H. W. B.*—In addition to Morello Cherries and Currants, you may plant against your north wall the Jargonelle, and (for stewing), the Catillac and Bezi d'Heri Pears. It will be worth while trying the Old Pine Strawberry in the border for a late crop.‖——*T. W., Oldford*.—Are you certain your Apple is a seedling? If it is, it cannot be distinguished from the Gravenstein.‖——*J. Selwood*.—Your Pears are—1, Brown Beurré; 2, St. Germain.‖——*Ignoramus*.—Your Apples are—1, Golden Noble; 4, very like the Old Nonpareil externally, but more acid; 6, a yellow Crab. The others are not known: they appear to be unworthy of cultivation.‖——*W. M., Dereham*.—Your Apples are—1, Striped Beaufin; 2, Royal Pippin; 3, Cambridge Pippin or Bedfordshire Foundling; 4, Blenheim Pippin; 5, King of the Pippins; 6, 7, Wyker Pippin; 8, Alfriston; 9, Golden Russet; 10, Aromatic Russet; 11, Fearn's Pippin; 12, Franklin's Golden Pippin; 13, Stone Pippin. The Pear is the Urbaniste.‖——*A Young Gardener*.—We regret to say we cannot give directions in this Paper for laying out gardens. It is impossible to do so without furnishing plans; we are therefore unable to afford you much assistance. Nevertheless, rather than entirely disappoint you, we will state, that no forms for beds are so good as circles or ovals, and that fancy patterns hardly ever please the eye. For this reason we advise you to convert your Maltese cross into a circle, to place an oval on B, and to convert the very ugly bed next B into an oval.†——*Eboracum*.—We have tried in vain to find out how the confectioners put up their fruit; and we must give up the inquiry.†

Errata.—In the article upon pruning Apple and Pear trees, at p. 709, column *c*, line from the top 14, for "circumference," read "diameter."

Potatoes.—In our report of the Ash-leaved Kidney Potatoes, exhibited by Mr. Cockburn at the late meeting of the Horticultural Society, in p. 743, column *a*, line from the bottom 72, for "tubers planted May 7th," read "tubers planted July 7th."

Mr. PAXTON'S COTTAGER'S CALENDAR is now reprinted in the form of a small volume, for general distribution, price 3*d*. each copy; it may be ordered of all Booksellers. Gentlemen wishing to distribute copies among their cottage tenantry may have them *delivered in any part of London* by remitting a Post-office order to this Office, at the rate of 5*s*. for every 25 copies.

As usual, many letters have arrived too late for answers this week.

NEWS OF THE WEEK.

The arrival of the Overland Mail has supplied us with intelligence from India to the 1st October, and from China to the 26th July. The Indian news is very interesting. The Government had decided to send the army towards Cabul, and to take possession of that place; part of the troops, under General Nott, had already marched from Candahar in the direction of Ghuznee and Cabul, and the remaining portion had returned to Quetta in safety, so that Candahar has been evacuated. The army of Gen. Pollock had been successful in advancing to Gundamuck, from which position a rapid move upon Cabul was expected to take place early in September. Among the reports in circulation, it was stated that Akhbar Khan had been seized by the Kuzzilbashes, and that Ghuznee had already opened its gates to Gen. Nott, without any show of resistance. It was also rumoured that on the junction of the two armies at Cabul, decisive measures will be adopted to introduce an effective system of government into the Sikh country; and that Shere Singh, the present chief, had expressed to the Supreme Government his desire to become a subsidised monarch, and place his territory under the protection of Great Britain. In regard to the prisoners, it was reported that on the first intelligence of the advance they were removed from Cabul to the Hindoo Koosh, with the exception of a few who were too ill to leave the capital; it was also stated that the Governor-General had surprised the Affghans, by announcing his resolution to act in the same summary manner towards the family of Dost Mahomed, by sending them to England as prisoners. In the interior of India tranquillity prevailed, with the exception of the mountain districts of Bundelkund. A severe famine had prevented the assembling of the Army of Reserve on the Ferozepore frontier, under Sir Jasper Nicholls. The arrival of Lord Ellenborough at Simla, and the proximity of that place to Lahore, had induced many to consider the occupation of the Punjaub as probable.—From China we have news of the capture of another town, and of some small successes on the coast; the Expedition has advanced towards the north, but there is little chance of its reaching Pekin until next year, and the prospects of a final settlement are as remote as ever. The capture of Shang-hoi, a commercial city of some consequence, had produced great alarm among the Chinese, and the Mandarins in the two most fertile provinces had sent an express to one of the principal Hong merchants, requesting him to interpret between them and the British, for the apparent object of making terms. The fleet had proceeded to Nankin, and it was generally believed that no further movement would take place this season.—Our European news is not of great importance: in France the chief subject of discussion is the failure of the attempt to effect a union between the French and Belgian Customs. Several of the manufacturing towns have petitioned in favour of the union, and the Ministerial papers announce that the negotiations will very shortly be resumed.—From Spain there is no news of immediate interest; the rumoured changes in the Cabinet, and the report that the Regent intends to introduce a law curtailing the liberty of the press, are the principal topics of attention.—From Portugal we learn that the Government has submitted to the British Cabinet a series of proposals on the tariff question, which profess to be final. So far as their contents had transpired at Lisbon, they were not considered satisfactory by the English merchants, and it was expected that Lord Aberdeen would not hesitate to reject them.—The speech of King Leopold at the sitting of the Belgian Chambers, on Tuesday, contains the important announcement that all the difficulties relative to the separation from Holland have been removed; that a convention of internal navigation has already been signed, and that a treaty, suggested by a mutual sense of conciliation, is in progress, for the purpose of establishing, on a satisfactory basis, all the questions which have arisen out of the partition treaty.—By the Levant mail we learn that the Russian Ambassador has withdrawn his opposition to the new Sovereign of Servia, and that Prince Ghika has been dismissed from the government of Wallachia. Renewed disturbances have taken place in the Lebanon; the Turkish forces were defeated with great loss, and the outbreak is supposed to be the first movement of a general insurrection against the Turkish government in Syria.

Home News.

Court.—Her Majesty and Prince Albert, the Prince of Wales and the Princess Royal, left Windsor Castle on Thursday morning on a visit to the Duke of Wellington at Walmer Castle, attended by a numerous suite. The Royal party arrived at Walmer about 4 o'clock; the details of the journey are given under our provincial news. On Saturday, the Queen and Prince Albert arrived in town from Windsor, and returned to the Castle in the afternoon after the Prince had transacted business at the office of the Duchy of Cornwall. On Wednesday, the birthday of the Prince of Wales was celebrated at Windsor with the usual honours. The Guards were reviewed in the Home Park, and in the evening the town was generally illuminated. The event was also observed in the Metropolis with the customary demonstrations of loyalty; the bells of the different churches were rung, and several club-houses and the shops of her Majesty's tradesmen were illuminated. It is stated that her Majesty has abandoned the intention of visiting Brighton until the spring. Lady Portman has succeeded the Countess of Dunmore as Lady in Waiting on the Queen. Viscount Sydney has succeeded Viscount Hawarden as Lord in Waiting, and Sir Frederick Stovin has succeeded Admiral Sir Robert Otway as the Groom in Waiting on her Majesty. The Queen has appointed Colonel Berkeley Drummond, of the Fusilier Guards, to be one of the Grooms in Waiting, in the room of the Hon. Sir W. Lumley, who has been appointed Extra Groom in Waiting to her Majesty. The Duke of Cambridge left his residence at Kew on Sunday, on a visit to her Majesty the Queen Dowager, at Canford-house, Dorset. The Duke of Sussex and the Duchess of Inverness left Howick-hall, where the Royal Duke had been visiting Earl and Countess Grey, for Auckland Castle, Durham, on Thursday last, to honour the Bishop of Durham with a visit.—The Archduke Frederick of Austria has returned to town from his tour in Scotland, Wales, and the midland counties. His Imperial Highness came direct from Oxford, where he arrived on Monday last from Bristol, having previously visited Bangor, Llangollen, Shrewsbury, Birmingham, and Cheltenham.

Parliamentary Movements.—Mr. Jas. Stuart Wortley has publicly addressed the electors of Buteshire on the Conservative interest, as a candidate for the seat vacant by the death of the Lord Advocate.—The resignation of Mr. Horsman, Member for Cockermouth, is now said to be certain. The High Sheriff, Mr. Dykes, of Dovenby, is mentioned as the Liberal candidate, and Major-Gen. Wyndham is also likely to come forward on the Conservative interest.

Church Preferment.—The Gazette of Friday announces that the Queen has been pleased to grant to the Rev. George Butler, D.D., the deanery of Peterborough, void by the resignation of the Rev. Dr. Turton.

Official Appointments.—Mr. C. J. Herries, barrister-at-law, and son of the Right Hon. J. C. Herries, is announced as the new Commissioner of Excise, in the room of the late Hon. Berkeley Paget. The death of Sir John Cross has caused a vacancy in the Judgeship of the Court of Review; but it appears to be doubtful whether the office will be filled up. The rumour that Mr. D. Pollock is to be appointed one of the Commissioners of the Insolvent Debtors' Court, in the room of the late Mr. Commissioner Bowen, is said to be unfounded; and it is generally believed in legal circles that the office will be discontinued. The Scotch papers announce that Lord Gillies has been obliged by ill health to tender his resignation as a Judge of the Court of Session; and that Mr. Duncan Macneil, who has been appointed Lord Advocate, in the room of the late Sir W. Rae, has been succeeded in the office of Solicitor-General in Scotland by Mr. Adam Anderson.

Public Pensions.—Her Majesty has granted a pension of 100*l.* per annum to each of the Misses Kennedy, sisters of the late Sir Robert Kennedy, to whose services during the war, as Commissary-general, the Duke of Wellington bore honourable testimony in the House of Lords during the last session of Parliament. Her Majesty has also conferred a pension of 300*l.* a year on Mr. Owen, the Hunterian Professor of the College of Surgeons, as an acknowledgment of his services to science. A statement having appeared in some of the daily papers that the pension to Mr. Wordsworth, the poet, was a retiring allowance from the Stamp Office, the Ministerial papers repeat the announcement that the pension of 300*l.* per annum has been granted by her Majesty from the Civil List.

Foreign.

France.—The Paris papers are chiefly occupied with the failure of the attempt to effect a union of the French and Belgian Customs. It was currently reported, and indeed suggested by the Ministerial papers, that although the idea of the union had, for the moment, been abandoned, the King was resolved that it should be resumed and the measure carried. The citizens of Bordeaux and the Chamber of Commerce of Lyons have sent a petition in its favour, while Elbeuf, Lille, Rouen, &c., warmly oppose it. The rumoured treaty of commerce with this country seems unlikely to be effected; the delegates for the principal manufacturing and commercial cities of France have held a meeting and resolved that "French manufactures cannot bear competition," and that "any treaty of commerce which would diminish the protecting duties by the effect of which they now exist would give them their deathblow."—The reduction of the fleet has already been carried into effect, and twelve line-of-battle ships, ordered by the Minister of Marine to be laid up at Marseilles, have been hauled into the inner harbour.—The Ministerial papers state that, according to the official returns made to Government on the 1st instant, the population of the kingdom of France amounts to 34,494,875 inhabitants, divided amongst 363 arrondissements, 2,846 cantons, and 37,040 communes. The population of Paris, according to the census of 1841, amounts to 912,330; and if the troops of the garrison and strangers are added, to 1,035,000.—The Minister of Commerce and Agriculture has purchased the racing stud of the late Duke of Orleans at Meudon for 55,000, for which a special credit will be demanded of the Chambers. By this means an establishment, which was formerly maintained at the expense of the Prince Royal, will now be kept up by the State.—The contract for the first portion of the works on the proposed railroad to connect Calais and Belgium with Paris has been taken by Messrs. Sherwood, who constructed the Croydon Railway; the contract is for 1,122,000 fr., about 7 per cent. under the Government estimate.—It appears that the celebrated Aguado gallery of painting and sculpture is to be brought to the hammer in the month of March next.—Letters from Quillebœuf of the 8th inst., state that the works for the salvage of the Télémaque were, at noon on that day, crowned with complete success. The vessel had been raised to the surface of the Seine, under the superintendence of Mr. Taylor, the English engineer, and the naval commissioner of Honfleur had proceeded to Quillebœuf, to superintend the extraction of the property which may be on board.

Spain.—The Madrid journals of the 1st inst. have been received, but contain no news of great importance. The rumours of a change of ministry seem not to have consistency, although many dwell on the incompatibility of temper and views between Gen. Rodil and the Regent, and assert that Espartero gives his whole confidence to the ex-ministen Gonzales and the Infante, who are intriguing for a dissolution and their return to power. The ministerial papers declare that the Regent has entire confidence in the Rodil Cabinet; and add that the negotiations between Spain and the other countries were progressing most favourably. Fresh rumours are afloat of a commercial treaty with England being in progress; cottons to be admitted at half the duty paid in England, and given to pay the interest of the debt. It was also said that the Spanish Government is about to despatch a vessel to Fernando Po, to the Philippines, and Monte Video. A decree of the Regent, dated the 3d October, promotes Madame Mina to the rank of Grandeza of Spain as a reward for her services on the night of the 7th October, 1841, when the Palace was attacked by Diego Leon. The Infante Don Francisco de Paulo and his wife are again at issue with the Regent. Some letters speak of a conspiracy to upset Espartero, and to appoint Don Francisco in his place. The Madrid papers are in a state of some excitement in consequence of a rumour that the Regent intends to introduce a law curtailing the liberty of the Press. The Bishop of the Canaries had been sentenced for sedition, by the Supreme Tribunal of Justice, to banishment for two years in a place to be specified by the Government.

Portugal.—We have received Lisbon news to the 31st ult. The latest proposals of the Portuguese Government, which were looked upon indeed as its ultimatum, had been forwarded to London by Lord Howard de Walden. They were not considered satisfactory as far as their contents had transpired, unless they were viewed as merely furnishing a basis for future negotiation. It was noticed with regret, that Mr. Payant, one of the most efficient members of the British commission, had sent in his resignation. The French princes had set off on a tour to Alcobaça, Batalha, and Coimbra. There was a military parade, in honour of their visit, on the 27th, when the king and French princes reviewed about 3,000 troops of the Lisbon garrison, Sir C. Napier being present among the general officers in the royal suite. The Cortes would not meet on the 1st December, the period fixed, but on the 2d of January, the regular day of opening under the charter. Election struggles absorbed the whole attention of politicians. There was little doubt that Government would be defeated in the districts of Alemtejo and Estremadura, and that of the 20 vacancies the opposition would gain nearly half that number.

Belgium.—The speech of the King of the Belgians, at the Royal sitting on Tuesday last, is given at length in the papers. It takes a general review of the domestic and foreign policy of the country, but its details have little interest for the English reader. It states, that the direct negotiations opened during the year with the Cabinet of the Hague have been brought to a conclusion satisfactory for every interest; all the difficulties relative to the separation of both countries have been simultaneously resolved; and that this treaty, a complement of the treaty of London, will be the first object of their deliberations. It is, it says, without intermediate party, and inspired by a mutual sense of conciliation, that the two powers are come to place themselves definitively in a normal situation, and the first consequence of this accord has been the signature of a convention of internal navigation. Among the new laws for consideration, it mentions some propositions for the improvement of legislation, and for the protection of children in manufactories.—A private letter from Brussels, dated the 8th inst., states that on the preceding day, General Vandersmissen had escaped from prison, disguised in his wife's clothes. The lady, an Englishwoman, subsequently effected her escape also.

Germany.—We learn from Berlin, in letters of the 30th ult., that the Assembly of the Provincial States, by a majority of 90 against 8, decided in favour of the project to establish a universal system of Railroads in Prussia, to connect all the provinces of the monarchy together. Notwithstanding this large majority, it appears that a number of doubts and hesitations arose as to the details of the plan. Several members, while they admitted the importance of railroads, insisted upon it that the improvement of the common roads was a matter of at least equal moment. Some were for giving greater extension to the proposed plan, others for confining it within narrower limits. The papers also announce that the King of Prussia has exempted from the censorship all publications of more than twenty sheets, and that Professor Dahlman, who had been banished from Gottingen, is to have a chair at the University of Bonn. His Majesty, during a recent visit to the annual exhibition of pictures at Berlin, expressed his displeasure on seeing a painting representing a crime said to have been committed by an ecclesiastic in the middle ages, the truth of which, however, has been questioned by several historians. The picture was immediately removed. To the directors of the exhibition his Majesty intimated his opinion, that no picture calculated to place any religious sect in an odious light ought ever to be tolerated in a public exhibition. A new cathedral is to be erected in Berlin on the site of the old *Domkirche*. It has been designed by Stuler, after the King's ideas. It is to be a Roman basilica, with two high towers.—The papers advert to the fact, that whilst the fortifications of Rastadt and Ulm are progressing so rapidly, the Baden and Wurtemberg Governments are not the less active in pursuing the projects of railroads, and state that the negotiations have been concluded advantageously for both countries.—In addition to the projected marriage between the Princess Augusta of Cambridge and the Hereditary Grand Duke of Mecklenburgh Strelitz, which we mentioned last week, the German papers state that the Grand Duchess Elizabeth, the daughter of the Grand Duke Michael of Russia is about to bestow her hand on Duke Adolphus of Nassau, and that an alliance between the Grand Duchess Olga and a prince of that branch of the house of Hesse which expects one day to occupy the throne of Denmark, is talked of. Another item of matrimonial intelligence more interesting to English readers, is the announcement that the preliminaries of a marriage between the Marquess of Douglas, the eldest son of the Duke of Hamilton, and a Princess of Baden, have been finally arranged; it is expected that the ceremony will take place in Germany in the course of the present or early in the ensuing month.—A Frankfort paper relates, that a smith called Kirchhof, of the island of Felster, has nearly discovered the quadrature of the circle, and that a favourable report has been made of his discovery.—The distinguished German composer, Frederick William Pixis, died at Prague on the 20th ult., in the 57th year of his age.—From Southern Germany we learn that the Commercial Company of Trieste and the Chamber of Commerce at Venice have resolved on despatching some of their body to the East Indies, to report on the best means of opening a direct trade between Austria and the East, and that the Austrian Government has made a treaty with the Swiss Executive, for the quick and daily conveyance of letters from Milan by the St. Gothard to Zurich and Bâle. It is said that Austria hopes, especially when the railroad is finished between Venice and Milan, that this will be the quickest road from the East to England. It will be, however, more a summer road than a winter one, as the St. Gothard is sometimes stopped, and the steam-boats on the Rhine have this year already ceased to run.

Turkey.—The Levant Mail has brought intelligence to the 19th. It states that M. Boutenieff, the Russian Ambassador, had withdrawn all opposition to the confirmation of the new Sovereign in Servia; reserving, however, his decision, until his own Government should have expressed its opinion. The Divan had appointed Emir Effendi to proceed to Servia, to withdraw the decoration from Prince Michael, and to invest Prince Alexander with it. The Russian Minister had obtained what was considered a triumph, by the dismissal of Prince Ghika from the government of Wallachia. Notwithstanding the Ramazan, several councils had been held by the Ministry, and business continued to be transacted. Mustapha Pacha, Governor of Candia, had been permitted by the Sultan to return to that island, and a steam-boat had been ordered for his conveyance. One of the Sultan's wives gave birth to a daughter, his eighth child, on the 18th ult. Some injury had been sustained in the Black Sea, by a hurricane, on the 9th ult. Private letters mention the extraordinary fact, that Ibrahim Pacha was hourly expected at Constantinople, in company with the ex-Capudan Pacha (Ahmed), who delivered the fleet into the hands of the Pacha of Egypt, and whose pardon had been obtained through the intercession of

Mehemet Ali.—The news from Persia was quite pacific, and the differences with Turkey were expected to be speedily adjusted.—Advices from Beyrout to the 8th ult. state, that the inhabitants of Lebanon were still indulging themselves with the hope of the return of their old Governor, the Emir Bechir; a statement of a very doubtful character. Accounts of a later date have been received through Egypt, which bring news of a collision between the mountaineers and the Turkish forces, near Tripoli, in which the latter were defeated with considerable loss. They state also, that a valuable caravan, bound from Bagdad to Aleppo, had been plundered, and that all European property found among the plunder had been given up voluntarily by the mountaineers to a French merchant at Beyrout, to be delivered to the owners. It is supposed that this is the first step of a well-combined insurrection against the Turkish Government in Syria.

Egypt.—The accounts from Alexandria are to the 16th ult. The Pacha had set out on a journey to Damietta, from whence he intended to proceed on a visit to his farms in Upper Egypt, where the distemper, which had extended from oxen to buffaloes, and even horses, continued to commit dreadful ravages. In consequence of the prevalence of this malady, the Pacha purposes in future to use camels for the plough, instead of oxen or horses. The Pacha is said to have several important schemes in contemplation. The large dock at Alexandria is nearly concluded; and he is about to undertake the construction of locks or sluices on the canal of Mahmoudie, by which means boats may pass directly from Alexandria to Cairo. He next intends to construct a canal between Fostat, Old Cairo, and Kolzim, near Suez, such as formerly existed under the occupation of the Arabs. This canal will be of great advantage in facilitating the transit of goods from India to Europe through Egypt. Another favourite idea of the Pacha, is to place, in the course of next year, steamboats on the White River, for the purpose of exploring the source of the Nile. On the 8th ult. Lieut. Holman, the blind traveller, had an audience of the Pacha, by whom he was well received. Mehemet Ali laughed heartily when he was informed that this gentleman had been arrested in Russia as a spy. On the 15th ult. the Pacha received the Catholic Bishop Salero, who returned thanks on the part of the Pope for the four alabaster columns sent to Rome for the basilica of St. Paul. On the same day were presented to the Pacha, Selim Capudan, who commanded the expedition to the White River three years since, and M. Arnaut, a French artist, who accompanied him. The Nile had risen to the height of 24 3-24 cubits, surpassing last year's inundation, and causing an unusual damp heat, which has been particularly felt from the beginning of the month.

India.—The Overland Mail, with despatches to the 1st October, has arrived this week. The intelligence which it conveys is highly interesting. The decision of the Government to send the armies towards Cabul and to take possession of that place, has given general satisfaction. General Nott, at the head of a chosen army of about 7,000 men, having left Candahar on the 10th Aug., proceeded in the direction of Ghuznee and Cabul, while General England, with the remainder of the troops lately stationed at Candahar, marched without encountering any obstacle worthy of notice back in safety to Quetta. Candahar has therefore been relinquished by the British. The progress of General Nott into the interior of Affghanistan appears to have been thus far fortunate. His corps is described as possessing in beasts of burden, &c., every facility for the accomplishment of the undertaking. Intelligence from General Pollock to the 4th September states that his troops had been eminently successful in their gradual movement to Gundamuck, and in routing some bodies of the enemy, preparatory to making a rapid march on the capital. On the 23d and 24th August, a detachment of about 2,000 of the enemy, having taken up a position inconveniently near to him were attacked by Gen. Pollock and dispersed, after five hours' fighting, their villages and strongholds being destroyed, and their vineyards and fruit-trees cut down. He has left the posts in his rear strongly garrisoned. The arrival in the camp of Futteh Jung, the son and heir of Schah Soojah, who had effected his escape from the prison of Akhbar Khan, was considered, in the present circumstances, an event of great magnitude. On his reaching General Pollock's tent, a salute of welcome was instantly fired. His reception proved the intentions of the General to be favourable to his rights as Sovereign of Cabul. The orders for a rapid move from Gundamuck to Cabul on the 6th or 7th September had, it was said, been issued, but some doubts were entertained of that march being effected prior to the certainty of the approach of General Nott from Ghuznee. Among the rumours was one that Akhbar Khan had been seized by the Kuzzilbashes, who constitute a large portion of the inhabitants of Cabul, and who, in order to save the city from destruction, were in the interest of the British alliance, and for that reason also protected the British prisoners. One item of painful news is that the gallant Sir Robert Sale was seriously indisposed. A report was circulated in Bombay on the 1st of Oct. to the effect that Ghuznee had opened its gates, without any great resistance, on the appearance of Gen. Nott's army. This fact is considered probable, but it requires official confirmation. It seems to be expected in India that the British army, on the junction of the two corps at Cabul, will, subsequently to the liberation of the prisoners, be called upon to take decided steps for introducing a proper system of government and the administration of justice into the Sikh country. The present chief, Shere Singh, is described as being in a most difficult position, finding it almost impossible to control the fanatics and his soldiers, who, although forming a very small portion of the population, have, by their turbulence, long kept the Government at bay. Rumour asserts that Shere Singh had expressed to the supreme Government his desire to become a subsidised Monarch, and to place his country under the management of the British. Lord Ellenborough arrived on the 10th September at Simla, the proximity of which place to Lahore, as well as many other indications, led many to consider the occupation of the Punjaub as probable. In regard to the prisoners, it was reported that all of them have been removed from Cabul to Bameean, near the Hindoo Koosh, with the exception of Captains Troup and Bygrave, who were still with Akbar Khan at Cabul, and Captains Eyre and Anderson, whose families were too ill to be removed. Dr. Campbell is also left in the capital, to attend to the sick. It was likewise rumoured that the Governor-General had announced his resolution to act by the members of Dost Mahomed's family in India in as summary a method, and at once send them off to England, *viâ* Bombay; and that the official notification of this fact "took the Affghans quite aback, and that they stood perfectly aghast." Another report mentions that Akhbar Khan had murdered Captain Troup, but it appears to be entirely without foundation. In the interior of India tranquillity prevails, with the exception of the mountain districts of Bundelkund, whither a strong force was about to be sent in order to put down the disturbances effectually by destroying the forts of the petty chiefs. A severe famine will, it is said, prevent the assemblage of the army of reserve ordered for the Ferozepore frontier under command of Sir. J. Nicholls: nor does it appear that any other employment is intended for Major-Gen. Sir C. Napier in Scinde than the command of the troops now under General England, whom he supersedes.—Some heavy losses by shipwreck have, occurred on the Ganges. Eighteen of her Majesty's 50th were drowned by the swamping of a boat near Cawnpore—the depot of the regiment at this latter locality having lost 50 by cholera in the course of a week. A wing of her Majesty's 62d, on their way from Calcutta to Dinapore, in boats, lost 47 men, including two officers, besides six women and 12 children, in a storm: Col. Reid and his wife were saved. The ship Ricardo had been swamped descending the Hoogley, and ten lives were lost. In Bombay, cholera still prevails to an alarming extent amongst the European troops, her Majesty's 86th having lost about 100 men since their arrival. No fewer than 64 deaths occurred in three days from the same cause on board the steamer Zenobia, while conveying 160 of her Majesty's 28th to Kurrachee; while on board the Semiramis and Berenice 14 others died. The failure of the house of Fergusson Brothers and Co., at Calcutta, was much talked of. The amount of their liabilities in India was stated to be little more than 10,000*l*.

China.—From China we have intelligence of the 26th July. The expedition had been in motion to the northward, but the doubts of reaching Pekin this season appear to be increasing. The prospects of the termination of the operations of the expedition are as vague and indefinite as ever—considerably more so than they were supposed to be when the first fleet arrived in June 1840. It appears that, after the arrival of the reinforcements, the expedition on the 13th of June entered the Yang-tze-Kiang, the most magnificent river of China, on the banks of which the Chinese had erected many strong fortifications, and garrisoned them with large bodies of their best troops. Having passed three days in making observations and in taking soundings, which were seen and permitted by the Chinese, the fleet at daylight on the 16th prepared for action, and on the ships taking their stations the batteries from the shore opened. After a cannonade of two hours, the forts were silenced, and the city of Shang-hoi, a commercial station of some consequence, was captured. No less than 364 pieces of artillery were taken. The Chinese fought well, and served their guns in gallant style. Lieut. Hewitt, R.M., of the Blonde, and two others, were killed, and 25 wounded. The results of this victory have been remarkable. The Mandarins in the two most fertile provinces of China were dreadfully alarmed lest Wang-chow-Foo and Nankin should be taken and sacked, and the mouth of the Great Canal seized. They sent a flying express for a son or some other relation of Howqua, the Hong merchant at Canton, to "hasten to Keangsoo with the rapidity of a shooting star," in order to interpret between them and the British. They exhibited a wish to make terms, but whether with the object of merely gaining time, does not appear certain. The Emperor himself had also issued a proclamation on the miseries inflicted on his people by the "outside barbarians," and stating that though the spirits of his troops were "not equal to the hated race," still, if they will do their duty, they could "yet exclude the barbarian worthless sprouts, sweeping them into the depths of the wide ocean, and restore to the people of the empire the blessings of peace and tranquillity." The fleet has proceeded to Nankin, and there seems no likelihood of a move on the capital till next year. The Chinese are still making vigorous efforts for resistance. At Canton the defences are again strengthened. They have erected a fort of considerable size, some distance below Whampoa, on a parallel branch of the river, and large quantities of cannon are said to be cast for the use of the government, at a foundry near the foreign factories at Shaming, which is ostensibly private property. They have also obtained shells of foreign manufacture for Paixhans guns. The inhabitants of Canton were in great alarm, in consequence of the poisoning of the wells by the Tartar troops. Several of the Chinese had died, and the greatest animosity is said to prevail between them and the Tartar soldiers.

West Indies.—The arrival of the Medway West Indian steamer has confirmed the rumour brought by the British Queen of the loss of the Isis steam-ship. It appears that she was wrecked off Bermuda on the night of the 10th ult. She had been previously on shore at Porto Rico, and was returning to England in company with the Medway, when they encountered a heavy gale with a tremendous sea off Bermuda, and it became necessary to abandon the Isis, and remove the officers and crew to the Medway, which, by the aid of the paddle-box boats, was effected with the loss of only one life out of a crew of nearly 100 persons. It appears that the Tweed, another of the Royal mail steamers, had got on Turk's Island Reef, where she remained for some hours, when her fore-foot was cut completely off; and in forcing her off after being lightened, she backed on the Larne, mail schooner. and carried away part of her head-works; both were left very much shattered at Turk's Island on the 1st Oct.—Another disaster in steam navigation is the loss of H.M. steam-ship Spitfire, which was totally wrecked about 70 miles from Belise, Honduras, on the 10th Sept. She had on board at the time two companies of the 3d W.I. Regiment, but out of 200 souls only one man, a private of the regiment, was lost. She struck on a reef during the night, and in less than two hours was full of water. If she had parted, all hands must have been lost, as there was no land in sight; but fortunately she held together, and the crew and passengers took to the boats on the following morning.—The accounts from the West Indies are not important. The islands had been favoured with abundant rains, and the labouring population continued orderly and free from all reproach, except that at some points they employed themselves exclusively in the cultivation of their own lands to the neglect of those of the old proprietors. At Jamaica, the Earl of Elgin and family continued in the enjoyment of uninterrupted health, and the health of the island generally is noticed.—The advices from Mexico are of a satisfactory nature, even more so than had been anticipated. The extraordinary Congress was assembled for the modification of the Constitution, the object being to make it more in harmony with the feeling of the people. General Santa Anna, the President, had retired to his country seat, where he purposed remaining during the deliberations. The packet brings a large remittance on account of the bondholders, amounting to 78,606 dollars. It has been decreed by the Congress of New Granada, that all the privileges which have heretofore been given to the French and English, in opening a canal through Panama, be forfeited and withdrawn, and the project of connecting the Atlantic with the Pacific be thrown open to the competition of the whole world.

Parliament.

HOUSE OF LORDS.

Thursday.—The Parliament was this day further prorogued until Tuesday the 13th of December.—Shortly before three o'clock, the Lord Chancellor, the Duke of Buccleuch, and Lord Wharncliffe, as Lords Commissioners, took their seats in front of the throne, when the Lord Chancellor directed the Commons to be summoned to hear her Majesty's commission read.—Mr. Ley, clerk at the table, and many of the officers and messengers of the House having appeared at the bar, the Lord Chancellor, in her Majesty's name, announced in the usual form, that the present Parliament was further prorogued until Tuesday, the 13th day of December next. His Lordship did not add, "then to meet for the despatch of business." The ceremony occupied only a few minutes.

CITY.

Money Market, Friday.—The Funds have again advanced this week. Consols closed at $94\frac{1}{8}$ to $\frac{1}{4}$, for money and the account; Three and a Half per Cents. Reduced, $100\frac{1}{2}$ to $\frac{5}{8}$; New Three and a Half per Cents., $101\frac{1}{2}$ to $\frac{5}{8}$; Three and a Half per Cents., $100\frac{1}{2}$: Bank Stock, 173; India Stock, 259: Three per Cents. Reduced, $93\frac{3}{8}$ to $\frac{1}{2}$; Exchequer Bills, 59s. to 61s. prem.

Metropolis and its Vicinity.

Court of Aldermen.—On Tuesday Alderman Humphery was sworn into the office of Lord Mayor, with the usual ceremonies, at Guildhall. The election of an Alderman for Broad-street Ward in the place of the late Sir John Cowan, Bart., took place on Friday, when Mr. John Musgrove, citizen and clothworker, was elected without opposition.

Lord Mayor's Day.—The annual civic procession took place on Wednesday with the usual ceremonies; the effect being somewhat heightened by the rejoicings and illuminations in honour of the birthday of the Prince of Wales. After the public breakfast in the morning, the Lord Mayor went in procession to Westminster, and after taking the required oaths, invited the judges to the banquet. On returning, an accident occurred near Blackfriars-Bridge; one of the men in armour was thrown from his horse and broke his leg. The banquet in the evening was attended by Sir R. Peel, and several of the Ministers; by Lord John Russell, the Judges, the American Minister, and by several members of both Houses of Parliament. After the routine toasts had been given, the Lord Mayor said, that though he differed in politics from her Majesty's Ministers, still he felt assured of their sincere desire to promote the interests of the country. Sir R. Peel returned thanks on behalf of Ministers: after deprecating any indulgence in party politics on these occasions, he said he would merely dwell upon the subject for the purpose of declaring that Ministers were not unmindful of the obligations which office imposes. "Many," he said, "may differ from us as to the mode of effecting the objects we have in view. Few can differ from us as to the propriety of those objects. Our earnest wish is to cultivate the relations of peace, and to extend its inestimable blessings in every way consistent with the permanent and comprehensive interests of the country. The object of our policy is to maintain the lustre of the British arms on every occasion on which an appeal to them may be necessary. The object of our policy is to encourage the demand for labour, and to extend our commercial prosperity. The object of our policy is to maintain the public credit, and that character for public faith which no country can lose without losing also the main foundation of its strength and stability." —Mr. Everett, the American Minister, answered to the toast of the "Ambassadors." He said he heartily responded to the sentiment which Sir Robert Peel had delivered as to the necessity of strengthening the good understanding which now happily prevailed amongst the nations of the world; and he desired to express his gratification at finding the questions which had arisen between his own country and England recently settled on a foundation equally honourable and beneficial to both.—Lord Stanley acknowledged the toast of the "House of Commons." He held it to be one of the highest boasts of their free constitution, that a free expression of individual opinion and of political differences was held compatible with the most sincere private respect. He trusted that whilst the House of Commons promoted the general welfare of the State, and truly represented its great and complicated interests, the parties into which it was divided would ever remember to give to their opponents the credit for sincerity and good intention that each division claimed for itself.—Lord John Russell, as one of the members for London, said that whenever the Crown should think it necessary to appeal to the people, there was no people that would respond to that call with greater energy, greater virtue, or greater perseverance. If it should be our unhappy fate to be involved in the contests of war, no nation could produce men from the naval and military ranks more determined to uphold its honour. And if, as he trusted, it should please Providence to bless us with continued peace, there was no nation that could snatch from us the rewards of its holy victories. His noble friend, Lord Stanley, had said, that though they differed on political subjects, there had been no interruption to their friendship. He begged to acknowledge and confirm the truth of that sentiment. He should always pursue that course in public which his duty pointed out, however painful on some occasions a strict adherence to it might be; but he trusted that the firm declaration of his opinions could never abate or destroy those friendships which were the pride and pleasure of his private life.

Court of Common Council.—On Monday a Court was held for the purpose of electing the High Bailiff of Southwark. In consequence of the preparations in the Guildhall for the entertainment on Lord Mayor's Day, the court was held in the saloon at the Mansion House. The Lord Mayor elect proposed Mr. D. W. Harvey, commissioner of City police; Sir P. Laurie proposed Mr. Wm. Payne, City coroner; and Mr. Sheriff Hooper proposed Mr. W. Pritchard, who held no office under the corporation. The court then proceeded to act in accordance with the standing order, which states, "That in all elections to any office or place in the gift of the court, the number of candidates, if more than two, be reduced to that number by show of hands. The Recorder having put forward each name, the Lord Mayor said that, in his opinion, the show of hands was in favour of Mr. Payne and Mr. Pritchard. This announcement was received by a great many members with evident dissatisfaction. Several of them rose and addressed the chair at the same moment, declaring that the majority of hands were held up for Mr. Harvey in comparison with those held up for either of the other candidates, and calling upon his lordship to take the show of hands again; while the friends of Mr. Payne and Mr. Pritchard were equally strenuous in supporting the opinion of the Lord Mayor, and calling upon his lordship to proceed to the election of one of the two by poll, according to the terms of the standing order above mentioned. After a long discussion, a poll was demanded for Mr. Harvey; but this was overruled as irregular, and at last his lordship, after having consulted the Recorder and Town-clerk, formally declared that in the best of his belief the show of hands was in favour of Mr. Payne and Mr. Pritchard. A scene of great confusion followed. At length, Mr. Harvey's name having been considered by the decision of the Lord Mayor to be set aside in the election, the polling commenced for Mr. Payne and Mr. Pritchard. When the time to which the polling was restricted expired, the scrutineers handed the poll-book to the Lord Mayor. His lordship then stated that the votes were,—for Mr. Pritchard 87—for Mr. Payne 79; and he therefore declared that Mr. William Pritchard was duly elected to the office of High Bailiff of Southwark, subject to the standing orders of the court, and the regulations in the deed. Mr. Wire and several other members believing Mr. Harvey to have been most unjustly excluded from the poll, formally protested against the decision, and others refused to vote.

Death of Sir John Cross.—Sir John Cross, the Judge of the Court of Review, expired suddenly on Saturday afternoon at his house in Whitehall-place. He had been all the morning engaged in his judicial duties at Westminster, and had left home in the morning in good health. On entering the drawing-room on his return from court, he took his seat on the sofa, and in a moment fell back and expired without a sigh. Lady Cross and her daughter were in the drawing-room at the time. Medical assistance was at hand, but death had ensued instantaneously. The Judge was for many years well known on the Northern Circuit as Serjeant Cross.

Public Meetings.—The forty-eighth anniversary, in commemoration of trial by jury, and the acquittal of Messrs. Horne Tooke, John Thelwall, Thomas Hardy, and others, on their trial for high treason, was celebrated on Saturday evening. Mr. T. S. Duncombe, M.P., presided, and about 130 gentlemen were present.—The half-yearly general meeting of the Grand Union Canal Company was held on Monday. The report stated, that the receipts for tonnage, during the 12 months of 1841, amounted to 6,793*l.*, and for the same period of 1842, up to September last, 6,608*l.*, showing a decrease of 184*l.*, which was principally to be attributed to the falling off in the coal-trade to the extent of 10,000 tons. It was also partly owing to the unusually fine spring and summer, and to the disputes among the pitmen for wages. From the accounts, it appeared that the receipts for the last 6 months, for tonnage, &c., amounted to 6,239*l*, and the expenditure, for repairs, materials, and management, to 3,763*l.*, leaving a balance in the hands of the company of 2,475*l.*, out of which the directors recommended a dividend at the rate of 10*s.* per share for the half-year.

Westminster Abbey.—The ceremony of installing Dr. Turton, the newly-elected Dean of Westminster, took place on Tuesday, during the morning service, at the Abbey. At the conclusion of the first service the dean was led in by Dr. Dakin, the precentor, upon which her Majesty's letters patent, signed with the great seal, were read by the chapter clerk, and the usual oath having been administered, Lord John Thynne, the sub-dean, conducted Dr. Turton to the dean's stall, where he continued during the remainder of the service. Though it had been announced by some of the daily journals that the public would be admitted by tickets only, such was not the case, and the choir was filled by a numerous congregation.

Royal Academy.—On Monday, the 7th inst., a general meeting of the academicians was held at the Royal Academy in Trafalgar-square, when Mr. Thomas Creswick, Mr. John Hollins, and Mr. Francis Grant were elected associates of that institution.

Metropolitan Improvements.—The Commissioners of Woods and Forests have given notice, that it is their intention to apply to Parliament early next session for an act empowering them to widen and improve Piccadilly, between Bolton Street and Park Lane, and to take for that purpose so much of the Green Park as will make it of a uniform width of seventy feet; it is likewise intended by the act to attach that portion of the Green Park so used to the parish of St. George's, Hanover Square, so that after the carriage and footway shall be levelled and paved by the commissioners, they shall be henceforth kept in repair by the parish.—A petition to the House of Commons is now in course of signature among the inhabitants of the Strand and Drury Lane, on the subject of the various burial-grounds in that vicinity. The petitioners contend that the overcharged state of the graveyards in the neighbourhood is destructive to health, and therefore pray that Parliament will take such steps, at the earliest possible period, as may lead to the abolition of the present system of interment.—On Saturday the first section of a new system of wood-paving was laid down at the entrance to Lombard Street. It is called by the inventor the "Stereoprism" system, and is about the sixth now on trial in the Metropolis.—The project has been again revived of building a bridge across the Thames from the stairs adjoining Lambeth Palace to the Horseferry-road. The idea was suggested about 16 years back, and some steps were taken for carrying out that object, by the issue of shares in a company called "The Clarence Bridge Company;" but upon application to Parliament for the necessary powers, the bill was so strenuously resisted in the House of Lords, that the design was abandoned. It is now again taken up. Notice has been already given to the clerks of the peace for the counties of Middlesex and Surrey that a bill is to be brought forward in Parliament to authorise the work.

The Nelson Monument.—On Saturday the workmen put up the last layer of stone which forms the column of this monument. Their next operations will be to erect the Corinthian capital, which is to be about 13 feet in depth. The remaining portion of the column will be about 35 feet in height, and is not expected to be finished for six months. The casting of the metal for the Corinthian capital is now in progress at Woolwich Dockyard. The quantity required to form one of the leaves is about four and a half hundredweight: they are cast from the brass of old guns, and several are already finished and bronzed. The whole of the leaves and flutings will be cast at the foundry of the Royal Arsenal.

Thames Tunnel.—This great undertaking is rapidly advancing to completion: the staircase of the shaft on the Rotherhithe side of the river has been finished several days; and during the week the men have been employed in removing the gear which formed a portion of the machinery originally laid down for the excavation of the shaft. The old steam-engine has been removed, and a new and more compact one has been erected for the purpose of drawing off the water which would otherwise accumulate from the land springs. The thoroughfare for foot-passengers is expected to be opened early in January.

Fires.—A serious fire broke out on Friday in the extensive premises opposite Allhallows Church and Calvert's Brewery, the lower portion of which was occupied by Mr. Ramsey, wholesale druggist, and the upper part by Messrs. Dawson and Bolt, drysalters. From the nature of the materials by which the flames were fed, the appearance was for nearly an hour of the most threatening description, and at one time Allhallows Church was in great danger. The origin of the fire was the accidental breakage of a large bottle of sulphuric ether, while the workmen were engaged in packing it by candlelight. The whole of the building was entirely destroyed.

St. Pancras.—At a meeting of the board of guardians on Tuesday, the official report of Messrs. Tremenheere and Twisleton, the assistant poor-law commissioners, relative to the state of the pauper children, was read. The document, which is very voluminous, gives a detailed account of the recent examinations, which were noticed in this Paper at the time. In regard to the interference of Mr. Williams respecting the religious examination of the children, the commissioners remark—"It was the duty of the directors present, in obedience to the spirit of the section of the Poor-Law Amendment Act (the 19th), in which the course to be pursued in reference to religious instruction is pointed out, to prevent any attempts, covert or open, at proselytism, and especially all of the nature and character of the one now in question; and further, that the pauper inmates of their establishment, and the poor of the parish generally, have a right to demand that the children should be protected from such attempts from whatever quarter they may come." The commissioners state their regret that no decided course had been adopted by the directors of the poor, with a view of preventing any such interferences as that of Mr. Williams in future. They ought to have formally recorded their disapprobation of the course pursued by that gentleman; and the commissioners state, "We are of opinion that a formal expression of their opinion would have given a desirable assurance to those interested in the children consigned to their care, and to the public, that no subsequent attempt, from whatever quarter, would be permitted by themselves, or by any future board, to undermine the religious belief of the children, and to desecrate in their eyes the doctrines which are regarded by all Christians with reverence and awe." The report then proceeds at great length with a detailed statement of the acquirements of the children. The general result appears, on the whole, to be unfavourable—the children being described as in too many cases backward and ignorant. There appeared, however, from the evidence to have been an improvement since the present schoolmaster and schoolmistress took charge of their respective schools. Referring to the religious instruction of the children, the commissioners reprobate the system of wearying the children upon Sundays by the repetitions of the Church service which they are obliged to listen to. They state that the rule that the children shall attend church twice every Sunday is conformed to, and is also exceeded in a manner requiring special notice. It appears that, while all attend one morning and one evening service, 80 attend two full morning services (immediately succeeding each other), and 24 are present both at two morning and two afternoon services. All are engaged in religious services or employments, either in church or school, five hours during the Sunday; 24 are so engaged for six hours and a half; none can be said to have more than two hours' relaxation on the Sunday (exclusive of the meals and of the time occupied in going to and returning from church); while 24 have only an hour and a half. The commissioners are also persuaded that, had a regularly-appointed chaplain been charged with the religious superintendence of this workhouse, an injurious habit of this kind could not have been suffered to arise. The condition of the girls appears to be very similar to that of the boys. The commissioners recommend the establishment of an infant school, and conclude by stating—"We are satisfied, also, that much improvement would arise in the management of these schools, and in the results they would produce, by attention to a proper mode of registering the progress, the industrial work done, and the general conduct of each child; by more exact classification, more frequent and accurate examinations, more varied industry, both for the boys and girls; by providing more books, apparatus, and means of instruction and illustration: sources, indeed, of some little additional expenditure, but which, together with what would be required to meet the previous suggestions, would be amply repaid in the benefit to those whose lot had cast them upon public guardianship, for that paternal care which is to regulate the first critical steps of an unfriended childhood."

British-American Company.—Since our last notice of the proceedings of this Company, the Lord Mayor has received a letter from Lord Elibank, whose name had appeared as one of the vice-presidents, giving an explanation of his connexion with it. His Lordship writes as follows: "About eight years ago, or perhaps more, several reports of proceedings were sent to me, having for their object the recovery of certain lands in Nova Scotia, said to belong to the Baronets of that order. The representations were so plausibly made, and seemed to be sanctioned by so many respectable parties, that I felt no hesitation at the time in adding my approval of the measures. It soon afterwards, however, became evident to me that the attempt to recover these lands from the Government was altogether absurd, so that I ceased to feel any interest in the matter, and never took any further notice of their proceedings. By what species of ingenuity the object of recovering lands, said to belong to the Baronets of Nova Scotia, has been made to slide into the present scheme, I am at a total loss to understand. I was applied to to become a vice-president, but to this application I never replied, nor have I in any way sanctioned the chameleon-like appearance which has been adopted."

Mortality of the Metropolis.—The number of deaths registered in the week ending Saturday, October 29, was 967—Males 504, Females 463. Weekly average for 1838-9, 401—Males 467, Females 445. The distribution of this mortality over the different districts was as follows:—West Districts, 140; North Districts, 174; Central Districts, 187: East Districts, 229; South Districts, 237.

Stepney.—On Friday a meeting of the parishioners was called, for the purpose of making a church-rate. From 800 to 1,000 persons were present, the rector in the chair. The churchwardens proposed a threepenny rate. An amendment was moved, however, to consider the subject that day six months, which was carried by a large majority. A poll was then demanded, which was kept open till Saturday evening; when the result gave 725 votes for the rate, and 972 against it.

Woolwich.—On Friday a court-martial was held on board the William and Mary Royal yacht, on a sailor of the Dee steamer, for threatening to take the life of one of the Lieutenants of that vessel. The prisoner was found guilty, and sentenced to transportation for life.

Teddington.—On Sunday morning the inhabitants of the quiet villages of Hampton, Twickenham, and Teddington were alarmed by the breaking out of a fire in the extensive range of premises in the occupation of Mr. Gunner, at Teddington, and about one mile from the town. The first appearance of the fire was about 1 o'clock, at which time one of the persons occupying a small cottage on the estate observed a great body of fire raging in one of the stacks of wheat. He raised an alarm, but before sufficient time had elapsed for any person to reach the spot, the wind, blowing strong at the time, carried the flames across the farm-yard, and in about 10 minutes after the first outbreak, they had spread with such rapidity, as to fire two other stacks of wheat and several waggon-loads of unthrashed straw, two barns, the stabling, the various outhouses and sheds, all of which, with their valuable contents, were very soon one body of fire. The whole of these premises were destroyed, not even the walls remaining. There appears to be no doubt that it was the act of an incendiary. A man named Morris, who had formerly been in Mr. Gunner's employment, has been apprehended on the charge of setting fire to the premises, and been remanded for further inquiry.

Provincial News.

Her Majesty's Journey to Walmer.—On Thursday Her Majesty and Prince Albert, the Prince of Wales and the Princess Royal, left Windsor Castle at a quarter to eight o'clock on their route to Walmer Castle. The Royal party arrived by a special train at the Paddington terminus of the Great Western Railway in about an hour, and immediately took their departure for Walmer. On the arrival of the Queen at Greenwich, a party of the 7th Hussars relieved the escorting detachment that accompanied the Royal party from Paddington. At Dartford a relay of horses was supplied, and a fresh escort provided. The bells of the church rang a merry peal, and the inhabitants assembled in great numbers to witness the Royal progress. Horses were again changed at Gravesend, where a triumphal arch was erected across the New-road. A large number of persons loudly cheered the Queen and Prince; and, after a short delay, the Royal party of three carriages pursued its route through Rochester and Sittingbourne to Canterbury, parties of the 7th Hussars relieving each other at the different stages. At Canterbury, preparations were made on an extensive scale to do honour to her Majesty's visit, and galleries were erected at the West Gate for the accommodation of the principal inhabitants. By two o'clock thousands were congregated from St. Dunstan's along the line selected for the Royal route, as far as St. Thomas's Hill, and Royal carriages, which passed through the city for Walmer with the principal domestics of the Royal household, occasioned a stir every now and then amongst the populace. The windows of every house along the line were occupied by parties of ladies. At twenty minutes to three the Royal carriage, escorted by the cavalry, was discerned from St. Dunstan's, and the gratifying intelligence passed very quickly to the remotest part of the city. Her Majesty soon after reached West Gate, having been loudly cheered in her passage from St. Dunstan's. A Royal salute was immediately fired at the gaol, amidst the acclamations of the multitude. Owing to the thoroughfare being thronged on either side with spectators, the speed of the horses was checked, and the Royal carriages proceeded along the High-street at a slow pace, amidst the cheering of the inhabitants. The pleasure of the people was unexpectedly heightened by the opportunity of beholding the Princess Royal and the Prince of Wales, who were held to the carriage-windows by their attendants at the command of the Dowager Lady Lyttelton. The guard of honour, before the Royal carriages arrived at St. Margaret's Lane, passed to the Fountain Hotel, where relays of horses were in waiting, and, on Her Majesty's arrival, received her with the customary honours. After changing horses, the Royal party immediately resumed its route by the High-street to the Deal-road. The Royal progress, as far as St. Thomas's Hill, afforded a very animated scene. Her Majesty's arrival at Sandwich was also marked with similar demonstrations of joy. The Duke of Wellington, as Lord Warden of the Cinque Ports, received Her Majesty shortly before reaching the town, and preceded the carriages to Walmer Castle, where Her Majesty arrived at four o'clock. The guard of honour were drawn up at the entrance, and received Her Majesty with a Royal salute. The guns were fired from the Castle, and a salute was also fired from Her Majesty's ship *Thunderer*, which had been brought from Portsmouth for that purpose. Her Majesty appeared in excellent health and spirits, although apparently fatigued from the effects of so long a journey. Nothing could exceed the joyous welcome given to the Queen and the Prince by the loyal inhabitants of this part of the country, who had assembled from the neighbouring towns and villages for several miles round. There was scarcely a house without some appropriate emblem or device. The Royal standard, and flags of various kinds, were suspended from the public buildings, across the streets, and from the windows of many of the principal houses. The vessels along the coast were also decked in their gayest colours; and in the evening nearly every house was illuminated. The journey was performed in nine hours and a half.

Agricultural Districts.—The provincial papers state that the nightly appearance of the country is assuming an aspect that must alarm all classes of the community. Incendiary fires are spreading anxiety throughout the agricultural districts, and excite very great apprehension for the safety of outstacked and unthrashed corn. In Hertfordshire last week the yard of a farm at Keysoe, Brook End, belonging to Mrs. Browning, was fired, when 13 ricks, and the homestead, containing 200 quarters of wheat, were reduced to ashes. At Marston, in the same county, a great part of the homestead, and a rick of barley on the farm of Mr. Dinmock, were fired and destroyed. In Derbyshire, on Sinfin Moor, a stack was fired, by a young lad in the employ of the farmer, but the progress of the flames was arrested before any serious damage was occasioned. At Bromham in Wiltshire, a rick of 25 tons, standing apart from the farm in an open field, was totally destroyed last week; and at Burghclere, the whole of Nokehouse farm, including property, corn, and buildings, was fired and burnt to the ground. In Dorset also, a large rick of barley on the farm of Lower Eggerdon, in the parish of Askerwell, near Bridport, was destroyed; and in South Lincolnshire, the contents of the stackyard on the farm of Mr. Foster, at Great Carlton, consisting of 19 stacks, barns, &c., were fired on Monday night, and reduced to ashes. In all these cases there is no doubt that the fires were the work of incendiaries.

Cheltenham.—The adjourned inquiry into the charge of conspiracy and forgery, in connexion with the will of the late Admiral Sir R. Ricketts, was resumed on Friday. The bench was filled with magistrates, and the court was crowded. Mr. Straford, the solicitor, who had not been apprehended on the previous Tuesday, now answered to his name; as did also Lady Ricketts, Mr. Wright, and the other parties indicted—all of whom were present in court. Previously to opening the case, Mr. Straford made some observations relative to a report that he had absconded; and stated that he knew nothing whatever of the application for warrants before he started from Cheltenham, whence he had been called upon very urgent business, and his detention now was of great consequence to him, though not so much so as his reputation. At the time he heard of the charge he was 140 miles distant from the place, but he had lost no time in returning to meet it. The prosecutor, Mr. Newton, then opened his case, and after commenting upon the different bequests said to have been made by the late Sir Robert Ricketts, in the will said to be a forgery, proceeded to discuss a variety of family matters with extraordinary freedom, speaking in no very measured terms of some of the parties concerned. At the conclusion of an address which occupied three hours in its delivery, he proceeded to call his witnesses. Mr. Richardson, surgeon, was examined as to the mental and bodily state in which he considered the late baronet to have been. It appeared that his professional acquaintance with deceased had terminated about two or three years ago; but the examination occupied a considerable time, and entered much into detail. An officer of the Prerogative Court having produced the will, Mr. Harper was called, and examined as to the hand-writing, the different attestations which it contained, and the signatures affixed to two or three other documents, understood to be wills, executed by Sir R. Ricketts previously to that forming the subject of dispute and the prosecution at issue. At this stage of the proceedings, the inquiry was again adjourned. The hearing of the charge was resumed on the following day before a full bench of magistrates. After a long address from Mr. Newton, in which he brought before the Court the private affairs of Sir R. Ricketts, and commented without reserve on his alleged treatment during his last illness, he proceeded to call witnesses. Several persons were called, of whom a great number of questions were asked, entirely irrelevant to the question, bearing on the domestic life of the family of the deceased admiral, and the general conduct of the prosecutor and his wife. On Wednesday morning, when the magistrates had met, proceedings were brought to an abrupt conclusion by the following declaration of the chairman, Mr. J. C. Viner:—"The magistrates have been in consultation from an early hour on their duty in this important case. They have well considered the subject, and have endeavoured to come to a conclusion seriously and faithfully; and they have come to a decision which I think no honourable mind could fail to arrive at. I have it in writing to prevent mistake. It is as follows:—'It is the opinion of this Court, after the most mature consideration of all the evidence produced, that it does not warrant us to proceed any further, and that the case be dismissed.'"

Dover.—The local papers have at length published the letter of the Secretary of State, in regard to the case of Messrs. Fitzjames and Gladstone, the comedians, whose hair was cropped by the gaoler, while confined in the prison waiting to be bailed. The letter is a severe rebuke to the magistrates on all the arrangements of their prison. Sir James Graham states that the prison rule relating to cutting the hair of prisoners has reference to the general arrangements for maintaining the cleanliness of the prison and prisoners—that it is not a rule prescribing the cutting of prisoners' hair on admission, but rather for directing that it is to be kept in such a state as will secure cleanliness. He also expresses his opinion that the keeper is deserving of marked censure, that the surgeon has been wanting in discretion and judgment for not advising the keeper differently than he states he did, and that the turnkey should properly have communicated with his superior officer under such strong and repeated remonstrances on the part of the prisoners, urged in a proper and respectful manner, before he proceeded to enforce the orders he had received. In conclusion, Sir James Graham requests that the magistrates will, as soon as possible, prepare and submit to him, for his approval, a more complete and appropriate set of rules for the government of Dover gaol.

Durham.—It is stated in the daily papers that the Marquess of Londonderry, when following the fox-hounds on Monday, fell from his horse at Two-mile Houses, near Stockton-on-Tees, and broke his right arm. His lordship was immediately conveyed to Wynyard Park, where he received surgical assistance, and is now doing well.

Gloucester.—The local papers are filled with details of a case of wholesale infanticide which has recently come to light. It appears that a woman named Bennett, residing at Ruardean-hill, in the Forest of Dean, being very ill, and probably fearing to die with the undivulged guilt of murder upon her conscience, communicated to the Rev. H. Formby, curate of Ruardean, that she had been the mother of five children, all of whom she had murdered at their birth, and, with the assistance of their father, had buried their bodies at separate spots beneath the floor of the brewhouse and near a barn adjoining her cottage. These statements were confirmed by the discovery of the skeletons, but the woman having since recovered, denies that she ever made the confession. An inquest has been held on the bodies, and been adjourned for further inquiry.

Leeds.—The Leeds papers give statistical accounts of the increasing distress in this great capital of the woollen and flax manufactures. The amount of relief given at the Leeds workhouse in September and October of the present year, is 40 per cent. above the amount paid in 1840. The decrease of wages paid has been still more striking. Taking three of the principal firms who manufacture stuffs in the east ward of Leeds, the wages paid by them in the eight weeks of September and October in 1840, were 1,821*l.*; in 1841, 1,630*l.*; and in 1842, 919*l.*; so that the wages in 1842 were only about half of the wages paid in 1840. Four other firms declared that they paid less by one-third in 1842 than in the corresponding months of 1841. In the same ward three flax-mills have been closed. It is distinctly stated that the reduced amount of wages paid does not proceed from a lowered rate of wages, but entirely from the diminished quantity of work done. These facts afford a sad prospect for the winter.

Llandaff.—Dr. Copleston, Bishop of Llandaff, has just completed the triennial visitation of his diocese. In the charge delivered to his clergy, his Lordship remarked, that on every occasion on which he had met them, matters in which the interests of the Church were involved had invariably engaged their attention. The discord and divisions amongst Christians at present were much to be deplored. In a recent appeal to the various classes of Dissenters, he had endeavoured to persuade them to return to the bosom of the Anglican Church—having more in common than of difference with the Established Church, their return would be hailed by Churchmen. He could with all truth assert that nothing would be wanting on their parts to remove obstacles or hindrances to the bringing about the unity of the Church. In regard to the Oxford Tracts, he said he was well aware they had been praised in unqualified terms by some, and as strongly censured by others. By some they were defended as leading to the enforcement of a stricter discipline in the Church, and by others opposed as tending to introduce the most destructive errors of the Church of Rome. He knew that these publications were of a mixed character, and that they had led many to think seriously and feel deeply on points which, in the last age, had excited little inquiry, and were consequently imperfectly understood. The attention of theological students—the future ministers of the Church—had been directed to the subjects discussed in the tracts. These papers had, in a great measure, displayed the nature of the Church, and had raised an awful sense of the history of man's redemption. These were principles which were never absent from the teachings of the Church, which, he could not but admit, was dormant when those publications appeared. With pain and sorrow, however, he observed the beginning of an evil which would attempt to form within our Church a school or a party in matters of religion. The writers of these Tracts had laboured to restore certain forms of discipline; had called particular attention to redemption; had taught persons to feel a greater value for the bible, which was apt, from its commonness, to be slighted. With regard to the more frequent performance of services, and particularly of the Holy Communion, he was sure that every minister would gladly increase them if necessary. The Bishop concluded by urging on his clerical brethren the necessity of using every endeavour to promote the unity of the Church, and to bring the stray sheep into the fold. He warned them against despondency in spiritual matters, and observed that prejudice having been removed, what they who returned to the Church at first did conscientiously, they would afterwards perform from pious affection.

Manchester.—The local papers mention as another proof of what depressed trade can effect, that the Manchester Zoological Gardens are on the eve of being finally closed. The concern is said to be as completely bankrupt as that of the Bank of Manchester, so far as the loss of the subscribed capital bears out the resemblance.—Further particulars of the disastrous fire which we noticed last week have been published. It is supposed to have been caused by the friction of the machinery in the blowing-room, from which it spread to an adjoining room filled with loose cotton. The loss is said to be little less than 17,000*l.*, the amount of the insurance. At the inquest on the workmen killed, a verdict was returned attributing their death to accidental suffocation, and to injuries received in falling.—The corporation have agreed to a memorial to the Postmaster-general, praying for an alteration in the hours of despatching the Yorkshire mail by railway; the present arrangements interfering with the transmission of new manufactures by the Hull steamers to the north of Europe.—A special meeting of proprietors of the Bank of Manchester was held on Monday, chiefly with a view to determine on the dissolution of the company. The report stated that the direct liabilities of the concern amount to 1,810.462*l.* 18*s.* 11*d.*, the estimated net assets amount to 1,794.214*l.* 11*s.* 11*d.*, showing a deficiency of 16,248*l.* 7*s.* 0*d.* exclusive of the entire capital of 741,030*l.* 0*s.* 0*d.*, and the reserved surplus fund and profit for the year, amounting in the aggregate to 43,609*l.* 8*s.* 9*d.*, and making in the whole a total loss of 800,887*l.* 15*s.* 9*d.* A long and angry discussion ensued; some of the shareholders openly charging one of the late directors with abusing his trust and fraudulently abstracting money from the bank for his private uses. It was also stated that 41,186 shares were held by people in Salford and Manchester, the loss upon which would amount to 410,000*l.*, and that the assets declared to be good in bills on hand and current must in a great measure be extremely doubtful. It was generally felt that the shareholders have a large responsibility beyond their capital in the bank, and the motion for dissolving the company was met by an amendment adjourning the meeting for six months, which was carried by a large majority.

Northleach.—The chairman of the Gloucester magistrates transmitted to Sir James Graham, on the 29th ult., a report on the state of the county prisons, referring more particularly to the case of Charles Beale, whose death in Northleach House of Correction has been of late so much before the public. The chairman expressed the wish of the magistracy that the fullest public investigation might take place respecting the verdict in that case before any authorities delegated by Sir James Graham as Secretary of State, for that purpose, should he deem such a course desirable. Sir James Graham has since communicated to the magistrates, that in consequence of the information he has received relative to the proceedings before the coroner's inquest, he has thought it necessary to appoint a commission, consisting of two inspectors of prisons, a gentleman of eminence in the medical profession, with a barrister, to assist in conducting the examination of witnesses, who will be authorised to make the most full and strict inquiry into the treatment received by the deceased during his confinement in the House of Correction at Northleach, and into the treatment of the prisoners in the same gaol; and after that, to inquire into the state of the different gaols of the county which are governed by the same regulations as that of Northleach.

Peterborough.—We learn by the local papers that on Monday the 18th ult., as the workmen, in cleaning the church at Caistor, near this town, were scraping the whitewash off the walls of the north aisle, they found a large painting, divided into three parts: in the lower is the martyrdom of two female Saints, in the middle part is the entombment of the Saviour, and above are several figures, but the subject intended to be represented is not known. Considering the length of time the painting has been covered by whitewash, it is said to be in a very good state of preservation, and well worth the inspection of the antiquary.

Portsmouth.—The case of the Earl of Errol for an assault on two of the police-constables of this borough, on the 22d September, which we noticed at the time, stood for hearing at the Quarter Sessions last week, but was withdrawn; his Lordship having, through his counsel, explained—"That at the time the assault took place, his Lordship was under an impression that the prosecutor intended to insult him by pushing him backwards; that having since ascertained from prosecutor's own statement, on oath, that he had no such intention, but was acting in the discharge of his duty, his Lordship had no hesitation in expressing his regret at having struck him."

Stafford.—On Tuesday an unusually numerous meeting of the migistrates of this county was held in the Shire Hall, for the purpose of considering the expediency of establishing a police force within the county, according to an Act passed in the session of the 2d and 3d years of the present Queen, entitled "An Act for the Establishment of County and District Constables by the Authority of Justices of the Peace;" and also to take into consideration another Act passed in the 3d and 4th years of the reign of Her Majesty, entitled "An Act to amend the Act for the Establishment of County and District Constables," and to determine whether it would be expedient or not to introduce a measure founded upon its enactment into the county of Stafford, or into one or more divisions thereof. The proposed establishment of a police force was considered by its proposers as necessary in consequence of the late disturbances; while, on the other hand, a very large proportion of the inhabitants of all parts of the county were decidedly opposed to its introduction. The Chairman, after alluding briefly to other matters not immediately connected with the business of the day, called the attention of the meeting to certain resolutions passed at the last sessions. It was then resolved that the present police of the country was not sufficient to maintain the public peace and protect the property of the inhabitants; and a committee was appointed to take the subject into consideration, and report that day. About 40 petitions were then presented by various magistrates from all parts of the county against the establishment of a general county police force, and three in its favour. Lord Sandon then brought up the report of the committee recommending the appointment of a chief constable and the division of the county into three districts. After a long speech entering fully into the local details, he concluded by moving that the report be received. This was carried on the understanding that no magistrate who voted for it should be considered committed to its details. Lord Sandon then moved a declaratory resolution to the effect that it was expedient measures should be taken for the introduction of a more efficient system of police (under the 2d and 3d of Victoria) into the county of Stafford. Alderman Copeland contended that, as regarded the Potteries, there was a general wish for the establishment of the force. At the last sessions the chief bailiffs had been sent as a deputation to request its introduction into the Potteries. After the late lamentable events, he would only repeat what he had said on a former occasion. He did not wish to force a police force upon the agricultural districts, but this he would take the liberty of saying—it would not be efficient, unless it was extended to the whole county. With reference to the petitions presented against the extension of the police to the Potteries, he would say, that in a population of 70,000 they had only 7 constables. It had been said, that in consequence of the efficiency of the local police at Wolverhampton, no disturbances had taken place in that town; but they must recollect that Woverhampton was protected by a troop of cavalry and companies of infantry. He believed that if they had had 50 efficient policemen in the Potteries, no disturbances would have taken place; and, moreover, he would say, that unless they were supplied with them, and that soon, he would not answer for what would occur during the ensuing winter. A long desultory conversation ensued, when Lord Sandon's declaratory resolution was carried without a division. This point being gained, the next contest was in regard to the neighbourhood to which the force should be extended, and from which it should be excluded. Several amendments were moved for the purpose of exempting Wolverhampton from the operation of the act; but they were negatived, and the entire district was included within the range of the measure. The meeting terminated with the adoption of resolutions regulating the salaries of the officers and constables.

Sunderland.—The local papers state that there is now a greater number of applicants for relief, and a larger amount expended for the Sunderland Union, than at any preceding time. Hundreds of men, but lately in respectable circumstances, are now compelled to break stones that they may receive a small amount of parochial relief. Last week no less than 4,500 persons were allowed outdoor relief in this town.

Windsor and Eton.—The annual sale of live stock from Prince Albert's Norfolk Farm took place last week; it was well attended by gentlemen and dealers, and the lots realised very good prices, higher, according to the markets, than those of last year. Some cases of fever having occurred among the pupils (two or three of which have terminated fatally), upwards of 200 boys left for their respective homes during the past week. In all cases of fever manifesting itself at the College, there is generally more alarm created than the circumstances warrant, and it is therefore feared that the school will be broken up this year long before the usual period.

Railways.—The return of the traffic for the week by the principal railway companies is as follows:—Brighton, 4,083*l.*; South-Western, 5,431*l.*; Edinburgh and Glasgow, 1,777*l.*; Midland Counties, 2,603*l.*; Eastern Counties, 918*l.*; London and Birmingham, 15,404*l.*; Northern and Eastern, 1,327*l.*; Grand Junction, 6,753*l.*; Blackwall, 545*l.*; Great North of England, 1,371*l.*; North Midland, 3,896*l.*; Great Western, 12,625*l.*; Greenwich, 773*l.*; Birmingham and Gloucester, 1,862*l.*; Birmingham and Derby, 1,294*l.*; Hull and Selby, 909*l.*—The affairs of the North Midland Company continue to attract attention in connexion with the report of the committee appointed at the General Meeting to examine and report on its prospects. This committee proposed to reduce the yearly expenditure from 44,173*l.* 9*s.* 9*d.* to 26,424*l.* 4*s.* The directors have recently published a very voluminous report to the shareholders, which winds up by proposing to reduce the yearly expenditure by the sum of 11,335*l.* 6*s.* 9*d.*, which the directors admit as practicable. It is now contended, that this admission, and the immense amount of the reduction, being about 25 per cent. on the whole previous expenditure, call for still further investigation into the general management of the company.—The Brighton papers state that the negotiations between the Post-office authorities and the directors of the Brighton Railway with regard to the carrying of the night up-mail on the rail have terminated unsatisfactorily. In consequence of this failure the up-mail will not be conveyed by the last train, and the night down-mail, which during the last month had been carried by the train, is to be taken off, and the old system of sending the bags by coach again resorted to.—The new town of Swindon, situated in the vicinity of the station of that name on the Great Western Railway, has recently been making rapid progress. Out of the three hundred houses intended to be built for the use of the Company's officers and servants at this central establishment, a considerable number are already tenantable. Accommodation is required for about two thousand persons, including guards, policemen, porters, &c., about half of which number will be employed in the engine factory. The whole of the arrangements are similar to those at the central station of the London and Birmingham Railway, at Wolverton.—On Tuesday night, about 12 o'clock, as the luggage-train of the London and Birmingham Railway was proceeding towards London, it was discovered, on arriving at Kilburn, that some of the trucks, which were heavily laden, were on fire. With the assistance of some of the Company's servants and a number of the Metropolitan police, the carriages were speedily unloaded, and the engine, being detached from the train, went on to Euston-square; it speedily returned with a supply of water, and after the lapse of a short period the flames were entirely subdued, but not before a considerable quantity of property had been destroyed.

IRELAND.

Dublin.—The appointment of the Ven. Archdeacon Stopford as Bishop of Meath, and the different law appointments mentioned in our last, were gazetted on Saturday, with the addition of Mr. Stock, Mr. R. B. Warren, and Mr. Keatinge, Q. C., as the three Serjeants-at-law. The weekly meeting of the Repeal Association took place on Monday. Mr. O'Connell spoke at some length, and adverted to a rumour which he stated to be rife, to the effect that a coalition was in contemplation between the Whigs lately in office and the present Government. He could not trace the rumour to any creditable quarter, but he perceived symptoms of such a thing, and among them an article in the *Morning Chronicle* of the 4th November, praising the late Irish law appointments. Several resolutions in favour of the Repeal Agitation were carried, but the proceedings presented little novelty. The week's rent was announced to be 97*l.* 7*s.* 7*d.*—A requisition is in course of signature for the purpose of convening a meeting in order to decide on the best mode of erecting "an enduring testimonial of the esteem in which the labours of the Rev. Father Mathew are held by all classes of the community." Among the names already authorised to be attached to the requisition, are those of the Duke of Leinster, the Marquesses of Anglesey and Conyngham; Lords Duncannon, Talbot de Malahide, Lurgan, Stuart de Decies; the Earls of Gosford, Meath, Shannon, Arran, Wicklow, Charlemont, Charleville, Glengall, Mayo, and Lucan.—The Government model farm in the Phœnix-park has been sold off, the project turning out an entire failure. The loss to the Treasury is about 1,000*l.*, although free of rent and taxes.

Tipperary.—The local papers give fresh accounts of incendiary fires in different parts of this county, and of renewed outrages similar to those which occurred last year. At the last quarter-sessions, a man who acted as a spy to the police was indicted for stealing a gun from the police-barrack at Cappagh. The jury, without leaving the box, convicted him of the felony. The barrister, in sentencing him to transportation, made some observations on the prisoner's calling, which, he said, was "not more dangerous to the innocent victims he might have ensnared, than to justice, of which he was a most unworthy ally."

Limerick.—The extensive mills of Messrs. Denniston and Co., at O'Brien's Bridge, near this city, were totally destroyed by fire on Friday morning last. The flames raged with so much fury, that the premises were burned down before the engines could arrive, and were visible for many miles.—The season for the provision markets commenced last week; the prices of horned cattle were fully 25 per cent. lower than those of last year, and a corresponding reduction took place in all other articles of consumption.

SCOTLAND.

Edinburgh.—We learn from the Scotch papers that Lord Gillies has been obliged by ill-health to tender his resignation as a Judge of the Court of Session. The vacancy thus caused has not been filled up, but Mr. Duncan Macneil, who has been appointed Lord Advocate in the room of the late Sir W. Rae, has been succeeded in the office of Solicitor-General by Mr. Adam Anderson.

Glasgow.—On Wednesday week, the Marquis of Breadalbane was formally reinstalled Lord Rector of Glasgow University, in presence of the various professors and the students attending the different classes in the institution, who compose his Lordship's constituents. The Marquess, after the usual ceremonies had been completed, addressed the students, advising them, at their future elections, to select a gentleman connected with their country rather than from a distance, and likewise to allow no political feeling to interfere with this choice. In his opinion, the politics—the general politics—of the country ought not to come within the walls of a place devoted to study and science; and, therefore, he advised them to select a Lord Rector from the north side of the Tweed rather than from the other, and in the object of their choice to look for those qualifications which will lead him to take an interest in their affairs, and be of some use to the University."—The extensive works which for three or four months past have been going on at that part of the Monkland canal which unites the Forth and Clyde with the Monkland are on the eve of completion. They have totally changed the appearance of that quarter. From Port Dundas, eastward to St. Rollox bridge, there has been constructed on either side a substantial wall and breastwork, where the largest vessels that enter the canal may load or disembark. On the south side this wall is almost continuous along the whole length of the line, affording excellent harbourage at almost every point. The canal has been widened, and spacious docks for float timber, &c., have been constructed along the line. The works were so far advanced at the close of the week, that it was thought probable the water would be let into the canal in the course of a few days. The Garnkirk and Glasgow Railway Company have commenced their preparations for laying down a continuation of their line westward from the present terminus to the neighbourhood of Port Dundas, running nearly collateral with the canal.

Elgin.—The Inverness papers inform us, that the petition of the inhabitants of Elgin to the Commissioners of Woods and Forests, relative to their rights of sepulture within the venerable ruins of the cathedral, has met with a favourable answer.

Perth.—It is said to be the intention of the nobility and municipal authorities of Perth, to perpetuate the visit of the Queen to that city in her late progress to the Highlands, by erecting a triumphal arch at the entrance to the burgh from the Bridge of Earne, where the temporary arch was erected by the platform at which the city keys were presented by the Provost: it is to be of stone from Craigleith quarry. The Council have voted 100*l.* from the city funds, and the members individually have come forward with subscriptions to defray the expenses of the erection. The Earl of Mansfield has also given 25*l.* in furtherance of the object.

Ayr.—Several new disturbances have taken place in the vicinity of the coal-pits in this neighbourhood, caused by the turn-outs annoying and intimidating the new men at the different pits. The consequence of these proceedings has been a cessation of labour about most of the pits in the vicinity of Ayr—the men preferring to give up their employment rather than risk their lives. Petty thefts are also becoming numerous in the various districts in which the strike continues. For the protection of property, watchmen have been stationed in several places, and the Yeomanry has been called out with a view to prevent any further outbreak.

THEATRICALS.

Drury Lane.—"The Duenna" was performed at this theatre on Saturday evening. It was produced with all the care bestowed by Mr. Macready in getting up every piece performed at his theatre; but the success of his efforts is necessarily limited by the powers of his company. Madame Vestris appeared as *Don Carlos*, the part so well known in connexion with Mr. Braham. It was not a part for a female performer, and its effect was consequently much impaired. Miss Romer was *Donna Clara.* The acting was better than the singing, and though the general effect was agreeable, it was not the result produced in the older days of ballad opera, when Miss Stephens and Mr. Braham sustained the principal character.

Covent Garden.—The *Tempest* was produced on Wednesday evening for the first time at this theatre from the text of Shakspeare, except during the management of Mr. Macready, whose splendid revival of it is in every one's recollection. It was brought out with great care, and with considerable attention to decoration and scenery; but it wanted the pictorial and poetical effects which belonged to the first revival. Mr. Vanderhoff appeared as *Prospero*, Miss Vanderhoff as *Miranda*, Mr. C. Pitt as *Ferdinand*, Mr. Bartley and Mr. Harley as *Stephano* and *Trinculo*, and Miss Rainforth as *Ariel.* At the conclusion the principal performers were called for; and the play was announced for repetition.

Haymarket.—Mrs. Fitzwilliam made her re-appearance at this theatre on Monday night for the first time since her return from America, and English playgoers proved they had not forgotten one of their most deserving favourites. The first piece chosen was the comedy of "My Little Adopted," in which Mrs. Fitzwilliam sustained the character of *Lauretta Seymore* with all that freshness which used to delight the audience before she started on her transatlantic tour. In the second piece she appeared in a new monopolylogue, called "The Belle of the Hotel," written for her by Mr. Buckstone, and founded on the "notions" they have picked up during their sojourn with brother Jonathan. The scene, as imparted by the title, represents an American hotel, and our heroine, after reprimanding the prompter for prematurely ringing up the act drop, presents herself on the stage in her own proper person, as Mrs. Fitzwilliam, and, in a few rhyming lines, informs her audience that she is about to offer to them some slight sketches of character picked up in the antipodes. She then appears in a succession of characters: an old Scotch woman, *Mrs. Macscribblescrabble*, who commits to her scrap-book a series of sagacious but not very original observations; then an Irish chambermaid, and an American fireman, who sings snatches of political songs; then *Signora Amoroso*, a romantic dramatic genius, who has flown to the States with her singing master, *Signor Amoroso*; then as *Mademoiselle la Petite Sylphide*, a corpulent dancer from the Opera at Paris. This young lady dances a "Pas à la Sylphide" with comic awkwardness and complacency that excited much laughter and amusement. At the close of the piece Mrs. Fitzwilliam was loudly called for and cordially welcomed by the audience.

Adelphi.—Two new pieces were produced on Monday with great success. The first was a light little farce from the French, "Anthony and Cleopatra," in which Mr. Wright and Miss Murray kept the house in a roar for the brief duration of one act, without the assistance of any other performer. The next piece was "Alma," a sort of musical extravaganza, a burlesque of the successful ballet which had so long a run last season at the Opera House, but, by the introduction of Mr. Bedford's mock heroics, and Mr. Wieland's diablerie, the "Alma" of the Adelphi, though not, perhaps, quite so grand, is at all events more amusing than its prototype. It contained several pointed hits at the passing events of the day, and promises to have a long and successful career.

Miscellaneous.

Mortality in England and Wales.—The quarterly table of the mortality in 114 of the principal districts of England and Wales has just been published. It embraces nearly all the large towns as well as the more rural districts, and therefore affords a fair criterion of the rate of mortality throughout the kingdom. Besides giving the number of deaths (and the causes of them), registered during the 13 weeks previous to the 30th of September, it also gives the average of deaths in the same quarter of the four preceding years, and thus shows the general and local increase or decrease in the mortality. The total number of deaths registered during the quarter for those 114 principal districts (there are 447 registrars for all the country) is 39,069, out of a population of 6,534,535. Exclusive of the Metropolis, the number of deaths is 28,050, out of a population of 4,663.808. The number registered in the Metropolis during the quarter was 11,019, out of a population (June, 1841) of 1,879,727. As compared with the average number of deaths in the same quarter of the four preceding years, 1838, 1839, 1840, and 1841, there is an increase in the past quarter of no fewer than 2,474 deaths, the average for those four years having been 36,595, while the deaths in the past quarter have been, as above stated, 39,069. This includes the Metropolis, where, however, there were two deaths in the past quarter less than the average of the four preceding years; so that the increase of 2,474 deaths is to be accounted for in the country. The increase of population, however, has to be taken into account, as reducing the proportionate increase of deaths. The population increases in the town districts about 1·74 annually, which would reduce the average of deaths applicable to the summer of 1842 from 39,069 to 38,208, or 861 deaths less than those actually recorded. Still, this would leave an increase of deaths upon the quarter of no less than 1,613. The deaths registered for the 114 districts in the first quarter of the present year amounted to 44,479. In the second (or spring) quarter they were 38,190. Thus there were 879 more deaths in what is called the summer quarter (ending September 30) than there were in the spring quarter. The mortality was 2 per cent. greater than the summer average, which is at the rate of 23 deaths annually in a population of 1000. In the last summer quarter, ending September the 30th, the mortality was at the rate of 23·4 annually in 1,000—namely, 23·0 in the Metropolitan districts, and 23·6 in the provincial towns. The following are some of the towns in which the most remarkable increase of deaths has taken place:—In Brighton 310, or 70 above the average (240) of four former years; Plymouth 343, or 178 upon 165; Redruth 288, or 77 upon 201; Penzance 283, or 84 upon 199; Clifton 426, or 115 upon 311; Cheltenham 259, or 79 upon 180; Liverpool 1,956, or 158 upon 1,798; Tynemouth 360, or 80 upon 280. The undermentioned towns in the manufacturing districts present the following results:—In Kidderminster the number of deaths in the last quarter was 172—an increase of 63 upon 109, the average of former years; Dudley 568, or 147 upon 421; Walsall 243, or 91 upon 152; Wolverhampton 508, or 87 upon 421; Nottingham 429, or 79 upon 350; Preston 482, or 73 upon 409; Chorlton 679, or 214 upon 465; Manchester 1,614, or 191 upon 1,423; Bradford 820, or 115 upon 705; Leeds 1,133, or 114 upon 1,019. At Rochdale, Sheffield, Huddersfield, Merthyr Tydvil, Newtown, and Wrexham, the deaths were much under the average of the four preceding years. The registrars almost universally attribute the increase of deaths to the prevalence of scarlatina and bowel complaints, in which they include diarrhœa and cholera. The children have been the chief sufferers. In St. Anne's, Nottingham, out of the 133 deaths registered, 52 were of children under one year of age. At Chorlton 28 children died of diarrhœa, of whom 23 were children of the working classes. It is amongst the working classes, the registrar says, that the disease has been most fatal. The increased mortality at Brighton has been chiefly amongst young children. In the Metropolis, as has been said, the deaths from all causes exhibit a decrease of 2 on the average of former years. The decrease of deaths from epidemic, endemic, and contagious disorders, has been 251. Deaths from small-pox exhibit a decrease of 251; from typhus, of 153. On the other hand, there is an increase of 260 from diarrhœa (total from this disease 477), and from cholera of 74. In other respects the Metropolis returns present no striking features.—*Times.*

American Slavery.—In describing his visit to Richmond, Mr. Dickens gives the following account of slavery in that city:—"On the following day I visited a plantation or farm of about twelve hundred acres, on the opposite bank of the river. Here again, although I went down with the owner of the estate to 'the quarter,' as that part of it in which the slaves live is called, I was not invited to enter into any of their huts. All I saw of them was, that they were very crazy, wretched cabins, near to which groups of half-naked children basked in the sun, or wallowed on the dusty ground. But I believe that this gentleman is a considerate and excellent master, who inherited his fifty slaves, and is neither a buyer nor a seller of human stock, and I am sure, from my own observation and conviction, that he is a kind-hearted worthy man. The planter's house was an airy rustic dwelling, that brought Defoe's description of such places strongly to my recollection. The day was very warm, but the blinds being all closed, and the windows and doors set wide open, a shady coolness rustled through the rooms, which was exquisitely refreshing after the glare and heat without. Before the windows was an open piazza, where, in what they call the hot weather—whatever that may be—they sling hammocks, and drink and doze luxuriously. I do not know how their cool refections may taste within the hammocks, but, having experienced, I can report that, out of them, the mounds of ices and the bowls of mint-julep and sherry-cobble they make in these latitudes, are refreshments never to be thought of afterwards in summer by those who would preserve contented minds. There are two bridges across the river—one belongs to the railroad, and the other, which is a very crazy affair, is the private property of some old lady in the neighbourhood, who levies tolls upon the townspeople. Crossing this bridge, on my way back, I saw a notice painted on the gate, cautioning all persons to drive slowly—under a penalty, if the offender were a white man, of five dollars; if a negro, fifteen stripes. The same decay and gloom that overhang the way by which it is approached, hover above the town of Richmond. There are pretty villas and cheerful houses in its streets, and nature smiles upon the country round; but jostling its hand-home residences, like slavery itself going hand-in-hand with many lofty virtues, are deplorable tenements—fences unrepaired, walls crumbling into ruinous heaps. Hinting gloomily at things below the surface, these, and many other tokens of the same description, force themselves upon the notice, and are remembered with depressing influence, when livelier features are forgotten. To those who are happily unaccustomed to them, the countenances in the streets, and labouring places too, are shocking. All men who know that there are laws against instructing slaves, of which the pains and penalties greatly exceed in their amount the fines imposed on those who maim and torture them, must be prepared to find their faces very low in the scale of intellectual expression. But the darkness—not of skin, but mind—which meets the stranger's eye at every turn; the brutalising and blotting out of all the fairer characters traced by Nature's hand, immeasurably outdo his worst belief. That travelled creation of the great satirist's brain, who, fresh from living among horses, peered from a high casement down upon his own kind with trembling horror, was scarcely more repelled and daunted by the sight, than those who look upon some of those faces for the first time must surely be. I left the last of them behind me in the person of a wretched drudge, who, after running to and fro all day till midnight, and moping in his stealthy winks of sleep upon the stairs between-whiles, was washing the dark passages at four o'clock in the morning; and went upon my way with a grateful heart that I was not doomed to live where slavery was, and had never had my senses blunted to its wrongs and horrors in a slave-rocked cradle."

The Chinese.—The following extract from the letter of a French merchant has been published in the Paris *Constitutionnel*:—"For more than a year we have been without news from France. The French frigate Erigone has sailed for the north of China. Her presence in the neighbourhood of Canton will long be remembered, the conduct of the Captain having been most generous and handsome towards the English, notwithstanding they made most offensive remarks respecting the presence of his vessel. You will, of course, have heard of the interview which took place between the high functionaries of the viceroyalty of Canton and the commander of our frigate. This interview was first requested by the Chinese, for the purpose of talking over their affairs. A letter of several pages, filled with hyperbolical phrases, on the divine qualities of their Emperor, the bravery of their soldiers, and the power of their arms, &c., signed by the Viceroy of the province of Canton, who is said to be a near relation of the Emperor, was brought by a party of mandarins, escorted by soldiers dressed in all the colours of the rainbow. The crew of the French frigate received the Chinese deputation with military honours; the officers in full uniform introducing the mandarins into the chamber of council, where they were received by the commandant. Our countrymen did the honours with a cordiality, frankness, and respect, which elicited the most flattering compliments from the mandarins. Two interviews took place a few days afterwards on shore, at a little pleasure-house which the government possesses, a few leagues from the sea, in a delightful situation. The Viceroy was accompanied by the great dignitaries of the province. I can't tell you what passed there. There was on the part of the Chinese much of that gravity and diplomatic dissimulation in which they excel, and the French displayed a mixture of curiosity and art which made the meeting very amusing. The Viceroy had the most extraordinary ideas about our country, its size, wealth, armies, navies, and manufactories, &c. The name of Napoleon was not unknown to him. He knew that he was a great warrior, but fancied that he was one of the heroes of fabulous times. The Viceroy, for what reason I know not, tried to prove to the Commandant that China was extremely poor, and that the English had ruined Canton and Macao. It is quite true that Macao has suffered very much since the English established themselves at Hong-Kong, where they have concentrated all their commercial operations. The smuggling trade has never been so brisk. Opium is purchased by the Chinese with more avidity than ever, and English goods sell extremely well. Macao is almost ruined by this illicit commerce. It will long form an *entrepôt* for Portuguese, Dutch, American, and French merchants, although they know that they cannot contend with the English of Hong-Kong. At the second interview, the Chinese and French parted mutually satisfied. The commander of the frigate, M. Cecil, succeeded in giving the Viceroy a high opinion of the power, the people, and the armies of France; but the Viceroy declined to accept a pressing invitation of the commander to visit the Erigone. Distrust is a natural principle of the people. A maxim of Confucius warns them against becoming familiar with strangers."

Niger Expedition.—By letters from the coast of Africa to the 15th of August, we learn that her Majesty's steamer Wilberforce had returned to Fernando Po, from the ascent of the river Niger to the model farm of the African Civilisation Society, bringing away all the people and property left there by the Niger expedition. The natives had not molested the people at the model farm; but Mr. Carr, who had attempted to ascend from the coast in a canoe, had, it was supposed, been murdered.

New Australian River.—A discovery has been made lately in the northern part of Australia of a new river; and in a country where there is such a paucity of these sources of fertility, and means of internal communication, the discovery becomes one of no small importance. The discovery of this river, named, in honour of our prince, the "Albert," was made by her Majesty's surveying ship the Beagle, and the account given of it is in a letter from one of the officers aboard, and which appears in the *Swan River Inquirer*. The inhabitants were stated to be neither numerous nor troublesome. The temperature varied from 52 to 82; and as this was in the mid-winter month of July, forty feet above the level of the sea, it is easy to see that the summer heat would be oppressive to European constitutions. Nothing else, however, could be expected in the parallel of ten degrees. The whole distance across the immense island or continent, from the Gulf of Carpentaria on the north, is 908 miles, of which 300 miles have been explored northward from Adelaide by Mr. Eyre. The "Albert" admits of tracing nearly a hundred miles in a direction to the south, so that there remain still about five hundred to explore.

Law.

COURT OF QUEEN'S BENCH—*Greville* v. *Chapman*.—This was an action for the publication of an alleged libel, which was tried at the last assizes for Surrey, before Lord Abinger, when a verdict was found for the plaintiff. The pleas put in were pleas of justification. The Solicitor-General now moved for a nonsuit or a new trial. The declaration stated, that there was a race at Epsom called the Derby, which was run for in the present year, and for certain stakes amounting to the sum of 9,100*l.*; that certain horses named Attila, and Robert de Gorham, and others, ran at the race; and that Attila was the winner: that a horse named Canadian was entered for the race; and that the owner of a horse so entered was entitled, by the rules of the Jockey Club, to withdraw him before the race if he thought fit; that after Canadian was entered he was purchased by the plaintiff, who intended him to run, but shortly before the race he was discovered to be lame, and was therefore withdrawn. The declaration then alleged that the plaintiff was a member of the Jockey Club, and that one of the rules of that club was, that if a person betted againt a horse and that horse was withdrawn, such horse was considered to have lost, and the bets in his favour were paid to those persons who had betted against him. The alleged libel was then substantially stated in the declaration, by which it was represented that the plaintiff, before purchasing Canadian, had betted largely against him, and withdrew him after the purchase on the ground of lameness—"a *lame* excuse being better than none." The alleged libel then proceeded to ask certain questions, which it declared would show, unless the answers to them were satisfactory, that the transaction was a robbery, and would be an everlasting stain on the character of those engaged in it. The learned Solicitor-General then contended that no sufficient cause of action was shown on the declaration. The facts of the plaintiff's betting against the horse, afterwards purchasing, and then withdrawing him, were not denied; but as to the lameness, evidence was adduced upon that point, and the only question was, whether, upon the circumstances stated in the declaration, the plaintiff could properly maintain the action. The only charge against the plaintiff was dishonourable conduct as to the bets, and not with respect to the race, for it was perfectly clear that the owner of a horse might withdraw him at any time before the race, without being considered guilty of any impropriety. That rule of the Jockey Club had certainly excited the astonishment of every person who was present when it was stated at the trial; but it was the rule, and so far there was no charge against the plaintiff. It was alleged, however, that although the rule was as he had stated, it was considered dishonourable to act upon it, and upon that point the learned judge had received evidence which ought not to have been admitted. But some of the evidence was admissible; still, as the transaction itself was illegal, any imputation upon a person for certain conduct in the course of such transaction could not be the ground of an action for libel, and therefore this action could not be maintained. The race itself was legal, as the stakes were above 50*l.*, but the betting was illegal. The opinion of the Court upon that point was shown in the case of "Shillito *v.* Teague." The Court said that point was settled, but asked what evidence there was as to the plaintiff's being a winner or loser by the horse being withdrawn. The Solicitor General said that Colonel Peel was called on the trial, and stated that he and the plaintiff had a joint betting-book, and that he had lost by the horse being withdrawn. In the case of "Morris *v.* Langdale," which was an action for slander, it was stated, that if it had been shown that the words related to an illegal transaction, the action could not be maintained. The cases of "Hunt *v.* Bell" and "Yrissari *v.* Clement" were to the same effect. The Court granted the rule for a nonsuit, on the ground of the illegality of the transaction. The Solicitor-General then applied for a rule for a new trial, on the ground that the learned judge permitted a question to be put to one of the witnesses, which he contended was in fact matter of consideration for the jury. The question was, whether the witness did not think it dishonourable for a party to withdraw a horse against which he had betted?—Rule granted.

COMMON PLEAS.—*Smith* v. *Vanderlin*.—This was an action to recover the sum of 50*l.* upon a promissory note made by the defendant as a member of the Westminster Loan Investment Company, carrying on business in Adam street, Adelphi, and discounted by the plaintiff for that company. It appeared by the evidence that the defendant became a shareholder of the Westminster Loan Investment Company in July 1841, and that he continued a member of such association down to the period of June 1842, when it appeared, that in consequence of certain attacks made upon it by *The Times* newspaper, and an exposure before Sir P. Laurie, the parties who had made deposits withdrew them, and the company was dissolved. Capt. Smith, the present plaintiff, had discounted the bills of the company to the amount of 20,000*l.*, and he now sought by this action to fix the defendant, who was a shareholder, with the amount of one of such bills. Mr. C. K. Nicholls, who appeared to be the ostensible manager of the concern, and a Mr. Simpson, the secretary, both proved that they had authority to endorse bills of exchange in the name of the company to any amount. In his examination by counsel, the former witness occasioned some amusement, by stating that he had attended "the *conversationes* of Sir P. Laurie at Guildhall, and that after those exhibitions the company ceased to exist." More documentary evidence was adduced, in order to fix the defendant with his liability as a shareholder. Mr. Justice Cresswell summed up the case, and stated to the jury that he considered the defendant bound by having signed the deed and become a shareholder, and that he had no right to complain of any liability thrown upon him, as he had assisted to blow the bubble. The jury found a verdict for the plaintiff for the amount claimed, with interest.

BAIL COURT.—*The Queen* v. *Captain Douglas*.—Mr. Chambers applied to his Lordship for a writ of *habeus corpus*, to bring up the body of Captain Douglas, who is now in custody on a charge of having deserted from the service of the Honourable East India Company. The learned counsel at great length detailed the facts of the case, which were recently published in our police report, and contended that desertion meant, in law and reason, an actual and final abandonment of the service, without any intention of returning to it, and that neither by the laws of our own nor those of any other country was it ever intended that the several penalties of death, transportation, or other punishment awarded against deserters should be inflicted upon a person who had merely overstayed his leave or gone from the place for which the leave had been obtained to some other locality. It had never before been contended that a person who upon receiving leave to go to the Cape had gone on to Madeira was to be treated as a deserter, or that a soldier would become liable to the penalties of that offence because, having a furlough for Birmingham, he had proceeded on to Manchester. Upon all these grounds the learned counsel hoped that the writ would be granted, and that to meet the emergencies of the case, it would be made returnable immediately, as the authorities intended to remove Captain Douglas from the prison in which he was now confined at Chatham. Mr. Justice Patteson granted the application.—In the Court of Queen's Bench on Thursday, the Attorney-General mentioned this case, in reference to the *habeas corpus*, and stated that Capt. Douglas was now in Military custody. He understood that his Learned Friend who appeared for the Captain desired time, and wished the discussion on the *habeas corpus* not to be brought on that day. Mr. Chambers said that he understood both sides wanted time. His object was to obtain and present to the Court the depositions on which the captain had been committed, and these were not ready now. It was understood that the Learned Counsel should have liberty to bring up the depositions. The hearing of the case was then postponed. Mr. Chambers then said that the captain was now in military custody; and he asked the Court, as such custody prevented his legal adviser from having free access to him, to order the custody to be changed. Lord Denman said the Court could not interfere in that matter at present.

Bainbridge v. *Booth*.—The defendant in this case had promised to give a cup, of the value of fifty guineas, to be run for at the last Bedford races upon certain conditions. The plaintiff in the action alleged in his declaration that he had complied with the conditions and won the race, and demanded the cup, and that the defendant refused to give it. The defendant pleaded several pleas, amongst which was one alleging that the matter in difference had been referred by the parties to the decision of two persons to be named by the Duke of Bedford; that his Grace had nominated Colonel Anson and Mr. G. Payne to decide the controversy; and that they had given judgment in favour of the defendant. The plaintiff in his replication denied this appointment of referees, and the case was afterwards referred to Mr. Crommelin and Lord C. Russell, of whom the former gentleman was nominated by the plaintiff and the latter by the defendant. These arbitrators were empowered, in the event of their not being able to agree upon the subject, to refer the matter to the final adjudication of an umpire, and in pursuance of this authority they appointed the Hon. Captain Rous for this purpose. The hon. and gallant umpire having entered upon the performance of his functions, made an award in favour of the plaintiff. Mr. Byles, upon the part of the defendant, now applied to the court for a rule calling upon the plaintiff to show cause why the award should not be set aside, upon the ground of the impropriety of the umpire's conduct in the matter of the umpirage. In support of the motion the learned counsel adduced some affidavits, of which one was made by Mr. Booth and another by Lord Charles Russell. The general result of these statements was, that at the time appointed for the hearing of the case before the umpire, the Duke of Bedford, who was a material witness for the defendant, happened to be in Devonshire. The defendant in these circumstances requested an adjournment of the hearing until his grace could attend and give his testimony as to the fact of the case having been originally referred to the gentleman who had been nominated by the Duke. It was represented to the umpire that this evidence was indispensable to the case of the defendant, in relation to the plea already mentioned, and upon which issue had been joined. The umpire, however, refused to adjourn the hearing. He said that there was no use at all in referring the matter to him, if he was to be influenced by any opinion which the original arbitrators might have expressed or entertained upon the subject. He said that he had in his own head a compound of racing and seafaring law, upon the principles of which he should cut short the case, and decide it in a summary manner. He therefore proceeded to make an award in favour of the plaintiff upon the issue in question, whilst he refused to hear the evidence which the defendant had to adduce upon the subject of the issue. Mr. Justice Patteson granted the rule.

Criminal Information.—The Queen v. *Thomas Badger, Esq., and the Rev. H. W. Cartwright*.—Mr. Erle applied for a rule, calling upon Thomas Badger, Esq., and the Rev. Henry William Cartwright, two magistrates of the county of Stafford, to show cause why a criminal information should not be filed against them for having, from improper and corrupt motives, refused to admit to bail the Rev. A. O'Neill, a dissenting preacher, who was brought before them, charged with having attended an illegal meeting, and who had been ordered to find bail for that offence, himself in 200*l*, and two sureties in 100*l.* each, and directed to give 24 hours' notice of bail, and in the mean time to stand committed. The learned counsel stated, that from the affidavits on which he founded his motion, it appeared that after Mr. O'Neill had been so committed in default of bail, Mr. Collins, his attorney, waited upon the defendants, who were the presiding magistrates of the day, and gave them notice of his intention to offer as bail for Mr. O'Neill two persons of the name of Page and Truman, both of whom were members of the town council of Birmingham, a situation which no person was qualified to fill unless possessed of property to the amount of 1,000*l.* There could, therefore, be no doubt of the responsibility of the parties so tendered, and their possession of property to a much larger sum than the amount of bail required; nevertheless, the defendants refused to accept their bail, on the ground that they were connected with the Chartists. A long conversation on the subject took place between Mr. Collins and the defendants, and of which the learned counsel read a report that has already appeared in the public prints. Mr. Badger, in the course of that conversation, told Mr. Collins that the application to admit O'Neill to bail came through a suspicious channel, he (Collins) being then himself under recognisances for attending a Chartist meeting, and added that he had no proof that the persons whose names had been handed to the bench were willing to become bail for O'Neill. However, notwithstanding these remarks, Mr. Collins gave the required notice of 24 hours of his intention to offer the above parties, Messrs. Page and Truman, as bail for O'Neill, and at the expiration of the 24 hours he attended with them before the defendants, in order that they might enter into the required recognisances. On this occasion another long conversation took place between Mr. Collins and the defendants, (the learned counsel here read a report of that conversation,) in the course of which the defendant Badger said he must take time to consider before he decided whether the proffered bail should be accepted or not. In the mean time he would put a few questions to the proposed bail. He then asked Mr. Page whether he had not presided at a Chartist meeting which was held in the neighbourhood of Birmingham in the year 1832; and on his admitting that he had done so, the defendant Badger said to him, "You are a leader of the Chartists, and I will not take your bail." He (Badger) then inquired of Mr. Truman whether he had not lately signed a requisition for convening a Chartist meeting? Mr. Truman denied having signed such a document, but admitted that he was a Chartist; on which the defendant, Badger, said, "Then I will not take your bail either. We (the magistrates) have other objections to both of you as bail, but we do not think it necessary that we should state them." The consequence of this refusal on the parts of the defendants was, that O'Neill continued in custody until he was ultimately taken before Chief-Justice Tindal under a writ of *habeas corpus*, when that learned judge accepted the same bail for his future appearance which the defendants had refused. The affidavits further stated, that the defendants had refused to accept the bail of Messrs. Page and Truman, on account of their political opinions, and that they were actuated by improper and corrupt motives in so doing. Under all these circumstances, he (Mr. Erle) trusted that his lordship would be of opinion that he was entitled to the rule he prayed for. Mr. Justice Patteson said, that nothing like corruption on the part of the defendants had been stated in any one of the affidavits which the learned counsel had read. All that appeared from those affidavits was, that the magistrates therein named had thought that their duty was not confined to a mere inquiry into the sufficiency of the bail tendered, but that they ought to extend their inquiry to the previous conduct and opinions of the bail. He (Mr. Justice Patteson) recollected a case in which one of the magistrates had refused to accept a person as bail because he was the keeper of a gaming-house; but although it had been since decided that such a ground of objection was not sufficient, it was not pretended that the case was one that called upon the court to interfere by criminal information. After some further remarks from counsel, Mr. Justice Patteson desired that the affidavits might be handed up to him, and said that he would read them through before he gave his judgment. At present he was inclined to think that he ought not to grant a rule. The case came on again on Thursday, when his Lordship said that after a careful perusal of the affidavits he had come to the conclusion not only that the defendants had acted wrongly in refusing to admit the persons who had been proposed as bail for O'Neill, but that the manner in which that refusal had been stated by them, the expressions they had used at the time, and the observation, that they had other reasons for their refusal, but which they had refused to state, all together established a case which justified the Court in granting a rule calling upon them to explain their conduct. The rule, however, would only be granted against the two magistrates, Messrs Badger and Cartwright; for although the committal was the act of five magistrates, and the warrant was signed by them all, it did not appear that the other three had been at all implicated in the refusal complained of. Rule granted accordingly.

CONSISTORY COURT.—*Pemberton* v. *Pemberton*.—In the last term, the proctor for Mrs. Pemberton (that lady having obtained previously a separation, and had alimony granted to her) stated that Mr. Pemberton had, on tendering the periodical payment, deducted the income-tax. The court then said it would take time to consider this novel point, and the learned judge on Thursday expressed his opinion, after having carefully referred to the act, that the deduction must be allowed, the lady having the power of applying to the assessor for a return of the tax if her whole income was under 150*l.* a year.

SPORTING.

TATTERSALL'S.—The business in the afternoon was too dull to require more than a statement of the bets actually laid.

DERBY.

8 to 1	agst	Mr. Blakelock's A British Yeoman
1400 to 100	—	Sir G. Heathcote's lot (taken)
1000 to 45	—	Mr Bell's Winesour (taken)
1000 to 25	—	Duke of Grafton's Oxygen colt (taken twice)
1000 to 20	—	Mr. R. Wood's Eli (taken)
400 to 10	—	Mr. Bowes's Cotherstone (taken)
400 to 10	—	Sir G. Heathcote's Amorino (taken)
400 to 10	—	Sir G. Heathcote's Sirikol (taken)

MARK LANE, FRIDAY, Nov. 11.—There has been but a small arrival of English Wheat since Monday, and that day's currency was fully supported.—Foreign was sold at the same rates, but the quantity disposed of was more limited.—There is still some inquiry for bonded for exportation. Fine Barley is in demand, but secondary qualities are a heavy sale. Peas are improving in value. Beans are difficult of sale, unless at a reduction. The Oat Trade is exceedingly flat.

GAZETTE OF THE WEEK.

INSOLVENTS.—B. Laurence, Old Broad-street, city, merchant—T. Murray, Bedford street, Covent-Garden, glass dealer—J. Bell, Hereford, porter-merchant—T. W. Prosser, Hereford, soda-water manufacturer—J. Pearce, Kennington cross, coachmaker—W. Ayton, Milton Kent, brazier.

BANKRUPTCIES SUPERSEDED.—G. Wegg, Ipswich, draper—A. W. G. Dow and W. Richmond, Liverpool—C. Yandle and G. Field, Marylebone, coachmakers.

BANKRUPTS.—E. Massey and R. Lambert, Watling-street, City, warehousemen—J. Butler Lodge, Gerard-street, Soho, bath proprietor—G. J. Marshall, Wood-street, Cheapside, warehousemen—J. Linden, Plymouth, merchant—J. O. Burnley and J. Auty, Heckmondwike, Yorkshire, corn millers—J. M. Frances, Gosport, grocer—T. A. Goodall, Epworth, Lincolnshire, chemist—W. Tomkinson, Stoke-upon-Trent, Staffordshire, wine-merchant—J. Cranbrook, Deal, Kent, draper—J. Froste and I. Ashlin, Liverpool, merchants—J. H. Anderson, Manchester, printer—E. B. Robinson, Nottingham, printer—R. Lindon, Snapes, Devonshire, corn-factor—T. B. Fehr, Dudley, wine and spirit-merchant—R. Steuart, Santa Fe de Bogota, manufacturer of artificial granite—S. Ray, Duke-street, St. James's, bookbinder—R. J. Webb, Piccadilly, tailor—G. T. Knowles, Manchester, cotton-spinner—H. Charlton, Regent-street, milliner—H. Budney, St. Marylebone, builder—G. J. Marshall and W. C. Hall, Wood street, Cheapside, woollen-warehousemen.

SCOTCH SEQUESTRATIONS.—J. Dickson, Wattsman, Dumfries-shire, cattle-dealer—J. Walker, Aberdeen, fancy warehouseman.

BIRTHS.—On the 7th inst., in Upper Grosvenor-street, the Countess of Hillsborough, of a daughter.—On the 7th inst., in Belgrave-street, the Lady Henniker, of a son.—On the 5th inst., at Hedgerley-park, the lady of Rice R. Clayton, Esq., M.P., of a son—In Bedford-square, on the 5th instant, the lady of Henry Corntoot, Esq., of the Old Palace, Richmond, of a son.—On the 7th inst., in Cumberland street, the lady of Captain Elrington, Scots Fusilier Guards, of a daughter.—On the 5th instant, at Dryham-park, Barnet, the Hon. Mrs. Trotter, of a son.

MARRIAGES.—On the 3d inst., at Tynan Church, county of Armagh, by his Grace the Lord Primate, Captain William Bunbury M'Clintock, R.N., second son of John M'Clintock, Esq., of Drumcar, county of Louth, to Pauline, second daughter of Sir James M. Stronge, Bart., of Tynan Abbey.—On the 5th inst., at St. Margaret's Church, Westminster, Thomas Ryall, Esq., Her Majesty's portrait and historical engraver, to Georgiana, second daughter of John Cooper, Esq., Duke-street, Westminster.—On the 27th Oct., at Munden, kingdom of Hanover, by the Rev. William Kaufman, Frederick Baron von Neydeck, son of the late Baron von Neydeck, of Bamberg, in the kingdom of Bavaria, to Octavia Maria, daughter of the late Quarles Harris, Esq., of Bourne-grove, Southgate.—On the 2d inst., at St. Mary's, Lancaster, by the Rev. Frederick Passy, Edmund William Wilton Passy, Esq., Captain in her Majesty's 56th Reg., to Catherine Harriet, youngest daughter of the late Right Hon. Lord Chief Justice Dallas.—On the 5th inst., at Chesham, Bucks, by the Rev. J. H. Talbot, rector of Clifton, John Sutthery, Esq., of Mill-hall, to Sarah Ann Pellatt, fourth daughter of Francis Pellatt, Esq., of Thorne-house, late Storekeeper of Her Majesty's Ordnance, Weedon.

DEATHS.—On the 6th inst., at the Views, Huntingdonshire, Vice-Admiral Sir Richard Hussey Hussey, K.C.B., G.C.M.G.—On the 5th inst., at his house in Whitehall-place, Sir John Cross, Knight, aged 74, the Judge of the Court of Review.—On the 6th inst., after a short illness, in the 52d year of his age, Mr. William Greathead Lewis, who for many years was connected with the London Press.—On the 18th ult., at Naples, in the bloom of manhood, of a fever caught at Rome, John Harper, Esq., architect, York.—At Hanover, on the 1st inst., aged 24, Laura Georgiana, wife of Gervase Parker Bushe, Esq., attache to her Majesty's Legation at Hanover.—On the 6th inst., at Great Chart, Kent, in his 69th year, the Rev. Thomas Waite, D.C.L., rector of that place, for many years chaplain to His Royal Highness the late Duke of Gloucester.—On the 8th inst., at his house, Summit-place, Upper Clapton, Thomas Peters, Esq., of Haydon-square, Minories, aged 64.—On the 3d instant, at Lower Mitcham, Surrey, in his 79th year, William Hodgson, Esq., late of the Navy Office.

Printed by Messrs. BRADBURY and EVANS, Lombard-street, Fleet-street, in the Precinct of Whitefriars, in the City of London, and Published by them at the OFFICE, 3, CHARLES-STREET, COVENT GARDEN, in the County of Middlesex, where all Advertisements and Communications are to be addressed to the Editor.—Saturday, November 12, 1842.

THE GARDENERS' CHRONICLE.

A STAMPED NEWSPAPER OF RURAL ECONOMY AND GENERAL NEWS.
THE HORTICULTURAL PART EDITED BY PROFESSOR LINDLEY.
No. 47—1842. SATURDAY, NOVEMBER 19. Price 6d.

INDEX OF THE PRINCIPAL HORTICULTURAL SUBJECTS IN THE LAST NUMBER.

Acorn, its germination in water . 755 *a*
Amateur's Garden . . . 756 *c*
American plants, hardy . . 761 *a*
Ammoniacal vapour, to apply to Vines . . . . . 761 *a*
Aristolochia gigas . . . 759 *c*
Ash coppice, its treatment . 758 *a*
Cart for distributing liquid manure . . . . . 758 *b*
Cat, white, as a scarecrow . 759 *a*
Cereus truncatus, its treatment 761 *a*
Chironia decussata, its treatment 761 *a*
Clerodendron speciosum, cause of leaves spotting . . . 761 *a*
Conferva fluviatilis, in Gloucestershire . . . . . 759 *a*
Cytoblast, defined . . . 759 *a*
Dahlia, different colours on the same plant . . . . 759 *a*
Euphorbia splendens, its treatment . . . . . 761 *a*
Fig-trees, to train . . . 761 *a*
Forest-trees, best time to prune 761 *a*
Gardenia florida, its treatment 761 *a*
Gas, obtained from Grapes . 760 *a*
Gladioli, for the open ground . 761 *b*
Godetia grandiflora . . . 759 *c*
Gooseberries, heaviest of 1842 . 758 *a*
— select kinds . 761 *b*
Grapes, cause of their not colouring . . . . . 757 *c*
Grass, remedy for its coarseness 761 *b*
Greenhouse, its formation . 761 *a*
Heating by hot air, remarks on 757 *b*
Hothouse regulators . . . 761 *a*
Hyacinth, its treatment . . 756 *b*
Ivy, its effect on houses . . 758 *c*
Jasmine, common, to prune . 761 *a*
Ladies gardeners . . . 759 *a*
Lily of the Valley, soil for . 761 *a*
Lingard on the Decay in Timber, rev. . . . . . 760 *a*
Loquat, its treatment . . 756 *a*
Mangel-wurzel, to preserve . 758 *c*
Manure, Boussingault's paper on . . . . . . 755 *c*
Medlars, to ripen . . . 761 *b*
News, botanical . . . 760 *a*
— Indian . . . 759 *c*
Night-soil, to disinfect . . 760 *c*
Oxalis rubro-cincta . . . 759 *c*
Ozmazome, its definition . . 759 *a*
Paint, to soften . . . . 761 *b*
Pear tree, prolific . . . 760 *a*
Pelargoniums, good kinds . 761 *a*
Plants growing in a sulphurous atmosphere . . . . 758 *c*
Protecting-houses, materials for 757 *c*
Roella ciliata, its treatment . 761 *a*
Rural sonnet—November . . 759 *c*
Salt, to apply to Asparagus . 760 *c*
Sap, its motion in plants . . 761 *b*
Scotch Farming in the Lothians, rev. . . . . . 760 *a*
Sea-sand, for Asparagus-beds . 760 *c*
Siphocampylus betulæfolius . 759 *c*
Sweet Cane of Scripture, remarks on . . . . . 757 *a*
Tillandsia rubida . . . 759 *c*
Timber, its increase . . . 758 *c*
Trees, plan for transmitting to foreign countries . . . 755 *a*
Trellis for climbers . . . 756 *b*
Tropæolum tuberosum, blooming freely at Holme House . 759 *a*
Vine-border, to improve . . 761 *a*
Vines, out-door, to prune . . 757 *c*
Wasps, to destroy in spring . 759 *a*
Wood's Catalogue of Roses, rev. 760 *a*

ROYAL AGRICULTURAL SOCIETY OF ENGLAND.—MEETING AT DERBY. Principal Day of the Show: Thursday, July 13, 1843.—The Prizes are open to general competition.—Forms of Certificates to be procured on application to the Secretary, 12, Hanover-square, London. All Certificates must be returned, filled up, to the Secretary, on or before the 1st of June, 1843.

PRIZES FOR IMPROVING THE BREED OF CATTLE.—1843.

Short-horns.—Class 1. To the owner of the best Bull calved previously to the 1st of January, 1841, 30*l.*; to the owner of the second-best ditto ditto, 15*l.*—2. To the owner of the best Bull calved since the 1st of January, 1841, and more than one year old, 20*l.*—3. To the owner of the best Cow in milk, 15*l.*—4. To the owner of the best in-calf Heifer, not exceeding three years old, 15*l.*—5. To the owner of the best Yearling Heifer, 10*l.*

Herefords.—Class 1. To the owner of the best Bull calved previously to the 1st of January, 1841, 30*l.*; to the owner of the second-best do. ditto, 15*l.*—2. To the owner of the best Bull calved since the 1st of January, 1841, and more than one year old, 20*l.*—3. To the owner of the best Cow in milk, 15*l.*—4. To the owner of the best in-calf Heifer, not exceeding three years old, 15*l.*—5. To the owner of the best Yearling Heifer, 10*l.*

Devons.—Class 1. To the owner of the best Bull calved previously to the 1st of January, 1841, 30*l.*; to the owner of the second-best do. do., 15*l.*—2. To the owner of the best Bull calved since the 1st of January, 1841, and more than one year old, 20*l.*—3. To the owner of the best Cow in milk, 15*l.*—4. To the owner of the best in-calf Heifer, not exceeding three years old, 15*l.*—5. To the owner of the best Yearling Heifer, 10*l.*

Cattle of any Breed or Cross (not qualified to compete as Short-horns, Herefords, or Devons).—Class 1. To the owner of the best Bull calved previously to the 1st of January, 1841, 30*l.*; to the owner of the second-best ditto ditto, 15*l.*—2. To the owner of the best Bull calved since the 1st of January, 1841, and more than one year old, 20*l.*—3. To the owner of the best Cow in milk, 15*l.*—4. To the owner of the best in-calf Heifer, not exceeding three years old, 15*l.*—5. To the owner of the best Yearling Heifer, 10*l.*

HORSES.

Class 1. To the owner of the best Cart-Stallion of 4 years old and upwards, 30*l.*; to the owner of the second-best ditto ditto, 20*l.*—2. To the owner of the best two years-old ditto foaled since the 1st of January, 1841, 15*l.* 3. To the owner of the best Cart-Mare and Foal, 20*l.*; to the owner of the second-best ditto, 10*l.*—4. To the owner of the best two-years-old Filly, 10*l.*—5. To the owner of the best Thorough-bred Stallion, which shall have served Mares at a price not exceeding three guineas (and with a groom's fee of not more than five shillings), in the season of 1843, 30*l.*

SHEEP.

PRIZES FOR IMPROVING THE BREED OF SHEEP.—1843.

Leicesters.—Class 1. To the owner of the best Shearling Ram, 30*l.*; to the owner of the second-best ditto, 15*l.* —2. To the owner of the best Ram of any other age, 30*l.*; to the owner of the second-best do. 15*l.*—3. To the owner of the best pen of Five Shearling Ewes, 10*l.*; to the owner of the second-best ditto ditto, 5*l.*

South Downs, or other Short-woolled Sheep.—Class 1. To the owner of the best Shearling Ram, 30*l.*; to the owner of the second-best ditto, 15*l.*—2. To the owner of the best Ram of any other age, 30*l.*; to the owner of the second-best ditto, 15*l.*—3. To the owner of the best pen of Five Shearling Ewes, 10*l.*; to the owner of the second-best ditto ditto, 5*l.*

Long-Woolled Sheep (not qualified to compete as Leicesters).—Class 1. To the owner of the best Shearling Ram, 30*l.*; to the owner of the second-best ditto, 15*l.*—2. To the owner of the best Ram of any other age, 30*l.*; to the owner of the second-best ditto, 15*l.*—3. To the owner of the best pen of Five Shearling Ewes, 10*l.*; to the owner of the second-best ditto ditto, 5*l.*

PIGS.

Class 1. To the owner of the best Boar of a large breed, 10*l.*; to the owner of the second-best ditto ditto, 5*l.*—2. To the owner of the best Boar of a small breed, 10*l.*; to the owner of the second-best ditto ditto, 5*l.*—3. To the owner of the best breeding Sow of a large breed, 10*l.*—4. To the owner of the best breeding Sow of a small breed, 10*l.*—5. To the owner of the best pen of Three breeding Sow-Pigs of the same litter, above four and under nine months old, 10*l.*

IMPLEMENTS.

A sum not exceeding Three Hundred Sovereigns.

CHEESE.

To the exhibitor of the best hundred-weight of Cheese (of any kind), 10*l.*—To the exhibitor of the second-best ditto (of any kind), 5*l.*

EXTRA STOCK, ROOTS, AND SEEDS.

For extra stock of any kind, not shown for any of the above prizes, and for Roots, Seeds, &c., prizes may be awarded and apportioned, by the committee and judges, to an amount not exceeding in the whole 50*l.*

ANY NEW IMPLEMENT.

For the invention of any new Agricultural Implement, such sum as the Society may think proper to award.

SEED-WHEAT.

I. Thirty Sovereigns, or a Piece of Plate of that value, will be given to the Exhibitor, at the Meeting at Derby, of the best 14 bushels of White Wheat, of the harvest of 1842, and grown by himself.

II. Thirty Sovereigns, or a Piece of Plate of that value, will be given to the Exhibitor, at the Meeting at Derby, of the best 14 bushels of Red Wheat, of the harvest of 1842, and grown by himself.

III. Twenty Sovereigns, or a Piece of Plate of that value, will be given to the Exhibitor, at the Meeting at Derby, of the best 14 bushels of Spring Wheat, of the harvest of 1842, and grown by himself.

Competitors are requested to send with their Wheat specimens, fairly taken, of the same in the ear, with the whole of the Straw, in a bundle not less than one foot in diameter, and with the roots attached.

[Twelve bushels of the Wheat will be sealed up by the judges, and one of the remaining bushels of each variety will be exhibited as a sample to the public; the other being kept for comparison with the produce of the next year. At the General Meeting in December, 1844, the prizes will be awarded.]

The two best samples of each of these three classes of Wheat, without at that time distinguishing, in any of the cases, between the comparative merits of either sample, will be selected by the judges appointed for the Meeting at Derby; and will be sown, under the direction of the Society (the winter Wheats in the autumn of 1843, and the spring Wheat not earlier than the 1st of March, in 1844), by four farmers: who will make their report, upon which the prizes will be awarded, provided there be sufficient merit in any of the samples. Ten Sovereigns will be given at the Meeting at Derby to each Exhibitor whose Wheat has been selected for trial.

⁂ No variety of Wheat which has been selected for trial at any previous show shall be qualified to compete.

ESSAYS AND REPORTS ON VARIOUS SUBJECTS.

Prizes for 1843.—PRIZE ESSAYS.

1. *Artificial Food for Cattle or Sheep.*—Twenty Sovereigns, or a Piece of Plate of that value, will be given for the best trial of the relative value of different sorts of Artificial Food for Cattle or Sheep. Competitors will be required to attend to the following conditions in their prosecution of experiments on this subject:—1. One or more head of cattle or sheep to be put to each of the sorts of artificial food selected for trial.—2. To ascertain by measurement or weighing the state of the animals when first put to feed, and at given intervals afterwards.—3. When the increase has been ascertained at the end of one or two months, the experiment to be reversed, and the animals put to the sort of food which in the first month was consumed by their competitors, and the increase ascertained in a manner similar to that applied in the first month.—4. In all cases, the quantity of food consumed by each class of cattle or sheep to be accurately stated.

2. *Natural Food for Cattle or Sheep.*—Twenty Sovereigns, or a Piece of Plate of that value, will be given for the best trial of the relative value of different sorts of Natural Food for Cattle or Sheep. Competitors will be required to attend to the same conditions in reference to this prize as in the preceding.

3. *Horse and Ox-Teams.*—Ten Sovereigns, or a Piece of Plate of that value, will be given for the best Essay on the Comparative Advantages in the Employment of Horses and Oxen in Farming Work. Competitors will be required to attend to the following conditions:—1. The age and breed of both horses and oxen, with the time at which they were first put to work, must be accurately stated.—2. Both horses and oxen to be in good working condition, and regularly employed on the same farm (stating the nature of the soil) during a whole year.—3. The amount of work, whether on road or field, of each pair of horses and oxen; together with remarks upon the manner in which that work has been performed; and its separate value.—4. The cost of maintenance and farriery of each pair of horses and oxen; including the separate charge for management.—5. The cost, or presumed value, of each pair of horses and oxen, with their gear, when put to work; and their value at the close of the comparison.—6. The comparative number of oxen or horses which are required to do the same work.

4. *On the Construction of Cottages.*—The Gold Medal, and Mr. Slaney's addition of Ten Sovereigns to the prize, will be given for the best Treatise on the Form and Construction of Agricultural or other Cottages, with the Outbuildings and Conveniences belonging to them; together with suggestions for the best methods of constructing Chimneys, Fireplaces, Ovens, Floors, Roofs, and whatever may conduce to the health and comfort of the occupiers; to comprise Plans, Elevations, and Estimates, in which due regard is to be paid to reasonable economy.

5. *On the Drainage of Land.*—Fifty Sovereigns, or a Piece of Plate of that value, will be given for an Account of the best mode of Under-draining Land, regard being had to variety of Soil, Subsoil, and other local circumstances. Competitors for this prize will be required to give information on the following subjects of inquiry:—1. Depth and frequency of drains.—2. Materials: tiles, stone, or peat.—3. Filling in, whether with tenacious or porous earth.—4. Expense of the various methods.—5. Disposition of drains.—6. Fall required.—7. Direction of drains on land having a considerable slope.—8. Benefit in increasing crop, admitting new modes of culture and stocking, advancing the time of harvest, reducing the amount of horse-labour required on heavy clays, improving climate, &c.—9. Durability of drains.—10. Past and present practice of draining in England.—11. Districts of England which require the most extensive efforts in under-draining.

6. *On Liquid Manure.*—Ten Sovereigns, or a Piece of Plate of that value, will be given for the best Account of results obtained in the application of Liquid Manures, as artificially obtained by composition, or as occurring in their ordinary and natural state. Competitors will be required to attend to the following points, in the case of each of these classes of Liquid Manure:—

Artificial Liquid Manure.—1. The nature of the substances either dissolved or suspended in liquid manures *artificially* composed.—2. The soils to which they are best adapted; and whether to pasture or arable land.—3. The quantity, mode, and season of their application.

Natural Liquid Manure.—1. The nature of those *naturally* combined; as the urine of cattle and of man, the drainings of stables and farm-yards, &c.—2. Their mode of treatment and preservation.—3. Their application both to pasture and arable land; the soils and crops to which they are best adapted; their chemical properties; and the probable causes of their success or failure; together with observations on the quantity to be employed on clays and turnip-lands.

7. *Management of Farm-yard Manure.*—Fifteen Sovereigns, or a Piece of Plate of that value, will be given for the best Account of the Mode of Management and Application of Farm-yard Manure. Competitors will be required to state—1. The season when made. 2. The materials of which it is composed. 3. The crops for which it is intended. 4. The period of the year when applied. 5. The mode of applying it.

8. *On Artificial Manures, or Hand-Tillages.* — Fifteen Sovereigns, or a Piece of Plate of that value, will be given for the best Account of Artificial Mineral and Vegetable Manures, and of the simplest and most effective mode by which their adulteration with spurious substances may be at once detected. The following information will be required in the case of each of these classes of artificial manure: *Mineral Manures.*—1. The different *inorganic* or mineral substances which have been recommended and used as portable manures, distinguishing the simple from the compound. 2. The quantities applied per acre: mode and time of application, whether to grass or arable land; and nature of the soil. 3. The probable causes of their success or failure. *Vegetable or Animal Manures.*—1. The different *organic* and *composite* manures, whether artificially or naturally combined; and their chemical constitution. 2. The quantity used per acre; the time and mode of their application, and whether to pasture or arable land. 3. The soils to which the several kinds are best adapted, and the probable causes of the more certain and constant effect produced by them than of the inorganic kinds; as also, the causes to which their occasional failure may be attributed.

9. *Water Meadows and Upland Pastures*, 1844.—Twenty Sovereigns, or a Piece of Plate of that value, will be given for the Best Account of the Comparative Value of Water-Meadows and Uplands generally for Cattle, Sheep, and Horses, but especially for Milch Cows. Competitors will be required to state the following particulars in reference to the trials instituted for the purpose of obtaining practical results on this subject:—1. The nature of the soil and its state of drainage to be described, and equal portions of upland and water meadow to be selected. 2. Equal numbers of cows of the same age and breed (not less than four in number) to be separately fed in pairs, on each different kind of grass, and to be changed once from one kind of grass to the other; and the quantity, as well as the quality, of the milk from such cows to be ascertained by the lactometer. 3. If made into hay, the quantity of each sort produced on the land, and the quantity, as well as quality, of the milk which has been produced, to be ascertained in a similar manner. 4. The value of spring food and grass, whether in rowen or pasture. 5. The same conditions to be applicable to the feeding of sheep stock; stating the numbers which the same quantity of each land have separately maintained during a certain period; and whether or not subject to the rot by the flooding. 6. In regard to irrigating the land: the primary cost, whether of catch-water or flow-meadow, of its formation, and the annual expense of management, including the repair of sluices; together with the former and present rent or value. (Competitors are also requested to state, as far as their observation may have extended, the comparative value of the grasses of water meadows and uplands, when cut into hay, and consumed as fodder.)

10. *Production of Fat and Muscle.*—Twenty Sovereigns, or a Piece of Plate of that value, will be given for the best Explanation of the Causes which appear to determine the Production of Fat and Muscle respectively, according to the present state of our knowledge of Animal Physiology. Competitors will be required to point out: 1. The connexion between certain recognised signs of early maturity, as smallness of bone, shape of the ears, mellowness of skin, &c., with the determination of the animal frame to produce fat or muscle. 2. The tendency of certain articles of food to fatten stock, and the adaptation of others to maintain the general frame in a growing state. 3. The disposition of certain breeds to secrete fat externally, and of others internally. 4. The mode in which Beans and Acorns occasion hardness of flesh in the animals fed on them.

These Essays, except No. 9, must be sent to the Secretary, at 12, Hanover-square, on or before March 1st, 1843.

Rules of Competition for Prize Essays.—1. That all information contained in Prize Essays shall be founded on experience or observation, and not on simple reference to books, or other sources. 2. That drawings, specimens, or models, shall accompany writings requiring them. 3. That all competitors shall transmit a sealed note, containing their names and addresses, with a motto on it to correspond with the one inscribed on the Essay. 4. That the Society shall have the power to publish the whole or any part of the Essays which gain the prizes; and the other Essays will be returned on the application of the writers. 5. That the Society is not bound to give an award, unless they consider one of the Essays worthy of a prize. 6. That in all reports of experiments, the expenses shall be accurately detailed; that only the Imperial weights and measures are those by which calculations are to be made; that prizes may be taken either in money or plate, at the option of the successful candidates; and that no prize be given for any Essay which has already appeared in print.

It is requested that all communications, addressed to the Society, of experiments on land—whether of draining, liming, manuring, or other operation—be accompanied with the cost of such operation, with the value of the land to rent previous and subsequent thereto, and an analysis of the soil upon which such experiments have taken place, or a specimen of the soil, to be analysed by persons employed by the Society: also further requested that, in communications relative to experiments on land in foreign countries, the measures be stated in English values.

By order of the Council,
London, Nov. 2, 1842. JAMES HUDSON, Secretary.

ROYAL AGRICULTURAL SOCIETY OF ENGLAND.—The General Meeting will be held at the Society's House, No. 12, Hanover-square, London, on Saturday, the 10th of December, at 12 o'clock precisely.

The Rooms of the Society will be thrown open for the accommodation of Members on Wednesday the 7th, Thursday the 8th, and Friday the 9th of December, from 6 to 10 o'clock.

Dr. Lyon Playfair will deliver a Lecture to the Members of the Society, at the Society's Rooms, on Wednesday the 7th of December, at 8 o'clock in the Evening, on the subject of "The Application of the Principles of Physiology to the Fattening of Cattle."—By order of the Council,
London, Nov. 9, 1842. JAMES HUDSON, Secretary.

IPSWICH CUCUMBER SOCIETY, OPEN TO ALL ENGLAND.

PRESIDENT—P. B. Long, Esq., Ipswich.
VICE-PRESIDENTS.
The Right Hon. Lord Rendlesham.
Capt. Aplin, Melton Lodge.
Wm. Rodwell, Esq., Ipswich.
Rev. C. Green, Grundisburgh.
Dr. Maclean, Colchester.
Dr. Beck, Ipswich.
W. J. Maude, Esq., Langham Hall.
P. S. Edwards, Esq., Greenock.
Wm. Green, Esq., Boxford.

The FIRST SHOW for the present season will take place on the 23d February, and the SECOND on 11th May, 1843—when a Silver Cup, and other articles of Plate, or Money, will be awarded for the best Braces of Cucumbers.

Printed circulars, with the Society's Standard, Rules and Regulations, Mode of Judging new Cucumbers, and other particulars, may be had on application to the Secretary, by enclosing a Postage stamp. THOS. WILD, Hon. Secretary.
3, Tavern-street, Ipswich.

ROSA DEVONIENSIS.

ABOUT 500 of the above valuable ROSE to be disposed of at J. Hally's Nursery, Blackheath, Kent. If to the trade, they will be supplied on advantageous terms. It has been proved a most excellent Rose to force for cut flowers in the winter, and its other properties are now too well known to need further eulogy. J. H. also takes the opportunity of stating that he has still on hand a few of the leading varieties of Camellias, handsome saleable Plants; well set for bloom from 1 to 3 ft. in height. Also young Plants of all the best new kinds, and several thousand 1 and 2 years' grafted Double White, Double-striped, Monarch, fimbriata, Chandlerii, corallina, tricolor, Bealii, Colvilli, Eclipse, ochroleuca, candidissima, Campbellii, elegans, perfecta, Lefèvreana, and all the leading varieties, in excellent order for packing and exportation.

J. H. begs to inform his friends in the trade who have so kindly favoured him heretofore with their orders for Stocks, that owing to the great demand he has had, he will be able to supply only a very limited number the ensuing season. J. H. has for sale a large stock of Myatt's British Queen Strawberry Plants; as also an abundant supply of Lilium lancifólium punctatum and album.

CONIFERÆ.—The Subscribers have this Season to offer the following:—

Pinus austriaca, 1 year transplanted, per 1000	30s.	0
,, ,, 1½ ft., in pots, each	1	0
,, Banksiana, 1 ft., in pots, each	15	0
,, Cembra, 1 year seedling, per 100	7	6
,, ,, 2 years seedling, per 100	10	0
,, ,, 1 year transplanted, per 100	15	0
,, ,, 2 to 3 inches, in pots, each	0	8
,, ,, 4 to 6 inches, in pots, each	0	6
,, excelsa, 1 year seedling, in pots, per doz.	30	0
,, ,, 2 to 3 inches, in pots, each	2	6
,, ,, 4 to 6 inches, in pots, each	3	6
,, Gerardiana, 1 year seedling, in pots, each	15	0
,, ,, 4 to 6 inches, in pots, each	20	0
,, halepensis, 6 to 9 inches, in pots, each	1	0
,, ,, 1 year seedling, in pots, per doz.	6	0
,, ,, var., 6 inches, in pots, per doz.	7	6
,, inops, 1 to 1½ ft., in pots, each	1	0
,, insignis, 1 ft., in pots, each	20	0
,, Lambertiana, 1 year seedling, in pots, each	40	0
,, ,, 1 ft., in pots, engrafted, each	50	0
,, Laricio, 2 years seedling, per 1000	12	6
,, ,, 1 year transplanted, per 1000	20	0
,, maritima major, 4 to 6 inches, in pots, each	1	6
,, monticola, 1 ft., in pots, each	60	0
,, Montezumæ, 1 ft., in pots, each	42	0
,, neglecta, 1 to 1½ ft., in pots, each	3	6
,, nepalensis, 1 to 1½ ft., in pots, each	20	0
,, Oeote (oocarpa), 1 to 1½ ft., in pots, each	7	6
,, palustris, 3 ft., in pots, each	63	0
,, patula, 1 ft., in pots, each	7	6
,, Pinaster, 1 year seedling, per 1000	7	6
,, ,, 2 years seedling, per 1000	10	0
,, ,, 1 year transplanted, per 1000	15	0
,, ,, (maritima of France), 1 year seedling, per 1000	7	6
,, ,, ,, ,, 2 years seedling, per 1000	10	0
,, ,, ,, ,, 1 year transpl., per 1000	15	0
,, Pinea, 12 to 15 inches, in pots, each	0	9
,, Pithyusa, 4 to 6 in., in pots, each	5	0
,, ponderosa, 1 ft., in pots, engrafted, each	21	0
,, Pseudo-Strobus, 1 ft., in pots, each	10	6
,, Pumilio, 1 year seedling, per 1000	20	0
,, ,, 1 year transplanted, per 1000	35	0
,, pungens, 1 to 1½ ft., in pots, each	1	0
,, pyrenaica, 3 to 4 ins., in pots, each	1	0
,, resinosa, 6 to 8 inches, in pots, each	0	6
,, rigida, 1 year seedling, in pots, per doz.	3	0
,, ,, 4 to 6 inches, in pots, each	0	6

PETER LAWSON AND SON, EDINBURGH,
Seedsmen and Nurserymen to the Highland and Agricultural Society of Scotland.

Agents,—Messrs. W. and J. NOBLE, Seedsmen, 152, Fleet-street, London.

OAKLEY'S "SURPRISE" AND OTHER DAHLIAS.

SAMUEL GIRLING begs to refer the Trade and his friends generally to his advertisement in the *Gardeners' Chronicle* of the 12th Nov., 1842.

Danecroft Nursery, Stowmarket, Suffolk.

JAMES PAMPLIN, Nurseryman, Florist, &c. Walthamstow, Essex, begs to return thanks to his friends for their liberal orders for his Seedling Pelargoniums sent out last season, and which he flatters himself have given general satisfaction. He is now sending out the undermentioned new Seedlings, raised by Mr. J. Wilson. As regards their qualities nothing need now be said, as they have taken so many prizes, and have been so universally admired at the exhibitions of the London Horticultural Society at Chiswick, and at most other Societies round the Metropolis, that they must still be fresh in the memories of all lovers of that splendid flower.

J. P. begs to refer them to the report of the exhibition at Chiswick, in the *Gardeners' Chronicle* of July 16th.

Achilles	£3	3	Duke of Wellington	£2	2
Acis	3	3	Fair Maid of Leyton	3	3
Atia	3	3	Galatea	2	2
Adelaide Kemble	2	2	Hesperus	2	2
Aurora	3	3	Laura	1	10
Beauty of Essex	3	3	Prince Albert	2	2
British Queen	2	2	Princess Royal	2	2
Count D'Orsay	3	3	Queen of the East	3	3
Countess of Wilton	3	3	Sir Robert Peel	1	1
Creole	3	3	Sir Walter Scott	3	3
Duke of Devonshire	2	2	Venus	2	2

J. P. regrets that owing to the very limited stock of his Seedling Beauty of Walthamstow, he must defer sending it out at present.

J. P. has also a fine stock of those Pelargoniums he sent out last season, which have so enriched the collections of the principal cultivators of that flower at very low prices, Catalogues of which may be had on application.

J. P. begs further to state that he is now sending out his splendid new Seedling CEREUS, which he has named Cereus speciosus elegans, at 21*s*. each, which was exhibited at the Horticultural Gardens at Chiswick in July last; for description of which, see *Gardeners' Chronicle*, July 16th.

SELECT AND SHOWY HARDY PERENNIAL HERBABCEOUS PLANTS.

WILLIAM MAY begs to announce to the Floricultural Public, that he possesses a Stock of some Thousands of very Select and Showy Hardy Perennial HERBACEOUS PLANTS, which he has collected for the purpose of display more than for Botanical curiosity, and well adapted for ornamenting the most finished "Parterre or Flower-border." The Collection consists of upwards of 500 species, comprising all the leading articles, such as Aconitums, Anemones, Aquilegias, Campanulas, Delphiniums, Dianthus, Lobelias, Lupinus, Œnotheras, Pæonias, Pentstemons, Phlox, and Potentillas, in great variety, with all the most noted "Genera" in present cultivation, and which he is enabled to offer (from his IMMENSE STOCK) upon the following very reasonable terms, viz.:—100 species or more, all correctly labelled (which he will select), at 2*l*. 2*s*. per 100, and which will be forwarded on receipt of Post-office order on Bedale for amount required.

N.B.—He has still a supply of his superb HOLLYHOCK Seed, all warranted collected from double Flowers, in packets containing 200 Seeds, for 2*s*. 6*d*.; ditto ditto 500 Seeds, for 5*s*. Also a few packets of very select PANSY SEED, at 2*s*. 6*d*. and 5*s*. each. The Seeds post free.—Hope Nursery, Leeming-lane, near Bedale, Yorkshire, Nov. 15, 1842.

HYACINTHS, TULIPS, &c.

H. GROOM, Clapham Rise, near London (removed from Walworth), by Appointment Florist to her Majesty, respectfully informs the Nobility and Gentry that this is the proper season for planting the above bulbs, and that his Catalogue is ready and may be had on application.

THIS being the proper season for Planting TULIPS, J. POPE and SONS offer the following, viz.:—

100 named Tulips in 50 fine sorts, for	£7	10	0
50 do. do. in 25 do. for	3	15	0
100 superior do. in 50 do. for	10	0	0
50 do. do. in 25 do. for	5	0	0
100 good mixed do. from named flowers, for	1	10	0
100 very fine do. do., for	3	0	0

Remittance or Reference from Strangers.

Handsworth Nursery, near Birminghan.

WANTS a SITUATION as GARDENER, a Young Man, aged 30, who thoroughly understands his Business in all its branches. Satisfactory references can be given from the place he has lately left, in consequence of a death in the family.—Address, F.K. at Mr. Pamplin's, Nurseryman, Walthamstow, Essex.

WANTS a SITUATION as GARDENER, a Young Man, aged 28, who has had 10 years' practical experience in all the various departments of Forcing, the Propagation of Plants and Flowers, together with the planning out and systematic arrangement of the Flower Garden. Letters addressed to Mr. Brown, gardener to Lord Southampton, Whittlebury Lodge, Towcester, will meet with immediate attention.

TO GARDENERS.—A Premium of Ten Pounds will be given to obtain the Advertiser a situation as UNDER-GARDENER, or an Apprentice, where there is a good collection of Plants and all kinds of Forcing. It will be expected that the engager will keep the advertiser a limited time, such as may be agreed on; he has been in the business three years; age 20. For further particulars, address to T. B., Mr. Pugh's, No. 1, Northampton-street, Bath.

NOTICE.—SUPERB NEW DARK CHINA ROSE—"MIELLEY'S PRINCE OF WALES."

WM. WOOD & SON beg leave to announce to their Friends and Rose Amateurs in general, that in consequence of the unprecedented number of applications already received for the above most splendid new Rose, they are unavoidably compelled to discontinue sending out any more plants at present.

All future orders received from this date will be executed early in May, the usual period for sending out China Roses in pots. As the stock even then will be limited, early orders are respectfully solicited, which will be executed in rotation.

Woodlands Nursery, Maresfield, near Uckfield, Sussex,
November 14th, 1842.

"EMPRESS OF WHITES" DAHLIA.

G. SMITH, FLORIST, HORNSEY ROAD, ISLINGTON, LONDON, begs to call the attention of Dahlia Growers to that splendid DAHLIA, the "Empress of Whites," which is now ready for sending out in Ground Roots in fine condition, at Five Guineas each, for ready money only. Obtained prizes at the following Shows:—viz., 1st at South Essex—1st at Victoria Gardens, Stepney—2d at the Royal South London Zoological Gardens—also at the Grand Salt Hill Show and Floricultural Society of London—also obtained the prize offered by the Floricultural Society for the Best White of any age. See *Gardeners' Chronicle* of Sept. 17th, in report of Salt Hill Show. "'Empress of Whites'—better blooms than we had previously seen of this flower, with well-formed petals of good substance; the white is good and the centre better developed than at previous exhibitions; this will prove a very useful flower." It is recommended by Mr. Glenny in the "Practical Gardener and Florist," in his remarks of new Dahlias, as one of the best of the season.

G. S. has also a few packets of Verbena Seed, saved from the newest and best kinds, price 5*s*. per packet.

Hornsey Road, Islington, London.

TURVILL'S BLACK DAHLIA, THE "ESSEX TRIUMPH."

THOMAS BROWN begs to announce that he has purchased the entire Stock of the above superb and universally-admired Dahlia, which has been justly pronounced the greatest novelty yet produced, and is essential to the most limited grower. The following is the description given by the Floricultural Society of London, Sept. 6, when nine Blooms were exhibited:—"Of the petal: *form*, good; *substance*, good; *arrangement*, good; *eyes*, complete and good in every specimen; *depth*, great and globular; *size*, full; *general form*, excellent; *class of quality*, first-rate." The following awards will prove that it maintained its high character successfully throughout the season.

1841	Chelmsford	Sept. 12,	1 bloom		1st prize
,,	Halstead	,, 17,	1 ,,		1st ,,
,,	Salt Hill	,, 28,	1 ,,	5*l*. cup	1st ,,
1842	Floricultural Society	,, 6,	9 ,,		1st class
,,	South London	,, 13,	4 ,,		1st prize
,,	Salt Hill*	,, 16,	4 ,,		2d ,,
,,	Floricultural Society †	,, 20,	6 ,,		1st ,,
,,	,, ,,	(best Dark Dahlia)	1 ,,		1st ,,
,,	Sunbury	Sept. 22,	3 ,,		1st ,,
,,	Halstead	,, 22,	1 ,,		1st ,,
,,	Floricultural Society	,, 27,	12 ,,		1st class
,,	,, ,,	Oct. 4,	6 ,,		1st ,,

It is very constant, and never shows an eye, the centre being well up when young. Fine habit; throwing its blooms out in the most graceful manner.—Plants in May, 10*s*. 6*d*. each; the usual allowance to trade where a dozen are taken.

Also plants, at the same time, of the following Seedlings, which have been shown and obtained prizes at the principal open Shows, and can be recommended as good Show flowers.

BROWN'S PERPETUAL GRAND—bright crimson; fine broad petals; well cupped, full, and constant—10*s*. 6*d*.

BROWN'S QUEEN OF TRUMPS—white, tipped with purple; petals of good substance, well arranged, and of great depth—10*s*. 6*d*.

BROWN'S MIRANDA—blush white, shaded with rose; of unusual depth—7*s*. 6*d*.

BROWN'S BLUE BONNET—bright rosy purple; good petal; full, and very constant—7*s*. 6*d*.

A few Ground and Pot Roots of ADMIRAL STOPFORD and BEDFORD SURPRISE to dispose of.

Slough Nursery, Nov. 17, 1842.

* 18 blooms were also shown not for competition.
† 30 blooms were also shown not for competition.

NEW AND SUPERB FUCHSIAS.

MESSRS. YOUELL and Co. beg to offer the following new and highly-beautiful FUCHSIAS, which they will send Post-free to any part of the United Kingdom (on the receipt of a Post-office order), at the rate of 21*s*. per doz.:—Arborea, aurantia, roseo-alba, Bruceana, conspicua arborea, cordata superba, Dalstonia, excelsa, eximia, formosa elegans, grandis, Hopverii, ilicifolia, inflata fulgida, insignis, magnifica, Middletonia, mirabilis, Monypennii, pendula terminalis, princeps, racemiflora, Riccartonia, stylosa conspicua, stylosa elegans, stylosa pulchella, Towardii, tricolor, Usherii, Youellii.

For Particulars of their superb Collection of Carnations, Picotees, and Pinks, Fuchsia St. Clare, and Araucaria imbricata, see their advertisement in the *Gardeners' Chronicle* of the 12th inst.

Great Yarmouth Nursery, Nov. 17, 1842.

PRINCE ALBERT PEA.

CORMACK & OLIVER, Seedsmen and Nurserymen, New Cross and Bedford Conservatory, Covent-garden, London, have the honour to offer to the notice of Noblemen, Gentlemen, and others, the above new PEA, as one of the earliest and best sorts extant: in proof thereof, a quantity put into the open ground on the 14th of March last was ready for use the 25th of April following, being only *forty-two days from the period of sowing to the date of gathering for the table*; it is moreover a good bearer, of excellent flavour, and highly advantageous for early forcing.—Packets, containing a quart, 5*s*. each. They also beg to recommend the British Queen, a new wrinkled marrow, larger and more productive than any of Knight's varieties, 3*s*. 6*d*. per quart. Likewise the new Incomparable Cos Lettuce, peculiarly crisp and juicy, perfectly hardy as a winter Lettuce, not apt to run in summer, and requiring no tying; in packets, at 1*s*. or 5*s*. per oz.

WANTED, GARDENERS' CHRONICLE, Vol. I. —Address price, Mr. J. W. Drury, Post-office, Lincoln.

The Gardeners' Chronicle.

SATURDAY, NOVEMBER 19, 1842.

MEETINGS FOR THE TWO FOLLOWING WEEKS.

Saturday, Nov. 26	Royal Botanic	3¾ P.M.
Monday, Nov. 28	Royal Geographical	8½ P.M.

"In the description of the warm air apparatus applied to Mrs. Tyssen's Conservatory, it is stated that the air, though heated, does not become dry; and as this is a peculiarity often claimed for favourite contrivances, it may be well to explain that there is probably some slight misapprehension about the matter. It should be premised, that air may be called *dry* in two senses—first, in reference to the absolute quantity of moisture which it may contain; and, 2dly, in reference to its appetite for further moisture, in which latter sense it would be better called thirsty. Now, in the first sense, no one imagines that heating the air will make it dry; on the contrary, it is always probable that heating will make it wetter: whereas, in the second sense, no power on earth can prevent its becoming drier—that is to say, thirstier, as it acquires heat; and this is equally true, whatever be the nature of the apparatus by which the heat is imparted. In order to prevent mistakes upon this subject, it should be noted, that no degree of heat will dry either the air or anything else; in fact, the best way to dry the air is to cool it as much as possible. A wet cloth put into an air-tight oven may be baked for seven years, and will come out exactly as wet as it entered. It is the air, and not heat, which is the general instrument for drying. The air is the universal carrier for superfluous moisture, and the hotter it is made, the more it will carry; all attempts to overcome this tendency will inevitably fail. With every increase of temperature, the capacity of the air to absorb moisture must be increased; it is indeed not merely a capacity, but a demand, which WILL be supplied, if the means are within reach. This is a consequence which no form of apparatus can elude, and which can only be anticipated by furnishing to the heated air such supplies of fluid as will prevent its being taken from objects that have none to spare."—*A.*

Thus writes one of our most valued correspondents; and we would beg our readers to store these, his useful truths, in their memory. There is no doubt that the air of a common hothouse will become drier the greater the heat; not because the heat really dries the air, but because the heated air flies away with all the moisture it can take up. The case is, however, very different in a hothouse properly constructed and provided with evaporating contrivances; in such a place, the higher the temperature, the damper the air will become; because as much water is then thrown into the air in the form of vapour as the thirsty air can drink, and thus no moisture is abstracted from plants. It is therefore indispensable that, in cases where a high temperature is demanded and a damp atmosphere, an abundant supply of vapour should be provided, either by the exposure of shallow pans of water to the action of the heated air, or by attaching such pans to the source of heat itself, whether it be a flue or a hot-water pipe.

We do not, however, conceive that the statement as to the dampness of the air in Mrs. Tyssen's stove is at all exaggerated. On the contrary, a table, showing the state of the hygrometer, and now before us, proves that when the fire was hottest, there was not ever more than two degrees difference between the wet and dry bulb thermometers, rarely more than one, and most commonly as little as half a degree, or even no difference at all. The air, then, must at all times have been abundantly moist for the health of the plants. This was, no doubt, owing to the dampness of the external air, that was always forcing its way, loaded with moisture, into the interior of the house, from which it could not escape, and partly, perhaps, to the vapour supplied by the boiler above the furnace; and hence, although the heating of the air increased its capacity for moisture, yet, as there was always an abundance of it for the heated air to take up, the atmosphere in the interior of the house never lost the amount of humidity demanded by the vegetation exposed to it.

A SHORT time since we gave an account of some observations by Mr. Hassall on the decay of fruit, which he supposed to be produced very commonly by the attacks of parasitical fungi. Some of our readers may have wondered why we gave so prominent a place to a matter having so little apparent bearing upon practical operations. Our reason will now be seen by what follows.

Last Wednesday evening Mr. Hassall again brought the subject before the Microscopical Society, for the purpose of showing that the attacks of the fungi on fruit were not only very common, but extremely rapid; in proof of which he produced Apples, which, three days before, had been fresh and sound in all respects, but which he had then inoculated with the spawn of the fungus growing in some decayed specimens. It was stated, that, in twenty-four hours after the inoculation, its effects became visible, in the form of a soft and brown substance, spreading regularly from the centre where the spawn had been introduced. In the specimens exhibited the decay had in three days extended to the size of a half-crown, and the fruit was entirely unfit for table.

Nothing could be more evident than that the fungi in question, which appeared to be of the Mucedineous group, had brought on sudden rottenness to a great extent; and this being so, what a lesson it is in the practical management of a fruit-room! The seed-like bodies of these fungi are too fine for the eye to detect, even in masses of considerable size, and they are always floating in the air around the place where such plants are able to fructify; wherever they meet with a portion of the skin of a fruit a little torn, or abraded, there they can instantly establish themselves; and when the surface of the fruit is in no way injured, they are doubtless able, only with less rapidity, to introduce their microscopical spawn through the pores of the skin. Nothing can show more clearly than this the great importance of careful handling when fruit is gathered, or of admitting strong currents of air among fruit occasionally, as we particularly explained when adverting a twelvemonth since to the management of a fruit-room. The heavy, unpleasant smell observable in ill-ventilated fruit-rooms, is no doubt caused, either wholly or in great part, by the spores of fungi floating in the air, and discoverable by the organs of smell, though hardly to be discerned by the eye, even in the form of motes that float in the sunbeam.

But it is not alone ventilation at frequent times which is calculated to assist in the preservation of fruit by carrying off the particles by which fungi are multiplied. The instant of removal of fruit the moment it begins to spot, not to say putrefy, is equally indispensable, as indeed has been previously insisted upon. The instant a fruit is in a state of even very early decay, the fungi begin to multiply, discharging their seeds (or spores) into the air, and spreading their spawn around with most surprising rapidity. Every decayed fruit, then, which is removed, is, so far, a destruction of myriads of these pests; and every specimen that is allowed to remain in a state of decay is a source from which an enormous brood of such villanous spawn is certain to make its appearance, spreading and destroying in all directions.

We trust our readers will now see the force of one of the axioms formerly laid down—viz., that A FRUIT ROOM SHOULD BE AS SWEET AND NEAT AS A DAIRY.

It is not, however, to be inferred from these statements, that decay in fruit can only take place when it is attacked by fungi. Do with fruit what we will, it, like all other living things, must perish and decay at its appointed time. But it is one thing for the texture of a fruit to be destroyed by the ordinary agencies of decomposition at its natural period, and another for the action of those agencies to be brought on *long before the necessary term of existence has been run*, by the ravages of parasites, the removal of which is, to a considerable extent, within our power. The bletting of Medlars, and the softening of the core or solid interior of fruit, are probably true cases of spontaneous decay; while, on the other hand, that rottenness which begins on the outside is certainly that whose real cause has now been, for the first time, demonstrated by Mr. Hassall.

We would invite attention to our report of the other papers read to the Microscopical Society at the last meeting,

---

EXPERIMENTS ON MANURES.

HAVING made some experiments on a small scale, for the sake of determining accurately the value of guano and of another manure, called urate, in the cultivation of Wheat, I send you the results such as they are, although, from two causes, they are unsatisfactory.

Their history is this:—In the beginning of February, when some spring Wheat was sown, I had some earth prepared for that purpose, brought from the field, and placed in 28 good-sized garden-pots, in order that I might the better be able to watch the process of germination and the early growth of the plants. I then selected 24 of the best grains from two parcels of seed, the produce of the preceding autumn; half of which were from corn cut at the ordinary time, the other half from some cut a fortnight sooner. The latter had the advantage in point of weight when both were threshed after harvest.

In sixteen of these pots I planted a single seed: the first two had no manure at all, the next two were sown in quick-lime, the next six in urate in the following proportions, 1, 2, 3, 4, 5, 6, grains; in the 11th I thrust a dibble down to the bottom of the pot, and filled up the cavity with an unmeasured quantity of the urate, in which I sowed four seeds. The same method was adopted with the guano, so that two out of the eighteen pots contained four seeds each, the rest only one. In each of the two former, one seed failed to grow; all the rest succeeded. Germination was much more rapid with the urate than with the guano, and with the green corn than with the ripe. There was a difference of a fortnight between the first and the last, and that last was in the unmeasured guano pot.

At the latter end of May, they were transplanted into a field, and this was one great disadvantage to the experiment; for the roots would be more or less disturbed, and in some more than in others; one effect of which was, that when the roots were fully re-established, there was a second growth, the ears of which never came to maturity. How much of the rustiness, which afterwards appeared upon the foliage, was due to this cause, and how much to the operation of the manures, it is hard to say.

When the ears began to fill, they were covered with a net to protect them from the birds, which brought with it one disadvantage that was obvious enough; it hindered the access of air, light, and heat. But there was another which could not be so easily foreseen: it stimulated the cupidity of some person, who probably imagined that there must be some extraordinary excellence in plants so carefully protected, and who being determined to have his share in such a valuable prize, plucked a large proportion of the finest ears as soon as they were ripe. These circumstances were very fatal to the success of the experiments; but if any safe conclusion can be drawn from them, as to the merits of the two manures, it is very much against the guano and in favour of the urate.

Another experiment, on a larger scale, tells against both of them; for three perches of land in one field. without any extra manure, produced nearly three pounds more of Wheat than the same quantity manured with guano, and nine more than that dressed with urate: also twelve pounds more of Straw than the former, and nine pounds more than the latter. Nevertheless, the weight per bushel was, however, a quarter of a pound less than either.

I have also tried both these manures upon Grass land; but it is clear that this should only be done in wet weather; for the volatile parts, on which their fertilising effects depend, are speedily taken up and dissipated in a warm and dry atmosphere. Nothing was gained by this experiment, nor by a similar application of ammoniacal liquor. Another point which should be attended to in the employment of these volatile manures is, that they should only be used when vegetation is in activity. The drainings of the farm-yard sprinkled over the land in winter produce no effect; but if applied at the season when the Grass is beginning to grow, the vigour which they impart to it is very visible. Nitrate of soda, which is not liable to the same risk of failure, certainly deepens the colour of the Grass; but I have not ascertained whether it increases the bulk of the produce.

I will take this opportunity of mentioning the results of another experiment, which seems to me to throw considerable doubt upon the accuracy of Professor Liebig's assertion, that carbonic acid is not taken up by the roots of plants. On the 5th of August, I sowed three seeds of Maize and three of Wheat, in 200 grains of charcoal; one of these seeds germinated on the [illegible], and the rest some days afterwards. On the 16th of this month, they had not quite ceased to grow; but I was obliged to terminate the experiment in order to ascertain the results. The weight of the seeds when sown was 9·73 grains; the weight of the produce was 26·53. The charcoal had lost nearly four grains, after every care had been taken to separate what adhered to the roots, although the quantity of soluble matter which it contained was rather more than in an equal quantity of the same charcoal. These effects, indeed, were not produced without the aid of art; no more, however, than is requisite to supply the place of these natural influences which favour the organisation of plants in the open ground, but which cannot exist in such small quantities of a single substance insulated in Wedgewood evaporating dishes. Who can say how much, in the analytical processes of vegetation, may depend upon the electrical and magnetic condition of the earth?

In order to remedy this defect, I employed a Smee's voltaic battery of six pairs of platinised silver and zinc plates, but excited only by spring water. They were connected with a magnetic coil, and the handles intended for receiving a shock were laid upon the charcoal, and the seeds were inserted between them. Having found that this arrangement was sufficient to deflect the needle of the galvanometer several degrees, I took measures to ascertain the amount of effect that might be ascribed to it, by sowing some seeds, in an equal quantity of the same charcoal, in a separate dish; I also threw every advantage into this scale by having fewer and heavier seeds, and by watering them with common water, while that which I used for the others was distilled. Nevertheless, in the former case, the three plants of Wheat acquired only half a grain of additional weight by their growth, while the gain of those which were galvanised was twice as much; in the first, a seed of Maize gained nothing; in the latter, the gain amounted to ten grains in one instance, and to seven in another. The quantity of water used was ten ounces for the last, and five for the first.

By the combustion of the whole vegetable matter in a small covered crucible, I hoped to recover the quantity of carbon, which the large development of the plants and the loss sustained by the charcoal gave me reason to expect; but in this I failed, partly because the cover not being sufficiently close, much of it escaped in a gaseous form, and partly, no doubt, because some carbonic acid gas would be given out by the plants during their growth.

There is one more fact which I have to communicate to you concerning the growth of seeds; no experiment of my own, but simply an illustration of the course of nature when she is left to herself. A field of mine was this year prepared for White Carrots, it being in perfectly good condition; the Carrots were sown, but the season being so unusually dry, they did not grow. The ground, however, was soon covered with another crop, which had been sown eight years before. In the year 1833, some round White Turnips had been sown there, which were allowed to stand for seed, and from that time to this, the ground has not received a single seed of that nature. It is evident, that the crop must have sprung from the seeds scattered over the surface when the former crop was gathered; but as the land has been in tillage ever since that time, why have they not germinated sooner? They must have been carried down by the rains below the depth of ordinary ploughing, and beyond the reach of atmospheric influence, and there they have remained in a condition which artificial preservation finds it difficult to imitate, being neither parched up by too much heat nor decomposed by stagnant moisture, until they were brought, by the subsoil plough, to the surface, where their vital powers were stimulated into action. Many of these Turnips attained the weight of eleven pounds, notwithstanding the dryness of the season and the depredations of insects. — *L. Vernon Harcourt.*

1. Corn cut green; unmanured; 20 ears; straw not strong; 6 quite green; in 4 best ears 164 seeds, weighing 95 grains—in the others 359, weighing 162·6: total number, 523; total weight, 251·6.

2. Corn unmanured, cut ripe, gave 10 stalks, but 2 of the ears had been plucked off. The 4 best contained 157 seeds, weighing 82·56 grains; the four others, 114, weighing 50 grains; total weight, 152·56: total number, 271.

3. Corn cut green, sown in lime, produced 11 stalks, 6 ripe, 5 green, 2 of which very weak; from 2 of the green and 3 of the ripe, the ears had been plucked and 1 of the latter had been much pecked by birds, so that instead of perhaps 50 only 17 grains remained, for, including this, the 4 best ears gave 138 seeds, weighing 65·55 grains; the other 35, weighing 8½: total 74·05.

4. Corn cut ripe, sown in lime, produced 17 stalks, of which only 5 were ripe, 2 of very recent growth, stunted, and the seed not formed: 4 best ears contained 193 seeds, weighing 110·1 grains; the other 10, 360, weighing 127·64: total weight, 237·74.

5.—1 Urate; 15 stalks, of which 4 had their heads plucked off; of the other 11, 5 were ripe, 6 green and weak; the 4 best ears contained 209 seeds, weighing 91·4 grains; the other 7, 199, weighing 56·5 grains: total weight, 147·9; if the 4 lost heads were nearly equal to the 4 first, the total number of seeds would be about 600, and the weight 238.

6.—2 Urate; the corn cut green; 16 stalks, half of which had lost their heads, the straw very strong; of the 8 that remained 1 was quite green; length of the longest ear, 6½ inches, and containing 76 seeds; in the 4 best, 249 seeds, weighing 103·71; in the others 138, weighing 40·89, in all 144; if the ears that were taken were equal to those that were left, the total number of seeds would be 974, and the total weight 289·2.

7.—3 Urate; the corn cut ripe; 12 stalks, of which 3 had their heads plucked off; of the remainder, 5 were ripe, and 4 green; 4 of the ripe contained 177 seeds, weighing 114·34 grains; the other 5, 168, weighing 83·2; total number, 345; adding 132 for the missing ears, 477: total weight, 197·54, or, adding 84=281.

8.—4 Urate; the corn cut green; produced 14 ears, of which 5 were ripe and 9 green, besides 1 imperfect one, containing 2 or 3 small seeds. In the 4 best there were 235 seeds, weighing 154·2 grains; in the others 317, weighing 129·35: thus the total number was 552—the total weight 283·55.

9.—5 Urate; the corn cut ripe; only 10 ears, but being brought to me without the root, I cannot tell how many other stalks may have had their heads plucked off; half were ripe, half green. The 4 best ears contained 162 seeds, weighing 88·2 grains; the others 164, weighing 66: total number, 326; total weight, 154·2.

10.—6 Urate; the corn cut green; bore 13 stalks, of which all the heads but one had been plucked off; 6 were very strong, the rest weak, 1 of which contained 16 small seeds, not worth weighing.

11. Urate; unmeasured quantity, filling the centre of the pot; the ears from 3 seeds were 30, of which 20 were quite green, and 3 very small, some of them almost as much bearded as rye, others only awned at the top in the general manner. The 4 best ears contained 196 seeds, weighing 107·05; the rest 720, weighing 262·8 grains: total number 916, or 305 for each seed; total weight, 369·85, or 123·28 for each seed.

12.—1 Guano, produced 15 ears, of which 2 were good, 2 moderate, the rest quite green and small, 2 very diminutive. The 4 best contained 165 seeds, weighing 82·77 grains; the others 224, weighing 64·5: total number, 389; total weight, 147·27.

13.—2 Guano; the corn cut green; ripened the first of all; produced 14 ears, disposed to be bearded, but 10 of them abortive; the 4 best, one of which was 5 inches long, produced 200 seeds, weighing 80·04 grains; all the rest weighed only 17·43: total weight, 97·47.

14.—3 Guano; the corn cut ripe; produced 20 stalks, of which 7 were green; the heads of all had been plucked off, except 4, which contained 113 seeds; but they were on feeble straws, one quite green; some of the straws were very strong: the weight was 47·6 grains.

15.—4 Guano; corn cut green; produced 14 ears; 10 ripe, 4 green, and 1 of them very small and poor; the 4 best contained 219 seeds, weighing 71·9 grains; the rest 230, weighing 47·5; total number of seeds, 449; total weight, 119·4; straw very strong; 1 ear curled up by tying.

16.—5 Guano; corn cut ripe; the produce only 9 ears; 4 ripe, 3 green, and 2 very small, an aftergrowth; the 4 best contained 214 seeds, weighing 117·26 grains; the rest 140, weighing 57·95: total number, 354; total weight, 175·2.

17.—6 Guano; corn cut green; produce, 14 ears, besides 2 abortive; in 7 the grain was imperfect and unripened, the largest ear 5 inches long; the 4 best contained 220 seeds, weighing 104 57 grains; the rest 98, and some imperfect ones not worth counting, weighing altogether 39·37; total number, 318; total weight, 143·94.

18.—Guano; unmeasured quantity, filling the centre of the pot; the 3 seeds produced 32 stalks, not bearded, most of them ill grown; 5 had their heads plucked off; 1 ear contained 69 seeds, the 4 best 224, weighing 124·6; the other 25 had 694, weighing 233·27; total number, 918 grains; total weight, 357·87; if the plucked heads contained 50 each, the total number of seeds would be 1168, and the weight about 507 grains, which gives for each seed sown a return of 389; weight, 169.

	Best Ears.		Total.

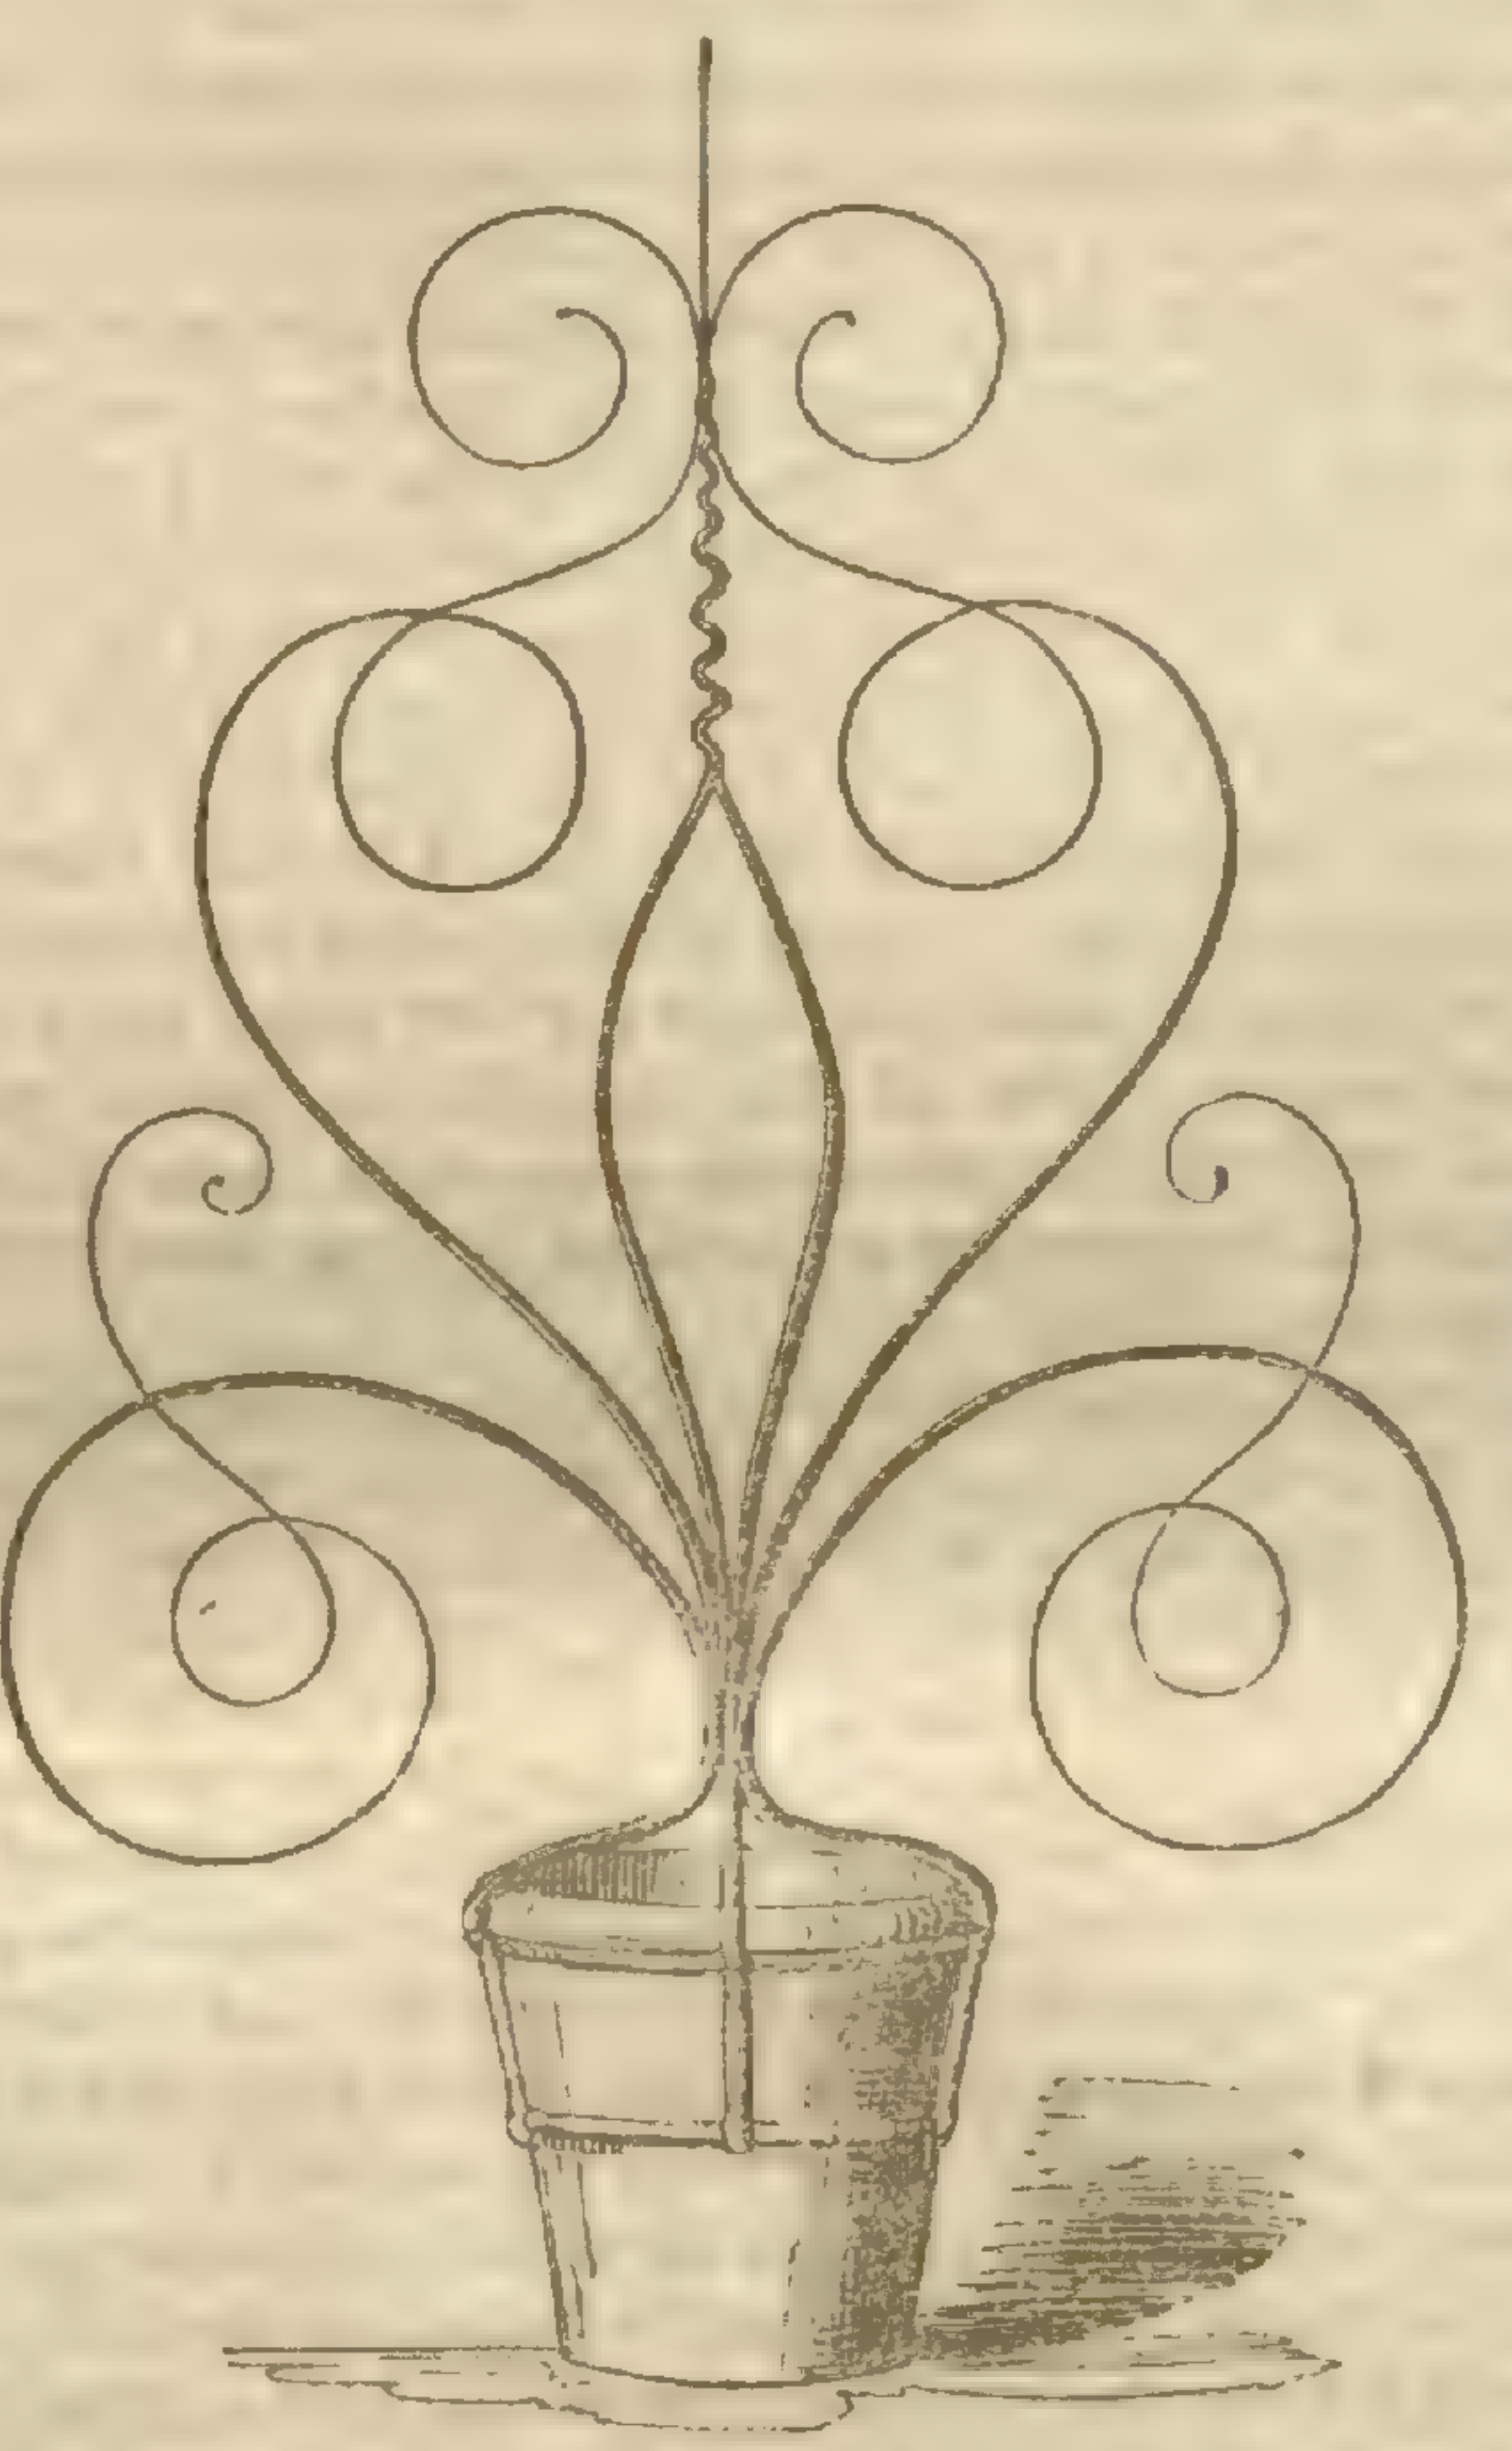
TRELLIS FOR CLIMBERS.



ANNUALS.

One of your correspondents says that "for the last dozen years annuals have not been much cultivated in the North of England, owing to the very unfavourable wet and cold seasons which have till this last summer been experienced. With many amateurs the chief sorts which have adorned their gardens, and which in his opinion are more suitable for the shrubbery than for the flower-garden, have been the Eschschóltzia, Convólvulus minor, Gília, Nemóphila, Eutoca, Lupines, Candytuft, &c.; all of which, with the exception of Nemóphila insignis and Gília trícolor, have during the late delightful summer grown so vigorously, that they have almost smothered every other plant that may have been near them. Although acquainted with the colours of the annuals, he is at a loss to know what kinds are the most suitable for beds about seven yards long and three or four wide. He would like to have a first row of Verbenas, intermixed with Petúnias and Sálvias, pegged down; then a second row of annuals, varied in colour, which do not grow too tall; and a third row of some kinds taller and more showy."

In the North of England, where spring is so late in making its appearance, this difficulty of obtaining good blooming plants of select annuals is very likely to occur; but it might in a great measure be obviated, by rearing a sufficient stock in autumn to be planted out the following spring, as soon as the weather became tolerably settled. Any old spare frame, or even a mat or two supported upon hoops, would furnish them with sufficient protection during severe frost; but they should be allowed plenty of air upon all favourable occasions, in order that they may not become weakly or drawn. Reared in this manner, the young plants would begin to flower almost as soon as they were planted out in spring, rendering the beds lively until the Verbenas, Petúnias, &c., had recovered from the effects of their removal. The latter would also have spread over the greater part of the bed by the time that the beauty of the annuals was past; or, if a few annuals intermixed with the Verbenas were preferred, a few of the last spring-sown ones might be planted out to follow in succession.

The best annuals for producing effect, and which range from six to nine inches high, are Collínsia grandiflora, Leptosiphon androsáceus, L. densiflorus, Sanvitália procumbens, Calandrínia speciosa, Platystemon califórnicum, Indian Pinks, Campánula spéculum, Phlox Drummondi, Sphenógyne speciosa, Callichroa platyglossa, Kaulfússia amelloides, Lupinus nanus, and although now common, yet not to be neglected on that account, the charming Nemóphila insignis. The following attain to the height of one foot and upwards:—Collínsia bícolor, Clárkia pulchella and its white variety, Ery'simum Perofskianum, Godétia rubicunda, G. róseo-alba, G. bifrons, G. vimínea, Hibiscus africanus, Crepis barbata, Chrysánthemum trícolor, Schizanthus pinnatus, Coreopsis tinctória, Bartónia aúrea, Malope trífida, and double dwarf Larkspurs. Those which attain a greater height, and are suitable for the central parts of the bed, are—Godétia Lindleyana, branching and single Siberian Larkspurs, the Sweet Pea, Málope grandiflora, Mádia élegans, with Clárkia élegans and its varieties.

There are many handsome low annuals which would not live through the winter, unless protected in a greenhouse or pit secure from frost; amongst which we may mention Lobélia ramosa, Rhodanthe Manglésii, Brachycome iberidifólia, and Mesembryánthemum trícolor. In dry and warm situations there is no annual which can surpass the latter in beauty.—*T. R.*

AMATEUR'S GARDEN. No. XLVII.

If the amateur will turn to page 157, he will find some information regarding the new or little known varieties of Pears, Plums, and Cherries, which are most worthy of being added to his collection, and which he can now purchase in any respectable nursery. Where the object is to get together a small collection of the more valuable kinds, the following selection will answer the purpose, being placed in the order in which they become fit for use. Dessert Pears:—*Seckel, Louise Bonne (of Jersey), Marie Louise, Beurré Bosc, Duchesse d'Angoulême, Althorpe Crassane, Figue de Naples, Winter Nelis, Hacon's Incomparable, Glout Morceau, Passe Colmar, Ne plus Meuris, Easter Beurré, and Beurré Rance.* When very early summer kinds are desirable, the following may be chosen: *Muscat Robert, Citron des Carmes, Jargonelle* (this requires a wall), *Summer Franc Réal*, and *Dunmore.* Kitchen Pears:—*Bezi d'Heri, Double de Guerre*, and *Catillac.*

Dessert Plums.—*Royale Hâtive, Green Gage, Washington, Purple Gage, Coe's Golden Drop*, and *Ickworth Imperatrice.* Kitchen Plums:—*Early Orleans, White Magnum Bonum*, and *Shropshire Damson.* Some of the Dessert kinds already named are also excellent for kitchen purposes.

Dessert Cherries.—*Early Purple Guigne, May Duke, Knight's Early Black, Black Eagle, Downton, Elton, Royal Duke*, and *Bigarreau.* The *Kentish* and *Morello* are the best sorts for preserving.

The above selection, together with the Apples described last week, will be amply sufficient for a small orchard, and will enable the possessor to have the different kinds at his table throughout the season, whenever they are most required. With one exception, the whole succeed perfectly on standards in the midland and southern counties of England, and probably much farther north. The Pears in particular are much finer for table when grown on standards than upon walls; they are not so large nor so smooth-skinned, but the flavour is much higher, and as they are grown to be eaten as well as to be looked at, the latter property is of most consequence. I do not think that the great size of a Pear is any recommendation to it when brought to table. Moreover, some kinds, such as Gansell's Bergamot, Crassane, Brown Beurré, and the Jargonelle already noticed, require a wall; and where that is to spare, these kinds may be trained against it. Those who have small gardens are not supposed to have much accommodation for wall-trees, and therefore this little fact will be of some importance to them. The Morello Cherry succeeds well upon a north wall, and so do many other kinds in favourable situations; the Bigarreau, for example, is said by a correspondent of this paper to do so.

In planting, guard against making the ground too deep or too rich. It should be well drained, and means should be used to prevent the roots from running down into the cold subsoil. Do not plant deep, spread the roots out within a few inches of the surface, and your trees will succeed as well as you can wish them.—*R. F.*

HOME CORRESPONDENCE.

Dissipation amongst Gardeners.—It is to be hoped that the "Hammersmith Gardeners' Mutual Instruction Society" will adopt your reading in their articles respecting drunken gardeners. I can speak from experience of the advantages that may be gained from mutual instruction, when conducted in a proper manner. Gardeners of sobriety should endeavour to hold as little communication with drunken ones as possible; and societies of gardeners, meeting for the purpose of imparting useful information to one another, should use every means in their power to weed out from among them those pests, who will only hinder their progress, and throw a blight over their exertions. Such men will care little for another's concerns, when they show so much forgetfulness of their own. These incurables are fitter companions for the sect of the Borborites, who prefer to wallow in the mire like swine, rather than to be admitted into the company of sober men. One person of intemperate habits may be the means of destroying many others; and certainly, if the evil could be prevented before the infection became epidemic, it would be more to their profit; for, in general, these characters are too stubborn for instruction, and proof against homily and good counsel. By admitting a few of these swillbowls into a society, the meetings would soon become exhibitions of riot and confusion; the members, instead of receiving instruction, would witness the transmigrations of Pythagoras—a menagerie of wild beasts without cages to confine them. If gardeners would only pay more attention to what kind of company they associate with, they would soon banish from their profession these disgusting sights; namely, dissipated begging gardeners, who by means of begging letters, forged names, and forged sums attached to them, often deceive the unwary. Their stammering tongue and their alcoholic breath, which a lighted lucifer would almost set fire to, should, however, serve as beacons to prevent others from running headlong to ruin from the same cause. How many of the frozen-outs could ascribe their misfortunes to the same evil! whilst a little economy in their expenditure would have enabled them to have weathered the storm, and would have prevented them from becoming unblushing beggars, with a ruined character.—*Peter Mackenzie.*

Vines.—I beg to offer the following observations, in answer to "A Brother Amateur's" call for an explanation of the apparent discrepancy in my mode of accounting for the imperfect condition of the Grapes produced this year at the top of my Grapery.—I find that at all times, although the top lights are open, when the lower ones are closed, the temperature of the lower part of the house is many degrees below that of the top;—the ascent of the heated air from below being more than sufficient to counteract the cooling effect from above,—except when the *wind blows briskly*, to cause a quicker ingress by the crevices in the lower part of the house, the door-way, &c. together with agitation from the openings at top. The last summer was not more remarkable for the superiority of its sunshine and the fineness of its weather, than it was for its prevailing calm. I believe, indeed, that the *immediate* cause of its high character was an unusual absence of the prevailing sharp indraft of wet and cold north-westerly currents—the great bane of our climate. In the absence, therefore, of the greater pressure at all the feeding crevices below, and the agitation at the top of the house, I have no doubt that my Vines were kept, a great part of the summer, immersed in air not only heated beyond the healthy temperature of 80° or 90°,—as indicated by the thermometer in the lower part of the house,—but air also, which from its stagnation, or very slow circulation amongst the foliage below, had lost much of its vital property and maturating influence. I have since recollected, that long before the fruit should begin to show colour, I was struck with its slow progress in plumping and "swelling off," considering the fineness of the season; but as the leaves did not appear to suffer, I did not take alarm, or think of the true cause at that time. The growth of the new unbearing shoot was also not so vigorous as usual. Although I believe, therefore, that in my case, "the blight" was mainly attributable to *bad air*, that is, air deprived by stagnation amongst the foliage of its maturating properties and vivifying influence, I agree with "R. Layton, Essex," that high temperature had some share in the business. The Grape ought not to be subjected to the heat of a tropical climate; and I dare say that my Grapes were half the summer, at the top of the house, in a temperature of 100° or 120°,—not of radiated heat, but of air heated up to that point. Nevertheless, as Grapes ripen well in stoves and pineries where a high temperature is maintained, we may suppose that they will bear hot air if there be *plenty of it*. The theory of the successful cultivation of the Grape is this: We live at the northern limits of its climate, and we must bring to it by artificial means the sunshine, warmth, and "sweet airs" of the south. The simple protection of our glass, when well managed, does this; and the secret of Mr. Crawshay's great success, so prominently advanced by yourself, is, that, with a well-ventilated glass-house, he gives his Vines the climate of Burgundy, whilst his garden furnishes him with the soil of the Valley of Jordan,—no way, if we may believe modern travellers, deteriorated in its character since the days of Moses.—*Amateur.*

——The cause of the second year's crop of your Dublin correspondent's Grapes failing in colour and flavour was, I suspect, entirely owing to the number of bunches allowed to remain on the Vine last year. I have strictly followed the rules laid down in Clement Hoare's admirable little work on the Cultivation of the Vine, and have placed many hundred-weights of bones to the root of my Vines. The following experiment may not be altogether useless to amateurs like myself. Being desirous of testing the accuracy of Hoare's principle, in 1841 I allowed a Black Hamburgh, four years old, containing two canes of 12 feet each and 2 feet apart, to ripen thirty-nine bunches. The consequence was, that many at the top were nearly white. Another Vine, of the same age and size, ripened twenty bunches; these were of better colour, although a few near the extremity were light-coloured. Twelve bunches only were allowed to remain on a third Vine in the same house, and of the same age as the former two; these were well ripened and very black, some of them weighing 1½ lb. each. I should observe, that the first-mentioned Vine this year produced very weak and unripe wood, the bunches and berries being so small that I was obliged to cut them all off, and I think the Vine will not recover itself for some years, thus confirming the statement of Mr. Hoare. Although air is a most powerful agent, both in colouring and giving flavour to Grapes, I am quite convinced that the principal cause of failure in these most essential points, as well as the want of size in the bunches and berries, is allowing Vines to bear more than they are able to ripen.—*Frederick Chase, Langley Lodge, Luton.*

——Having lately obtained the loan of a few copies of the *Chronicle*, I observe, in No. 8 of this year, that some one has styled me "a conjuror in Grape-growing," from an advertisement inserted in a preceding Paper, in which I stated that I had been accustomed to the cultivation of the Grape, and that I would undertake to produce a crop in 16 months after the Vine is planted. This writer asks, "Will any gardener allow his permanent Vines to bear a crop of fruit in that short period?" I planted a house of Hamburgh in the year 1837, and the season following they each produced from 25 to 30 bunches, weighing from 2lbs. to 3lbs. a-piece; continuing, up to this time, to bear from 40 to 45 bunches annually. The house stands in a bad situation, the front facing S.W. and S.E., surrounded with tall trees, so that the Vines have no sun till nine in the morning. I also planted a small house of year-old plants on the 21st April last, and the Vines have made from 40 to 45 feet of well-ripened wood.—*J. Gregory, Hilborough, Brandon, Norfolk.*

Fuchsias.—Being a great admirer of the Fuchsia, particularly when planted out in masses, and having frequently observed how unsightly beds of that pretty flower appear after having been in the ground for a few years, owing to the unevenness of their growth, and the perishing of plants in various parts of the bed, I have been induced to adopt the following plan to remedy the above defects:—About the middle of July, or whenever the shoots are 18 inches high (or less, if the bed be close planted), I bend down as many of them in all directions as will cover the bed closely, and peg them down securely, taking care to retain one or two of the finest shoots of each plant; these I tie up to neat stakes, and in a short time they form beautiful heads, from four to six feet high, loaded with blossom: at the same time I cut away all superfluous shoots which are not wanted for either of the above purposes. Those laid down soon push up innumerable laterals laden with blossom, which, contrasted with the fine pyramidal heads of those retained as standards, give the whole a uniform and pleasing appearance; I may add, also, that they continue much longer in flower, as the standards (I mean those tied up to stakes) were covered with fine bloom until cut off by the frost; while a bed which I had left to their own free will presented but a mass of plants of uneven dimensions, deformed by vacancies. The above plan, if not generally known, I would strongly recommend to the readers of the *Chronicle*; it may be thought troublesome at first, but I assure them it will recompense them. I may remark, that it is better not to peg the shoots down too soon; if left alone until they will reach over to cover all the interstices, much trouble is saved, and the laterals which arise from them do not grow so high as to interfere with those left as standards.—*W. F. Robson, Ware.*

§ *Fuchsia Fulgens in the North of Scotland.*—At the seat of Sir J. Rose, of Holme, ten miles east of Inverness, several specimens of Fuchsia fulgens formed objects of universal admiration. One of them thrust up 27 strong shoots from the tubers; the central ones were two feet high, whilst the lower ones drooped on all sides to the ground, thus forming a most beautiful conical-shaped bush. The extremity of each shoot bore a magnificent truss of pendulous tube-like flowers, and continued to bloom from the month of June until they fell a sacrifice to their sharp frost. The beds where the F. fulgens were planted were 30 yards from the wall.—*Snowdrop.*

Trees.—A correspondent informs us that he has observed for the last ten years or more, that a great many of the Lombardy or Turin Poplars have been gradually dying, the disease commencing at the top of the trees. This observation was first made in Suffolk, and was confined to the trees of fifty or sixty years of age, or older. He has noticed similar effects in other countries, though less strikingly than in Suffolk. During the last two years he thinks that trees, from ten to twenty years old, have begun to die off in the same manner. This autumn he has been confirmed in the opinion that this description of tree, of all ages, is dying almost all over the country. He has travelled over twelve hundred or more miles in England and Scotland this autumn, and has observed this to be the case; so that in ten more years he fears that the whole race will be on the wane. Within the two past seasons he has also remarked that in Suffolk the common Willow (there called Sallow) has died in a proportion ten-fold greater than in preceding years, and even in situations which they used to like best, beside rivulets and wet ditches. During the same period, indeed, almost every kind of young tree, Oak, Elm, Ash, Beech, Birch, &c., appears to have been dying in a very unusual degree. He has been a planter more than thirty years, and, being very partial to trees, he plants them in all new fences; of late, little else but Oak. Last year and this he has lost more of his young Oaks so planted, than in the preceding thirty altogether. He is not aware of any difference in his mode of planting, but he can see a hundred rods of fencing, of 25 or more years old, with scarcely a tree missing; while in 1841-2, three-fourths have died. The young Oaks, cut and laid in with the Whitethorn, have not died. Our correspondent desires to add, that being at the Duke of Athol's, at Dunkeld, he saw, with great admiration, the splendid Larch trees, two of which, supposed to be the first brought to England from Switzerland, in 1737, are still healthy and growing. Four years ago the largest measured 14 feet round at 6 feet from the ground, and 16 at 4 feet. It was 96 feet high, and contained 396 cubic feet—nearly 10 loads, of 40 feet. The forester said, that the late and present Duke had planted 47,000 acres, chiefly Larch. Many splendid trees (200,000 feet, as the forester said) were lying about the park, just felled (September 1842) for the Navy. As near as he could judge by stepping, some of these prostrate trees were about 100 feet long, and measured 60 cubic feet. Our correspondent is of opinion, that there is a Larch in Suffolk which contains half a load—20 feet. He has some 30 years old, not one of which, he believes, is worth five shillings. In the fine park of the Duke of Hamilton, at Hamilton, are some splendid Oaks: so old, perhaps, as not now to be growing profitably. One was said to measure 24 feet round at 6 feet from the ground. It is a magnificent tree, but so overgrown all about it as to show to disadvantage. Immense boughs have been lately broken off by wind, and are lying under it.

Effect of Ivy on Houses.—With great deference to your opinion, I am compelled to differ from you respecting the damp occasioned to buildings and walls by their being covered with Ivy. When I entered my former residence, I found the walls dry, and, as an ornament, I planted Ivy. About five years afterwards, I found the part of the house thus covered so extremely damp and wet inside, that I was induced to cut most of the Ivy down, when the walls got thoroughly dry. The place, however, looked so bare, that I afterwards allowed the Ivy to grow up again; the damp returned and continued to increase during the remaining four years of my occupation. The kind planted was the Giant or Irish.—*F. Chase, Langley Lodge, Luton.*

Horse Chesnuts.—These nuts being very abundant this (as they are, indeed, every) year, but always appearing to me to lie on the ground without use, I was induced to try some experiments in offering them as food to horses, pigs, fowls, and cows. I began by pounding them in a mortar, and, in the first experiment, I mixed oats with them for horses: this was refused. 2dly, with meal to the pigs and fowls, neither of which would touch them. And, lastly, to milch cows, who immediately paid due attention to them. I had some idea that the bitterness might affect the butter; we, however, found no ill effect from it, but, on the contrary, it did not produce the slightest difference in the taste. We soon found that the cows looked for their meal every time they were brought in to be milked, and we then gave them the whole nut, which they devoured most ravenously. I consequently directed the nuts to be gathered, and proceeded in this manner for about a fortnight, when it was observed, that, although the animals had plenty of grass, the milk began to fail; I therefore discontinued the practice, but no inconvenience has resulted from it, as the cows are now in as full milk as ever. I cannot conclude without offering a suggestion, which might be of further use to those who have dairies, viz., that when a cow is giving but little milk (if at this time of the year), she might be soon made fit for the butcher by the above food, which would, no doubt, be equally serviceable for oxen.—*A. P., Cheam.*

Hot-Air Stove.—I find I made a mistake in the quantity of fuel consumed in Mr. Lawes' stove, and in that belonging to the hot-water. Though the comparative quantities are the same (the hot-water consuming seven times as much as the hot-air—one burning in a week what the other does in 24 hours)—it is the *hot air* that consumes a bushel of cinders in the day and night, whereas the hot-water takes seven bushels of coals in the same period. The mistake arose from my having inquired the consumption of the latter stove in the 24 hours, and the gardener having supposed I meant the former, and answered accordingly. Of course, had I given a thought to what a bushel measure really is, I should not have made a blunder so obvious; but ladies are not expected to think, and this is the only excuse I can offer. I do not know how long Dr. Ure's Dictionary has been published. Mr. Lawes' stove has been in full operation in his own dwelling-house for three or four years. We do not trouble ourselves in the least respecting the originality of the stove, being perfectly satisfied with its utility; and as the latter is the only thing really important to the public, a discussion on the subject of the former would not be sufficiently edifying to make it agreeable to your numerous readers.—*M. D. Tyssen.*—[We quite agree with you.]

To destroy the Red Spider.—Having read with interest the various remedies mentioned as a cure for the Red Spider, which so often proves fatal to the growth of Melons during the heat of summer, I am induced to send you an account of a successful method which I have adopted in banishing them. About the 1st of May, I observed the Red Spider making its appearance in two or three different beds; one of these I immediately had painted inside with a mixture composed of sulphur, soft soap, tobacco-water, and a little tenacious clay to make it adhere the better. This coating I afterwards repeated three different times during the season, or whenever the strong sulphureous smell seemed to subside; and on one or two occasions when Red Spider made its appearance in the centre of the frame, I had some blue slates painted over with the mixture and placed under the leaves affected; taking care to remove them when I watered the plants. It certainly did not restore the leaves affected, but it effectually prevented the further progress of the spider, and on the bed so treated I had a fair crop of fruit of good size and flavour; while the other beds, which were treated in the usual manner, of partial shading during hot sunshine, watering early in the afternoon, and occasionally in the forenoon too, to create moisture, were absolutely eaten up with this insect. Even one bed of Melons which I carefully had washed with a strong soapy lather, was as bad as the one which was only watered occasionally. I may here observe, that the bed experimented on with the painted mixture was never shaded, except on one or two occasions after copious waterings; which, while Melons are in a growing state, I think is essential to their well doing.—*S. N. V.*

Soot.—With respect to its adulteration, I recollect once finding a boy, who had been sweeping my chimneys, sifting the cinders at the ash-hole. On asking him what he was about, he replied, he should be thrashed if he did not carry home a certain quantity of soot.—*T. O.*

FOREIGN CORRESPONDENCE.

Paris.—The autumnal show of fruits and flowers of the "Société d'Horticulture de Seine et Oise" was held in the grand gallery of the Hotel de Ville, Versailles, on the 1st of October. The fruit was the principal object of attraction. Pomona has been this autumn extremely lavish in her gifts; whether the reproaches or entreaties of her votaries last season moved her compassion, or jealousy at the rising fame and honours paid to her younger sister, Flora, in the spring, rankled in her breast, certain it is, that for months past her attendants have been daily exerting all their influence, and she has once more appeared in seductive and luxuriant splendour. Apples, Pears, and Grapes were exhibited in profuse abundance; and Pine Apples, Peaches, Melons, &c., contributed their part to render this exhibition worthy the fête of so celebrated a goddess. I have at various times seen, both in England and France, excellent specimens of the Reinette du Canada Apple, and Duchesse d'Angoulême, Beurré, and Calabasse Pears, but never before such as were here exhibited; combining a beautiful colour and form with extraordinary size. Some of them could not weigh less than one to one and a half pounds each. The Grapes exhibited the same gorgeous appearance which characterized those at the Paris show, proving clearly that the celebrated paintings of this fruit by Vandael, Fontaine, Voitellier, &c., are not ideal fictions, but absolute fac-similes of nature. The varieties most remarkable were the Gros Ribier de Meroc, Gros Damas, Cornichon Blanc, Grommier, Chasselas noir musqué, Muscat of Alexandría, Violet d'Alexandrie, Damas de l'Hérault, Chasselas de Bar sur Aube (finer in appearance than the Chasselas de Fontainebleau), Chasselas gros Guillaume, and Chasselas de Fontainebleau. The Frankendale was also exhibited, but either this is not the same variety known in England by the name of Black Hamburg, or the cultivators here do not bring it to the same perfection. Among the Pears, Duchesse d'Angoulême, Calebasse, and Catillac, stood pre-eminent for size; but Beurré incomparable, Beurré doré, St. Germain, Belle de Berri, Passe Colmar, Bonchrétien d'Hiver, Beurré d'Angleterre, Napoleon, Beurré d'Aremberg, Bezi Chaumontel, and Bergamotte de Bruxelles, were all that could be desired; to which I may add a basket of Doyenné d'Hiver, gathered in 1841, but looking as fresh as if just plucked from the tree. The varieties of Apples were not numerous; Calville blanc, Reinette du Canada, Alexander, Cœur de Bœuf, Reinette doré, Reinette d'Angleterre, and Pigeonnet, showed what could be done even in a district not favourable to this fruit. Among other fruits, were the Pastêque Melon, a very large dark green late variety; the Yellow Gourds of Coucourzelle and Valparaiso, and the Long Green of Barbary. The Plants and Flowers were as numerous as could be expected, after a season of unexampled heat and drought. Dahlias are, or ought to be, from their universal cultivation, the leading flower at an autumnal exhibition; but, in this instance, the Society debarred several from showing, in consequence of its offering prizes only for stands of 100 varieties; nevertheless, there were seven or eight collections for competition; and in the stand of M. Sammesson were fine flowers of Burnham Hero, Eclipse, Highgate Rival, Bridesmaid, Comte d'Helley, Maria, Reine d'Or, Conqueror of the World, Lewisham Rival, Bloomsbury, Comte de Cussy, Pascal Bruno, Royal Standard, Reine des Fées, Fanny Keynes. In that of M. Deschiens were Ne plus ultra, Gem of the South, Regina, Grenadier, Petit Paul, Indispensable, Lady Cooper, Beauté Suprême, Primrose, Aries, Glory of Plymouth, Comte de Cussy, Coquette de Nancy, Maid of Bath, Argo, &c. Mr. Salter exhibited Prince of Wales (Dodd), Attila, Twyford Perfection, Caroline Wallner, Dame de Beauté, Prince Albert, Bridal Ring, Beauté de Paris, Lady Cooper, Lady Ann Murray, Alba purpurea, Superba, Sir F. Johnson, Widnall's Queen, Reine des Feés, Stella, Fanny Keynes, Marquess of Lansdowne, Winterton Rival, Indispensable, &c. From M. Souchet were thirty tipped varieties, in pots, which, although embodying every kind of form except the true one, attracted much attention by their fantastic colours. M. Jessé had some good specimen plants of Cássia corymbosa, Asclépias fruticosa (almost covered with its silky pods of seed), Acácia Esterbázia (10 feet high), Eucomis punctata, Ricinus víridis, Plumbago cærúlea, and Cárduus Marianus. From M. Bertin, a noble plant of Physianthus albus (covered with thousands of blooms), Clethra mexicana, A'bies columbaria, Cedrus Deodara, Paulovnia imperialis, and Quercus Cerris variegata. From M. Pajard, the skilful superintendent of the Botanical Gardens, Cedrus Deodara, Cupressus thyoides, Araucária brasiliensis, Arália japónica, Juníperus macrocarpa, and Pinus australis, montana, and halepensis. From Mr. Salter, Achimenes rósea and longiflora, Gloxínia rubra, Euthales macrophylla, Gesnera magnífica, Russélia júncea; Impátiens glandulígera, rósea, and tricornis; Ipomœa ficifólia and Leárii; Fúchsia aurántia, albiflora, conspícua, arbórea, corymbiflora, cordifólia, compacta, excelsa, Fairy, fulgens arbórea grandiflora and longiflora, ilicifólia, formosa élegans, Meteor, trícolor, and several very fine hybrid seedlings with large and long flowers. Some fine Ericas, chiefly E. Linnæana superba, mammosa major, ventricosa, and Lambertia, together with some hybrid Rhododendrons (not in flower) with very singular foliage, were from M. Duval.

PROCEEDINGS OF SOCIETIES.

ROYAL AGRICULTURAL SOCIETY OF ENGLAND.

Nov. 9.—T. Raymond Barker, Esq., in the chair. The Earl of Beauchamp, and Sir W. Beauchamp Proctor, Bart., were elected Governors; and 41 gentlemen members. The Earl of Hardwicke addressed a letter to the Council on the subject of the arrangements to be made for the Society's Annual Country Meeting at Derby in July next; and Mr. C. Stokes expressed his willingness to promote the business of the meeting to the utmost of his power. W. W. Bulpett, Esq., Mayor of Winchester, addressed a letter in favour of that city as the place of the Society's Annual Country Meeting of 1844. It was decided that a lecture to be given by Dr. Playfair should be delivered at the Society's House, in Hanover-square, on the 7th Dec., at 8 o'clock in the evening. A report from Prof. Henslow was communicated on the subject of his arrangement of the Society's specimens of Wheat for permanent suspension in glass cases at the rooms. Mr. G. Drake communicated some remarks on the points of distinction in deciding on the peculiarities of breed in animals exhibited in competition for prizes. After calling the attention of the members to the conflicting opinions which were entertained upon this subject, he concluded by recommending the Society to establish a committee competent to erect a standard of character for every class of cattle and sheep which they intended to encourage; the first work of the judges when they entered the yard being to exclude all animals that did not show the breed intended; that a standard of form should be assigned, and every point necessary to constitute a perfect animal noticed according to its importance, so as to have its proper influence on the decision of the judges. By such fixed rules the public would become better acquainted with the pure breed and proper form both of cattle and sheep, and be better qualified to form an accurate opinion as to the animals they should exhibit. That there was also a necessity of confining prize animals to a system of feeding; for frequently, after the natural appetite had been appeased, they were crammed with stimulating drugs to increase the desire for food, with which they were most extravagantly supplied; by which means many defects were concealed, and the natural size, form, and fattening properties, unfairly represented.

The Rev. D. Gwilt of Ickingham, Suffolk, communicated the results of his trial of the Siberian Vetch, which grew luxuriantly, but was refused as food by horse, colt, cow, and beast.—Sir C. Morgan, Bart., presented samples of wool from his black breed of Welsh mountain sheep (superior to the wool of the white), and from his Hampshire South-down ram; and Mr. O. Gore, M.P., a ball of agglutinated hair, weighing 13 ounces, taken from the stomach of a perfectly healthy calf, killed when seven weeks old, at Porkington Park, Shropshire.

LINNEAN SOCIETY.

Nov. 15.—E. Forster, Esq., in the chair. Mr. Parry was elected a Fellow, and Mr. Woodward and Mr. Salter associates. A collection of fruits and dried specimens of plants from Aurungabad, in the Deccan, presented by T. S. Ralph, Esq., were exhibited. Amongst them were the fruit of the Areca Cátechu, and of several species of Leguminous plants, a specimen of Arundo Karka, the fruits of Nelumbium speciosum, Anona squamosa, Luffa pentandra, and acutangula, a branch and fruit of Caryota ureus, also of Psidium pyriferum and Pandanus odoratissimus. Mr. Ward exhibited living specimens of Buxbaumia aphylla, growing in a closed glass vessel. A paper was read from Dr. Thos. Forster, on the varieties of Papaver orientale. He considered there were four permanent varieties, the P. bracteatum, præcox, serótinum, and another. The P. o. bracteatum was said to yield better opium than P. somniferum.—A paper was read from Mons. Haro, on the Secale cornutum, in which the author had come to the conclusion that this diseased state of the plant was not at all dependent on the development of fungi in the tissue of the grain, but on a monstrous condition of the grain. The paper was also accompanied with a description of a supposed new species of Asplenium, which had been found near Metz, and which had been named after the author of the paper.—Mr. Youell exhibited several plates of the illustrations of a new work on American Zoology, by Mr. Audubon. They were equal to anything the author had previously published.—We noticed with regret a long list, in large letters, of defaulters in their payments to the society, and we hope this notice will induce some to take steps for the removal of this exposure.

MICROSCOPICAL SOCIETY.

Nov. 16.—Professor Lindley, President, in the chair. A second paper was read by Mr. Hassall on the destruction of fruit by fungi. The author stated that he had obtained more conclusive evidence of the influence of fungi in producing decay in fruit, from the fact that this decay can be communicated at will by inoculating sound fruit with a portion of decayed matter containing the spawn of the fungi. In an Apple or Pear of a soft consistence, the effects of this inoculation become manifest in 24 hours, and the disease progresses so rapidly that in a few days or weeks an entire disorganisation of the fruit is effected. If a sound Apple were inoculated with a portion of a decayed Pear, or *vice versâ*, the same effect would be produced. Sound Apples, whose cuticles have been ruptured, if kept at a distance from affected fruit, are longer in becoming contaminated than when placed near it; this would lead to the conclusion that the entrance of the sporules of the fungi is generally, if not always, through the ruptured epidermis. The author concluded by observing, that the decay of fruit might be retarded by coating the surface over with some kind of varnish, which would protect it from the influence of the atmosphere. Mr. Hassall next called the attention of the meeting to a peculiar form of the spiral vessel which he had observed in the Vegetable Marrow. He described it as consisting of secondary fibres placed *longitudinally* across and within the spire of the vessel. It might at first sight, he said, be supposed that the appearance is produced by plaits in the enclosing membrane of the spiral vessel; but he considered them proved to be secondary fibrillæ, first by the circumstance that they are distinctly separable from the membrane, and secondly by the fact that, if such a spiral vessel is broken up, and the fibre unwound, the longitudinal striæ will be observed to have separated into numerous short pieces, which adhere to each turn of the spire; and again, that if an interior view of this kind of vessel is obtained, the extremity of the striæ may be plainly seen interrupting the circularity. The author conceived that such longitudinal fibrillæ were intended for the purpose of giving strength to such vessels. In conclusion, he stated that a similar observation had been made by Mr. E. Quekett, in the Canna bicolor (an example of which was afterwards exhibited) and Loasa contorta, and by Mr. Wilson in Typha latifolia; and also that this kind of tissue had been represented from Urania speciosa, by Schultz, in his Memoir on the Latex.—Dr. Lankester remarked, that this singular fact appeared to him to corroborate the views of those botanists who regard the spiral vessel as an organ destined for the conveyance of fluid, and not of air; whereupon a discussion ensued, in which the President defended the doctrine of spiral vessels being really air vessels; and Mr. Dalrymple pointed out the striking similarity of the spiral vessel to the trachea or breathing apparatus of insects. A letter was read from the Rev. J. B. Reade upon various matters. The author, in the first place, sent for inspection a specimen of Cocoa-nut cake, covered with a dense mass of minute filamentary fungi to the depth of some inches. The Cocoa-nut cake is a substance proposed to the farmer as a substitute for oil-cake, and having been given to Mr. Reade for analysis, he found that it contained a considerable quantity of ammonia, "*quasi* ammonia, and not produced by destructive distillation." The fungi growing on the cake were also remarkable for the quantity of nitrogen they contained. The circulation of the sap was distinctly to be seen in their filaments. The author next directed the attention of the society to Liebig's statement, in his Organic Chemistry, p. 114, that "the nitrogen in the air is applied to no use in the animal economy." Mr. Reade expressed his intention of hereafter showing that it is only a very limited view of the wisdom displayed in the composition of the atmosphere, which denies the agency of its larger constituent, and of endeavouring to prove that it tends directly to the production of many millions of pounds per annum of carbonate of ammonia *in the breath of man.* Although the quantity of this agent in a single expiration may be too small to be "quantitatively ascertained by chemical analysis," it is discoverable by the microscope (as was afterwards shown by a specimen of breath sent up from Aylesbury for examination). Mr. Reade also expressed his intention of showing on a future occasion, by aid of the microscope, that Liebig's assertion, that "no conclusion can have a better foundation than this, that it is the ammonia of the atmosphere which furnishes nitrogen to plants," must unquestionably be met with a negative. The discussion on this communication was deferred till the next meeting of the Society. Specimens of microscopic animalcules, sent up from the country *alive* through the post-office, were exhibited by Mr. Ross. They had been enclosed, with the weeds they were attached to, in a piece of wet linen, covered over with tinfoil.

COUNTRY SHOWS.

Hampshire Horticultural Society, Nov. 10.—The last exhibition was held at the Corn-Exchange, Winchester. The following prizes were awarded:—Flowers—Orchidaceous Plants: 1, Oncídium ornithorhynchum, Rev. F. Beadon; 2, Epidendrum cochleatum, J. Fleming, Esq. Best Stove Plant, *not Orchidaceous*, Dichorizandra thyrsifólia, Rev. G. C. Rashleigh. Best Collection of Ditto: Rev. G. C. Rashleigh. Best Greenhouse Plant: Crówea saligna, Rev. F. Beadon. Best Collection of Ditto: 1, Rev. F. Beadon; 2, Rev. G. C. Rashleigh. Best Twelve Chrysanthemums: Vesta, Coronet, Early Blush, Exquisite, Queen, Minerva, mirabile, Princess Marie, grande, formosum, Duc de Cornegliano, Goliath, 1, Rev. the Warden; 2, Mr. Ralfe. *Best Twenty-four:* Rosalind, Memnon, Tasselled Yellow, Conqueror, Bijou, Beauty, Vesta, Maria, Adventure, Grande, Goliath, Duc de Cornegliano, Georgiana, Theresa, Madame Pompadour, Queen, Early Blush, Triumphant, Wheelerianum, Coronet, Princess Marie, Superb clustered Yellow, mirabile, sanguineum, 1, Mr. W. Barnes; 2, Mr. Ralfe. Best Collection of Plants: Col. Wall. Extras: *Collection of Chrysanthemums:* Mr. Wickham. *Ditto*, Rev. Dr. Moberly. Fruits—Black Grapes: Mr. Knight. *White:* J. Fleming, Esq. *Out of Doors:* H. F. Holloway, Esq. Pine Apple: 1, J. Fleming, Esq.; 2, H. F. Holloway, Esq. Best Collection of Apples: 1, R. F. Beadon; 2, Col. Wall. Best Varieties of Table ditto: Col. Wall. *Kitchen:* Col. Wall. Best Collection of Pears: 1, H. F. Holloway, Esq.; 2, Rev. F. Beadon. Best Six Varieties, *now in eating:* H. F. Holloway, Esq. Medlars: Col. Wall. Red Currants: Mr. Stride. Extras: *Pears,* Rev. F. Beadon. *Collection of Apples:* The Rev. the Warden. Vegetables—Celery: Col. Wall. Onions: H. F. Holloway. Several Cottagers' Prizes were also awarded.

NOTICES OF NEW PLANTS WHICH ARE EITHER USEFUL OR ORNAMENTAL.

Læ'lia flava. Yellow Lælia. (*Stove Epiphyte*). Orchidáceæ Epidéndreæ. Gynándria Monándria.—A pretty Epiphyte, which has lately flowered in the collection of Sigismund Rucker, Esq. It is from Brazil, and approaches near to L. cinnabarina, a noble species, with orange-coloured flowers. From that plant it is distinguished by the shortness of the pseudo-bulbs, and of the sepals and petals; and also by the bluntness of the middle lobe of the lip, whose veins are more elevated and diverge considerably at the point, instead of being nearly straight as in L. cinnabarina. This is one of those plants which ought to be grown in a cool stove, or at least at the cool end of the common Orchidaceous-house. A temperature which suits Dendróbiums and plants of that kind is very injurious to this species, and hence most persons who grow many of these plants have a cool house and a warm one. It should be tied to a block of wood, or placed in a basket, and hung from the rafters. Like the rest of the family, it is propagated by dividing the pseudo-bulbs.—*Bot. Reg.*

Rondele'tia longiflora. Long-flowered Rondeletia. (*Stove Shrub*). Cinchonáceæ. Pentándria Monándria.—This beautiful plant was imported from Brazil, by Messrs. Veitch, of Exeter, and flowered in their nursery in July last. The blossoms are borne in clusters, like those of R. odorata; but the bunches are so much larger, that they resemble more nearly those of Lucúlia gratissima, though rather more loosely disposed. The flowers have a tube an inch and a half in length, expanding into an open spreading limb, round the mouth of which the stamens are arranged, protruding slightly. The colour is a bluish lavender, very deep, and exceedingly attractive. There is a trifling odour, when the inflorescence is perfect. Although inclined to make long bare shoots, this plant in all probability may be kept dwarf and compact by a timely pruning of the young branches. This point of its culture appears to require most attention, and should be closely looked after. It may be potted in a mixture of sandy loam and heath-mould, equal parts, with the addition of a little leaf-soil. Kept in a moderately warm stove, and not stinted for pot-room, it will soon attain a flourishing condition. Cuttings of the young wood will root, with some tardiness, under a shaded hand-glass in the stove; the pots containing them had better be plunged in a tolerably strong hotbed.—*Paxton's Mag. of Botany.*

MISCELLANEOUS.

Mr. John Curtis, F.L.S., &c.—It gives us great satisfaction to learn that Sir Robert Peel has recommended Her Majesty to grant an annual pension of 100*l.* to this eminent naturalist. His great work, "British Entomology"—the most important publication that has ever appeared on European insects, occupied his attention for nearly 20 years, at a sacrifice which few men would have had the courage to make, and for which no public patronage could remunerate him; and we are sure that all friends of science will rejoice at the intelligence now communicated. But it is not merely for his past labours that this honourable distinction has been conferred. It is well known that Mr. Curtis's entire attention has been for a long time directed to a practical inquiry into the habits of the insects injurious to the farmer and the gardener; and it is in order to enable him to prosecute these very important, but to himself unprofitable researches, that Her Majesty's favour has been graciously extended to him. The papers published from time to time in the Transactions of the Royal Agricultural Society, and those under the signature of "Ruricola" in this journal, have long evinced how highly Mr. Curtis is qualified for so difficult an undertaking, and how much his labours may be expected to conduce to the advantage of those who are interested in the all-important business of cultivating the soil.

To boil Salsify and Scorzonera.—Scrape them gently, and cut them into pieces of an equal length; then throw them into water with a little common vinegar to prevent their turning black. Boil them, with a little salt, in sufficient water to allow them to float freely. Three-quarters of an hour will generally cook them. They must be carefully drained, and served up either with melted butter or white sauce. They are also excellent when fried in batter after boiling; when dressed thus they should be served with fried Parsley.

Botanical Information.—A continuation, as far as Coniferæ, of Turczaninow's Flora Baikalensi-dahurica, has appeared in the "Bulletin de la Société Impériale des Naturalistes de Moscow." Sets of dried plants, collected in the north of Chili by Mr. Bridges, have been received for sale by Mr. Cuming; among them are some fine things. Bongard and Meyer have published an account of the plants collected in 1838, about the Saisang-Nor, and the Irtisch, with 16 plates.

Guano.—It is stated in the Liverpool Courier that this substance has again proved itself to be one of the most valuable manures. It has been used to a considerable extent both in a dry and liquid state, and in every instance, when properly applied, has answered well for crops of every kind. It has also been proved to be lasting, for good crops have been obtained without any manure whatever, from land where guano was applied and yielded good crops last year. It has been applied on Wheat and other grain crops, and on Grass lands, as a top-dressing, at the rate of 2 cwt. per statute acre, with excellent effect. For Turnips, 4 cwt. have been used to the acre, and given good crops; and from 4 cwt. to 6 cwt. to Potatoes with like success. In the gardens and nursery-grounds guano has been applied in a liquid state, and in that manner has surpassed every manure yet discovered. Its effects on young fruit and forest trees are wonderful, also upon hothouse and greenhouse plants of every description; even the exotic Heaths seem to flourish in a manner beyond precedent when watered with it. About 4lbs. to 12 gallons of water are enough for hothouse and greenhouse plants; the water should stand 24 hours before use, and, when drawn off, 24 gallons more may be put to the same guano.

GARDEN MEMORANDA.

Claremont.—The principal entrance to this place is by a pair of lodges on the south side of the park, through which the coach-road winds, and displays some beautiful views of the house, which is situated on an eminence about a quarter of a mile from the gates. The south or carriage entrance is from the park, and on the north is a spacious hanging lawn, whose beautiful undulating surface is highly pleasing. On the west, the ground, at a short distance from the mansion, rises almost perpendicularly, forming a mound of considerable height, on the top of which an observatory, embosomed in trees, has been erected. The side of the mound is covered with various trees; amongst them, an aged specimen of Quercus Suber, beneath whose umbrageous foliage, we are informed, Her Majesty and Her Royal Consort, when sojourning at Claremont in the summer season, delight to make their morning meal. The observatory commands an extensive view over the lovely scenery of the Surrey hills, with the parks of Hampton Court and Bushy, and the Thames winding through the valley by Kingston. Leaving the observatory, we proceed through a noble avenue of Beech-trees to the conservatory—a lofty oblong square building, with circular ends and a span roof, divided by glass partitions into three compartments. The centre one contains Orange-trees, Magnólia fuscata in full flower, Acácias, and other hard-wooded plants, among which Acácia pubescens, trained over one end and part of the roof, is particularly conspicuous in the flowering season. The two end divisions are stocked with Camellias, which, considering the short time they have been planted, are doing remarkably well. From the conservatory, we are led to a neat Gothic structure, commenced by, and intended for, a work-room for the late Princess Charlotte; she did not, however, live to see it completed, but his present Majesty, then Prince Leopold, had it finished according to the original design. From the garden in front of this room, we have a pretty bird's eye view over the lake, whose placid waters, surrounded by trees of almost every description, decked in their autumn livery, had a peculiarly grand, though, from the circumstance of their being in the "sere and yellow leaf," a rather melancholy appearance. In truth, to those desirous of studying the various combinations of colours, and of understanding the grouping of trees, so as to produce the most pleasing combinations of autumn scenery, this is the place to study it. Here the tall Cedar, and still taller Pine, surrounded by the many-coloured foliage of the Beech, the Elm, the Oak, and Bird-cherry; there the graceful Birch, the "Lady of the Woods," as it has been poetically designated, with its pendent branches drooping almost to the ground, with the noble specimens of Purple Beech, Sycamore, Plane, &c.—form a combination of picturesque grandeur more easily to be imagined than described. The scenery, indeed, which surrounds this lake is grand in the extreme at the present time; but in spring, when the Rhododendrons and other flowering shrubs are in bloom, its effect must be enchanting. In the garden in front of the work-room are two large plants of Araucária Cunninghámii, which have stood out for a number of years. In the winter of 1837-8 they were considerably injured; but they have since recovered, and are now growing luxuriantly. On leaving the work-room we descend the hill towards the lake—a spacious piece of water, with an island in the centre, and bounded on the north side by a bank of evergreens, perhaps the finest in the country,—and on the south, or rather south-east, by some artificial rockwork, backed by large forest-trees. This rockwork has for some years been in a neglected state, so much so, that it was almost lost amid the shrubs and trees that overhang it; but Mr. Malleson has commenced reclaiming it, and when his plans are finally completed it will be an improvement to the place. The pleasure-grounds extend over an area of 60 acres, the whole of which is in the highest state of keeping. Among the various things for which this place is celebrated in a gardening point of view, are the undergrowths of common Laurel, with which nearly the whole of the pleasure-ground is covered. We are of opinion that it would be advantageous to introduce groups of variegated plants, such as Aúcuba, variegated Holly, Rhododendrons, Alaternus, &c., with Yews, Laurustinus, Arbutus, Portugal Laurels, and other evergreens of diversified foliage; neither would deciduous flowering plants be objected to. The Rhododendron grows freely in the natural soil, and Mr. Malleson has begun to introduce clumps of this and other American plants in various parts of the grounds. It is also his intention to intersperse groups of hardy and half-hardy flowering plants, which will be a great improvement; for, with all the splendid scenery of hill and dale, wood and water, the eye will find relief and rest in viewing the humble, though not less interesting, productions of nature. All that Claremont requires to render it everything that can be desired as a pleasure-ground, is rockwork and waterworks, both of which might be introduced at inconsiderable expense. The kitchen-garden is situated in the valley, at a short distance to the east of the mansion. It contains about eight acres of ground, and some years back was noted as one of the first forcing establishments in the country. At present, with the exception of the slips, it is laid down in grass, and partly as a flower-garden. This piece, properly laid out, would form one of the grandest things of the kind in the country, more especially if the walls were covered with Roses and other climbers, with a judicious admixture of vases, baskets, and other rustic and architectural embellishments, in the central part. We should like much to see this garden thus laid out; for, notwithstanding all that has been said and written on the subject of the grouping system of flower-gardening, it is by no means well understood; and as Claremont is a show place, we know no garden better adapted to illustrate this.—*W. P. Ayres, Oct.* 15.

(To be continued.)

Reviews.

The Suburban Horticulturist; or, An Attempt to teach the science and practice of the Culture and Management of the Kitchen, Fruit, and Forcing Garden. Illustrated by numerous woodcuts. By J. C. Loudon, F.L.S., &c. Smith.

THIS work is now completed, and forms a large octavo volume of 732 pages. In one respect it differs from most others of its kind, inasmuch as it contains a greater variety of information than, from a glance at its title-page, we were led to expect. We must acknowledge that the author has exhibited great assiduity, not only in describing and pourtraying all the minutiæ of the practical part of gardening, but also in entering upon the classification, functions, and geographical distribution of plants. In many cases, however, Mr. Loudon has devoted too much room to subjects unconnected with that for which the volume was originally intended; for example, the classification of insects is irrelevant in a work on horticulture.

It is in those parts which treat of the principles of cultivation, that its greatest utility consists. The novice in gardening will there find ample instructions in the various branches of labour, such as digging, trenching, mowing, &c., as well as for the propagation of plants by budding, grafting, inarching, and other methods. A considerable space is justly occupied with directions for planting,—an operation too often considered of minor importance, but which, as daily experience proves, cannot be too carefully performed. Those sections of the work which relate to pruning and training are well worthy the perusal even of the practical gardener; were the rules therein inculcated, as well as those relative to the proper formation of borders, more strictly attended to, we should not have to lament the barren and unsightly state of fruit-trees, which is so frequently observable. The three first chapters of Part III. are occupied with hints for the cropping and general management of a kitchen-garden, with a detail of the conditions necessary to be observed in forcing fruits and vegetables; of which a list of the most suitable for the purpose is given. In the Fourth Chapter is contained a select catalogue of the best varieties of fruit in cultivation, with instructions for their propagation and general management. The last chapter is devoted to vegetables, and furnishes a list of the most useful kinds, arranged in classes, dignified by the grand names of Spinaceous, Acetariaceous, Medicaceous, Toxicaceous, Fungaceous, Odoraceous, Condimentaceous! Adornaceous!! &c.; concluding with a monthly calendar of the various operations required in the fruit and vegetable departments. The closing sentence is worthy of being impressed upon the mind of every young gardener:—"The young gardener will have leisure during the long evenings of November, December, and January, to improve himself by reading, to which he should add writing and drawing, including, of course, arithmetic and mensuration. In these days, when the employers of gardeners are readers of gardening books, and often possess a considerable knowledge of vegetable physiology, the young man who does not occupy every moment of his spare time in improving himself has no chance whatever of getting a good situation as head-gardener."

Having said thus much in favour of the work, we must now advert to a circumstance which we confess surprises us. In the original prospectus, and on the wrappers of the early numbers, it was stated that the *Flower-Garden* would be included in the plan; and, with this expectation, it may be presumed that many people subscribed to it. But at the 16th number, and not that we can discover at an earlier period, it was announced that Flower-Gardening would form the subject of another volume. Now the terms in which the book was advertised were perfectly explicit. After stating in great detail the plan of the work, in which 41 chapters are specified, thirteen of which are to treat of flowers or flowering-plants, one of bees, another of fish-ponds, another of the icehouse, and so on, there followed this passage:—"The author does not bind himself to follow the exact order of these chapters, or even to give all their titles; but he engages to include, in the volume for *twelve shillings*, *all* that is indicated or implied in them, *and probably a great deal more.*" Yet the volume, now that it is completed, costs sixteen shillings, and contains but half the promised quantity of good things—a mode of dealing with his subscribers which we, in their name, must protest against.

☞ *The Book of the Farm.* Part VIII. Blackwood.

WE are glad to see again this excellent work, the publication of which had been suspended for a few months. The present Number, which commences the Second Volume, contains valuable information upon the Winter work of the Farm, such as storing Turnips, Mangel Wurzel, &c., and Sheep-feeding in Winter.

The Gooseberry Growers' Register, for 1842.

BY those who take an interest in growing this fruit to an extraordinary size, this little work will be found useful. Not only does it contain an account of the different Gooseberry shows, which during the past year have been held in Lancashire and Cheshire, and other parts of the kingdom celebrated for exhibitions of this kind; but, in addition, a tabular list of the number of prizes which each kind of Gooseberry has gained, as well as the greatest weight which they have attained during the past season. From this statement we find that the heaviest Gooseberry in 1842 was the London, grown by Mr. Thomas Bradcock, of Shatto Heath; the weight of which was 31 dwts. 13 grains.

CALENDAR OF OPERATIONS *for the ensuing week.*

IN this month, the operation of "root-pruning" is recommended by its advocates to be practised upon infertile fruit-trees. Like most novelties, this process is likely, for a time, to be fashionable; whether it will continue so, as generally performed, may reasonably be doubted. The principle upon which root-pruning rests—diminishing the supplies—is unquestionably correct, but the usual manner of applying it is as unscientific as pruning Gooseberry-trees with hedge-shears. In all the cases which have come under our notice, a trench has been dug out within a short distance of the stem, and the whole of the roots, good, bad, and indifferent, cut off without distinction; the effects of this rude mutilation will have been made disagreeably apparent in many instances by the past summer. But the same principle might be carried out in a more efficient way, with wall-trees especially, by taking up and replanting them. The strong downward-growing and ill-placed roots could then be removed in proportion to the vigour of the tree, while those retained could be spread out in a proper position; that is, nearly horizontally. By this method (which also affords greater facilities for trenching, raising, or draining the border), a tree would suffer less, and yet be sufficiently checked to alter its habit; the roots being likewise brought near to the surface, and properly spread out, would be less liable to penetrate too deeply into the ground, which always tends to promote luxuriant growth and consequent barrenness. Old and sterile wall-trees, which from their size it is impracticable to transplant, we would root-prune; not, however, in the way above reprehended, but by undermining the roots and cutting off the lower ones only.

I.—KITCHEN-GARDEN AND ORCHARD.

In-door Department.

PINERY.—The heat of dung linings is liable to be checked by heavy rains, when the linings are only slight, which must be guarded against. Pits that are dependant upon dung heat alone, generally have the linings sunk below the surface and protected by a boarded covering; but where this is not the case, a large mass of heating material, which should be partly composed of leaves, will be necessary during the winter months. Plants which are growing in pits of this description will not need any water so long as the weather continues dull and damp, and very little will be requisite now in fire-heated houses.

VINERY.—Take advantage of rainy days to do all that is necessary in the late houses. After pruning the Vines, the loose bark should be peeled off, and every part of the stems well coated with a thick mixture of lime, soot, sulphur, and soap-suds. If the Vine Coccus is troublesome, something more adhesive, as a thin solution of glue, might be tried. If the Vines which are intended to be first forced root inside the house, the borders should now be covered with good rotten manure and afterwards well watered; or, if more convenient, manure water might be used instead of dung. Admit air liberally, as before.

PEACH-HOUSE.—Continue the treatment previously recommended. In the earliest house, nothing should be left undone in the way of preparation for forcing, if it is intended to begin next month.

CUCUMBERS.—Give those growing in pits all the light possible, by taking off the covering soon in the morning when there is no frost, and keeping the glass clean. Be careful that the red-spider does not establish itself upon the plants in the Pine-stove, where the drier atmosphere favours their increase.

ASPARAGUS.—Guard particularly against too much heat in the bed, which would be sure to injure the roots. Upon the first indication of this give a good watering, and let the lights remain off. If these remedies do not avail, make holes in the sides of the bed with a pointed stake. Prepare materials for another bed if a succession is wanted.

Out-door Department.

The early sorts of Potatoes will probably be putting out sprouts, which should never be permitted to grow long, because they deteriorate the quality of the Potato. Stored Carrots and Parsneps are apt to heat when they have been stacked in a wet state, or in moist sand; these ought, therefore, to be examined occasionally; likewise Beet and other edible roots.

BEANS AND PEAS.—If any have been sown in the open ground, spread some sand over the rows, which, it is said, will effectually preserve them from the attacks of mice.

CAULIFLOWERS.—As the heads form, tie the leaves close over them, when slight frosts will have no influence; but when frost is likely to be severe, they, and Broccoli also, should be taken up and housed in sheds.

ENDIVE.—Take advantage of a dry day to tie up a batch for succession. A better method of blanching Endive is to invert a common earthern flower-pan over each plant, and at the approach of frost to cover the whole with leaves or fern.

JERUSALEM ARTICHOKES.—Take up enough for winter consumption, and lay them in sand. The small tubers should be sorted out, and preserved for planting in spring.

ONIONS.—Examine the dried ones, and take out for present use all that are inclined to grow.

Orchard.—The fruit-room will now require to be often looked over, and the decayed fruit picked out. This should never be neglected, for besides the filthy appearance of, and unwholesome smell arising from, rotten fruit, it generates decay in all that is in contact with it. Some of the finest specimens of the latest sorts might be packed in boxes for spring use. Some persons pack Apples and Pears in dry sand, but that is apt to affect their flavour; we have found dried fern one of the best materials for this purpose. Those who cannot command a better method may winter Strawberry plants for forcing by piling them up in ridges, after the fashion of the market-gardeners' out-door Mushroom-beds. Lay the pots sideways one upon the other, of course with the plants outwards, filling the spaces between them with coal-ashes.

II.—FLOWER-GARDEN AND SHRUBBERY.

In-door Department.

STOVE.—Any spare time may now be usefully employed in the Orchidaceous-house. Plants which are suspended on blocks of wood and in baskets may be taken down and examined; sphagnum is an excellent material to grow plants of this kind in, because it retains moisture upon which these things feed. Many of those which grow in pots may be repotted, particularly where the soil has become heavy and sour, and the whole will be benefited by being top-dressed.

GREENHOUSE AND CONSERVATORY.—Give air liberally to the houses that contain Caméllias, Heaths, &c., which merely require protection from frost; but keep Pelargóniums a trifle warmer. Remove dead leaves from the plants, and destroy aphides as soon as they appear; hard water, or too great a quantity, will cause the leaves to spot. If intended for specimens to be exhibited in the usual way, one side only of the plants must be presented to the light; the training of the branches, which may be required to bring them into a proper form, should also be begun now. Cinerárias that are putting up flower-stems may be brought forward for an early bloom.

PITS AND FRAMES.—Expose half-hardy plants at every favourable opportunity for drying them. Water in the fore part of the day, and give no more than is absolutely necessary, particularly to soft-wooded plants, such as Pelargoniums from the flower borders, &c. Persian Cyclamens might be removed to a warm place, where they will come into bloom soon. This pretty and fragrant plant is much neglected.

Out-door Department.

As soon as the leaves are all down, the whole of the pleasure-ground, &c., should be thoroughly cleaned. If the leaves are not wanted for forcing, they should be taken to some back part of the premises, where they may lie and rot into leaf-mould. Gather seeds of Rhododendrons and Azáleas as they ripen. Wherever these beautiful shrubs will thrive they ought to be extensively planted; and by raising an annual batch of seedlings a great variety in colour of flowers and habit may be procured. When removing large Rhododendrons, any natural layers that have made strong upright shoots should be taken to the nursery, and there trained into a standard form, for budding with the finer varieties.

NURSERY AND FOREST DEPARTMENT.

Nursery.—See last Calendar.

Forest and Coppice Woods.—When the ground is too wet for planting, see to the opening of all drains and water-courses. It is also a good time to make new ones, because it will now be readily seen where they are most wanted.—*J. B. Whiting, The Deepdene.*

State of the Weather near London for the Week ending Nov. 17, 1842, as observed at the Horticultural Garden, Chiswick.

Nov.	Barometer.		Thermometer.			Wind.	Rain.
	Max.	Min.	Max.	Min.	Mean.		
Friday 11	29.548	29.089	55	47	51.0	S.	.37
Saturday 12	29.516	29.050	55	45	50.0	W.	.40

The highest temperature during the above period occurred on the 21st, in 1832—thermometer 59°; and the lowest on the 22nd, in 1827—thermometer 20°.

REPORT ON COVENT GARDEN MARKET,

For the Week ending Nov. 18, 1842.

The market has been abundantly supplied with both fruit and vegetables during the past week; trade, in some respects, is a little brisker. *Fruit:* The price of Pines has not varied since our last account; amongst them are some Envilles and Montserrats. Grapes are advanced somewhat in price, and fetch from 2*s*. to 4*s*. per lb. Jersey Chaumontel Pears are less plentiful, at 1*s*. 6*d*. per dozen; those of English growth are becoming fit for use, and are selling at 4*s*. per half-sieve; a few Marie Louise remain, from 6*s*. to 8*s*. per half-sieve. Crassanes of good quality are abundant, from 1*s*. to 2*s*. 6*d*. per dozen; and numerous samples of the Bishop's Thumb and Swan's Egg Pears are selling from 1*s*. 9*d*. to 2*s*. per half-sieve. A few New Town Pippins are in the market, which fetch 2*s*. per dozen. Golden and Ribstone Pippins are well supplied; the former at 10*s*. 6*d*. per bushel, the latter from 4*s*. to 6*s*. per bushel. Lemon Pippins and other culinary Apples remain the same as in our last Report. *Vegetables:* Little change has taken place in the price of vegetables. The quality of Cauliflowers is deteriorating, and they are consequently somewhat cheaper; but the Broccoli supplied is very good. Brussels Sprouts have improved greatly within the last few weeks; the same may also be said of Endive. Radishes and Salading of every description are plentiful. Mushrooms, many of which are of French growth, are selling from 1*s*. to 1*s*. 3*d*. per punnet. *Flowers:* The plants in pots consist chiefly of Chrysanthemums and Ericas. The cut flowers are more varied, and comprise Cypripédium insigne, Euphórbia splendens, Bignónia radicans, Caméllias, Auriculas, Amaryllises, Mignonette, Neapolitan and Russian Violets.

PRICES, Saturday, Nov. 19, 1842.—FRUITS:—

Pine Apple, per lb. 3*s* to 5*s*
Melons, Spanish, each, 2*s* to 4*s*
Grapes, Hothouse, per lb. 2*s* to 4*s*
— Spanish, 9*d* to 1*s*
— Portugal, 1*s* to 1*s* 6*d*
Apples, dessert, per bush., 2*s* 6*d* to 7*s*
— Kitchen, 2*s* to 6*s*
Pears, dessert, per hf. sieve, 2*s* to 10*s*
Medlars, per hf.-sieve, 2*s* to 2*s* 6*d*
Pomegranates, per doz., 3*s*
Quinces, per hf.-sieve, 2*s* 6*d*
Berberries, per hf.-sieve, 5*s* to 6*s*
Oranges, per doz., 1*s* to 3*s*
— per 100, 4*s* to 24*s*

Lemons, per doz. 1*s* to 2*s* 6*d*
— per 100, 5*s* to 18*s*
Almonds, per peck, 6*s* to 7*s*
Sweet Almonds, per pound, 2*s* 6*d* to 3*s*
Chesnuts, per peck, 3*s* to 7*s*
Walnuts, per bush., shelled, 12*s* to 20*s*
Filberts, English, per 100 lbs. 60*s* to 70*s*
Cob Nuts, per 100lbs., 80*s* to 90*s*
Nuts, per bushel—
— Brazil, 16*s* to 20*s*
— Spanish, 20*s*
— Barcelona, 24*s*

VEGETABLES.

voys, per doz. 6*d* to 1*s*
Cabbage, per doz. 9*d* to 1*s* 6*d*
— plants, per doz. 1*s* 6*d* to 2*s* 6*d*
— Red, for pickling, 2*s* to 6*s*
Brussels Sprouts, per hf.-sv. 1*s* 3*d* to 2*s*
Broccoli, per bunch, 9*d* to 1*s* 3*d*
Cauliflowers, per doz., 1*s* to 4*s*
Potatoes, per ton, 40*s* to 75*s*
— per cwt. 2*s* to 4*s*
— per bushel, 1*s* 6*d* to 2*s* 6*d*
— Kidney, per bu., 2*s* to 2*s* 6*d*
— Scotch, per bush., 1*s* 6*d*
— New autumn, per lb., 1*s*
Jerusalem Artichokes, per half-sieve, 9*d* to 1*s* 6*d*
Turnips, per doz. bun., 1*s* 6*d* to 2*s* 6*d*
Red Beet, per dozen, 9*d* to 1*s*
Scorzonera, per bundle, 1*s* 3*d* to 1*s* 6*d*
Salsafy, per bundle, 1*s* 3*d* to 1*s* 6*d*
Horse Radish, per bundle, 2*s* to 4*s* 6*d*
Radish, per doz. hands (24 to 30 each) 9*d* to 1*s*
— Turnip, p. doz. bch., 1*s* to 1*s* 6*d*

Carrots, per doz. bun., 3*s* to 5*s*
Parsneps, per dozen, 9*d* to 1*s*
Spinach, per sieve, 1*s* to 1*s* 3*d*
Leeks, per doz. bun., 1*s* 6*d* to 2*s*
Onions, per bushel, 4*s* to 5*s*
— Green, p. doz. bun. 3*s* 6*d* to 4*s*
— Spanish, per doz. 2*s* to 5*s*
Garlic, per lb. 6*d* to 8*d*
Shallots, per lb., 1*s*
Asparagus, forced, per 100, 9*s*
Lettuce, Cabbage, p. sc., 9*d* to 1*s*
— Cos, 1*s* to 1*s* 3*d*
Endive, per score, 9*d* to 1*s* 6*d*
Celery, p. bd., (12 to 15) 9*d* to 1*s* 9*d*
Small Salads, per punnet, 2*d* to 3*d*
Watercress, per doz. sm. bun. 4*d* to 6*d*
Parsley, per doz. bun., 1*s* 6*d* to 2*s*
Tarragon, per doz. bun., 2*s* to 3*s*
Sage, per doz. bunches, 1*s* 6*d* to 2*s*
Mint, per doz. bunches, 2*s*
Chilies, per 100, 1*s* to 2*s*
Mushrooms, per pottle, 1*s* to 1*s* 3*d*

Notices to Correspondents.

We shall be obliged if our Correspondents, in their future communications, will take care that no general question relating to *different* subjects is asked in the same paragraph, and that each question is headed with the principal subject. *One side only of the paper should be written on,* so that we may separate each question. If these directions are observed, it will greatly facilitate our obtaining answers, and will enable us to arrange our Correspondence under general heads, separating those questions and answers which are of interest merely to individuals, from such as are of general interest.

Will some correspondent obligingly inform us how much has ever been published of the Transactions of the Agricultural Society of Ireland, and where a complete copy may be had?

Parties must pay the carriage of their parcels, or they will be refused. This notice is particularly necessary, as we have refused several this week.

Nitrate of Soda.—*W. M.*—Instead of sowing Nitrate of Soda in the drills, with your Onion seed, you had better wait until the young plants are thinned, and water the ground then with a solution of that substance dissolved at the rate of half an ounce in a gallon of water. If you find that quantity does not produce any effect, you can increase the dose. ‡

Guano.—*E. R.*—1 cwt. or 1½ cwt. of this manure will be sufficient for an acre of grass land. The price of the best is 25*s*. per cwt.

Manures.—*J. A.*—Too little has yet been ascertained about Guano to enable us to say in what proportions it should be employed. As fast as we obtain *authentic* information about it, we keep publishing it in our columns. It may be mixed with anything in the shape of mould; peat will do very well. The object is to separate the guano mechanically, because it is too strong a manure to be employed otherwise. Ammoniacal water is what should be used to mix with the scourings of trenches and refuse vegetables. Gas lime is itself a powerful manure, but should be employed alone for purposes where lime is useful. †——*Burnham.*—No doubt you have disinfected your manure; but you have done so at the expense of the best part of it. By adding quicklime you have driven away the ammonia, while your object should have been to preserve it, by setting it fast, which gypsum (sulphate of lime) would have done. †——*J. B. H.*—Sea-weed may be quickly decomposed, when collected in a heap, by pouring over it a sufficient quantity of ammoniacal liquor to moisten the whole mass; this will soon throw the heap into a state of fermentation. ‡——*S.*—The only rules that can be given to farming men as to the quantity of oil of vitriol required to fix ammonia, are, to mix it, much diluted, say 1 to 4 of water, with the manure, and a few hours after to hold over the mixture a rag dipped in spirit of salt (muriatic acid); then, if many white fumes are formed round the rag, more oil of vitriol is wanted; but if the fumes are not abundant, there has already been enough. The fumes indicate that ammonia is flying away. If there were no ammonia passing away, there would be no fumes. †

Lawns.—*M. W.*—The best Grasses for lawns are Crested Dogstail, Meadow Poa, Sweet Vernal, and Meadow Fescue, mixed with a little White Clover and Black Medick. These may be had true of all *respectable* seedsmen. The Grass mowing-machine is useful where there is not much work to do and good mowers cannot be had, especially in dry summers. But it cannot be used in wet weather, and is both dearer and less effectual than a good mower. †

Neglected Field.—*R. S. V. P.*—A field that has had no manure for 20 years must surely be very hungry, and ought to be fed. If very foul, burning will assist it, and is perhaps the cheapest thing to do. But neither manuring nor burning will be of much avail unless the land is thoroughly subsoil-ploughed. The mud from your pond had better be treated exactly as recommended by Sprengel at p. 524. We attach *great importance* to the practical directions given by this Agricultural Chemist for preparing manures. If the patches of weeds in your lawn cannot be extirpated by pulling up, or cutting down continually, there is no remedy but digging up and burning. If the lawn is really very foul, the shortest and cheapest plan is to plough it up, clean it thoroughly, and lay it down again with *good* well-selected grass seed. *Much* may however be done in the way of eradicating weeds quietly, by patience and perseverance. †

Sea Coast.—*R. S. V. P.*—If your Pelargoniums do not flower well, it must be the gardener's fault, and not the sea air. The minute quantity of salt in the sea air, when tranquil, cannot be injurious to plants; although when large quantities are raised into the air by storms it might be so. In such weather a conservatory should, of course, be kept closed. Perhaps your house is ill constructed; if *dark*, that will account for your plants not thriving; but if light and well warmed, it must be the want of skill in your gardener if your plants do not succeed well. The Sea-kale and Asparagus ought to be excellent there in the open garden, if proper soil is made for them. Suppose you try how New Holland Acácias, Borónias, Córreas, Goódia lotifólia, and Clianthus puníceus would succeed. †

Concealing Walls.—*Frank.*—Irish Ivy, Aristolóchia sipho, and the American Creeper (Ampelopsis quinquefólia) are the best things that you can procure for quickly covering a large white-washed wall. They will all require to be nailed or fastened to its surface; but there is little doubt that in time the Ivy will cling naturally to it, and need no further assistance. ‡

Heating.—*Elliot.*—Air passing through warm iron-pipes will not be thereby vitiated, *unless the iron is overheated;* and it would be equally deteriorated if passing through any other substance at too high a temperature. †——*An Amateur.*—Hot water is certainly preferable to smoke-flues for heating houses in which plants are grown. You cannot do better than procure one of the smallest of Rogers's conical boilers with the necessary apparatus. ‡——In answer to *A Subscriber from the first*, Mr. Beaton informs us that the proposed range of Melon-pits (p. 348) is given up, and that a range of low houses, 55 feet long, 12 feet wide, and about 8 feet high over the back path, is substituted in its stead. This range is just finished, and is heated from the same boiler which heats the troughs in the Orchidaceous-house. This larger range was determined on in consequence of finding that the capacity of the improved conical boiler was much greater than that of the old ones, from the power of which he first calculated the heat required. He therefore cannot say from experience how this plan of heating answers for Melons; but judging from its value for other kinds of plants, he would expect it to be the cheapest and best mode of growing Melons or Cucumbers; but that if the latter are wanted very early in the season, there must be a provision for bottom-heat. For an ordinary-sized Melon-pit, 6 or 7 feet wide, a trough 6 inches wide and 9 inches deep, or two bricks on edge, should be built all round it, the flow to be along the front of the pit. The bottom of the trough should be level with the surface of the soil, and two or three inches apart from the walls of the pit. To provide bottom-heat, the water should be made to flow in the front and back troughs, and to return in a pipe under the soil in the manner of Mr. Green's pit. Two or more ranges of pits are heated from one boiler, by using T pieces; but the blacksmith or iron-founder will explain this better on the spot.

Grapes.—*Clericus.*—The Escholata Superba Grape is by some represented to be very like the Black Muscat of Alexandria, by others to resemble the Black Morocco. Our knowledge of it is not such as to enable us to state anything concerning its merits. The varieties, however, to which it is said to be very similar, require a great heat to ripen them perfectly. The Frankendale is the Black Hamburgh. The Black Muscadine scarcely merits a place in a vinery. ‖

Vines.—*Hibernia.*—The most suitable white Grape for growing in a greenhouse, where no artificial heat is maintained, except to exclude frost, is the white Muscadine. ‡——*A Manchester Subscriber.*—So far from injuring your Vines, you will do them inestimable good by changing the order in which they are forced; allowing those which have been forced first for several years a longer season to recover themselves. The circumstance of your Grapes shrivelling only in that part of the house where the flue entered from the fire is in accordance with the opinion, that this disease is caused by the great difference of temperature in which the roots and branches are placed; this difference being necessarily greater over the entrance of the flue than in any other part of the house. Many different composts are recommended for dressing Vine borders, but few are better than a mixture of ⅓ turfy loam, ⅓ half-decayed horse-dung, and ⅓ leaf-mould. Broken bones, when they can be procured, are also a valuable addition. ‡

Melons.—*A Young Gardener.*—The most probable reason why you have always found such great difficulty in setting and swelling off your Melons is, that you have endeavoured to fertilize the female blossoms before the plants have attained sufficient strength to swell off the fruit. All the earlier blossoms should be pinched off as soon as they appear, until the plants have nearly covered the surface of the bed; by which time they will be strong enough to set and swell their fruit, provided they are kept at the requisite temperature. ‡

Oak.—*Quercus.*—We do not think digging requisite if soil is thoroughly subsoil-ploughed. The bottom soil, although hungry and poor, will soon be improved by exposure to the air. If Acorns can be sown as soon as gathered, kept from vermin, and the young plants are carefully looked after for the first two or three summers, we should certainly prefer sowing the Acorns; but if this care *cannot* be afforded, then young Oaks 1 to 1½ feet high are to be preferred. If Acorns are sown, they should not be more than 3 inches deep; 2 inches is better. What we call taking care of them, is keeping the ground quite clean, stopping laterals where they appear, and selecting for permanent trees those plants only that are vigorous and inclined to form a good leader. Many are, in all cases, constitutionally scrubby. †

Trees.—*Ωμεγα.*—If you do not break up your rocky soil, or cannot, you must place earth upon it. If you can get it into loose pieces for the depth of a foot, the frost will no doubt disintegrate the fragments; but even then you will want soil to mix with them. Why not plant Ash instead of Sycamore? The first grows the fastest, and is the handsomest. It is, however, a bad neighbour. Road-scrapings, with the addition of a little manure, will make a soil for Ashes, Hollies, Sycamores, Laurels, Birch or other hardy trees, perhaps for Limes. Nothing will grow so fast as the Salix alba, and Canadian Poplar; and if you have room, you might plant them, in the first instance, as a screen for better things. Few plants, except Yews and Hollies, will grow under shade and drips so well as the common Laurel. †

Laburnums.—*W. J.*—These trees should not be pruned if it can be avoided. They will most likely shoot up from the base of the stem when cut down, but will never assume such an ornamental appearance as when left to take their natural form. You may head them down now. ‡

Evergreens.—*W. J.*—You cannot remove your Rhododendrons, Laurels, &c., at a better time than the present. The pruning which they require had better be performed before they are transplanted. ‡

Plants for a south-west wall.—*W.*—We recommend you to procure the following: Glýcine sinensis, pale blue; Magnólia conspicua and grandiflora, both with white flowers; Bignónia radicans, scarlet; Clématis azúrea grandiflora and C. Sieboldi, the former with large blue, the latter with white flowers; Jasminum revolutum, yellow; Chimonanthus fragrans and grandiflorus, with sweet-scented flowers, expanding from December till March; Escallónia rubra, red; the yellow and white Banksian Roses; and Ceanothus azúreus, blue, if slightly protected during winter. ‡

Layering.—*Burnham.*—You cannot propagate any plant by layers, except when it is growing; if, however, you layer your Jasmine now, it will strike root next year, provided the branches are not killed during winter. †

Coltsfoot.—*W. L.*—This is one of the most difficult plants to extirpate where it has once taken possession. We know of no remedy except thorough draining, and constant destruction of the leaves. The roots should also be frequently turned up by the plough, collected, and burnt. ‡

Ipomœas.—*M. D. T.*—You were right in cutting down I. Learii; but it is not right to let it grow so very fast. We apprehend the cause of its small flowers and large leaves to be the rate at which it has been growing, and consequently the lateness of its flowering. You will find some good information upon the mode of managing this fine plant at pp. 161 and 589. We are uncertain what you call a Jalap plant. If it is the Ipomœa batatoides, that species flowers most abundantly, and will succeed perfectly on the trellis of a flower-pot. If it is Exogónium Purga, that plant indeed runs about a good deal, very rarely flowers, and then late in the year; it wants a longer and hotter summer than we have in this country. It has long crimson blossoms, which are very handsome. It is a plant that requires a house hotter than a greenhouse, and cooler than a stove. From the names you give of plants that are thriving in your conservatory, especially Cáttleya Harrisóniæ and Gesnéria Zebrina, we should think the house is well suited to Exogónium Purga. It certainly seems to be an admirable atmosphere. †

Tree Violet.—*A Subscriber.*—This plant may be procured at any of the nurseries in the neighbourhood of London. ‡

Balsams.—*Elliot.*—We believe it to be true that old seeds produce finer Balsams, under equal circumstances, than new seeds; and the reason is thought to be, that the plants raised from old seeds are not so vigorous as others. We know of no way of accelerating the effects. †

Passiflora Middletoniana.—*A Gardener.*—This plant has also been sent out as Passiflora fragrans. It should be planted in the border of a warm conservatory or intermediate stove. ‡

Calceolarias.—*A New Subscriber.*—We recommend you to procure the following:—

Herbaceous.
Ellen the Fair,
King (Barnes')
Delicata,
Bride of Abydos,
Pilot,
Sylph,
Adonis,
Isabella,
Lydia,
Madonna,
Criterion (Barnes')
Mabel.

Shrubby and Half Shrubby.
King (Green's),
Gem,
Pindarus,
Sultan,
Speciosa,
Victoria (Green's)
Miss Antrobus,
Magnum Bonum,
Enchantress,
Aurea grandiflora,
Prince Albert—(Green's),
Lady of the Lake. *

Pelargoniums.—*An Admirer of the First Class.*—The following list contains two of the best flowers of each class:—

White.
Garth's Witch,
Leila.

Delicate Pink.
Matilda,
Evadne.

Pink.
Sylph,
Nymph.

Light Rose.
Grand Monarch,
Cyrus.

Rose.
Corona,
Jubilee.

Orange.
Gaines' Rising Sun,
Erectum.

Crimson.
Madeleine,
Hodges' Emperor.

Purple.
Conservative,
Gem of the West.

White and Dark.
Queen of the Fairies,
Fair Maid of Devon. *

Arthropódium paniculatum.—*Hibernia.*—This is a liliaceous plant, and bears a small white flower of little beauty. ‡

Irises.—*A Constant Subscriber.*—We recommend you to procure the following 12 tuberous-rooted Irises:—I. amœna, hungárica, biflora, florentina, germánica, pállida, lúrida, sibírica, versícolor, púmila, taúrica, and flavescens. ‡

Pruning.—*Burnham.*—It is a good plan to head down now such Apples and Pears as you mean to graft next year. †

Apple and Pear Stocks.—*Simpleton.*—The most hardy stocks are raised from the seeds of the Crab and Wild Pear. You will find sufficient directions as to the time and manner of sowing them at p. 475. You must have five or six years' patience before they will be fit for grafting. If you sow the seeds of good cultivated Apples, with the view of planting them out for bearing, you must expect a lapse of 15 or 20 years before they produce a good Apple. You can, however, ascertain in a few years what kind of fruit a seedling produces, by grafting it as soon as possible on the branches of a bearing tree. Quinces are propagated by layering; and Medlars may be grafted on the White Thorn, or on the Pear-stock. ‖

Pears.—*Clericus.*—Gansell's Bergamot sometimes bears as a standard in warm seasons and in good situations; but its doing so is very precarious. As a standard you had better plant the Suffolk Thorn Pear, instead of its parent, the Gansell's Bergamot; inasmuch as you will obtain the flavour of the latter, with an abundant produce. ‖——*A Subscriber ab initio*, who is desirous of planting against a wall with a southern aspect, two or three Pear-trees, the fruit of which will come into use between February and May, had better procure Beurré Rance, Easter Beurré, and Ne plus Meuris. ‖——*W. Elworthy.*—The

Dunmore Pear ripens in October, and comes into use between Williams's Bonchrétien and the Marie Louise. ‡——*A New Subscriber.*—The following varieties of Pears will most probably succeed as standards in the climate of Edinburgh:—Summer Franc réal, Dunmore, Flemish Beauty, Fondante d'Automne, Seckel, Louise Bonne of Jersey, Althorpe Crassane, Aston Town, Hacon's Incomparable, Thompson's, Winter Crassane, Winter Nelis, Knight's Monarch, Passe Colmar, Ne plus Meuris, and Beurré Rance. In the following selection of early Pears for a wall, quantity of produce has been kept principally in view, as requested; but it is presumed the varieties will, notwithstanding, be found of good quality:—Summer Franc-réal, Dunmore, Summer St. Germain, Flemish Beauty, Beurré de Capiaumont, Althorpe Crassane. ‖

Wall Trees.—*W.*—In addition to the varieties of fruits you propose for your wall with a north-west aspect, you may add the Washington Plum; it will do well for kitchen use. Hacon's Incomparable Pear is very proper for the eastern aspect; but instead of Gansell's Bergamot, you had better substitute the Jargonelle or the Marie Louise; these will succeed on Quince stocks. The Crown Pear is not known to us: but any variety that takes badly when in immediate contact with the Quince, will succeed much better if worked on an intermediate stock with which the Quince agrees. There is perhaps no winter kitchen Apple more generally approved of than Dumelow's Seedling. You will find a good selection of Gooseberries in our two preceding Numbers. ‡

Knight's Early Kidney Potato.—If *S. H.* finds any difficulty in procuring Mr. Knight's Early Kidney, I shall be happy to send him half a score, or a score of them, raised from seed, which I received from Mr. K. when on a visit at Downton Castle some years since. I can send them carriage free to Epsom.—*Edw. Bevan, Llanferry.*

Potatoes.—*E. R.*—The Ash-leaved Kidney Potatoes which you intend for seed should be looked over occasionally, and all the sprouts should be removed. ‡

Capsicums.—*James.*—These are easily dried by being hung in strings in an airy, shady place, well ventilated; it is better than drying them in the sun. When to be reduced to powder, put them into a small handmill, or bray them in a mortar. †

Asparagus.—*Aquila.*—In the formation of Asparagus beds, where water is met with at the depth of 3 or 4 feet, a layer of rough materials at the bottom for drainage would be advantageous. When neither river nor sea sand can be procured, pit-sand may be substituted in their stead. Where there is not a chance of the stems attaining to an extraordinary size, 15 or 18 inches will be a sufficient distance between the rows. It is better to sow the seeds in drills 2 inches deep where the plants are to remain, than to have to transplant them afterwards. In about three years from the time of sowing, the beds will be fit to cut; but before the young shoots make their appearance, a layer of leaves 6 or 8 inches thick should be spread over the bed. In the autumn, these leaves should be removed, and a dressing of night-soil or other manure forked lightly in. A layer of fresh leaves should be again applied in spring, and similar treatment should be continued every season. On no account use tan instead of leaves; if you are afraid of the latter blowing about the garden, cover them with a light coating of mould. There is but *one* kind of Asparagus. ‡——*J. B. H.*—We are of opinion that sea-sand, unmixed with manure, would be of some little benefit as a dressing for an old Asparagus bed. ‡

Jerusalem Artichokes.—*Simpleton.*—These roots are best dug up fresh as they are required; but a portion may be dug up now for a supply, in the event of a severe frost.

Wireworm.—*F. R.*—The refuse lime of gas-works is stated to be efficacious in banishing these pests from the garden. Previously to the crops being planted, a thin covering of the lime should be spread over the ground, and should be well mixed up with the soil in digging. ‡——*R. W.*—We have great doubts whether chloride of lime, although considerably diluted, would not be injurious to Picotees, and commit as much havoc amongst them as the Wireworm. We recommend you to spread some of the refuse lime from the gas-works over the surface of the bed, the effluvia of which will probably drive them away. ‡

Rose Aphides.—*A Subscriber.*—We know of no method to prevent the re-appearance of these insects in the spring. We cannot say where the eggs are deposited, possibly upon the buds; but they are too minute to be visible to the naked eye, and, it is believed, are too well protected to suffer even from the severest frosts. The best mode, therefore, is to wash the plants well in the early spring with tobacco or lime-water, which will be some security until the winged females make their appearance. All liquids should be applied early in the morning, otherwise frosts at night and the heat of the sun by day may injure the expanding buds. *R.*

Woodlice.—*J. J.* says, "In removing the shreds from the Peach-trees trained against the back wall of my Vinery, I find millions of woodlice snugly nestled up in the holes and crevices, evidently in the confident expectation of passing an agreeable Christmas, and of punishing the fruit next year ten times worse than they did this. Pray say how I can best disappoint these hopes, and what course I had best take, and when." [The best plan which he can pursue will be to unfasten the trees entirely from the wall, to *burn* the shreds, and to fill up all the crevices in the brickwork with a grout of Roman cement. ‡]

Red-Spider.—*Hibernia.*—In a greenhouse, where there is no artificial heat, and in which sulphur cannot be conveniently used, you might try the effect of sprinkling the floor with turpentine, the powerful odour of which is said to be obnoxious to this insect. At this season the red spider does little injury in such a house as you describe: but in April and May it will appear in myriads, unless kept down by constant syringing and a moist atmosphere. Tobacco-water will be of no use. ‡

Cutting Down.—*G. R.*—When a plant is cut down, the whole force of the sap in the roots is directed towards a very small number of buds, perhaps to only one, and that pushes with great vigour. If the plant had not been cut down, the same quantity of sap, with the same force *à tergo*, would have been applied to a great number of buds, and each would have, in consequence, pushed with proportionate feebleness. †

Flower Pots.—*Z.*—The dimensions of the different sizes are given at p. 577 of this year's *Chronicle.* The sizes may vary in different localities, but it is to a trifling extent, and it would create great confusion to alter the standard by which they are now known. ‡

Pheasants.—*J. B. R.*—The curious bodies which you took out of the craw of a pheasant, and which looked like seeds, but which you afterwards found on the under side of Oak-leaves, so round and concave on the under side, and convex on the outer, are called Oak-spangles, and are the gall of an insect, as you will learn from our contributor "Ruricola" before long. †

Seeds.—*Facile.*—There is nothing in your communication about seeds. Of course, if a quantity of seed is sown, or dropped on ground, and buried at different depths, the seeds will come up at different times. This happens every day, and we wonder that so old a gardener as you are should be surprised at it. †

Mildew in Peas.—*Elliot.*—We have ourselves no doubt whatever that this disease is produced by dryness, which is favourable to the growth of a parasitical fungus, called Erýsiphe communis. If Peas are kept growing in a damp soil, they are not mildewed. †

Naming Plants.—*Charles* has sent us what we at first took for a wisp of bad hay, but afterwards found consisted of common plants to be named. As we have repeatedly mentioned in former answers, we are ready to furnish the names of horticultural plants in moderation, and when there is any *reasonable reason* for sending them, but they must be in good condition and properly selected. We, however, really cannot give up our time to attaching the names to heaps of wretched specimens of the commonest description, which any one, with a little industry, may name for himself. Our object must be confined to the removal of *real*, not *imaginary* difficulties. †

Etymology.—*Bignonia.*—We can find no explanation of the meaning of the word Martagon. Matthiolus, the commentator on Dioscorides, says that the alchemists called the plant by that name; and in another place he says, "Seruntur lilia dissectis bulbis Martio mense;" whence, perhaps, it may be concluded that the word is compounded of Marte ago, something acted upon in the month of March. If you do not approve of this guess, perhaps you will favour us with the result of your own inquiry †

Pronunciation.—*Bignonia.*—The proper pronunciation is radícans, not radicans. ‡

Miscellaneous.—*Cambriensis* must excuse our saying that he is rather unreasonable. He sends up a quantity of fruit to be named, many of them "imperfect and uncertain specimens," as he admits: we return him the names of all that we are acquainted with; and because he receives no information respecting those of which we know nothing, he says our reply is made "without care, skill, or attention"—hard words, of which we do not acknowledge the justice. Why, every county in England contains a quantity of seedling Apples and Pears, of no value except to the owner, and having no recognised names; we are no Œdipi to guess what imperfect and uncertain specimens may be: and "Cambriensis," instead of quarrelling with us for not knowing anything about these things, should apologise for sending such unexaminable materials, or blame those who have stocked his garden badly. He says, moreover, that what names he has received are only in part correct: for instance, No. 3, marked "*probably* Duchesse d'Angoulême," is not that variety: now we happen to have preserved the identical deformed specimen sent us, and we affirm that it is not distinguishable from the specimens of that Pear produced by second blossoms. We stated that No. 4 was the Doyenné, and we repeat that it is so. No. 2 is also the Autumn Bergamot, so far as the specimens sent will enable any one to judge: the time of ripening of many Pears is very uncertain, and is affected by circumstances unobserved in the early time of the year. The Apples 4 and 5, stated by us to be the Dutch Mignonne, and denied, are exactly like specimens of that fruit now before us, the appearance of which is subject to great differences in different trees. We have entered into this long defence, because we regard the naming fruits an important part of our duty; and because nothing can be more unfair, where infinite pains are taken with so very difficult a task, than that correspondents should turn round and charge us with "want of care, skill, and attention." †——*Robert Scot.*—Your plant is a curious variety of Woodsia ilvensis. The cut 137 is duplicato-dentate; 136 is coarsely serrate; there is no cut of duplicato-serrate. †——*W. L. N.*—Your Státice is S. tatárica. ¶——*Thaddeus.*—With every wish to oblige you, we really cannot again undertake the labour of naming large numbers of bad specimens; if we were to have many such applications, we should be overwhelmed by an enormous amount of the most wearisome occupation. Every gardener *ought* to be acquainted with the greater part of the following species:—1, Carpinus Bétulus incisa; 2, Smilax bona nox; 3, Daphne collina; 4, Hydrángea arborescens; 5, Smilax hastata; 6, Juníperus communis; 7, Cýtisus nígricans; 8, Genista ovata; 9, Genista tinctória; 10, Genista tinctória hirsuta; 11, Cýtisus triflorus; 12, Genista anxántica; 13, Cytisus hirsútus; 14, Genista sibírica; 15, Juníperus oblonga; 2d 15, Spártium multiflorum incarnatum; 16, Acer rubrum coccíneum. ¶——*A. C.*—Your Heath appears to be a variety between E. echiiflora, and another sometimes called in gardens E. abietina. §——*S. S. S.*—Instructions for the management of water-meadows would take up too much room, and are of too complicated a nature to be given in a short answer. You had better consult some work which treats upon the subject in question. In "Johnson's Farmers' Dictionary," under the head "Irrigation," you will find the required information. ‡——*Fidelis.*—Your Rhubarb seeds because it flowers: when the flower-stem is a foot high, cut it off and you will have no seed. We beg pardon for not having answered your question sooner. †——*Janus.*—We have already given directions for preserving Tomatoes, at p. 697 and 713. You will also find the mode of curing Tomato Figs at p. 95 of this year's *Chronicle.* †——*W. J.*—We know of no means of preventing the growth of green upon substances in water, without poisoning the water. The colour is produced by some minute aquatic plant. †——*R. S. V. P.*—Pray do us the favour of eliciting from Dr. B. the information you speak of. We do not know him well enough to ask him.——*J. H. J.*—We have repeatedly stated that it is immaterial whether salt is given to Asparagus beds now or in the early spring. If your story about Tea leaves is really true, we must request you to give us your name to authenticate it. †——*G. B. A.*—Chemical analysis is much too difficult for any one to think of undertaking who is not a very skilful chemist. We recommend you to read the articles on Rural Chemistry published in our columns last year; or the separate publication of them, which will be on sale very soon. †——*C. E.*—The charge for a short Advertisement, respecting gardeners out of place, is 3*s.*——*Frank.*—Remit us a Post-office order for three, six, or twelve months, at the rate of 6*d.* a copy, and we will hand it to a newsman, who will supply you at that price.——*Burnham.*—The Blenheim Pippin and the Blenheim Orange Apple are synonymous.——*J. Moore.*—Your Epiphyllum truncatum does not appear to differ materially from others in cultivation. ‡——*G. P. W.*—The Rhubarb you speak of is most likely "Myatt's Victoria," which may be procured at any respectable nursery. ‡——*A Gardener.*—There has never been any satisfactory reason given for fruit-trees flowering twice during the same season. We do not know such a plant as Hibiscus multífidus. ‡——*Clericus.*—We are not acquainted with any Státice under the name of S. grandiflora. S. Dickensónii bears red flowers. ‡——*Viator.*—We are not acquainted with your plant; if you can send us the flower of it, we may probably be able to tell you what it is. ‡——*Bignonia.*—No doubt the plant you refer to is Impátiens glandulígera. ‡——*G. W.*—The specimen was much shrivelled when it arrived; it appears to be Maxillária racemosa. ‡——*A. E. S.*—Your Pears are—1, Vicar of Winkfield; 2, Beurré Rance; 3, St. Germain; 4, Colmar; 5, Doyenné Blanc; 6, Glout Morceau; 7, 14, Beurré d'Aremberg; 8, Glout Morceau; 9, Beurré Diel; 10, Beurré Bosc; 12, and probably 13, Passe Colmar; 16, Henri Quatre. The Apples are—1, 3, Syke House Russet; 5, sometimes called Orange Pippin; 6, Norfolk Beaufin; 7, Cockle Pippin; 8, Hughes's Golden Pippin; 9, Round Winter Nonesuch; 12, Probably a small Reinette du Canada; 14, appears to be Minshul Crab; 15, Fearn's Pippin; 16, Flat Nonpareil; 17, Court-pendu Plat; 18, Dutch Mignonne. ‖——*Robert Palmer.*—Your Pears are—1, Marie Louise; 2, 26, Brown Beurré; 3, Winter Nelis; 4, St. Germain; 5, 8, Colmar; 6, Crassane; 7, 19, 31, 37, Glout Morceau; 9, a sort falsely called Délices d'Hardenpont; 11, 14, Beurré Diel; 12, Flemish Beauty; 13, 29, 35, Duchesse d'Angoulême; 15, Poire d'Austrassie; 17, Louise Bonne (of Jersey); 18, Easter Beurré; 20, Belle et Bonne, 21, 30, Beurré Rance; 22, Passe Colmar; 23, Gansell's Bergamot; 24, Seckel; 25, Beurré de Capiaumont; 27, Easter Bergamot; 28, Glout Morceau; 32, Buchanan's Spring Beurré; 33, Chaumontel; 34, Bishop's Thumb; 36, Achan; 40, Ne plus Meuris. ‖——*A Constant Reader.*—Your Apples are—1, Golden Reinette; 2, Boston Russet; 5, Manks Codlin; 8, 14, Yorkshire Greening; 9, 16, 17, appear to be the same, unknown; 10, King of the Pippins; 11, 50, Court of Wick; 12, Wormsley Pippin; 13, Court-pendu Plat; 15, Ross Nonpareil. Mr. Paxton's Cottager's Calendar is now reprinted in the form of a small volume, for general distribution, price 3*d.* each copy; it may be ordered of all Booksellers. Gentlemen wishing to distribute copies among their cottage tenantry may have them *delivered in any part of London* by remitting a Post-office order to this Office, at the rate of 5*s.* for every 25 copies.

As usual, many letters have arrived too late for answers this week.

NEWS OF THE WEEK.

The anticipated announcement of the withdrawal of France from the Right of Search Treaty has appeared this week, and the protocol of the convention, which had been so long left open for the ratification of France, has been closed by the other Powers. In announcing this fact, the Papers state that M. Guizot has assigned as his reason for refusing to ratify the treaty, that the wishes expressed by the Chamber of Deputies in their vote of February last were so clear and precise, that the Cabinet could not appear again before the Chambers without conforming to their will. This intelligence will be received with great regret by all who can appreciate the disinterested sacrifices which England has made for the suppression of slavery; and the daily Papers of all classes express their disappointment that M. Guizot has considered himself unable to maintain a treaty organised by his own co-operation. On the other hand, the French Opposition Papers announce their satisfaction at the result, and declare that the concession will be incomplete without the abrogation of all the existing treaties with this country on the subject of slavery.—From Spain we have fresh rumours of a change of Ministry; the Cortes were to assemble on the 14th; and a Parliamentary coalition had been formed, which was expected to be sufficiently strong to overthrow the Administration. Notwithstanding these indications of an approaching struggle, the Regent was confident in his strength, and had refused to modify the Cabinet or dissolve the Cortes.—In Portugal affairs have assumed a more serious aspect; party feeling has seldom run so high, and the coalesced Opposition is expected to defeat the Government in the new elections. The neighbourhood of Lisbon and several places on the western coast have been visited with destructive storms, which appear to have spread over a great part of Spain, and to have extended to the island of Madeira.—From Belgium we learn that the treaty with Holland has been signed by the plenipotentiaries of the two nations; it settles the disputed questions respecting the exchange of territory, and will be submitted forthwith to the Chambers of both countries.—Our German news mentions the continued illness of the King of Hanover, and announces that the committee of the Prussian States held their last meeting on the 10th. Their vote on the Railroad question, which they affirmed by a large majority, has given great satisfaction; and there is no doubt that a general system of railways, to connect all the provinces of the kingdom, will be immediately commenced.—From the Levant the Servian insurrection and the affairs of the Lebanon are the chief topics of interest. The cause of Prince Michael, the deposed Sovereign of Servia, is said to have been embraced by Russia; and a fresh insurrection of the Maronites and Druses against the Turkish troops has been attended with such important results, that the admiral at Malta has sent a portion of the fleet to the coast of Syria, to watch the course of events.—From the Cape of Good Hope we have accounts of two melancholy shipwrecks, the one of the Abercromby Robinson with five hundred troops on board, bound to Algoa Bay; the other, of the Waterloo, with upwards of three hundred convicts bound to Van Diemen's Land. The former vessel fortunately held together for some time after she struck, so that every person on board was saved; but the Waterloo went so soon to pieces, that nearly 150 convicts, the soldiers of the guard, and several women and children, amounting altogether to 189 souls, were drowned. These disasters are unhappily not the only ones of the same kind recorded in our Paper this week. The Reliance, East-Indiaman, of 1500 tons, was wrecked near Boulogne in the storm of Saturday night, and, out of a crew of 122 persons, only 7 were saved. Her arrival had been expected for many days; and the extent of the loss may be imagined from the fact that she had no less than 27,000 chests of tea on board, and was insured for nearly 200,000*l.* These calamitous events have depressed the feelings of parties connected with the shipping interest, and have spread a general gloom among the merchants concerned in the East India trade.

Home News.

Court.—Her Majesty and Prince Albert, the Prince of Wales, and the Princess Royal, still remain at Walmer Castle, and are quite well. During the week, her Majesty and the Prince have taken airings on the beach, but have been prevented, by the unfavourable weather, from visiting several places on the coast. Some doubt has been expressed in regard to the Queen's visit to Brighton, but it is now announced that the Court will leave Walmer for that town on the 22d.—The Archduke Frederick of Austria has visited during the week the United Service and Reform

Clubs, the British Museum, the Dockyard and Arsenal at Woolwich, and other public establishments. His Imperial Highness, on Wednesday, dined with the Duke of Wellington, at Apsley House, and with the French Ambassador on the following day.—A privy council was held on Saturday, at which the Roll of Sheriffs for the ensuing year was agreed on.

Public Pensions.—It is announced that her Majesty, out of the grant for distinguished services, has been pleased to award to General Robertson, residing at Canaan Bank, Edinburgh, a further pension of 210*l.*, in addition to the former allowance of 190*l.* per annum, making the whole of the General's pension for distinguished services 400*l.* per annum.

Parliamentary Movements.—In consequence of the death of Mr. John Jones, a vacancy has occurred in the representation of Carmarthenshire. It is expected that the former representative, Sir James Williams, will come forward on the Liberal interest; and no opposition is at present mentioned.

Legal Appointments.—It has been decided that no new judge is to be appointed to the Court of Review in the place of Sir John Cross, but that the business of that court shall in future be heard before Vice-Chancellor Knight Bruce, who was sworn in as a judge in bankruptcy on Thursday. The office will be held in conjunction with that of Vice-Chancellor. The patent confers all the honours and emoluments of the office, with the exception of the salary; and recites the resignation of the Hon. T. Erskine as one of the judges of the court. It is also announced in the Ministerial Papers that the office of Commissioner of the Insolvent Court, vacant by the death of Mr. Commissioner Bowen, is not to be filled up.—The East India Directors have appointed Mr. Loftus Wigram Standing Counsel of the Company in the room of the late Mr. Serjeant Spankie.—Mr. Alfred Dowling has been promoted to the dignity of Serjeant-at-Law.

Church Preferment.—Archdeacon Robinson, Lord Almoner's Professor of Arabic in the University of Cambridge, formerly domestic chaplain to Bishop Heber, and archdeacon of Madras, has been elected morning preacher of the Foundling Hospital,

Foreign.

France.—The Paris Conservative Paper, the *Presse*, announces, on what it states to be good authority, that the Powers have at last resolved on closing the protocol of the convention of the 20th of December, 1841, for the suppression of the slave-trade, which had been left open to receive the ratification of France. It is also said that M. Guizot, in yielding to the demand of the Chambers for the withdrawal of France from the treaty, has assigned as his reason for refusing to ratify it, that "the wishes expressed by the Chamber of Deputies in the vote of the 24th of February were so precise and formal, and so clearly expressed, that the French Cabinet would not dare to appear again before the Chamber without having conformed to the wish expressed in the amendment carried on that occasion." All the Opposition journals are loud in their expressions of satisfaction at this announcement of the closing of the London protocol, and the consequent exclusion of France. Equal unanimity is to be observed in the demand for the abrogation of the treaties of 1831 and 1833, without which they declare that the present concession is incomplete.—A meeting of about 80 of the manufacturers and merchants of Paris took place on Wednesday, and agreed upon a petition against the customs' union with Belgium, which is to be presented to the President of Commerce. The wine-growers of Colmar, the municipal council of Bordeaux, and the booksellers of Paris, have petitioned in its favour.—The Papers give long accounts of the trials of different clerks and others attached to the office of the Paris Prefecture, which betray a disgraceful system of corruption, as regularly established as that disclosed a short time since on the trial of M. Gisquet, ex-Prefect of Police, which revealed facts of the same nature, such as permission for omnibus lines which had been bought for thousands. It is said that these disclosures have made it impossible for Count de Rambateau, the Prefect of the Seine, to retain his post.—The official *Moniteur* of Sunday publishes a Royal ordonnance, dated St. Cloud, the 12th inst., and countersigned by Marshal Soult, allowing the opening of a subscription in the French army, for the purpose of erecting a bronze statue, executed by Marochetti, to the Duke of Orleans in Algiers.—The King and Royal Family will not leave St. Cloud before the 6th December for the Tuileries; and the mourning of four months, which expired on Sunday last, for the Duke of Orleans, is ordered to be continued till the 5th of that month.—It is stated that the friends of M. Thiers calculate upon his re-entry upon office early next year, if not before the opening of the session of the Chambers.—The *Journal de Honfleur* of Saturday has the following postscript:—"As we were going to press, we learned that the Télémaque is completely raised from her bed; she is decked with flags, and the guns are being fired in honour of the event."

Spain.—We have advices from Madrid to the 8th inst. Some sensation had been produced by the publication of the programme of the Parliamentary Coalition for the session of the Cortes, which were to meet on the 14th. The Deputies who have signed the document specify 13 articles for which they will resolutely contend; they include in this number religious toleration, public economy, freedom of the press, and the definition of ministerial responsibility; and the whole manifesto is considered to be intended to overthrow the Cabinet. Rumours of a change of Ministry were current in various quarters. It is stated, however, in official circles, that the Regent will neither modify the Rodil Cabinet nor dissolve the Cortes; but it was believed that the Parliamentary Coalition would have the majority, and thus overturn the Administration. The Government Gazette of the 5th contains some severe comments on the declaration published by the twelve journals in regard to the liberty of the press. It declares that the Government has no hostile intentions against the press, and it relies on public opinion to defend the laws and defeat the machinations of a conspiracy, having for its object the renewal of the civil war and the establishment of anarchy. A rumour was current that the Duc d'Aumale intended to visit Madrid, and that a commercial treaty with England was likely to be brought forward.—The southern coast of Spain was visited on the 29th ult. by a destructive hurricane. At Seville three houses were levelled with the ground, vessels driven from their moorings, trees felled, and the public promenades entirely devastated. Several edifices, and the cathedral in particular, sustained considerable damage. The coast in the neighbourhood of Cadiz was covered with wrecks.

Portugal.—We have Lisbon news to the 7th inst. Party politics were discussed with unusual bitterness, and the approaching elections were to be strongly contested. An anonymous libel had appeared, charging M. Dietz, a German high in the King's confidence, with advising the Queen to abdicate and desert her children, he having been previously employed, according to this document, in forming a purse abroad, for the support of the royal family in case of need. It was reported that M. Dietz would be sent into Germany for a year or two in consequence of this excitement. The ensuing elections were looked to with interest; it was anticipated that the coalesced Opposition would succeed in carrying the day in Lisbon. The election of a delegate in the place of the deceased ex-minister, Viera de Castro, was going in their favour. In consequence of the proceedings of the Papal Nuncio, a royal circular had been published, calling on all the bishops to refuse the royal placet to all dispensations not directed to the lawful authorities; and the clergy not to accept any dispensations but such as have the royal placet, on pain of legal prosecution. A great flood had visited the low country about Cintra, where a cloud had burst, which washed away walls and bridges, and had done great damage at Colares, Cintra, Rio de Moura, Cascais, Oireas, Chelleiros, and other parts; but no lives were reported to have been lost. Immense masses of earth were moved in various farms and *quintas*, sweeping away and overwhelming great quantities of vines and larger trees. On the following day the sea appeared covered with the wrecks and ruins created by the flood, and strewn with rafters of houses, pieces of cars and carts, mill-wheels, and agricultural implements, from the coast to the verge of the horizon.—Accounts from the Azores mention that there are strong grounds for believing that pirates are hovering about the Atlantic islands. In illustration of the state to which the island of Madeira has been reduced, the papers mention the fact that whole weeks frequently elapse during which the Custom-house receipts do not amount to 20 milreis (less than 5*l.* sterling). Private letters from Madeira give melancholy accounts of a disastrous storm which has desolated the island. The Dart packet, and several other vessels, were wrecked at Funchal, and the floods from the mountains swept away numerous houses, and occasioned a great loss of life. The child of Mr. Veitch, son of the late Consul, was carried, by the force of the current, out of the nurse's arms, and drowned; and the calamities produced by the swollen currents can only be appreciated by those who have witnessed a Madeira flood at this season of the year.—A letter from Lisbon observes, that the good people of London will be somewhat amused at the mode in which the recent election of their Lord Mayor is announced at Lisbon in the Government journal:—"Is nominated Corregedor of Londres for the coming year, João Hemsphery, maker of candles." The editor adds in a note, that "Corregedor" is the equivalent for "Mare!"

Belgium.—The papers announce that the treaty between Holland and Belgium was signed on the 5th inst. by the plenipotentiaries of the two nations. This treaty, which contains an exchange of territory, will be submitted to the approbation of the Dutch States General and the Belgian Chambers. A commercial treaty with Spain has been concluded, by which the duty on Belgian linens is reduced, and Spanish wines admitted into Belgium on the same terms as those of France. The Minister has announced in the Senate that he does not despair of bringing the proposed commercial union with France to a successful issue. The escape of General Vandersmissen continues to occupy attention. It appears that some persons were waiting for him at a short distance from the prison. They threw a cloak on his shoulder and proceeded to a spot where horses were ready, which the fugitives instantly mounted; and taking the road from Schaerbeck to Eva and Westerloo, at half-past eleven on the following day they were in a place of safety, exhausted with fatigue; they had not stopped a moment by the way. The riders were obliged to be lifted from their horses, and the poor beasts immediately fell to the ground. We have subsequent information, stating that the General and his wife and child arrived safely at Maestricht on the 12th inst. The papers say that the escape was entirely planned by his wife, the daughter of the late Admiral Graves; and that England ought to be proud of having given birth to such a heroine. The other son, who has been arrested since the flight of his father, is not permitted to see anybody in prison. The Prince de Ligne is appointed Ambassador at Paris.

Hanover.—A letter from Hanover of the 7th instant states that the King had returned on that day from the hunting palace of Rothenkerchen, where he experienced another attack of illness, and that the frequency of his relapses causes great anxiety. The Crown Prince enjoys excellent health, and appears in public at almost every opera or concert. It is remarkable that nothing transpires respecting the time when his Royal Highness's marriage is to take place, although he has set out to pay a visit to his bride.

Germany.—Accounts from Berlin state that the Committee of the States held their last meeting on the 10th inst., and that the negotiations with Hanover have now proceeded so far, as to leave little doubt that the latter will in a short time join the Customs Union. The Papers mention the probability of a separation between Prince Albert of Prussia and his consort, a sister of the king of Holland. They also announce that the German Customs Union intend to resort to reprisals against the trade of the United States. This measure, it appears, is strongly urged by Saxony, in consequence of a considerable number of its products being excluded from the American market by the high duties imposed upon them in the new tariff.—The betrothment of the Hereditary Grand Duke of Mecklenburg Strelitz with the Princess Augusta of Cambridge was officially announced to the court of Neustrelitz on the 27th ult. On the same day, the Grand Duke received addresses of congratulation on the subject. The *Carlsruhe Gazette* of the 10th instant announces officially the betrothment of the Princess Maria of Baden, daughter of the Grand Duchess Dowager Stephania, to the Marquess of Douglas, son of the Duke of Hamilton, with the assent of the Grand Duke.—The German Diet have come to a resolution to purchase the house and the several collections of Goethe at Weimar, and to preserve the whole as a German national monument.—The Frankfort Papers state that, at a meeting lately held by the shareholders of the society for the construction of a canal to join the Danube to the Maine, a report of a satisfactory nature was presented relative to the state of the works. All the masonry, embankments, and sluices are finished, and the works undertaken for the improvement of the Altmuhl are so advanced as to allow a vessel tolerably laden to pass from Kelheim to Dietfurt. There only remains, therefore, the operation of sending water into the canal, which cannot be undertaken until spring. It is stated in the same paper that there have been recently discovered, in the vicinity of Nikolstadt, in Silesia, stones so mixed with veins of gold, that one alone yields the value of seven ducats.—Letters from Presburg inform us that the commission appointed by the Comitat of Oldenberg, to report upon the question whether it would be advantageous to Hungary to join the German Customs Union, had delived an opinion that the measure would be detrimental to the interests of the country. The commission further recommends that, at the next sitting of the Diet, the States should petition the Emperor to suppress the line of custom-houses between Hungary and Austria.—We regret to find, by letters from Vienna, that Prince Metternich is seriously ill.—The Senate of Hamburg is said to have it in contemplation, at one of the earliest meetings of the citizens, to propose a law to empower Jews to acquire freehold property in every part of the dominions of the city.—The Duke of Saxe Coburg Gotha has named Liszt and Rubini members of the Ducal Saxon Ernestine Order.

Russia.—The Paris *Constitutionnel* publishes a private letter from St. Petersburg, mentioning that a number of officers belonging to the first corps of the army quartered at Moscow, and to the division of Orenburg, had been arrested, in consequence of the discovery of a conspiracy to overturn the existing Government, and emancipate the serfs. This conspiracy, which was got up by some young officers, is described as having extensive ramifications among the soldiers and the people. The recent incendiary fires which occurred in several towns and villages of the empire, were believed to be one of the means resorted to by the conspirators to indispose the inhabitants against the Government. The same letter states, that 120,000 men, with 360 pieces of artillery, were concentrated along the line of the Pruth and L o Danube, and that the fleet in the Black Sea had been ordered to complete its armament.—The *Allgemeine Zeitung* contains a letter from the Polish frontier, stating that the Russian Government have at present a plan under consideration, to compel every Roman Catholic proprietor of land in Podolia, whose tenants belong to the Greek church, to sell or exchange his property.

Turkey and Syria.—The arrival of the Levant mail brings news to the 27th ult., announcing that the Austrian Consul had departed from that city for Vienna, and that the Russian Colonel de Lieven had been ordered to Servia, to inquire into the circumstances that had led to the overthrow of Prince Michael. It is also stated, in opposition to the accounts last received from Constantinople, that the Emperor of Russia disapproved that revolution, and had resolved, in conjunction with Austria, to vindicate the rights of the Milosch family to the sovereignty of Servia. The former Hospodar of Wallachia, Alexander Ghika, had sought refuge in Servia. The party opposed to him was not, it seems, disarmed by his deposition, for they had commenced legal proceedings against him, with the view of depriving him of the property which he owned in the country.—Accounts received at Malta, from Beyrout, state that the Maronites and the Druses, who were armed by the British during the Syrian war, have been joined by another powerful sect, the Mutuali, and entered into a solemn league and compact to extirpate the Ottomans. In their first contest, the Albanians in the Turkish service lost 100 men, and had 400 wounded. A Maronite convent had been attacked, and the whole of Mount Lebanon is under arms. In consequence of this intelligence, the Howe, bearing the flag of Sir F. Mason, has been ordered to prepare for sea, with the view, it is supposed, of proceeding to Vourla. The Indus ship-of-the-line, Inconstant frigate, and Snake brig-of-war, are also under sailing orders for the coast of Syria.—Favourable news had been received from M. Tessier, appointed to direct the French expedition sent to Magnesia, in Asia Minor, in order to raise the remains of the temple of Diana Leucophrys. It appears that many more objects had been discovered than was originally expected, amongst which are numerous statues and bas-reliefs in the finest style of art.

Egypt.—Private letters from Cairo give further accounts of the murrain among the cattle noticed in our last. It appears to have caused a general panic throughout Egypt. The Pacha had already lost 90,000 oxen, besides other animals, and had been obliged to make use of the horses employed in the service of his artillery for agricultural purposes, as the destruction of the cattle had rendered their number insufficient to get in the seed for the ensuing year. The animals are described as dropping dead suddenly, as if shot with a musket ball. The persons employed in the transit of Indian passengers from Alexandria to Suez had also experienced considerable loss. 100 of their horses had perished in a single month, and the mortality was increasing. The unexpected and unseasonable rising of the Nile had carried desolation throughout the country. The floods had carried away the corn stores at Boulac, which had been but lately filled. Persons wishing to pass from Old Cairo to the new town were obliged to make use of boats; and the houses of Cairo were flooded by the waters of the canal of Halic, a circumstance unparalleled in the annals of Egypt.

Cape of Good Hope.—By the arrival of her Majesty's ship Hyacinth from the Cape, we have advices from the colony to the 19th September. The prominent intelligence is an account of the wreck of the Abercromby Robinson and the Waterloo, in Table Bay, on the 28th of August, the former with upwards of 500 troops on board, bound for Algoa Bay, and the latter with upwards of 300 convicts, bound for Van Diemen's Land. The Abercromby Robinson was fortunately driven ashore on a sandy part of the beach, which enabled the vessel to hold sufficiently long together to save every person on board; but the Waterloo, on being driven from her anchors by the gale, ran ashore upon the rocks, and the ship went so soon to pieces that a dreadful catastrophe followed. Although numbers of persons were assembled on the beach, it is to be regretted that 15 soldiers of the convict guard (her Majesty's 99th Reg.), 14 seamen, 4 women, 13 children, and 143 convicts, in all 189 persons, met a watery grave. Some strong reflections are made in the Cape Papers against employing such old vessels as the Waterloo in the conveyance of convicts, it being assumed, that if she had been a stronger ship she would have held out sufficiently long for all the people to be saved. There seems at the same time to have been a great deficiency of boats calculated to live in such a tremendous sea as is brought into Table Bay by a N.W. gale. So great a loss of life has not happened in the Bay since the wreck of H.M.S. Sceptre, in 1799, when 300 persons perished. The following is an extract from a private letter, written by an eye-witness of the calamity:—"About ten o'clock the Waterloo gave a sudden lurch, and parted from all her anchors, and came broadside in amongst the breakers. The scene which now took place I shall remember to the day of my death. After two or three heavy rolls her three masts went on the side with a dreadful crash. The hatches were now opened, and the convicts rushed on deck. The sea was making a clean breach over her. Immediately on the convicts arriving on deck about 50 jumped overboard; about fifteen or twenty gained the shore; the remainder were drowned. The cries of the poor wretches on deck were heart-breaking. Each sea, as it made a breach over the unfortunate vessel, carried a dozen or so into the water, who, of course, were drowned. Thousands of people were on the beach, but could not render the least assistance. It was a dreadful sight. There, within a stone-throw, lay 200 or 300 of our fellow-creatures being drowned before our eyes." The wreck was sold a few days afterwards for 630*l.* A subscription list had been opened for the survivors, and promised in a slight degree to relieve their temporary wants. Dr. Helsall, of the convict ship, was among the number saved. The weather on the coast had been most severe for the shipping. At Algoa Bay the Sabina, a Spanish vessel, with a cargo valued at 120,000*l.*, of which 90,000*l.* was insured, was lost, and 21 of the crew and passengers drowned. This ship, which was bound from Manilla to Cadiz, in trying to make for Algoa Bay, struck on Cape Recief. These disasters had thrown into the shade the affair of the insurgent Boers at Port Natal. No news of interest respecting the proceedings on the frontier had been received. Lieut.-Col. Cloete had gone on a visit to the chiefs in Caffreland respecting the robbery of some cattle; but doubts were expressed whether his object would be successful, as the Caffres, though not expected to offer any hostile resistance, were considered likely to evade the demand for the restitution of the plunder.

United States.—The Royal mail steamer Britannia, which sailed from Boston on the afternoon of the 1st, and from Halifax on the 3d inst., arrived at Liverpool on Wednesday last. She had to contend with unfavourable winds during the whole passage, which, nevertheless, she accomplished in less than 15 days. She brought between 20 and 30 passengers. The Papers received by the Britannia come down to the 1st inst., but their contents are not important. The citizens of the United States were engaged in electioneering; a large portion of the Papers are consequently occupied with reports of electioneering speeches. Colonel Edwards, who had been convicted of forgery and swindling, had been sentenced by Judge Kent to 10 years' imprisonment. In a speech which he delivered before receiving sentence, he called himself an injured and persecuted man; said that he was a victim to brokers, bankers, &c.; and affirmed that he would never come out of prison alive. He said that he was to be offered up a sacrifice on the altar of avarice; that he cared not whether he was sentenced for an hour or a thousand years, &c. The "Colonel" was well known in England, where he contrived, it will be remembered, to swindle Earl Spencer. Sir John Caldwell, late Treasurer-General of Lower Canada, had died suddenly at the Tremont Hotel, Boston, of angina pectoris. The Caledonia arrived at Halifax on the 30th, and the Great Western was spoken by the Britannia on the 4th off Halifax, all well.

Canada.—The Canada Papers received by the Britannia are to the 27th inst. They mention the death of Lieutenant-Col. Cameron, of the 79th Highlanders. The recent changes in the Government continued to be the prominent topics of discussion in the Papers. Mr. Morin had been appointed a Commissioner of Crown Lands; and the rumoured intention of Sir C. Bagot to appoint Mr. E. G. Wakefield to a high office had excited the indignation of the British or Opposition party.

Mexico and Texas.—Papers to the 8th ult. had been received from Galveston, Texas. A Texan force of 350 men, under the command of Colonel Caldwell, had an engagement with the Mexican troops under General Wall. The Texans were the victors, killing 100 and wounding 200 Mexicans. The accounts from Vera Cruz were to the 30th Sept. An embargo had been laid on all vessels in that port till the 15th Oct. The object of this measure was to prevent news being carried out respecting the expedition there in progress. It was said that Santa Anna would direct the expedition in person, and that Yucatan or Texas was its destination. The Montezuma, the iron war-steamer built in the Thames for the Mexican Government, was daily expected at Vera Cruz.

CITY.

Money Market, Friday.—Consols closed at 94¼ to ⅜; Bank Stock, 168 to 170; India Stock, 260 to 262; Three per Cents. Reduced, 93½ to ⅝; Three and a Half per Cents. Reduced, 100⅝ to ¾; New Three and a Half per Cents., 101⅝ to ¾; Long Annuities, 12⅜; India Bonds, 51s. to 53s. prem.; and Exchequer Bills, 55s. to 57s. prem.

Metropolis and its Vicinity.

The Polish Ball.—The annual ball, in aid of the funds for the relief of the Polish refugees, took place at the Guildhall on Wednesday night. It was numerously attended, there being upwards of a thousand persons present. The illuminations and other decorations used at the Lord Mayor's dinner had been left for the occasion. The ball was preceded by a concert, at which Mrs. Alfred Shaw assisted. The dancing commenced soon after eight o'clock, and, with the interval of the concert, which seemed to be the great attraction of the evening, continued with spirit till a late hour.

Metropolitan Improvements.—The elegant structure recently erected by Mr. Moxhay, on the site in Threadneedle-street formerly occupied by the French Protestant Church, is now nearly completed, and will shortly be opened, under the title of "The London Hall of Commerce," for the accommodation of merchants and traders from all quarters of the globe. By the erection of this building Threadneedle-street has gained ten feet in width; and when this is carried out through the whole length of the street, and the improvements in the vicinity of the new Royal Exchange are effected, that portion of the city may fairly challenge a contrast even with some of the best localities of the West-End.—The statue of the Duke of Wellington intended for the City is finished, but the committee have not yet decided on the site it is to occupy. The subscription for it is somewhat under 15,000*l.* Mr. C. Wyatt has made great progress with the West-End statue of the Duke, 23,000*l.* for which have already been subscribed.

The Caoutchouc Company.—An investigation has been going on for some days at the Mansion-house, in which this company, established for the manufacture of India-rubber goods, was principally concerned. In the first place, a large number of respectable hosiers in the city appeared to complain of the conduct of certain parties, representing themselves to be the London Caoutchouc Company, and professing to sell articles made of India-rubber, the interest in three-fourths of which company is said to be vested in Mr. W. Leaf, of the Old-change, in having filed 55 bills in Chancery against the retail hosiers in the metropolis, for an alleged infringement of their patent. The articles alleged to be pirated, were those into which strips of India-rubber were introduced, surrounded by thread, and so covered over that it was impossible for any one to discover whether they were or were not similar to the articles manufactured by the company. The first intimation given to the parties, was in the service of about 60 writs, requiring them to appear and answer a bill in Chancery, filed by Mr. Wight, in the name of the "London Caoutchouc Company." When the parties applied to Mr. Wight for information, they were told they had infringed the company's rights, but that he was willing to compromise the matter, and in many instances they were induced, through intimidation and ignorance of the proceedings with which they were menaced, to pay sums of money varying from 15*l.* to 70*l.*, and amounting together to about 1000*l.* Mr. Wight asked much larger sums than he eventually consented to take; in one instance he asked 45*l.* of a respectable tradesman, declaring that less would not pay him, but he was at last satisfied with 15*l.* It was contended on behalf of the applicants that the great oppression in these proceedings on the part of the company was in selecting the retail dealers, instead of boldly attacking the manufacturers of the articles complained of, who, if any were really liable, must be the parties to answer, and who could afford to spend 1,000*l.* in contesting the right. On the part of the company, the solicitor who served the writs appeared and said that due notice of the infringement of the patent had been given in the papers, but it appeared that the advertisement had been headed "The New Tariff," and was not likely to attract the attention of the parties to whom it was professedly addressed. On Friday the inquiry was again resumed, when Mr. Leaf, the principal proprietor, above referred to, appeared by counsel to explain his share in the concern. He stated that he was ignorant of the proceedings till after they had been commenced, and then he declared them disgraceful. He disavowed the acts of the solicitor, and said, that as long as he belonged to the company such proceedings should not again be resorted to against the retailers. If he had known of the intentions to commence proceedings he would have prevented them, and when he did hear of them he had interfered to diminish the expenses. The solicitor admitted that he had no written instructions on the subject, and the counsel who had conducted the cases in Chancery admitted that the fee of 7 guineas had been paid to him in each case. The inquiry was then closed, with an assurance on the part of Mr. Leaf that no further proceedings will be taken against the retail traders.

British Museum.—The executor of the late Marquess Wellesley last week sent to the British Museum upwards of three waggon-loads of MSS. and books, in compliance with the will of the Marquess. It is hoped that these valuable documents will soon be made available to the public.

Temple Church.—It has been determined that this church shall be reopened for divine service to-morrow morning. A rehearsal of the music took place on Monday before the principal members of both inns of court, and under the direction of the organists of Westminster Abbey and St. Paul's. The general effect was considered satisfactory, and in the "round church," to which the public will be admitted now that the old organ-screen is entirely removed, the minutest sound was distinctly heard. It is generally believed that a daily service will be performed in the church when the repairs are finally completed.

Exeter Hall.—On Monday evening the pupils composing the first workmen's music class at Exeter Hall presented Mr. Hullah with a music-stand, as a testimony of their gratitude for his instructions. The address on the occasion, after expatiating on the merits of Mr. Hullah as a teacher, dwelt on the advantages to be derived from a knowledge of the science of music as a cheap and intellectual amusement for the humbler classes, as an amusement tending to the increase of the domestic comforts and to the improvement of their morals. Mr. Hullah, in acknowledging the gift, mentioned the great importance of congregational singing, as adding to the solemnity of religious worship, and announced his intention of forming a class of the wives and children of working men. At the conclusion of the proceedings, Lord Wharncliffe, under whose patronage as Lord President of the Council the classes have been formed, came forward and said, that he could not allow the proceedings to terminate without expressing his gratification at all he had witnessed, and his entire concurrence in the sentiments and address which had been put forth on presenting Mr. Hullah with that elegant testimonial of their respect and esteem. It had never been his lot to meet with a teacher who possessed in such an eminent degree as Mr. Hullah the art of fixing the attention of his pupils. He congratulated them on the progress they had made in the delightful science of music. It was delightful to see the working man thus adding to his stock of innocent and intellectual amusements; and he was proud to think that he had contributed to promote their instruction in that most delightful and beautiful science.

Chartist Meetings.—On Thursday evening a meeting took place at the Crown and Anchor, ostensibly to "consider the proceedings connected with the recent disturbances in the northern and midland counties, and to adopt such measures relative thereto as may be deemed necessary;" but the real object, as disclosed in the course of the meeting, was to raise a subscription for the defence of such Chartists as may now be in durance, and to form a permanent fund for a similar purpose hereafter. Mr. T. Duncombe, M.P., was in the chair. A long series of resolutions was passed, deprecating the punishment of persons engaged in the late outbreak on political grounds, establishing a general defence and support fund, and condemning the conduct of Lord Abinger in delivering from the bench charges of a political nature. These resolutions were to form part of a petition to the House of Commons, praying the House to address her Majesty that Lord Abinger may be visited "with such a mark of her Royal displeasure as may induce other judges hereafter to preserve the purity of the judicial functions unsullied by political rancour or party spirit."

Middlesex Sessions.—On Monday the court assembled to hear appeals. The first case was that of the Grand Junction Water-works Company against the Poor Rate of St. Mary Abbots, Kensington. The objections to the rate were stated at considerable length, but in the course of the proceedings the court having expressed an opinion that machinery and fixtures were rateable, it was agreed not to alter or interfere with the present rate, upon the understanding, that, when a new rate was made, the machinery and fixtures of the parish generally should be rated. A judgment to that effect was pronounced and recorded by the court.—The next case was that of the West Middlesex Water-works Company against the same parish. It appeared that the property of the company was formerly assessed separately under different heads. The rate was then 262*l.* When the last rate was made the parish officers added the whole property together, and augmented the rate to 1,500*l.* Against this the company appealed, and the result was that the rate was reduced to the sum of 762*l.*—The last case was that of the General Cemetery Company against the parish. On the part of the company it was represented that they were rated at a much greater sum than that to which they were legally liable—their income from all sources being only 2,825*l.*, whereas they were assessed at 3,700*l.* An abstract of the company's accounts was produced in verification of this statement. The respondents contended that their profits must be greater than represented, as a much larger sum was annually paid in dividends to the shareholders. This led to an investigation of the company's accounts by the court; and to various arguments from counsel on both sides, interesting only to the parties concerned. The court said that the true principle of rating this kind of property was that it was to be treated as land having peculiar privileges by Act of Parliament, by which it became more beneficial to the owners than it otherwise would be; and that the true criterion of rating was, what it would let for to a tenant with all its advantages, and the court thought that no tenant would take the cemetery with all its risk, trouble of superintendence, &c., unless he could make a clear profit of 1,000*l.* a year; and, therefore, the rate must be fixed at 1,800*l.*, the profits being 2,800*l.* It was subsequently agreed that the sum of 300*l.* annually charged as directors' fees should be included, on the ground that it was an expense which would not be required in the hands of a tenant.

Metropolitan Prisons.—The prisons for debt have, within the last few days, presented a different appearance to what they have exhibited for some time. The Fleet and Marshalsea have been closed; the former was shut on Saturday, and the latter on Thursday last, the prisoners being then removed to the Queen's Bench Prison, under an Act passed during the last session, authorising Lord Denman to issue his warrant for their passage from one gaol to another. The number at present in the Queen's Prison is about 280 persons. In Whitecross-street Prison there are about 360, and 120 in Horsemonger-lane Gaol. The total number of prisoners for debt in London may now be stated at about 760. Some years ago there were as many in one prison.

Marylebone.—We have before alluded to the proceedings of the Marylebone Vestry in reference to a monumental column to the memory of the Scotch Reformers of 1793. A meeting of the Vestry took place on Saturday to receive the second report of the committee in regard to the grant of a space of ground upon which the monument may be erected. The report recommended Regent's Circus, Oxford-street, as the most convenient site, and a motion for its adoption was brought forward. An amendment was moved,—"That the board, having been elected by the rate-payers of Marylebone for the purpose of protecting their parochial interests, any interference on its part towards the proposed erection of a monumental column to perpetuate the memory of the alleged Scottish Reformers and political martyrs of 1793 would be highly inexpedient." A long debate ensued, which terminated in a division, giving 41 votes for the motion, and 11 for the amendment. It was then moved,—"That the Scots and English Monumental Committee, assisted by Messrs. Rennie, Hume, and Donaldson, do select the three most appropriate designs, and submit them to the Vestry for their choice of the most suitable for erection." Another long debate ensued on the propriety of this motion, which was considered by some members to make the Vestry parties to the act; but after some angry discussion it was carried without a division.

St. Pancras.—On Wednesday a special meeting of the vestry was held for the purpose of receiving the official report of the special poor-law commissioners noticed in our last, and also a further report of the directors and guardians of the poor. The report of the directors went into a long review of the commissioners' report, with the object of refuting its statements. The report having been adopted, Mr. Stock moved the appointment of a committee to inquire into, and report to the vestry on the propriety of taking legal steps to invalidate the whole of the proceedings of the recent special poor-law commission, and in doing so expressed his regret that the directors had not taken earlier notice of the subject. The motion was seconded, and carried unanimously.

Mortality of the Metropolis.—The number of deaths registered in the week ending Saturday, Nov. 5, was 956—Males 467, Females 489. Weekly average for 1838-9-40-1, Males 467, Females 445. The distribution of this mortality over the different districts was as follows:—West Districts, 137; North Districts, 164; Central Districts, 187; East Districts, 182; South Districts, 286.

Woolwich—The Archduke Frederick of Austria visited this dockyard on Monday, accompanied by a numerous suite. His Imperial Highness went over the different departments, minutely inspecting the machinery for testing anchors, the smithy, and the manufactory for making boilers. On Thursday the Archduke visited the arsenal, and examined all the works and machinery of the establishment.—The Lords of the Admiralty have ordered the construction of a war steam-vessel, with engines of 800 horse power, from the designs of Mr. Oliver Lang, master-shipwright of this dockyard. She will exceed the Trafalgar in size, by 20 feet 6 inches in length of deck, and by 3 feet 10 inches in depth of hold.—The Admiralty have been so satisfied with the report of the experiments on board the Lightning steam-vessel last week, with M. Clement's sillometer, marine thermometer, and steam thermometer, that they have ordered that 200*l.* be paid to him, and the machinery deposited in this yard. It is therefore probable that their Lordships' approbation of the inventions will shortly lead to their introduction in all the vessels of her Majesty's navy. The sillometer has a dial on deck which constantly shows the number of miles per hour that the vessel is going; so that it is easy to discover, under all circumstances, what is the best trim of the vessel, and the most advantageous quantity and distribution of the sails for obtaining the greatest speed. As the sillometer shows immediately the effect which every alteration in the sails or trim of the ship has on its velocity, it follows also that ships fitted with the sillometer can constantly maintain the speed they may have agreed upon, and so keep company together, and maintain the same relative position, though, from the darkness of the night or thickness of the weather, they cannot see each other. From the experiments made with the marine thermometer, it appears that in its variations it followed the inequalities of the bottom of the sea, so far as these inequalities could be ascertained from the heaving of the lead, or from the information of the pilot; on the approach to shoal water the thermometer fell, and on the approach to deep water it rose, and distinguished the difference very distinctly and rapidly, according to the transition from shallow to deep water, and *vice versâ.* It may therefore be inferred, that the marine thermometer would indicate the approach to rocks and icebergs, from the influence these bodies are known to have on the temperature of the sea for a considerable distance. The dial of the marine thermometer is also on deck, and shows, by inspection merely, the exact depth of water in which the vessel may be sailing at the time. The steam thermometer indicates the exact temperature of the steam in the boilers, showing distinctly every variation as it occurs. The thermometer is a Centigrade of 107°, four degrees of M. Clement being equal to 212° Fahr.

Wreck of an East Indiaman.—We regret to record the total loss of the Reliance East Indiaman, of 1,500 tons, Capt. Green, which was wrecked on the coast of Meriment, near Boulogne, in the storm of Saturday night. The captain, passengers, and 115 persons (out of 122 on board) have perished. This calamitous event has spread a gloom of the most melancholy description among the merchants connected with the East India trade. Her last place of resort was St. Helena, and the parties interested in her fate were therefore in expectation every day of hearing of her safe arrival. It appears from the report of the agent of Lloyd's, that of the crew and passengers, 75 were British, 27 Chinese, and 20 Dutch: the saved are, the ship's carpenter, an Irish seaman, 2 Dutch sailors, and 3 Malays, who reached the shore in one of the boats of the vessel. The body of the captain was washed ashore, and identified by the carpenter. Captain Tucker, of H.M.S. Iris, is among the passengers drowned. The Reliance was an old ship on this station, and had on board a cargo of tea of considerable value, besides the freightage incidental to the voyage. The quantity of tea on board was 1,884,748lb., of which there were 1,277,556lb. of Congou, and 406,565lb. of Twankay, with smaller proportions of other descriptions. Fortunately for the insurance offices and underwriters in this country, their risks upon the vessel do not include more than from 14,000*l.* to 15,000*l.* of the 195,000*l.* for which it is said she is insured, the insurance offices of Calcutta and Bombay being responsible for at least 150,000*l.* to 180,000*l.* of the whole amount. This mishap, with those reported under our foreign news from the Cape of Good Hope, and others which have occurred on the coast during the late severe weather, have, in a material degree, depressed the feelings of parties connected with the shipping interest. So far as the particulars have been ascertained, the scene of confusion which prevailed on board until daylight is described by the survivors as of the most awful character, though little beyond the manner in which the crew and passengers lost their lives has at present transpired. The confusion and terror consequent upon the suddenness with which the vessel struck was such, that no orders on the part of the ship's officers were attended to, and some time elapsed before signals of distress could be fired. The signals continued to be made until daylight, but without any effect, no boats having put off to the vessel. The Boulogne papers state that there were no means of affording the least assistance. As soon as day broke and the coast was discerned, it was determined to hoist out the boats. This was quickly accomplished, but the long boat was immediately swamped by the breakers, and the others, from being overloaded, went down within a short distance of the vessel. The captain remained on board to the last moment, and went down while near the carpenter, who reached the shore in safety. Many bodies had been washed on the beach, some of them showing symptoms of life; but although every medical attention was promptly rendered, none of them were restored. The scene on the beach was of the most extraordinary description from the number of chests of tea which came ashore when the ship broke up. It was ebb tide when the ship struck; but before daylight the sea was flowing fast, and at ten o'clock she was a perfect wreck. Out of 27,000 chests on board, only 2,050 have yet been saved, and these are all much damaged by sea-water. The loss of so large a quantity of tea has had a great effect on the market, and an advance of price is considered certain. The vessel belonged to Messrs. Tomlin & Mann, of Cornhill. The commander was much respected in the City, and until some official account of her situation and loss is received it is a matter of mere conjecture whether it was through the state of the weather or an oversight in navigation.

Teddington.—At the Feltham Petty Sessions, John Morris was re-examined on a charge of setting fire to the premises of Mr. Gunner, at Teddington, on the night of the 5th inst., as noticed in our last. The additional evidence went to show that the prisoner was out late at a neighbouring public-house on the night of the fire, and that he took away some remnants of a coat which had been torn up, two or three of which were found between the farm and his own house. It was also stated, that on the night in question he had complained to his companions of having no work, and had made an unsuccessful application to Mr. Gunner for employment about six weeks ago. The magistrates thought the suspicion of his guilt strong enough to justify another remand.

Provincial News.

Her Majesty's Visit to Walmer.—Her Majesty and Prince Albert, notwithstanding the unfavourable weather, have paid frequent visits to the sea-side and to different places in the neighbourhood. Her Majesty has declined receiving any addresses during her stay, and has signified her wish that it should be regarded as a private visit. On Friday the Queen and Prince Albert visited Deal, and on Saturday walked on the beach, unattended by any of the household. On Sunday divine service was performed in the Duke of Wellington's small dining-room by the Rev. Mr. Wilberforce, Vicar of Walmer, and was attended by her Majesty, Prince Albert, and the whole suite.—On Monday Prince Albert went on board her Majesty's ship Thunderer, and in the afternoon her Majesty and the Prince visited the town and castle of Dover. On Friday his Royal Highness again visited the Thunderer to witness target firing: he remained on board some hours, and was much gratified. It is generally rumoured that the Prince is about to succeed the Duke of Wellington as Lord Warden of the Cinque Ports. The advanced years of his Grace, and his expressed wish on more than one occasion to be relieved from official duties, are considered to strengthen the rumour. The rooms selected for the use of the court at Walmer Castle are twenty in number, the greater portion of them looking towards the French coast. All the rooms occupied by her Majesty have a southern exposure; but the portion of the fortress appropriated for the exclusive use of the Prince of Wales and the Princess Royal, the Dowager Lady Lyttelton, and the attendants upon the Prince and Princess, are the outworks of the north tower.

Agricultural Districts.—The papers continue to give long details of incendiary fires. In Berkshire, the outhouses and ricks on General Dickson's Severne Barn Farm, about eight miles from Reading, occupied by Mr. Brokenbrow, were fired on Saturday evening; the flames were not subdued until Sunday night, when the whole of the property, with the exception of one or two wheat ricks, was consumed. A reduction of the labourers' wages is supposed to have led to the occurrence.—In Buckinghamshire, the farm of Mr. Lazenby, at Ley-green, Chesham, was fired on Saturday week; some of the stacks were destroyed, but the flames were subdued before they reached the buildings. On the following Tuesday, another fire occurred on a farm near the same spot, and destroyed the barn and a large quantity of oats.—In Cambridgeshire, on Sunday evening, the faggots and timber on the premises of the Earl of Leicester, at Chatteris, were fired; for some time the mansion was in danger, and if the wind had been high, a great portion of the town must have been destroyed; the light of the fire was seen at Cambridge. On the previous day a haulm stack and other property were burnt to the ground on the farm of Mr. Collett, at Feversham.—In Bedfordshire, on Wednesday week, ten stacks of barley, beans, &c., were destroyed at Bushmead, near Eaton Scoon.—In Northamptonshire, a barn, in a close detached from other buildings, at Leighton Buzzard, and some stacks of gorse at Billesdon, were burnt on Saturday. At Harrold also a barley stack was fired, but the flames were discovered in time to prevent any considerable danger.—In Nottinghamshire, two large barns in the neighbourhood of Loughborough, one of them belonging to Mr. Middleton, the other, filled with barley, belonging to the farm of Mr. Brewer, were destroyed by fire last week.—In Wilts, the hayricks and outhouses at Cotham, near Hungerford, were fired, and burnt to the ground; and in Worcestershire, a rick of straw, about nine tons weight, on the farm of Mr. Harris, at Stoney-lane, near Tandebigg, was totally destroyed.

Bristol.—The commissioners appointed under the New Bankruptcy Act for this locality, Mr. Sergeant Stephen and Mr. Stevenson, opened the court, at the Guildhall, on Saturday. No business was entered upon, further than receiving such fiats as were ready to be tendered to the court.—During the past week dividends have been declared upon the separate estates of Mr. D. W. Acraman, of 2*s.* in the pound, and of Messrs. W. E. Acraman and A. J. Acraman, of 6*d.* each in the pound. The sum of 8,000*l.*, the purchase-money of the pictures of Mr. D. W. Acraman, remains in the hands of the assignees, till the Court of Review shall have decided whether it belongs to his private estate or to the estate of Mr. W. E. Acraman.—A general meeting of the shareholders of the Great Western steam-ship company was held on Friday, to receive a report from a committee elected in August last to investigate the affairs of the company, jointly with the board of directors. The chairman of the committee read the report, which recommended the sale of all the company's property, and the winding-up of the concern. A resolution in accordance with the report was moved, and a very lengthy and stormy discussion ensued, in the course of which it was stated that the liabilities of the concern amounted to 23,818*l.* There was due on calls 17,000*l.*, being a balance against the company of 6,818*l.* The cost of the Great Western was stated at 61,671*l.* Complaints were made of the extravagant management of the company's affairs, particularly in the salaries of the captain and managing directors. It was also stated that the highest bidding for the Great Western, at the recent attempt to sell her, was 17,500*l.* Several counter resolutions were presented by the directors, which were eventually adopted by the meeting in a modified form, to the effect that the Great Western should continue her voyages at the usual periods, unless in the mean time an advantageous offer should be made for her; that the Great Britain should be completed and fitted for sea, and that a loan of 20,000*l.* should be raised for that purpose.

Cambridge.—The Cambridge Camden Society are making great efforts for the repairs and restoration of the Round Church. When completed, it will be the most remarkable piece of antiquity in Cambridge, and especially interesting to the admirers of church architecture. At present the works are suspended from want of funds. A sum of 1,400*l.* will be required to complete the restoration; and it is hoped that the Society, by an appeal to the public, may succeed in raising the amount.

Cardiff.—A few weeks since, the local papers gave long accounts of a young girl, who was apprehended at this place, while going on board one of the Bristol packets in sailor's attire, when she stated that she was on her way to America to see her brother. The same papers now announce that she was burnt to death at Merthyr on Wednesday week. It appears that the poor girl, who was of weak intellect, had gone to Merthyr in search of employment, and having fallen asleep in a room with a fire, her clothes ignited, and she was so severely burnt that she died in a few hours.

Deal.—The storms which have been felt so severely in the Downs have been experienced on all parts of the southern coast, and numerous wrecks of small craft are reported. On Monday night an English brig, the Smales, bound from Quebec to Whitby, was preserved from being driven upon the beach by the intrepidity of the Deal boatmen. At 9 o'clock she was about to run from the Downs, where she had put in for shelter on Sunday, to the northward; but the captain, not knowing the coast well, got within a quarter of a mile of the shore, and in less than three fathoms of water. So near was the vessel to the beach, that during the lull of the wind the people on shore could hear the men speaking on board. Four Deal boats, with forty men, immediately put off, and after great efforts for upwards of half an hour, the boatmen succeeded, with an easterly wind blowing dead ashore, in preserving the brig (worth between 4,000*l.* and 5,000*l.*), and taking it to a safe anchorage in the Downs. Several other vessels at the same time were nearly blown ashore, and the revenue cutters were obliged to run for Ramsgate.—On Saturday great alarm was felt at Deal and Walmer respecting the fate of a galley, containing seven hands, which was observed from the coast suddenly to disappear, just as she had reached the Lisbon steamer, at the time of the heavy gale on Friday afternoon. The accident was observed from Walmer Castle, and her Majesty was very anxious in her inquiries; but it was afterwards ascertained that the men were picked up by the crew of the steamer.

Falmouth.—It is proposed to erect forthwith a line of telegraphs from the Lizard to this port, which will enable the merchants to obtain the earliest reports of vessels arriving in the Channel from abroad, since they all endeavour to make the Lizard, as a landfall; while, with contrary winds, valuable cargoes are detained by ships standing off and on the coast, not able to clear the Lizard on some occasions for several days.—We learn from the *Plymouth Times* that the accounts from the fisheries on the western coast are of the most cheering description; after almost all hope had been abandoned, nearly 20,000 hogsheads were enclosed last week at St. Ives and Newlyn, and other places have also been successful. Altogether it is said that the value of the fish caught on Wednesday week is not less than 50,000*l.*

Gloucester.—The adjourned inquiry into the mysterious cases of wholesale infanticide at Ruardean, in the Forest of Dean, the particulars of which we noticed in our last, was resumed last week, in the presence of several magistrates of the district. The evidence adduced was similar to that already published, and no new fact of a material nature transpired. The jury expressed an opinion, that if further time were allowed, additional evidence might probably be obtained, and the inquest was consequently again adjourned.

Hull.—On Saturday four youths, indifferently attired, applied to the bench for assistance to enable them to get to London. On being questioned by the magistrates, they stated that they had run away from school, at Winton, near Kirby Stephen, in Westmoreland, kept by Mr. Twycross, in consequence of ill-treatment. The details of the case seem to be a counterpart of the history of "Dotheboys Hall," which Boz has made so famous. They all stated that they were not half fed, nor allowed to write to their friends, except what the master dictated. They started with 1*s.* 6*d.* between them; they had walked from Winton to Selby, and thence had taken the packet to this town. William Griffiths, one of the youths, said he was 17 years of age, and had been at the school seven years; it was two years since he had seen any of his friends. He did not know where his parents resided. His father was a bookseller and stationer in London, and he only knew the residence of his grandmother. William Wright said his father was a lawyer at Temple-bar; he had been at the school two years, and had not seen or heard anything of his parents during that time. Thomas Wilson said his father was a lawyer in the Strand; he had been at the school six years, and had not seen or heard anything of his parents or friends during that time. Thomas Forbes said he had no father; he had been five years at school, but had not received any letter from his mother during the last two years. The magistrates subscribed to defray their expenses to town, and the mayor undertook to make arrangements for their passage.

Lavenham.—On Saturday, several tradesmen of this place and Sudbury were brought before the local magistrate, charged, by the secretary of the Society for the Prevention of Cruelty to Animals, with having kept a plot of ground called Washmere-green for the purpose of bull-baiting, and with having aided and assisted at the bull-baiting on the 5th inst., contrary to the provisions of the statute. The offence was fully proved. The principal parties concerned were fined 5*l.* each, and the others were sentenced to penalties of less amount. Five paid the fines, and seven were committed to prison with hard labour. The penalties and costs amounted to 43*l.*; and the Society presented the prosecutors' moiety to the funds of the National School.

Leeds.—We last week noticed the increased amount of relief given to the poor at the Leeds workhouse in the months of September and October of the last three years. The amounts were as follows:—In September and October of 1840, 2,608*l.*; in 1841, 2,994*l.*; in 1842, 3,659*l.* The increase of the rate is a necessary consequence; and the papers of this week announce that the overseers have laid a half-yearly rate of two shillings in the pound, where there has not for many years been a rate exceeding one shilling and fourpence. The increase is, therefore, fifty per cent. upon the former rates, although at no time have the inhabitants been less able to bear any increase of the rates than at present.

Liverpool.—The New Bankruptcy Act having come into operation on Saturday, the Court for the Liverpool district was formally opened on that day before the Commissioners, Mr. Skirrow, Q.C., and Mr. C. Phillips. The Order in Council authorising the opening of the Court, its constitution, jurisdiction, limits, &c., was read, and after the usual formalities the Court adjourned to the 21st.

Manchester.—A large meeting of the Anti-Corn-Law League was held last week, to learn the progress of the 50,000*l.* fund, and to hear the speeches of Mr. Buckingham, Mr. Cobden, and others. The chairman, Mr. Wilson, said that the Local Committee for collecting the 50,000*l.* fund had met, and had succeeded in putting into circulation a number of cards, which, when filled up and returned, would contain subscriptions to the amount of 1,646*l.* The ladies had held their second meeting. The number of their committee at the present time was about 120 members, and they had succeeded in issuing cards, which, when filled up, would contain contributions to the amount of 620*l.* 10*s.* A General Committee of Superintendence for the whole kingdom had also been formed, and had issued cards, which, when returned, would contain subscriptions to the amount of 3,075*l.* 18*s.* Cards were already taken, therefore, to the amount of 5,342*l.* The meeting was addressed at great length by Mr. Buckingham and other gentlemen, who entered into numerous details on the objects before them, and on the measures to be adopted in carrying out the purposes of the League.—The balance-sheet of the Chartist Executive for the last quarter has just been published. It contains several details which afford a significant proof of the small resources of the party, although professedly numbering no less than 3,000,000 members. At Birmingham, where Chartism is supposed to be, numerically speaking, stronger than in any other part of the kingdom, there are but 175 contributors, and the amount they have sent to the executive during the last three months is only 18*s.* 4*d.*, or 3*l.* 13*s.* 4*d.* per annum. Coventry adds 100 Chartists to the ranks, and 16*s.* 8*d.* to the funds. Carlisle gives 5*l.*; Darlington, 5*l.*; Derby, 1*l.*; Huddersfield, 1*l.* 18*s.*; Hull, 1*l.* 12*s.* 6*d.*; Halifax, 1*l.* 15*s.* 4*d.*: Liverpool has 280 contributors to the amount of 1*l.* 13*s.* 2*d.*; and Manchester, with its 524 brethren, sends 9*l.* 17*s.* 4*d.* The total income for the three months is 160*l.* 1*s.* 5*d.* Of this sum no less than 90*l.* 8*s.* has been taken by Dr. M'Dowall and two other lecturers, and the accounts show a balance in hand of only 10*s.* The various associations in different parts of the country have not succeeded in inducing more than 11,363 persons to enrol themselves at twopence a quarter, of whom a great number are reported as defaulters.

Northleach.—The Government inquiry into the management of this prison commenced on Monday week. The commissioners are, Mr. Rogers, Queen's Counsel; a physician, and two inspectors of prisons; assisted by Mr. Gurney. Twenty-nine prisoners at present in confinement were examined on Monday; all the witnesses at the late inquest on Beale were re-examined on the following days; and after the case was finished, other witnesses were examined as to the alleged insufficiency of diet, and other privations. After finishing at Northleach, the commissioners proceeded to the other prisons of the county. At the meeting of the Cheltenham board of guardians last week, the clerk read two communications from the commissioners, requesting assistance in the investigation. The reports will not be laid before the public until the close of the inquiry.

Northwich.—About three years ago several lives were lost by the falling-in of the top mine of a rock-salt pit at Dunkirk, near this place. A few weeks ago, indications were observed which led the miners to expect a second fall, which has since taken place, owing, it is conjectured, to some rock-salt pillars in the bottom mine having given way. No lives, however, have been lost, as in the former instance; but the destruction of property is very great, involving considerable loss to the miners and their families. The pits are now flooded to the height of five feet by the water, which had collected in the cavity occasioned by the former calamity, and which has now found its way into three neighbouring pits, and threatens to enter as many more.

Oldham.—The Manchester papers state that the distress prevailing among the operatives has become so serious, that, at the petty sessions last week, the cases of no fewer than 300 poor persons, defaulters of poor-rates, were investigated, without summonses, for the purpose of saving legal costs. All these cases were from one of the four districts of the township. A considerable number of these operatives described themselves as entirely destitute of work, and some as only partially employed.

Oxford.—The Regius Professor of Modern History, Dr. Cramer, has resigned the office of public orator in the University; and the Vice-Chancellor has fixed Thursday, the 24th instant, for the choice of his successor. On the late visit of the Archduke Frederick of Austria to this city, his Imperial Highness called at the house of Mr. Sheriff Hunt, and expressed his admiration of the conduct of his son at the taking of Sidon; his Highness, with Major Maronivich, one of the suite, having been eye-witnesses of the gallant race between Mr. Hunt, then a midshipman of H.M.S. Stromboli, and an Austrian officer, Signor Chinca, in order to be the first to plant their respective colours on the walls. The circumstance was noticed in Commodore Napier's despatches at the time, the race having been gained by Mr. Hunt, who has since been promoted to a lieutenancy for his conduct. The kind consideration of the Archduke on this occasion is justly extolled in the local papers.

Pembroke.—The Admiralty have sent orders to this dock-yard for the planks and the copper and metal bolts, nails, &c., for the new Royal steam yacht, to be prepared with all possible despatch, and to take precedence of all other work. The plans for the yacht have been submitted by Sir Wm. Symonds, Surveyor of the Navy, to Prince Albert for approval.

Preston.—The local papers state that a portion of the proceeds of the robbery of 2,000*l.* at the recent Guild, the particulars of which have frequently been noticed, have lately made their way to the Bank of England, in the shape of a 500*l.* note. It was paid into the Bank of England by Messrs. Masterman and Co., the bankers, to whom it was paid by the house of Rothschild, who received it from their house in Paris. It is supposed that the note was paid in Paris within forty-eight hours of the robbery.—The plans and specifications for the new barracks at Fulwood, near this town, have at length received the confirmation of the Board of Ordnance. They will be on the most complete scale, to accommodate 2,000 men, with stabling for 750 horses.

Sheffield.—On Monday week the extensive grinding-mill of Mr. Dyson, a scythe manufacturer at Abbey Dale, near this town, was blown up by gunpowder, and the machinery totally destroyed. It appears that there exists a union among the grinders, and if any master employ men who are not members of this union, a decree is forthwith issued that such master is to have either his dwelling-house or place of business blown up with gunpowder, or some other combustible matter. In this case, Mr. Dyson had two men in his service who did not belong to the body, and, therefore, came under the displeasure of the union. From some circumstances, which have not yet publicly transpired, three men have been apprehended on suspicion of being the parties concerned. The amount of gunpowder used to effect the explosion is said to have been not less than 100 lbs.

Southampton.—There is now some prospect of a speedy completion of the new docks at this port, Government having advanced the company 25,000*l.*, and further assisted them with a large quantity of materials. It is anticipated that, by the first week in January, the tidal dock will be opened, and that the whole length of sheds for landing and shipping goods will be erected.

Wolverhampton.—The papers announce that Lord Wrottesley has lately finished the erection of an astronomical observatory on his estates near this town. It is built in a commanding situation, about a field's length from the great Holyhead-road, and is fitted up with a complete supply of suitable instruments.

Railways.—The returns of the week's traffic are as follows:—Northern and Eastern 1,318*l.*; Greenwich 778*l.*; Manchester and Leeds 4,201*l.*; Edinburgh and Glasgow 1,912*l.*; South-Eastern and Dover 1,183*l.*; Brighton 3,854*l.*; South-Western 5,596*l.*; Birmingham and Gloucester 1,806*l.*; Birmingham and Derby 1,297*l.*; Great North of England 1,302*l.*; York and North Midland 1,563*l.*; London and Birmingham 16,298*l.*; Blackwall 501*l.*; Great Western 12,532*l.*; Eastern Counties 923*l.*; Manchester and Birmingham 2,735*l.*; North Midland 4,133*l.*; Midland Counties 2,533*l.*; Hull and Selby 986*l.*; Croydon 237*l.*—A survey is now in progress for the construction of a line of railway to pass through Greenwich, Woolwich, Gravesend, and Rochester, terminating at Maidstone.—Surveys have lately been made for a line of railway from Oxford, to join the Great Western at Wallingford; also for a branch line to join the Aylesbury railway, thus opening a direct communication between Oxford and London.—It appears from the report of the officers of the railway department of the Board of Trade, that the number of accidents on the railways of the United Kingdom, arising from causes beyond the control of passengers, which occurred in the year 1841, was 29, by which 24 persons were killed and 72 injured. The number of accidents which occurred in the same period to individuals owing to their own negligence or misconduct, was 36; by which 17 persons were killed, and 20 injured. The description given of the several cases in this class affords proof of the extraordinary recklessness of the individuals who have suffered. "Jumped off after his hat," occurs no less than three times; "jumped off," twelve times; "run over, crossing before a train," occurs six times. There are also several cases of persons killed whilst lying asleep on the rails, and of others killed or injured by falling from trucks on which they had been riding without leave. The number of accidents which occurred in the same period to servants of the company, under circumstances not involving danger to the public, was 60, by which 28 persons were killed, and 36 injured. The safety of railway travelling is shown by the small number of persons killed and injured by accidents arising from causes beyond the control of passengers. It would be easy to prove that the mortality and injuries occasioned during the past year by such coach accidents only as are recorded in the newspapers (and probably not half that occur are so recorded) were greater. It must also be borne in mind how few persons now travel by coaches; whilst the number who travelled by railway, during the first half of 1811, amounted to no less than 8,901,916. The number of persons who travelled by railways, from the 1st of January to the 1st of July in 1841, was, as we have stated, 8,901,916, and the gross sum paid for their fares during that half-year was 1,145,546*l.* 15*s.* 4*d.* It appears that a great third-class passenger traffic (a test of the accommodation afforded to the poorer classes by railways) is carried on by most of the lines in the manufacturing districts of Yorkshire and Lancashire, in the coal districts of the North, and in Scotland. These lines are, in a great measure, dependent upon third-class passengers, who are conveyed by all, or nearly all the trains, at fares averaging from 1*d.* to 1¼*d.* per mile. The following information respecting the nature of the third-class traffic upon the Manchester and Leeds Railway will afford a fair exemplification of the effect of a railway in a densely-peopled manufacturing district:—The Manchester and Leeds Railway passes through or near 15 towns, between which there were formerly several carts, waggons, and vans, passing every hour of the day and night, with manufacturing and market produce, of which the poor could avail themselves at a trifling expense of money, and a considerable sacrifice of time. These are now almost entirely swept away, and the market-people load one or more of the railway trucks amongst them, paying 3*d.* or 4*d.* per ton per mile for their goods, and, in many instances, less than 1*d.* per mile for themselves. The effect has been to bring a supply of fruit, fish, and vegetables within the reach of those who could never obtain them formerly, and to afford very great advantages to the market-people and towns. In fine weather respectable tradespeople, clerks, &c., avail themselves of the third-class carriages to a considerable extent; but the great bulk of the half a million of third-class passengers who are carried on this railway in the course of the year, are strictly the working-classes, weavers, masons, bricklayers, carpenters, mechanics, and labourers of every description, some of whom used, formerly, to travel by carts, but the greater number on foot. The fare from Manchester to London by railway and steam-boat, *viâ* Hull, is 14*s.*; and many of the labouring classes avail themselves of this mode of conveyance, especially during summer. In the case of such a line as the Manchester and Leeds, there can be little doubt that the railway has been a great advantage to the poorer classes, and it may be expected that the interest of the directors will induce them to afford every facility for the development of an extensive third-class traffic. But upon the long lines, which form the main lines of communication with the Metropolis, and upon which there is a great through-traffic, the case is very different, and the number of third-class passengers is inconsiderable. The whole number, for instance, of third-class passengers carried on the London and Birmingham and Grand Junction Railways, between London, Manchester, and Liverpool, is less than the number carried by the Arbroath and Forfar Railway, and not a seventh part of the number carried between Newcastle and North Shields. Upon these lines it may be questionable whether the interest of the proprietors will ever induce them to encourage the development of a large third-class traffic. It is satisfactory, however, to find that there is a growing disposition among railway companies, thus circumstanced, to afford the accommodation of at least one train a day by which the poorer classes may be conveyed at reduced fares. It is stated that the result of the experiment of running a third-class train upon the London and Birmingham Railway has been very satisfactory; the persons who have availed themselves of it having been, with few exceptions, of a class who could not have afforded to pay second-class fares; and it is expected that the number of this class of passengers will greatly increase when the advantages to be derived from the great saving of time are more generally known.

IRELAND.

Dublin.—A chapter of the Order of St. Patrick has been held by the Lord-Lieutenant, at the command of the Queen, for the purpose of investing the Earl of Wicklow with the insignia of the order.—It was attended by several knights in full costume, and by the principal officers of the order, and was followed by a state banquet, given to the knights by the Lord-Lieutenant.—The papers state that it is her Majesty's intention to visit Ireland next autumn, and make an excursion to the principal towns in the interior.—A committee has been formed to raise a fund in behalf of the family of the late Dr. Dickenson, bishop of Meath, who has left seven children almost destitute of present means of support. The Archbishop of Dublin heads the list with the munificent donation of 1000*l.*—The Government have determined to appoint Mr. D. C. Latouche, of the banking firm of Latouche & Co., as High Sheriff of Dublin for the ensuing year.—Lord Gort, better known as Colonel Vereker, died at his residence near this city on Friday, in his 74th year. He distinguished himself as Colonel Vereker, in 1798, by stopping the progress of the small French invading body which landed at Killala, in Ireland, at a place in Sligo called Coloony.—The two proprietors of newspapers, Mr. Dowdall and Mr. Duffy, who were prosecuted by the late Attorney-General for seditious libels, and convicted—one by his own confession, the other upon trial before the Lord Chief Justice—having made their submissions and sued for pardon, have both been set at liberty by Mr. Smith, the new Attorney-General. In announcing this determination, the Attorney-General said that the sole object of these prosecutions was to rescue the administration of justice from unmerited imputations. The Government considered that the avowals made by the defendants met that object; and it having been admitted that the publications which led to the prosecutions were the result of excitement, and that in the commentaries under which they were made, the defendants had exceeded those limits which the true circumstances of the trials referred to would have warranted, the Government did not conceive they were called on by that sense of public duty which alone actuated the law officers of the Crown to press for judgment upon the indictments, and therefore they did not think it necessary to call up the defendants for judgment.—Another proceeding of some interest has taken place in the Rolls Court. In giving judgment in a case in which sixteen exceptions had been taken, the Master of the Rolls adverted to the fact, that on the previous day he had disposed of no less than 37 exceptions, which might have been reduced to three, and expressed his opinion that the practice imposed a formidable burden on the opposite party, and impeded the investigation of truth. He was determined, he said, to make an example which would prevent the recurrence of a similar practice for the future, and concluded by ordering that the costs of the numerous exceptions unnecessarily filed should be paid by the party who had filed them.—The Papers of the 15th announce the death of Dr. Sandes, Lord Bishop of Cashel and Waterford, which took place in Dublin on that day. Several candidates for the vacant bishopric are mentioned, among whom are Archdeacon Pakenham, brother-in-law of the Duke of Wellington, and Dr. Daly, who has been so long involved in the litigation respecting the deanery of St. Patrick.

Belfast.—The annual meeting of the "Belfast Society for the Promotion and Improvement of the Growth of Flax in Ireland" took place in this city on Thursday. The meeting was very numerous, comprising agriculturists and manufacturers, landlords and merchants, of all shades of politics. At the close of the meeting, it was moved that the next meeting of the Agricultural Society be held in Belfast.

Donegal.—As anticipated during the discussions on the Spirits Duties Bill last session, the increase of the duty on whiskey has led to the revival of illicit distillation on an extensive scale. In various parts of this county, and in the northern districts of Mayo, this illicit distillation is carried on upon a larger scale than at any time during the last 20 years. In addition to the increased duties, the price of oats has fallen so low, that the farmers are said to resort to distillation with all its risks, in the hope of making up their rents. The revenue police are unable to check the system; and it is expected that the police will be reinforced, if the military be not called out to assist in its suppression.

Mayo.—The great fair of Balla has just taken place, with serious loss to the agriculturists. There was an abundant supply, but the best beef sold at the rate of three-halfpence a pound. At least five-eighths of the stock left the fair unsold; many cattle sold at full 30 per cent. under their original cost; the sheep did not realise more than twopence per pound; and many of the small farmers could not effect sales at any terms.

SCOTLAND.

Edinburgh.—The *Edinburgh Advertiser* states that one of the most important decisions yet given in regard to the Church question was pronounced by Lord Cuninghame, on Thursday, in the processes of suspension and reduction of the sentence of deposition passed by the General Assembly of 1841 against the seven ministers of Strathbogie. Referring to the interlocutor itself, it states, that so far as the Lord Ordinary's judgment goes, he sustains the competency of the process for setting aside that sentence—that he holds the moderator of that Assembly, the procurator of the Church, and the clerks of Assembly, as the parties who are properly called as contradictors or defenders on the part of the Church—and that he sustains the jurisdiction of the Court of Session to suspend and set aside the sentence of the General Assembly in this particular case. His lordship has repelled all the preliminary defences offered by the respondents and defenders. They have, it appears, as stated in the interlocutor, intimated that they are to reclaim to the inner house.—Last week a packet, containing several specimens of needlework in the shape of nightcaps, was forwarded by post to the town council of this city by a number of young ladies resident in London, as a small tribute of their admiration of the conduct displayed by the Mayor and Council on her Majesty's visit.

Glasgow.—At a large meeting of the students of the University, on Wednesday week, for the purpose of nominating a person for the Rectorial Chair of the University, the Marquess of Bute and Mr. Fox Maule, M.P., were proposed as candidates. The election took place on Tuesday, when Mr. Maule was returned by a majority in all the nations. He was supported by the Non-intrusionists, and the Marquess of Bute by the moderate party.

Rothsay.—The Marquess of Bute was entertained in this town last week by the gentry and principal tenants of the Marquess's estates in this part of Scotland, as a mark of their gratitude for the benefits he has conferred on them as a landlord. There were more than 150 persons present at the dinner, the County Convener presiding.

Ayr.—The strike at the Ayr colliery still continues, and, from the turn which affairs have recently taken, there is now little hope of any settlement being effected. In consequence of the numerous acts of intimidation, a troop of Yeomanry has been stationed here for some days; and under their protection the new hands, as well as some of the old colliers, have resumed labour at the various pits. The proprietors, in the mean time, have advertised for additional men from a distance, and several have already arrived to undertake the work.

Renfrew.—The local papers contain an account of the meeting of the noblemen and gentlemen of this county on Tuesday last, with a view of devising means of relieving the distress of the people. The distress is increasing, and seems likely to increase in the district. It appears by a memorial presented to the meeting from the unemployed artisans and labourers in Greenock, that in the last month no less than 1,304 able-bodied men were out of employment in that town, having dependent on them 3,545 persons, and making a total of 4,849 destitute individuals. Not very long ago they were in the receipt of weekly wages, varying from 12*s.* to 40*s.*, and now, without any fault or improvidence, they are entirely deprived of income, and obliged to beg for the most scanty subsistence.

THEATRICALS.

DRURY LANE.—On Wednesday night, Dryden's operatic drama of "King Arthur," with Purcell's music, was brought out at this theatre with great success. It was rather a series of spectacles than a complete drama. Though compressed into three acts, it presented a succession of scenes magnificent in themselves, but having little real connexion with each other. Mrs. Nisbett appeared as *Emmeline*, Mr. Anderson as *Arthur*, Mr. H. Phillips as *Osmond*, and Miss P. Horton as *Philidel.* At the close of the piece the audience were enthusiastic in their applause, and Mr. Macready was obliged to come forward and receive the usual marks of their approbation.

HAYMARKET.—On Monday night this theatre was crowded to excess, in consequence of the appearance of Madame Vestris and Mr. C. Mathews, who have seceded from Drury Lane, in consequence of some dispute with Mr. Macready, the merits of which are not fully before the public. So far as their reception on this occasion can be regarded as a manifestation of the popular feeling on the subject, it would seem that they have the sympathy of the public. The dispute, at all events, is likely to be beneficial to the Haymarket; the cheering which Madame Vestris received on her appearance as *Lady Teazle*, in the "School for Scandal," was so loud and long-continued, that many minutes elapsed before the play could proceed, and the house has been well filled during the week on those nights on which she has appeared. The *Lady Teazle* of Madame Vestris is not one of those characters in which her peculiar talents appear to the best advantage; it was, however, carefully studied, and produced with that attention to appropriate costume for which she is so justly celebrated. Mr. C. Mathews appeared as *Charles Surface*, Mr. Farren as *Sir Peter Teazle*, Mrs. Glover as *Mrs. Candour*, Mr. Buckstone as *Sir Benjamin Backbite.* At the close of the play the principal performers were called for by the audience, and its announcement for repetition was received with great applause. A new piece, by Mr. Buckstone, followed, under the name of a duo-drama, and with the title of "Snapping Turtles; or, Matrimonial Masquerading." It is a ludicrous extravaganza, its impossibilities making people laugh in spite of themselves. It is written with a view to display the talent of Mrs. Fitzwilliam and Mr. Buckstone, in assuming different characters. Mr. Buckstone, accordingly, appears in female dress, with the usual mystifications. The absurdities of the plot seemed to amuse the audience, and it was announced for repetition.

OLYMPIC.—A new drama, by Mr. Leman Rede, under the name of "Life 's a Lottery, or Jolly Bill the Lamplighter," was produced on Monday with complete success. The scene is laid in the year 1776, and the plot developed a picture of London life at that period, from the man of fashion to the inhabitants of St. Giles's; the object being to show how much virtue and real humanity could exist in the worst district of the Metropolis. The old London cries of the fruit-sellers, the lavender girls, the sweeps, the hackney-coachmen, the vendors of vegetables, and all the component parts of that class of London life in the last century, were brought upon the stage with appropriate scenery; and the piece was announced for repetition amidst clamorous approbation.

Law.

COURT OF CHANCERY.—*Attorney-General* v. *Corporation of Ludlow.*—The Lord Chancellor delivered judgment in this case, which came before him on the petition of the master of the grammar-school of Ludlow. His Lordship said, the question was whether, under the circumstances, the court could sanction a compromise as to the exchange of lands belonging to the charity for others the property of the corporation. It was alleged that the late Attorney-General had not been informed of the reference to the Master, but it was impossible to say on what ground he had subsequently assumed authority to vary the terms of the report. This proceeding had the effect of rendering the compromise one on which the court had not determined. The points to be now decided were whether the estates of the charity could be satisfactorily identified? and secondly, whether the estate, called the "Farmers' Guild," was included in the charter of Edward VI.? His Lordship said, it was sufficient at present to say, that the investigation before the Master had not been satisfactory; and, perhaps, the result of a new inquiry might make a determination of the second point unnecessary; for, notwithstanding the variation referred to, the court would carry the compromise into effect if it appeared to be beneficial to the charity. The further inquiry must be on the same terms as the former one, when the neglect to obtain the sanction of the Attorney-General might be rectified, and it might become needless to determine the question upon the construction of the charter, the main point for the consideration of the Master being whether the compromise was for the benefit of the charity. The costs must be reserved and the petitioners have leave to attend, as well as the Attorney-General, independently of the relators.

Attorney-General v. *Foster.*—The Vice-Chancellor Wigram delivered judgment on the exceptions for impertinence taken to the answer of the defendants in this case. The information was filed in Trinity term, 1835, against the Earl of Wilton, and the other trustees of the Manchester school, and the object of it was to effect considerable alterations in the mode of carrying on the school. In Michaelmas term, 1837, a supplemental information was filed against Lord Francis Egerton, a new trustee, and two gentlemen, who were then the head-master and usher of the school, seeking the same relief against them as the Attorney-General would have been entitled to if they had been parties to the original information. The answers were put in to both of these informations. Before the original and supplemental suits had come on to be heard, the Earl of Wilton resigned his office as one of the trustees, two others of the trustees died, another Dean of the Collegiate Church of Manchester and another head master of the school were appointed; and the defendants, Mr. Foster, Mr. Wilson Patten, and Mr. Burleigh, were chosen as trustees in the place of the three retired and deceased trustees. The new parties thus introduced were not, however, then made parties to the proceedings, and the cause was heard without them. The hearing took place in 1839, and Lord Cottenham's judgment was pronounced in November 1840. Disputes arose between the parties on the minutes of the decree, and these disputes were not settled until long afterwards. Another supplemental information, being that on which the present question has arisen, was filed against Foster and other gentlemen who had come into office before the judgment was pronounced. This supplemental information stated the purport of the original and first supplemental suit, the proceedings which had taken place, and the decree. It stated the appointment of the new defendants to their respective offices, and prayed that the Attorney-General might have the same relief against them as he would have been entitled to if they had been parties to the information when the decree was pronounced. The defendants put in their answers to this information, and admitted that such proceedings had been had; that the minutes of the decree were settled, and that the same was ultimately passed and entered as of the 5th of December, 1839. They stated that they were trustees of the charity at the time the decree was made, and ought to have been parties thereto, and they insisted that the decree was invalid as against them, and that the Attorney-General was not entitled to the benefit of the former suit and proceedings as against them. The defendants stated a variety of circumstances connected with the history and present state and prospects of the school, for the purpose of showing why, on the merits of the case, the Attorney-General ought not to have the same decree against them. To the latter part of the answer the relators excepted for impertinence. The Master overruled the exceptions, and the parties now appealed from his decision. Nothing ought to be in the answer which the bill did not call for, or which would not be material to the defence with reference to the order or decree which might be made. The question was on the application of this principle. The practice of the court required that the new trustees should have been parties at the hearing, when they might have made any defence which the justice of the case required. They could not be likened to purchasers *pendente lite*; they did not come in under the old trustees, but they derived their title from the founder of the charity. The information itself so treated the case, and, he thought, correctly. If he was accurate in this position, it would follow that the new trustees must, at the time of answering this information, be considered as in the same position as though they were answering before the original and first supplemental informations were heard. In that case, it would be clear that they might have made any defence which they thought was required by the justice of the case, subject to a question of costs, should they needlessly have repeated matter contained in the answers of the former trustees. His proposition was, not that the new trustees would necessarily be unaffected by the answers of the former trustees, or the proceedings in the cause, but that they were not so bound as to be absolutely precluded from making a possible case against the decree prayed, and being heard to argue against its correctness and propriety. The assignee of a defendant who had become bankrupt, after answer, might in some cases be affected by it, but they would not be precluded from stating their own case in their own answer against the relief prayed. Extreme cases had been put for the purpose of showing the inconvenience which possibly might result from repeated changes of trustees. Those extreme cases which, in fact, rarely, if ever, occurred, did not furnish a rule at all affecting his decision, or the principle upon which it proceeded. Upon the second question, which was one of strict pleading, he certainly had felt difficulty; but adverting to what Lord Redesdale had stated, as to the frame of an original bill, filed for the purpose of having the benefit of preceding and existing suits as against persons who were not parties to those proceedings, he meant an original bill in the nature of a bill of revivor, and an original bill in the nature of a supplemental bill, and referring to what Lord Eldon had also decided, notwithstanding his intimation of opinion as to what would be a more convenient rule of practice, he thought the facts which constituted the case, made by the original information, were so far put in issue by this information, that the Court might, at the hearing of the latter, go into the case at large as against the new trustees, and would not be confined to a narrower issue. The Master's report must, therefore, be confirmed.

Bail Court.—*The Queen* v. *Charles Devon and Robert Sullivan, Esqs.*—Mr. Erle applied to Mr. Justice Patteson for a rule, calling upon the defendants to show cause why a writ of *mandamus* should not issue, commanding them to grant a warrant of distress, and levy a poor-rate which had been made by the parochial authorities of the district in which Hampton Court Palace is situated. The question in dispute in this case is simply, whether the parties who officially reside in the Palace are liable to be rated to the relief of the poor, and upon which a decision has already been given by the Court of Queen's Bench. His Lordship granted a rule.

Rolls Court.—*Beard* v. *Edwards.*—Mr. Pemberton and Mr. Torriano moved for the committal to the warden of the Queen's Prison of the defendant, Edward Josephs, otherwise Edward Josephs Edwards, for disobeying an injunction granted on the 13th of September last, restraining him from using the invention of the plaintiff's bill called the daguerreotype, and from taking or vending the portraits and delineations, and from giving instructions in the art of using the invention. The bill stated letters patent of the 14th of August, 1839, to Miles Berry, the enrolment of the specification in February 1840, that Berry was the agent of Louis Jacques Maude Daguerre and Joseph Isidore Niepce, and in June 1841 assigned the patent to the plaintiff, who was using it; but the defendant, without his license, was exercising it in Liverpool-street, London, and was taking portraits of persons and delineations of objects. The affidavit of the plaintiff's witness stated, that he was shown the apparatus by the defendant, who explained it, and that it was in every particular like the apparatus in the plaintiff's specification; the defendant sold it him for 5 guineas, offered to instruct him in the mode of using it, said his terms for instruction were 5 guineas, and that he had a class of pupils. The mode of using it was the same as described in the plaintiff's specification. The defendant had been proceeding in that manner, instead of moving to dissolve the injunction. Mr. Sandys, for the defendant, said, it was not a case to visit the defendant with commitment. There was no intention of continuing to sell the apparatus. He did not know whether he was not entitled to sell the portraits; but it was not his intention to continue so doing, and he had advertised that no portraits would be taken. The likeness taken was in his absence, and he had now discharged his assistant. It did not follow, that, because the defendant was not in a condition to move to dissolve the injunction, he would not be able effectually to defend the action, for then he could compel witnesses to give evidence whom he could not bring forward to make affidavits in support of the motion. Lord Langdale said, he should be sorry to press upon the defendant by a commitment, but he must pay the costs of the motion, and the injunction must be extended to restrain him from selling the apparatus, or using any part of the invention of the plaintiff, who must bring his action within a reasonable time.

Court of Queen's Bench.—[Sittings in Banco.]—*In Re Captain Douglas.*—In this case a *habeas corpus* had been obtained to bring up the body of Captain Douglas, who was in the custody of Lieutenant-Colonel Hay, at Chatham, on the charge of having deserted from his regiment in India. The return to the *habeas corpus* was read. It set out that Captain Douglas had been charged before J. Hardwicke, Esq., one of the justices of the peace for the county of Middlesex, with having deserted from the 49th Regiment of Native Infantry, of the forces of the East India Company; that on such charge he had been committed by the said justice to the custody of the gaoler of Tothill-fields bridewell, and that since such committal the Secretary at War had issued his order to Lieutenant-Colonel Hay, the commander of the East India Company's forces at Chatham, to receive the body of Captain Douglas, and have him safely kept till he could be despatched to Madras. The captain denied that he was a deserter, as he had leave of absence till March 1843. The order contained a statement of the charge of desertion, which was made on the ground that the leave of absence only applied to the Neilgherry Hills. After a long argument on the admissibility of affidavits, which the Court considered the case did not call upon them to receive, Mr. Kelly stated the facts of the case at great length, and contended that Captain Douglas was an officer, not a common soldier, and it was plain that the words of the statute did not authorise such proceedings as had been taken in this instance against an officer. There were, in fact, three objections to these proceedings, which would be presently stated to the court in their regular order. But, first, if the object of the statute and its title were looked at, it would be clear that it did not apply to a case like the present. The act was passed with a view to the management and command of the British army, and there was but one section which partially extended its provisions to the forces of the East India Company. That was the 32d section, which made the act applicable to the forces of the Company, while they should be in any part of the United Kingdom. And the 22d section declared, that if any soldier should be found, who had deserted from the corps to which he ought to belong, and should be charged with such desertion, he might be taken before a magistrate, and on the order of that magistrate might be committed, &c. It was clear, therefore, that before the magistrate had any right to commit a man as guilty of the offence of having deserted, he must be satisfied that the man was a soldier, and was a person who ought to have been with the corps to which he belonged; and being satisfied on that point, the magistrate might commit him to civil custody, and then the Secretary at War might give an order for his transfer to military custody, to be there dealt with according to martial law. The objections to the course which had been pursued here were three. The first was, that the powers of the magistrate extended only to common soldiers, and till this most strained and unprecedented proceeding had taken place, no one had ever heard of this provision of the Mutiny Act being applied to an officer. The magistrate had, in fact, no jurisdiction in a case like the present. The second objection was, that it was not made to appear before the magistrate, and that he did not state in his warrant, nor did the Secretary at War state in his order, nor was it stated in the return, that the person whom he had in his custody was a person who ought to be with the corps to which he belonged. These objections related to the 22d section of the act. The third objection related to the 32d section of the act, which was the section where the provisions of the act were declared applicable to the forces of the East India Company while in the United Kingdom. The third objection was, that the act did not apply in this instance, for the corps to which Capt. Douglas belonged did not form any part of the forces of the East India Company in this country. The learned counsel here read the section in question, and Lord Denman asked whether the proceedings were altogether under the 22d and 32d sections. The Attorney-General (who, with the Solicitor General, Mr. Clarkson, Mr. Pollock, and Mr. Forsyth, appeared in support of the committal) answered in the affirmative. Lord Denman: Then, is it not a fatal objection that it is nowhere stated that Capt. Douglas is a soldier, and ought to be with his corps? It seems to me that these allegations ought to have been made in order to give the magistrate jurisdiction. The Attorney General answered that the return had been framed with those materials which had been placed before the advisers of the East India Company, and if the defect existed in those materials themselves, the court must decide how far it would affect the return itself. Lord Denman: It certainly appears to me that it is necessary in this case that these two facts should distinctly appear on the return. The Attorney-General admitted that if that was the opinion of the Court, the return, which of course was founded on the warrant, could not be supported. Lord Denman: I put that question to you expecting that you would answer it in the way you have done. The Attorney-General felt that he could not do otherwise. Till this moment, when the objection was pointed out in argument, it was not known that it existed, and of course the return, being founded on the warrant, could only be made in such a way as the facts of the case justified. Capt. Douglas was then ordered to be discharged.—Immediately after this, and as he was quitting the precincts of the court, he was arrested on process issuing out of the office of the Sheriff of Middlesex. That process was upon a claim for 12,800*l.* in virtue of an information filed against Capt. Douglas by her Majesty's Attorney-General. Mr. Kelly immediately brought the fact before the court, and read the writ. It appeared to be a *capias*, issued under the provisions of the 33d George III., c. 52, sec. 141, relating to the government of the British possessions in India, and at its foot was the usual order to the officer directed to execute to beware of violating the privileges of ambassadors, &c. Mr. Kelly contended that the arrest was a civil proceeding, and, therefore, illegal after the recent acquittal. He argued that it was a contempt of court, and that no arrest could take place until defendant had reached his home. On these grounds he applied for his discharge. Mr. Chambers followed on the same side, and adduced cases in support of his argument. The Attorney and Solicitor Generals at some length replied to this argument, and contended that the offence for which Capt. Douglas was arrested was a statutable offence of a criminal nature, and that the arrest had actually taken place, after he had left the hall in which the court holds its sittings. Now, no one could doubt that an offence designated in a statute as a misdemeanour at law, and declared by that statute to be punishable as a misdemeanour, and to subject the party guilty of it not only to fine and imprisonment, but to forfeiture of goods, was a criminal offence. It could have no other character assigned it, and if so, then the party charged with such an offence could not set up any privilege of freedom from arrest in any place, or at any time. The arrest here was, therefore, a lawful arrest, and the application to discharge the defendant must be refused. Lord Denman said, when a person who is unlawfully in custody is set at liberty by this court, he is privileged from arrest in civil proceedings. The question here is really, therefore, whether this arrest is in a civil or a criminal proceeding. The distinctions between the two modes of proceeding are infinite. The privilege now sought to be asserted is undoubtedly important, but equally important is it to the public that, to the necessity of enforcing the criminal law, mere privilege should give way. And this principle has long been recognised by the law of England; for when a man has returned home, that home itself, sacred for other purposes, forms no protection against invasion if the individual, whose home it is, is charged with a crime; for the law itself directs the invasion of it, and authorises the arrest of the party, not only if the officer can peaceably get within the house, but by his breaking open the outer door. The question, therefore, I repeat, is whether this is a civil or a criminal process. I think it is perfectly clear that it is a criminal proceeding: and I think that we cannot favour this application, for it is not within the ordinary duty of the court to protect individuals who are properly restrained of their liberty. Much has been said on the nature of this proceeding, but if the writ had been placed in the hands of the sheriff after the defendant had left the court, we should have been bound to say that he had no privilege to protect him from arrest upon criminal process *bonâ fide* issued. I introduce the expression *bonâ fide*, because, in the case referred to by Mr. Chambers, the criminal process of the law was abused, and the party was therefore rightfully discharged from custody. But that is not the case here. That was not an application to discharge a man after he had been liberated on a *habeas corpus* from illegal custody; it was on application to set aside an arrest on civil process, because the party suing out that civil process had, in order to get possession of the person of his debtor, been guilty of collusion with those who had the day before apprehended that debtor on criminal process. Mr. Baron Parke there declared that he should feel disposed to say, that any plaintiff availing himself of the use of criminal process to obtain the custody of the person of his debtor, which he was not entitled to, should not afterwards avail himself of other means to render such a course of conduct advantageous to himself. There is no proof of anything of that kind in the present instance. The case cited, therefore, does not in any respect apply to the present; but if we had found that this custody, which is now clearly of a criminal nature, had been obtained by proceedings set on foot for the purpose of giving the parties the opportunity of afterwards detaining the defendant on another charge, we should not permit them to avail themselves of it. This is a case wholly different from the one I have now supposed. The charge is for a specific offence, and there is no ground whatever for supposing that the advisers of the Crown have acted like the plaintiff who issued one process for the mere purpose of laying hold of the person of his debtor under another. We cannot say that this arrest is unlawful as the case of a violation of privilege, for such privilege never did extend, and never can extend, by any operation of any principle of law, to give a man, under a *bonâ fide* criminal charge, an exemption from liability to arrest upon it. The other judges concurred, and the application was refused. Captain Douglas was then removed in custody.

SPORTING.

TATTERSALL'S, Thursday.—The Derby.—Offers of 8½ to 1 on the field and to take 20 to 1 about Murat, and 22 to 1 about Winesour, but no bet was laid; the attendance being thinner than usual, owing to the country meetings which take place at this time of the year.

MARK LANE, Friday, Nov. 18.—There is but little English Wheat offering, yet purchases might be made at a decline of 1*s.* to 2*s.* since Monday. The trade in Foreign is effected by the above, and the sales are confined to needy buyers in retail quantities, the prices being held the same; there is not much inquiry for bonded. Barley is without alteration, and the same may be noted of Peas and Beans, but they are a dull sale. The Oat Trade is exceedingly flat.

GAZETTE OF THE WEEK.

BANKRUPTCIES SUPERSEDED.—J. Raleigh, Manchester, merchant—J. Hardman, Kearsey, Lancashire, shopkeeper—W. Lyon, Jun., Cambridge, chemist and druggist.

BANKRUPTS.—W. Capon, New Bond street, Middlesex, hatter—J. Vanderlyn, Houndsditch, tailor—J. N. Chapman, Upper Holloway, licensed victualler—J. Cranbrook, Deal, draper—T. J. Lancaster, Barge-yard, Bucklersbury, merchant—D. Smith, Bucklersbury, merchant—J. Ashworth, Rochdale, Lancashire, worsted manufacturer—T. Brennand, Blackburn, linen-draper—G. Soutter, Birmingham, japanner—J. Hepworth, New Malton, Yorkshire, woollen draper—J. Grant, Bristol, baker—J. Suffolk, Birmingham, [illegible] cutter—W. Collings, Devonport, baker—T. Frith, Stafford, shoe manufacturer—J. Linden, Plymouth, merchant—W. Street, Bickingshall Superior, Suffolk, grocer—T. Fisher, Randolph street, Camden Town, victualler—J. Jay, London Wall, builder—G. Savage, Winchester, dealer in glass and china—J. Green, Bucklersbury, coffeehouse-keeper—J. Aplin, Bicester, scrivener—S. Waters, Edenbridge, Kent, draper—B. Lawrence, Crown Court, Old Broad street, merchant—R. Linden, Marlborough, Devonshire, corn factor—C. Lovey, Berkhampstead St. Peter, Hertford, plumber—T. Bignell, Chatham, Kent, linen draper—R. Pinkerton, Mark-lane, London, merchant—G. Deane, Upper Tooting, Surrey, stablekeeper—W. Mason, Boston, Yorkshire, corn dealer—W. Bull and F. Turner, Birmingham, printers—S. Butler, W. Butler, and J. Butler, Birmingham, ironfounders—T. Bell, Newcastle-upon Tyne, grocer—G. B. Brown, Liverpool, commission merchant—W. Bayley, Hastings, Sussex, grocer.

SCOTCH SEQUESTRATIONS.—G. B. Brown and J. S. Chalmers, Leith, watchmakers—W. Watt and J. M'Dowall, Glasgow, wrights—G. Bishop, Dundee, merchant—D. Keay, Lochee, grocer—W. Kissock, Edinburgh, writer—J. Anderson and W. Harvey, Paisley, thread manufacturers.

BIRTHS.—On the 14th inst., in Grosvenor-square, the Countess of Galloway, of a daughter—On the 15th inst., at Dover, the lady of E. Rice, Esq., M.P., of a daughter, still-born—On the 13th inst., at 8, Willow-walk, Kentish Town, the lady of Assistant and Commissary-General Dinwiddie, of a daughter—At Cheltenham, on the 15th inst., the lady of John Parkinson, Esq., of Kinnersley Castle, Herefordshire, of a daughter—On the 15th inst., at 3, Upper Montagu-street, Montagu-square, the lady of H. J. Robinson, Esq., of a daughter.

MARRIED.—At Croydon, on the 10th instant, by the Rev. Henry Lindsay, George Drummond of Croydon, Esq., to Sarah, second daughter of William Sanders Robinson, Esq., of Fairfield House, Croydon—On the 12th inst., at St. John's, Hampstead, by the Rev. John Ayre, William Shaw, Esq., surgeon, Hampstead, to Mary, youngest daughter of the late C. R. H. Bunny, Esq., of Swallowfield, Berks—On the 15th inst., at Holy Trinity Church, Brompton, by the Rev. W. Curling, M.A., Charles Rhind, Esq., of Belfast, to Sophia Harriet, youngest daughter of William Ord, Esq., London.

DIED.—At Chelsea, on the 15th inst., in his [illegible]th year, Sir George Walker, Lieutenant-Governor of the Royal Hospital—On the [illegible] inst., at Charles Place, Hoxton, aged 63, C. E. Walker, Esq., a cashier in the Bank of England—On the 13th inst., after a few days' illness, John Browne, Esq., surgeon, Camberwell, in the 42d year of his age—On the [illegible] inst., at No. 214, High Holborn, in the [illegible] year of his age, Mr. Benton—At Kew, on the 12th inst., Mrs. Selnell, aged [illegible]—On the [illegible] inst., at Manor Place, South Lambeth, William Osborne, Esq., aged [illegible]—On the [illegible] instant, Mr. James Alexander Osborne, of Manor-row, Wandsworth—On the [illegible] inst., at Carshalton, in his [illegible] year, the Rev. E. T. Beynon, of that place, and [illegible], Chelsham, Surrey—On the [illegible] inst., at the Vicarage, Toddington, in his [illegible] year, the Rev. John Eddy, M.A., vicar of Toddington and of Didbrook, Gloucestershire, and rector of [illegible], Wilts.—On the 8th inst., aged 76, at Coltishall Hall, in the county of Norfolk, the Rev. James Ward, D.D., formerly Fellow of Queen's College, Cambridge, and senior Chaplain at the Presidency, Bengal.

N. GAINES begs to inform the Nobility, Gentry, and Trade in general, that his LIST of first-rate Pelargoniums, Pansies, Calceolarias, Fuchsias, Verbenas, Chrysanthemums, Cinerarias, Auriculas, &c., may be obtained by application at the Nursery.

SPOTTED DIGITALIS.—Seed of this Splendid Flower, which received a Medal at the June Meeting of the Horticultural Society at Chiswick, can be obtained in small packets at 5*s*. each —also some fine Pansy-Seed, at 2*s*. 6*d*. do.—Surrey-lane, Battersea, 20th Oct., 1842.

SHIRLEY VINEYARD, NEAR SOUTHAMPTON,—NURSERY DEPARTMENT.

CLEMENT HOARE respectfully announces that he has now on sale an extensive collection of Grape Vine Plants of superior growth, and of the most approved sorts in general cultivation, varying in price from 2*s*. 6*d*. to 7*s*. 6*d*. each.

Lately Published,

A PRACTICAL TREATISE ON THE CULTIVATION OF THE GRAPE VINE ON OPEN WALLS. By CLEMENT HOARE. 3d edition. 8vo, 7*s*. 6*d*. boards. Longman & Co., London. Sold by all Booksellers, and at the Vineyard at Shirley.

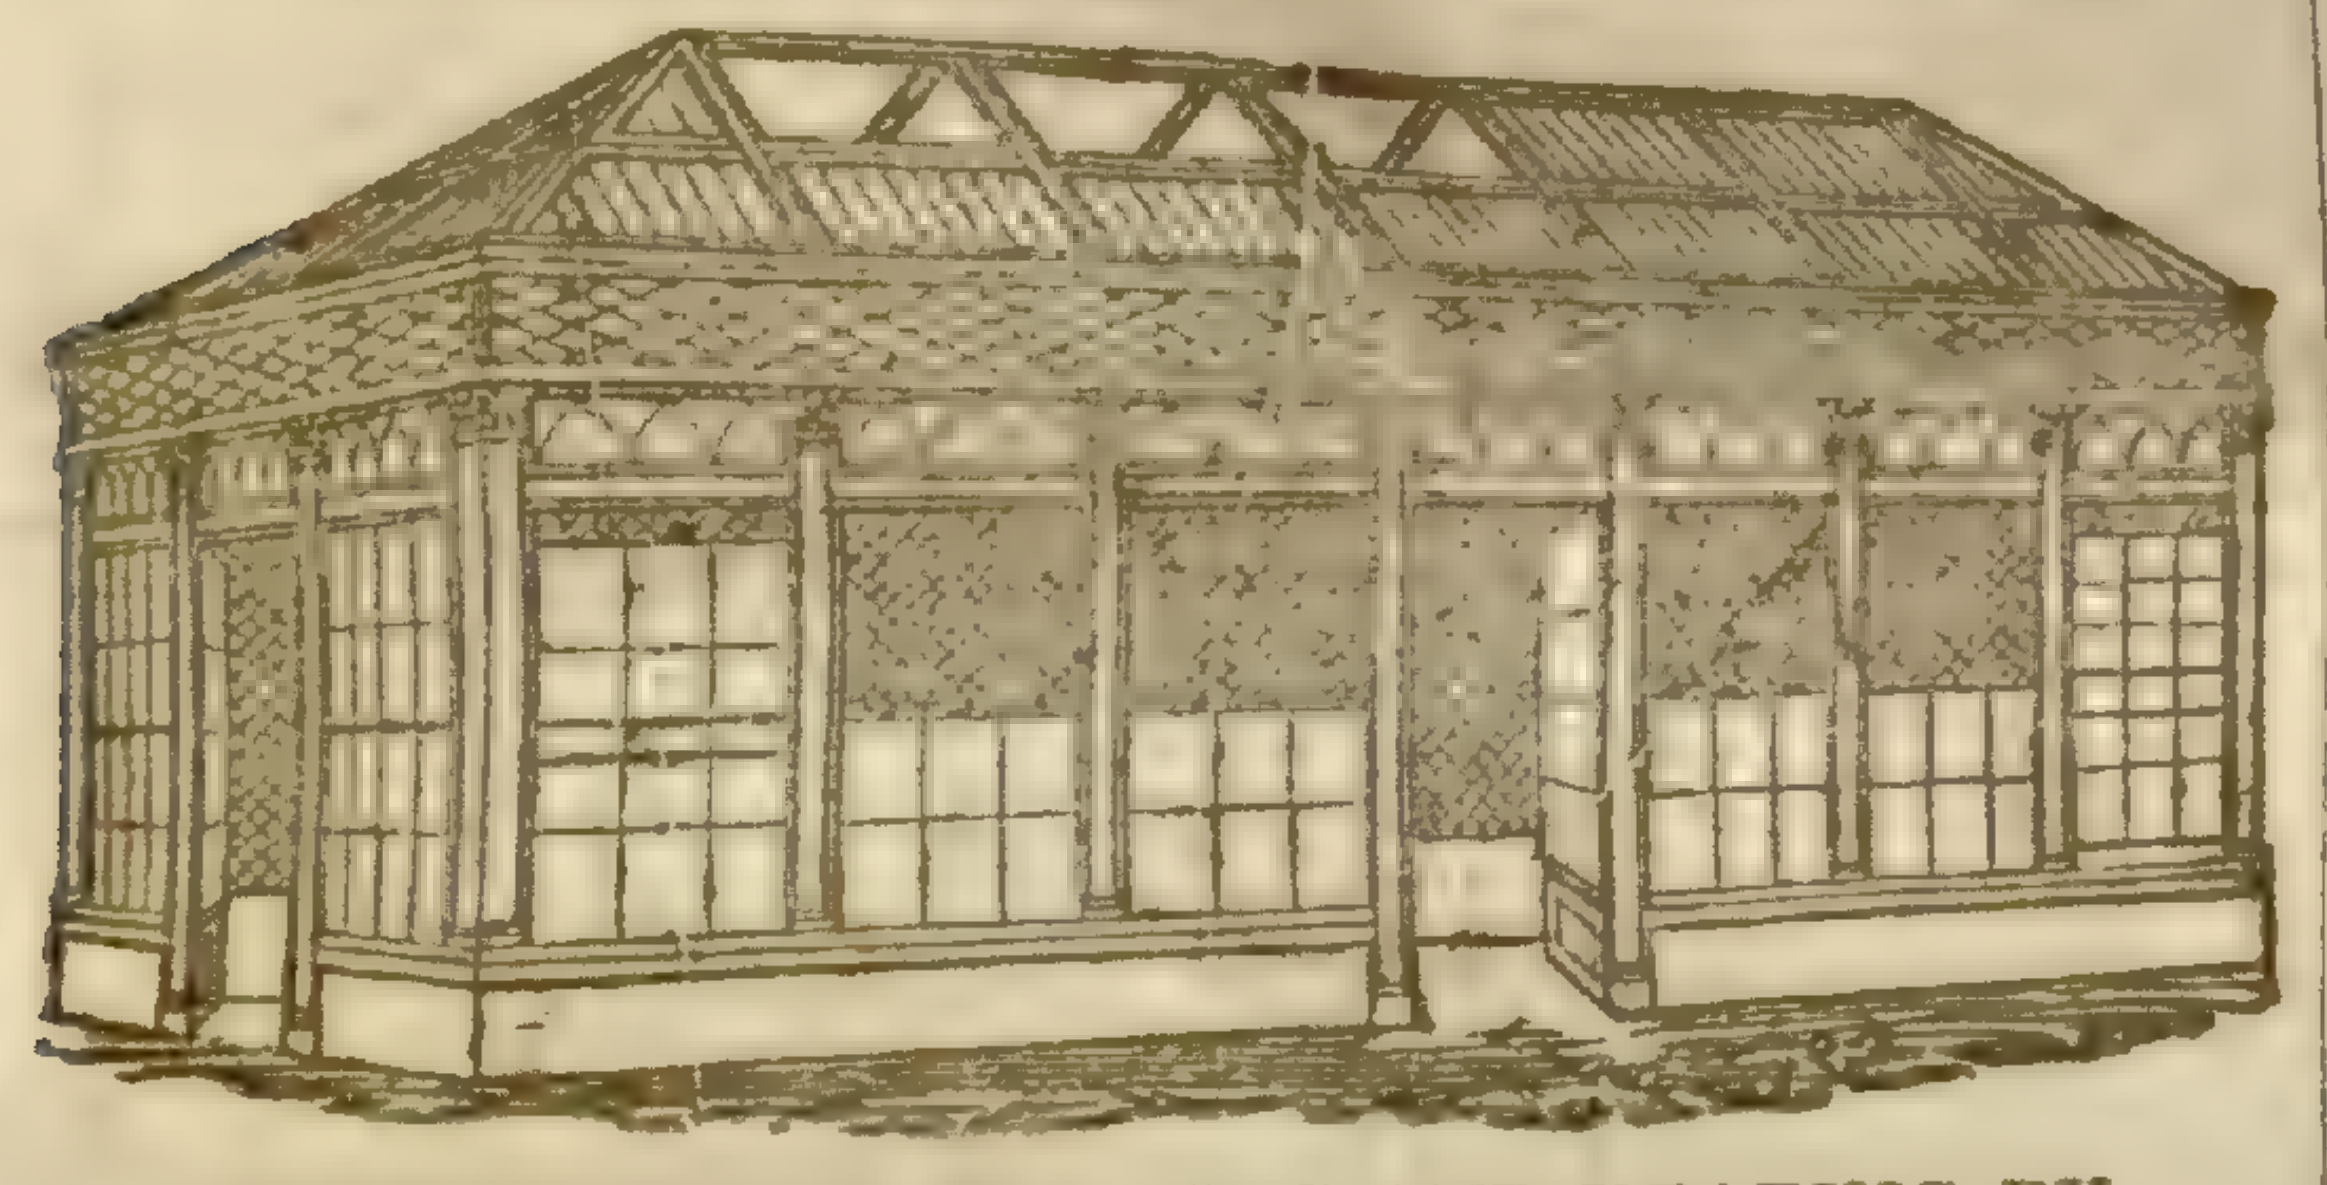
HARDIE'S NEW CANTALOUPE MELON, warranted the earliest and most prolific variety known, producing three crops in one season. The fruit is of good size and excellent flavour. It has obtained several prizes, and is matched against any Melon of its class in cultivation. To be had in sealed packets, at 2*s*. 6*d*. each, postage prepaid, exclusively of James Carter, Seedsman and Florist, 238, High Holborn, London.

⁂ Seed of the "Rambler" Cucumber, from the finest fruit, at 1*s*. 6*d*. and 2*s*. 6*d*. per packet.

J. COOK begs leave to inform his Friends and Dahlia Growers, generally, that he intends letting out his Superb Seedling Dahlia CONFIDENCE in ground roots at 3*l*. 3*s*. each;—colour, orange pink, a decided improvement upon Pamplin's Bloomsbury; great depth of petals, and beautifully cupped; from 3 to 4 ft. high. J. C. regrets he could not exhibit it in September, in consequence of the thrips during the latter end of July and through August. One plant produced from 6 to 8 first-rate Blooms. It was shown at the Surrey in July last, and by Mr. Southby, 1841, Oxford Show, by name "Jack of Newbury." See *Gardeners' Gazette*, Oct. 9th. A remittance from unknown correspondents.—Address, Ladbroke Grove, Notting Hill, London.

FOR TEN POUNDS.—A Bed of TULIPS, 60 Rows (420 Bulbs), the property of an Amateur declining their cultivation, comprising most of the esteemed varieties, —among which are Louis XVI., Violet Alexander, Transparente Noire, Rubens, Perle d'Angleterre, Claudiana, Cerise à Belle Forme, Ponceau très Blanc, La Tendresse, Amadis, Walworth, Thalestris, Andromache, Charbonnier, Polyphemus, Rising Sun, &c., &c. Address Y.Z., 4, Prospect Cottage, Thornhill Road, Islington.

TO GARDENERS AND OTHERS.—By MR. JOHN KING, on MONDAY, 21st Nov. at 11 precisely, on the Premises, Cambridge Row, Cambridge Heath, Hackney Road:—Two Greenhouses (nearly new), 1000 Greenhouse Plants, Fruit and Forest-trees, Evergreens, 20 Boxes and Lights, Hand Glasses, Spring Cart, Ware, Tubs, &c. May be viewed, and Catalogues had on the Premises; of Mr. Lake, Seedsman, Bishopsgate-street; and of the Auctioneer, Hackney Road.



HORTICULTURAL BUILDING AND HEATING BY HOT WATER.

J. WEEKS and Co., ARCHITECTS, &c., GLOUCESTER-PLACE, KING'S-ROAD, CHELSEA, Hothouse Builders and Hot-water Apparatus Manufacturers, beg leave to inform the Nobility and Gentry that their business, which has been extensive throughout the country for many years, is entirely confined to the BUILDING OF HORTICULTURAL ERECTIONS of every description, and the HEATING of them by HOT WATER.

CONICAL and other BOILERS of all sizes; their largest consumes but a small quantity of fuel, only requiring attention once in 10 hours, and will heat a range of Forcing Houses 300 ft. in length.

Their improved plan of BOTTOM HEAT FOR PITS, by means of an open trough under the bed, is now being universally adopted.

References may be had, and their works seen at most of the Nobility and Gentlemen's Seats in the country, nearly the whole of the London Nurseries, and a great variety of Horticultural Erections and Hot-water Apparatus, Models, Plans, Estimates, &c., at their Horticultural Manufactory, Gloucester-place, Chelsea, near Sloane-square.

HOT-WATER APPARATUS FOR HEATING HORTICULTURAL BUILDINGS, DWELLING-HOUSES, CHURCHES, and MANUFACTORIES, upon improved principles, and at very moderate charges, erected by DANIEL and EDWARD BAILEY, 272, HOLBORN.

D. and E. BAILEY having devoted much time to the consideration of this subject, and had much experience in the erection of apparatus for the above-mentioned purposes, have, by improvements suggested in their practice, rendered their mode of heating not only very efficient, but very simple, and have combined durability in the apparatus with economy in the charge. They have erected apparatus in England, Scotland, and Ireland, for many noblemen and gentlemen, and have had the honour to be employed by the Horticultural Society of London, in executing the works of their splendid Conservatory, lately erected at Chiswick.

D. and E. BAILEY also construct in metal all descriptions of Horticultural Buildings and Sashes, and invite noblemen, gentlemen, and the public to an inspection of their various drawings and models, at 272, Holborn, where they have the opportunity of exhibiting, amongst other metal works, an extremely complete and convenient kitchen apparatus, or range, adapted for the continued supply of hot water, and an arrangement of the oven more complete than has hitherto been brought before the public.

D. and E. BAILEY were the first to introduce metallic curvilinear houses to horticulturists, and can refer to the Conservatory attached to the Pantheon as one of their works, besides many others in this country and on the Continent.

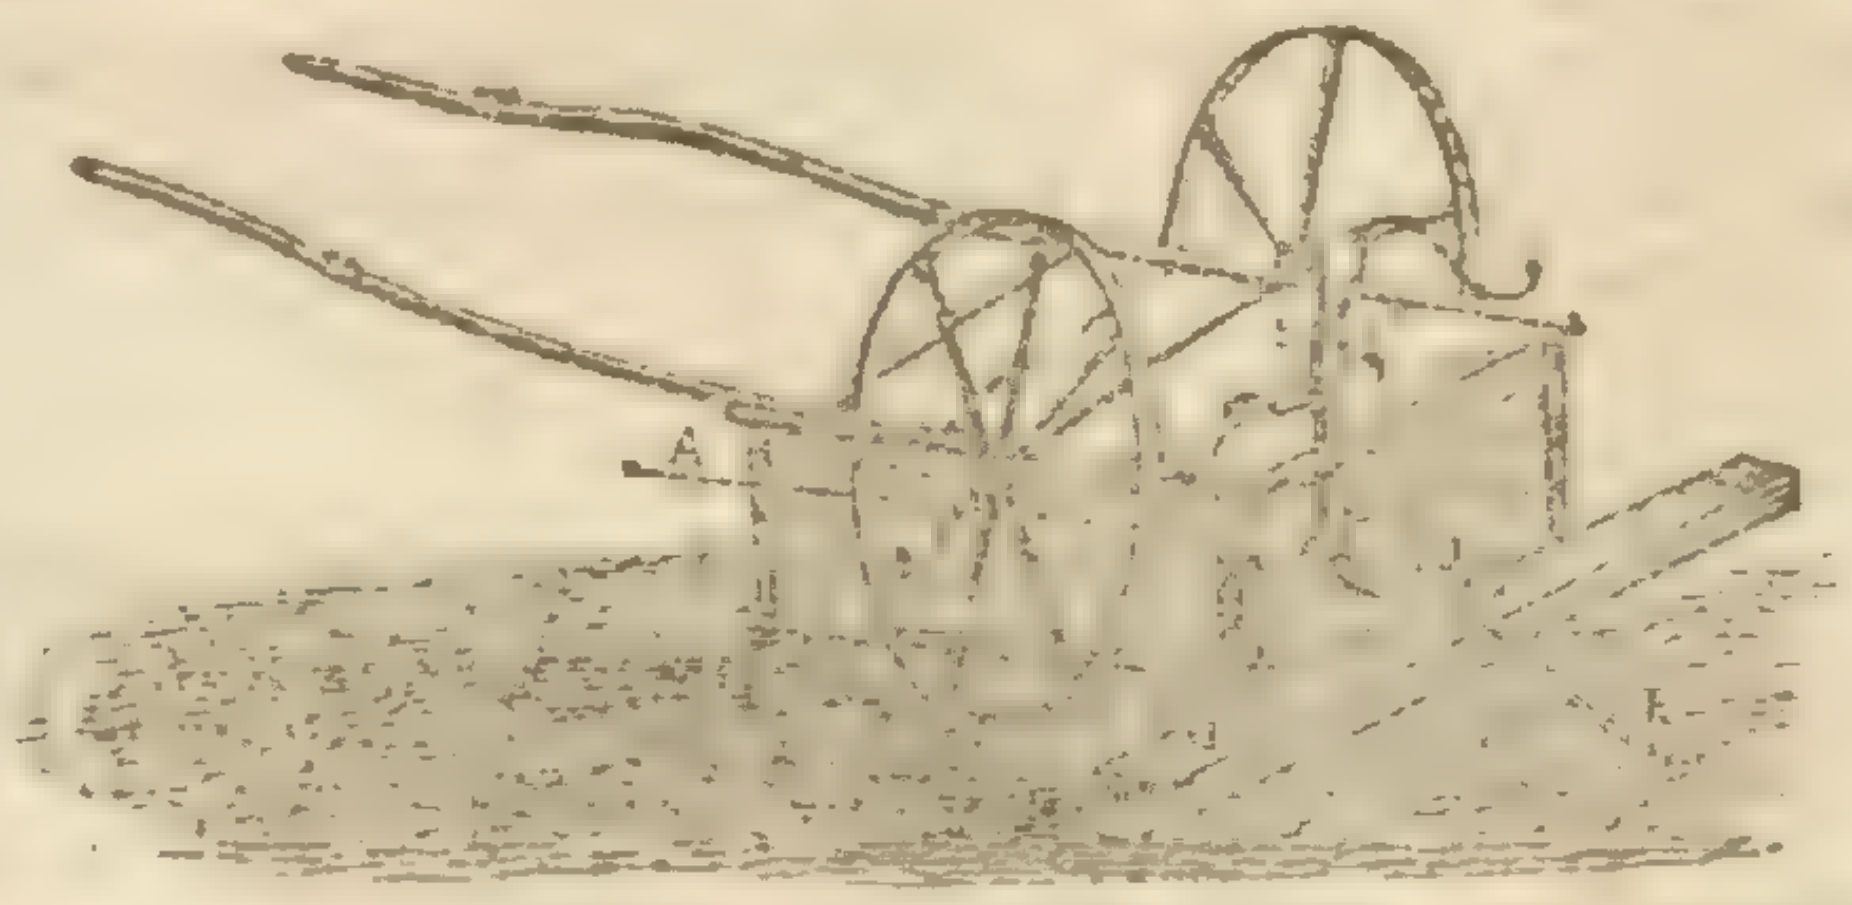
D. and E. BAILEY have prepared a quantity of the Galvanic Plant Protectors, which are now ready for immediate delivery; they beg to introduce to public notice a new Trough Pipe, for Orchidaceous or other Houses where vapour is constantly, or at intervals, required, and which may be seen at their Manufactory.

HOT-WATER APPARATUS, for Horticultural and other Buildings.—STEPHENSON and Co., Agents for the Old Park Iron-works, and Manufacturers, 61, Gracechurch-street, London, solicit an inspection of their improved Conical Boiler. (See Editor's description, *Gardeners' Chronicle*, March 12, p. 175.) To Amateurs these Boilers will be found invaluable. They are complete without furnaces or setting in brickwork, movable at pleasure, very ornamental in appearance, and require attention only once in 14 or 15 hours, price 5*l*. 5*s*. and upwards. Further particulars, with plans and estimates for heating any description of building may be obtained as above; where also may be seen the improved Wrought-iron Boiler, as applied with Chanter's Smoke-consuming Furnaces at Chatsworth, and many other of the Nobility's Seats. Iron Fencing, Hurdles, Bedsteads, Ornamental Wire-work, Garden Implements, &c. &c. The trade supplied with Hot-water Socket-pipes.

N.B.—WAYTE'S New Patent Land-presses and Drills.

AGRICULTURAL MACHINE WORKS, BEVERLEY, YORKS.

CROSSKILL'S LIQUID MANURE CART, which received the Honorary Reward of the Royal Agricultural Society.



The Body of the Cart is made of Cast-Iron, and holds about 200 gallons. A, The Brass Valve Lever. Without stopping the horse, the man pulls the Iron Lever, A, to let out the liquid upon the Spread-Board, C. B, Patent Iron Pump, which cannot possibly choke or get out of order. E, The Flexible Leather Pipe, 7 ft. long, with 3 ft. copper pipe at the end.—Price delivered in Hull, 25*l*.

CROSSKILL'S PORTABLE MANURE DRILL, for drilling any quantity of soot, lime, salt, &c.—will contain 8 bushels of manure—price 12*l*. 12*s*.

TO FARMERS, GARDENERS, AND OTHERS.—SULPHATE of LIME, now in use by the Horticultural Society, being a cheap substitute for Gypsum, may be had in large or small quantities, at Samuel Carter's, 65, Blackman-street, Borough of Southwark.

GUANO ON SALE.—Any quantity of this valuable Manure can be had from the Bonded Stores of the Importer, either in London or Liverpool, on application to Cotesworth, Powell, and Pryor, St. Helen's-place, London; Edwards, Danson, and Co., Liverpool. William Joseph Myers and Co., Importers, Liverpool.

Just published, price Threepence, with Engravings,

THE GARDENER AND PRACTICAL FLORIST.

This week's Number contains:—Floricultural Society of London—Coverings for Pits and Frames—Gardeners' Wages—Ayres on the Cucumber—Hotbeds—Improvement of Frontages—Progress of Floriculture—Notes on Plants and Flowers—Rhododendron—Properties of the Pink—Directions for December—Vegetables—Flower Garden, &c. &c.

London: R. Groombridge, 5, Paternoster Row, and sold by all Booksellers and Newsmen.

Published this day, fcap. 8vo., 5*s*. 6*d*. cloth,

A COMPREHENSIVE VIEW of the CULTURE of the VINE, under Glass, from the Embryo Bud to the permanent Bearing of the Plant. By JAMES ROBERTS.

[Dr. Lindley's opinion on specimens of five varieties of Grapes from young Vines two years planted, exhibited at the Royal Hort. Society's Rooms, Regent-street, London, Sept. 7th, 1841]:

"For size and weight of bunches we should think they have never been surpassed." [The large silver medal was awarded them.]

"As a plain and practical treatise on the subject it is the best we have ever met with."—*Wakefield Journal.*

London: Longman, Brown, Green, and Longmans.

A HISTORY OF BRITISH FOREST-TREES, indigenous and introduced. By PRIDEAUX JOHN SELBY, of Twizell, Esq. This volume gives an account of the useful and ornamental properties, best modes of culture, of the various Forest-trees now grown in Great Britain. It forms a manual for the planter, and an interesting and informing volume for the general reader. Each species is historically described and figured. The Engravings, amounting to nearly 200, represent the perfect tree, and details of the flowers, leaves, and fruit. Demy 8vo, 28*s*.; royal 8vo, 2*l*. 16*s*.

John Van Voorst, 1, Paternoster-row.

EMIGRATION TO NEW ZEALAND.

Just completed, in large folio, price 5*s*. coloured,

A PLAN OF THE TOWN OF NELSON, beautifully engraved on copper, from the original survey by F. TUCKETT, Surveyor to the New Zealand Company; showing the numbers and orders of choice of the Allotments.

Just published, in imperial folio, price 4*s*. coloured,

A PLAN of the TOWN OF NEW PLYMOUTH, drawn on stone from the original Survey by FREDERICK A. CARRINGTON, Surveyor to the New Zealand Company.

In demy octavo, price 1*s*. 6*d*. sewed,

An INDEX REFERENCE to the above PLAN, being a KEY to the Numbers of the Allotments.

The Plan and Index Reference together, price 5*s*.

In demy octavo, price 1*s*.,

LATEST INFORMATION from the SETTLEMENT of NEW PLYMOUTH, comprising Letters from Settlers there, with an Account of its general Products and its Agricultural and Commercial Capabilities, &c.

In post octavo, price 2*s*. 6*d*. cloth,

NARRATIVE of a RESIDENCE in various PARTS of NEW ZEALAND, giving a complete Account of that highly interesting country. By CHARLES HEAPHY, Esq.

The Fifth Edition, demy octavo, with Map and Plates, price 3*s*., cloth,

An ACCOUNT of the SETTLEMENTS of the NEW ZEALAND COMPANY, from Personal Observations during a Residence there. By the Hon. HENRY WILLIAM PETRE.

"These excellent works contain recent and most valuable information respecting New Zealand; and the honourable and talented authors have given satisfactory proof of their sincerity, by having returned to New Zealand as their now adopted country and permanent home."—*London Review.*

Published by SMITH, ELDER, and Co., Cornhill, London; where all the works connected with New Zealand may be procured, a complete list of which will be sent (free), on application, to any part of the kingdom.

Now published, price 10*s*.,

A SECOND Edition of MILL'S TREATISE ON THE CULTURE OF CUCUMBERS, MELONS, SEA-KALE, and ASPARAGUS, with a descriptive Plate of his Pit, and also daily Notes of Practice from December to February inclusive.

Published by WM. SMITH, 113, Fleet-street, and sold by all Booksellers.

COUNTRY GENTLEMEN are respectfully informed that the PROVINCIAL PAPERS from every County, also Irish and Scotch, are regularly filed at DEACON'S COFFEE and CHOP-HOUSE, 3, WALBROOK, near the Mansion House. Also, a variety of Foreign Journals and the best Periodicals. Coffee, Chops, Steaks, Ales, and Stout, in perfection. Good Beds. Established 1812.

☞ Advertisements received for every London and Country Paper. An Index kept to Advertisements for Heirs and Next of Kin.—Advertisement Office, First floor.

TO NOBLEMEN, GENTLEMEN, NURSERYMEN, and OTHERS.—SEVEN ACRES of NURSERY-STOCK, Greenhouse Plants, Household Furniture, Mare and Colt, Cow, Gig, Cart, Harness, Pits, Frames, Hand-glasses, Garden Pots, Sundry Utensils, &c.—To be SOLD BY AUCTION, by Messrs. PROTHEROE and MORRIS, on the Premises, Ingatestone, Essex, on Monday, Nov. 21st, 1842, and following days, at 11 o'clock, by order of the Trustees of the Estate of Mr. ALEXANDER HOGG, the whole of the Valuable Nursery-Stock, consisting of Fruit and Forest Trees, Evergreens, American Plants, Deciduous and Ornamental Shrubs of every variety, 200 feet of Hot-water Pipe, Boiler, &c. Catalogues, 6*d*. each (returnable to purchasers), may be had on the Premises; at the Black Boy, Chelmsford; Spread Eagle, Ingatestone; White Hart, Brentwood; White Hart, Romford; of the principal Seedsmen in London; and of the Auctioneers, American Nursery, Leytonstone.

TO NURSERYMEN AND OTHERS.—To be Let, on very advantageous terms, in a very excellent situation, about six miles from London, eight acres, part in Nursery, Flowers, Fruit, and Vegetables, at a low rent, held on lease for 22 years unexpired. Dwelling-house, Greenhouses, Pits, Frames, &c. &c. The stock of Plants, &c. to be taken by valuation, in the usual way. For particulars apply to Mr. John King, Auctioneer, Hackney-road.

BANKS OF THE THAMES.—Wanted to rent or purchase, between Staines and Wallingford, a Gentleman's Residence, suitable for a small family, with Pleasure and Walled Kitchen Gardens, good Stabling and Offices, and if with from 20 to 50 acres of Land, the more desirable. Particulars to be sent to R. D. K., care of Mr. Corfield, Land Agent, 31, Francis-street, Tottenham-court Road.

TROPICAL ORCHIDACEÆ.—TO BE SOLD, in one Lot, cheap, a Small Collection (65 sorts) of free flowering Tropical Orchidaceous Plants, including some good specimens. This lot is worthy the attention of any one commencing the cultivation of these plants. For list and particulars apply to EDWARD SANG and SONS.—Kirkaldy, Nov. 15, 1842.

LEASE to be SOLD, with a House and Four Rooms; and a PINE PIT, 52 feet long by 12 wide; and one ditto 50 feet long by 10 feet wide; and 600 Pine Plants in sorts; one acre of good Garden Ground; the rent at 10*l*. per year. Apply by application to Mr. Stone, gardener, Deptford.

WANTED TO PURCHASE, immediately, 100 feet of Second-hand 4-inch Cast-iron Socket-jointed PIPE.—Direct (free) to J. W. H., 20, Compton-street, Brunswick-square.

WHITE HART HOTEL AND HORTICULTURAL GROUNDS, BROMLEY, KENT.

W. PAWLEY begs most respectfully to call the attention of the Nobility and Gentry wishing to purchase specimens of Stove and Greenhouse Plants for exhibition to his Collection, which is equal and not to be surpassed by any Nurseryman's in the neighbourhood of London. Catalogues of the Stock will be sent Gratis on application. W. P. also begs to state that the above Hotel has an advantage over many, as the apartments open into the grounds, with additional conservatories attached, rendering it in every respect desirable for Families and parties wishing for a retreat at a convenient distance from the Metropolis, where they may ensure every accommodation and comfort upon moderate terms. Bromley is particularly healthy, and beautifully situated in an excellent neighbourhood ten miles from town.

RABBIT NETS, SHEEP NETS, & TARPAULINS. Long Hare and Rabbit Nets, 50, 80, and 100 yards, proper for the purpose. Sheep-folding Net 1½*d*. per yard, 3½ feet high, made of strong tarred cord, much approved. Superior Tarpaulins 2*s*. per square yard, made up and perfectly waterproof for covering Greenhouses, Frames, &c. Nets for Frames, against Cats, Dogs, Rabbits, &c., 2*d*. per yard. ROB. RICHARDSON, Net Maker, 21, Tonbridge Place, New Road, near Euston Square, London.

Upwards of 1000 Second-hand Policemen's Tarpaulin Capes, lined with cloth, and in a good state, being redressed, 1*s*. 9*d*., 2*s*., and 2*s*. 6*d*., for Gardeners' Labourers, Farm Servants, &c. Also large Tarpaulin Capes for Gamekeepers.

KEENE'S PATENT CEMENT.

THIS CEMENT is harder than any other known, and is especially fitted for the Walls of Hothouses, Conservatories, &c., as it neither cracks nor vegetates, and is perfectly impenetrable by insects.

The entire range of Hothouses erecting by the Government at Frogmore are about being stuccoed with it, and the price ranges nearly equally with the Cements in ordinary use for floors, and it forms a paving harder and cheaper than Portland Stone.

Patentees and Manufacturers, J. B. WHITE and SONS, Millbank, Westminster.

ROWLAND'S MACASSAR* OIL, a VEGETABLE PRODUCTION. The only article that produces and restores HAIR; also WHISKERS, MUSTACHIOS, and EYE-BROWS; prevents Hair from falling off or turning grey to the latest period of life; changes grey Hair to its original colour—frees it from scurf, and makes it beautifully SOFT, CURLY, and GLOSSY. In dressing HAIR, it keeps it firm in the Curl, uninjured by damp weather, crowded rooms, the dance, or in the exercise of riding. To Children it is invaluable, as it lays a foundation for a BEAUTIFUL HEAD OF HAIR.

CAUTION.—Ask for "ROWLAND'S MACASSAR OIL," and observe their NAME and ADDRESS, in Red, on the Wrapper, thus:

A. ROWLAND & SON, 20, HATTON GARDEN,
Counter-signed ALEX. ROWLAND.

The lowest price is 3*s*. 6*d*.—the next 7*s*.—10*s*. 6*d*. and 21*s*. per bottle.

⁂ On the back of the Wrapper, are the words "ROWLAND'S MACASSAR OIL" engraven nearly 1,500 times, containing 29,028 letters, without which none are genuine.

(Impostors call their trash the "GENUINE," and omit the "&" in the Signature, offering it for sale under the lure of being cheap.)

ROWLAND'S MACASSAR OIL is sold by the Proprietors, as above, and by respectable Perfumers and Medicine Venders.

Printed by Messrs. BRADBURY and EVANS, Lombard-street, Fleet-street, in the Precinct of Whitefriars, in the City of London, and Published by them at the OFFICE, 3, CHARLES-STREET, COVENT GARDEN, in the County of Middlesex, where all Advertisements and Communications are to be addressed to the Editor.—Saturday, November 19, 1842.

THE GARDENERS' CHRONICLE.

A STAMPED NEWSPAPER OF RURAL ECONOMY AND GENERAL NEWS.

THE HORTICULTURAL PART EDITED BY PROFESSOR LINDLEY.

Woodlice, to kill . . . 777 a

HORTICULTURAL SOCIETY OF LONDON.

EXHIBITIONS AT THE GARDEN for the year 1843. The Exhibitions will take place on the following days: viz., Saturday, May 13; Saturday, June 17; Wednesday, July 12.

EXHIBITORS.

All persons, whether Fellows of the Society or not, will be at liberty to send subjects for exhibition.

DELIVERY OF OBJECTS FOR EXHIBITION.

Exhibitors are earnestly requested to notify in writing, previously to the day of meeting, what plants they intend to supply, in order that due provision may be made for the proper distribution of the specimens on the exhibition tables. The best places will be secured for those who comply with this request.

As it is necessary that the Judges should proceed to consider the **respective merits of the exhibitions by 10 A.M., and as it is absolutely** indispensable that the tables should be arranged by that time, it has been determined that *no subject for exhibition shall be admitted into the garden after half-past eight o'clock in the morning*; and if the owners of any locked-up boxes, or other cases, should not be in the exhibition-tent at the said hour, such cases or boxes must be excluded from competition for medals.

All specimens whether of fruit or flowers, will remain untouched until after six o'clock, when they will be delivered into the hands of the exhibitors, who are most particularly requested not to give away their cut flowers in the tents, as much confusion has been found to arise from that practice.

ADMISSION OF EXHIBITORS.

Exhibitors or other persons required to assist in bringing in the objects for exhibition, will be admitted before half-past eight in the morning at the Carter's Yard Entrance Gate.

Every principal exhibitor of subjects for which medals are *specifically* offered may be furnished with one pass-ticket, which is not transferable, for which he is requested to apply before ten o'clock, AT WHICH HOUR THE GARDEN WILL BE CLEARED OF ALL PERSONS not officially detained there.

Exhibitors may re-enter the Garden after one o'clock, when they will be required to give up their pass-tickets at the Carter's Yard Gate.

FLOWER-STANDS.

Exhibitors of cut flowers must SUPPLY THEIR OWN BOXES OR STANDS. No box or stand shall exceed eight inches in height at the back, or eighteen inches in depth from front to back. The lids of all boxes must be either loose or made to unhinge.

MEDALS AND REWARDS.

The Society distributes the following Medals and Rewards; namely,

			£	s.	d.
C.	The Certificate	value	0	10	0
SB.	Silver Banksian Medal		1	0	0
SK.	Silver Knightian ditto		1	5	0
LS.	Large Silver ditto		1	15	0
SG.	Large Silver Gilt ditto		4	0	0
GB.	Gold Banksian ditto		7	0	0
GK.	Gold Knightian ditto		10	0	0
LG.	Large Gold ditto		20	0	0

Exhibitors to whom any of these shall be awarded can exchange them one for another, or may receive their value in money, or in plate. *If within one month after the third Exhibition of the year* no intimation shall have been received from an Exhibitor of the manner in which he desires his Medals to be disposed of, all the Medals due to him will be prepared and *transmitted to him through the usual public conveyances, without further notice.* In case an Exhibitor shall receive a First Prize in any one Letter, he shall not be entitled to receive any other Medal in the same Letter; except in Z, AA, and BB.

SUBJECTS OF EXHIBITION.

These will be divided into Classes, as explained further on.

No articles not of horticultural produce will be allowed to be placed upon the tables.

Exhibitors will do well to make themselves acquainted with the arrangements described in the following list, as they will IN ALL CASES BE REQUIRED TO SIGN A PRINTED FORM OF DECLARATION TO BE FURNISHED TO THEM IN THE GARDEN stating under what letter their plants are to be shown; and they are particularly requested to take notice, that if errors in the awards of the Judges should occur, in consequence of mistakes on the part of Exhibitors in filling up such declarations, the Society cannot undertake to rectify the errors afterwards.

Names fairly written are to be attached by Exhibitors to all Florists' flowers; and the Judges are restrained from awarding any Medal to such Exhibitors, whatever their merit may be, if this regulation is not complied with. By Florists' flowers are meant not only flowers usually so named, but also Fuchsias, Pelargoniums, Roses, and Calceolarias.

CLASS I.—FLOWERS for which nurserymen and private growers exhibit independently of each other.—

A. Pelargoniums, in collections of 12 new and first-rate varieties, cultivated with superior skill, in pots of 24 to a cast, GB, SG, LS, SK.

B. Pelargoniums, in collections of 12 varieties, in pots of 12 to a cast, SG, LS, SK.
  N.B. Persons exhibiting in B cannot also exhibit in C.

C. Pelargoniums, in collections of six varieties, in pots of 8 to a cast, LS, SB.

D. Rhododendrons, in pots; not fewer than 12 plants in 12 varieties. LS, SK, SB.

E. Roses, in pots, in collections of 25 distinct varieties, GB, SG, LS.
  N.B. It is the wish of the Society, in a future season, to require Roses to be shown exclusively in pots; and not to allow cut specimens to be exhibited at all.

F. Moss Roses in loose bunches, as gathered, so as to exhibit, as far as possible, the habit of the variety; in 12 varieties, SK, SB, C.

G. Other Roses, exhibited as in the last letter, and in 50 varieties, LS, SK, SB, C.
  N.B. No one who exhibits in this letter, can also compete in the following.

H. Other Roses, exhibited as in the letter F, and in 25 varieties. SK, SB, C.
  N.B. Higher Medals than those here offered for Roses cannot be given by the Judges. And if Roses are brought for exhibition without attention to the regulations here explained, they will not be allowed to be placed on the tables.

I. Cape Heaths, in collections of 20 distinct varieties. GB, SG, LS.
  N.B. It is expected that the same plant is not exhibited on more than one occasion.

K. Cape Heaths, in collections of 6 distinct varieties. SG, LS, SK.
  N.B. No person who shows in I will be allowed to exhibit also in K.

L. Herbaceous Calceolarias, in sixes; in pots of 12 to the cast. LS, SK, SB.

M. Shrubby Calceolarias, in sixes; in pots of 12 to the cast. LS, SK, SB.

N. Carnations, in pans of 24 blooms. LS SK, SB.

O. Picotees, in pans of 24 blooms. LS, SK, SB.

P. Pinks, in pans of 24 blooms. SK, SB.

CLASS II.—FLOWERS; for which all persons are admitted to equal competition:—

Q. Stove or greenhouse plants, in collections of 40 plants. GK, GB, SG, LS.
  N.B. Heaths, Calceolarias, Fuchsias, to be excluded from Q. R. and S.

R. Stove or Greenhouse plants, in collections of 20 plants. GB, SG, LS.
  N.B. Persons exhibiting in Q not to compete in R also.

S. Stove or Greenhouse plants, in collections of six distinct species. SG, LS, SK.
  N.B. Persons exhibiting in Q or R will not be allowed to compete in S also.

T. Greenhouse Azaleas; to be shown in 12 distinct varieties. GB, SG, LS.

U. Collections of Stove or Greenhouse climbers. GB, SG, SK.
  N.B. The Gold Banksian Medal is not to be awarded for fewer than 12 distinct kinds.

V. Exotic Orchidaceæ, in collections of not fewer than six species. GK, GB, SG, LS.

W. Exotic Orchidaceæ, in single specimens, SG, LS, SK.

X. Tall Cacti in flower, LS, SK.

Y. Fuchsias in collections of 12 distinct varieties. LS, SK.

Z. Single specimens of new or rare ornamental plants, SG, LS, SK, SB, C.
  N.B. These medals will be awarded by the Society's officers, and not by the usual Judges. Exhibitors will particularly observe that none but new or rare plants can be exhibited under this letter.

AA. Miscellaneous subjects, SK, SB, C.
  N.B. Cockscombs, Hydrangeas, and cut flowers are altogether excluded from exhibition.

BB. Seedling Florist's flowers, SK, SB, C.
  N.B. Every seedling must be shown singly, and must be marked with the name it is to bear. The same seedling cannot gain a prize more than once in the season. Pelargoniums are to be shown in pots, and not in a cut state. No person will be allowed to exhibit more than five seedlings at each meeting.

CLASS III.—FRUIT, for which market gardeners, or persons in the habit of regularly supplying the market, and private growers, exhibit independently of each other.

  N.B. All fruit must be *fully* ripe and *well coloured*; if the contrary, it will be disqualified.

1. **Miscellaneous collections of fruit, consisting of at least three different kinds. Peaches and Nectarines being considered as only one kind, GK, GB, LS.**
   N.B.—Cucumbers, Tomatoes, Gourds, and similar Kitchen Garden produce, are excluded from this letter.
2. Grapes. SG, LS, SK, SB.
3. Pine Apples. SG, LS, SK, SB.
4. Peaches or Nectarines, in dishes of six specimens. SK, SB.
5. Miscellaneous fruit. SK, SB. C.

JUDGES.

The Judges have the power of increasing or diminishing the *number* and *value* of the Silver Medals offered by the Society for particular objects, and also of conferring Silver Medals or Certificates in cases not contemplated in these regulations, if they think it necessary to do so.

The Judges are also required to bear in mind that the Society's Medals are offered, less for new and curious objects than for fine specimens of Horticultural Skill, the design of the Council in instituting these meetings, being not so much to encourage the collector, as to reward the skilful Gardener; they are also not to make any award in cases where the objects exhibited do not appear worthy of a Medal; otherwise a bad single exhibition might obtain a prize, merely because there is no better exhibition of the same class to oppose it.

ROYAL AGRICULTURAL SOCIETY OF ENGLAND.—The General Meeting will be held at the Society's House, No. 12, Hanover-square, London, on Saturday, the 10th of December, at 12 o'clock precisely,

The Rooms of the Society will be thrown open for the accommodation of Members on Wednesday the 7th, Thursday the 8th, and Friday the 9th of December, from 6 to 10 o'clock.

Dr. Lyon Playfair will deliver a Lecture to the Members of the Society, at the Society's Rooms, on Wednesday the 7th of December, at 8 o'clock in the Evening, on the subject of "The Application of the Principles of Physiology to the Fattening of Cattle."—By order of the Council,

London, Nov. 9, 1842. JAMES HUDSON, Secretary.

NEW AND SUPERB FUCHSIAS.

MESSRS. YOUELL and Co. beg to offer the following new and highly-beautiful FUCHSIAS, which they will send Post-free to any part of the United Kingdom on the receipt of a Post-office order, at the rate of 21s. per doz.:—Arborea, aurantia, roseo-alba, Bruceana, conspicua arborea, cordata superba, Dalstonia, excelsa, eximia, formosa elegans, grandis, Hopverii, ilicifolia, inflata fulgida, insignis, magnifica, Middletonia, mirabilis, Monypennii, pendula terminalis, princeps, racemiflora, Riccartonia, stylosa conspicua, stylosa elegans, stylosa pulchella, Towardii, tricolor, Usherii, Youellii.

For Particulars of their superb Collection of Carnations, Picotees, and Pinks, Fuchsia St. Clare, and Araucaria imbricata, see their advertisement in the *Gardeners' Chronicle* of the 12th inst.

Great Yarmouth Nursery, Nov. 17, 1842.

SHIRLEY VINEYARD, NEAR SOUTHAMPTON,—NURSERY DEPARTMENT.

CLEMENT HOARE respectfully announces that he has now on sale an extensive collection of Grape Vine Plants of superior growth, and of the most approved sorts in general cultivation, varying in price from 2s. 6d. to 7s. 6d. each.

Lately Published,

A PRACTICAL TREATISE ON THE CULTIVATION OF THE GRAPE VINE ON OPEN WALLS. By CLEMENT HOARE. 3d edition. 8vo, 7s. 6d. boards. Longman & Co., London. Sold by all Booksellers, and at the Vineyard at Shirley.

OAKLEY'S "SURPRISE" AND OTHER DAHLIAS.

SAMUEL GIRLING begs to refer the Trade and his friends generally to his advertisement in the *Gardeners' Chronicle* of the 12th Nov., 1842.

Danecroft Nursery, Stowmarket, Suffolk.

"EMPRESS OF WHITES" DAHLIA.

G. SMITH, FLORIST, HORNSEY ROAD, ISLINGTON, LONDON, begs to call the attention of Dahlia Growers to that splendid DAHLIA, the "Empress of Whites," which is now ready for sending out in Ground Roots in fine condition, at Five Guineas each, for ready money only. Obtained prizes at the following Shows:—viz., 1st at South Essex—1st at Victoria Gardens, Stepney—2d at the Royal South London Zoological Gardens—also at the Grand Salt Hill Show and Floricultural Society of London—also obtained the prize offered by the Floricultural Society for the Best White of any age. See *Gardeners' Chronicle* of Sept. 17th, in report of Salt Hill Show. "'Empress of Whites'—better blooms than we had previously seen of this flower, with well-formed petals of good substance; the white is good and the centre better developed than at previous exhibitions; this will prove a very useful flower." It is recommended by Mr. Glenny in the "Practical Gardener and Florist," in his remarks of new Dahlias, as one of the best of the season.

G. S. has also a few packets of Verbena Seed, saved from the newest and best kinds, price 5s. per packet.

Hornsey Road, Islington, London.

ACHIMENES GRANDIFLORA.

MESSRS. MOUNTJOY and SON have the pleasure **of advertising a few good BULBS at 21s. each of the above** most beautiful Plant, which differs from Achimenes longiflora in COLOUR ONLY; possessing the same size of flower and vigorous habit as A. longiflora, but the colour being a bright rosy crimson. A remittance is respectfully requested from unknown correspondents.—Ealing, 23d Nov., 1842.

NEW CAPE ERICAS.

T. JACKSON, Nurseryman, Seedsman, &c., Kingston, Surrey, **begs most respectfully to inform the admirers** of CAPE ERICAS, that he is now sending out his Two Superb New Varieties, viz.:

ERICA ARISTATA VITTATA—It is a variety between E. aristata major and E. linnæoides; it was exhibited to the Horticultural Society of London, and awarded a Banksian Medal, when it was kindly named by Dr. Lindley. It is favourably noticed in "Paxton's Magazine of Botany," in comparison with E. Neillii, where it is remarked, "We have also noticed another hybrid at Mr. Jackson's. It is very similar to the present, but approaches a shade or two nearer to E. aristata, and is extremely beautiful £1 1 0

ERICA JACKSONII is a hybrid between E. retorta and E. Irbyana, combining the elegant growth of the latter with the splendid flowers of the former. Figured in "Paxton's Magazine of Botany," Vol. 7, p. 149 . 1 1 0

T. J. respectfully invites an inspection of his extensive and healthy stock, from which he can furnish Collections at the following low prices:

			£	s.	d.
100 Cape Ericas	in 100	distinct kinds	5	0	0
100 do.	do.	choice do.	10	0	0
200 do.	200	do.	15	0	0
12 Epacris	12	do.	1	1	0
20 Camellias	20	do.	5	0	0

Superior Evergreen and Flowering Shrubs, Standard and **Trained Fruit Trees, Ornamental** and Forest Trees, and Nursery **Stock of all Descriptions.**

N.B.—About 2,000 English Yews, *from* 3 to 5 *ft.* high, of good **colour, and with fine roots.**—Kingston Nursery, Oct. 27, 1842.

SPLENDID NEW CACTUS (CONWAY'S GIANT).

PHILIP CONWAY begs to inform his Friends and the Public, that he intends sending out this unequalled Production the second week in April, at 2 guineas each. See Dr. Lindley's opinion of the above in the *Gardeners' Chronicle* of June 4th, page 367, as follows:—

"A new seedling Cactus, of most extraordinary beauty, has just been sent us by Mr. Conway, Nurseryman, Old Brompton. **It is a cross between speciosissimus and Ackermanni, having the** large size of the former, and the rich scarlet colour of the latter, with only a tinge of violet inside. Although the plant has only now flowered for the first time and is quite small, the blossoms measure eight inches in diameter. The petals have a fine broad oblong outline, and the stigma is a bright violet. It is much the handsomest sort yet raised. It is to be called Conway's Giant, and its name is no exaggeration."

P. C. begs further to intimate that his Stock is not large, and early orders will ensure the strongest plants, as they are to be executed in rotation. A remittance or reference will be required from unknown correspondents. No allowance to the Trade, the Stock being limited.—Old Brompton, Oct. 27th, 1842.

JAMES PAMPLIN, Nurseryman, Florist, &c. Walthamstow, Essex, begs to return thanks to his friends for their liberal orders for his Seedling Pelargoniums sent out last season, and which he flatters himself have given general satisfaction. He is now sending out the undermentioned new Seedlings, raised by Mr. J. Wilson. As regards their qualities nothing need now be said, as they have taken so many prizes, and have been so universally admired at the exhibitions of the London Horticultural Society at Chiswick, and at most other Societies round the Metropolis, that they must still be fresh in the memories of all lovers of that splendid flower.

J. P. begs to refer them to the report of the exhibition at Chiswick, in the *Gardeners' Chronicle* of July 16th.

	£	s.		£	s.
Achilles	3	3	Duke of Wellington	2	2
Acis	3	3	Fair Maid of Leyton	3	3
Ada	3	3	**Galatea**	2	2
Adelaide Kemble	2	2	Hesperus	2	2
Aurora	3	3	Laura	1	10
Beauty of Essex	3	3	Prince Albert	2	2
British Queen	2	2	Princess Royal	2	2
Count D'Orsay	3	3	Queen of the East	3	3
Countess of Wilton	3	3	Sir Robert Peel	1	1
Creole	3	3	Sir Walter Scott	3	3
Duke of Devonshire	2	2	Venus	2	2

J. P. regrets that owing to the very limited stock of his Seedling Beauty of Walthamstow, he must defer sending it out at present.

J. P. has also a fine stock of those Pelargoniums he sent out last season, which have so enriched the collections of the principal cultivators of that flower at very low prices, Catalogues of which may be had on application.

J. P. begs further to state that he is now sending out his splendid new Seedling CEREUS, which he has named Cereus speciosus elegans, at 21s. each, which was exhibited at the Horticultural Gardens at Chiswick in July last; for description of which, see *Gardeners' Chronicle, July 16th.*

SUPERB SEEDLING PELARGONIUMS, now ready for delivery —Gaines' Duchess of Sutherland, Orange Perfection, Amulet, Pride of Surrey, Lady Duncannon, Royal Adelaide, Prince of Wales, Countess of Eldon, Princess Royal, Graciosa, Emperor, Superb, and Lady Sale. His first-rate Catalogue of Pelargoniums, Pansies, Calceolarias, Fuchsias, Verbenas, Chrysanthemums, Cinerarias, Auriculas, &c., may be obtained by applying to N. Gaines, Florist, Surrey-lane, Battersea.

SELECT AND SHOWY HARDY PERENNIAL HERBACEOUS PLANTS.

WILLIAM MAY begs to announce to the Floricultural Public, that he possesses a Stock of some Thousands of very Select and Showy Hardy Perennial HERBACEOUS PLANTS, which he has collected for the purpose of display more than for Botanical curiosity, and well adapted for ornamenting the most finished Parterre or Flower-border. The Collection consists of upwards of 500 species, comprising all the leading articles, such as Aconitums, Anemones, Aquilegias, Campanulas, Delphiniums, Dianthus, Lobelias, Lupinus, Œnotheras, Pæonias, Pentstemons, Phlox, and Potentillas, in great variety, with all the most noted "Genera" in present cultivation, and which he is enabled to offer (from his IMMENSE STOCK) upon the following very reasonable terms, viz.:—100 species or more, all correctly labelled (which he will select), at 2*l.* 2*s.* per 100, and which will be forwarded on receipt of Post-office order on Bedale for amount required.

N.B.—He has still a supply of his superb HOLLYHOCK Seed, all warranted collected from double Flowers, in packets containing 200 Seeds, for 2*s.* 6*d.*; ditto ditto 500 Seeds, for 5*s.* Also a few packets of very select PANSY SEED, at 2*s.* 6*d.* and 5*s.* each. The Seeds post free.—Hope Nursery, Leeming-lane, near Bedale, Yorkshire, Nov. 15, 1842.

LOUGHBOROUGH NURSERY, NORTH BRIXTON, LONDON.

EDWARD DENYER respectfully invites Noblemen, Gentlemen, &c., to the inspection of his Nursery Stock, consisting of Standards and Dwarfs, trained and untrained Peaches, Nectarines, Apricots, Cherries, Plums, Pears, Apples, &c. &c., of the finest sorts, in a full bearing state, selected from the Horticultural Society of London, and consequently true to kind. He also wishes particularly to recommend his new Victoria Plum-trees, which stand unrivalled as constant bearers, and are of a most delicious flavour.

E. D. also takes this opportunity of gratefully acknowledging the patronage he has been favoured with, and begs to say he has received a large importation of all the newest sorts of Roses, in addition to his present extensive stock, which attracted so much attention in their flowering season, and which are now ready for drawing.

He has constantly on hand a large and fine collection of Evergreens, Deciduous Shrubs, Forest Trees, Greenhouse Plants, Flowers, &c. Annexed is a list of prices, namely,

Standard Roses, left to his own selection	£10	0	0	per 100
Half Standard, ditto, ditto	6	0	0	,,
Extra fine Standard Roses	1	10	0	per doz
Ditto half, ditto, ditto	0	18	0	,,
Dwarf Roses from	33*s.* to 50*s.*			per 100
Ditto Extra fine	12*s.* to 18*s.*			per doz.

N.B.—Remittances expected from unknown correspondents.—Gardens and Pleasure Grounds tastefully arranged and planted by contract, on the most moderate terms, in any part of England; and orders promptly executed. Also a general list of Plants sent, on a prepaid application if by post.

GENUINE FLOWER BULBS.

J. CARTER, SEEDSMAN and FLORIST, 238, High Holborn, begs to submit the following List of BULBS to the notice of his Customers:—

		£	s.	d.
25 fine double Hyacinths, named		0	15	0
12 very fine ditto, ditto	8*s.* to	0	12	0
25 fine single Hyacinths, named		0	15	0
12 very fine ditto, ditto	8*s.* to	0	12	0
12 very fine Narcissus, named		0	4	0
Fine double Jonquils	per dozen	0	4	0
Italian Narcissus, Roman	,,	0	3	0
Paper, white, ditto	,,	0	3	0
Finest Dutch Crocus, 25 varieties	per hundred	0	3	6
Very fine mixed Dutch Crocus	,,	0	2	0
Early Tulips, 30 varieties, named, (one of each)		0	10	0
Double ditto ,, ,, ,,		0	10	0
Fine mixed early or double ditto	per hundred	0	8	0
52 Rose, Byblœmen, and Bizard Tulips		2	10	0
Very fine mixed ditto, ditto	per hundred	0	12	0
Parrot Tulips, 4 varieties, named, per 100, 16*s.*	mixed	0	8	0
Finest mixed Spanish Iris	per hundred	0	6	0
Extra fine mixed double Ranunculus	,,	0	7	0
100 ditto ditto in 100 fine sorts	,,	1	0	0
104 Turban Ranunculus, in 8 varieties	,,	0	10	0
Superb new mixed Dutch Anemones, double	per lb.	0	12	0
Extra fine new single ditto		0	4	0
50 fine double Anemones, in 8 varieties		0	15	0
24 Anemone hortensis, in 6 varieties		0	6	0
Lilium longiflorum	per dozen	0	5	0
Asclepias tuberosa	,,	0	12	0
Gladiolus floribundus, 3*s.* per doz.; very large	,,	0	5	0
25 extra fine Amaryllis, named		5	0	0
25 very fine Gladiolus, named		2	0	0
Ixia, extra fine mixed	per hundred	0	16	0
Sparaxis, in 20 fine varieties	,,	1	0	0
Lachenalia, 4 species, (one of each)		0	5	0
Tigridia Pavonia, small, 1*s.* 6*d.* per doz.;	large, per doz.	0	2	6
Tecophilia sp. nova, Chili, 2 varieties	each	0	2	0
Conanthera sp. with white flowers		0	1	6
Amaryllis from Chili, new and fine		0	12	0

All kinds of Floricultural, Culinary, and Agricultural Seeds, of which a separate Catalogue may be had.

Hardie's earliest Cantaloupe Melon	per packet	0	2	6
The Rambler Prize Cucumber	,,	0	1	6
Superb White Spine ditto, ditto	,,	0	1	0
Roman Emperor ditto, ditto	,,	0	1	0

KING'S ROAD, CHELSEA.

SPLENDID Fruit-bearing Standard and Dwarf Apple Trees, extra fruit-bearing Mulberry Trees, the largest stock of Gooseberries ever before offered for sale; very large plants of Aucuba japonica; an extensive and carefully-selected stock of Dwarf, Pillar, and Standard Roses, and a good collection of Herbaceous Pæonies, Irises, &c., &c., &c.

Wm. Dennis and Co. beg to remind the Nobility, Gentry, and the Public in general, that the above-mentioned plants and trees are unrivalled for SIZE, BEAUTY, and Superior Quality; they can supply many thousand plants of Aucuba, Gooseberries, Currants, &c., &c., with every other description of their stock, at extremely moderate prices, according to size and quality of plants; and as the Season for Planting is now excellent, they solicit a share of their favours, assuring them that their kind orders will be promptly and truly executed. The Trade liberally supplied.

N.B.—A PARTNER could be admitted.

TO GROWERS of named POLYANTHUS and AURICULAS.—The Advertiser, who possesses a collection of nearly all the new Fuchsias out, is desirous of meeting with a party who is a grower of the above flowers, and who would be willing to exchange for Fuchsias.—Address C. C. D., care of Mr. J. Matthews, 3, Charles-street, Covent Garden, London.

MESSRS. DICKSON, NURSERYMEN AND FLORISTS, Acre Lane, Brixton, beg to inform Amateurs and Florists, that their Catalogue of Carnations, Picotees, Auriculas, &c., is now ready, and may be had on application to them, or Messrs. Warner and Warner, Seedsmen, &c., Cornhill, London.

PRINCE ALBERT PEA.

CORMACK & OLIVER, Seedsmen and Nurserymen, New Cross and Bedford Conservatory, Covent-garden, London, have the honour to offer to the notice of Noblemen, Gentlemen, and others, the above new PEA, as one of the earliest and best sorts extant; in proof thereof, a quantity put into the open ground on the 14th of March last was ready for use the 25th of April following, being only *forty-two days from the period of sowing to the date of gathering for the table*; it is moreover a good bearer, of excellent flavour, and highly advantageous for early forcing.—Packets, containing a quart, 5*s.* each. They also beg to recommend the British Queen, a new wrinkled marrow, larger and more productive than any of Knight's varieties, 3*s.* 6*d.* per quart. Likewise the new Incomparable Cos Lettuce, peculiarly crisp and juicy, perfectly hardy as a winter Lettuce, not apt to run in summer, and requiring no tying; in packets, at 1*s.* or 5*s.* per oz.

TO PEAR-GROWERS.

RENÉ LANGELIER, Nurseryman and Florist, St. Helier's, Jersey, particularly wishes to draw the attention of Pear-growers to his most superb and extensive collection of PEARS, for which he has obtained so many prizes. His list, which will be found containing several new Varieties, may be had by application as above, post-paid, letter and stamp enclosed; all trees warranted to be true to sort, and a succession of fruit ensured. All orders from unknown correspondents will be promptly attended to, but must be accompanied with a post-office order.

MERRICK'S VICTORIA VINE.

STRONG, Well-Rooted Two-Year-Old Plants, from Eyes from the original Vine, can be had by application to T. Merrick, Buscot Park, Faringdon, Berks, at 7*s.* 6*d.* each.

CUCUMBER, CELERY, &c., may be had genuine at Thos. D. Watkinson's Seed, &c., Establishment, 6, Market Place, Manchester. Walker's improved long Cucumber, Cherry's Goliath, and Roman Emperor, in packets 1*s.* 6*d.* each. Lancashire solid Red Celery, Bayley's Gigantic, Howard's Red Seedling, Big Ben, and Seymour's superb White, in packets 1*s.* each; finest Guano Manure imported 16*s.* per cwt.

Sole Agent for the Gooseberry Growers' Register, 1*s.* 9*d.* in boards and 1*s.* 6*d.* stitched, which can be forwarded per post, prepaid 6*d.* extra.

ECONOMIC LIFE ASSURANCE SOCIETY, No. 34, BRIDGE-STREET, BLACKFRIARS, LONDON. Established 1823. Empowered by Act of Parliament, 3 William IV.

LOWER RATES OF PREMIUM THAN THOSE OF ANY OTHER OFFICE, that entitle the assured *to participate in the profits*, as follows:—

Age.	15	20	25	30	35	40	45	50
Annual Premium per cent.	1 10 8	1 14 7	1 19 0	2 4 3	2 10 11	2 19 9	3 11 9	4 8 0

The BONUS declared in 1834 amounted upon an average to 16*l.* per cent. on the premiums then paid; and in 1839 a second BONUS was awarded, amounting on the average to 31*l.* per cent. on the premiums paid during the preceding five years.

No extra charge for residence in any part of Europe, nor for proceeding (in a decked, sailing, or steam vessel) from any one Port thereof to another during peace, to Assurers, not being seafaring men by profession. Licenses are granted to go to any part of the world upon terms proportionate to the risks.

Policies on the lives of persons dying by suicide, duelling, or by the hands of justice, are not void as respects the interests of parties to whom they may have been legally assigned.

Assurances may be effected on any and every day.

By order of the Board of Directors,
CAMPBELL JAMES DOWNER, Secretary.

HOT-WATER APPARATUS FOR HEATING HORTICULTURAL BUILDINGS, DWELLING-HOUSES, CHURCHES, and MANUFACTORIES, upon improved principles, and at very moderate charges, erected by DANIEL and EDWARD BAILEY, 272, HOLBORN.

D. and E. BAILEY having devoted much time to the consideration of this subject, and had much experience in the erection of apparatus for the above-mentioned purposes, have, by improvements suggested in their practice, rendered their mode of heating not only very efficient, but very simple, and have combined durability in the apparatus with economy in the charge. They have erected apparatus in England, Scotland, and Ireland, for many noblemen and gentlemen, and have had the honour to be employed by the Horticultural Society of London, in executing the works of their splendid Conservatory, lately erected at Chiswick.

D. and E. BAILEY also construct in metal all descriptions of Horticultural Buildings and Sashes, and invite noblemen, gentlemen, and the public to an inspection of their various drawings and models, at 272, Holborn, where they have the opportunity of exhibiting, amongst other metal works, an extremely complete and convenient kitchen apparatus, or range, adapted for the continued supply of hot water, and an arrangement of the oven more complete than has hitherto been brought before the public.

D. and E. BAILEY were the first to introduce metallic curvilinear houses to horticulturists, and can refer to the Conservatory attached to the Pantheon as one of their works, besides many others in this country and on the Continent.

D. and E. BAILEY have prepared a quantity of the Galvanic Plant Protectors, which are now ready for immediate delivery; they beg to introduce to public notice a new Trough Pipe, for Orchidaceous or other Houses where vapour is constantly, or at intervals required, and which may be seen at their Manufactory.

HOT-WATER APPARATUS, for Horticultural and other Buildings.—STEPHENSON and Co., Agents for the Old Park Iron-works, and Manufacturers, 61, Gracechurch-street, London, solicit an inspection of their improved Conical Boiler. (See Editor's description, *Gardeners' Chronicle*, March 12, p. 175.) To Amateurs these Boilers will be found invaluable. They are complete without furnaces or setting in brickwork, movable at pleasure, very ornamental in appearance, and require attention only once in 14 or 15 hours, price 5*l.* 5*s.* and upwards. Further particulars, with plans and estimates for heating any description of building, may be obtained as above; where also may be seen the improved Wrought-iron Boiler, as applied with Chanter's Smoke-consuming Furnaces at Chatsworth, and many other of the Nobility's Seats. Iron Fencing, Hurdles, Bedsteads, Ornamental Wire-work, Garden Implements, &c. &c. The trade supplied with Hot-water Socket-pipes.

N.B.—WAYTE's New Patent Land-presses and Drills.

THE CONICAL HOT-WATER BOILERS invented by J. ROGERS, Esq., may be obtained of any size from JOHN SHEWEN, Ironmonger, &c., Sevenoaks, Kent.

J. SHEWEN having had every opportunity afforded him by an extensive practice to bring this apparatus to perfection, begs to offer it as most efficient and economical: it may be seen at Messrs. Chandler & Sons' Nursery, Vauxhall; Messrs. Loddiges', Hackney; Messrs. Henderson's, Pineapple-place; Mr. Knight's, King's-road, Chelsea; Messrs. Veitch and Son's, Exeter; and at the Gardens of the Horticultural Society of London.

WANTS a SITUATION as GARDENER, a Young Man, aged 28, who has had 10 years' practical experience in all the various departments of Forcing, the Propagation of Plants and Flowers, together with the planning out and systematic arrangement of the Flower Garden. Letters addressed to Mr. Brown, gardener to Lord Southampton, Whittlebury Lodge, Towcester, will meet with immediate attention.

WANTS a SITUATION as UNDER-SHOPMAN, a Young Man who has been for five years engaged in a Seed-shop in one of the largest Nursery and Seed Houses in the West of England, and can have a good recommendation from his late employers.—Address, A. B., Messrs. Lucombe, Pince, and Co., Exeter.

TO NOBLEMEN AND GENTLEMEN.—WANTS a SITUATION as GARDENER, or as GARDENER and FORESTER, a Married Man, about 30 years of age; the most satisfactory references can be given as to ability, integrity, industry, &c. Address, W. H., at Messrs. Veitch and Son's, Nurserymen, Exeter.

N.B.—Salary about 70*l.* per annum, with cottage, &c.

PENN'S SYSTEM OF OBTAINING A FREE CIRCULATION OF HEATED PURE ATMOSPHERIC AIR THROUGHOUT HORTICULTURAL AND OTHER BUILDINGS.

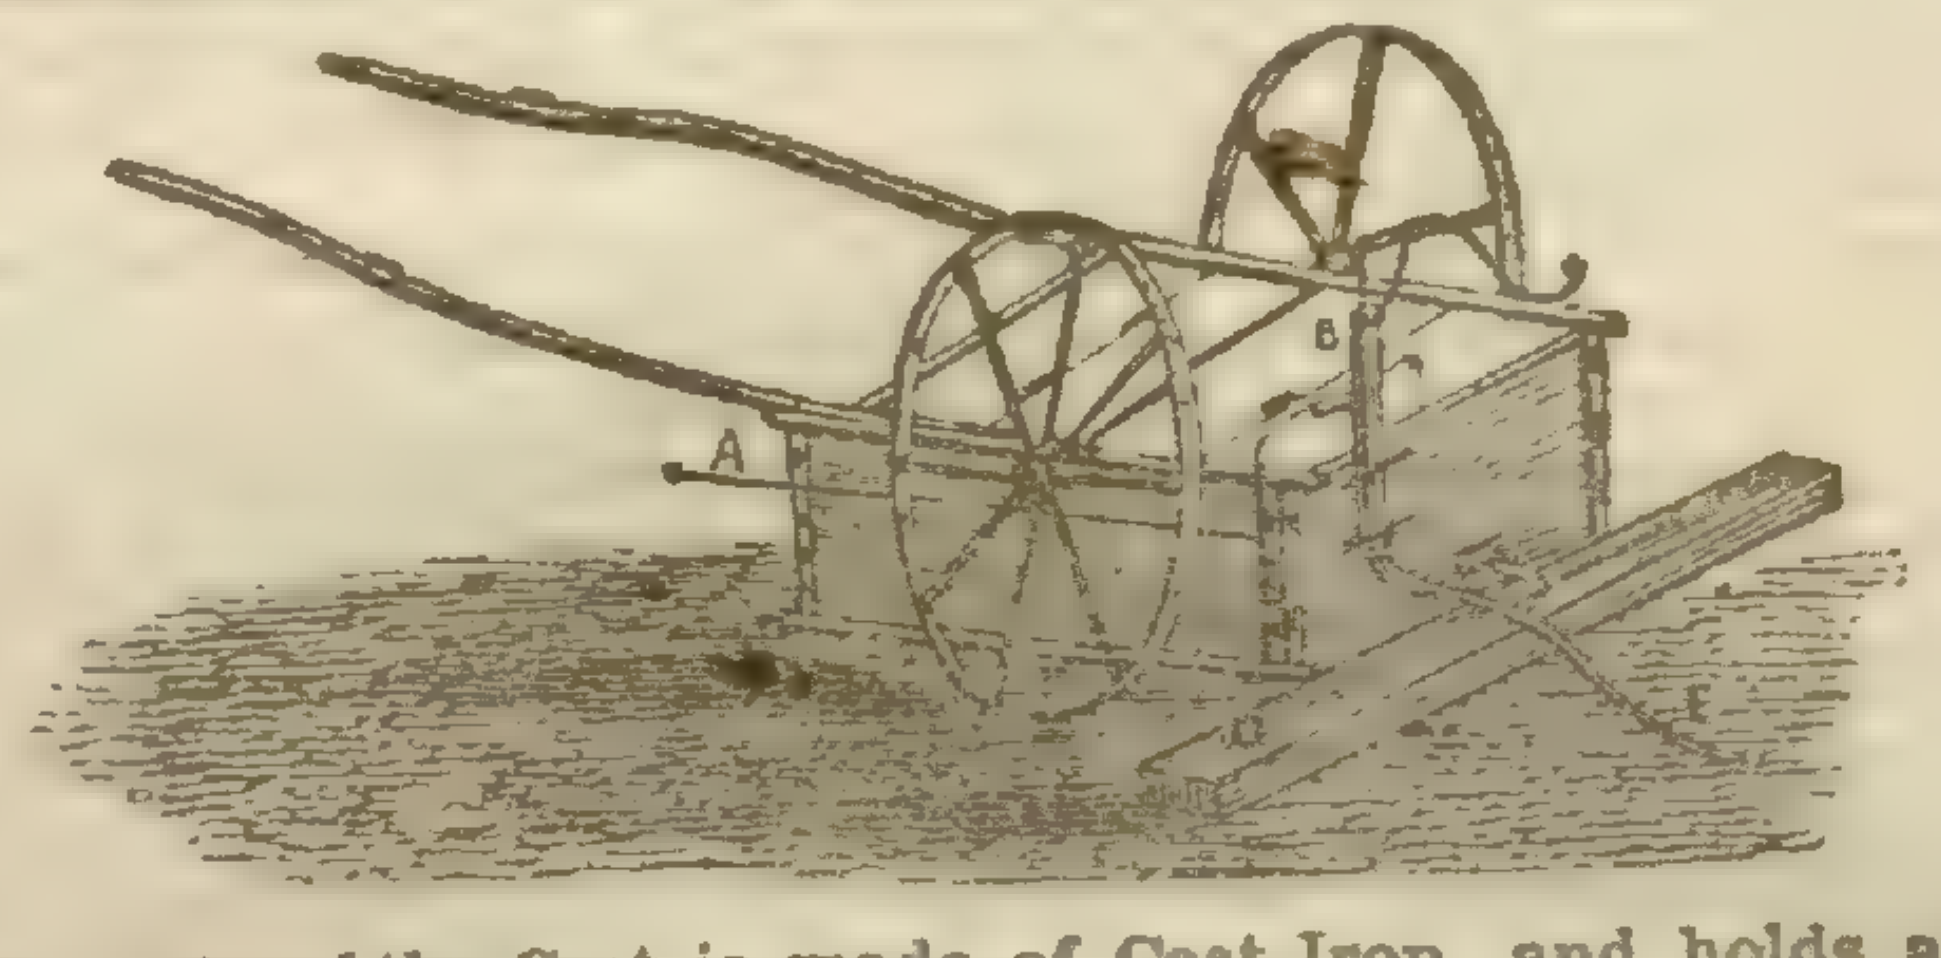
W. HILL having had considerable experience in the Erection of Horticultural Buildings, after the most approved designs, and having received from the inventor of the above system a complete induction into its practical application, begs to announce to the Nobility, Gentry, and Others, that he is prepared to furnish Designs and Estimates for every description of Horticultural Erection, upon application personally, or by letter addressed to W. HILL, Builder and Surveyor, Lewisham.

This system, which is allowed by men of science and all the most eminent practical Horticulturists in the Kingdom to be the most perfect mode of Heating, combined with economy, has undergone the most *complete test in every variety of application*, by the inventor and others, with a success which can only be sufficiently appreciated upon an inspection of its effects on a Collection of rare Plants and Fruits at any season of the year.

W. Hill will (through the kind permission of Mr. Penn, Lewisham—Mr. John Willmott, Isleworth, and others), be happy to afford the most satisfactory demonstration of the superiority of this to all other modes of Heating, and every other information required may be obtained upon application personally, or by letter addressed as above.

AGRICULTURAL MACHINE WORKS, BEVERLEY, YORKS.

CROSSKILL'S LIQUID MANURE CART, which received the Honorary Reward of the Royal Agricultural Society, may be seen at the ensuing exhibition of W. C.'s Agricultural Implements at the Smithfield Club Show, Dec. 7th to 10th, Baker-street, Portman-square, London.



The Body of the Cart is made of Cast-Iron, and holds about 200 gallons. A, The Brass Valve Lever. Without stopping the horse, the man pulls the Iron Lever, A, to let out the liquid upon the Spread-Board, C. B, Patent Iron Pump, which cannot possibly choke or get out of order. E, The Flexible Leather Pipe, 7 ft. long, with 3 ft. copper pipe at the end.—Price delivered in Hull, 25*l.*

CROSSKILL'S PORTABLE MANURE DRILL, for drilling any quantity of soot, lime, salt, &c.—will contain 8 bushels of manure—price 12*l.* 12*s.*

BY HER MAJESTY'S ROYAL LETTERS PATENT.

BROWN'S IMPROVED GARDEN POT.

ROBERT BROWN having made an important and successful improvement in the construction of Garden Pots, submits them to the Floricultural Profession, and to all who are interested in the propagation and cultivation of Plants. It is well known that many valuable plants are annually lost, or much injured, by having the delicate fibres of their roots dried up from the pots in common use becoming heated by the sun's rays, or from exposure to drying currents of air, &c., for which evils a remedy has long been sought. The Improved Garden Pot now offered to the Public is intended to counteract this irregularity of temperature, by being made hollow-sided, with an aperture on the rim, that the space between the outer and inner surface may be filled with water when required, and the aperture being made air-tight by means of a peg, a uniform degree of coolness or humidity may be preserved, and the plants, although exposed to the mid-day sun, will have their roots secured from injury. The Improved Garden Pot does not differ in appearance from those in common use, but the advantages of its construction, for the growth of plants, or for the propagation of cuttings, are too obvious to need further comment.—R. B. has submitted his invention to several eminent cultivators, from whom he has received the greatest encouragement.

Specimens may be seen at the Horticultural Society's Rooms, 21, Regent-street, or at Mr. Brown's Pottery, Surbiton-hill, near Kingston, Surrey, and at his private residence, Ewell.

LIQUID MANURE.

PUMPS of a Superior Construction, Fixed and Portable, for LIQUID MANURE. Garden Pumps, Hydraulic Do., and for Deep Wells; also for Ships, Barges, Tanners, Soap-boilers, Brewers, &c.—Benj. Fowler, late George Turner, 63, Dorset-street, Fleet-street.

TO FARMERS, GARDENERS, AND OTHERS.—SULPHATE of LIME, now in use by the Horticultural Society, being a cheap substitute for Gypsum, may be had in large or small quantities, at Samuel Carter's, 65, Blackman-street, Borough of Southwark.

THE PATENT ASPHALTE PROTECTING MATERIAL, spoken so highly of in the *Gardeners' Chronicle* for 1841, p. 100, 415, 530, and p. 8, for 1842, may be obtained in Sheets—32 inches by 32 inches, 32 inches by 64 inches, 32 inches by 96 inches, of THOS. JNO. CROGGON, 8, Ingram-court, Fenchurch-street. A liberal discount to Hothouse Builders, Nurserymen, &c.

GENERAL DRAINAGE, AND THE DISTRIBUTION OF WATER.—The Drainage of Land, combined with the Sewerage of Towns, advocated in a Letter to P. Pusey, Esq., M.P. By J. BAILEY DENTON. Ridgway, Piccadilly. Also, by the same writer, Model Mapping considered as Suggestive of Uniform and Profitable Draining of Land, with Directions for Construction.—Weale, Holborn.

TO GARDENERS.—WANTED, IMMEDIATELY, A YOUNG MAN, as a COLLECTOR. His Salary will be £100 a-year, exclusive of his expenses. He must be well acquainted with the plants now in cultivation in this country; must be healthy, active, and well-educated; and must produce the strongest testimonials of sobriety and good conduct. Apply, by letter only, to A., 3, Charles-street, Covent-garden.

The Gardeners' Chronicle.

SATURDAY, NOVEMBER 26, 1842.

MEETINGS FOR THE TWO FOLLOWING WEEKS.

Monday, Dec. 5	Entomological	8 P. M.
Tuesday, Dec. 6	Horticultural	2 P. M.
	Linnean	8 P. M.
	Floricultural	6½ P. M.
Wednesday, Nov. 30	Geological	8½ P. M.
Friday, Dec. 2	Botanical	8 P. M.
Saturday, Dec. 26	Royal Botanic	3¾ P. M.

THE varieties of the Vine, when well suited to good cultivation, attract so much attention, that a great inducement is held out to the dealers in novelty to procure what are called new sorts; and it unfortunately happens that this fruit-tree is itself so liable to change its appearance, under peculiar circumstances, that the most honest and best-intentioned persons may deceive others by deceiving themselves. This renders it extremely difficult for any man to affirm whether a so-called new Grape is really a novelty or not. We remember that a Vine was some years since found at Bath, the quality of whose Grapes was so superior to those of the Black Hamburgh, that, although very like that variety in form and colour, it was pronounced by good judges to be something new and better; and yet that Vine was really nothing but the Black Hamburgh, with an old stem, some 50 or 60 feet long before it branched, and growing in an extremely favourable situation. So, again, the Tottenham Park Muscat was sold at a high price for some years, under a belief—quite conscientious in this case on the part of the sellers—that it was an improvement in that variety, because, owing to some cause or other, it had temporarily acquired an improved quality at Tottenham Park. This renders us at all times unwilling to pronounce a positive opinion upon what are called new Grapes, until they shall have undergone some years' cultivation, and will explain to some of our correspondents the reason why we have not sooner told them what evidence there is respecting "The Royal Victoria" Grape. There is a general belief that this is really a new and first-rate variety; and we conceive it impossible to gainsay the opinion, except by tracing the history of the plant, which, by the assistance of Mr. Clement Hoare, whose knowledge of English Vines surpasses all men's, we are enabled to do.

"The facts concerning the Royal Victoria Vine," says Mr. Hoare, "are briefly these:—A reverend gentleman, well known as an excellent Grape grower, called on me in the latter part of the summer of 1841, and in the course of our conversation on Grape culture, the above-mentioned Grape came under notice; and, if my recollection serves me aright, he stated that he had then recently seen the Vine at Buscot Park, and that the fruit on it that year was not better, if so good, as that usually borne by the Black Hamburgh in general cultivation; moreover, that the Vine itself was an old one, having been growing for several years in a neglected state, till at last it was cut down with an intention to destroy it, in consequence of its being inconveniently situated in the garden. As a matter of course, instead of being killed by the operation, it produced in the following year some extraordinarily fine fruiting shoots, which in the succeeding season bore equally fine fruit—and this fruit it was that was brought before the public as a splendid new Grape. In the ensuing year (1840), according to my informant's account, the fruit was not so fine as in the first or preceding year; and in the year he saw it, viz. 1841, it was (as already mentioned) not finer, if so good, as the common Hamburgh—and he assured me that, in point of fact, it was nothing more than the Black Hamburgh in common cultivation. Of this information I have no reason whatever to doubt the correctness. The results which followed the cutting down of this Vine—such as the production of *very* superior fruit the *first* year of bearing, not *quite* so fine the *second* year, and finally, in the *third* year, coming down to its proper level—being neither better nor worse than that usually produced on the same description of Vines when properly cultivated, will never fail to follow the cutting down of any Vine that is well established in its growth, and more especially so the Black Hamburgh, which seems to possess the qualities of improvement in proportion to the goodness of its culture, *in combination with undercropping*, in a far greater degree than that possessed by any other sort of Vine that I am acquainted with. Indeed, I think very great caution should be exercised with respect to the introduction of any new Grape, or of any new variety, for knowing, as I do, the extraordinary difference that *soil*, *aspect*, and *culture* will make in the fruit of the Vine, I am uncommonly sceptical with respect to new sorts of Grapes, or new varieties of old sorts."

We trust that this little history will, once for all, put our readers on their guard against implicitly believing that every Grape is new that is called so, or seems so; and that they will further agree with us in believing that, in respect to the Vine, it is *improved culture that is wanted, rather than improved sorts.*

THE great pests of gardeners are insects. The best gardener, with all his skill in cultivation, is perplexed by their attacks, against which he has rarely an effectual remedy which is easily employed; and when he applies to the man of science for advice, he obtains little or no information; for science deals more with generals than with particulars, and there is nothing known in the nature of things which will arrest the progress of insect pestilence. Accordingly we find that the directions for destroying insects are in all cases empirical, and consist of various compounds; the motives for employing which no good reason, except the result of experience, can be assigned.

We cannot but think that, in seeking after remedies against the attacks of insects, one mode of repelling them has been much neglected; little or no heed having been taken of the effect of smell upon them. It is always some wash, or some powder, that is recommended; and very rarely any vapour. Indeed, so far as we know, there are only two instances in which matter in the form of vapour is employed against them by gardeners. These are tobacco as a remedy for green-fly, and the vapour of heated sulphur as a cure for red-spider; both, however, effectual. Such being the case, we would strongly advise gardeners to occupy themselves in trying in various other ways the effect of smells and vapours, instead of the common remedies to which they now more generally have recourse, and which are so often ineffectual.

The vapour of oil of turpentine was this year stated, in our columns, by Professor Henslow to destroy wasps. Who could have suspected this beforehand? Who would have believed that a very small quantity of turpentine, poured into a hole in the ground, and consequently much absorbed and lost, would prove the certain destruction of such a troublesome enemy as the wasp? Nevertheless, we have ourselves repeated the experiment, and we can affirm that the vapour of turpentine is a sudden and total destruction to this insect. Why, then—since the vapour of tobacco kills aphides, of sulphur the red spider, and of turpentine the wasp—should not other kinds of effluvia prove equally destructive to other races of the insect world? Indeed it has been asserted that the vapour from crushed Laurel-leaves proves fatal to the white bug, and that the strong odour of coal-tar drives away the wire-worm, and many maggots that attack the roots of plants.

We cannot but connect with this kind of probability a curious circumstance mentioned by Sir Chas. Monck, as having occurred to himself at Belsay Castle, in Northumberland. Having been much annoyed, as who has not? by the brown-scale insect upon his Orange-trees, he was led to suspend some plants of Chamomile among the branches of certain trees, and to syringe others with an infusion of this strong-smelling herb. In a fortnight after the Chamomile was suspended in the branches, the young scales began to turn brown and dry up; and in the spring succeeding the experiment, the trees were almost cleared of their enemies. Sir Charles does not, indeed, therefore infer that this dispersion of the scale was really owing to the Chamomile; he merely calls attention to the circumstance, in order that further experiments may be tried. To us, however, it seems by no means improbable that the powerful odour of Chamomile may be as offensive to scale insects as Camphor is to the Anobia which infest herbaria, or as Cedar-wood or Pepper-corns or Russia-leather to the Moths that attack our furs.

We therefore again say, it is exceedingly well worth the while of gardeners to try all kinds of experiments upon this subject; and we trust they will report the result in our columns for their mutual benefit.

SOME time since there was introduced into France a new kind of Beet called Bassano, some account of which was given in last year's *Chronicle* (p. 183). It was there stated to be found in all the markets from Venice to Genoa in the month of June; to be very tender, very delicate, preserving its rose-coloured rings after cooking, and to be from 2 to 2½ inches in diameter. In the "Bon Jardinier" for 1842, we find this kind mentioned as being much esteemed in the North of Italy, and that it is, in fact, one of the best varieties for the table.

We are, however, inclined to believe, from what we have seen of it this year, that it is of much more importance as an agricultural than as a garden plant. It has this season been grown in the Garden of the Horticultural Society, and, from its appearance, seems highly deserving of further notice. In form, it is like a Norfolk round Turnip, more than half its bulk being above ground; the colour of the skin is a deep scarlet; the flesh is tender and juicy, white, and beautifully ringed with rose colour. Some of the roots weighed 5½ lbs., and were 23 inches in circumference. As it does not extend downwards like the other Beets or Mangel Wurzel, it would probably be very fit for field cultivation, especially on land that would be too thin for other varieties of Beet. Its top is not large; and it may be grown so close that the roots may nearly touch each other in the drills, like field-Turnips. We should also expect that it would reach, in damper seasons, a much larger size than it has attained in the past dry summer.

TO PRESERVE SALVIA PATENS AND SIMILAR PLANTS THROUGH THE WINTER.

IN some of the former Numbers of the *Chronicle* various statements are to be found respecting Salvia patens, some writers contending that it is quite hardy, while others state that it will not stand the winter in the open border without protection. Last winter I allowed several plants to remain in various situations in the open border, not one of which lived through the winter. It is therefore evident that those plants which have survived with other persons must have been protected, or otherwise favourably circumstanced, probably by being in a dry situation, since the roots of Salvia patens suffer much in winter from damp. A great risk is therefore run by leaving the roots in the open border; but the following method of preserving them is certain, and within the reach of those persons who have no greenhouse or pit to keep them in. Another recommendation is, that the roots require no further attention during winter; therefore, this being the proper time for taking them up, I will describe the manner in which they may be treated. Let a dry day be chosen to take up those plants required for preserving, and let the tops be cut off as with Dahlias, and all the soil shaken from their roots. Lay them for a few days in a shed to dry, and having procured a box or old tub sufficiently large to hold the roots, when packed closely, get some dry sandy peat, finely broken; a layer of the roughest of this, about an inch thick, should be laid at the bottom of the box; the roots may then be packed as closely as possible in layers, and the spaces between each filled with peat. When the box is full, give it a good shaking and press it well down with the hands, to stop up all the cavities; finally covering the whole about two inches thick with the rough part of the peat. The box may then be removed to a cellar or other convenient place, secure from frost, where it may remain without any further care until the following spring.

About the end of March the roots should be removed from the box, potted in the usual way, and placed either in a greenhouse or warm pit, where they will soon make fine plants and be ready for turning out in the open borders, when the danger of spring frosts is over. In this way, and with much less trouble, they will make better and stronger plants than those kept in pots, or struck from cuttings in the spring.

In the same manner Fuchsias, scarlet Pelargoniums, weakly Dahlia roots, and similar plants may be preserved through the winter; this is important to those persons who have not sufficient room to keep them otherwise. It must, however, be observed, that scarlet Pelargoniums, Fuchsias, &c., will require to be taken out of the boxes much sooner in the spring than Salvia patens. The only plant which perished under this treatment was Pentstemon gentianoides, not one of which survived the winter.

I have found dry peat finely broken to be the best material for preserving bulbs and tuberous-rooted plants, as neither damp, drought, cold nor heat affect them, when packed closely in it. The roots of Salvia patens, at the expiration of five months, were nearly as fresh as when first put in, although the box containing them stood in a damp cellar. There is no doubt that tuberous-rooted Convolvuli and bulbous-rooted plants might be sent with great certainty to any distance, if properly packed in it; and as peat, when dry, is very light, neither the weight nor the bulk would be much increased by it.

Peat, in a dry state, being an excellent nonconductor of heat, cold, and moisture, would keep the roots in a dormant state for a considerable time; care should, however, be taken that the peat, when used, is quite dry, and of a fibrous nature. If this is attended to, and the roots, when packed, are properly dried, neither damp nor mildew will ever injure them, although the box were placed in a damp situation.—*George Gordon.*

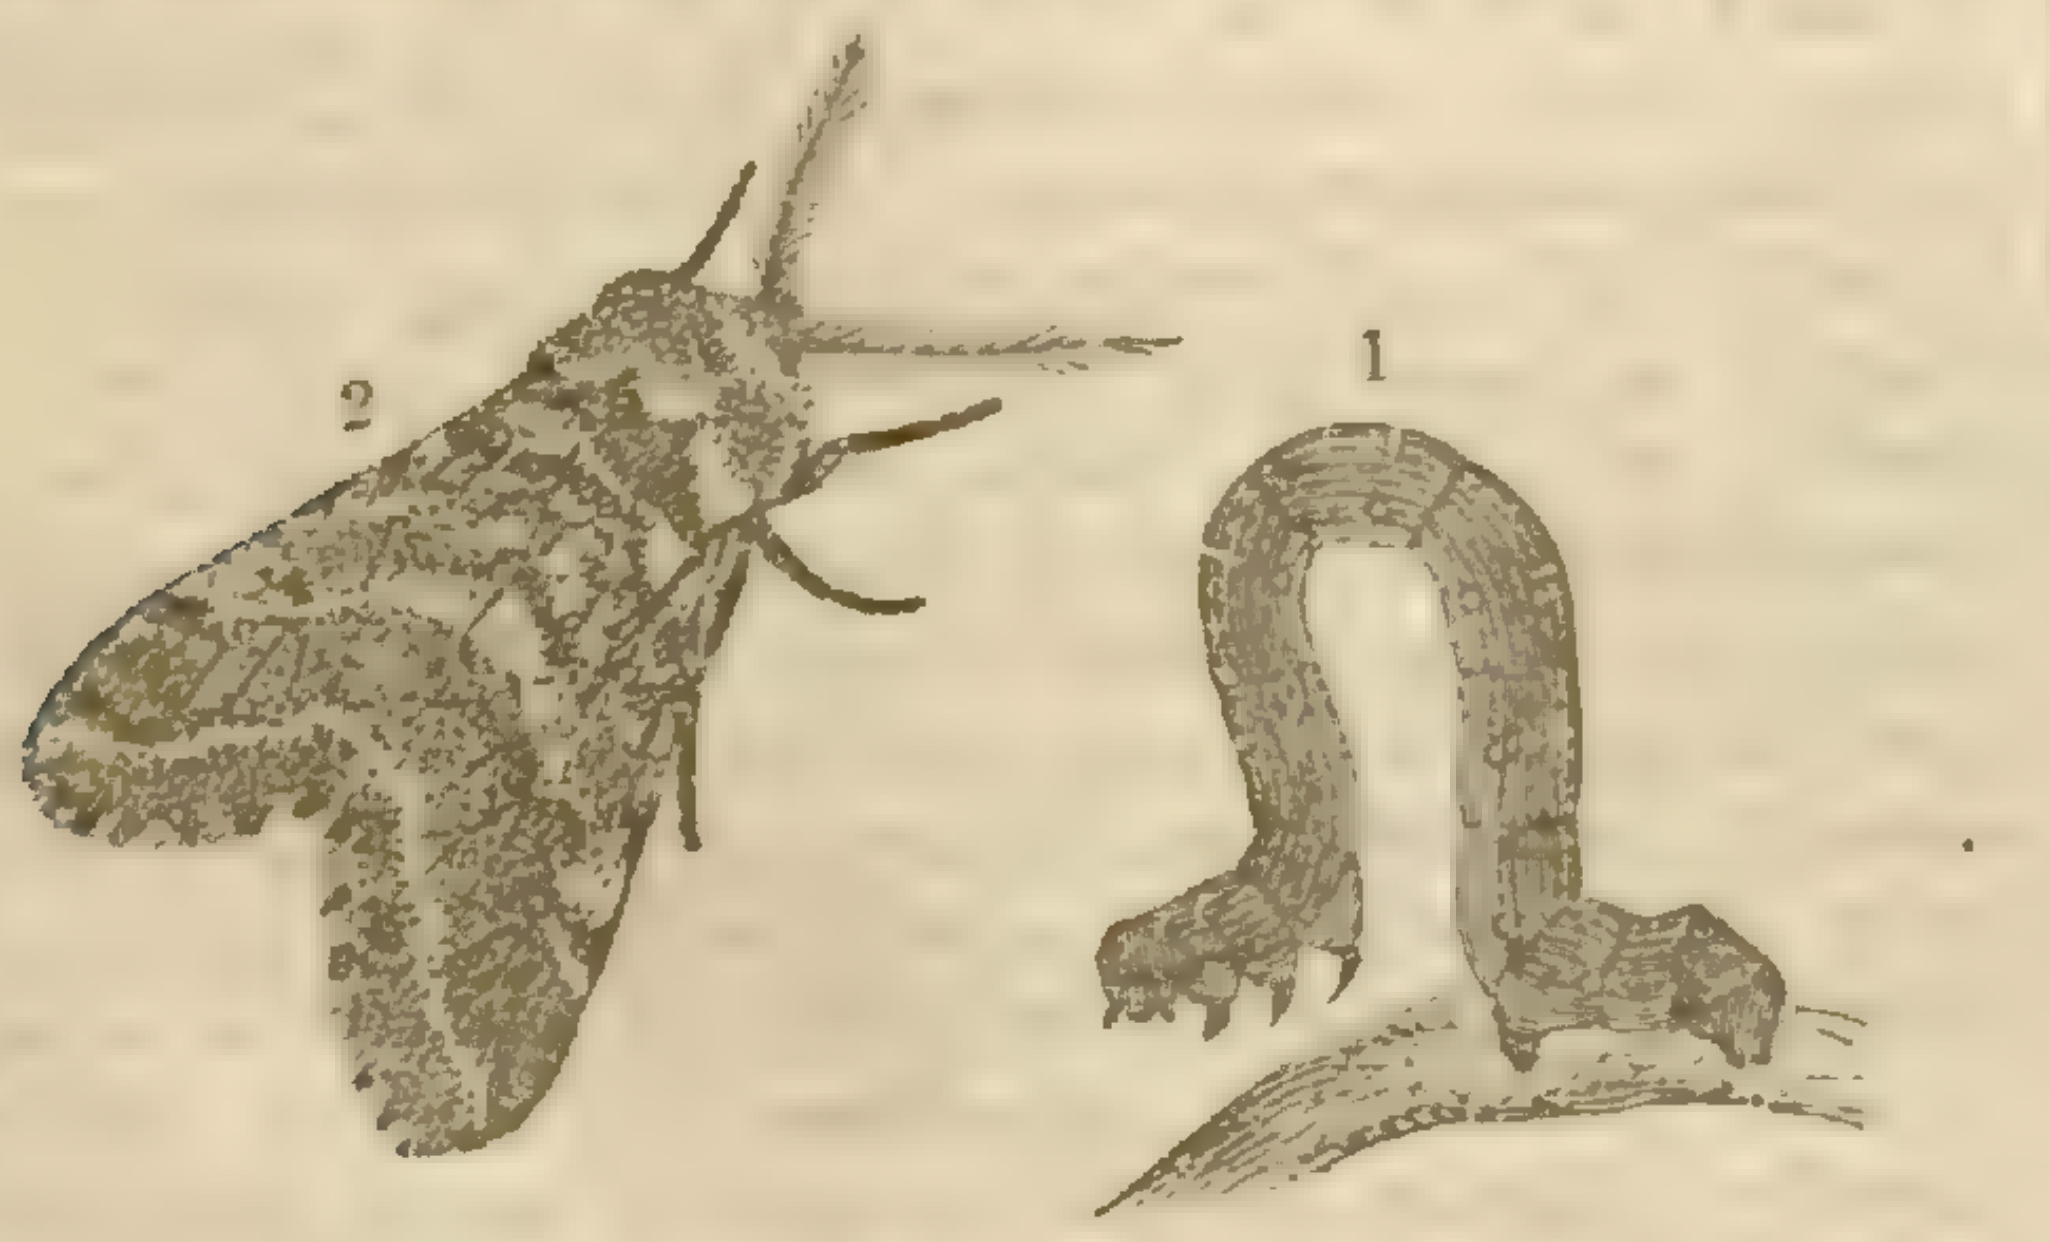
† ENTOMOLOGY.—No. XXXVII.

THE BRINDLED BEAUTY-MOTH, Geometra hirtaria.—Early in the year, this fine moth is frequently very abundant around the Metropolis; yet I never heard of its occurring in any considerable numbers in the country. It never, perhaps, appeared in greater multitudes than during last April, when it swarmed even in the squares and gardens of London, especially in the vicinity of Poplar-trees; upon the trunks of which, as well as upon the adjacent walls and paling, the moths might be seen sticking in the day-time with their wings closed. They are also so abundant upon the Elm-trees in the public walks at Paris, that Godart says, he could have taken 300 specimens in an hour. Owing to the looping action of the caterpillar when walking, this family received the name of Phalæna geometra from Linnæus, but it now forms part of a genus and is called BISTON HIRTARIUS.* It is grizzly, being smoky, freckled with ochreous scales: in the male the antennæ are beautifully bipectinated, but in the female they are simple threads. The thorax is often speckled

---

* Curtis's Guide, Gen. 889. No. 3.

with pale ochre; the wings, when at rest, form a deflexed triangle and are variegated with ochreous and black scales, the costa and nervures of the superior having black undefined spots, forming lines and bands; three of these uniting towards the posterior margin exhibit a waved but regular and generally distinct fascia; the fringe is spotted; the abdomen is hairy and ochreous-brown. It is a very variable species, some specimens being entirely fuscous; but the colours and markings are always brightest in the males, in which sex the inferior wings are more or less traversed by ochreous and black lines: in the female, the wings partake of a greenish cast when alive, and they appear to be partially hyaline in some lights. Length nearly $\frac{3}{4}$ of an inch; expanse about 2 inches (Fig. 2, the male). The clothing of these moths seems well calculated to protect them against the chilling blasts of our early springs; their bodies and wings being covered with rough scales and woolly hairs. The female probably lays her eggs, which are oval and bright green, upon the tender buds; they hatch in May, I believe, and feed upon the leaves of a great variety of trees, as the Elm, Poplar, Lime and Lilac; I suspect also, that the Apple and Oak are not unpalatable to them. By the middle or end of July, they are full-grown, when they are about $1\frac{3}{4}$ inches long, as thick as a turkey's quill, and vary from a grey to a brown or pitchy colour, sometimes of the deepest tint: they are striated longitudinally, have a yellow collar of spots, and there are markings of the same colour on each segment along the line of spiracles; the margins of five of the abdominal segments are yellow also (Fig. 1).



These caterpillars are perfect loopers, having six pectoral, two abdominal and two anal feet; they are perfectly free from hairs, and when stretched out and at rest so closely resemble a piece of stick or a twig, that it is scarcely possible to detect them, and this is no doubt their security against the smaller birds which would prey upon them. There are, however, checks upon these caterpillars, one of which I shall notice, as it is rather remarkable. On the 14th of last July, a friend took me to the Lime-trees in the gardens of Christ's Hospital, to show me the caterpillars which were hanging from the leaves and lying upon the pavement beneath them: some were nearly full-grown, and others were smaller, but they all appeared healthy and active. I placed them in a breeding-cage with a twig of the Lime-tree, on which they fed very well; but every morning when I looked at them, I always found one or two dead, yet holding firmly by the anal feet, the skin hanging down and the whole inside of the animal changed to a red fluid, which was scattered also over the leaves. The same fatal disease last year affected some caterpillars of the white Cabbage-butterfly, which were feeding upon Turnip-pods, only that their muscles, &c. were converted into a dirty white liquor; the season had been very wet, and there were some scorching days in September, the period alluded to, to which I attributed this attack; but from the wandering of the stick-caterpillars of the Brindled Beauty, before they had arrived at perfect maturity, I am almost inclined to attribute their diseased state to the honey-dew, which was thick upon the leaves of the Lime-trees at the time, as it was also upon those I supplied them with. Whatever may have been the cause, it is fortunate that a check is thus not unfrequently given to the increase of caterpillars, which otherwise would deprive our gardens of every vestige of foliage, to the annoyance of the sight, and the injury, if not the destruction, of our trees and plants. As these looping or stick-caterpillars cling so fast, by their anal feet, to the stalks and twigs, that it is scarcely possible to dislodge them by shaking or beating the branches, we must have recourse to other means for their destruction. Hand-picking would likewise be attended with but poor success, owing to the difficulty of detecting them, and I am not prepared to say what might be effected by syringing with lime or tobacco; but the readiest method of getting rid of them, when they do any mischief in gardens, would be to destroy the moths in March and April; from their sombre colouring, however, they must be searched for by eyes well accustomed to such pursuits. By day the caterpillars conceal themselves generally in the crevices of the bark, when it is almost impossible to detect them, from their colours assimilating so perfectly with the coat of the tree; and when they are full grown and desire to enter the earth, where they change to chrysalids in a cocoon, they either let themselves down from the branches by an exceedingly fine thread, or they travel down the trunk of the trees. De Geer mentions one which remained in the pupa state 19 months, a power possessed by many Lepidoptera, which seems especially necessary to secure the existence of early-bred species through frosty and inclement seasons; thus they lie secure until a more favourable opportunity presents itself for their appearance in the winged or imago state.—*Ruricola.*

ON THE EFFECT OF GUANO.

(From the Hamburgh Correspondent, 1842, No. 162.)

Most of the experiments with guano in the vicinity of this city have been made on meadows and lawns. On these it has produced the best possible effects, so that, for instance, at Flottbeck, the patches manured with guano presented not only a finer and darker green, but the Grass was closer and more rich, so that comparing it with patches not guanised, the produce of the former may, without exaggeration, be stated to be double. To give an idea of the extraordinary forcing qualities of guano, we may mention that at Flottbeck, on a spot of Grass managed after the English fashion, the second cutting of the Grass was necessarily five days after the first, while the Grass growing close by (which had not been guanised), although healthy and vigorous, required double the time to arrive at the same state of progress. It deserves to be stated as something remarkable, that on the guanised spot, the dew appeared in the morning much stronger on the tops of the leaves, than on the part unguanised. In an experiment made by M. Staudinger on a barren hill, composed of granite or quartz, the guanised spot exhibited a dark bluish green sward, while round about nothing but barrenness was to be seen. If, therefore, a landowner wishes to cover bleak hungry pasture in a short time with nutritious Grass for cattle or sheep, the guano certainly is the thing to do it. It would not only produce a plentiful fodder in the autumn, where cattle can be well nourished and prepared for the winter, but such guanised pasture will bring a heavy crop early in the spring. Guano has also been used advantageously on a sour meadow, overgrown with Horsetails, and it produced, instead of Reeds and Bullrushes, a dense turf of sweet Grass, and the Horsetail almost disappeared. Thus, in the first place, more Grass is obtained, which may be put down as double the former crops; and then the Grass is very much improved in quality. Of course good drainage must be attended to on each meadow, if the result is expected to be complete.

In using guano we must be careful to pulverise it well, because on account of its tenacity it will form into lumps, and on places where it lies too thick, it will burn the Grass; although subsequently, even on such places, a luxuriant herbage will spring up. Experiments with guano on spring crops has been as successful at Flottbeck, with both Wheat and Rye, as on the above meadow. The Wheat manured in the spring with guano is much superior to that manured in the ordinary way, both in grain and straw. The following experiment was tried on a spot of almost blowing sand:—

On the 18th March, several square rods in the above locality, planted with winter Rye, were strewed with guano. The spot thus manured was in a short time not only conspicuous for its dark green colour, but the tiller became so luxuriant as to cover the whole surface. Notwithstanding a drought of two months, the guanised crops remained in the same flourishing condition; whilst the other Rye standing close by had a weak and sickly appearance. Subsequently, the former attained the height of five or six feet, with ears five inches long, with strong plump grain; whilst the latter were scarcely half that height in straw, and their ears were barren and empty. This experiment speaks in favour of guano in preference to other manure in another respect. If a light sandy soil like the above is manured too much with common dung, and if there follows a luxuriant vegetation, with dark green foliage, we may be sure that if there be subsequently any long drought, or sudden change of temperature from great heat to intense cold, rust will follow as a matter of course; whilst, in the above experiment, notwithstanding a nine weeks' drought, and some intervening night frosts, the growth of the guanised Rye was uniformly good up to the ripening of grain—a sufficient proof that the guano must possess the property of attracting and retaining the fine vapour contained in the air. Hence the fact is to be explained, why dew was more apparent on the guanised turf than on that not subjected to that process. As we know that in general during long drought the action of dung—in fact of every manure, ceases; and as it is light sandy soil which first suffers from drought; it must be evident what valuable manure guano is, not only on pastures, but for winter Rye, our chief crop on light land. If an acre of land is dressed with 125 lbs. of guano, an abundant crop of grain and straw will fully repay the expenses incurred. If such a Rye field is laid down in spring with Meadow Catstail Grass (Phleum pratense), and White Clover, a heavy Grass crop in the autumn would still increase the advantages already mentioned. As Rape can by no means be too luxuriant, guano would produce an extraordinary result on it.

WEIGHTS AND MEASURES USED IN THE LONDON MARKETS.

Fruit is sold in the London markets in baskets of such forms and dimensions as are found most convenient for packing and carriage. The following account will give a tolerably correct idea of those most in use:—

The half-sieve, so frequently mentioned with reference to prices, is a cylindrical basket, varying from 12 to $12\frac{1}{2}$ inches in width, $12\frac{2}{10}$ inches in diameter, and 6 inches deep, inside measure; it contains 701 cubic inches strike measure, which may be considered the medium size. This is about $\frac{1}{4}$ of the heaped bushel formerly used for dry goods; the $\frac{1}{4}$ of which, or one peck, was about 704 cubic inches. It would appear that the half-sieve was originally intended to contain a peck of the above measure when level with the brim; Apples and Pears, &c., are now, however, heaped in the half-sieves, and protected by a rim fixed to the top of the half-sieve, with the width of which it corresponds at the base, but slants inwards, so that the diameter of the rim at top is only 9 inches. In other words, the rim forms the frustrum of a cone, the diameters of which are, respectively, $12\frac{2}{10}$ and 9 inches, and the height 3 inches. The capacity of the half-sieve, together with that of the rim, is therefore equal to 968 cubic inches, or about $\frac{1}{10}$ of a pint short of $3\frac{1}{2}$ Imperial gallons.

The sieve contains two half-sieves; its diameter is about 15 inches, and depth 8 inches. The sieve and half-sieve are more especially known in the London markets, and are more uniform in size than several other kinds of baskets in which horticultural productions are exposed for sale.

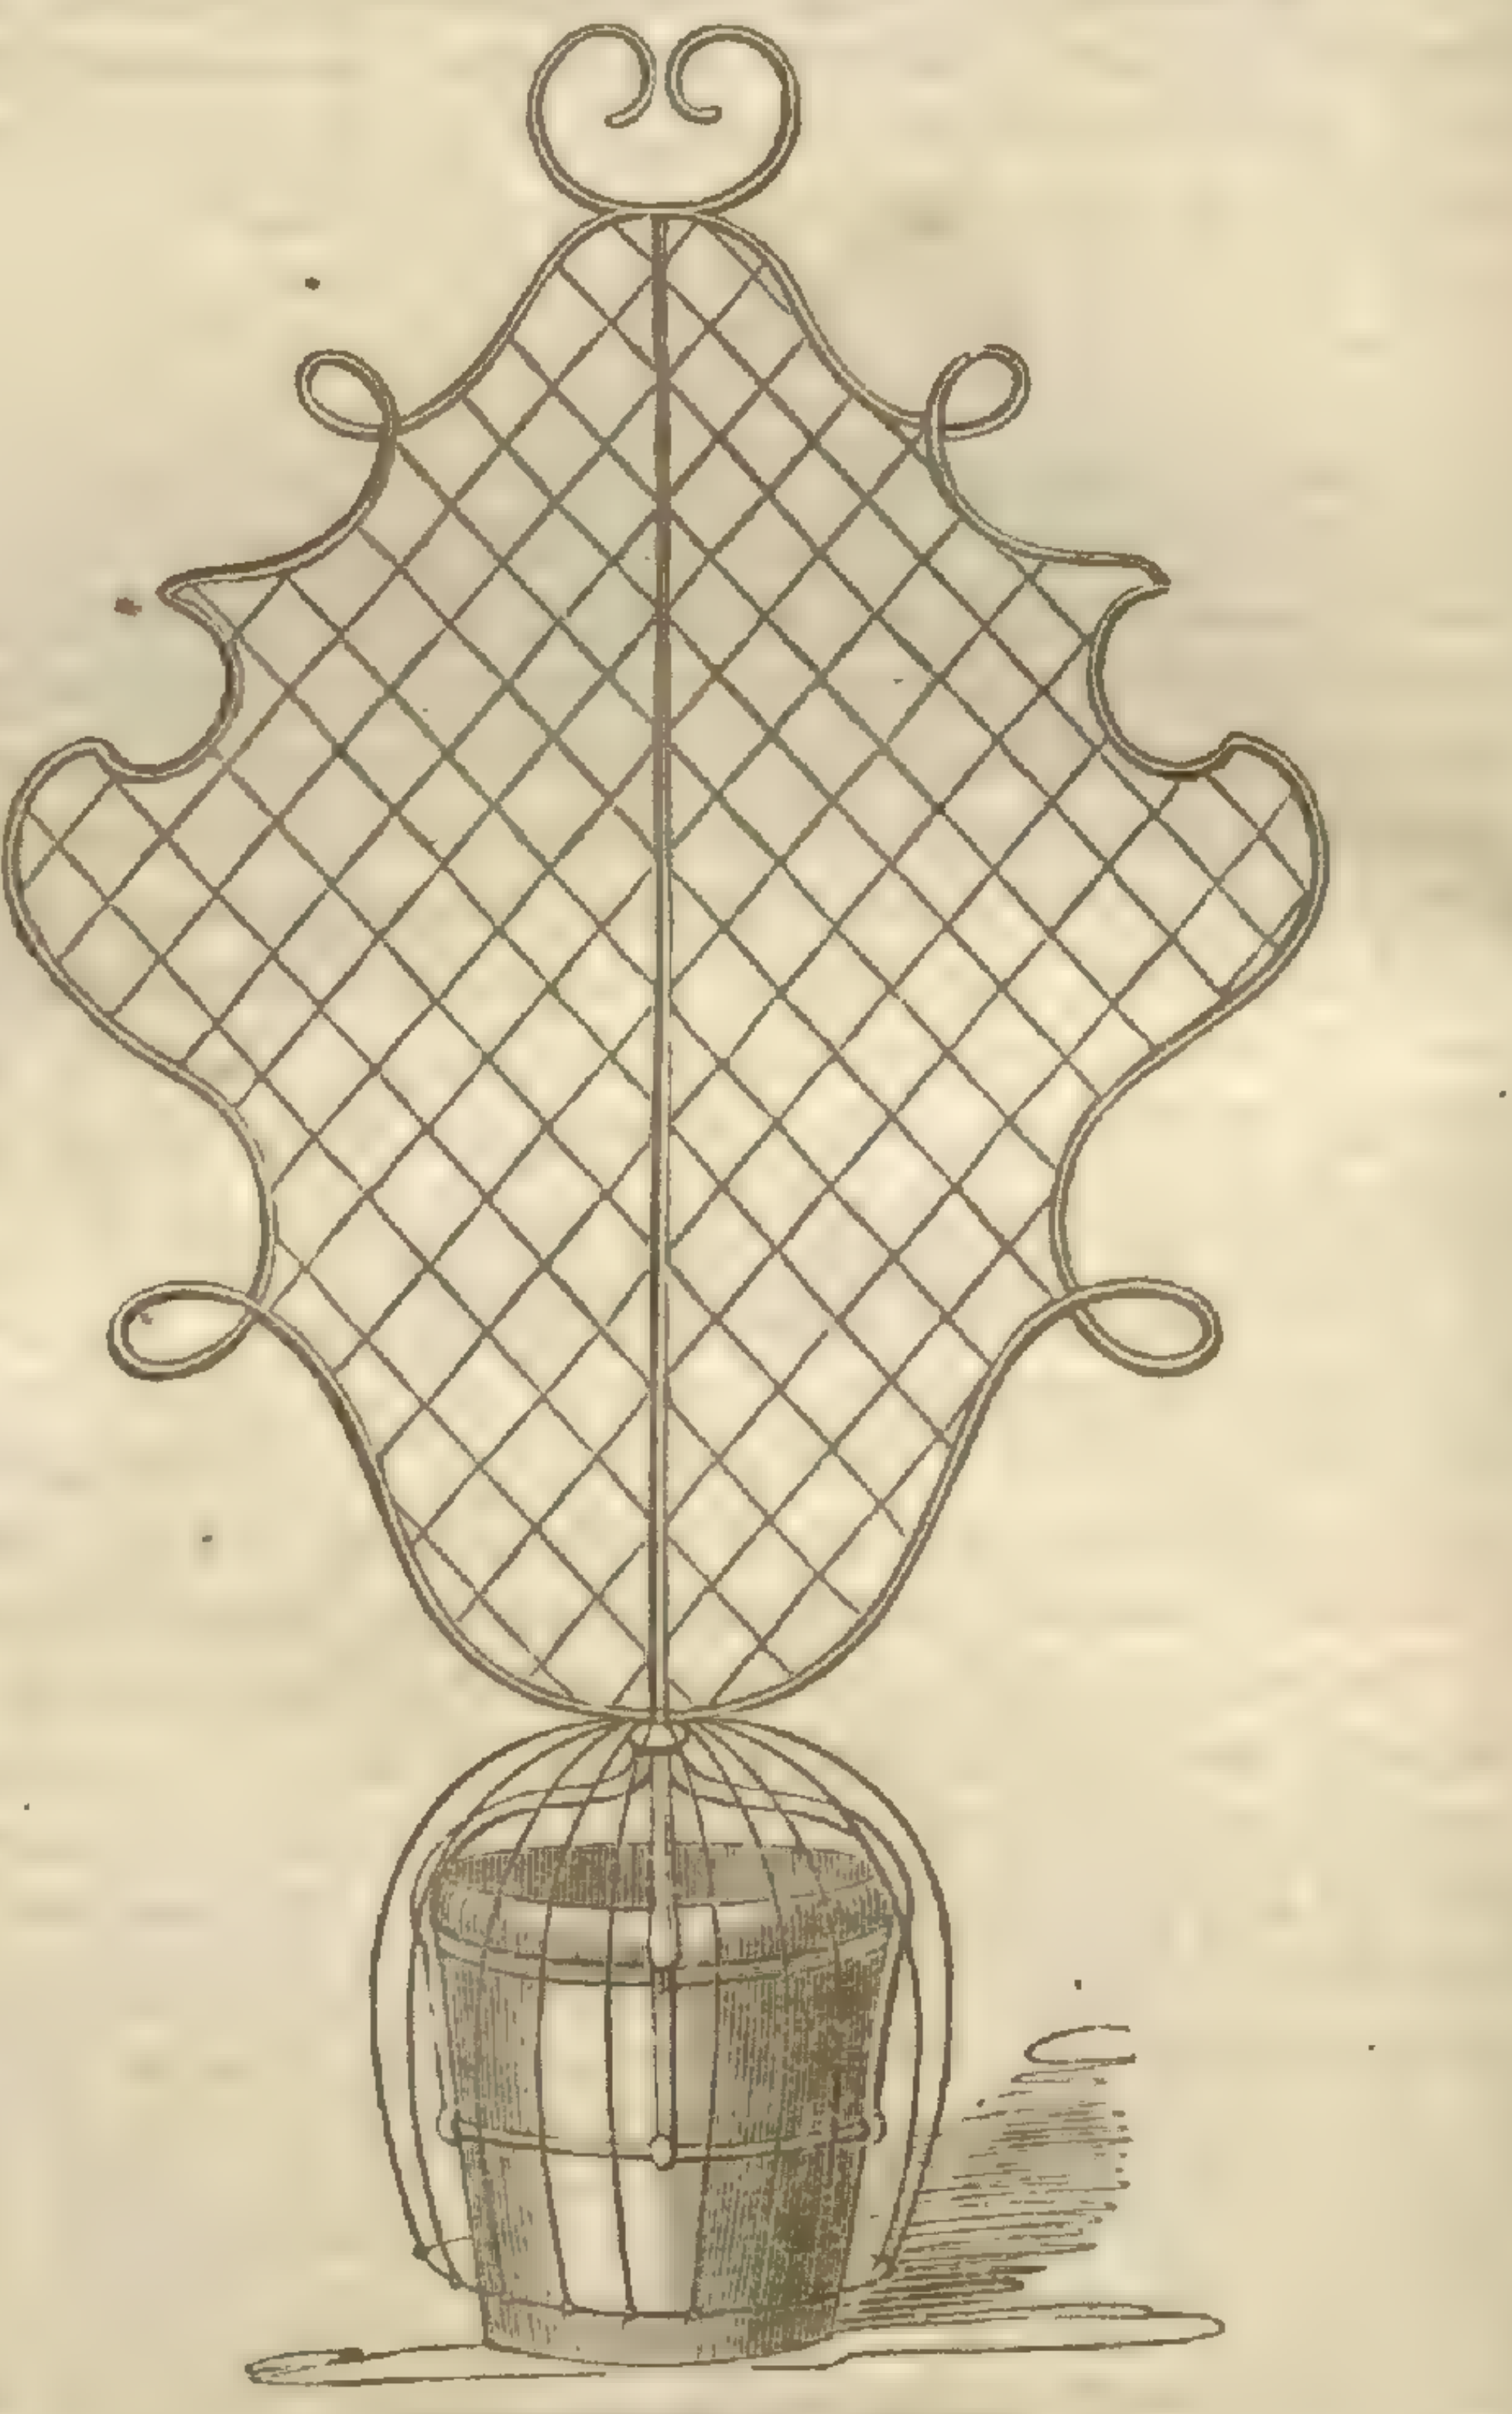
The bushel-sieve measures near $17\frac{1}{10}$ ins. in diameter at bottom, $17\frac{8}{10}$ ins. at top, and $11\frac{3}{10}$ ins. deep; its contents being about 2703 cubic inches, which is considerably more than an Imperial bushel. When filled a little convex it contains three half-sieves, or a heaped Imperial bushel.

A bushel-basket is also employed, but chiefly for Apples. It is of a different form from either of the preceding and varies more in its dimensions. Its form is that of an inverted frustrum of a cone. One measured was $9\frac{8}{10}$ inches in diameter at bottom, $14\frac{1}{2}$ inches at top, and 17 inches deep, containing $2089\frac{1}{2}$ cubic inches; consequently, about 228 cubic inches, or rather more than 3 quarts, short of an Imperial bushel. As the fruit is generally a little heaped, the quantity contained may be considered equal to that of an Imperial bushel.

Punnets are of various sizes. They are made of deal laths, split exceedingly thin and in the direction of the silver grain of the wood, across the annual layers; for although these layers easily separate, yet they will not readily subdivide so as to obtain portions of the requisite thinness and uniformity. Punnets for Sea-kale are $7\frac{1}{2}$ inches wide at the bottom, 8 inches at top, and 2 inches deep. For Radishes, to hold 6 hands, the punnets are made 8 inches wide and $\frac{1}{2}$ inch deep; and for 12 hands, or small handfuls, 9 inches wide and $\frac{1}{2}$ inch deep. Punnets for Mushrooms are 7 inches wide and $\frac{1}{2}$ inch deep; for small Salad, $5\frac{1}{2}$ inches wide and $\frac{1}{2}$ inch deep.

Potatoes are sold in the London markets by the Imperial bushel, or a weight of 56 lbs., there being 40 bushels to the ton; but it is customary, when the Potatoes are unwashed, to allow 60 lbs., and sometimes 62 lbs., to the bushel. Walnuts and Nuts are sold by Imperial measure.

TRELLIS FOR CLIMBERS.



AMATEUR'S GARDEN. No. XLVIII.

As many of the readers of these papers have a small greenhouse in their garden, a few hints on its winter management will probably be acceptable to them. A house of this kind, properly constructed and filled with pretty flowering-plants, is a source of endless gratification to the possessor, particularly in the winter and spring months. He can then walk among and enjoy the lovely flowers indigenous to the southern hemisphere—the Chrysánthemum, the Chinese Primrose, the Epacris, the Camellia, and the Rose; which, although they have travelled far from their native country, still keep up a kind of sympathetic friendship with those they have left behind by flowering when they flower, in their own summer, although that should happen in the winter of that country to which they have been removed. To grow and flower these plants well, however, they must be kindly treated; that is, the greenhouse must be properly built—the temperature, fresh air, soil, and water, all attended to. With regard to the construction of a house, there is this consolation, that it is just as easy and as cheap to build it in the right way as in the wrong; and therefore, those who fail for want of a proper greenhouse have only themselves to blame. For a full explanation of the way in which this should be done, I must refer the Amateur to articles on this subject published at pp. 53 and 763 of the volume for 1841. With reference to the general management at this season, the temperature at which the atmosphere ought to be kept is, perhaps, of the greatest importance. If the house is filled with what are called hard-wooded plants, such as Heaths and Epacrises, no more fire-heat is wanted than what is necessary to exclude the frost. It may be left at about 40° at night, which will allow for the decline of the fire in the morning; and although the thermometer should indicate 33° or even 32° before sunrise, the plants will not sustain the slightest injury. They have even escaped unhurt when the mould has been completely frozen; but this is rather a dangerous experiment, and should always be avoided if possible. If the greenhouse contains soft-wooded things, such as Pelargóniums and Calceolárias, the temperature should be kept a little higher. About 38° or 40° should be the minimum in this case, and such a house may be left for the night at 45°. Of course the temperature will rise much higher during the day when the sun shines, but then the sashes should be opened, and fresh air admitted freely.

A high temperature in greenhouses during the winter months is very injurious to the health of plants, causing them to grow in the absence of light; they then form weak shoots and yellow leaves, and when the sun has more power in spring they are not able to bear up against it. If, by any accident, the thermometer sinks below the freezing point in the morning, the temperature should never be suddenly raised by artificial means; for this is found to produce worse effects than several degrees of cold. The best way is to cover the house with mats, which shade the plants from the morning sun, and allow the thaw to be gentle and gradual.

Water should be given sparingly in the winter season, particularly in frosty weather, and then the plants should never be watered in the afternoon. Few will require repotting now, unless it be Pelargóniums and plants of that kind intended for exhibition; but when other things require it, they should be shifted without waiting until spring. Those who wish to excel in the cultivation of greenhouse plants should never bind themselves down to shift all their specimens at a particular season, even if books tell them to do so.—*R. F.*

HOME CORRESPONDENCE.

The Importance of Draining Land.—You justly remarked in an April Number, that everything resolved itself into various gases, taken up by the atmosphere, and not wasted, but re-applied to the formation of new matter. You have also, in subsequent Numbers, justly reproached the farmers with allowing the most valuable portion of their manure to escape. Still more might be said with regard to drainage, without which (on heavy land) the greatest quantity of manure may be said to be absolutely wasted. In illustration—I cultivated two pieces of stiff brick earth, both richly manured—the one drained, the other not; both, however, having a considerable fall. In the drained land, everything luxuriated and was early; in the other, the very reverse—all stunted and late. So wonderful a contrast convinced me that there were powerful chemical agencies at work. A reference to "Henry's Elements of Chemistry" (page 427, vol. 1) cleared up the mystery. There it is stated that hydrogen has the power of instantaneously absorbing, under pressure, seven hundred times its own volume of ammonia. Well may vegetation improve after a shower, where the rain can percolate through the well-drained land, bringing down with it, to the roots, the much-desired ammonia; and equally clear must it be that undrained land, already saturated with stale water, can derive no such benefit, for the rain cannot filtrate, but runs off the surface. Again, without drainage, the only escape for moisture is by evaporation, which, it is well known, causes excessive coldness; besides, wet land, not being porous, is deprived of the rays of light, of heat, and of the nitrogen of the atmosphere, which would naturally occupy the pores vacated by the water in its downward course. It is lamentable to see the immense sums wasted in this country on undrained lands—in manure, extra manual and animal labour—with an unprofitable return of capital. Was there ever a farmer who drained, but would tell you it paid itself principal and interest, in the very first or second crop? There is little doubt that the perfect drainage of all the heavy and spongy land in the United Kingdom would increase the produce at least one-fourth, at a diminished expense, and render us no longer dependent on foreign supplies. I have heard many persons say that "their land was so stiff, that it was of no use draining it"—illustrating their remark by saying, that "water will remain in a horse's foot-hole till it evaporates." Do try and convince them that it cannot go down unless they *make a way for it.—J. J. M., Stamford-hill.*

Planting Trees.—I have no doubt but the leading article on planting in Number 45 will draw the attention of some able correspondent on forest-pruning to the subject of planting, which must be considered one of paramount importance. Every one who has had experience in the management of young plantations must see the truth of your remarks on the bad effects which generally follow planting on the ground which has not been properly prepared by trenching, or having the soil otherwise broken up to a considerable depth. But with respect to planting large tracts of mountainous or hilly ground, it is often not practicable to break up the whole surface, nor, in my opinion, is it always necessary where Larch and Scotch Firs are the only sorts of trees generally planted; for instance, the Bin Hill, in Aberdeenshire, which measures 2,500 acres, the property of the Duke of Richmond, which was planted by his Grace 3 or 4 years ago in the slit mode, and, I dare say, cost little more than a pound per acre for planting. In high and bleak situations, the smaller the trees are at the time of planting, the better they are suited for the purpose; for it will generally be found that a two-years-old seedling Larch, planted in the slit mode, or by the planter's hack or mattock, will in a few years be as large a tree as one four feet high planted in a pit by its side at the same time; supposing them both to grow, the chance of which will be greatly in favour of the small one. This is clearly demonstrated in a large plantation of Larch on a high steep hill near Radnor, in South Wales. I was told that, for experiment, the whole of the ground was first planted with strong plants, four feet high, at 14 feet apart; these, of course, were planted in pits. The ground betwixt them was then filled up with two-years-old seedlings, set in about 4 feet apart in the slit manner. When I saw this plantation about twelve years after it had been planted, there was no visible difference in the height or stoutness of the trees; those planted in the pits could only be distinguished by having, in some instances, rather more branches near the ground. They were all in a thriving state, the general height round the top of the hill being about ten or twelve feet, which gradually increased to its base, where their height was about 18 feet. I have seldom, in any part of the country, seen Larches make such rapid growth as on the steep slopes at the bottom of the mountains in South Wales, where Larch, and, in fact, all other kinds of wood meet a ready market for the iron-works. Mr. Dalrymple, who manages the Marquess of Bute's extensive plantations at Cwm, Neath, Glamorganshire, told me, some years ago, that he had been thinning some Larch plantations which had only been planted twelve years, and that 14 of the trees thinned out generally weighed a ton, and sold for a guinea. There are many inducements for gentlemen to plant Larch extensively, for it will grow in almost any soil or situation; it soon becomes fit for the market, and at present there is not enough in the country to supply the demand. Since I came to Ireland, I have seen some timber-merchants a hundred miles from home, hunting for Larch timber, to enable them to execute their English orders. In planting hilly ground in the slit mode, there are two or three things which ought to be particularly attended to; namely, to burn all Heath or other herbage—to cut plenty of drains, when necessary, before planting—to use small plants, and to see that they are not choked by Ferns, or other weeds, for some years after planting. I have lately heard that some of the Scotch lairds are trying to raise timber on their hill-sides, by sowing the seed among the Heath, and harrowing the Heath afterwards. Perhaps some of your correspondents could give a little information on the subject.—*J. Alexander, Carton Gardens.*

Increase of Timber in Trees.—"Quercus" having requested a little more explanation from me on this subject, I shall briefly reply. Some time since he raised doubts and misconceptions of my system of pruning forest-trees, without having seen my practice or read what I had published on the subject. I do not think that a controversy of this kind will advance the science; but I may state that I have lately written a short explanatory essay upon this subject, which may perhaps be published by the English Agricultural Society. If they do not print it, perhaps I may choose some other way of bringing it before the public; as "Quercus" seems so fond of his favourite term "reciprocity between the roots and branches of a tree," and the "prune-not-at-all system," a system which I fear will gain many converts, as it requires neither reflection, labour, nor expense. As it is certain that there can be but few roots without branches, and as the roots are increased with or by the branches, to please "Quercus," let there be a reciprocity between them, if that is the most intelligible term, which I much doubt; I still maintain that which I have proved in my former publication, that the increase of timber in trees is in proportion to the number and healthiness of the branches and leaves, and is produced by the descending fibres, filaments, or woody tissue, and from the leaf and leaf-buds of each successive year, to the collar of the roots, which increases the roots also; hence the greater number of branches, with healthy leaves, is the true cause of the increase of timber in trees. My system of training is simply to regulate those parts according to science, so as to aid those properties in accelerating the elongation and regular increase of the timber in the stem, and not "to expend itself in making useless branches," instead of useful profitable timber. I hope this will satisfy "Quercus;" and I repeat my firm conviction that nothing will effectually dispel the confusion on this subject, in any reasonable time, but what I have repeatedly suggested, namely, experimental plantations to teach by example.—*W. Billington, Underhill, Oswestry, Salop.*

Cutting Coppice.—I think it is in the Netherlands, that they have a method of cutting coppice wood which appears to be much preferable to that adopted in this country. The workman stands with his back to the stool, and cuts between his legs, with an instrument much like a wheelwright's adze, but with a shorter handle. The cut is by this means made slightly sloping upwards, and with a clean face without cracks or splinters; an advantage too obvious to mention. It is true, that in some of our older woods, the stools will be too high to render this method available; but in younger woods, and where the stools are low, it may be adopted with good effect. The cut is closer, the work neater, and it is stated that a man will cut much more in a day than with our common tools. —*Lusor.*

Shakspeare.—Can any correspondent of the *Chronicle* explain the reason why Shakspeare says the Primrose dies unmarried, in the following paragraph?—

> ——— "Pale Primroses
> That die unmarried, ere they can behold
> Bright Phœbus in his strength.
>
> *Winter's Tale, Act* 4, *Sc.* 3.

I conjecture that Pale is a misprint for Tall, and that Shakspeare referred to the Oxlips, which rarely bear seed.—*Theophilus Forsyth.*—To me it seems that Shakspeare wrote exactly what is printed, and that he meant the earliest of all Primroses, which, flowering when light and warmth are insufficient to invigorate them, perish without seeding, and that he thus distinguished the early pallid flowers from the later darker-coloured ones.—*Jael.*—[We should entertain the latter opinion, if we were sure that the early Primroses do not bear seed. We commend the inquiry to our country friends this ensuing Primrose-time. If it is really true that the Winter Primroses cannot seed, we shall have a new proof of Shakspeare's intimate acquaintance with Natural History; if it prove otherwise, why, in that case, another explanation of his meaning must be sought for.]

Weight of Pine Apples.—During the late summer six Pine Apples have been cut at this place, the respective weights of which were 7 lbs. 4 oz., 8 lbs. 2 oz., 8 lbs., 7 lbs. 8 oz., 9 lbs. 8 oz., and 10 lbs. 6 oz.; being an average for each fruit of rather more than 8 lbs. 7 oz. avoirdupois.—*J. Burr, Gardener to H. Preston, Esq., Moreby Hall, near York.*

Cranberries.—In a recent visit to Hastings, I was pleased to see fresh Cranberries for sale at the fruiterers' shops. In answer to my inquiries, I ascertained that they were the surplus produce from the estate of a nobleman in the neighbourhood. Those who are acquainted with the superiority of the flavour of the fresh berries, to those imported—the rich, racy flavour of the former, compared with the insipidity of the latter,—must feel surprised that this agreeable fruit is not more cultivated in the south of England. There are many swampy spots admirably adapted to the growth of this plant, which are fit for little else; the cultivation would not only afford remuneration to the growers, but the gathering would also furnish employment to many young persons.—*C. P.* [The American Cranberry, although inferior to our English species, is best suited to cultivation.]

Asparagus.—I am induced to acquaint you with the following successful mode of treating Asparagus, in the hope that it may prove interesting to your subscribers:—Instead of the usual plan of autumn-dressing the beds, by placing manure upon them, and throwing earth from the alleys to cover it, I let the beds remain untouched until the spring (the beginning of March, if fine), when I fork them over carefully, observing that the earth is broken fine, and covers the stools, &c., sufficiently; I then apply my liquid manure, consisting of house-slops properly diluted, plentifully to the beds with a watering-pot having a coarse-bored rose. In this manner Asparagus is produced averaging an inch in thickness and nearly three inches in circumference, of the finest quality. This plan was communicated to me by an amateur, who informs me that it never fails to produce him most plentiful crops averaging the above size. —*Rus.*

Preserving Potatoes.—In a late Number of the *Chronicle*, some advice is given for securing Potatoes for the winter, recommending the old plan of covering them first with straw. From some one of the many excellent papers in the Highland Society's Transactions, I some years ago adopted the simple and better plan of using earth only. Straw soon decays, and is then anything but sweet, while common earth keeps the Potatoe always sweet and moist without fermentation, especially if some be mixed here and there among the Potatoes when they are ridged up. From this pile or ridge, they are got in daily for use; and the difference in flavour is soon observed to be in favour of those brought in this morning, over those of the previous day. There is something in the nature of earth particularly suited to the Potatoe. If straw be used at all, it should be on the outside of the covering of earth.—*S. H.*

Potatoes for Fattening Oxen.—I once tried an experiment in stall-feeding oxen with raw Potatoes. Each bullock was allowed about $\frac{3}{4}$ cwt. per day, with a peck of barley-meal, and as much hay as it pleased. I consumed about 35 tons of Potatoes, and, although the bullocks did get fat at last, the return for the Potatoes was very small indeed—less than 30*s.* per ton. They were too laxative in the raw state; insomuch, that it was scarcely possible to keep the poor animals clean; and the smell of the cattle-house was exceedingly offensive. I have since given steamed Potatoes pretty extensively to horses, under the severest work, with good effect. Each horse was allowed daily about 20 lbs. in a warm state, mixed with bruised corn, cut hay, and salt. I once attempted to rear little pigs on raw Potatoes only: in two or three weeks one died, and the rest would speedily have followed, had not their diet been changed. My experience induces me to conclude that raw Potatoes are worse than useless as food for live stock.—*Lusor.*

Saving Seed of Vegetables.—I find so much difficulty in procuring good vegetable seed, even from London, that I think it would prevent trouble and disappointment if a few amateurs would agree amongst themselves, for each to save seed of a particular vegetable, for distribution amongst their own party—one, Cauliflower; another, Savoy; a third, Broccoli, &c.; so as to insure obtaining the true breed. This might be done, if only one species were allowed to ripen in the same garden.—*W. W.*

Guano.—As much has been said of the effects of guano upon vegetable products, I am induced, from my own observation, to give you an instance of its value as a manure compared with bone-dust. On a chalk hill, belonging to Mr. John Brett of this town, where the soil is very thin, White Turnips were sown, one-half of the field being drilled with guano, and the remainder with bone-dust. The result is that the former produced Turnips of an extraordinary small size; but where the bone-dust was used, they were rather large; indeed the difference is so great that, from a distance, only part of the hill appeared to have any crop on it.—*Fred. Chase, Langley Lodge, Luton.*

Adulteration of Soot.—This is carried on to a considerable extent, not only by mixing ashes with it, as noticed by "T. O.," but also in the fens of Norfolk and Cambridgeshire, by mixing black fen soil with it, which, if collected when dry in the summer season and finely sifted, may be used to the extent of one-fourth without any fear of detection.—*Judex.*

Derivation of the word Martagon.—In Casteli's Lexicon I find the following explanation of this word :—"Martagon is the name of a plant called the Mountain Lily, concerning which consult the authors on Botany; it is said vulgarly to come of a *golden root.* Hence the Alchemists transferred it to the materials of the Philosopher's Stone, which they called Martagon, as appears from the *Theatr. Chym.*, vol. i., p. 512."—*A. H.* [Now, then, if any one will tell us why the Philosopher's Stone was called Martagon, the mystery that surrounds this word will be cleared up.]

Poisoning by the Roots of Œnanthe crocata.—It has been sometimes asserted, that the plant of Œnanthe crocata is not poisonous, and that the roots may be eaten with impunity. This may be the case when the root is cooked, but certainly not when it is eaten raw. The daily papers relate a case of poisoning, which has lately occurred from eating the roots of Œnanthe crocata instead of Horse-radish. At first sight it would appear that such a case could indeed but seldom occur, as the Œnanthe is not likely to grow in gardens where Horse-radish is cultivated. It may not, however, be generally known, that the root of the Œnanthe resembles that of the Dahlia, and that trampers make a practice of selling these roots, instead of those of the Dahlia; and thus the roots of the Œnanthe are much more frequently found in gardens around London than, but for this circumstance, could have been expected. It is probably only at a season of the year like the present that such a mistake could be made, but persons cannot be made too generally aware of the necessity of caution, in guarding against confounding the poisonous and nutritious roots of our gardens. The same mistake as that committed above has been made with regard to the roots of Aconite and Hemlock, and in most instances with fatal effects.—*E. L.* [We do not know who can be so rash as to assert that this most dangerous plant is not a fearful poison in all states.]

New Mode of Catching Rats.—A novel plan of destroying rats has lately been practised in this part, which is likely to supersede all other methods. A gentleman in the neighbourhod of Satterthwaite, being tormented with these destructive vermin, which visited his pigsty, and robbed the grunters of their food, determined to put a stop to such proceedings. He accordingly took a fishing-rod, with line and hook attached; and having baited it with a piece of bread, he stood at a little distance from the pigsty, and threw in the line. In about ten minutes, he succeeded in catching no less than six rats.—*Facile, Garstang.*

Scarecrows.—I do not know what antipathy a "domesticated rook" may have to a "white kitten" in a living state; but it is a fact that wild rooks are devouring some Wheat within a few paces of a dead white cat. I presume it is the feline embrace of Miss Puss that Mr. Rook is afraid of, and not her immaculate skin.—*Judex.*

The Migration of the Swallow.—The migration of birds is an episode in their natural history not unfraught with the most curious interest, though an event perplexed with obscurity. They know their appointed time, and that is almost the sum and substance of our knowledge on this strange event. At Brechin, N. B., the house-swallows congregated in vast numbers round the church steeple and tower of the Mechanics' Institution, on the 24th Sept. and two preceding days. They seemed restless and uneasy. On the 26th and 27th, none were to be seen. Perchance, in two or three days thereafter, these interesting beings were fluttering round the Palm-trees of Africa—"Happy bird!" said I, "that can 'flee away, and be at rest.'"—*J. Murray.*

FOREIGN CORRESPONDENCE.

Malacca—an Ascent of Mount Ophis.—The party which was given by Sir W. Norris, the Recorder, left Malacca in February. Our first march was to Ayer Pannus, the second to Chubow, the third to Gummy or Mirring, the fourth to the top of Goonoon Toondook—a peak within twenty miles of the summit of Mount Ophir, or as the Malays call it, Goonoon Leydang. The whole distance is about 51 miles. With the exception of the first seven miles, the road runs almost entirely through forests, occasionally intersected by strips of swamp, and by the occurrence of villages, which are almost always on the edges of these swamps or rice-flats. The surface throughout the forest is greatly undulated; the road is traversable by wheel carriages as far as Rhim (lately a military post), but after that place is passed, it degenerates into a Malay footpath. The great features of the first seven miles are the rice-flats and Gluon trees (Melaleuca Leucadendron), which occur in profusion wherever the ground has been undisturbed for some time—being always planted on the sides of the roads running across the swamps. This plant is one of our most decided Australasian forms. The forest can scarcely be said to present any characteristic feature, all sorts of plants swarming in it. The most common trees are the Dammars (Dipterocarpus), which attain their usual striking size; but great as they are, they are overtopped by the Melk-trees, which I take to be Artocarpi or Fici. The vegetation of the swampy strips and their borders is different from that of the forest itself, and is in one way characterised by the absence of large trees. It would be too tedious to enumerate the various novelties that I met with during each march. After starting from Gummy, one soon begins to ascend the mountain, which consists (on this side at least) of three peaks—Mounts Miening, Toondook, and Leydang. The first takes a long time to surmount; on reaching its summit a sharp descent takes place to the base of Toondook. The ascent then recommences, and continues through tropical forests until a well-known place called Puddam Bhattoo is approached. The vegetation then begins to change, as exemplified by the occurrence of Dacrýdiums; and when Puddam Bhattoo is reached, the change is as complete as could be desired. This place is nothing more than the rocky exposed face of the mountain; it is otherwise well known as being the first watering-place. Here, instead of the dense dark tropical forest, you meet with stunted trees and bushes belonging to the genera Bæ'ckia, Leptospermum, Illícium, Dacrýdium, Leucopogon, Aly'xia, Ardísia, and Rhodámnia; the two first being the prominent features. The face of the rock, where the trees or shrubs are scattered, is covered by Cyperáceæ, Hedyotis, Nepenthes, and Arundinária; among which Burmannia disticha, like Dischídia Rafflesiana, and a curious tomentose-flowered E'ria, occur. From this place to the summit of both Toondook and Leydang, no very remarkable change takes place; the path ascends steeply along a rugged ridge, clothed with the same stunted bushes, literally covered with Mosses and Jungermánniæ, especially the latter. In this line Matónia occurs in profusion, occasionally with Polypódium Wallíchii, or one very much like it. The summit of Goonoon Toondook, on which place we passed the night, in a hut made of Kasang (a Pandanus) leaves, sent from Malacca on purpose, is so little inferior in height to Leydang that the vegetation is much the same. It is a very exposed place, and distant from water; nevertheless, it is preferable to the usual halting-place. The descent from it to the base of Leydang is very steep, but short; the profusion of Mosses, among which is a very fine Bryum (B. araucária, temporarily), and of Jungermánniæ, is, if possible, increased. Then comes the ascent, very steep, over rock like that of Puddam Bhattoo, covered with nearly the same kind of plants. This is the station for the vaunted Ophir Cypripédium: an Impátiens also occurs. Then one reaches the "Big Rock," the usual halting-place, a large naked mass, projecting upwards at a considerable angle; under it is a small spring. There I found a minute Sonerila, an Utriculária, a curious Cyperaceous plant, with equitant leaves like those of Dianella, Juncus, Cœlogyne, &c. From this rock to the summit may be 150 feet, over an equally steep and uneven, but much drier surface. The summit of Mount Ophir is exceedingly confined; the sides being rugged and precipitous. Here I gathered the same Leptospermum, an undescribed species of Annesléa, two shrubby Rhododendrons, a species of Vaccinium, a Tristánia, a Symplocos; an Elæocarpus looking much like an Andrómeda, with diœcious or polygamous flowers, and definite stamens; a large yellow-flowered Spathoglottis, Lindsæa, Neurónia of Don? Cœlopyrum, and several other interesting plants. After remaining on the summit for half an hour, during which it cleared up sufficiently to disclose a view remarkable for the extent of jungly or forest-covered country, from which seas of mist were becoming every moment disengaged—interminable on the east side, on the west bounded by the coast of Malacca—I descended, grieved that I could not remain in such a place for at least several days. We breakfasted on the top of Toondook, and the evening found us at Gummy. From experiments made under the Big Rock, on the top of Toondook and at Malacca, with a thermometer, made under the supervision of Mr. Horsman Solly, and in some measure corroborated by other ordinary thermometers similarly fitted, I make the extreme height 3,200 feet; others have made and make it 5,600 or 6,000. The question I shall not consider settled until I have taken barometers to the summit, although I could adduce many natural reasons for adhering to my own results. Almost all the features of the vegetation of the loftier parts from Puddam Bhattoo are peculiar, although in the presence of Burmánnia, Nepenthes, Neurónia, Symplocos, Rhododendrons, Impatiens, Polypódium Wallíchii! Sonerila, and Illícium, it approaches to the flora of the Khasigya mountains. Its most marked general features are the stunted size of the trees, and the profusion of Moss-like plants. Its marked partial features are Dacrýdium, Bæ'ckia, Leptospermum, Nepenthes, Leucopogon, and Matónia; the last should be first so far as we yet know. Through several of these it shows affinities with the vegetation of Australia and the Polynesian group; particularly if we add Tristánia, and two species of Osyris subgenus Pentameris. The only northern plants are Rhododendron; Vaccinium, which is not Jackson's Goonory Bunkoo species; the Impátiens, which is like I. Mastersiana; and Juncus. I was certainly disappointed in the Ferns, excepting Matónia, of course; the range of this plant is, according to my experiments, from 2,300 to 2,500 feet. On looking hastily over the Ferns, I find they consist of a short-leaved Vittária, a Davállia like D. pectinata, two or three Lindsæas, Polypódium Wallíchii, P. fronde 1-pinnata, and a subarborescent species of the same genus, two Gleichénias, several Trichómanes and Hymenophylla, Neuronia, a very small Schizæa, and a plant which, although it has no glands, and has the pinnules pinched or compressed opposite the sori, I believe, may belong to Adenophora. Of Lycopódia, I procured four or five species of very various forms. I may say the same of Orchidáceæ; my list only contains one Spathoglottis, one Trichotósia, one remarkable Dendróbium, one Hermínium, one Cypripédium, and one E'ria. I have still several Ophir plants, which have puzzled me. Of these, the most remarkable is a shrub with the habit of Olax; an inferior bilocular, several ovuled ovarium, indefinite highly monadelphous (Meliaceous) stamens, and five petals, appearing to adhere in some degree with the "tubus stamineus," evidently approaching Blume's Calpándria. My space, however, becomes limited. We had the vilest weather imaginable; for six out of eight days it rained heavily. The day of the ascent was really dreadful, and thoroughly disheartening; clouds, rain, squalls, drippings, mud and slush, all combined. Lieutenant Spottiswoode and myself, who were the only pedestrians, were scarcely ever dry, except in the throat; and, what is worse, we were scant of brandy and water. The whole party returned safe and sound. This immunity, the natives say, was owing to Sir W. Norris leaving a horn at the foot of the mountain, the deity of which was pleased with the compliment. One Cooly died about fourteen days after, who, of course, turned out to be the horn-carrier.—*W. Griffith, July* 2, 1842.

PROCEEDINGS OF SOCIETIES.

BOTANICAL SOCIETY OF EDINBURGH.

Nov. 10.—Prof. Graham in the chair. J. E. Winterbottom, and J. Carter, Esqrs., were elected non-resident Fellows; and Mr. J. Thompson, an associate. A donation to the library was announced from T. Brown, Esq., and numerous parcels of plants, &c., were stated to have been received since last meeting. Mr. Brand read a paper by Mr. Edmonstone, jun., on the Botany of Shetland, and instituted a comparison between the numbers of genera and species existing in that region, and those which occur in other districts of Scotland. "The Botany of Shetland," observes Mr. E., "though not very extensive, is interesting. Many of the less common (chiefly subalpine) plants are abundant in all situations, while many species commonly distributed, and indeed often marked as universal, throughout Great Britain, are rare or altogether unknown in Shetland. Among the last may be mentioned—Alchemilla arvensis and vulgaris, Briza média, Prímula veris, Anagallis arvensis, Convolvulus arvensis, Teúcrium Scorodónia, Gerániuin Robertiannm, Lapsana communis, and other common weeds. Again, Thalictrum alpinum, Blysmus rufus, and other local plants, are abundant, growing down to the sea level; and sylvan plants, associated with woods or luxuriant pasturage, are almost entirely wanting. The geology of Shetland is rich in interesting phenomena. The formation is almost wholly primitive—the most abundant rocks being gneiss and mica-schist, clay and chlorite slate, granite quartz, serpentine limestone, &c.; besides which, there are amygdaloidal porphyritic rocks of different kinds. The difference of formation between Shetland and Orkney is striking—that of the latter being as uninteresting as the former is the reverse. Orkney consists chiefly of an apparent continuation of the north coast of the mainland, being composed of sandstone, clay-slate, and other secondary rocks, while the Shetlands may be said to belong to the oceanic series of islands. Again, the difference seems as great between the Shetland and Faroe Isles—for in the latter group the rocks are all basaltic. Many of the Shetland rocks bear great similarity to those of the south of England—chrome ore, native magnesia, serpentine, crystallised fluor, and several others, being common to both extremities of Great Britain, though rarely found in the intermediate space; and it is a singular fact that some of the plants present a corresponding analogy, as for instance Láthyrus maritimus, &c. The prevalence of peat is a characteristic feature in the general aspect of Shetland, and proves beyond a doubt the abundance of trees in former ages. Judging from the remains, these seem chiefly to have belonged to the Hazel and Pine tribes, as trunks and nuts of the Hazel, and cones of Abies Picea, have repeatedly been dug out of the moors. This evidence of their existing formerly in such abundance, leads to the question whether such trees may still be grown. I do not think that the experiment has been fairly tried; but many reasons seem to render it unlikely that trees could be profitably reared. The frosts and cold weather which occur early in autumn do not leave the plants time to form their buds for hybernation before the old leaves are nipped; and the heat of summer is by no means sufficient to compensate for its shortness. I do not attach so much importance to the influence of the sea spray, by which, during heavy gales, Shetland is liable to be swept—for these generally occur after the sap has descended, and the plant is dormant. I may here mention some experiments carried on by my father for five or six years, in order, if possible, to settle the question. He obtained from Messrs. Lawson all the more generally cultivated trees and shrubs,—N. British, N. American, and N. Asiatic,—and the result has been as follows:—Among the indigenous trees of Scotland, the Ash appears to stand as well as any other, since it puts forth its leaves late and loses them early. Of the scarcely indigenous, or naturalised species, the Plane-tree appears to be the hardiest; while the Birch and Scotch Fir will scarcely live a year. Again, Pinus montana and Æ'sculus Hippocástanum, comparatively tender plants, appear to thrive well—and Pyrus aucupária, indigenous with us, succeeds tolerably. Almost all the Willows do well; Salix Russelliana, frágilis, cinérea, viminalis, and vitellina, among the best. The Alder is too early in putting forth its leaves; but some Poplars appear to thrive, especially the White Scotch, Black Italian, and Lombardy; Pópulus nigra is indigenous. Oak and Beech will not grow at all. Generally speaking, evergreens, both trees and shrubs, appear not to suit. Pinus Cembra, and the spruce, black, white, and Norway, have all been repeatedly tried, but seldom languished a year. Even the hardy shrubby evergreens, which are indigenous, or in every shrubbery on the mainland—as Ilex aquifólium, Rhododendron pónticum, and flavum, Viburnum Tinus, &c.,—die almost immediately. Among the best thriving evergreens may be mentioned A'rbutus mucronata, Cotoneaster Uva-ursi, Hédera Helix, &c. The latter, indeed, is a native and in some situations thrives, as it also does in Orkney. The climates of Orkney and Shetland differ little, but scientific observations have only been recorded of the former. 'Regarding it,' Mr. Clouston states, 'the high latitude of Orkney will no doubt induce many persons even in Scotland to suppose that our winter is much colder than that of any other country, and it may surprise them when we say that our winter is as warm as that of Glasgow, and several degrees warmer than that at Applegarth in Dumfriesshire, on the southern border. This is owing to the influence of the surrounding ocean, which elevates the temperature of winter as much as it lowers that of summer. Thus, the temperature of Orkney in May, June, and July, is 7 degrees below that of Glasgow during these months; but for the whole year the mean annual temperature in Orkney is nearly the same as that in Applegarth, both being about 46 degrees, or 3⅔ below that of Glasgow.'" Mr. Edmonstone goes on to observe, that "the uniformity of temperature in Shetland strikes every one; and a remarkable feature in the climate is the great and almost constant humidity. These causes, no doubt, have a great influence on vegetation, for there is not a semblance of Arctic, and scarcely of Alpine, vegetation throughout the islands. This is certainly what might be expected; but there are other anomalies which cannot be altogether referred to climate; and the extreme scantiness of the flora is remarkable, considering the extent of the islands, and the variety of soil, exposure, and situation." The flowering plants (including the Grasses) hitherto observed in Shetland extend to 94 genera and 178 species; while those found in the district of Moray amount to 333 genera and 692 species; and even in a range of 16 miles round Aberdeen, there have been found 287 genera and 562 species. In a similar extent round Edinburgh, the numbers are 389 genera and 908 species—while the flowering plants of Great Britain extend to 523 genera and 1594 species. The proportion of species to genera is also least in Shetland and Aberdeenshire, being only 2 to 1, whereas in the Edinburgh district it is 2⅓ to 1; and in Britain generally it is 3 to 1.—The statements in the above paper led to some interesting conversation. Prof. Graham remarked, as a phenomenon, which has not hitherto received a satisfactory solution, the entire destruction or absence of wood in many parts of Scotland where once it evidently abounded, and where the change cannot apparently have arisen through human instrumentality; he observed that the investigation of this subject would be attended with interest, besides being of importance in a national point of view.—Dr. Neill said, that in his opinion the peat mosses of Scotland have been formed at an earlier period than is usually supposed - some of them containing trees which do not now exist in the country; and he suggested that means should be taken to ascertain the particular species of which the mosses consist, by taking specimens of wood and seeds, or cones, &c., from the successive layers, and duly noting their relative position, with all such circumstances as might tend to establish a correct theory respecting our aboriginal forest vegetation; indeed, he had once proposed that a prize should be offered by the Highland Society for the best essay on this subject; but his proposal had not been carried into effect.—Mr. Brand remarked that, in this country, as in America, the forests in many places appear to have been destroyed by fire, and he instanced some Oak-trees in Dalkeith Park, which appear to have been burnt down at an early period, and to have thrown out new trunks from the stumps at a later date.—Mr. Goodsir supposed that the increase of peat might gradually render the soil unfit for the support of trees, and stated, in reference to a remark made by Prof. Graham on the approach of the Alpine plants in Shetland to the sea-edge, that this peculiarity coincided with the elevation of the deep sea invertebrate animals, to the high-water mark in the same locality.

COUNTRY PROCEEDINGS.

Oxfordshire Horticultural Society, Nov. 17.—The annual general meeting of this society was held in the Council Chamber,—C. Peers, Esq., in the chair. The following report of the Committee was read:—"In laying a statement of the affairs of the Oxfordshire Horticultural Society before the members, the Committee for the year 1842 would have felt gratified if they could have reported that there had been a surplus of receipts for the year, so that the balance of last year might have been increased instead of being diminished; yet they have great satisfaction in announcing that the Society is in a flourishing state, and although the balance in the hands of the treasurer is not large, a considerable addition has been made to their property in the purchase of baskets and stands for exhibition, &c. The amount of prizes this year has exceeded that of last by upwards of 20*l.*, which has been occasioned in a great measure by a more extended competition for the cottagers' prizes. During the year 1841 the cottagers exhibited 250 productions in vegetables and fruits, and 113 prizes were awarded. In the present year they have exhibited 302, and 155 prizes have been awarded, being an addition of 42; and the Committee have reason to believe, from the extensive benefit which those cottagers who have hitherto been recommended have received, not only in a pecuniary but in a moral point of view, from the premiums for industry held out by societies like this, that there will still be a much greater competition; they therefore beg respectfully to call the attention of the gentry of the neighbourhood, and the parochial clergy in particular, thereto, and request them to assist with their subscriptions, and in recommending proper persons to compete for the cottagers' prizes. The Committee have to regret the death of several old and valuable members, and that there has not been a corresponding increase of honorary members; but at the same time they have pleasure in stating that the numbers are gradually increasing. The Committee cannot close their report without congratulating the members on the kindness shown by different public bodies in the University, County, and City, in allowing the exhibitions to take place in their buildings and gardens—and beg to tender their thanks to the Magistrates of the county, for the use of their County Hall; to the Professor of Botany, for the use of the Botanic Gardens; to the Radcliffe Observer, for the use of the Observatory Grounds; to the Provost and Fellows of Queen's College, for the use of their College quadrangle and cloisters; and also to the Mayor and Council of the City of Oxford, for the use of their Council Chamber." W. H. Ashhurst, Esq., was elected President in the room of the late Earl of Macclesfield. The following gentlemen were appointed as the Committee for the ensuing year:—C. Peers, J. W. Henley, M.P.; J. H. Langston, M.P.; W. H. B. Earle, J. Morell, jun., M. J. Johnson, J. Saunders, Esqs.; the Rev. the Provost of Queen's College, the Rev. J. Baker, the Rev. Dr. Barnes, the Rev. A. H. Matthews, the Rev. V. Thomas, Dr. Daubeny, and the Rev. H. Cary; also Messrs. W. Collcutt, J. Stevens, J. Hastings, jun., W. Day, J. Maltby, T. Looker, W. Plaister, T. Joy, T. Walker, J. Perkins, J. Phillips, and J. Birch.

MISCELLANEOUS.

THE GARDENER OF THE HALL.

When She was born I had been long the Gardener of the Hall,
The shrubs I planted with my hand were rising thick and tall;
My heart was in that work and place, and little thought or care
Had I of other living things than grew and flourish'd there—
Beneath the happy shelter of
The Old Manorial Hall.

At first She came, a rosy child, a Queen among my flowers,
And play'd beside me while I toil'd, and prattled on for hours;
And many a morning, in the plot of ground she call'd her own,
She found an unexpected show of blossoms freshly blown,
And sent her merry echoes through
The Old Manorial Hall.

Thus eighteen summers, every day, I tended her and them;
I watch'd the opening of the bud—the shooting of the stem;
And when her childly laughter turn'd to silent maiden smiles,
I felt in heaven whene'er she pass'd, and scarce on earth the whiles:
How could I ever think to leave
The Old Manorial Hall?

One day, when Autumn's last delights were nipp'd by early cold,
It fell like death upon mine ear, that she was bought and sold!
That some rich lord, she hardly knew, had come to bear away
The pride of all the country round—the poor man's hope and stay,
The glory and the darling of
The Old Manorial Hall.

I heard her plight to him the troth she could not understand,
I saw her weeping turn away, and wave her parting hand:
And from that hour nothing on earth has gone with me but wrong,
For soon I left the garden, and the home I loved so long—
It was a haunted house to me,
That Old Manorial Hall!—

And now I wander up and down—I labour as I can,
Without a wish for friend or rest—a weary-hearted man;
Yet, at the bottom of my thoughts the saddest lies, that She,
With all her wealth and noble state, may none the happier be,
Than I, the poor old Gardener of
The Old Manorial Hall!——*The Keepsake.*

The Solubility of Lead in all Water containing Free Carbonic Acid.—It is the generally received opinion of Chemists, that spring or river water containing salts of lime, &c., will not dissolve lead or its salts, if kept in or transmitted through that metal, although pure distilled water will hold a considerable quantity in solution. Professor Daniel's attention having been directed, in consequence of some severe cases of colic in the neighbourhood of his residence at Norwood, to the examination of the water, found, to his astonishment, that it contained lead in large quantity, and has established the fact, that in all cases of water containing *Free Carbonic Acid*, lead is readily dissolved, and cannot therefore be safely kept in, or transmitted through that metal. This truly important fact, unless attended to, may *in certain localities* produce much mischief.—*T. N. R. Morson, in the Pharmaceutical Journal.*

Intended Winter Garden at Berlin.—The King of Prussia has given orders for the formation, in Berlin, of a winter-garden, similar to that of Breslau, but on a more magnificent scale. A sum of 800,000 thalers (about 120,000*l.* sterling) has been allotted to this purpose; the field near the Brandenburg gate, known as the Champ-de-Mars, eight hundred feet in length and six hundred in width, has been appropriated as the site; and the works have been placed under the direction of Herr Kroll, the Dresden gardener, who formed the winter-garden of Breslau. The roof will be of glass, supported by columns of granite or cast-iron; the heating will be effected by means of subterranean steam-pipes, and the garden will be lighted by gas. The Botanical Section of the Royal Academy of Sciences has been called on to furnish a list of the exotics which, whether for their beauty or use, it is most desirable to cultivate in the establishment.—*Athenæum.*

Tulipomania.—The sum of 640*l.* has been lately given for the bulb of a new Tulip, called the "Citadel of Antwerp."—*Standard.*—[Is this possible?]

To boil Potatoes.—Wash them well, and put them unpeeled into a covered saucepan with cold water, which must completely cover them. Boil them slowly from half to three-quarters of an hour. Pour the water away, and let them stand five minutes to dry, with the lid partly off.

THE NATURALIST'S CORNER.—No. V.

(Continued from page 728.)

18. The word Nature comprehends three different significations: 1. It means the universe, or material world: we say, according to this signification, the beauties of nature—the riches of nature; that is, of the objects in heaven and on earth presented to our contemplation. 2. It means the power which animates and moves the universe, considering this power as a distinct being, such as the soul is supposed to be with respect to the body. In this second sense we say, the intentions of nature—the incomprehensible secrets of nature. 3. It means the partial operation of this power, as exerted in each individual being, or in any class of beings; and we say, in this third sense, the nature of man is an enigma—every being acts according to its nature. Since the actions of each individual, or of each class of beings, are subjected to constant and general rules, which cannot be departed from without changing and disturbing some general or particular order of things, to these rules of action and motion is given the name of Natural Laws, or Laws of Nature.—*Volney.*

19. The Hirundines (Swallows) are a most inoffensive, entertaining, social, and useful tribe of birds: they touch no fruit in our gardens; delight all, except one species, in attaching themselves to our houses; amuse us with their migrations, songs, and marvellous agility; and clear our outlets from the annoyances of gnats and other troublesome insects. Some districts in the South Seas, near Guayaquil, are desolated, it seems, by the infinite swarms of venomous mosquitoes which fill the air, and render those coasts insupportable. It would be worth inquiring whether any species of *Hirundo* is found in those regions. Whoever contemplates the myriads of insects that sport in the sunbeams of a summer evening in this country, will soon be convinced to what a degree our atmosphere would be choked with them, were it not for the friendly interposition of the swallow tribe.—*Gilbert White.*

(To be continued.)

GARDEN MEMORANDA.

(Continued from p. 775.)

Claremont.—In a neat flower-garden adjoining the gardener's house, there are some fine specimens of Magnólias and Cedars, and a large plant of Glýcine sinensis. The manner in which the unsightly naked bottom of a large Red Cedar is got rid of is worthy of imitation: round the bole of the tree a seat has been formed, and round the circumference of the branches a series of rustic arches has been placed, over which the branches droop and have a very neat appearance. No one would think that deformity had rendered this rustic structure necessary, but, on the contrary, would be pleased with the manner in which the bower has been conceived and executed. Among the groups of flowers in this garden were some large masses of scarlet Pelargóniums, Sálvia patens, Heliotropes, and other showy plants. In a group of orange-scarlet Pelargoniums, called compactum, there were a number of sporting branches, the flowers on which were quite pink; some entire plants had sported in the same way. What can be the cause of this? Is it that varieties are inclined to merge into the character of their foster parents? or does it arise from some constitutional peculiarity—such as the interception of the colouring matter, or the want of pores for its reception? We strongly incline to the former theory, because some years back we had a variety of Pelargónium called Hill's Hector, the flowers of which were pale red, but which produced a sporting branch, with flowers pale lilac; and sometimes, on other parts of the plant, part of a truss of flowers would be the proper colour, and the others lilac. Now this variety was ascertained to have been raised from a lilac flower; and hence, we presume, the degeneracy. A bed of Phlox Drummondi, almost approaching scarlet, was very conspicuous; and some other beds contained scores of self-sown Verbenas just coming into flower. A variety raised by the writer of this, and called V. Neillii rósea, is a good and distinct kind. The flowers are rosy lilac, with a white centre, and are profusely produced. Mr. Malleson had a number of single specimens, many of which were from four to six feet in diameter. Among the plants that stood out under the dwarf wall of a plant stove, unprotected, last winter, may be enumerated Ipomœa Leárii, Abútilon striatum, Twéedia cærúlea, and Brugmánsia sanguinea. They have all flowered beautifully this season, and are in most robust health. Sálvia involucrata was also flowering freely in the same border; but the new kind S. regla, though growing luxuriantly, is not likely, from the paucity with which it produces flowers, to become a useful border plant. Some plants of Ipomœa Leárii and ficifólia, planted in the open ground, and trained to stakes, were flowering, but not profusely. They appear to grow too robustly, and consequently, to insure their flowering in the open ground, it will be necessary to moderate their growth, by planting them in pots in poor soil, or by root-pruning. The same remarks apply to the singular Tropæolum Moritzianum, of which Mr. Malleson has raised a variety, the flowers of which are darkbrown or cinnamon colour, striped with yellow, and without the yellow fringe round the outer edge. In pots it does not flower freely, but perhaps propagation by cuttings of the extreme points of the leading shoots will, in two or three generations, moderate the growth sufficiently to make them flower more abundantly, when, as a curiosity, it will be worthy of cultivation in the flower-garden. Tropæ'olum peregrinum, planted in a large pot of poor soil, plunged in the ground, and trained over a fancy trellis, or the branches of a tree, makes a most interesting object for a lawn or flower-garden. In the stove and Palm-house, the plants are healthy and clean; a circumstance which reflects considerable credit on Mr. Malleson, inasmuch as at the time he entered on the place they were one mass of white scale and mealy bug. They have been cleaned simply by retaining the plants in a vigorous-growing state, by keeping constantly a moist atmosphere, and by syringing occasionally with lime-water. In truth, the plants have been grown out of the insects, which, of all the recipes that have been recommended, is the most advantageous one for clearing either stove plants or Pines of this abominable pest. Of plants in flower in these houses, we noticed Allamanda cathártica, Curcuma Roscoeana, Abútilon striatum trained as a climber, and Passiflora quadrangularis loaded with its curious flowers. A specimen of Cereus truncatus, grafted on a Peréskia aculeata, trained on an arch over the pathway, was loaded with thousands of flower-buds; and some plants of the same species, suspended in wire baskets from the roof of the Palm-house, were also growing luxuriantly. In addition to the above, we noticed, but not in bloom, large specimens of Goldfússia glomerata, Aphelandra cristata, Passiflora fragrans, Cereus serpentinus, and many other good and showy plants. Ipomœa Leárii, ficifólia, and pentadema, the two latter in pots trained over fancy trellises, were flowering profusely. The collection of succulent plants and Ferns is still kept up, though they do not hold so conspicuous a position in the collection as they did in the time of Mr. Macintosh. In the Orchidaceous-house, the plants, though small, are looking well; several Oncidiums were showing bloom, as were also Æschynanthus grandiflorus and Hoókeri. The two latter were growing on small blocks of wood, and were showing bloom at almost every joint. In the Vineries, with the exception of one house, the fruit was cut, but in that there were some of the best Black Hamburgh Grapes we have seen this season; the bunches were large, the berries well coloured and swelled, and the crop quite an average one. The season of Pines was over, but the plants for fruiting next year are very fine. One house of Ripley, or what is commonly called Ripley Queen, for spring-fruiting, which are now twelve months old, are as well-grown plants as we ever beheld: and if they produce fruit proportionate to their size, which there is little doubt of, they will be well worth seeing. A second pit of Ripley and Black Pines, for winter and autumn fruiting, are also very promising. The Pines here, both Queen and Black kinds, are generally fruited at fifteen months old. The soil used for all kinds is Norwood loam, with a slight admixture of sheep's dung, when placed in the fruiting pots. In one of the pits in the Pine-ground, we noticed a collection of the more rare kinds of Abies, Cedrus, Pinus, Picea, Cupressus, &c., which were bought two years since for planting in a Pinetum, which it is the intention of the King to form in the grounds at Claremont. The plants have been encouraged to make two growths each season, so as to get them strong before they are planted out. For immediate effect, there is an advantage in this kind of treatment; but whether it may not ultimately militate against their well-being, remains to be seen. At any rate, if there is any truth in the doctrine which has been advanced in the "Gardener's Magazine" and other places, viz., that the spiral direction given to the roots by their confinement in a pot will, unless the roots are laid out horizontally at the time of planting out, prevent the tree from properly establishing itself, so as to resist the power of the wind, this system is wrong; but if there is not, there is an undoubted advantage in keeping plants in pots until they are thoroughly established. Among the seedling plants in a frame, Mr. M. pointed out a large stock of the Spotted Digitalis, about which so much noise is now made. This variety we have grown for the last five years. Three years back, we sent a packet of seed to Mr. Malleson, and this year he has had scores of plants flowering all through the season. In a long, narrow house, devoted to the culture of greenhouse plants, were some promising young specimens of Erica, Epacris, Correa, Chorizema, Azalea, and other showy plants, with two pretty hybrid varieties of Fúchsia, raised by Mr. M. We saw here, for the first time, the variety called Venus victrix; why called white we cannot imagine, since the difference in colour between this and F. Chandleri is trifling. In the compost-ground Mr. M. was burning the refuse of the flower-garden—such as Pelargóniums, Verbenas, and other plants, the ashes of which, in small quantities, he had been using for some time past with considerable advantage, mixed with other compost, for potting plants. This is a practical application of the hints thrown out by us at p. 381 of this year's *Chronicle*, and we were certainly pleased to find the plan working so well.—*W. P. Ayres, Chicksands, Oct. 15.*

Reviews.

The Grasses of Scotland. By Richard Parnell, M.D.
8vo. Blackwood. With 66 plates.

The study of the distinctions by which the vast race of Grasses is classified, and the numerous species are to be positively recognised, is one of the most difficult parts of Botany; and we continually find persons, otherwise pretty well acquainted with plants, shunning all inquiry into the subject. And yet this part of the creation, although it wants the gaudy colours of some, or the grotesque forms of many, or the broad and ample foliage of others, yields to no branch of the vegetable world in its importance to mankind. To say nothing of the Cereal Grasses—yielding the most ample supply of food in all parts of the world—and to pass by the Sugar Cane and Bamboo—the value of these productions as pasturage for animals on the one hand, and as the great source of perennial verdure on the other, ought to fix in the strongest possible degree the attention of the observer. Nor is it for their utility alone that their study is worth pursuing. There are no plants in which more curious variations in organisation, or more beautiful proportions, or more exquisitely fashioned parts, or a more perfect adaptation of structure to the purposes to be served by it—there are no plants, we say, in which all these things are more profusely strewed, as it were, before the feet of the observer.

In the last enumeration of the Graminaceous order, about 3,067 species are mentioned, and 232 genera; and there can be no doubt that the number is far greater. Of these, only 123 species are admitted as British in the last edition of Hooker's British Flora.

Dr. Parnell's object is to settle the limits of the species found in Scotland, and to give to each the characters by which it may be certainly distinguished. The working out of this purpose has been effected in a handsome 8vo volume of 152 pages, and 66 plates, representing 95 species. The letterpress consists of careful technical descriptions, of an account of the marks by which each species may be known from its neighbours, and of the properties which they are proved to possess in agriculture.

We have looked the volume through with care, and we can say with perfect truth, that it is extremely useful to all who occupy themselves with the study of Grasses. The plates are to these plants what the old figures of Dillenius were to Mosses—excellent characteristic representations; and this is paying their execution no small compliment. In short, we recommend the work with confidence to public favour.

Concerning the so-called new species introduced into the pages, we have not materials on which to form a judgment, and we commend them to the critical examination of persons of more leisure than ourselves.

The only point on which we are disposed to animadvert, is the employment of the word calyx to express the glumes of a Grass. If we are justified in applying that term to any part of its floral organs, it is to the paleæ, and certainly not to the glumes, which, being common to more florets than one (in all except the one-flowered genera), must be of the nature of bracts, and are exactly the same to Grasses as the involucrum is to Composite and Umbelliferous plants. This, however, although a technical mistake, which ought not to have been committed, does not detract from the practical utility of Dr. Parnell's work.

CALENDAR OF OPERATIONS *for the ensuing week.*

In an early Number we alluded to the influence of soil and climate upon the quality of fruits, of Pears especially; and suggested the propriety of ascertaining, by trials on a small scale, which among the numerous new varieties were best suited to particular localities. We again advert to this subject, as an important one to every gardener who studies to supply his employer's table well. No out-door fruit (except the Apple, which is inferior in quality) equals the Pear for the length of time that it might be produced at table; from the Citron des Carmes, ripening in July, to the Beurré Rance, which, from some soils, will keep till May, or later, nearly a constant succession can be had in situations favourable to the growth of the Pear. It must, however, be a work of time to ascertain what varieties will attain perfection in particular places; and, as a beginning, bearing-trees of inferior kinds should be headed down during the winter, and each grafted in spring with several sorts; these, under good management, will in a few years produce fruit. In places where the aid of walls is not required, we would strongly advise a modification of what is called the "pyramidal" method of training. A row of trees, eight feet apart, on each side of the principal walks, in the kitchen-garden would occupy but little ground, and would yield a great quantity of fruit. For the information of those who are unacquainted with this way of training, we may state, that an upright stem, 8 or 9 ft. high, is feathered with side branches, which are made to curve downwards by their ends being tied in that direction at every winter pruning. By thus reversing the natural position of the branches, their vigour is diminished, and a fruitful habit is induced; but the stock for such trees ought to be the Quince. Those who are now planting are recommended to try this form of tree in preference to tall standards. A selection of the best sorts might be made from the Horticultural Society's Fruit Catalogue; and if any of them are afterwards found not to succeed, the sorts can be changed for others which have been proved to be better, without much loss of time, by grafting each of the side branches.

I.—KITCHEN-GARDEN AND ORCHARD.

In-door Department.

Pinery.—On dull days when the weather is mild, take the coverings off the pits early in the morning; and at some favourable opportunity in the course of the day tilt the sashes a little to change the air in the interior. At this season the plants will seldom or never require water, excepting those that are near the heating apparatus; but the whole should be looked over occasionally. The wet which drips through cracked squares, &c., in rainy weather is exceedingly injurious in the winter season; a dry day should, therefore, be chosen to stop all these carefully.

Vinery.—In early forcing fuel will be saved, and the buds assisted in breaking, by introducing a mass of fermenting matter into the house; if, therefore, it is intended to start a Vinery next month, some dung and leaves should be prepared in readiness. Or as a substitute for dung fresh bark might be used, which would be more manageable and also available for the Pine-pits when done with in the Vinery. Every damp day make gentle fires, and give air to the late Grapes.

Peach-house.—The late houses will require no other care than a free exposure to the atmosphere in open weather, unless made use of for the wintering of pot-plants, when the treatment must of course be varied to suit them. If a house is meant to be set in action in the beginning of December, the sashes should now be closed every night, but air given during the day.

Cucumbers.—Maintain a temperature of 70° in the pits, and let the plants have air every day if possible. If any plants in pots stand near the flues or pipes in the fruiting Pine-stove, the soil should be examined at the depth of a few inches, where it sometimes is dry when the surface is moist from syringing, &c.

Kidney Beans.—Add soil to those that are advancing as they may require it, and frequently sprinkle them over the leaves. If the pots stand over or near the heating apparatus, a liberal supply of water may be necessary.

Mustard and Cress.—Keep up a succession by sowing in boxes.

Asparagus.—Three or four inches of additional covering must be laid over the roots when the stems appear at the surface; and if the bed has not yet received any water, some may be necessary, which can be ascertained by examining the mould about the roots. Make up another bed with the dung, &c., previously prepared.

Sea-kale.—If the leaves heat strongly, part of them must be taken away. Another bed should now be covered.

Lettuces, Cauliflowers, &c., in frames and under hand-glasses, ought to be covered during rain, but freely exposed in fine weather. Lettuces meant for winter use should be kept closer, to encourage their growth.

Out-door Department.

The prevalence of rain lately will have made heavy land much too wet to be worked with advantage; it will therefore be best to defer for a time all labour which involves the stirring of the soil. In the absence of other work, deciduous hedges might be trimmed; the prunings of fruit-trees collected and burnt; rotten leaves and dung for composts turned; stored roots examined, &c. On wet days, straw mats might be made.

Orchard.—According as the weather is more or less favourable, the various operations of planting, pruning, nailing, or digging, amongst the smaller fruit-trees, should be forwarded. With regard to the latter work, the ground being lightly turned over, chiefly for the sake of neatness, and not for the purpose of cropping, it might be done when digging in other cases would be injudicious. Preserve cuttings for propagation of the best Gooseberries and Currants; also suckers of Raspberries to make new plantations. The covering of Fig-trees might be deferred till any convenient opportunity, unless an appearance of settled frosty weather should make it imperative to be done immediately.

II.—FLOWER-GARDEN AND SHRUBBERY.

In-door Department.

Stove.—Go on with the potting and top-dressing of Orchidaceous plants, at the same time cleaning the leaves of those which are infested with insects. Re-pot any of the other plants in the common stove which have their pots filled with roots. On wet days put new labels to the plants; if the green-fly infests them, smoke the house with tobacco.

Greenhouse and Conservatory.—There will now be abundant opportunities for staking, tying, re-labelling, and cleaning the plants. All that are wanted to cover trellises, or to assume a particular form, ought to be properly trained as they advance in growth. Remove dust and dirt from Orange and Caméllia leaves by means of a damp sponge. If the wet weather causes any of the greenhouse plants to damp, make fires in the day, and at the same time set the sashes open, to create a free circulation of air through the house.

Pits and Frames.—Be very careful of small seedling plants, such as Calceolárias and Pelargóniums; damp being a dangerous enemy to them in this dull weather. Let such plants stand very near the glass, and be watered with great caution. Bring forward in a gentle heat some Chinese Azáleas, Caméllias, &c., to maintain a succession of bloom. Keep forced Roses free from aphides by fumigating, and from grubs by hand-picking.

Out-door Department.

Carry on ground-work, especially where turf is to be removed: the sowing of Grass seeds should be deferred till spring. If not yet done, coverings ought now to be got ready for setting over tender shrubs, and young trees that are considered worth protecting. Guard choice bulbs and tubers against the attacks of mice: the beds should be covered with sand, and traps constantly set.

NURSERY AND FOREST DEPARTMENT.

Nursery.—Dig lightly between the rows of young stuff which it is not intended to remove. If not too wet, trench or otherwise prepare ground for tree seeds in spring, and likewise for the reception of seedling plants which are now growing in seed-pans, &c. See that stored seeds are in good condition.

Forest and Coppice Woods.—A free passage for the surface water is essential to the well-doing of young trees, as well as underground drainage; all ditches and gutters ought therefore to be freed from leaves and weeds, and new ones dug, if required. A few cross furrows made with a plough will assist in conducting superabundant water into the proper channels.—*J. B. Whiting, The Deepdene.*

State of the Weather near London for the Week ending Nov. 24, 1842, as observed at the Horticultural Garden, Chiswick.

Nov.		Barometer.		Thermometer.			Wind.	Rain.

REPORT ON COVENT GARDEN MARKET,

For the Week ending Nov. 25, 1842.

The supply of Fruits and Vegetables throughout the week has been good; but, in consequence of the late heavy rains, trade has been somewhat dull. *Fruits:* The price of Pines and Grapes remains unaltered. Spanish Melons are offered from 2*s.* to 3*s.* 6*d.* each, and occasionally a few of English growth are to be seen. Dessert Pears are plentiful; the best being the Marie Louise and Crassane, from 5*s.* to 8*s.* per half-sieve; the Napoleon and Chaumontel, from 2*s.* to 4*s.*; and the Beurré Diel, from 2*s.* 6*d.* to 3*s.* per half-sieve. Uvedale's St. Germain, and other baking Pears, are selling from 1*s.* 6*d.* to 2*s.* 6*d.* per half-sieve. Dessert Apples are principally confined to the Golden and Ribstone Pippins, at the prices given last week. Blenheim Orange, Royal Russet, and other culinary Apples, are selling from 3*s.* 6*d.* to 4*s.* per bushel. Medlars and Quinces have both advanced in price, fetching from 3*s.* to 4*s.* per half-sieve. Oranges are becoming more plentiful, and the supply of other foreign fruits is good. A few Berberries are left, which are selling at 5*s.* per half-sieve. *Vegetables:* The price of Vegetables has varied little during the past week. Greens of every description are abundant. The Broccoli are excellent, the purple kinds fetching from 8*d.* to 1*s.* per bunch; and the white, from 10*d* to 1*s.* 6*d.* per bunch. A small quantity of Sea-kale has been offered from 1*s.* 6*d.* to 2*s.* per punnet. Asparagus still continues scarce. We observed some remarkably fine American Shallots, which were selling from 1*s.* to 1*s.* 6*d.* per lb. Both Batavian and curled Endive are of good quality, and fetch from 9*d.* to 1*s.* 6*d.* per score. Mushrooms are rather plentiful, from 10*d.* to 1*s.* 3*d.* per punnet. *Flowers:* Amongst the cut flowers are Cypripédium insigne and C. venustum, Cýclamen pérsicum, Bignónia venusta, Amaryllises, Chrysánthemums, Roses, Gardénias, and Neapolitan Violets.

PRICES, Saturday, Nov. 26, 1842.—FRUITS:—

Pine Apple, per lb. 3*s* to 5*s*
Melons, Spanish, each, 2*s* to 3*s* 6*d*
Grapes, Hothouse, per lb. 2*s* to 4*s*
— Spanish, 9*d* to 1*s*
— Portugal, 9*d* to 1*s* 6*d*
Apples, dessert, per bush., 2*s* 6*d* to 7*s*
— Kitchen, 2*s* to 4*s*
Pears, dessert, per hf. sieve, 2*s* to 6*s*
Medlars, per hf.-sieve, 3*s* to 4*s*
Pomegranates, per doz., 3*s*
Quinces, per hf.-sieve, 3*s* to 4*s*
Berberries, per hf.-sieve, 5*s*
Oranges, per doz., 9*d* to 3*s*
— per 100, 4*s* to 24*s*
Lemons, per doz. 1*s* to 2*s* 6*d*
— per 100, 6*s* to 18*s*
Almonds, per peck, 6*s* to 7*s*
Sweet Almonds, per pound, 2*s* 6*d* to 3*s*
Chesnuts, per peck, 3*s* to 6*s*
Walnuts, per bush., 12*s* to 16*s*
Filberts, English, per 100 lbs. 60*s* to 75*s*
Cob Nuts, per 100 lbs., 80*s* to 90*s*
Nuts, per bushel—
— Brazil, 16*s* to 20*s*
— Spanish, 20*s*
— Barcelona, 24*s*

VEGETABLES.

Savoys, per doz. 6*d* to 1*s*
Cabbage, per doz. 9*d* to 1*s* 6*d*
— plants, per doz. 1*s* 6*d* to 2*s* 6*d*
— Red, for pickling, 1*s* 6*d* to 5*s*
Brussels Sprouts, per hf.-sv. 1*s* 3*d* to 2*s*
Broccoli, White, per bunch, 10*d* to 1*s* 6*d*
— Purple, 8*d* to 1*s*
Cauliflowers, per doz., 1*s* to 4*s*
Potatoes, per ton, 40*s* to 70*s*
— per cwt. 2*s* to 3*s* 6*d*
— per bushel, 1*s* 3*d* to 2*s*
— Kidney, per bu., 1*s* 6*d* to 2*s*
— New autumn, per lb., 1*s*
Jerusalem Artichokes, per half-sieve, 9*d* to 1*s* 6*d*
Turnips, per doz. bun., 1*s* 6*d* to 2*s* 6*d*
Red Beet, per dozen, 9*d* to 1*s*
Scorzonera, per bundle, 1*s* 3*d* to 1*s* 6*d*
Salsafy, per bundle, 1*s* 3*d* to 1*s* 6*d*
Horse Radish, per bundle, 2*s* to 4*s* 6*d*
Radish, per doz. hands (24 to 30 each) 9*d* to 1*s*
— Turnip, p. doz. bch., 1*s* to 1*s* 6*d*
Carrots, per doz. bun., 3*s* to 5*s*
Parsneps, per dozen, 9*d* to 1*s*
Spinach, per sieve, 1*s* to 1*s* 3*d*
Leeks, per doz. bun., 1*s* 6*d* to 2*s*
Onions, per bushel, 4*s* to 5*s* 6*d*
— Green, p. doz. bun 3*s* to 4*s*
— Spanish, per doz. 2*s* to 5*s*
Garlic, per lb. 6*d* to 8*d*
Shallots, English, per lb., 1*s*
— American, 1*s* to 1*s* 6*d*
Asparagus, per 100, 8*s* to 10*s*
Sea-kale, per punnet, 1*s* 6*d* to 2*s*
Lettuce, p. sc., 9*d* to 1*s*
Endive, per score, 9*d* to 1*s* 6*d*
Celery, p. bd., (12 to 15) 9*d* to 1*s* 9*d*
Small Salads, per punnet, 2*d* to 3*d*
Watercress, per doz. sm. bun. 4*d* to 6*d*
Parsley, per doz. bun., 1*s* 6*d* to 2*s*
Tarragon, per doz. bun., 2*s* to 3*s*
Sage, per doz. bunches, 1*s* 6*d* to 2*s*
Mint, per doz. bunches, 2*s*
Chilies, per 100, 1*s* 3*d* to 2*s*
Mushrooms, per pottle, 10*d* to 1*s* 2*d*

Notices to Correspondents.

We shall be obliged if our Correspondents, in their future communications, will take care that no general question relating to *different* subjects is asked in the same paragraph, and that each question is headed with the principal subject. *One side only of the paper should be written on*, so that we may separate each question. If these directions are observed, it will greatly facilitate our obtaining answers, and will enable us to arrange our Correspondence under general heads, separating those questions and answers which are of interest merely to individuals, from such as are of general interest.

Guano.—*G.*—We must refer you to the various notices of this manure which have been published in former Numbers of this Paper; where we have from time to time stated all that we know respecting its application and value. ‡

Manures.—*Carson.*—We are not aware that charcoal has been employed in *farming*, unless in a very small way, or in the form of soot. A large quantity of it would be too expensive for agricultural purposes, and from a small quantity we should not anticipate better effects than from soot, except that it would be probably more permanent. If you have access to charcoal powder at a cheap rate, your best way will be to use it for destroying the offensive odour of night soil, urine, or other putrid matter, when it will become a *most powerful agent.* Twenty or twenty-five bushels an acre of this mixture would probably go as far as an ordinary dressing of farm-yard dung. †——*L. G.*—We find it difficult to say positively whether now, or the spring early, is the best time to spread manure on Grass and Clover land. The fact seems to be this: if you manure now, the soluble parts of the manure are worked into the soil, contribute to the growth, slow as it is, of the Grass during winter, and are ready to be absorbed the moment vegetation in the spring receives its first impulse; but the volatile parts are no doubt lost. On the other hand, if your top-dressing is not applied till the spring, the volatile parts are preserved; but then unfortunately the Grass has no assistance during winter; and if the spring is dry, like last spring, it is a very long time before the manure will act: it was as late as May last year. This is a serious disadvantage. Upon the whole, we should manure *now*, and endeavour to destroy the volatility of manure by fixing it. In this respect we agree with your man against yourself. But, on the other hand, we think there can be no doubt about the superiority of guano to farm-yard manure, employed at the usual rate. See an article in another column extracted from the *Hamburgh Correspondent* newspaper.†——A bets B that he makes a better use of his soap-suds than B; on explanation, B says, "I throw my soap-suds to my dung-mix"—A replies, "I give my soap-suds to my pigs." Which is the more profitable of the two?—[When disputes arise respecting pigs, it is only to be expected that the argument should be as obstinate as those gentle creatures themselves are. This question is not easily answered, as there is a good deal to be said on either side, and in the present state of knowledge, it is impossible to ascertain with absolute certainty the relative merits of A and B's plans. After careful consideration, however, it appears most probable that B, who employs his soap-suds as manure, makes the best use of them. When oil or fat is made into soap, it is to a certain extent altered in its nature, and less fitted to become the food of animals; this change, however, does not alter its value as a manure. Besides this, the alkali of the soap is, in proporton, more valuable to plants than to animals; that is to say, a larger portion of organised matter will be formed under its influence, by a plant than by an animal. We therefore vote in favour of B. †——*Rus.*—It is stated that salt is, in a slight degree, more efficacious than soot as a manure for Potatoes; the latter having been applied at the rate of 30, and the former of 8 bushels per acre. We cannot say anything upon the subject from our own personal knowledge. ‡

Forest Trees.—*A. E. J.*—We quite agree with Mr. Billington in condemning the practice of cutting the laterals from Ash plantations. We have on many occasions advocated this practice as a general principle applicable to all trees, and would refer you to many places in our columns, especially pp. 363 and 523, where the subject has been considered. Fir-trees crowded into plantations where they smother each other may grow rather longer in a given time than when they have room to preserve a good proportion of their laterals; but they lose enormously in diameter and also in quality, as you may see if you compare the trees on the outside and inside of a choked-up plantation. The less forest-trees are pruned the better, provided means are taken to *encourage* (and no more) their leaders.†

Transplanting.—*A Subscriber.*—If you *must* move your Yew-tree, 35 years old, you had better proceed thus:—Open a hole all round, six feet from the ball, or thereabouts, and undermine the roots as well as you can. As soon as a hard frost sets in, throw water on the ball, which will thus become frozen hard. In this state you have only to apply strong tackle to the mass, and you may carry it anywhere with safety. If you cannot do this, get the ball up as well as you can, with as much of the roots as possible uninjured, and in planting the tree again, bury the roots in mud or puddle. This mode, called puddle-planting, is best done in the spring.†

Pruning.—*Amputation.*—The person who in managing fine, ancient, storm-ruined trees, should, for picturesque purposes, and as a matter of taste, cut off the decayed limbs, ought, in our humble opinion, to have his own forefinger amputated by the first woodman's axe that falls in his way. †

Vines.—*Nita.*—The best manner of training Vines in a house where plants are also cultivated, is to allow only one stem beneath each rafter. Under each of the latter, and from end to end, three wires should range; to the middle one the stem of the Vine should be secured, while the young wood can be trained to the wire on each side. The side shoots of the Vine, commonly called "spurs," should, in pruning, be kept as close to the main stem as possible; never allowing above two eyes to remain on each at the winter pruning. These spurs will in time become unsightly; when it will be necessary to train up from their bases fresh shoots to supply their place: the old spurs may then be cut away. By pursuing this method, the shade occasioned by the Vines will be trifling. ‡——*M. W. K.*—You had better proceed now with the alterations which you intend to make in your Vine border. After the Vines are re-planted, a mulching of dry litter should be spread over the border to protect the roots of the Vines from frost. ‡——*T. S. P.*—There is no difficulty, but a good deal of trouble, in removing a very large old Vine. Ascertain how far the roots extend; then, at that place, open a trench. Having done this, remove the soil carefully, picking out the roots with very great care, and tying them up in parcels. By degrees, you may thus extract the whole from the soil. In order to keep the roots damp, it will be as well to tie up each bunch in moist moss. The Vine being thus extracted from the earth, let the border to which it is to be transferred be uncovered to the depth of nine inches. Over the surface of the new border spread the roots very carefully and separately, and then cover them with the soil that had been previously taken away. If this is well done, you might remove the great Vine of Hampton Court. †

Grapes.—*Clericus.*—West's St. Peter's Grape, which is the same as the Black Lombardy, sometimes also called Raisin des Carmes, produces medium-sized bunches and large roundish-oval berries; these will ripen in a temperature that will suffice for the Black Hamburgh; the flavour is good. The Charlesworth Tokay is a rich Grape, with a Muscat flavour, and requires less heat than the Cannon Hall Muscat. You cannot err in planting a Royal Muscadine. Your Vines will not require much heat till they are in a bearing state; and in the mean time you will be able to ascertain the relative expense of a small hot-water apparatus, compared with that of a stove, to be placed in the centre of the house; when the superiority of the former is taken into consideration, you will probably come to the determination of heating your house by that method. When such an apparatus is once well fitted up, it will give satisfaction, and this is more than can be affirmed as regards the stove. ‖

Floor for a Greenhouse.—*A Subscriber from the commencement.*—We would not recommend you to use the mixture of gas tar and sand for the floor of a greenhouse, as the great heat during summer would probably cause it to blister and smell disagreeably; it is an excellent material for placing greenhouse plants upon out-of-doors. §

Flue for a Propagating Pit.—*A Subscriber.*—Your plan will do, but you must not by any means allow the flue to come in contact with the tan, or you will set fire to your pit. You should also provide some means for getting evaporation from the top of the flue, either by constructing it so that it will hold water on the top, or by covering it with evaporating pans. §

Paulównia imperialis.—*Totty.*—This plant is perfectly hardy. ‡

Tri'lliums.—*An Amateur.*—You may procure T. cérnuum, grandiflorum, erectum, séssile, discolor, erythrocarpum, péndulum, obovatum, and undulatum. They are all ornamental and hardy. ‡

Gentians.—*T. S. P.*—The seeds of these plants should be sown either now or in the spring, in garden pots, in good sandy peat mixed with a little loam, just covered with soil, and placed in a cool frame, where they may be shaded and kept damp, without being wet. If they come up, they may remain in the pots for the first year; and in the succeeding year they may be "pricked off" into single pots. They should not be planted in the open border till they are two years old. †

Gloxinia Seed.—This should be sown either early in autumn or in spring; when sown in the winter months, the young plants are apt to damp off. §

Heaths.—*A Subscriber.*—The greatest growers of this tribe of plants in the neighbourhood of London are Messrs. Rollison, of Tooting; Henderson, of Pine-apple Place; Fairbairn, Clapham Rise; and Jackson, of Kingston. ‡

Lucu'lia gratíssima.—*A. M.*—This plant may be propagated by cuttings, treated in the usual way; it requires, however, a little bottom-heat. ‡

Indian Azaleas.—*A Lady.*—The White Indian Azalea always loses the greater part of its leaves at this season of the year, and presents the appearance you describe; it is nearly deciduous. We, therefore, hope that your plants are in perfect health. If they are not, we advise you to repot them at once, and in spring, just before the flowering season commences, put them into a gentle heat. Keep them there until the growth is made, and then take them back to the greenhouse. As the White and Purple succeed with you in Devonshire in the open air, you may try the following varieties:—Smithii, Smithii coccinea, variegata, lateritia, double white, double red, or any of the other sorts you may meet with. §

Abutilon striatum.—*J. C. Y.*—This plant may be kept through the winter in a cold frame from which the frost is excluded; it will, however, do better in a greenhouse. ‡

Cuttings.—*G.*—Corræa bella and C. speciosa may be propagated by cuttings of the half-ripened wood. Podolóbiums may be increased in the same manner. This operation is best performed early in spring. ‡

Wista'ria Backhousiana.—*A Lady.*—The plant so called is not hardy, and in no way ornamental if it was. It is not a Wistaria at all. §

Pansies.—*A. B. C.*—It is difficult to obtain a knowledge of all the new Pansies, as they are frequently exhibited without names. We insert a list of the best that have come under our observation, and such as we can recommend:—

Thompson's Cyclops
,, Beauty of Bucks
,, Attila
,, Hamlet
,, Regulator
,, Jewess Superb
Silverlock's Prince of Wales
King's Princess Royal
Major's Bridegroom
,, Beauty of Knosthorpe
,, Princess Royal
Schofield's Surprise
Cook's Alicia
Cook's Attila
,, Ringleader
,, Black Bess
Brown's Unique
,, Premier
,, Attila
Lane's Sir John Sebright
Pearson's Agnes
,, De Buch
,, Sobieski
,, Milton
,, Magraith
,, Hinda. *——

A Lady is recommended to try the following 30 Pansies: they are flowers of first-rate character:—

Thomson's Eclipse
,, Jehu
,, Miss Stainforth
,, Desirable
,, Corona
,, Venus
,, Warrior
,, Princess Royal
,, Nymph
,, Rufus
,, Ultraflora
,, Cream
,, Raphael
,, Launcelot
,, Duchess of Richmond
Thomson's Prince Albert
Brown's Curion
,, Countess of Orkney
Cook's Triumph
,, Prince Albert
,, Mulberry Superb
Lidgard's Jewess
King's Exquisite
,, sulphurea elegans
Kitley's Bathonia
Maule's Prince of Wales
Davies's Miss Nugent
Silverlock's Prince Albert
Foster's Man of Kent
Pearson's Black Prince.*

Dahlias.—*An Admirer of the first Class.*—The following flowers can be recommended:—

Lewisham Rival
Exquisite (Holmes')
Beauty of the Plain (Sparry's)
Maid of Bath (Davis's)
Constantia (Cox's)
Countess of Pembroke (Dodd's)
Princess Royal (Hudson's)
Lady Middleton (Jeffries')
Queen (Widnall's)
Duchess of Richmond (Fowler's)
Maria (Wheeler's)
Phænomenon (Whale's)
Eclipse (Catleugh's)
Grace Darling (Dodd's)
Penelope (Headley's)
Nicholas Nickleby (Cormack's)
Prince of Wales (Dodd's)
Cox's Defiance
Argo (Widnall's)
Unique (Ansell's)
Winterton Rival (Low's)
Bloomsbury (Lee's)
Tournament (Catleugh's)
Bloomsbury (Pamplin's)
Eclipse (Widnall's)
Bedford Surprise (Sheppard's)
Bishop of Winchester (Jackson's)
Climax (Jeffries')
Grande Baudine (Low's)
President of the West (Whale's)
Regina (Gregory's)
Pickwick (Cormack's)
Conservative (Low's)
Springfield Rival (Lyne's)
Burnham Hero (Church's)
Andrew Hofer
Defiance (Horwood's)
Essex Rival (Sorrell's)
Metella (Begbie's)
Rouge et Noir (Ansell's)
Suffolk Hero (Girling's)
Egyptian Prince (Stamford's)

Those which are not decidedly first-rate in this list must be grown until better are produced to take their places: they are the best flowers in cultivation, and have been universally exhibited.*

Filberts.—*Ignoramus.*—Your Filbert-trees will certainly occupy less space if trained in the espalier form, as you propose, than they would by any other mode. There is no objection to their being trained horizontally, for this has been successfully practised in Kent. You will find excellent directions for the management of Filberts at p. 51 of last year's *Chronicle*, where also the Kentish method is explained. The trees are kept dwarf, with a single stem a foot high, and pruned as Currant-trees usually are. ‖

Fig-trees.—*G. P. W.*—The best variety of Fig for a wall with an E. S. E. aspect is the Brown Turkey. ‖

Shallots.—*J. J.*—You must have taken up your Shallots before they were ripe, or after having raised them, you must have kept them in a very warm and dry situation, or they would not have shrivelled so soon. The best way to dry them after they are taken up is to spread them thinly on the flue of a vinery, where there is no fire, or on the floor of a dry shed; but in both cases they should have a free circulation of air. ‡

Cauliflowers.—*W. H. M.*—We never heard of Cauliflowers being forced in pots, therefore we cannot assist you. There is little doubt but by growing them in that manner they might be brought forward much quicker than if kept under hand-glasses. ‡

Mushrooms.—*A Subscriber.*—The proper temperature at which to keep a Mushroom-house, after the bed is spawned, is between 50° and 55°. Horse-droppings, as clear of straw as possible, are the best material for making Mushroom-beds of; but these should be frequently turned over previously to their formation, in order that they may not heat violently after the bed is formed. The spawn may be put in when the temperature of the bed has settled to 70°; the Mushrooms will probably appear in four or five weeks from the time of spawning, but this will depend entirely upon the heat of the dung. ‡

Scale.—*A Subscriber.*—The readiest method of destroying the white scale upon Pine plants, if grown in a pit, is to introduce the steam of fermenting horse-dung amongst them at a high temperature. It is also stated that if the house in which they are grown is kept at 90° or 100°, and incessantly filled with vapour for several days, it will destroy the scale without injuring the Pines. ‡

Books.—*Novice.*—We recommend you to procure "M'Intosh's Practical Gardener." ‡——*A Subscriber.*—Mr. M'Nab's Treatise upon the Culture of Heaths is the best work on that subject which has yet been published. †

Fences.—*T. F.*—No plant will make a good hedge so fast as Whitethorn, and as a screen it is excellent when well managed. Between Farnham and Alton there is a Whitethorn hedge 12 or 14 feet high, and of very considerable length, which is as firm as a wall, and close to the very ground. No plant whatever, in fact, lends itself so readily to the hedger as the Whitethorn, if quick growth is an object. Hollies or Yews are in some respects better, because they are evergreen, but they grow too slowly; you cannot expect a Holly hedge of any value in less than 8 or 10 years, even if you begin by planting trees 2½ feet high. Let your Whitethorn be as strong as you can get it, if under 4 feet high, and, if possible, such as was transplanted last year. Plant it in double rows, 18 inches from plant to plant, and a foot from row to row. Let the work be done now, or as soon as you can; give a good mulch of farm-yard dung; cut the plants down at once in such a way as to leave them alternately 6 in. and a foot high; and in the spring fork in the mulching. No lime rubbish is required; indeed, it can do no good in such land as yours. †

Marvels.—*A.*—You ask us if we believe the stories of mites or acari being produced (that is created) by electrical action. We might, in return, ask you if you take us for atheists? But we will content ourselves by inquiring whether you believe that you were so created? An acarus is as perfectly constructed, after its kind, as a man: if one may be the result of electrical action upon saline matters, so may the other; and then what becomes of the Godhead? Our learning teaches us that God is visible in all His works, and the more we study them the more is our mind overwhelmed by the incomprehensible immensity of His power and wisdom. Mr. A or Mr. B may, in their vanity, assert that they have gained the powers of the Creator, but we are not quite mad or wicked enough to believe that the Almighty has surrendered His power to their galvanic batteries. †

Seeds.—*Winton.*—The best time for sowing the seeds which you have received from Australia will be early in the spring; the soil may consist of equal parts of loam, peat, and vegetable mould, with a small portion of sand. ‡

Butter and Cheese.—*Cestus* inquires whether any of our readers can assign a reason why dairy farmers object to sheep feeding on their cow-pastures—alleging that the cheese and butter in such case acquire a nauseous taste.

Wire Trellis.—*A. L.*—Any wire-worker can make the pretty trellises you see in our columns occasionally; or an ingenious gardener might make them himself. We dare say you will soon find somebody advertising them. †

Falling Stars.—*D. C. L.* inquires whether the phænomenon of falling stars was observed this year about the 13th and 14th of this month. Will any of our readers be so obliging as to inform him? We do not know.

Miscellaneous.—*A Young Farmer.*—We regret that the want of space in our columns renders it impossible to admit matter relating to stall-feeding cattle and similar agricultural subjects. Upon these heads we must refer you to the editors of the chief Farming Newspapers. †——*J. W. D. F.*—Your plant is the *true* Exogonium purga; a most difficult plant to flower. Your Ipomœa batatoides seems, from your description, to be something else. Both of them are genuine Jalap plants; the drug being prepared from either. †——*An Original Subscriber.*—Your letter and Grapes arrived quite safe, and very fine Grapes they were. We should have acknowledged the receipt of them at the time, had you not asked for advice, which we are desirous of giving you, but hardly know how. If the treatise was sent to us, we should know better what to say about it. †——*A. B. C.*—We can make very little of your list. Most of the names have, doubtless, been miscopied from an illegible Spanish manuscript. If by Leeremocap is meant Eccremocarpus, which is probable, the seed would seem to be from Chili rather than Mexico, and *may* be worth growing; but the finding Solanum dulcamara among them makes us rather doubtful about that. †——*A. M.*—Your plant is probably Clitória arborescens. †——*J. R. W.*—Of your seeds, 1 is a Cássia; 2 is allied to Abrus; 3 is Guilandina Bonduc; and 4 is Abrus precatórius. †——*J. G. E.*—Your plants are, 1, Begónia semperflorens; 2, Flemíngia strobilifera. †——*Totty.*—Your plants are, 1, Kleínia ficoides; 2, Mesembryánthemum incurvum. †——*J. C. Y.*—If you refer to the "Notices to Correspondents" of last week, you will find the information respecting Coltsfoot which you require. ‡——*Y. N. D.*—They are extremely curious; we are very thankful for them. †——*G. P. W.*—We cannot learn that any Russian leather is prepared in this country; and as for the oil of the Birch-tree, it does not appear to be known in London. We find, however, in Dr. Ure's Dictionary, that it is prepared in France by distilling the bark at a red heat; and is, therefore, somewhat empyreumatic. The process resembles that used for wood vinegar; and they obtain about 60 per cent. from the bark. †——*P. P.* next week.——*G. W.*—Your Pears are, 1, 2, Glout Morceau; 3, Beurré Diel; 4, Flemish Beauty, which should have been gathered earlier; 5, Winter Nelis. ‖——*T. W., Oldford.*—The Gravenstein Apple does sometimes produce fruit higher on one side than the other. Your seedling has merit; but before it can be fully recommended, it will be necessary to have more knowledge of it than can be obtained in the first year of its bearing. ‖——*A. M.*—Your Pears are, 1, Beurré Rance; 2, Passe Colmar. ‖——*Pyrus.*—The Pear you sent is the Glout Morceau. ‖——*C. E.*—Your Apples are, 3, Easter Pippin, or French Crab; 4, Golden Reinette; 5, Beauty of Kent; 6, one of the Reinettes Grises; 7, Margil; 8, Yorkshire Greening; 9, Dutch Mignonne; 10, Golden Noble; 12, Norfolk Beaufin; 13, Calville Blanche d'Hiver; 17, Redding Nonparcil. The Pears are, 15, Colmar; 16, Glout Morceau; 18, a small wild Pear, unknown. ‖——*G.*—The genus Gomeza has been transferred to Rodriguézia. †——*S. D.*—Your Pansy is a very good flower, well formed, with the eye distinct, and colour pleasing. The rose-coloured Picotee is common; the edges of the petals are uneven, and the colour is too much dotted over its surface. The heavy-edged delicate purple seedling is beautiful in colour; the petals are well formed, of good substance, and even on the edge; the guard petals are small (if none have been pulled out); the colour is rather too much broken, but the season may have some influence on this point; it is worth preserving.*——*Champion.*—Your Pears are, 3, Chaumontel; 4, Crassane; 5, Gansel's Bergamot; 1, decayed; 2, not known. The Apples are, A, Golden Reinette; B, Golden Russet; C, Winter Pearmain; D, Easter Pippin, or French Crab; E, Nonpareil; F, Court of Wick; G, Golden Harvey. ‖——*A. Z.*—Your Pears are, 1, Bezi de Caissoy; 2, Winter Nelis; 3, probably Ne Plus Meuris; 4, Hacon's Incomparable; 5, Grey Doyenné; 6, Beurré Diel; 8, Beurre Bosc; 9, Urbaniste; 10, Easter Bergamot. The Apples are, 1, Court pendu plat; 2, Herefordshire Pearmain; 3, decayed; 4, Dutch Mignonne; 6, Golden Pippin. ‖——*A Constant Reader.*—Your Pear, No. 2, is the Urbaniste; No. 3 is most certainly the Glout Morceau, and a very good specimen of it from a standard in the north of England. This variety was long confused with the Beurré d'Aremberg, under which name you received it; the latter may, however, be distinguished by its stalk being generally bent almost at a right angle with the axis of the fruit. No. 7, Winter Nelis; 42, White Doyenné, and not the Orange Bergamot, which has a musky flavour; 32 appears to be a large specimen of the Aston Town. The Ross Nonpareil has an anise flavour. The Turk's-Cap Apple is of little merit. The other Apples you sent are not known. ‖——*J. C. Y.*—Inclose six Post-office labels with your address, and No. 34 shall be sent you.——*E. Vr.*—Instead of the Summer Rose, Beurré Rance, Summer Franc-réal, and Yat Pears, you have obtained, in No. 1, the St. Germain; 2, Beurré d'Aremberg; 3, Chaumontel; 4, Glout Morceau; 5 is Uvedale's St. Germain. ‖——*Harriette H.*—Your Apple is not known; it bears considerable resemblance to Adams's Pearmain, but appears to ripen earlier. ——*Pear Tree.*—Your Pears, No. 1 and No. 2, are different, although certainly as much alike in form as any two fruits could possibly be; but No. 1, which was grown in the sun, has a thin covering of soft olive-coloured russet without any red, and is now tolerably melting and sugary. No. 2, although grown in the shade, is, notwithstanding, of a dark ferruginous red, and has coarse and rather austere flesh. It is called Buchanan's Spring Beurré. No. 1 is not known. ‖——*R. R.*—Your seedling Apple cannot be recommended as being sufficiently rich for dessert, although it is probably a very good kitchen Apple. It differs widely from the Quarrenden, from which it was raised; the latter being a red summer Apple, and the seedling from it a yellow winter variety. ‖——*A. C.*—Your Apples are, 3, Ross Nonpareil; 4, Pearson's Plate; 6, Golden Reinette; 8, Sops of Wine; 9, Beauty of Kent; 10, Embroidered Pippin; 11, Winter Pearmain; 12, Coe's Golden Drop; 14, Bedfordshire Foundling. ‖——*W. H.'s* curious bundle of cocoons has been produced from a caterpillar inoculated with the eggs of a little parasitic fly called Microgaster alveárius, which is figured and described at pl. and fol. 321 of "Curtis's Brit Ent."——*J. S.*—Your question is answered amongst our Advertisements.

Erratum.—In No. XLVI, p. 758, column *c*, line from the top 50, for "from the calcination of the copperas," read "from the calcination of the copper ores."

Mr. PAXTON'S COTTAGER'S CALENDAR is now reprinted in the form of a small volume, for general distribution, price 3*d.* each copy; it may be ordered of all Booksellers. Gentlemen wishing to distribute copies among their cottage tenantry may have them *delivered in any part of London* by remitting a Post-office order to this Office, at the rate of 5*s.* for every 25 copies.

As usual, many letters have arrived too late for answers this week.

NEWS OF THE WEEK.

The successes of the British forces in China and Affghanistan, recorded in our foreign intelligence of this week, will be received with unqualified satisfaction. A treaty of peace has been concluded with China, on terms dictated by the British Commissioner, under the walls of Nankin; and China has agreed to cede the island of Hong Kong in perpetuity to her Majesty, to pay the sum of 21 millions of dollars for the expenses of the war, to throw open five ports to English commerce, to restore the prisoners, and to treat the officers of both countries on an equal footing. The importance of this result to the commercial and manufacturing interests of Great Britain can hardly at present be estimated to its full amount; the admission of our enterprise to unrestricted intercourse with a people numbered at 300,000,000 is like the opening of a new world; while the removal of those barriers which have kept the Chinese secluded for centuries from the rest of mankind is an event of still higher interest in the history of civilisation. The news from India, if it does not open such a brilliant prospect for the future, appeals more immediately to the feelings of the public: Ghuznee is destroyed; the Affghan army, under Akhbar Khan, is utterly overthrown; the prisoners are rescued from the hands of the enemy; and, in the words of the Governor-General, "all past disasters have been retrieved and avenged, on every scene on which they have been sustained; repeated victories in the field, and the capture of the cities and citadels of Ghuznee and Cabul, have advanced the glory and established the accustomed superiority of the British arms." We need hardly remark that so many successes have seldom, if ever, been recorded in one week: the march of the two armies under Gen. Pollock and Gen. Nott was a continued series of brilliant achievements; every operation on the line of march was attended with success, and the gallant Sir Robert Sale, whose name is again mentioned with distinction, had been sent out to meet the prisoners, who were all rescued from the Affghans with the exception of Capt. Bygrave. For the particulars of these successes, and of the events which immediately preceded them, we must refer our readers to our Foreign news, where they are given in detail. We will merely add the expression of our thankfulness at the happy issue of both expeditions, and our conviction that the gratitude of the public towards those who have once more restored this country to her high position in the East will not be forgotten in this season of rejoicing.—Our European news possesses little interest in comparison with these achievements. In France the papers are occupied almost exclusively with discussions on the Indian and Chinese intelligence, which afford fresh grounds for the expression of their hostility. They admit, however, the magnitude of our victories, and regard the peace with China as an event which does honour to civilisation, and promises to render an important service to the cause of humanity.—From Spain we have accounts of another insurrection at Barcelona. The National Guards have unexpectedly risen against the authorities, and the troops of the line have been compelled to evacuate the garrison after a long and fatal contest in the streets of the city. A popular junta has been installed, and it is feared that the movement will spread to the other cities of the province. To add to these disasters, the Government has sustained a serious check at the opening of the Cortes. The President nominated by the Ministerial party has been defeated, and the Opposition have succeeded in returning all the officers of the Chamber.—From Lisbon we learn that Lord Aberdeen has returned the ultimatum of Portugal in regard to the settlement of the tariff, and has demanded further reductions in the duties on our woollen manufactures. We have also additional details of the disastrous flood at Madeira which we noticed in our last: the effects of the inundation were not exaggerated; and in the capital alone the damage done is said to amount to upwards of 100,000*l.*

At home, the triumphs in India and China are the leading subjects of attention; no events since the Peace of 1814 have produced so great a sensation. In the Metropolis, the Park and Tower guns have been fired in honour of our victories; and a general holiday and illumination are talked of, on the ratification of the treaty with China. The provincial Papers tell us that these rejoicings are not confined to the Metropolis, and that the news of our success has already produced a salutary effect on our manufacturing and commercial interests.

Home News.

COURT.—Her Majesty and Prince Albert are still at Walmer Castle. The Prince of Wales and the Princess Royal have derived so much benefit from their residence at Walmer, that the Court is likely to remain there for some days longer, and the visit to Brighton is said to be indefinitely postponed. In consequence of the important intelligence received this week from the East, it is reported that her Majesty will leave Walmer Castle for town in a few days, for the purpose of holding a Privy Council at Buckingham Palace. The Earl of Hardwicke has succeeded Viscount Sydney as Lord-in-Waiting upon her Majesty.—His Imperial Highness the Archduke Frederick of Austria has visited during the week Buckingham and St. James's Palaces, the Dockyards at Chatham and Sheerness, the Bank of England, Guildhall, the Mansion House, and the East India House; and on Thursday his Imperial Highness repeated his visit to Greenwich Hospital, and dined with Sir Robert Stopford.

Legal Appointments.—The Gazette of Friday announces the appointment of Mr. Alexander Wood, Dean of Faculty, to the office of Judge of the Court of Session, vacant by the resignation of Lord Gillies.

Colonial Appointments.—The Gazette of Tuesday announces that the Queen has been pleased to appoint Mr. L. H. Lafontaine and Mr. T. C. Aylwyn, as Attorney and Solicitor Generals of Lower Canada; and Mr. R. Baldwin and Mr. J. E. Small, as Attorney and Solicitor Generals of Upper Canada.

Foreign.

FRANCE.—The French papers of all parties discuss at considerable length the Indian and Chinese news, which appears to have produced a great impression in Paris. The Ministerial *Débats* says: "This is a great event—this peace, imposed by a European power on an empire which has hitherto treated foreigners with such supercilious contempt, is an act which may have the greatest consequences upon commerce and politics in general. It is a whole world henceforth opened to the penetrating activity of Europe. We cannot now dwell upon the various results which may arise from this event; but we cannot conclude without observing that, as conquerors, the English have given a proof of moderation." The Court Paper, the *Presse*, says, that England on all occasions brings within her grasp the best positions of every point of the globe, and that Hong Kong, ceded in perpetuity to this country, is the best station in the Chinese seas, an inestimable advanced port in the Oceanic Archipelago. In regard to the terms of the peace, it admits that it is "a grand and magnificent success—a success which does honour to the civilisation of our era; and, above all, to the nation which has torn it from the pusillanimity of the authorities of the Celestial Empire." The *Siècle*, the organ of M. Odillon Barrot and his party of opposition, says: "If the Emperor of China is compelled to sign with his own hand, and to seal with his own seal, a treaty with those whom he calls barbarians, it will indeed be a great triumph gained for civilisation. The English undertook the war upon grounds purely selfish, for the promotion of their own interests, and from an odious motive; but if they succeed in bringing 250,000,000 of men, now vegetating supinely under an astute and immoral government, into the improvements of European civilisation, a great service will be rendered to the cause of humanity." The Liberal organ, the *Courrier Français*, admits the importance of the results, but doubts whether the Chinese will observe the treaty. "If," it says, "the habits and laws of China be considered, the treaty is a violence imposed on that country. Strangers and barbarians to be treated there on the same conditions as the natives! Five commercial ports to be thrown open to the English, who are to have consuls at these places! Five breaches made in the wall of China, through which Europe, with her ideas of progress, will rush in! We doubt that such a treaty, if ratified by the Emperor, will be faithfully executed. If it be desired that the triumph which has been obtained over the Chinese immobility should have any duration, England must go farther, and interest Europe altogether in this advancement. Let England admit all the nations of Europe to a participation in the benefits of those commercial concessions, and China, no longer having to do with a single state, but with all which modern civilisation comprehends, will not attempt to engage in a resistance which would be desperate." The Royalist *Quotidienne*, after briefly referring its readers to the accounts from China and Affghanistan, says: "These are great events for England, and important also for the Administration of Sir R. Peel. In France, the persons who govern us do not seem to be aware that Ministers render themselves worthy of governing by brilliant acts of vigour. They care not for shame, provided they continue in power."—Much interest had been excited in Paris by the conclusion of the long-pending trial of the officers of the Prefecture of the Seine for fraud, corruption, and malversation in the exercise of their functions. Two of the prisoners were acquitted; but M. Hurdequin, a man of good fortune, and who had previously borne a high character for unimpeachable integrity, was condemned to four years' imprisonment, a small fine of 100f., and his share of the expenses, which will be considerable. MM. Morian and Boutet, the two other prisoners, were condemned to three years' imprisonment.—Jamm o Deen Mahommed, Prince of Mysore, a son of the celebrated Tippo Saib, died suddenly in Paris, on Sunday, in his 47th year. He was residing in that capital on a pension allowed by the East India Company.—A young orientalist, M. d'Ochoa, has been charged by the French Government with a scientific mission to the central states of Asia to the north-west of Hindostan, between Cachemire and Kafristan. He is to collect documents relating to the history, geography, origin of the races, languages, and literature of the East.—The Toulon papers of the 13th inst. announce the return of the two steamers which conveyed to Bona the relics of St. Augustin, and the bishops and clergymen who accompanied them to Africa. The ceremonies of the inauguration of those relics, in a chapel erected on the ruins of ancient Hippona, were celebrated on the 28th, ult.

SPAIN.—A new insurrection has broken out at Barcelona, which seems to have taken everybody and every party by surprise; for, although it was known that there was some scheme in progress in that city, the outbreak was not anticipated. The insurrection is believed to have been an extempore effusion of the National Guards of Barcelona, of whom 10,000 are operatives. They attempted, on the 13th inst., forcibly to bring in at one of the gates several casks of wine without paying the tolls. The people joined them: the guard was disarmed, and a soldier killed. Reinforcements having arrived, 12 persons were arrested. The editor of the *Republicano* was thrown into prison. On the 14th the workmen deserted the workshops, and filled the streets of the city. At 5 P. M. the avenues leading to the Town Hall were occupied by the National Guards, who refused to surrender their posts to the troops of the line. A regiment was drawn up in order of battle, on the Rambla, with six pieces of artillery. All the troops of the garrison were under arms. A collision took place on the 15th between the troops and the National Guards; and after three hours' fighting, and a loss of 500 men killed and wounded, the Captain-General, seeing that the windows and terraces of the houses were occupied, in all the city, by the armed National Guard, retired into the citadel with his staff and two regiments. On the 16th there was a firing both of musketry and cannon during a great part of the day. All the streets were barricaded. The garrison of the citadel was without provisions. The citadel threw shells into the town during the night. On the 17th, before day, the troops evacuated the citadel and went out of the town, leaving the place in the possession of the insurgent militia, of which the number was increased by the militia of the neighbouring towns and villages. The family of the Captain-General took refuge on board a French man-of-war in the harbour, with a great number of the principal inhabitants. A popular junta has been installed; which published on the 19th the following programme, explaining the object of the movement:—1, Down with Espartero and his government—2, The convoking of constituent Cortes—3, In case of Regency, that there are to be more Regents than one—4, That the Queen must marry a Spaniard—5, Protection of national industry." The effect of this insurrection on Madrid was considerable, where it was believed that a republican movement was at work, encouraged by the Infante Don Francesco de Paula. Gen. Rodil announced the movement to the Cortes on the 20th, and said that the Regent would set out in person for Barcelona on the following day with three battalions; the Cortes immediately voted an address to the Regent promising him their support.—The Cortes were opened on the 14th by commission, with little ceremony. In the Senate, the Minister of War read the decree of the Regent, declaring the session of 1843 to be open, agreeably to the constitution of 1837. The Cabinet had sustained a defeat at the outset: Señor Olozaga having been named President of the Chamber by a majority of 82 against 41 obtained by Señor Acuna, the former President, who was proposed by the Ministerial party. Señor Cortina was nominated Vice-President by 80 votes; and the Opposition had succeeded in returning all the officers of the Chamber.

PORTUGAL.—We have advices from Lisbon to the 14th inst. Lord Aberdeen had returned the ultimatum of Portugal with regard to tariff reductions, approving the part which relates to cotton goods, but requiring reductions in the import of woollen cloths and salt fish into Portugal. It was believed that Portugal would admit some further reductions in these articles, and that the new tariff convention would come into practical operation about the period of meeting of the British Parliament. The Duke d'Aumale had proceeded to Algiers, and the Prince de Joinville would immediately set out for Brazil, in connexion, it was believed, with a project for a matrimonial alliance between the Prince and the Emperor of Brazil's sister.—The long pending case of "Shortridge *v.* Manoel José d'Oliveira" has been decided in the Court of Relaçao in favour of our countryman Mr. Shortridge. The sentence annuls all that had previously been done in the case, which M. d'Oliveira must now, if he chooses to go on with it, commence again *de novo.* No cause, perhaps, in which an English subject was concerned, ever created greater interest, as it involved questions which affected the welfare of British Merchants in all parts of Portugal.—By the Madeira papers received since our last, we have further particulars of the disastrous floods which we noticed last week. It appears, that heavy rains began to fall at the beginning of October, and created unusual alarm. The sea began to swell on the 22d, and the ships were in such danger that the captain of the Portuguese bark Eliza abandoned her. She was saved on the following day, having been damaged by a collision with the American ship Mary Kingsland. The English ship Success nearly ran aground. The steamer Dee arrived with 52 passengers in the midst of the storm, and the women and children were removed by the boatmen, who displayed the greatest intrepidity. On the same day the rain increased to such a fearful extent, and the torrents swelled to such a height, that the inundation of the whole island was apprehended. The city of Funchal suffered most, and it is said that the damage done in that city alone would not amount to less than 500 contos of reis, or above 100,000*l.* The wine-stores were broken open by the current, and pipes of wine were floating in the streets. Entire quintas were washed away, and numerous houses destroyed. During all the night the rain continued to pour with a fury that had not been known even in the deluge of 1803. Never, it is said, was so great a volume of water known to fall as during an hour and a half of the 24th. Had it lasted one hour more, the journals declare that two-thirds of Funchal would have ceased to exist. On the third day the violence of the weather abated, the Dee disembarked the luggage of the passengers, and the hopes of the people began to rise. On the fourth day the sea swelled violently. The American brig Creole, which lately obtained such notoriety in the West Indies, on account of the mutiny and release of her cargo of slaves, was in great peril, but every one on board was saved. A Portuguese vessel ran aground, and three persons were drowned. The crew of the English schooner Wave would, it is thought, have perished entirely, had it not been for the intrepidity of Sir H. Crawford and other individuals, who ventured among the rocks to save the sailors. The English packet-brig Dart came alongside of the Portuguese vessel previously wrecked, but the crew were able to save themselves. Señor de Treitas Lomelino is mentioned as having on this occasion greatly distinguished himself by his efforts to save the unfortunate persons. A Sardinian polacca came in, but with such ill-success that she went to pieces, and not one of her crew escaped. The shore on the following morning presented the mournful picture of the wrecked vessels. The English ship Success remained in the port, and escaped damage. On the 28th the weather was comparatively calm. The loss of life in the interior is not yet ascertained, but is said to have been considerable.

GERMANY.—There is little news in the German papers. The King of Prussia's speech in dissolving the Committees of the States is the only subject of general interest. He said, among other things, that their proceedings were so satisfactory that he could not deny himself the pleasure of personally expressing his thanks. His Majesty also alluded to the measures the assembly had adopted. He said, he considered the members as councillors of the Crown, and defenders of the rights of the country. The speech was listened to with great pleasure, and is highly praised by the papers in different parts of Germany.—It was rumoured that Prince Esterhazy, the late representative of the Austrian Government at this Court, would be succeeded by Count Senfft Pilsach, the Austrian Ambassador at the Hague; and that Baron Sturmer would be replaced as internuncio at Constantinople by Prince Felix Schwartzenberg.—The Leipsic papers state that Austria has rejected the overtures of Great Britain for the extension of the commercial treaty between them, as it would be hostile to the rest of Germany. Letters from Trieste of the 1st announce that the negotiations between Great Britain and the Austrian Government, relative to the transmission of the overland India mail by Trieste and Venice, were going on so actively, that it was expected the first arrival from Bombay would take place in January.

TURKEY.—Letters from the frontier, of the 9th inst., announce that the new Sovereign of Servia was proclaimed at Belgrade on the 4th inst., after which Emin Effendi, who had arrived in that city from Constantinople, on board the steamer Seri Pervas, with the Sultan's beret, caused it to be solemnly read to the people. The Russian authorities still appeared to disapprove of the late revolution. It is also stated that on the 25th ult. Sawfel Effendi, the Commissioner of the Sultan, had arrived in the Lower Danube, at the quarantine of Giurgewo, with the firman pronouncing the dismissal of Prince Ghika. It is added, that the Prince quitted Bucharest on the 26th ult., being the anniversary of his solemn installation as Hospodar of Wallachia. General Kisseleff is generally regarded as his successor, although it was rumoured that the Greeks and Catholics had organised a strong party for the purpose of erecting the three principalities of the Danube into an independent state, to be placed under the protection of the great Powers, with a king chosen from among the reigning families of Europe. The Catholics had already turned their attention to an Austrian Archduke, whilst the Greeks and a party of Catholics wish to place the Duke of Leuchtenberg on the throne.—A rumour was current at Vienna, that the Sultan intends to fortify Constantinople.

Egypt.—The news from Egypt is not of great importance. Letters from Alexandria state that Sami Pacha has received instructions from Mehemet Ali to negotiate a marriage between Said Pacha, one of his sons, and a sister of the Sultan. We learn also that the rising of the Nile had caused great inconvenience to passengers on their way to India. Many houses are stated to have been washed away, and several lives lost in the native villages. The passengers by the late steamer from India have addressed a letter to the *Times*, complaining of the complete inefficiency of the measures adopted for the transit of passengers, and the exaggeration of the professions made by Messrs. Hill and Co., the contractors for conveying passengers across the Desert. They state that the horses were driven 40 miles in about 12 hours; and that many of them were so exhausted under a burning sun, that the carriages remained immovable in the sand, and the passengers themselves were obliged to assist in turning the wheels. They state that the only part of the arrangements they can commend are, the rapid conveyance and accurate delivery of the baggage, and the passage down the Nile; and that in every other respect the inconvenience of the journey compared with its great expense furnishes a just and reasonable ground of complaint It is perhaps fair to add to this account, that the late mortality among the cattle has seriously affected the horses in Egypt, and that Messrs. Hill have lost on the Suez Desert no less than 70 horses from this cause within the last month. The number of cattle destroyed by the murrain is said to amount to 150,000, and the Pacha has already despatched four frigates to procure fresh supplies for the purposes of agriculture.

India.—An intermediate Overland Mail from India, with news from Bombay to the 15th of October, arrived in town on Tuesday, bringing accounts of peace with China, and of the capture of Ghuznee and Cabul. Two pieces of intelligence of such importance have, perhaps, never before been simultaneously received from the shores of India. While they add increased lustre to the glory of the British empire, the events they record are calculated to consolidate its welfare for many years. The first details relate to the successes of General Nott, of whose proceedings we had but a brief account by the mail of the 1st of October. It appears that Shumsooden, the Affghan Governor of Ghuznee, having attempted to annoy the British force on its march, was repulsed on the 23d Aug., and totally routed on the 30th. "I moved out," says General Nott, "with one-half of my force; the enemy advanced in the most bold and gallant manner, each division cheering as they came into position, their left being upon a hill of some elevation, their centre and right along a low ridge until their flank rested on a fort filled with men; they opened a fire of small arms, supported by two six-pounder horse artillery guns, which were admirably served; our columns advanced upon the different points with great regularity and steadiness; and, after a short and spirited contest, completely defeated the enemy, capturing their guns, tents, ammunition, &c., and dispersing them in every direction. One hour's more daylight would have enabled me to destroy the whole of their infantry. Shumsooden fled in the direction of Ghuznee, accompanied by about 30 horsemen." The loss of the British amounted to 36 killed and 68 wounded. Among the former were Capts. Bury and Reeves, of the 3d Bombay Cavalry. On the 5th of Sept., Ghuznee was invested. The city was strongly garrisoned, while the hills to the north-eastward swarmed with soldiery. These heights were the first object of attack, and after considerable opposition they were effectually cleared. Preparations were then made for an attack on the fortress, but before our batteries could be opened, the enemy abandoned it, and left us once more complete masters of Ghuznee. The loss sustained by our troops amounted to no more than 3 killed and 43 wounded. 327 sepoys of the 27th Native Infantry were found in the city, and released from slavery, to which state they had been reduced by the Affghans. Ghuznee was soon a desolate heap of ruins. Its splendid citadel, and other formidable works and defences, were immediately razed to the ground. The force was to leave about the 9th or 10th September, and would join General Pollock at Cabul on the 17th. General Pollock, who had on the 3d September reached Gundamuck, 26 miles to the westward of Jellalabad, left that place on the 7th, and reached Soorkab, a distance of nearly 10 miles. On the 8th, he again set out on the march to Jugdulluck. On reaching the hills which command the road through the pass, the enemy were found strongly posted and in considerable numbers. They resisted our passage with determined courage, and manfully maintained their position, although our guns told with deadly effect amongst them. At length the heights were stormed, and after much arduous exertion, the enemy were dislodged and dispersed. A large body of them, however, fled to the summit of a lofty hill, where they planted their standards, and seemed to set us at defiance. To complete the victory, Gen. Pollock directed Captains Wilkinson and Broadfoot to take possession of this stronghold, which accordingly was gallantly assaulted, when the Ghilzies gave way and fled from the field. In this action several of the most influential Affghan chiefs were engaged; and the total amount of the force brought forward to oppose us is estimated by Gen. Pollock as from 4,000 to 5,000 men. Our loss was rather heavy; Captain Nugent, the sub-assistant commissary-general, being killed, and Sir Robert Sale slightly wounded, and 62 men killed and wounded. General Pollock proceeded onwards, and does not appear to have encountered any further opposition until his arrival, on the 13th September, in the Tezeen valley, where an army of 16,000 men, commanded by Mahomed Akhbar Khan in person, was assembled to meet him. A desperate fight ensued: we have no particulars of the details, but the result was, that the enemy were completely defeated and driven from the field, with a loss of several hundred killed and wounded; twelve Ghilzie chiefs are said to have fallen, two guns, three standards, and a large quantity of ammunition and stores were taken by our troops. Our loss was 32 killed and 130 wounded. The names of Captain Lushington of her Majesty's 9th, Captain Geils and Lieut. Montgomery of the 60th Native Infantry, and Lieut. Norton, 35th Light Infantry, are among the list of the wounded. Akhbar Khan fled in the direction of Bameean. On the day following this engagement, the General advanced to Boodkhak; on the next he encamped on the race-course at Cabul; and the 16th witnessed his triumphant entry into the citadel, and the planting of our colours on its walls. The city was almost deserted. The prisoners who had been left there on the removal of their companions to Bameean were restored by the Kuzzilbashes. Gen. Pollock had sent Sir Richmond Shakspeare in search of the others, at the head of 700 Kuzzilbashes; and in a supplementary despatch, dated Sept. 21, he had the gratification of announcing to the Governor-General that the whole of the European prisoners were then quite free from the hands of Mahomed Akhbar, except Capt. Bygrave. Gen. Pollock had very appropriately sent out a force under Sir Robert Sale to meet them; and he reports that the whole of the party is with him, with the exception of Major Pottinger, Capt. Johnson, Mrs. Trevor and 8 children, Capt. and Mrs. Anderson and 3 children, Capt. Troup, and Dr. Campbell, 1 European woman, and 4 privates, who had already arrived at the camp. The arrival of General Nott was daily looked for; and on the junction of the two armies it is said they would return to India with as little delay as possible. There seems no probability of our re-occupying Cabul; as soon as the prisoners are all recovered it is expected that we shall retire, after completing the work of retribution by the destruction of the city. Gen. Pollock, in his official report of these events, speaks in the highest terms of the gallantry of the officers and men: "Seldom," he says, "have soldiers had a more arduous task to perform than the dislodgement of the enemy from their heights; and never was an undertaking of the kind surpassed in execution." In regard to another gallant officer, Gen. Pollock says—"I feel considerable diffidence in mentioning the name of Major-General Sir R. Sale, whose heroic conduct in the field stands so little in need of my commendation. On this occasion I was an eye-witness to the personal intrepidity of this highly-distinguished officer, as he led up the heights in advance of his own regiment under a very hot fire." He concludes his despatch as follows:—"It gratifies me to be enabled to state that we have thus signally defeated, with one division of the troops, the most powerful tribes, and the most inveterate of our enemies, the original instigators and principal actors in those disturbances which entailed such disasters on our troops last winter." The Governor-General, on the receipt of the above intelligence, issued a circular announcing the facts, and offering, in the name of the Government and of all the people of India, to Major-General Pollock and Major-General Nott, and all the officers and troops under their respective commands, his grateful and heartfelt acknowledgments of the important services they have performed. He also directed that the successes in Affghanistan be fully made known to all the troops, at all the stations of the army, and that at those stations a salute of twenty-one guns be fired for the capture of Ghuznee, and a similar salute for the capture of Cabul. "All past disasters," says his Lordship, "have been retrieved and avenged on every scene on which they were sustained; and repeated victories in the field, and the capture of the cities and citadels of Ghuznee and Cabul, have advanced the glory and established the accustomed superiority of the British arms." All is quiet at Jellalabad and Gundamuck; but robberies are frequent in the neighbourhood of the Khyber Pass. The following extract from a Jellalabad letter of the 20th inst. will be perused with melancholy interest:—"On Sunday last, seven officers, and about twelve artillerymen, with some of Thomas's Khyberries, went as far as the hill, three miles on the other side of Gundamuck, where it is said our soldiers of the 44th, and some of the Artillery and 5th Cavalry, made their last stand, for the purpose of burying the bodies exposed to public gaze. They buried (within a square made of stones) 162 bodies, and covered them over with stones. On Sunday morning another party was sent out, who found and buried 70 men, so that 232 skeletons have at length been lodged in their earthly tenement." The last subject to be noticed is the report that Lord Ellenborough has determined on hanging Akhbar Khan, on bringing home to him the murder of Sir William M'Naghten.

China.—The date of intelligence from the expedition in China comes down to the 1st September from Nanking, and the 10th from Hong-kong and Macao. The last mail informed us of the capture of Woosung and Shanghae, in the Yang-tze-Keang, and of the destruction of numerous batteries and defences on the banks of the Woosung river; and it was stated that the fleet had proceeded towards Nanking for the purpose of commencing operations against that city. The squadron set sail from Woosung on the 6th July, and on the 14th arrived opposite some batteries built on a range of hills commanding the river, from which a fire was opened on the leading ships. The guns were instantly silenced, and the whole of the defences destroyed. On the 20th the vessels anchored abreast of the city of Chin-Keang-foo, which commands the entrance of the Grand Canal; the next morning the troops were disembarked, and marched to the attack. The Chinese, after firing a few distant volleys, fled from the camp with precipitation, and dispersed over the country. The city itself, however, was manfully defended by the Tartar soldiers, who prolonged the contest for several hours, resisting with desperate valour the combined efforts of the three brigades, aided by a reinforcement of marines and seamen. At length opposition ceased, and ere nightfall we were complete masters of the place. Chin-Keang-foo, like Amoy, was most strongly fortified, and the works in excellent repair. It is supposed the garrison consisted of not less than 3,000 men, and of these about 1,000, and 40 mandarins, were killed and wounded. "The Tartar General," says Sir H. Pottinger, "retired to his house when he saw that all was lost, made his servants set it on fire, and sat in his chair till he was burned to death. His private secretary was found, the day after the assault, hidden in a garden, and on his being carried to the spot, recognised the half-consumed remains of his master, who was worthy of such a death." Our list of casualties was heavy: three officers of the land force, viz., Col. Driver, Capt. Collinson, and Lieut. Gibbons, and one of the Naval, Major Uniacke, R.M., were killed; and nine of the land force, viz., Major Warren, Capt. Simpson, Lieuts. Bernard, Baddely, Grant, Cuddy, and Waddle, Ensign Travers, and Zemidar Number—and two of the Navy, viz., Lieut. Crouch, and Mr. Lyon, a Midshipman, were wounded. 169 men of both services were killed and wounded. The expedition soon after proceeded up the river Yang-tze, and, having anchored off Nanking, made preparations for bombarding that part of the city near the river. A large division of the army, under the command of Lord Saltoun, landed to the west of the city, and took up a position on a hill about half a mile distant from the walls. The inhabitants are stated to have declared their unwillingness to allow their houses and property to be destroyed. The garrison, consisting of about 14,000 Tartars and Chinese troops, became terrified. A flag of truce was sent out to the British Plenipotentiary, praying for a cessation of hostilities, which was granted, as Commissioners having full powers from the Emperor were declared to be on their road in order to treat for peace. The assault on Nanking, which was designed for the 13th, was therefore postponed. On the 15th the High Imperial Commissioners arrived. They were three, viz:—1. Kee-Ying, a member of the Imperial Family, and Commander-in-Chief of the Tartar troops in Konang-Sung. 2. Elipo, Lieutenant-General of Tchapoo, a former Governor of Tze-Kiang, but degraded last year for having liberated the prisoners. 3. Gnu, General-in-Chief of the provinces Keang-Sou and Keang-Si. They speedily communicated to the British Plenipotentiary their powers, which were found to be in due order. Visits of ceremony then took place, and, after various conferences, the conditions of a treaty of peace were signed, in the presence of the Admiral and General, and many other British officers. Copies of those conditions were immediately transmitted to Pekin. When the treaty was signed, a Royal salute was fired, and all restrictions removed on the intercourse between the expedition and the natives. Of this treaty the following are the most important provisions:—1. Lasting peace and friendship between the two empires. 2. China to pay 21,000,000 dollars in the course of the present and three succeeding years. 3. The ports of Canton, Amoy, Foo-chow-foo, Ningpoo, and Shanghai, to be thrown open to British merchants; consular officers to be appointed to reside at them; and regular and just tariffs of import and export (as well as inland transit) duties to be established and published. 4. The island of Hong Kong to be ceded in perpetuity to Her Britannic Majesty, her heirs and successors. 5. All subjects of her Britannic Majesty (whether natives of Europe or India) who may be confined in any part of the Chinese empire to be unconditionally released. 6. An act of full and entire amnesty to be published by the Emperor, under his Imperial sign manual and seal, to all Chinese subjects, on account of their having held service or intercourse with, or resided under, the British Government or its officers. 7. Correspondence to be conducted on terms of perfect equality amongst the officers of both Governments. 8. On the Emperor's assent being received to this treaty, and the payment of the first instalment, 6,000,000 dollars, her Britannic Majesty's Forces to retire from Nanking and the Grand Canal, and the military posts at Chinhai to be also withdrawn: but the islands of Chusan and Kolungsoo are to be held until the money payments and the arrangements for opening the ports be completed. This treaty of peace has given great satisfaction to the British in China and India. It was said that the Emperor had at first some doubts as to the propriety of opening a foreign trade at Foo-chow-foo, which is the capital of Fokien, and the nearest port to the country where the Bohea tea grows, but that he afterwards yielded that point. The Commissioners are described as anxious to get rid of the British from the Yang-tze-Kiang and the embouchure of the Great Canal; they offered to pay down four millions instantly; but the British Plenipotentiary insisted on the full instalment being paid and the ratification of the treaty before he would withdraw. The payment of the opium claims will, it is stated, be adjusted according to the amount fixed some months ago by the British Government. It was said that the Imperial Commissioners had pressed the consideration of the opium trade on the British Plenipotentiary, but he declined to discuss it, stating that if the Chinese Government was desirous of producing a stoppage to it, it ought to be effected by their own internal regulations, and by imposing restrictions on their own subjects. The steamers were the objects of great curiosity to the Chinese, who called them the "Devil's Ships." The Auckland steamer was under orders to start from Nanking direct for Suez as soon as the Imperial ratification should be given to the treaty, and the various conditions fulfilled. The removal of the expedition from the Yang-tze-kiang appears to be much desired, as the forces were beginning to suffer from sickness. At the time of the settlement, sickness had begun to appear extensively among the men of both services; upwards of 100 belonging to the 98th regiment had died. The city of Chinkeang-foo, mentioned above, is described as rather more than four miles in circumference. The works are in excellent repair, and the parapet, which is so thick and solid that nothing but cannon-shot could have made any impression on it, is pierced with narrow embrasures and loopholes, and flanked at a variety of spots with transverse walls. In addition to the above intelligence gleaned from the official despatches, the supplement to the *Canton Gazette* contains the important announcement that an officer of high rank from the court of Pekin is immediately to set out to represent the Emperor at the Court of St. James's. It is stated in private letters, that the Emperor was so much gratified at being called on for his signature to the treaty, that he immediately proposed to send an ambassador to England. There can be no doubt that the presence of the Chinese ambassador at the first drawing-room next season would create a sensation in the Metropolis.

West Indies.—The Clyde mail-steam ship, due on the 19th inst., arrived at Falmouth on the 18th, being the first ship returning to England upon the new scheme of service authorised by Government to come into operation on the 1st October. The weather had been favourable for the crops throughout the islands. At Trinidad and St. Christopher's the small-pox had prevailed with some severity. The return of the crops of sugar at Jamaica showed a great increase. The Governor was expected to open the session of the House of Assembly on the 25th October. The Barbadoes papers mention the illness of the Governor, Sir C. Gray, but he was in course of recovery at the date of these advices. The weather in that island is described as being favourable. Dr. Parry, the new Bishop of Barbadoes, was formally installed in his diocese on the 18th Oct., in the presence of the Lieut.-Governor, the ecclesiastical dignitaries and legal functionaries of the island. Accounts from New Orleans mention the arrival of the Hero from the Havannah, which reports that on the 6th Oct. they saw the destruction of a large vessel by fire; they ran down to her, and found her burning to the water's edge; the hands had left her, and the Hero cruised round the wreck till it sunk. They supposed from the appearance of the spars that the vessel was an English steamer.

CITY.

Money Market, Friday.—The successes in China and India have caused an advance in the price of Stock. Consols for immediate transfer are 94⅝, and 95 for January; Bank Stock, 171½ to 172½; Three per Cents. Reduced, 94; the Three and a Half per Cents. Reduced, 100¾ to ⅞; New Three and a Half per Cents., 101⅝ to ¾; New Five per Cents., 124; India Stock, 265, and 266½ to 7 for the opening.

Metropolis and its Vicinity.

The News from the East.—On Wednesday, in consequence of the news from India and China, orders were sent from the War-office to the Ordnance department that the Park and Tower guns should be fired. Accordingly at half-past two the Park guns to the number of 36 were fired, amid the cheers of a large concourse of people. The Tower guns were also fired, and the bells of a few of the churches were rung in the evening. It is reported that on the ratification of the treaty, a day will be appointed for a general holiday, an illumination, with fireworks in the Park, and other amusements, similar to those which took place at the proclamation of the peace of 1814.

Court of Aldermen.—A committee assembled on Saturday at Guildhall, on the subject of the charges brought against Alderman T. Wood, in connexion with the Talacre Iron and Coal Company. After a desultory conversation, Mr. Wood professed his readiness to enter into any explanation that might be required respecting the charges advanced, and pressed those present to name them. The other aldermen declined, on the ground that they had not come there as his accusers, but at his request, to hear what he had to say. It was then agreed that Alderman Wood should send in the whole of the affidavits which had been put into the Court of Chancery on both sides; and that, on a request for an investigation in writing being made by Alderman Wood, the Town Clerk should place the charges and answers in juxtaposition; and the committee should meet on the second Saturday after the receipt of the affidavits. In the course of the conversation which preceded this resolution, Sir Peter Laurie adverted to a charge against Alderman Wood, contained in a letter written by Mr. Hedge the barrister, which he would have read, but the Court refused to receive it. Alderman Wood remarked that he had a sufficient answer to Mr. Hedge, and that that gentleman's conduct would form the subject of very grave proceedings.

Court of Common Council.—A Court was held on Thursday, at which the late election of High Bailiff of Southwark was taken into consideration. It appeared in two shapes for the consideration of the Court: first, as to the question of putting the City seal to the appointment of Mr. Pritchard, according to the vote of the last Court; and secondly, in the petition of Mr. Harvey, the City Police Commissioner, against that decision. Mr. Harvey's petition prayed that the election might be declared null and void, or that no further proceedings might be taken in respect to the election of Bailiff until the next annual election of officers. A long discussion ensued, during which it was contended that the act of the late Lord Mayor was the act of the Court, and, whether right or not, could not be remedied; the Court had the opportunity at the moment of adjourning, but the majority determined to go forward, and they must abide by the decision. This argument was adopted, and the motion for affixing the seal to Mr. Pritchard's election was carried by a large majority.

Income Tax Commission.—The City commissioners commenced their sittings in Basinghall-street on Monday, for the purpose of receiving appeals aginst the assessments. The City having been divided into districts, notices of the day of hearing were forwarded with the papers to be filled up to all persons assessed in each district; and on appearing at the chambers, a number was appended to each notice paper presented, and they were then heard in rotation, so that those who made the earliest application were the first heard. On Monday, upwards of 200 appeals were disposed of, and nearly two thirds of the claims of exemption or reduction were admitted. 392 cases were heard on Tuesday, but the claims admitted were not so numerous. It is expected that the appeals for the City alone will occupy the commissioners until nearly Christmas.

Custom House.—The commission appointed some time back to inquire into the mode and expense of collecting the public revenue has been charged by Government with the investigation of the circumstances attending the frauds at the Custom House, which have been for some time before the public. Lord Granville Somerset is the chairman of the commission. The proceedings are private, none being admitted except those summoned by the commissioners to attend. Two officers, who are confessedly deeply implicated in the frauds, and ten others, who have been discharged by the board, have been requested to give evidence.

The Temple Church.—This ancient edifice was reopened on Sunday for divine service, admission in the morning being obtained by tickets only. The church was much crowded with members of the profession. The barristers and students each occupied their respective seats. Several of the Judges occupied stalls on the south or Inner Temple side; and there was a large attendance of benchers. The morning sermon was preached by the Rev. C. Benson, Master of the Temple, and that in the afternoon by the reader, the Rev. W. H. Rowlett. Mr. Turle, of Westminster Abbey, presided at the organ. The music at the morning service was selected from Boyce and Tallis, and that in the afternoon from Kent.

Trades of the Metropolis.—The distress prevailing among the various trades in the Metropolis is very great, and the police reports have given long accounts of particular instances which have come before the notice of the magistrates. These details show how little is known of the industry and privations of a large class of the population of London. Among the carpenters alone, no fewer than 500 men are out of employ. Among the piano-forte makers, which was once a very flourishing trade, men being able to earn from 3*l.* to 4*l.* per week in some branches, the distress is very great, not more than from 200 to 300 being in constant employ. Among painters, bricklayers, tailors, shoemakers, &c., the greatest distress prevails, more especially among the shoemakers, who, in consequence of the new tariff, have been compelled to reduce the price for making a pair of boots nearly one-third. The shirt-makers are in a very distressed state having to make the best shirts, each of which takes 14 hours, for 6*d.* each, and common ones for 1*d.* and 1½*d.* each. Meetings have been held at the eastern parts of London, at which these facts were stated by respectable persons acquainted with the destitution of the parties. One gentleman, a surgeon, mentioned that in Stepney, Limehouse, and the adjoining parishes, there were many thousands of industrious women employed in shirt-making who did not earn more than 4½*d.* a day, out of which they had to procure thread and needles, and that the outfitters frequently employed middlemen, who exacted a halfpenny out of every sixpence paid for making each fine shirt. These disclosures have attracted attention to other trades of the same kind, and it appears that the working stay-makers receive only 2½*d.* per dozen for making common stays. The poor creatures who make soldiers' and policemen's clothing are also miserably paid, 1*s.* 10*d.* being the price for making a coat, which generally occupies them for two days.

Metropolitan Statistics.—At a meeting of the Statistical Society on Monday evening, a paper was read on the moral and physical condition of the Working Classes in the inner ward of St. George's, Hanover-square, by Mr. C. R. Weld. The inquiry was originated by Lord Sandon, and conducted at his Lordship's expense in July last. The number of families visited was 1,465, consisting of 2,804 children and 3,141 adults, together 5,945 individuals, of whom 839 were ill. The number of rooms possessed by these families was 2,174, and the number of beds 2,510, which gives an average of 2·3 persons to each bed; while in the parishes of St. Margaret and St. John, Westminster, where the Society appointed agents to visit the working classes, it was found that there were 3 individuals to each bed. The average amount of weekly rent paid in St. George's parish was 4*s.* 3*d.*, nearly double what is paid by the working classes in Westminster. A considerable portion of the families visited were found living in rooms over coach-houses and stables, and these were better furnished than the dwellings of families living in streets. The moral condition of the classes under consideration, as represented by the number of religious books found in their dwellings, and the attendance of the families at places of worship, is far superior to that of the working classes in Westminster. In St. George's, 98 per cent. professed to belong to some religious denomination, 93 per cent. to attend public worship, and 88 per cent. of the families had a Bible, Testament, or Prayer-book; 74 per cent. of the children were in the habit of attending day or Sunday schools, and of those who did not go to school, 12 per cent. were educated at home; 37 per cent. of the heads of the families were born in London, 53 per cent. in other parts of England, 5·3 per cent. in Ireland, and 1·7 per cent. in Scotland. The usual length of time the families had resided in their dwellings was from one month to three years; there were only 8 cases of families having been stationary for a period exceeding thirty years.

Mortality of the Metropolis.—The number of deaths registered in the week ending Saturday, Nov. 12, was 931: males, 459; females, 472. Weekly average of 1839-40-1-2: males, 467; females, 445. The distribution of this mortality over the different districts was as follows: West districts, 136; North, 150; Central, 171; East, 228; South, 246.

Public Meetings.—A meeting has been held of the St. John del Rey Mining Company, at which the long-expected dividend has been announced to the proprietors. According to the best estimate that can be formed of the result of the workings, up to the month of August, the mines have left a net profit, between the 1st of January and the 31st of August, of 6,020*l.* The last remittance of gold from Morro Velho, which left that place in August, arrived at the Bank of England on the 14th inst. It leaves a balance in the hands of the directors, after providing for every engagement of the Company, of 4,301*l.* The amount of funds in the hands of the managers in Brazil, available to the current expenses of the company, was, on the 20th September, 25,634 milreas. The amount of gold on hand at Morro Velho, at the last date, the 28th September, was 9,867 oitavas, equal to 94 lbs. The directors have accordingly declared a dividend—being the first half-yearly dividend—of five shillings per share, on the shares in this company (11,000*l.*); which will take the sum of 2,750*l.*, leaving a balance in hand of 1,551*l.*; and they express a hope that the company will be enabled to continue declaring dividends every half-year.—A conference of the bondholders interested in the loan of 700,000*l.*, contracted by Portugal in 1836 upon the guarantee of the debt due by Brazil to that country, was held a few days since. Sir I. L. Goldsmith, who had convened this meeting, explained the offer which the Portuguese Government had made for the settlement of the debt, but which he, with others, who hold stock to the amount of 550,000*l.* of the entire sum, felt bound to reject. He proposed to send a strong remonstrance to the Portuguese Government, in the belief that such a course will obtain the justice to which they are entitled. An address for this purpose was submitted, and after a discussion on the policy of a public meeting to discuss the question, was adopted by the bondholders.

The Wreck of the Reliance.—Some further particulars of this melancholy event have appeared this week, chiefly from the account given by the survivors who arrived in town on Tuesday from Boulogne. It appears that, previously to the Saturday morning when the ship went on shore, the weather had been so hazy that the officers had been unable to take any observation for upwards of 70 hours. At the time the vessel grounded, she was heaving-to under close-reefed top-sails, and veering her head to the northward, when she struck on her heel. They had previously seen lights, which the second mate thought were those of Dungeness, and expected that they would be in the Downs in the morning. Her head immediately came round, and she fell broadside on the sand. The whole of the crew rushed on deck, and, before any orders could be given, she shifted slightly, and became more firmly imbedded. This motion was repeated five or six times in rapid succession, and it was the opinion of the officers that the ship's back was broken by the force of the concussion. The captain immediately ordered signals of distress to be fired. It was the opinion of all on board that they were off the English coast; and the captain, seeing there was no hope of saving the ship, desired several of the crew to cut away the mainmast. This was immediately commenced, and in a few moments it went over to leeward with a terrific crash. The foremast soon followed, and, in falling, broke the leg of a young midshipman named Forde; but the imminent danger of all around did not prevent, even at this crisis, every attention being shown him. The fractured limb was carefully set by the surgeon, and the poor lad was conveyed to the captain's cabin, where he remained until the breaking up of the ship obliged some of the crew to place him on the poop. The sea was now tremendous, and, as the vessel rolled, her bottom could be distinctly heard breaking up. The water rushed in, and her cargo of tea becoming wet burst up the decks; which for some time previous had been dangerous to stand upon, from the planks opening and shutting, whereby the feet of several seamen were jammed between the seams. Three hours had now elapsed since the vessel struck, and the day was beginning to break. The captain, with the officers and passengers and many of the crew, were on the after-part of the vessel, which still held together, the sea making a breach right over her. Chests of tea floated one by one on the surface, indicating that a portion of the bottom was entirely gone. Orders were now given to get out the long-boat, but from the injuries she had sustained from the falling of the masts and rolling of the ship, she was found to be useless. There were two other boats on board, but their condition at this time, as the carpenter O'Neill states, was such as to render them of no service. The Europeans among the crew were then desired by the officers to construct a raft, but this could not be accomplished. In fact, O'Neill admits that the crew refused to work at it. Shortly before nine o'clock, as nearly as can be ascertained, the vessel parted amidship, the sea breaking right through her; and in a few moments she was a complete wreck, portions of her timber floating about in all directions. Numbers of the crew sank immediately, and were entirely lost sight of amidst the breakers; Capt. Tucker was among this number. The captain, Mr. Walsh the chief-mate, O'Neill himself, and several others, still clung to the mainmast and rigging, which being released from the vessel, floated towards the land. At this period, and indeed for some length of time previous the people on the coast were distinctly observed running to and fro, but no boats put off to render assistance. The floating timber from the wreck, whirled round by the violence of the sea, struck off many who had taken refuge on those portions still above water. Captain Green, who was nearly 60 years of age, became so weak that he lost his hold several times, and fell into the sea. Mr. Walsh called out to some of the sailors, "Pull up the captain, boys!" and he was raised on the timber more than once. The last time he was taken out of the water he was found to be insensible, but the men still assisted in holding him on. About half-past 9 the loose spars became so exposed to the sea as no longer to afford protection against its violence, and the greater number of those who had sought refuge upon them were washed off. O'Neill plunged into the sea, and seized a plank. At the moment of doing so several sailors clung to him. He was compelled to strike them off to save his own life; but one of the Malays reached the shore, with himself. O'Neill states that, as daylight broke, men on horseback were observed on the shore; but he states most distinctly, that no boat was put off, and no attempt whatever made to save the crew. Many of the bodies have been washed ashore, but that of Capt. Tucker has not yet been found. It appears that he had sailed from Portsmouth, in command of H.M.S. *Iris*, about 18 months since, for the coast of Africa, and being obliged by ill-health to give up the command, proceeded to St. Helena, from which place he embarked in the ill-fated ship for London.

Fires.—At a fire which occurred in a large shawl-warehouse in Friday-street, Cheapside, on Saturday, the new apparatus for enabling the firemen to resist the action of the smoke was brought into operation. On the arrival of the brigade, the superintendent was for some time unable to discover the point whence the fire proceeded, in consequence of the immense mass of smoke that emanated from all quarters of the premises. One of the firemen therefore equipped himself in the apparatus, and descended into the cellar, in order to ascertain its real locality. This apparatus was presented to Mr. Braidwood some time since by Col. Paulin, of the Sappers and Miners in Paris, and is similarly constructed to a diving dress, the air being pumped in by one of the engines. The fireman, after traversing some distance, perceived the flames raging amongst several tons of waste paper piled in one corner of the cellar; the fire had reached the flooring of the warehouse, and was making rapid progress. A branch of the engine was introduced, and the fire was at length arrested. The importance of this contrivance was proved in this instance by the fact, that the stock on the premises is insured to the extent of 10,000*l*; and the property in the neighbourhood is so valuable that it is insured in the different offices for upwards of 3,000,000*l*.

Lambeth.—It is stated in the daily papers that the Council of the Duchy of Cornwall have made a donation, through the Rev. Dr. D'Oyley, rector of Lambeth, in the name of his Royal Highness the Prince of Wales, of 100*l*. towards the erection of a new church now proposed in the Waterloo district of this extensive parish.

Camberwell.—Mr. Robert Malcolm, whose recent death has caused a vacancy in the office of surgeon to the Surrey county gaol, has bequeathed the sum of 1,000*l*., to be paid at the demise of his wife, to the Royal Naval School at Camberwell, to found a scholarship or exhibition, to be entitled the "Malcolm Exhibition." Mr. Malcolm, who was a surgeon in the Navy, was one of the council of the school.

Marylebone.—On Saturday, at the weekly meeting of the Vestry, on the minute being read with reference to the erection of a monumental column to the Scotch Reformers of 1793, in Regent-circus, Mr. Gomm moved that it be not confirmed. A division was demanded, when the confirmation was carried by a majority of 41 to 8.

Acton.—Berrymead Priory, near this place, has just been purchased by the Sisters of Le Sacré Cœur of Paris, to be converted into a convent. The priory is a castellated building, of considerable extent, and since the year 1679 has been the residence of many of the aristocracy. For some time it was the property of Lady Mary Wortley Montague.

Richmond.—During the last week a painful excitement has prevailed throughout this town and neighbourhood, in consequence of the discovery of embezzlements in the management of the Savings-bank, the person charged with the offence being Captain Belstead, the secretary of the institution, a gentleman highly connected, who, besides holding other appointments, is a captain in the Surrey militia, and who has hitherto maintained the highest character. A warrant was issued for Captain Belstead's apprehension; and during Friday and Saturday last, the local magistrates were engaged in investigating the charge. The examination took place before Mr. B. Hawes, M.P., chairman, Sir H. Baker, Bart., Mr. Penrhyn, and other magistrates. Sir T. Reeve, the treasurer of the institution, conducted the prosecution. From the evidence, it appeared that on examination of the accounts, the sum of 1,050*l*. was found to have been abstracted from the funds. Sir T. Reeve stated that it was the custom of the accused either to call or send every Saturday for the amount of money required by the depositors on the following Monday, and that many names of the depositors having been forged, he, as treasurer, had, without hesitation, advanced the money upon the vouchers presented to him by the prisoner. Two cases of embezzlement and one of forgery only were gone into, upon each of which Captain Belstead was fully committed for trial, and conveyed to Horsemonger-lane gaol. In order to allay the excitement occasioned by the defalcation, the trustees of the savings-bank have issued notices, assuring the depositors that their demands will be met with promptness, and pledging themselves to make good the various sums abstracted by the secretary.

Twickenham.—On Monday, a young man, having the appearance of a gentleman, was apprehended by the police at this place, for attempting to pass at a shop a cheque on the London and Westminster Bank for 10*l*., knowing it to be forged. The prisoner made great resistance before he was taken into custody, and on searching him another cheque was found in his possession, also for 10*l*., on the same bank, and signed, as the first, in the name of Murray. The prisoner said he lived at Kingston House, near Kingston, and had been hunting the day before. He was afterwards taken for examination before a local magistrate, when there appearing reason to believe that he had passed similar cheques at Kingston and other places, he was remanded, in order to collect the necessary witnesses, until this day, when he will be re-examined at Brentford.

Teddington.—The inquiry into the late incendiary fire on the farm of Mr. Gunner was concluded on Monday, when John Morris, who has been in custody since the 6th inst. on suspicion, was brought up from the New Prison for final examination at the Staines petty sessions, and fully committed for trial.

Provincial News.

Her Majesty's Visit to Walmer.—We mentioned in our last Prince Albert's visit to H.M.S. Thunderer, for the purpose of witnessing target-firing. The following particulars of the experiments and manœuvres will, no doubt, be interesting:—Two targets were laid out to the eastward of the vessel, away from the shore—one 600 yards' and the other at 300 yards' distance. The target nearest to the ship was composed of a stage, 10 feet square, at either extremity of which was a staff surmounted with a small flag. The other target was a small boat, termed a "dingy," about 12 feet in length, with a flag flying from the mast. Everything being prepared, and the order being given to beat to quarters, the men cast loose the guns throughout the ship, on the port broadside. The quarters being reported to Captain Pring, orders were given to fire a broadside at the nearest target. This was executed with admirable precision, one flag-staff being shot away altogether, and the flag on the top of the other staff carried away also. Next were fired two broadsides, by divisions, and these completely riddled and nearly destroyed the "dingy"—every one of the balls which did not strike the target falling close around, and within a very few feet of it. Had the target been of the usual size of a ship of war, there was not one of the shots but would have "told" with unerring effect. The next was quick single-gun firing at the remains of the "dingy," followed by a divisional broadside. The effect of the precision with which this was executed was soon perceived, by forcing out the off-side of the "dingy," knocking away her stern, and finally sinking her. The firing being ended, the men (the ship being supposed to be attacked by an enemy) were ordered by divisions of boarders to board; then to repel boarders by several interesting evolutions in defence of ships of war, closely supported by the Marines. The riggers and firemen were next seen aloft, actively employed in their various departments. The firemen (the ship being supposed to be on fire) with their fire-buckets, having long lanyards, reaching from the lower yards to the water, appeared to be endeavouring to stop the progress of the flames in their respective vicinities. The riggers were aloft knotting and stopping the rigging supposed to have been shot away by the enemy. Thus terminated "general quarters," and the guns were then ordered to be manned. At the termination of this interesting display, his Royal Highness addressed Captain Pring, and expressed his highest admiration at the excellent discipline of the ship, and the beautiful style in which the whole of the nautical movements had been performed.—On Sunday divine service was performed at the Castle by the Rev. Mr. Lane, Rector of Deal. On Monday, being the birthday of the Princess Royal, the event was celebrated with the usual honours at Walmer and Deal; and the day was observed as a general holiday. Her Majesty and the Prince took their usual walk in the morning, proceeding from the Castle along the shore to Kingsdown, through the village, and returning across the Downs by the old landmark, unattended by any member of the household. At 9 o'clock the guns on the saluting battery at the Castle fired a Royal salute in honour of the Princess Royal's birthday, which was answered by Her Majesty's ships Thunderer and Curaçoa, and three boats, with a gun on each bow, from the Thunderer, which were moored within 50 yards of the Castle. The Thunderer and the Curaçoa, with the Fearless steamer, the Lady Flora, and the Sea Lark, all having their yards manned, and dressed with a profusion of colours, had a picturesque effect from the Castle. Between 10 and 11 o'clock upwards of 40 Deal luggers, gaily decked out with flags, arrived off the Castle, with Mr. Darby, the Mayor of Deal, taking the lead in the Prince of Wales. After cruising off Walmer for about half an hour, they made sail together towards the Southsand-head Light, rounding the Curaçoa's stern, and receiving three hearty cheers from the crew, with the rigging manned, which was returned by the boats as they passed in succession; they then tacked, and stood in for Walmer Castle, and, upon their arrival off the fortress, Her Majesty and Prince Albert went upon the ramparts, and received hearty cheers from the crew of each boat. In the afternoon six boats from the Thunderer, with a gun in each bow, manned with sailors and marines, went through the evolutions of a sham engagement immediately off the Castle, which were witnessed by the Queen and the Prince from the ramparts. The whole of these interesting displays passed off without the slightest accident; they appeared to afford much amusement to the Queen; and Lord Sydney has since conveyed to the Mayor of Deal the expression of Her Majesty's gratification at the appearance of the boatmen, and their manifestation of loyalty. In the evening all the ships illuminated with blue lights, and the men-of-war gave a display of fireworks and rockets. The towns of Deal and Walmer were also illuminated in honour of the Princess Royal. On Tuesday the heavy rain, which continued without intermission during the whole day, prevented Her Majesty from leaving the Castle.—On Wednesday Her Majesty and the Prince walked on the beach for nearly two hours. Arrangements had been made for the Royal suite to visit the Thunderer in the morning, but the visit was postponed in consequence of a case of small-pox having occurred on board, and the boats of the ship were ordered not to approach the castle. In the course of the day the Prince hunted with the Beachborough foxhounds; the meet was at Betshanger Gorse, where there was a brilliant field of upwards of three hundred, consisting of the gentlemen and yeomanry of the Isle of Thanet, and other places in the neighbourhood. After ten minutes' draw a dog fox broke cover, and gave them a run of 20 minutee, when he was killed near Eastry turnpike. The Prince was well up at the death, and was presented with the brush. The field then made for Knowlton Park, and soon found in a cover close by, when they had a good circuitous run of 25 minutes. The fox was ultimately killed at Betshanger Gorse, within 200 or 300 yards of the spot where the field met.—On Thursday the Queen and Prince Albert visited Ramsgate. The visit was quite unexpected, and the approach of her Majesty was unknown until she was within a mile of the town. The Queen and Prince were received at the Pier House by Sir W. Curtis, and afterwards promenaded for some time on the Eastern pier. During her stay the Queen gave an audience to the officers of the Belgian brig-of-war Comte de Flanders, and witnessed the launch of the Genoese barque Felice, from the patent slip in the harbour.

Agricultural Districts.—In addition to the incendiary fires recorded in our last, we learn from the local papers, that the farm of Mr. Oldham, at Freiston Ings, about four miles from Boston, and distant half a mile from any dwelling-house, has been fired. Two stacks of wheat, the produce of seven acres—one oat-stack, the produce of ten acres, and one large hay-stack, together with a large brick-and-tiled barn, were entirely consumed. The flames illuminated the country for many miles around, causing a great number of persons from Boston, as well as from a considerable distance, to hasten to the spot.—The extensive corn-mills of Messrs. Pointon, at Lawton, near Sandbach, were destroyed by fire on Sunday week. The whole of the machinery, with the stock, were reduced to a heap of ruins within two hours and a half from the first appearance of the flames.—The outbuildings on the farm of Mr. Morris, at Liftleham, near Bideford, have been burnt down, and a large quantity of stock, with some cattle, destroyed. The flames were visible for many miles. The incendiary, however, has been discovered, the apprentice girl having confessed that she set the premises on fire to spite her master. An investigation has taken place before the magistrates, when the girl was committed for trial.

Bath.—The local Papers state that the total debts now proved against the joint estates of Messrs. Hobhouse and Co., the bankers, amount to 248,679*l*. 13*s*. 8*d*.; and the total assets realised by the assignees for the benefit of the creditors amount to 89,743*l*. 14*s*. 3*d*. The creditors of two of the partners have received 20*s*. in the pound; and those of the remaining partner have received 9*s*. Two dividends of 5*s*. and 2*s*. in the pound, to all the creditors of the bank, have also been declared; and a sum remains in hand for a third but very small dividend.

Bedford.—Some dispute having arisen last week in regard to a church-rate for the parish of St. Paul, in this town, it was determined to poll the parish, when the rate was carried by a large majority, only four votes being given against it. The opposition arose in consequence of a law-suit for arrears of rates, the expenses of which were charged upon the parish. The opponents of the rate contended, that as the party proceeded against had been compelled to pay his share of the expenses, the churchwardens, who were bound to prosecute him, should pay the remainder. This view of the question was of course negatived by the result of the poll.

Cambridge.—This town was thrown into a state of great consternation on Friday night, by a report that the Rev. E. Mortlock, B.D., Fellow of Christ's College, had been fired at by his nephew, Mr. J. F. Mortlock. Mr. Mortlock, it appears, was sitting in one of his rooms in the Fellows' wing of the College, about half-past eight, in company with Mr. T. Mitchell, when his nephew opened the door, and, making some observation, said he would shoot them both, at the same time presenting a pistol. Mr. Mitchell made his escape, and the cap only of the pistol exploded. The young man was armed with another pistol and a dagger or small sword, and a scuffle ensued, the noise of which brought the Rev. Mr. Cartmell to the room. The young man then asked if Mr. Mortlock would swear not to prosecute him, and, on receiving no answer, he fired the second pistol, the ball passing through his uncle's body. The assassin, in the mean time, made his escape, lashing two hunting whips together, and dropping a height of three stories into the Fellows' garden, having first bolted the door, which was in vain attempted to be forced while he was making his escape. He was, however, apprehended in the evening a few miles down the river, at Baitsbite, by some men connected with the lock in that neighbourhood, but not until he had fired two shots at them whilst endeavouring to escape. The whole of this distressing affair came out in evidence before the magistrates, who assembled on Saturday at the town gaol to investigate the occurrence. It appeared that the young man has before been held to bail, and imprisoned in default, for threatening his uncles, Edmund, the object of the above attack, and Thomas, the head of the well-known banking establishment, for some grievance, real or supposed, relative to his father's will, to which they are executors. Mr. Mortlock was much affected in giving his evidence, and described the distress he suffered when he found that he had been wounded, as he had previously hoped that his nephew merely intended to frighten him. After a long inquiry, the magistrates committed the prisoner to take his trial at the Lent assizes for felony. His conduct and language at the inquiry showed the utmost indifference to his position, and the papers describe it as altogether a most painful scene.—The excitement occasioned by this occurrence had scarcely subsided on Saturday evening, when the inhabitants were surprised by the report of another attempt at murder, a man named Triplaw, who keeps a greengrocer's stall on the Market-hill, having stabbed his wife, by plunging a pruning-knife into her neck. The offence was committed in the open shop, in the presence of several witnesses. The hospital surgeon deposed that the woman was in a dangerous state, and could not be examined for three days at least, assuming that there was a hope of her recovery. The prisoner was, therefore, remanded until her depositions can be taken.

Carnarvon.—The local Papers state that the rebuilding of Lord Dinorben's new mansion at Kinmel Park, which was begun three months ago, has made such progress that the roof is now being covered in. It is said that the builder has engaged to complete it before the Christmas of next year.—The ship Hamilla, of Glasgow, was totally lost off Port Madoc in the storm of Saturday week. She was on her passage from Demerara to the Clyde, laden with coffee and sugar. The crew and passengers were saved, but the vessel went to pieces in the course of the night.

Cheltenham.—We learn by the local papers that the Tracy peerage, which has been dormant for nearly half a century, is likely very soon to engage a considerable share of legal attention. Mr. James Tracy, the present claimant to the viscountcy, having made out such a case as he considers will establish his claim before the proper tribunal, has this week lodged a *caveat* in the Bishop's Court at Gloucester, against Lord Sudeley's presenting to the living of Toddington, now become vacant by the death of the Rev. J. Eddey, who for the last fifty years has held the vicarage. This proceeding is important, as being the first overt act of interference with the rights and privileges of Lord Sudeley, on the part of the claimant to the title and properties of the Tracy family, and will, of necessity, bring on the discussion of the grand question, which, from munimental discoveries said to have been recently made, is likely to involve, in the general issue, the Sandiwell and Brockhampton estates equally with those of Toddington.

Gloucester.—The special commission appointed by Sir James Graham to investigate the affair of Northleach arrived in this city on Saturday week, and proceeded to examine the county gaol, where they were met by some of the visiting magistrates. After investigating the circumstances attending the imprisonment of the Cheltenham prisoners, they minutely inspected the gaol and penitentiary. The governor, surgeon, turnkeys, and clerk, underwent examination. Every prisoner was then examined and subjected to the stethoscope. The commissioners did not bring their labours to a close till Tuesday evening. The operation of the treadmill formed a prominent feature in the inquiry; and it is considered probable that some other punishment than hard labour on the wheel will be recommended. All the inquiries were carried on privately, and even the Chairman of the Quarter Sessions was not allowed to be present. The commissioners have since proceeded to inspect the House of Correction at Littledean.—The inquiry into the extraordinary case of infanticide in the Forest of Dean has terminated in the committal of the mother as principal, and the man as accessory, on the charge of wilful murder. The skeletons of the six children have been discovered in the graves in which the mother stated that she had placed them with the man's assistance. These atrocities appear to have been carried on for the last ten or twelve years; no suspicion of the fact had been entertained, and it might never have been discovered but for the confession of the mother during an illness which she imagined would prove fatal.

Hartlepool.—On Wednesday of last week, during the severe storms which prevailed along this coast, a fatal collision took place near this port between the brig Integrity, of Poole, and an English schooner, the name of which is unknown. The schooner sunk a few minutes after the accident, and all hands perished before the crew of the other vessel could render any assistance. It is supposed that she was a collier belonging to Newcastle, and that her crew consisted of 10 or 12 persons.

Henley-on-Thames.—On Thursday week the inhabitants of this town were surprised by the announcement that the bank of Messrs. Lydall, the only bank in the town, had suspended payment. It was market-day, and business was completely arrested by the intelligence. A meeting of the creditors was held on Saturday, when a statement of their affairs was made by the Mayor and a committee who had been entrusted to make a preliminary inquiry. It appeared that their London agent having refused to pay their notes on Friday week, in consequence of a party indebted to the bank having neglected to lodge with the agent a sum of money he had promised to pay in, they were obliged to suspend payments. The Mayor, however, assured the large body of creditors present that there were full assets to pay 20*s.* in the pound, and that Messrs. Lydall deeply regretted the inconvenience that arose to many persons from the interruption. The assets of the bank were 16,015*l.*; the liabilities were—to creditors, 9,650*l.*; notes in circulation, 4,895*l.*; due to Messrs. Grote's bank, 7,616*l.* The freehold property was valued at 30,000*l.* The creditors generally expressed confidence in the solvency of the bank, as the explanation given satisfactorily proved that the assets, independently of the freehold property, were amply sufficient to pay off all the liabilities. It was then arranged that 10*s.* should be paid on the 19th December; 5*s.* in February; and the last 5*s.* before Lady-day.

Iminster.—A meeting of the Agricultural Association took place in this town last week, and was numerously attended. The chief feature of the meeting was the speech of Mr. Bickham Escott, the Conservative member for Winchester, to whose opinions on all matters connected with agriculture and its prospects much weight is attached. On this occasion Mr. Escott defended the new measures of the Government; he stated his conviction that it would have been useless to talk of supporting agriculture under the circumstances of the country; and that therefore it was the duty of Parliament and the Government to endeavour to encourage the commercial and shipping interests of the country, as the best mode of giving increased value to agriculture, and of benefiting all classes of the community. In regard to the operation of the income tax and the tariff on the farmers, he said, "I have always been accustomed to speak plainly, and I mean to say that every landlord is bound to consider the circumstances of his tenant, and in the long-run does consider it; and that in case the occupying-tenant's proportion of three-and-a-half per cent. is too much for his means according to his present rent, then the landlord should himself bear it. He must do it. I say, that if the three-and-a-half per cent. upon the tenant makes his expenses more than his farm is worth, the landlord should bear it, inasmuch as the tenant was less a party to the arrangement. Who, I would ask, enjoys the benefit of our great and free institutions, the protection which rank and property enjoys, so much as the landlords? I should be ashamed of myself if I said that the landholders and the moneyholders of England were not to be called on, in times of difficulty, to uphold the national credit and the national resources. The landlords enjoy a greater value for their land through the laws and customs of the country, and they are called upon to support the Government from which they derive so much in a time of national pressure. It may be said, that from the income tax and the new tariff a blight will be cast upon agriculture; I have, however, come to a conclusion, after considering the whole bearings of the subject, that the great protective power of the agricultural classes of the country rests in the renewed prosperity of its trade and commerce. And with respect to the corn law, if you look at the late corn law, which has been superseded, there was a much greater panic and much greater distress among the agriculturists when the old law was in operation, than there is at the present time. Call your attention to 1835-6, and ask yourselves what you then sold your wheat for? Was it not 1*s.* or 1*s.* 6*d.* lower than at present? Is it, then, fair to say that the measures of the present Government have produced ruinous consequences to you? I certainly had entertained great doubts as to the propriety of conceding the extensive alterations proposed to be made in the corn laws; but at the same time, I never entertained the idea that a certain fixed scale of duties could be always adhered to; and who, when he heard of the state of the starving thousands in the manufacturing districts, and felt that something must be done—who was bold enough to take upon himself the responsibility of making no alteration? I confess I could not do it."—In regard to the grazing department of agriculture, he said, "I know there are many suffering, who bought in their cattle at a high price, and are now selling them at low prices. This is an evil such as I do not wish to palliate or deny. But I will ask you if the prices of cattle have not been such as could not be maintained in this country with fairness to the community? The fact is, that unsteady prices are prejudicial to all. I believe, looking at the circumstances of the country, that the late measures will give a great stimulus to trade and commerce, and that this will re-act upon the agriculture of the country."—He concluded amidst great cheering by disclaiming for the agricultural interest any protection but that of the equal laws, freedom, and energy of Great Britain; "Let us not, however, as agriculturists, think we can in times like these sit with folded arms. No; too much has been done to allow us to sit still. We must take our parts in the progress of the great destinies of England. And happy are we that we are allowed to do so. Think how high is the privilege to have been born a subject of the Queen of Great Britain, on whose dominions, extended through the energy of the enterprise of our forefathers, the sun never sets, and on the extremest corner of which no man sets his foot but he enjoys the sacred rights of liberty, and then think that this is the country, and these the privileges, for which you are called upon to make sacrifices. No, they are not sacrifices. I feel from this moment they are the offerings of free men, given with free hearts, who, despising the mean artifices of party politics, are resolved to hand down to their children's children the national glory which themselves have enjoyed."

Liverpool.—A large free-trade and anti-corn-law meeting took place in this city on Friday. The Earl of Sefton had been expected to take the chair, but sent a letter of apology, in which he said that, though he had always cordially agreed with the principles of the Anti-Monopoly Association, and hoped to see the day when those principles had triumphed over established prejudices, he must decline to take the chair, having long given up attending public meetings of any kind. He must content himself, therefore, with promoting the progress of free-trade in all its branches by his heartfelt good wishes. Mr. O'Connell and Mr. Hume were also expected, but were prevented attending by other engagements. The meeting was addressed at great length by Mr. Cobden, Mr. Buckingham, and other gentlemen.—Two ladies of this town, respectably connected, were brought before the magistrate charged with purloining articles from a shop. One of them was discharged for want of evidence, but the other was committed to take her trial, the magistrate refusing to accept bail.

Lynn.—On the morning of the 6th instant a carrier pigeon, quite exhausted, fell down in the yard of a house in High-street, in this town. An unsealed letter was fastened by a string to one of its legs. The letter was written in the German language, was dated Dresden, Nov. 4, and addressed to the Earl of Haddington; and after being disengaged from the pigeon's leg, was inclosed and sent by post to London. The pigeon was carefully attended to, and appears quite cheerful and contented.

Newcastle.—The Court of Bankruptcy under the new Act of Parliament commenced its sittings in this town on Tuesday week, before Mr. Ellison, the Commissioner, and Mr. W. Sidney Gibson, the Registrar of the district; the room at the opening was filled by solicitors and others belonging to the town and neighbourhood. There was no business of importance transacted, and it was understood that some days would elapse before the arrangements would be brought into working order.—Instructions have been received at the Custom House of this port to permit the export, duty free, of coal, in our own and foreign reciprocity vessels, to Malta, Gibraltar, and Heligoland.

Plymouth.—A case of extensive smuggling has recently been brought before the magistrates of this town, Mr. Hicks, a farmer residing at Efford, being charged with having in his possession 343 gallons of brandy, of the value of 321*l.* 11*s.*, the customs duty on which had not been paid. The bench said that they had gone over the depositions, and could come to no other conclusion than that the defendant was guilty; but in consequence of some mitigating circumstances, and considering that he had a wife and numerous family, they should inflict the lowest penalty the law would allow. The property seized amounted to the sum of 1,134*l.* 15*s.* 10*d.*, and according to the act they were compelled to fine him not less than one-fourth of that amount; they therefore adjudged that he be fined the amount of 283*l.* 13*s.* 10½*d.*, and in default of payment six months' imprisonment in the county gaol.

Preston.—The *Preston Chronicle* states that a singular change of fortune has occurred, during the past week, to a poor man at Bradford, called William Sewell, a water-carrier, who has for years plied his occupation in that town under the name of "Water Bill." A letter arrived the other morning from Bath, informing him that he was entitled to property to the amount of 10,000*l.* He had no sooner recovered from the surprise created by this announcement, than a gentleman arrived from that city, informing him of the death of his aunt, who had left him the above amount. With this gentleman the astonished water-carrier set out for Bath, where the property has been secured to him. The Paper adds that the old water-cart will, no doubt, be taken care of, and looked at with much interest, by William Sewell, Esq.

Stafford.—A few days ago an accident happened to Lord Hatherton, which might have been attended with serious consequences. His Lordship was struck a little above the eye with a shot from the gun of Mr. Mott, of Lichfield. Considerable hemorrhage ensued, and the shot has not been found; but the *Stafford Examiner* states that the eye has escaped injury.

Railways.—The returns of the principal lines for the week are as follows:—Birmingham and Gloucester 1,640*l.*; North Midland 3,795*l.*; Midland Counties 2,227*l.*; Blackwall 451*l.*; South-Western 4,994*l.*; South-Eastern and Dover 1,183*l.*; Edinburgh and Glasgow 1,814*l.*; Grand Junction 6,639*l.*; Greenwich 649*l.*; Birmingham and Derby 1,195*l.*; Great Western 11,128*l.*; Great North of England 1,333*l.*; Hull and Selby 972*l.*; London and Birmingham 13,595*l.*; Northern and Eastern 1,051*l.*; Eastern Counties 833*l.*; Croydon 193*l.*; Brighton 3,311*l.* A special general meeting of proprietors of the Midland Counties Railway has been held at Derby, to consider the unproductive state of the undertaking. After a discussion of six hours, a resolution for the appointment of a committee was passed by a majority of 716 votes for the purpose of instituting and inquiring into the state of the company, and to report with reference to the past, present, and future expenditure, the rate of fares and carriage, and generally with reference to the management.—A special general meeting of the North Midland Company has been held at Leeds, to consider the report of the committee appointed to investigate the affairs of the company. It recommended reductions to the amount of 17,788*l*. The address of the directors in reply was also read, suggesting a compromise by agreeing to effect savings to the amount of 11,335*l*. The directors expressed their opinion that it is impracticable to carry the reductions of the committee into operation without impairing the efficiency and safety of the line. The report of the committee was adopted almost unanimously by the shareholders, and a resolution was passed that it would greatly tend to restore the confidence of the proprietors if the whole of the present directors were to retire from the board, and other gentlemen appointed in their stead.—At the recent meeting of the Sheffield and Manchester Company permission was given to the directors to borrow from the Exchequer-bill Loan Commissioners the sum of 50,000*l*. at the rate of 5 per cent. The shareholders expressed their hope that the amount now borrowed will be applied to the progress of the works, and not to the payment of interest, as is said to have been the case when money was borrowed on a previous occasion. It appears that the directors will require about 200,000*l*., including the present 50,000*l*., to complete the line, and the whole of this amount they propose to borrow from the same source, at a rate below 5 per cent., if possible, on the security of their works.—Surveys are now in progress, and application to Parliament is intended to be made in the ensuing session for leave to construct a branch railway from the Blisworth station on the London and Birmingham railway to Northampton and Peterborough, and likewise for another branch to Leamington and Warwick. Branches are also in contemplation from the London and Dover railway to Canterbury, Margate, and Ramsgate. The Eastern Counties Company are about to make a line from their station at Kelvedon to Bury St. Edmund's; and the Northern and Eastern will extend theirs from Bishop's Stortford to Cambridge, terminating by a junction with the Norwich and Yarmouth. Two branch lines from Oxford are to be constructed to join the Great Western at Wallingford and Dideot; and a third to communicate with the Aylesbury railway. We have before noticed the surveys in progress for a line to pass through Greenwich, Woolwich, Gravesend, Rochester, and Maidstone; and also for another to connect the Brighton and South-Western Railways. The above lines, when completed, will open a direct line of communication with the Metropolis from nearly all parts of the kingdom. Two new stations have lately been opened on the London and Birmingham railway, at Sudbury and Rimer, to accommodate the increasing traffic.

IRELAND.

Dublin.—The vacancy caused by the death of Lord Gort in the representative peerage is likely to be filled up by Lord O'Neill.—Sir Kingston James has obtained a conditional rule for a writ of *mandamus* to be directed to the corporation of this city, requiring them to grant him compensation for the loss of his salary and office as City Treasurer.—A report is current in Dublin that Mr. O'Connell is about to withdraw from the world altogether, and spend the remainder of his days in a monastery.—By a letter from Poonah, dated September 29, received by the Overland mail, it is stated that a private in one of the East India artillery regiments has confessed that he was the murderer of Lord Norbury. He was attacked by a violent illness, and thinking himself at the point of death, made this confession in the presence of his officers. He is said to have subsequently recovered, and to have been placed under arrest by the authorities.

Skibbereen.—A fatal conflict took place in the neighbourhood of this place on Friday last, arising out of the resistance to poor-rates. It appears that there has been considerable opposition by the country people in that district to the collection of the poor-rate, and that it was deemed necessary to send out a police force of 63 men, at the head of which Mr. Gore Jones, stipendiary magistrate, and a Mr. Aylmer, the nephew and agent of Lord Carbery, who resides in this county, placed themselves in order to enforce the collection. Having met with some resistance from the people, who were labouring under great excitement, they returned to town to augment their force, and then proceeded once more to the scene of action. The people were now pressing on them in number about 2000, and one of them unfortunately threw a stone at the police, which was repeated by others; a general attack ensued, and the police were obliged in self-defence to fire, when two men were shot dead, and four others wounded. The excitement produced by this event has rendered it necessary to call out the military, and troops have been sent from Cork and other neighbouring stations.

SCOTLAND.

Edinburgh.—The quarterly meeting of the Commission of the General Assembly took place on Wednesday week. There was comparatively little discussion, the only business of importance being a resolution to memorialise Government for redress, in reference to the collision between the civil and ecclesiastical jurisdictions—as more especially illustrated by the recent decision of the House of Lords in the Auchterarder case, and the still more recent decision of Lord Cunninghame, in the Strathbogie Reduction case.—The meeting of the Non-intrusion members of the Establishment was held for the first time on the following night in Roxburgh church; but neither lay members of the church nor reporters for the press were permitted to be present. The clergymen entitled to attend were compelled to be provided with tickets in order to obtain admission. The Convocation remained in deliberation until one o'clock on Saturday morning, and having met again in the course of the forenoon, adjourned in the course of the day until Monday. The number of clergymen present amounted to about 500; it is understood that they were on the whole unanimous in resolving to make a final proposition to Government, setting forth the terms on which they can continue ministers of the church of Scotland. Nearly 200 clergymen in different parts of the country have intimated their inability to attend in consequence of the inclemency of the weather, and other causes; but it is expected they will agree to the resolutions of the Convocation. It is also rumoured that a proposition was made to allow Messrs. Dunlop and Hamilton, advocates, to attend the Convocation in the capacity of legal advisers; but, after some discussion, it was considered preferable that the assemblage should be confined strictly to clergymen, as originally intended.

Ayr.—Serious riots have again taken place in Ayrshire with the colliers, and many individuals have been severely wounded. The yeomanry were called out, and by their active co-operation with the local authorities they succeeded in restoring tranquillity, though great excitement still prevails in the neighbourhood of the pits.

Dundonald.—The local papers state that Dr. James M'Adam, late President of the Medical Board of Bombay, has bequeathed in trust to the minister and heritors of this parish, of which he was a native, the sum of 1000*l*., to be invested in the public funds, and the proceeds to be annually distributed in blankets and coals amongst the poor during winter.

THEATRICALS.

Drury Lane.—On Saturday, Congreve's comedy of "Love for Love" was revived, with all that attention to historical accuracy of costume and costliness of decoration which have generally characterised the productions of the old English drama under Mr. Macready's management. Several alterations have been made to adapt it to the taste and notions of a modern audience; many of the coarser dialogues were omitted, and nothing was allowed to remain which could offend the propriety of the audience. This process naturally deprived the play of much of that smartness of dialogue for which the original is remarkable; the result, however, was satisfactory, and the success of the experiment was complete. Mrs. Nisbett's *Mrs. Frail* was perhaps the best and most spirited character of the evening; she seemed to feel all the enjoyment of the scene, and communicated her lively humour to her audience. Mrs. Stirling's *Mrs. Foresight* was also very clever; the dialogue of the three ladies was admirably given, and acknowledged by the house with several distinct rounds of applause. The *Angelica* of Miss H. Faucitt was quiet and ladylike, perhaps too quiet for so sprightly a character; and Mrs. Keeley's *Miss Prue* was played with her usual drollery. Mr. Anderson acted *Valentine* with considerable spirit; and Mr. Keeley as *Ben the Sailor*, though badly dressed, amused the audience with the dry peculiar wit which he carries into all his characters. The play was announced for repetition amidst general applause.

Covent Garden.—A rumour has been current for some days that Mr. Kemble has retired from the management of this theatre, and that it is likely to be closed until after Christmas. A meeting of the actors and the managing committee of the proprietors was held on Thursday, and another took place yesterday, with the view of making every exertion to keep the house open. Mr. Bunn attended and announced himself as the new manager, but at present nothing appears to have been decided on.

Miscellaneous.

Chinese Diplomacy.—One of her Majesty's naval officers writes to the following effect from Chin-keang-foo, 31st of August:—"Three high mandarins—the Emperor's uncle, Yung; the governor of these two provinces, Elepoo; and the Tartar General Isaphen, Commander-in-Chief—came off on the 20th, attended by a numerous train of mandarins of various classes, to pay their respects to the Plenipo, Admiral, and General. The Cornwallis was appointed the place of meeting. A steamer was in attendance on them, to take them from the shore to the flag-ship. When they stepped from the shore to the steamer they were saluted with three guns from the Cornwallis, the number they fire themselves on such occasions. When they came on board the big ship, they were met at the gangway by two naval Captains and the Secretary of Legation, who conducted them aft to the poop, or rather near the poop, on the quarter-deck, where the Plenipo, Admiral, and General stood as stiff as crutches, in the full dress and toggery of their offices. When the fokies approached near, our big-wigs advanced a couple of steps towards them with majestic mien, the fokies chinchinned, the *Englese* took off their hats and bowed, and when both parties were sufficiently approximated, they shook hands most cordially, and then retired to the cabin to rest after so much labour. The marines were drawn up on the quarter-deck as a guard of honour, the seamen dispersed around the upper deck, and the ship was full of naval officers, all in their full uniforms, which gave everything a brilliant appearance. When they came on the side, they had not time to recover from the dazzling effect of what they saw, when the band struck up 'God save the Queen,' and completed their bewilderment. They were really astonished and amazed. They were afterwards shown round the ship, which they admired and wondered at much. You may fancy people who never before saw anything larger than one of their own junks brought for the first time to see a line-of-battle ship. They had some tiffin, at which some of the mandarins got drunk on cherry cordial and brandy, and all then left highly delighted and pleased. Our people went a few days after to return the visit of the Celestials. They were received in a joss-house outside the city wall. Nothing worthy of notice occurred. They had a guard of Tartar soldiers, a whole host of mandarins, a band, and a tiffin of sweetmeats and samchoo. A good deal of ceremony. This may give you some idea of the meeting."—*Bombay Courier.*

Law.

Court of Chancery.—*Anderson* v. *Wallis.*—The Lord Chancellor gave judgment in this matter, which was argued before the vacation. The bill was filed by Mrs. Hannah Anderson on the part of herself and the infant children of the defendant Mrs. Wallis, and it prayed payment of an annuity of 25*l*., bequeathed to her by her brother, and also that the executors might be compelled to renew certain leases under the Chapter of Durham, which this testator had directed to be renewed for the benefit of his children, specifying particular moneys which were to be accumulated for the payment of the fines. The bill alleged that the annuity was in arrear, and the leases were in danger of being lost by the expiry of the sixteen years which formed the limit of renewal. The defendants alleged, in their answer, that they were waiting the result of some proceedings pending against a railway company, before they renewed, but that they intended to renew, and that with respect to the bill itself, and the claim of Mrs. Anderson, there was a misjoinder of interests that made it wholly irregular. Mr. Baron Alderson took this view of the question, and dismissed the bill with costs. His lordship now said, that the aim of the Court in dealing with cases of this description was to do justice between the parties, but in such a manner that the interests of one party might not be prejudiced by the course adopted with respect to the other. In the present case it was by no means clear that the matter might not be prejudiced by the course adopted on the part of the children, and, as there was a clear misjoinder of interests, his lordship thought the interests of all parties would be best consulted by allowing another suit which had the same objects to be prosecuted, and dismissing that which was clearly irregular. The order of the Court of Exchequer was therefore confirmed, and the appeal dismissed.

Vice-Chancellor's Court.—*Slogget* v. *Viant.*—The circumstances of this case were very extraordinary. The subject of the suit was not of a nature to call for notice, but the unusual sensation which the extraordinary frame, extent, and language of the pleadings created among the counsel, and seemed to communicate itself to the Court as the case proceeded, renders it necessary to make some mention of the matter. The suit is one among several others to which the attention of the Court has been recently called, upon an application made by some of the parties attacked that the plaintiff should give security for the costs of the suit. Of the purpose, language, or frame of the bill, it is scarcely possible to give any description, and of the story it professed to tell no better idea can be conveyed, than that the plaintiff alleged himself, and some other persons related to him, to have been oppressed and persecuted ever since the year 1807, by an uninterrupted system of the most extensive and systematic fraud and conspiracy to effect his ruin and that of his family; that the fraud commenced with the executors of his grandfather; that it had been uniformly pursued through all the various transactions affecting the property which had occurred during the last 40 years, many of which were related at length; and all the parties who had ever been concerned were severally and collectively charged with having participated and assisted an endless number of other unknown individuals in concocting and perpetrating this systematic conspiracy. Mr. Wakefield, in stating the case, said he appeared in support of the demurrer of one of thirteen defendants,—and there might as well have been three hundred. He had never seen such a bill before, and it could only have been filed for the purpose of oppression. The office copy was 1,630 folios in length, extended over 250 brief sheets, and contained no less than 1,334 interrogatories. The pleadings alone must have cost each of the 13 defendants nearly 100*l*., and there was not a single charge in such a form as any one of them could answer. He was happy to find the bill did not bear the name of an equity draughtsman, or any gentleman practising in Court; but the individual who signed it was described in the *Law List* as a Parliamentary and Crown draughtsman and special pleader. The learned counsel contented himself with merely laying before the Court a portion of the statements in the bill, which he submitted were quite sufficient to show it could never be sustained in this or any other court. Mr. Pyke, the barrister alluded to, defended himself from the attack of Mr. Wakefield, and contended that the bill set forth a chain of systematic fraud, which entitled the plaintiff to relief in a court of equity.—The Vice-Chancellor said, as far as he could judge of the matter, there was nothing charged with sufficient clearness and distinctness to justify the plaintiff calling on defendant for an answer. After reading several of the peculiar passages on which plaintiff's counsel relied, his Honour asked what single act of confederacy was charged in the bill that Collins could be called on to deny? How was he in confederacy? Even if the case were true that Collins had done some specific improper act, it was nowhere alleged against him in a way he could answer. Gentlemen knowing the circumstances of the family might think it reasonable to call on certain persons to answer for supposed criminality, but all the Court could deal with was the statements contained in the bill. His opinion was, that there was not any case stated against Collins on the bill to enable the Court to say it could be sustained against him, and therefore the demurrer must be allowed.—Mr. Stuart applied for leave to amend the bill.—His Honour said, it appeared to him the case, as stated on the record, was most oppressive upon the defendant. He was obliged to take an office copy of this most long and ponderous record, and found, on examination, that it contained nothing but vague and general allegations against him, which it was impossible for any man to meet. It was not a case in which the Court would give leave to amend.

Bail Court.—*Case of Capt. Douglas.*—The Attorney-General on Saturday moved that Capt. Douglas be committed to the custody of the Marshal of the Marshalsea, the defendant having just previously been charged in form before the Court with the information upon which he had been arrested on the preceding day, and to which he now pleaded "Not guilty." Mr. M. Chambers, upon the part of Capt. Douglas, observed that the motion of the Attorney-General was one which he himself was about to make upon the part of his client. The learned counsel then, without making any express application to the Court, originated a conversation upon the amount of bail which was to be required upon the part of Capt. Douglas, in the event of a motion being made for the purpose of procuring his release from actual custody. It was ultimately decided that before such motion was made, a communication was to be had with the East India Company, for the purpose of ascertaining what was the lowest amount which they would consent to accept. The defendant was in the mean time directed, according to the motion of the Attorney-General, to be transferred from Whitecross-street to the prison of the Queen's Bench. On Thursday the Attorney-General applied to the Court for a writ of *mandamus* directed to the Chief Justice of Madras, commanding him to hold a court for the purpose of examining the witnesses in this case, whose evidence may hereafter be put in on the trial. Counsel for defendant also urged this application, and the Court directed the writ to be issued.

The Queen v. *Shrapnel.*—The Attorney-General applied for a criminal information against a gentleman who was making some applications to the Court of Directors of the East India Company of a very extraordinary nature. General Robertson, one of the directors, stated in his affidavit that he received, about the 11th of October, 1841, a letter inclosed in an envelope, addressed to him at the India House. It was dated Hampton, Sussex, 10th October, and was signed "H. Shrapnel." The letter, after apologising to General Robertson for writing on such a subject, stated that he had a young friend who was desirous of a cadetship, and that as he was himself known to many of the directors, he took the liberty of addressing him on the subject. It also stated that he was the son of Lieutenant-General Shrapnel, who voted for him (General Robertson), and that he was intimately acquainted with many of the aristocracy, and concluded by saying that, as he was aware from experience of the caution necessary in the matter, the most implicit confidence might be reposed in the writer of this letter, though he was entirely unknown to him. General Robertson took no notice of this letter, and laid it aside. On the 12th of August, 1842, Mrs. Robertson, wife of General Robertson, received another letter, and addressed to his residence, 53, Baker-street. It was dated from the post-office, Southampton. The writer stated that he was acquainted with many gentlemen of education and high standing in society, who were desirous of obtaining commissions in the East India Company's service, and that having the confidence of many of the Board of Directors, he had the honour of making the application in favour of those gentlemen. The letter also stated that if Mrs. Robertson exerted her influence, the writer would cause a sum of 2,000*l.* a year to be given to her banker, one quarter in advance. He concluded by saying that he was a proprietor of India stock, and that the utmost reliance might be placed on his honour and integrity. The second letter was signed K. C. B. Applications of a similar description in the same handwriting were made to the wives of two or three other directors. All these letters were in the handwriting of Mr. Shrapnel. The statute under which he (the Attorney-General) made the application was the 49th Geo. III., chap. 126, which enacted that any person bargaining for or selling any official commission, &c., as described in the 6th of Edward VI., chap. 16, should be deemed and adjudged guilty of a misdemeanour. When not only one but several letters of this description were written to different parties, it was full time to ask for the interposition of the Court in the matter.—Rule granted.

COURT OF QUEEN'S BENCH.—*The Queen* v. *Arrowsmith and another.*—Some time since the Solicitor-General obtained a rule, calling upon the defendants, printers of the *Worcester Chronicle*, to show cause why a criminal information should not be filed against them for the publication of an alleged libel reflecting on the character of Mr. Ellins, one of the justices of the peace for the county of Worcester. Mr. Serjeant Talfourd now appeared to show cause against this rule. Mr. Ellins had been one of the directors of a joint-stock company which had established the *Worcester Chronicle*, but he afterwards transferred his interest. An article was published in the paper, imputing to another magistrate in Worcestershire (Mr. Ricketts) that he had been guilty of jobbing relative to the erection of a station-house which had been built in the county. A rule was then obtained by Mr. Ricketts for a criminal information against the present defendants for the publication of that article. The defendants then communicated with Mr. Ellins, from whom they had obtained the information which had led to that alleged libel; but Mr. Ellins refused to allow his name to be given up as the author, but promised to bear a proportion of the costs. The defendants then made inquiry, and finding there was no foundation for the attack on Mr. Ricketts, tendered a public apology to that gentleman, which, being accepted, the rule was discharged upon payment of costs. Application was then made to Mr. Ellins as to the costs, who did not return any answer to the two first letters, but replied to the third through his attorney, desiring the defendants not to trouble him any further on the subject. The defendants then published an article, in which they expressed their regret for having written the first paragraph on the information of a magistrate, who had led them into the scrape, and then had not understood what was due to his word and his honour. Mr. Ellins had not in his affidavit denied that he had given the defendants the information, but alleged that he had cautioned the defendants not to publish it. This was similar to the tale of the gentleman who, expecting to be arrested by bailiffs, called his servants together, expressed his fear of arrest, and then cautioned them not to remember that they were more numerous than the bailiffs; not to recollect close to the house some fine hazel-trees were growing, which would furnish good switches for the bailiffs' backs; and, above all, not to think that the horsepond in the stableyard was invitingly near, and could effectually be used for ducking the bailiffs.—*Lord Denman*: There is one instance of that kind related in a work with which we are all of us acquainted, where the conviction of Fagan is much influenced by the fact that he gave some fatal advice in that manner. Mr. Serjeant Talfourd assented, observing that the instance was to be found in a book which might now be termed one of our classics. He concluded by submitting that the rule must be discharged, and with costs. The Solicitor-General supported the rule, and urged that it was sworn that the caution not to publish was given to the defendants, who had no right to attack Mr. Ellins in the way complained of, and the rule ought to be made absolute. Lord Chief Justice Denman considered the information had been given for the purpose of publication. Blame attached to both parties, and therefore he did not think that Mr. Ellins had a right to ask for a criminal information.—Rule discharged with costs.

Dunn v. *Combe.*—This was an action brought by Mr. Dunn against the defendant, a police magistrate, to recover damages for false imprisonment. The plaintiff had been taken before defendant on a Bench warrant issued by the Middlesex Quarter Sessions, to enter into recognizances to keep the peace towards Miss Burdett Coutts. The plaintiff not having entered into those recognizances, the defendant committed him in default. The plaintiff was afterwards brought up to this court by *habeas corpus*, and discharged; he then brought this action, which was tried before Mr. Baron Alderson, when he obtained a verdict with one farthing damages. A rule was afterwards obtained by Mr. Dunn for a new trial, on the ground that the damages were not sufficient. Mr. Thesiger having shown cause against this rule, and Mr. Dunn having been heard in its support; Lord Denman said that the case had been fairly before the jury, who had exercised their best discretion on the circumstances, and the Court could not think that another trial would lead to a different result. Under all the circumstances of the case the Court would not be warranted in making the rule absolute.—Rule discharged.

SPORTING.

TATTERSALL'S.—THURSDAY.

DERBY.

6 to 1 agst A British Yeoman and Winesour (taken)
5 to 1 — Scott's lot (taken to 100*l.*, and afterwards offered)
11 to 1 — Mr. Blakelock's A British Yeoman (taken and afterwards offered)
15 to 1 — Sir G. Heathcote's lot (taken to 50*l.*)
20 to 1 — Mr. Bell's Winesour (taken to 40*l.*)
20 to 1 — Col. Peel's Murat (taken and afterwards offered)
33 to 1 — Lord Eglinton's Aristides (offered)
3000 to 45 — Major Yarburgh's Mahomet (taken and afterwards offered)
2000 to 30 — Lord Verulam's Brocard colt (taken)
1000 to 10 — Mr. Bowes's Auld Lang Syne (taken and afterwards offered)

MARK LANE, FRIDAY, Nov. 25.—Of English Wheat there was but little left unsold, and prices remain as on Monday.—There is not much doing in Foreign, in consequence of the holders not being disposed to take less money, and the Millers held off under the impression that they should purchase at a proportionate reduction with the English. There are several cargoes of Bonded entered for Exportation.—Barley is 1*s.* cheaper.—Peas and Beans are a dull sale, and Oats are selling at rather less money.

GAZETTE OF THE WEEK.

BANKRUPTCY ANNULLED—G. Withey, of Bristol, grocer.

BANKRUPTS—J. Sewell, of Chatteris, Cambridgeshire, money scrivener—J. Seaber, of Sohum, Cambridgeshire, grocer—W. Rayner and J. Rayner, of Uxbridge and Hillingdon, Middlesex, seed crushers—J. Phillips, of Hercules Passage, Threadneedle Street, City, tavern keeper—J. Moore, of Pitfield-st., Hoxton, Middlesex, grocer—A. Walford, of Manchester, commission agent—D. B. Finn, of Nottingham, tailor—T. Millington, of Nottingham, sail-manufacturer—J. Lawley, of Stafford, cooper—C. Fish, of Lincoln, butcher—J. Parker, of Manchester, coach builder—B. L. Watson, 23, Cornhill, manufacturer of flags—J. Webster and M. Pickles, Morley, York, cloth manufacturers—J. Pepper, Wooton-under-Edge, Gloucester, tailor—P. Little, Blackburn, Lancashire, currier—W. Castle, Wanborough, Wiltshire, cattle-dealer—G. Swires, Birstall, Yorkshire, merchant—J. Parry, Newtown, Montgomery, mercer—J. Wyatt, Plymouth, upholsterer—H. Clapham, Liverpool, woollen-draper—W. Dedman, Bryanstone-square, grocer—R. Loosemore, Tiverton, scrivener—E. Lane, Cirencester, Gloucestershire, edge-tool maker—F. Newcomb, Newgate-market, carcase-butcher—S. C. Boyce, Fenchurch-street, cheesemonger—J. Ashwell, Salford, Lancashire, grocer—J. Lowther, Queen's Row, Pentonville, builder—T. Perry, Kirkdale, Lancashire, builder—W. Barton, St. Helen's, Lancashire, watch movement maker—J. Wilkinson, Ardwick, Lancashire, innkeeper—R. Bellingham, Wem, Shropshire, boot and shoemaker—T. Holyland, Manchester, woollen-cloth manufacturer—J. Green, Leeds, victualler.

SCOTCH SEQUESTRATIONS—J. Urquhart, of Aberdeen, boot and shoemaker—G. R. Baxter and D. Sandeman, of Dundee, confectioners—G. R. Baxter, of Dundee, confectioner—A. Lawrie and J. Lawrie, of Glasgow, gingham-manufacturers—J. Chrystal, of Kilmarnock, draper—W. Rutherford, Jedburgh, clock and watchmaker—R. Park, of Glasgow, corn factor—G. Gardiner, late of Perth, writer—D. Ambrose and J. Bartholomew, of Leith, merchants.

BIRTHS—On the 20th inst., at St. German's Place, Blackheath, the lady of W. Carr, Esq., of a daughter—On the 21st inst., at Crumpsall, Lancashire, the lady of Captain Laws, R.N., of a son—At the Grove, Kentish-town, on the 24th inst., the wife of George Hodgkinson, Esq., of a daughter—At Wimbledon Common, on the 23d inst., the lady of Major Oliphant, of a daughter—On the 20th inst., at the Cedars, East Sheen, Lady C. Penrhyn of a daughter, still-born.

MARRIED—At Kew, on the 22d inst., George Dean Pitt, Esq., 48th Reg., eldest son of Colonel Pitt, to Louisa, youngest daughter of the late Sir Horace St. Paul, Bart.—On the 22d inst., at Bromley, Kent, by the Rev. J. E. Newell, Mr. Robert Cooper, of Croydon, to Sarah, youngest daughter of the Rev. Hen. Smith, D.D.—On the 23d inst., Mr. R. Phillips, of Gloucester Villa, Gloucester Road, Regent's Park, to Helen, fourth daughter of Mrs. Levy, Up. Woburn Pl.

DIED—On the 9th inst., at Southampton, Mr. John Rogers, nurseryman, in the 92d year of his age. Mr. Rogers was the author of several treatises on Gardening and Planting. Since his 80th year he published the "Fruit Cultivator" and the "Vegetable Cultivator"—On the 15th inst., at Hemus Terrace, Chelsea, H. Clements, M.D.—On the 19th inst., at Highgate Rise, J. M'Clure, Esq., formerly of Calcutta—At Kensington Gravel-pits, on the 21st inst., Lady Callcott, the wife of Sir Augustus Callcott, R.A.—On the 20th inst., at Fairlight, Hastings, in his 73d year, Brice Pearse, Esq., of Mankham, Woodford, Essex.

PUNCH'S POCKET-BOOK FOR 1843, will be published on the 1st December, neatly bound, with tuck, price 3*s.* 6*d.* For further particulars, see "PUNCH," No. 72, for November 26.—Office, 13, Wellington-street, Strand.

On the 1st of December, vol. 3.

THE FLORISTS' JOURNAL FOR 1842, illustrated with 14 Superior Coloured Engravings, price 8*s.* 0*d.* in cloth. Continued in Monthly Numbers, price 6*d.*, each Embellished with some new or favourite Flower, coloured in the best manner.

Alfred Adlard, Wardrobe Place, Doctors' Commons, and all Booksellers.

A SMALL COLLECTION of ORCHIDACEOUS PLANTS to be sold, suitable for every person about to furnish a Conservatory. The number of Plants are about Two Hundred, including some rare Specimens in a very healthy condition. Apply to Messrs. Flannagan and Co., Seedsmen, opposite the Mansion House.

A HISTORY OF BRITISH FOREST-TREES, indigenous and introduced. By PRIDEAUX JOHN SELBY, of Twizell, Esq. This volume gives an account of the useful and ornamental properties, best modes of culture, of the various Forest-trees now grown in Great Britain. It forms a manual for the planter, and an interesting and informing volume for the general reader. Each species is historically described and figured. The Engravings, amounting to nearly 200, represent the perfect tree, and details of the flowers, leaves, and fruit. Demy 8vo, 28*s.*; royal 8vo, 2*l.* 16*s.*

John Van Voorst, 1, Paternoster-row.

Now published, price 10*s.*,

A SECOND Edition of MILL'S TREATISE ON THE CULTURE OF CUCUMBERS, MELONS, SEA-KALE, and ASPARAGUS, with a descriptive Plate of his Pit, and also daily Notes of Practice from December to February inclusive.

Published by WM. SMITH, 113, Fleet-street, and sold by all Booksellers.

LOUDON'S "ARBORETUM ET FRUTICETUM BRITANNICUM," Abridged for Gardeners, Planters, and Nurserymen.

AN ENCYCLOPÆDIA OF TREES AND SHRUBS; being the "Arboretum et Fruticetum Britannicum" abridged; containing the Hardy Trees and Shrubs of Great Britain, Native and Foreign, scientifically and popularly described: with their Propagation, Culture, and Uses in the Arts; and with engraved Figures of nearly all the Species. Adapted for the use of Nurserymen, Gardeners, and Foresters. By J. C. LOUDON, F.L.S., &c. 1 Thick vol. 8vo (1842), pp. 1234, with upwards of 2,000 Engravings on Wood, 2*l.* 10*s.* cloth.

"We very frankly and warmly advise all Gardeners, Nurserymen, and the Proprietors of Gardens or Land, to procure this valuable Abridgment of Mr. Loudon's. We are sure they will find themselves abundantly repaid for its cost."—*Paxton's Magazine of Botany.*

*** The original Work, THE ARBORETUM ET FRUTICETUM BRITANNICUM, in Eight Volumes, Four of Letterpress (8vo, 1838), illustrated by above 2,500 Engravings, and Four of octavo and quarto Plates, may still be had, 10*l.* cloth.

London: Longman, Brown, Green, and Longmans.

HORTICULTURAL SOCIETY OF LONDON.

This Day is published, Price 3*s.* 6*d.* to Fellows of the Society, and 5*s.* to Others,

A CATALOGUE OF THE FRUITS Cultivated in the Garden of the HORTICULTURAL SOCIETY OF LONDON. Third Edition. Sold by Longman and Co., Paternoster-Row; J. Hatchard, Piccadilly; Ridgway, Piccadilly; Rivingtons, Waterloo-Place; and by the principal Booksellers in all parts of the Empire.—N.B. A few Copies of the 2nd Edition may be had at the reduced Price of 1*s.* 6*d.* each.

TO NURSERYMEN AND OTHERS.—To be disposed of, an Established Nursery, Seed, Fruit, and Florist Business, at Chepstow, in the county of Monmouth. The ground is about three acres, part of which is stocked with Evergreens, Flowering Shrubs, Fruit Trees, &c. &c., which, with the Pits and Frames, are to be taken at a valuation, and immediate possession can be had, if required.

N.B.—A Dwelling-house and Sheds upon the ground.—For further particulars apply to Mr. James Morgan, Nurseryman, Chepstow.

KEENE'S PATENT CEMENT.

THIS CEMENT is harder than any other known, and is especially fitted for the Walls of Hothouses, Conservatories, &c., as it neither cracks nor vegetates, and is perfectly impenetrable by insects.

The entire range of Hothouses erecting by the Government at Frogmore are about being stuccoed with it, and the price ranges nearly equally with the Cements in ordinary use for floors, and it forms a paving harder and cheaper than Portland Stone.

Patentees and Manufacturers, J. B. WHITE and SONS, Millbank, Westminster.

NOBLEMEN and GENTLEMEN Planting, or NURSERYMEN in want of BOG EARTH for their American Stock, can be immediately supplied with the finest description of the above scarce article, well suited for all kinds of Rhododendrons, Azaleas, Kalmias, Camellias, Heaths, &c. For samples and price apply to Mr. DAVIS, Slough, Bucks. Orders exceeding one ton in weight will be delivered at the Slough or West Drayton Stations of the Great Western Railway, or at a Wharf of the Grand Junction Canal at Uxbridge.

SLATE WORKS, ISLEWORTH, MIDDLESEX.

EDWARD BECK informs Horticulturists generally, that the Cisterns, Tanks, Shelves, Stages, Conservatory Tubs, Flower-boxes, Edging for Garden-paths, &c., manufactured by him in Slate, may be seen in use at Worton Cottage, upon application to the Gardener (Sundays excepted).

Letters of inquiry will receive every attention.

PATRONISED by all the principal Architects and Builders in this Country and Abroad.——SEYSSEL ASPHALTE.—In consequence of the daily attempts made to imitate this valuable mineral production, and of the name of "Asphalte" being given to most of the spurious and "cheap" materials, the Directors of this Company particularly recommend Architects, Builders, and others, (for the purpose of securing the use of the genuine article,) to insert in their specifications "The Seyssel Asphalte, Claridge's Patent," and not merely "Asphalte" or "Bitumen," as, in many cases where these terms have been used, gas-tar and other worthless and offensive compositions have been introduced. For the information of those residing at a distance from London, and of those who, having employed the spurious composition, may, from its failure, have become prejudiced against the use of Asphalte, the following are mentioned as some of the distinguishing qualities of the genuine material. The Asphalte of Seyssel is of a light colour, closely resembling Yorkshire stone, has a smooth surface (without being slippery), and joints almost imperceptible; it is also free from smell, is not acted upon by change of temperature, and is at all times dry and warm, and remarkably pleasant to walk upon, and, from its elasticity, never cracks. The fictitious material, on the contrary, has a dark and dirty-looking appearance, presents a rough and coarse surface, and, from its brittleness, is liable to crack, particularly in frosty weather. In consequence of the above qualities, the genuine material (being perfectly impervious to wet) has been used with great advantage for roofing; it can be laid down to any extent, presenting one uniform surface, and is far superior to lead, as it is not liable to expansion or contraction in consequence of any change in the temperature. For covering of arches, (to prevent the percolation of wet,) it is invaluable, the Greenwich Railway Company alone having covered upwards of 400,000 superficial feet; it has also been used on the Great Western, Birmingham, Midland Counties, South Western, Brighton, Blackwall, and other Railways; at the joint Stations, London-bridge, and at the South Metropolitan, Highgate, and Nunhead Cemeteries. As proof of the great durability of the genuine Asphalte, it need only be mentioned that the first work executed in this Country with this material, (amounting to 3,952 feet,) was at Whitehall, opposite the Horse Guards, in the month of April, 1838, and which, although only half an inch in thickness, has remained up to this time (a period of four years and eight months) in the most perfect condition. Books of Testimonials with scale of prices may be obtained on application to

J. FARRELL, Secretary.

Seyssel Asphalte Company's Depot, Stangate, London.

Note—Neither the pavement in Parliament Street, London, nor the works at the Model Prison, at the Abney-park Cemetery (which from its failure has since been removed), or at the Hotel at the Slough station of the Great Western Railway, were executed by this Company.

HODGSON and ABBOTT'S PALE ALE.—The above celebrated Beer, so strongly recommended by the Faculty, is to be procured only from E. ABBOTT, Brewery, Bow, Middlesex. The Trade not being supplied, the Pale Ale cannot be genuine if procured elsewhere.

City Office, 98, Gracechurch-street.

LONG EVENINGS MADE SHORT.—MECHI'S BAGATELLE-TABLES continue pre-eminent as a source of amusement; the cushioning and arrangement of the game excel anything of the kind yet offered to the public. They are verily miniature Billiard-tables, combining calculation with enjoyment. None are genuine without Mechi's name and address,—beware of counterfeits. Manufactory, No. 4, Leadenhall-street, London. Price: 3*l.* 10*s.*, 4*l.* 10*s.*, 5*l.* 10*s.*, up to 12*l.* Sold by all his Agents: Spiers and Son, Oxford; Eastee, Liverpool; Lounge, Leeds; Brunton and Williams, Dublin; M'Lachlan, Stewart, and Co., Edinburgh; Woolfield, Glasgow; Pratt, Bradford; Thompson, Nottingham; Squiers, Dover; Steel and Rix, Norwich; Brooks, Bishopswearmouth. A large stock of Chess, Backgammon, and Draft-boards, sets of ivory and other Chessmen, Pope Joan Boards, Cribbage-boards, Pearl-counters, Card-cases.

CAUTION TO FAMILIES.—The high reputation and consequent great demand of the undermentioned Articles have excited the avarice of some Shopkeepers, who, to get a trifle more profit, attempt to impose on the Public *highly-pernicious* Compounds as the real MACASSAR OIL for the hair, and KALYDOR for the complexion: they copy the labels and bills of the original Articles, substituting either an *assumed* name, or the word GENUINE in the place of ROWLAND'S.—*** To frustrate such imposition, it is necessary, on purchasing either Article, to see that the word "Rowland's" is on the wrapper as follows:—ROWLAND'S MACASSAR OIL, price 3*s.* 6*d.*; 7*s.*; or Family Bottles (containing four small), 10*s.* 6*d.*; and double that size, 21*s.* per bottle. ROWLAND'S KALYDOR for the Skin and Complexion—Price 4*s.* 6*d.* and 8*s.* 6*d.* per bottle. "A. Rowland and Son, 20, Hatton Garden, London," is written in red on the wrappers of the MACASSAR OIL and KALYDOR, and engraved on the Government Stamp affixed on the Kalydor. Be sure to ask for ROWLAND'S ARTICLES. Sold by them and by respectable Chemists and Perfumers.

Printed by Messrs. BRADBURY and EVANS, Lombard-street, Fleet-street, in the Precinct of Whitefriars, in the City of London, and Published by them at the OFFICE, 3, CHARLES-STREET, COVENT GARDEN, in the County of Middlesex, where all Advertisements and Communications are to be addressed to the Editor.—Saturday, November 26, 1842.

THE GARDENERS' CHRONICLE.

A STAMPED NEWSPAPER OF RURAL ECONOMY AND GENERAL NEWS.
THE HORTICULTURAL PART EDITED BY PROFESSOR LINDLEY.
No. 49—1842. SATURDAY, DECEMBER 3. PRICE 6*d*.

Whitethorn for fences . . 793 *b*

ROYAL AGRICULTURAL SOCIETY OF ENGLAND.—The General Meeting will be held at the Society's House, No. 12, Hanover-square, London, on Saturday, the 10th of December, at 12 o'clock precisely,

The Rooms of the Society will be thrown open for the accommodation of Members on Wednesday the 7th, Thursday the 8th, and Friday the 9th of December, from 6 to 10 o'clock.

Dr. Lyon Playfair will deliver a Lecture to the Members of the Society, at the Society's Rooms, on Wednesday the 7th of December, at 8 o'clock in the Evening, on the subject of "The Application of the Principles of Physiology to the Fattening of Cattle."—By order of the Council,

London, Nov. 9, 1842. JAMES HUDSON, Secretary.

LYNE'S SUNRISE AND DUKE OF CORNWALL.

WILLIAM E. RENDLE respectfully returns thanks for the very Liberal Orders he has received for Mr. Lyne's Seedling Pelargoniums. To those who have kindly ordered "Lyne's Sunrise" and "Duke of Cornwall," and have not yet received plants, it would be well to say, that the precedence of orders will be strictly adhered to, and they may expect to receive them in the regular course.

No more orders can possibly be received to be executed this year; but those who would wish to possess these much-esteemed varieties would do well to order now for the spring.

All the other sorts advertised in August last can be had immediately. A reference is expected from unknown correspondents.

Union-road Nursery, Plymouth, Nov. 30, 1842.

OAKLEY'S "SURPRISE" AND OTHER DAHLIAS.

SAMUEL GIRLING begs to refer the Trade and his friends generally to his advertisement in the *Gardeners' Chronicle* of the 12th Nov., 1842.

Danecroft Nursery, Stowmarket, Suffolk.

TURVILL'S BLACK DAHLIA, THE "ESSEX TRIUMPH."

THOMAS BROWN begs to announce that he has purchased the entire Stock of the above superb and universally-admired Dahlia, which has been justly pronounced the greatest novelty yet produced, and is essential to the most limited grower. The following is the description given by the Floricultural Society of London, Sept. 6, when nine Blooms were exhibited:—"Of the petal: *form*, good; *substance*, good; *arrangement*, good; *eyes*, complete and good in every specimen; *depth*, great and globular; *size*, full; *general form*, excellent; *class of quality*, first-rate." The following awards will prove that it maintained its high character successfully throughout the season.

1841	Chelmsford . .	Sept. 12,	1 bloom	1st prize
„	Halstead . .	„ 17,	1 „	1st „

„	Floricultural Society	„ 27,	12 „	1st class
„	„ „ .	Oct. 4,	6 „	1st „

It is very constant, and never shows an eye, the centre being well up when young. Fine habit; throwing its blooms out in the most graceful manner.—Plants in May, 10*s*. 6*d*. each; the usual allowance to trade where a dozen are taken.

Also plants, at the same time, of the following Seedlings, which have been shown and obtained prizes at the principal open Shows, and can be recommended as good Show flowers.

BROWN'S PERPETUAL GRAND—bright crimson; fine broad petals; well cupped, full, and constant—10*s*. 6*d*.

BROWN'S QUEEN OF TRUMPS—white, tipped with purple; petals of good substance, well arranged, and of great depth—10*s*. 6*d*.

BROWN'S MIRANDA—blush white, shaded with rose; of unusual depth—7*s*. 6*d*.

BROWN'S BLUE BONNET—bright rosy purple; good petal; full, and very constant—7*s*. 6*d*.

A few Ground and Pot Roots of ADMIRAL STOPFORD and BEDFORD SURPRISE to dispose of.

Slough Nursery, Nov. 17, 1842.

---

* 18 blooms were also shown not for competition.
† 30 blooms were also shown not for competition.

SUPERB SEEDLING PELARGONIUMS, now ready for delivery—Gaines' Duchess of Sutherland, Orange Perfection, Amulet, Pride of Surrey, Lady Duncannon, Royal Adelaide, Prince of Wales, Countess of Eldon, Princess Royal, Graciosa, Emperor, Superb, and Lady Sale. His first-rate Catalogue of Pelargoniums, Pansies, Calceolarias, Fuchsias, Verbenas, Chrysanthemums, Cinerarias, Auriculas, &c., may be obtained by applying to N. GAINES, Florist, Surrey-lane, Battersea.

ITALIAN TUBEROSE ROOTS.

J. MARSANO has just received one Case of TUBEROSES, by the Diligence, by way of France, which may be had at 5*s*. per dozen; Italian Narcissuses, at 20*s*. per 100. New Tomato and Capsicum Seed. Anemones may also be had. He expects next month three Cases of Orange Trees and Jasmine Plants. Orders will be punctually executed at J. MARSANO'S, Seedsman and Florist, No. 2, Beauchamp-street, Brook's Market, Leather-lane, London.

FLORISTS TO HER MAJESTY THE QUEEN DOWAGER.

FUCHSIA ST. CLARE.—The above magnificent FUSCHIA was raised by Mr. Meehan, gardener to Colonel Harcourt, at St. Clare, Isle of Wight, from whom Messrs. YOUELL obtained the entire Stock. In May last it was submitted to Dr. Lindley for his opinion, which will be found in the *Gardeners' Chronicle* of the 14th of that month, as follows:—

"Your Seedling Fuchsia is by far the finest hybrid we have seen; the flowers being three inches in length, with the tube and sepals of a bright carmine colour, and the petals of a rosy purple. If, as you say, it is a strong grower and a free bloomer, it will prove a valuable addition to this beautiful genus."

Messrs. YOUELL, in bringing this beautiful production into public notice, do so without the slightest diffidence, being fully assured of its giving the most entire satisfaction. It is of vigorous habit, fine foliage, and as a proof of its being a profuse bloomer, they have a plant in flower at the present time (Sept. 15th), on one branch of which there are upwards of 200 blooms, forming a splendid object for the Greenhouse, Conservatory, or Flower-garden. YOUELL & Co. purpose sending it out in the second week of April next, at 10*s*. 6*d*. per plant, free of postage, to any part of the United Kingdom; and all orders they may be favoured with will be executed in rotation. Orders for the Continent will receive every care in packing, so as to ensure their safety.

The usual discount to the Trade, when not less than six plants are ordered.

Messrs. YOUELL have also much pleasure in announcing, that they are in possession of the entire Stock of two beautiful new VERBENAS, raised by Mr. Edmonds, gardener to John Lacon, Esq., of Ormesby Hall, which were kindly presented them by that gentleman. The one named "LACONII" is a fine blue, delightfully fragrant, of vigorous but compact habit, and the heads of flowers measuring upwards of 3½ inches in diameter.

The other, named "PRINCESS ROYAL," is of the purest snowy white, the flowers remarkably large, and extremely fragrant. Nothing can exceed the purity of the white in this beautiful variety, and it possesses that acquisition not to be found in any of its class—of retaining its clear white during fading.

It would be as well to remark, that the petals of the flowers of the above meet so closely, as to form a perfect ball. They will be ready for sending out by post (free) to any part of the United Kingdom, in the second week of April, at 5*s*. 6*d*. per plant.

Great Yarmouth Nursery, Dec. 1, 1842.

P.S.—Their Catalogue of Fuchsias may be had on application, and will be found to contain every variety worthy of cultivation.

T. RIVERS, JUN., begs to offer the following choice varieties of HARDY RHODODENDRONS AND BELGIC AZALEAS. Healthy plants from 1 foot to 18 inches high, mostly from pots.

RHODODENDRONS.

		s.	d.			s.	d.
1.	Arboreum album .	10*s*.	6	9.	Hybridum, very strong plants . . .	3*s*.	6
2.	Arboreum ponticum album . . .	7	6	10.	Macranthum roseum	7	6
3.	Altaclerense . .	3	6	11.	Mundula, dwarf .	10	6
4.	„ coccineum	7	6	12.	Nobleanum, dwarf and early . . .	5	0
5.	„ splendens	7	6	13.	Nobilis, dwarf . .	10	6
6.	Angustum, robust and fine habit . .	21	0	14.	Princeps . . .	7	6
7.	Eximium . . .	5	0	15.	Russellianum . .	5	0
8.	Formosum . .	7	6	16.	Speciosum . .	10	6
				17.	Strictum . . .	10	6

With exception of numbers 1 and 17, which are species, the above are hybrids. R. arboreum, numbers 1 and 2, have flowers of pure white without spot; numbers 3 to 15 have crimson and scarlet flowers of different shades, with black spots.

		s.	d.			s.	d.
1.	Ponticum album .	1*s*.	6	13.	Lowii	5	0
2.	Atro-rubens . .	1	6	14.	Magnoliæfolium .	1	6
3.	Album multi-maculatum . . .	7	6	15.	Nivaticum . . .	5	0
4.	Contortum, very dwarf	1	6	16.	Pumilum . . .	1	6
5.	Caucasicum album, or new white . .	3	6	17.	Roseum . . .	1	6
				18.	Roseum flore-pleno .	10	6
				19.	Smithii album . .	5	0
6.	Coccineum . .	3	6	20.	Spirale . . .	3	6
7.	Carneum maculatum	2	6	21.	Splendidum . .	5	0
8.	Flos pictum . .	5	0	22.	Spectabile . . .	5	0
9.	Fulgidum, crimson .	10	6	23.	Tigrinum, blush-spotd	10	6
10.	Grandiflorum . .	3	6	24.	Wilsonii . . .	5	0
11.	Guttatum . . .	5	0	25.	Vittatum . . .	10	6
12.	Hyacinthiflorum, dbl. purple . . .	5	0	26.	Atro-purpureum, very dark purple . .	5	0

The above are varieties of R. ponticum. Numbers 3, 8, 11, 13, 15, and 19, have cream-coloured and white flowers, beautifully and curiously spotted with brown, red, and greenish spots; No. 5 is a very early and dwarf variety, with flowers of the palest blush, changing to pure white; 10 and 15 have double flowers; 19 has curious small flowers nearly blue; No. 6 has not scarlet flowers, as its name implies—they are of a light carmine.

		s.	d.			s.	d.
1.	Adansonii . . .	10*s*.	6	4.	Fragrans . . .	2*s*.	6
2.	Azaleoides . . .	1	6	5.	Gowerianum . . .	3	6
3.	Azaleoides album .	7	6				

The above are hybrids of Azaleas, with Rhododendron; No. 4 is dwarf and very fragrant.

		s.	d.			s.	d.
1.	Cinnamomum . .	15*s*.	0	6.	Catawbiense hybridum	1*s*.	6
2.	Caucasicum . . .	5	0	7.	Catawbiense flore-pleno	5	0
3.	Campanulatum . .	7	6	8.	Dauricum atrovirens .	1	6
4.	Camp. hybridum . .	10	6	9.	Luteum . . .	42	0
5.	Catawbiense . .	1	6				

With exception of No. 1, the above are quite hardy; No. 4 is a robust-growing and very interesting hybrid; No. 9 is said to be a hybrid of Azalea pontica, with R. caucasicum.

AZALEAS, FINE BELGIC VARIETIES.

		s.	d.			s.	d.
1.	Pontica alba . .	1*s*.	6	17.	Double White . .	1	6
2.	„ alba flore-pleno	3	6	18.	Decus hortorum .	3	6
3.	„ alba globosa	2	6	19.	Early Pink . .	1	6
4.	„ eximia . .	3	6	20.	Electa . . .	2	6
5.	„ lutea rubicunda . .	3	6	21.	Insignis . . .	2	6
				22.	Large Orange . .	2	6
6.	„ mirabilis .	3	6	23.	Morterii genio . .	3	6
7.	„ magnifica .	3	6	24.	Maritima . . .	2	6
8.	„ rosea . .	2	6	25.	Nobilissima . .	2	6
9.	„ spectabilis .	3	6	26.	Pulchella . . .	2	6
10.	„ tricolor (Wulf)	2	6	27.	Præstantissima .	2	6
11.	„ tricolor albicans . .	2	6	28.	Princess Augusta .	2	6
				29.	Splendens . . .	2	6
12.	Cuprea splendens .	2	6	30.	Speciosa . . .	2	6
13.	Coccinea speciosa .	3	6	31.	Venustissima . .	2	6
14.	Calendulacea . .	2	6	32.	Violæ odora . .	2	6
15.	„ crocea .	2	6	33.	Vittata . . .	1	6
16.	„ grandiflora .	2	6				

Of the above Numbers, 1 to 11 are the earliest of Azaleas; Numbers 19, 25, 29, 30, and 31 follow in succession; Numbers 18, 23, 27, 28, 32, and 33 are late flowering varieties, with beautiful striped flowers.—All packages sent carriage free to London.

Sawbridgeworth, Herts., Nov. 30, 1842.

SUPERB ANEMONES, IRISES, &c., AT LOW PRICES:—

	£	s.	d.
IRISES—The collection of 30 beautiful new varieties, fresh imported, by name	£1	1	0
ANEMONES—The new large Dutch Double, in mixture, containing all the varieties, per 100	0	18	0
HYACINTHS—Choice sorts by name, per doz. . .	0	9	0
RANUNCULUSES—Ditto, in 50 varieties, per 100 .	1	5	0
Ditto in very fine mixture . . .	0	4	0

N.B. The above may be had in smaller quantities if desired, at the same prices.

Parcels delivered free to the Railway Stations, or any other part of London.—A remittance or reference is respectfully requested from unknown correspondents, and 5 per cent. deducted for cash payment.—SUTTON & SONS, Reading Nursery, Berkshire.

LARGE SPECIMEN PLANT of the ACACIA ARMATA for SALE, well adapted for exhibiting.—P. PORTER has the above to dispose of, a bargain; it is a fine handsome Plant, near 10ft. high, circumference in proportion, well set for bloom, and adapted either for the border of a conservatory or growing in a tub among other large Plants.

P.P. has also a large stock of those justly-admired Pelargoniums, the Frogmore Scarlet and Channel's Superb Scarlet,—Orders for which will be thankfully received and punctually executed at low prices.—N.B. all the new Fuchsias, Verbenas, &c. &c.

Sussex Nursery, Loughborough Road, North Brixton.

TO PEAR-GROWERS.

T. RIVERS, JUN., begs to recommend to notice his Catalogue of PEARS, in which those varieties most worthy of notice are pointed out. This will be sent post free on a paid application. Plants of the following sorts, raised by the late Mr. Knight, may now be had:—

Althorpe
Althorpe Crassane
Brougham
Boughton Bergamot
Broom Park
Belmont
Downton
Eyewood
Garnons'
March Bergamot
Monarch (true)
Rouse Lench
Shobden Court
Wormsley Grange
Winter Crassane
Seedling (not named)
Ditto ditto

KING'S ROAD, CHELSEA.

SPLENDID Fruit-bearing Standard and Dwarf Apple Trees, extra fruit-bearing Mulberry Trees, the largest stock of Gooseberries ever before offered for sale; very large plants of Aucuba japonica; an extensive and carefully-selected stock of Dwarf, Pillar, and Standard Roses, and a good collection of Herbaceous Pæonies, Irises, &c., &c., &c.

Wm. Dennis and Co. beg to remind the Nobility, Gentry, and the Public in general, that the above-mentioned plants and trees are unrivalled for SIZE, BEAUTY, and Superior Quality; they can supply many thousand plants of Aucuba, Gooseberries, Currants, &c., &c., with every other description of their stock, at extremely moderate prices, according to size and quality of plants; and as the Season for Planting is now excellent, they solicit a share of their favours, assuring them that their kind orders will be promptly and truly executed. The Trade liberally supplied. N.B.—A PARTNER could be admitted.

LOUGHBOROUGH NURSERY, NORTH BRIXTON, LONDON.

EDWARD DENYER respectfully invites Noblemen, Gentlemen, &c., to the inspection of his Nursery Stock, consisting of Standards and Dwarfs, trained and untrained Peaches, Nectarines, Apricots, Cherries, Plums, Pears, Apples, &c. &c., of the finest sorts, in a full bearing state, selected from the Horticultural Society of London, and consequently true to kind. He also wishes particularly to recommend his new Victoria Plum-trees, which stand unrivalled as constant bearers, and are of a most delicious flavour.

E. D. also takes this opportunity of gratefully acknowledging the patronage he has been favoured with, and begs to say he has received a large importation of all the newest sorts of Roses, in addition to his present extensive stock, which attracted so much attention in their flowering season, and which are now ready for drawing.

He has constantly on hand a large and fine collection of Evergreens, Deciduous Shrubs, Forest Trees, Greenhouse Plants, Flowers, &c. Annexed is a list of prices, namely,

	£	s.	d.	
Standard Roses, left to his own selection .	£10	0	0	per 100
Half Standard, ditto, ditto	6	0	0	„
Extra fine Standard Roses	1	10	0	per doz
Ditto half, ditto, ditto	0	18	0	„
Dwarf Roses from . . .	33*s*. to 50*s*. per 100			
Ditto Extra fine	12*s*. to 18*s*. per doz.			

N.B.—Remittances expected from unknown correspondents.—Gardens and Pleasure Grounds tastefully arranged and planted by contract, on the most moderate terms, in any part of England; and orders promptly executed. Also a general list of Plants sent, on a prepaid application if by post.

THE TRUE TOBOLSK RHUBARB.

YOUELL & Co. beg to announce they are now housing the above for Forcing. Roots planted now will be ready for cutting at Christmas.

This Rhubarb, being the earliest in the open border by three weeks of any yet introduced, renders it highly valuable for Forcing; its colour is of a beautiful transparent coral; and for delicacy of flavour it is unequalled. It can be forwarded with safety to any part of the United Kingdom, on the receipt of a Post-office order, at the rate of 12*s*. per dozen roots.

Great Yarmouth Nursery, Dec. 1, 1842.

CUCUMBER, CELERY, &c., may be had genuine at Thos. D. Watkinson's Seed, &c., Establishment, 6, Market Place, Manchester. Walker's improved long Cucumber, Cherry's Goliath, and Roman Emperor, in packets 1*s*. 6*d*. each. Lancashire solid Red Celery, Bayley's Gigantic, Howard's Red Seedling, Big Ben, and Seymour's superb White, in packets 1*s*. each; finest Guano Manure imported 16*s*. per cwt.

Sole Agent for the Gooseberry Growers' Register, 1*s*. 9*d*. in boards and 1*s*. 6*d*. stitched, which can be forwarded per post, prepaid 6*d*. extra.

PRINCE ALBERT PEA.

CORMACK & OLIVER, Seedsmen and Nurserymen, New Cross and Bedford Conservatory, Covent-garden, London, have the honour to offer to the notice of Noblemen, Gentlemen, and others, the above new PEA, as one of the earliest and best sorts extant; in proof thereof, a quantity put into the open ground on the 11th of March last was ready for use the [illegible] of April following, being only *forty-two days from the period of sowing to the date of gathering for the table*. It is moreover a good bearer, of excellent flavour, and equally advantageous for early forcing. —Packets, containing a quart, [illegible] each. They also highly recommend the Dutch Queen, a new wrinkled marrow, larger and more productive than any of Knight's varieties, at [illegible] per quart. Likewise the new Incomparable Cos Lettuce, peculiarly crisp and juicy, perfectly hardy as a winter Lettuce, not apt to run in summer, and requiring no tying; in packets, at 1*s*. or 5*s*. per oz.

CONIFERÆ.—The Subscribers have this Season to offer the following:—

Pinus austriaca, 1 year transplanted, per 1000	30s.	0

Altingia Cunninghamii, 1 to 1½ ft., in pots, cuttings, each	15	0

PETER LAWSON AND SON, EDINBURGH,
Seedsmen and Nurserymen to the Highland and Agricultural Society of Scotland.

Agents,—Messrs. W. and J. NOBLE, Seedsmen, 152, Fleet-street, London.

FORRES NURSERIES.—The Subscribers beg to intimate that their Stock of TRUE NATIVE HIGHLAND FIRS, LARCHES, and all other kinds of FOREST PLANTS, Ornamental PINES, &c., is this season unusually large, consequently prices are low. Lists will be furnished free on application, and the Trade supplied at the wholesale rate.

Nov. 1842. JOHN GRIGOR & Co., Forres, N. B.

SHIRLEY VINEYARD, NEAR SOUTHAMPTON,—NURSERY DEPARTMENT.

CLEMENT HOARE respectfully announces that he has now on sale an extensive collection of Grape Vine Plants of superior growth, and of the most approved sorts in general cultivation, varying in price from 2*s.* 6*d.* to 7*s.* 6*d.* each.

Lately Published,

A PRACTICAL TREATISE ON THE CULTIVATION OF THE GRAPE VINE ON OPEN WALLS. By CLEMENT HOARE. 3d edition. 8vo, 7*s.* 6*d.* boards. Longman & Co., London. Sold by all Booksellers, and at the Vineyard at Shirley.

FIRST-RATE SEEDS.—Cucumbers: Farmer Allen's, 2*s.* 6*d.*; Knell's, Smith's early frame, Rob Roy, and several other sorts, at 1*s.* 6*d.* packet. Melons: (Scarlet) Early Wellington and Scarlet Persian, (Green) Windsor prize, Duncan's and others, 1*s.* 6*d.* per packet. Splendid German Aster, Balsam, and Scarlet Cockscomb of extraordinary dimensions, at 1*s.* per packet. Superior White Carrot Seed, 2*s.* 6*d.* per lb., selected and transplanted by that noted Agriculturist, Mr. C. Poppy.

THOS. WILD can confidently recommend the above, having had frequent opportunities of proving their superior qualities; at the same time begs to announce that in the autumn he will have the honour of introducing two new Cucumbers, "Standard" and "Climax," also two Melons, Early Green and a Thick Fleshed Scarlet, good bearers, delicious flavour, of from 2 to 4 lbs.; on the present occasion only 12 seeds of each sort can be spared. Any of the above (Carrot-seed excepted) will be forwarded free, on receipt of Post-office order. THOS. WILD, Fruiterer.

3, Tavern-street, Ipswich, Suffolk.

HOGG'S CARNATIONS, PICOTEES, PINKS, & AURICULAS.

MESSRS. PROTHEROE & MORRIS will submit to public competition by Auction, on the premises, Paddington-green, on Monday, Dec. 12th, 1842, and following day, at 11 o'clock, by order of the Proprietors, in consequence of the lease having expired, the whole of this celebrated Collection; also Pits and Frames, Hand-lights, capital Carnation Stage, Show Boxes, Pots, and Pans, Carnation Mould, Rotten Dung, Utensils in Trade, &c. May be viewed prior to the sale. Catalogues may be had on the premises, of the principal Seedsmen, and of the Auctioneers, American Nursery, Leytonstone.

ORCHIDACEOUS PLANTS.—For Sale in one Lot, about 220 Orchidaceous and other Plants, including the STANHOPEA, BLETIA, MAXILLARIA, CATTLEYA, ONCIDIUM, ACROPERA, in a very healthy condition. Apply to Messrs. Flanagan and Co., Seedsmen, opposite the Mansion-house.

AUSTRALASIAN COLONIAL AND GENERAL LIFE ASSURANCE AND ANNUITY COMPANY.

Capital, £200,000—in 2,000 shares.

DIRECTORS:

Edward Barnard, Esq., F.R.S.	C. E. Mangles, Esq.
Henry Buckle, Esq.	J. B. Montefiore, Esq.
John Henry Capper, Esq.	J. H. Ravenshaw, Esq.
Gideon Colquhoun, jun., Esq.	William Walker, Esq.

BANKERS—The Union Bank of London.

COLONIAL BANKERS—The Bank of Australasia (incorporated by Royal Charter, 1835), No. 2, Moorgate-street.

PHYSICIAN—Patrick Fraser, Esq., M.D., 62, Guildford-street, Russell-square.

SOLICITORS—Messrs. Swain, Stevens, and Co.

The advantages offered to EMIGRANTS to the Australasian Colonies by this Company are—First, that no extra Premium is charged for residence in any of the Australasian Colonies, except in New Zealand. Second, that no extra Premium is charged to those who assure for the whole term of life, for one voyage out to the Australasian Colonies, and for one return voyage; and that Premiums may be paid and claims settled in those Colonies. And to all persons who wish to assure their lives, the Company offers unusually favourable Rates of Premium, participation in profits, and the guarantee of an ample subscribed capital.

Prospectuses and full particulars may be obtained at the Offices of the Company, No. 126, Bishopsgate-street.

EDWARD RYLEY, Secretary.

WANTS a SITUATION as GARDENER, a Young Man, 28 years of age, who has a thorough knowledge of his Business in all its Branches; the Forcing of Pines, Peaches, Grapes, &c. &c.; the most approved mode of managing Fruit-trees, the Kitchen-garden, &c.; is an excellent propagator of Plants and Flowers, together with the systematic arrangement of the Flower-gardens, Planning, &c. &c. Letters addressed to Mr. Brown, gardener to Lord Southampton, Whittlebury Lodge, Towcester, will meet with immediate attention.

WANTS a SITUATION as GARDENER, THOS. HATCH, for the last 10 years gardener to P. J. Miles, Esq., Leigh-court, near Bristol, and previously gardener 10 years to the late Lord Eldon, Encombe; will leave his present situation on the 14th inst., and will be happy to engage with any Nobleman or Gentleman in want of a first-rate practical gardener—T. H. having had great experience in producing every article required in a large establishment; the advertiser is 42 years of age, married, with only one child. Address until the 14th, T. H., Gardener, Leigh-court, near Bristol; after that period, at Garaway, Mayes, and Co.'s, Nurserymen, Bristol.

TO NURSERYMEN AND OTHERS.

WANTS a SITUATION as FOREMAN, or FOREMAN and PROPAGATOR, in a Plant establishment. The highest reference can be given as to character and abilities, &c. Apply, by letter only, Post paid, to A. B., Messrs. Henderson's, Nurserymen, Pine-apple Place, London.

WANTS a SITUATION as GARDENER, a Single young man, aged 28, who understands the propagation and general management of Greenhouse and Stove Plants, the Kitchen Garden and Forcing Department; can give unexceptionable reference as to sobriety and honesty. Wages 30*l.*; direct to E. K., Messrs. Loddiges' Nursery, Hackney.

TO NOBLEMEN AND GENTLEMEN.—WANTS a SITUATION as GARDENER, or as GARDENER and FORESTER, a Married Man, about 30 years of age; the most satisfactory references can be given as to ability, integrity, industry, &c. Address, W. H., at Messrs. Veitch and Son's, Nurserymen, Exeter.

N.B.—Salary about 70*l.* per annum, with cottage, &c.

HOT-WATER APPARATUS, for Horticultural and other Buildings.—STEPHENSON and Co., Agents for the Old Park Iron-works, and Manufacturers, 61, Gracechurch-street, London, solicit an inspection of their improved Conical Boiler. (See Editor's description, *Gardeners' Chronicle*, March 12, p. 175.) To Amateurs these Boilers will be found invaluable. They are complete without furnaces or setting in brickwork, movable at pleasure, very ornamental in appearance, and require attention only once in 14 or 15 hours, price 5*l.* 5*s.* and upwards. Further particulars, with plans and estimates for heating any description of building, may be obtained as above; where also may be seen the improved Wrought-iron Boiler, as applied with Chanter's Smoke-consuming Furnaces at Chatsworth, and many other of the Nobility's Seats. Iron Fencing, Hurdles, Bedsteads, Ornamental Wire-work, Garden Implements, &c. &c. The trade supplied with Hot-water Socket-pipes.

N.B.—WAYTE's New Patent Land-presses and Drills.

HOT-WATER APPARATUS FOR HEATING HORTICULTURAL BUILDINGS, DWELLING-HOUSES, CHURCHES, and MANUFACTORIES, upon improved principles, and at very moderate charges, erected by DANIEL and EDWARD BAILEY, 272, HOLBORN.

D. and E. BAILEY having devoted much time to the consideration of this subject, and had much experience in the erection of apparatus for the above-mentioned purposes, have, by improvements suggested in their practice, rendered their mode of heating not only very efficient, but very simple, and have combined durability in the apparatus with economy in the charge. They have erected apparatus in England, Scotland, and Ireland, for many noblemen and gentlemen, and have had the honour to be employed by the Horticultural Society of London, in executing the works of their splendid Conservatory, lately erected at Chiswick.

D. and E. BAILEY also construct in metal all descriptions of Horticultural Buildings and Sashes, and invite noblemen, gentlemen, and the public to an inspection of their various drawings and models, at 272, Holborn, where they have the opportunity of exhibiting, amongst other metal works, an extremely complete and convenient kitchen apparatus, or range, adapted for the continued supply of hot water, and an arrangement of the oven more complete than has hitherto been brought before the public.

D. and E. BAILEY were the first to introduce metallic curvilinear houses to horticulturists, and can refer to the Conservatory attached to the Pantheon as one of their works, besides many others in this country and on the Continent.

D. and E. BAILEY have prepared a quantity of the Galvanic Plant Protectors, which are now ready for immediate delivery; they beg to introduce to public notice a new Trough Pipe, for Orchidaceous or other Houses where vapour is constantly, or at intervals required, and which may be seen at their Manufactory.

PENN'S SYSTEM OF OBTAINING A FREE CIRCULATION OF HEATED PURE ATMOSPHERIC AIR THROUGHOUT HORTICULTURAL AND OTHER BUILDINGS.

W. HILL having had considerable experience in the Erection of Horticultural Buildings, after the most approved designs, and having received from the inventor of the above system a complete induction into its practical application, begs to announce to the Nobility, Gentry, and Others, that he is prepared to furnish Designs and Estimates for every description of Horticultural Erection, upon application personally, or by letter addressed to W. HILL, Builder and Surveyor, Lewisham.

This system, which is allowed by men of science and all the most eminent practical Horticulturists in the Kingdom to be the most perfect mode of Heating, combined with economy, has undergone the most *complete test in every variety of application*, by the inventor and others, with a success which can only be sufficiently appreciated upon an inspection of its effects on a Collection of rare Plants and Fruits at any season of the year.

W. Hill will (through the kind permission of Mr. Penn, Lewisham—Mr. John Willmott, Isleworth, and others), be happy to afford the most satisfactory demonstration of the superiority of this to all other modes of Heating, and every other information required may be obtained upon application personally, or by letter addressed as above.

TO NURSERYMEN AND OTHERS.—To be Let, on very advantageous terms, in a most excellent situation about six miles from London, eight acres, part in Nursery, Flowers, Fruit, and Vegetables, at a low rent, held on lease for 22 years unexpired. Dwelling-house, Greenhouses, Pits, Frames, &c. &c. The Stock of Plants, &c., to be taken by valuation, in the usual way. For particulars apply to Mr. John King, Auctioneer, Hackney-road.

TO NURSERYMEN, &c., &c.

JOHN BETHAM, Custom-House and General Forwarding Agent, begs to inform the above, that he continues to receive and forward consignments of Plants and Seeds, with strict attention, despatch, and moderate charges.

Every information given as to the arrival and departure of vessels to or from Hambugh, Rotterdam, Antwerp, Calais, Havre, or Boulogne; also the United States, Scotland, &c. &c.

Cox and Hammond's Quays, Lower Thames-street, London.

November 1842.

HORTICULTURAL SOCIETY OF LONDON.
This Day is published, Price 3s. 6d. to Fellows of the Society, and 5s. to Others,

A CATALOGUE OF THE FRUITS Cultivated in the Garden of the HORTICULTURAL SOCIETY OF LONDON. Third Edition. Sold at the House of the Society, 21, Regent-street; and also by Longman and Co., Paternoster-Row; J. Hatchard, Piccadilly; Ridgway, Piccadilly; Rivingtons, Waterloo-place; and by the principal Booksellers in all parts of the Empire.—N.B. A few Copies of the 2nd Edition may be had at the reduced Price of 1s. 6d. each.

The Gardeners' Chronicle.

SATURDAY, DECEMBER 3, 1842.

MEETINGS FOR THE TWO FOLLOWING WEEKS.

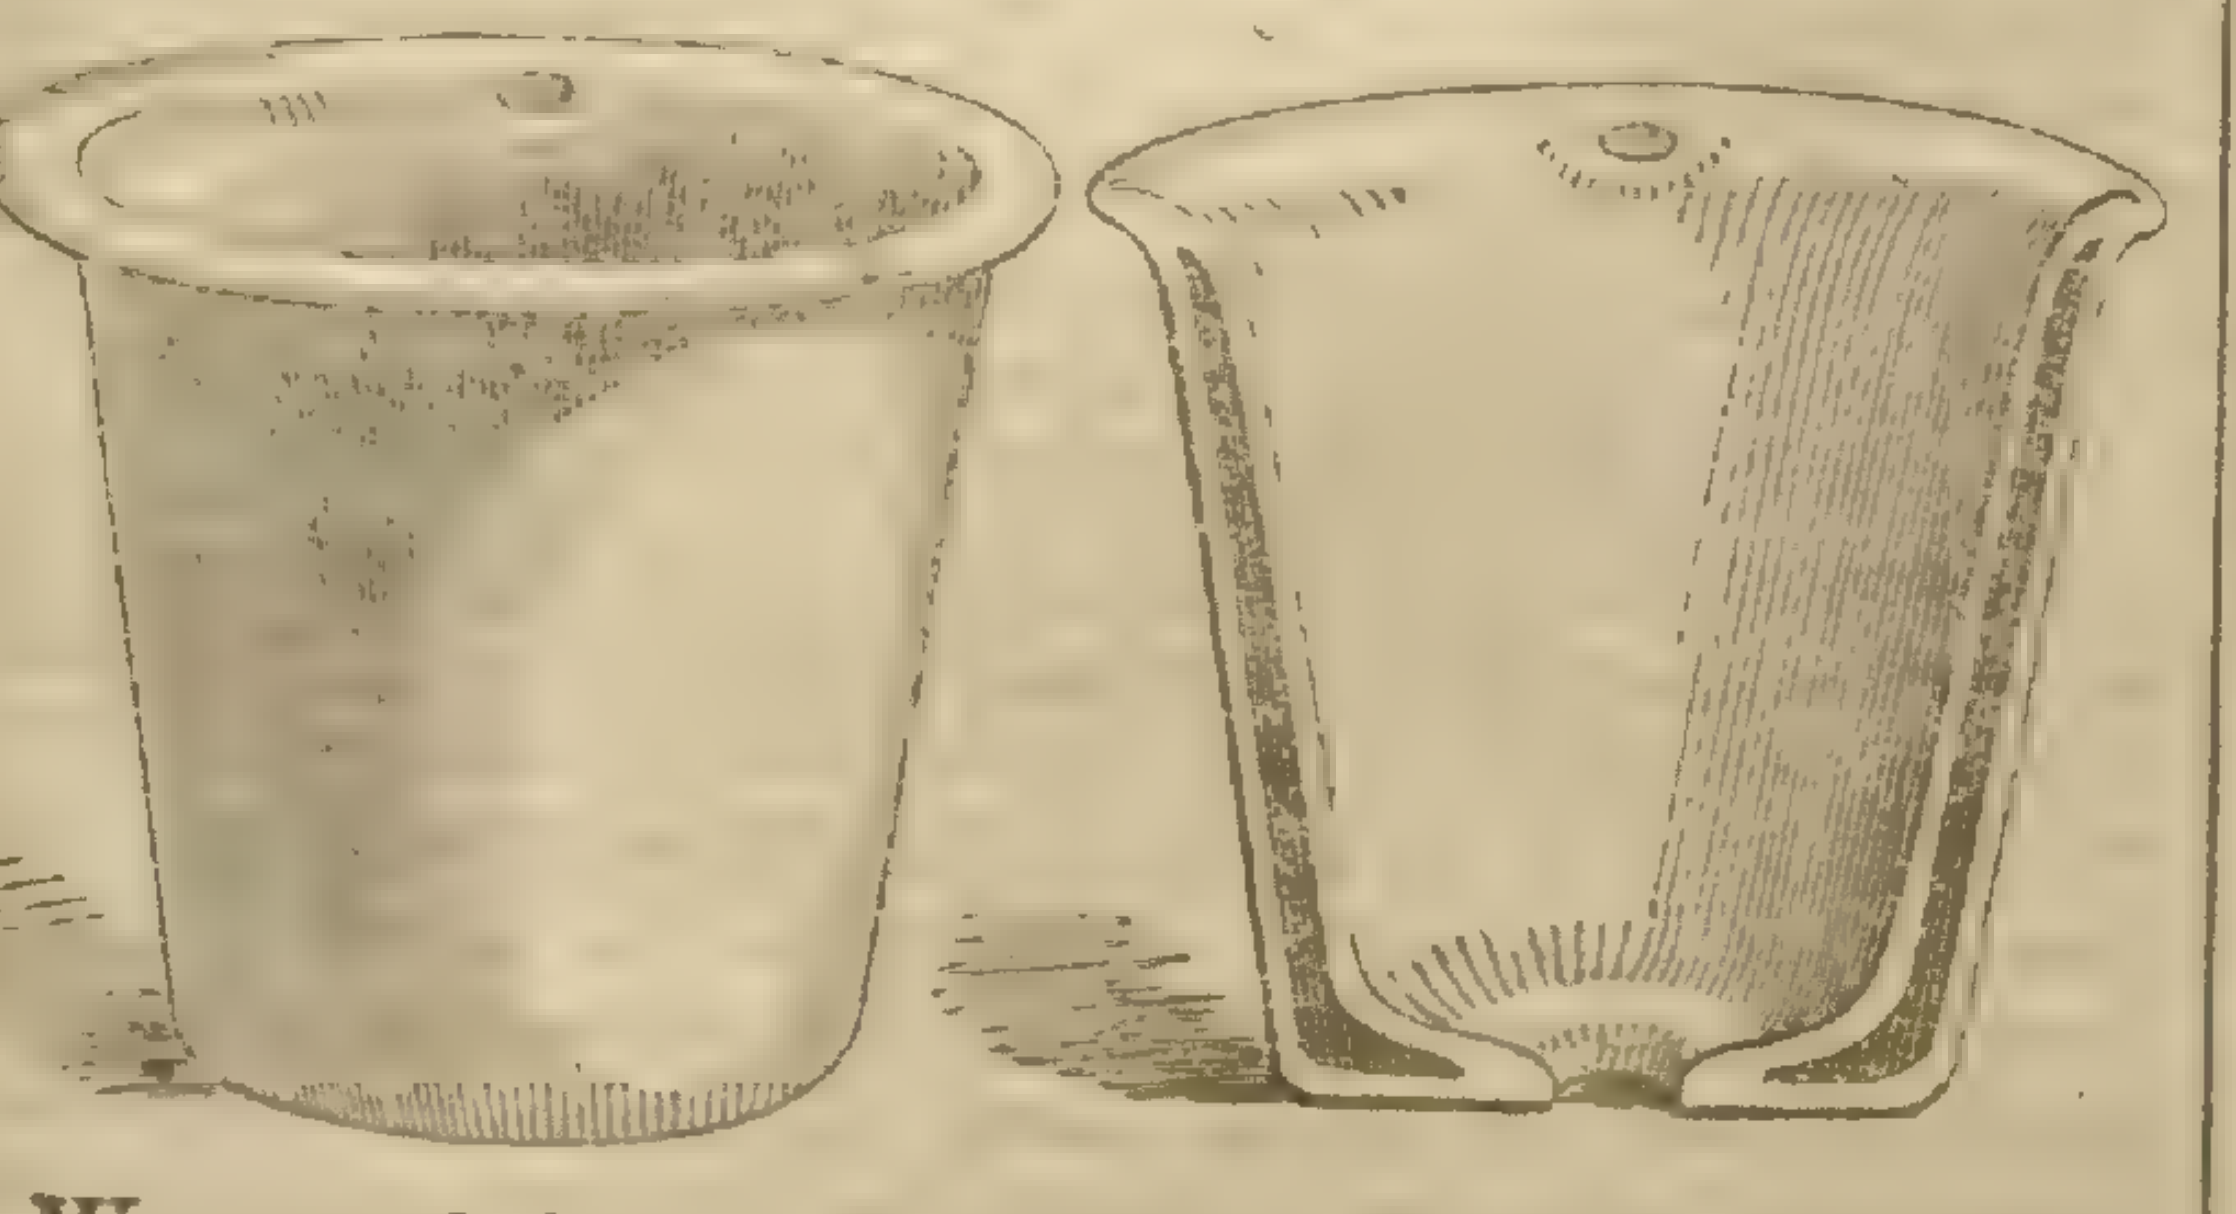
Monday, Dec. 5	Entomological	8 P.M.
Tuesday, Dec. 6	Horticultural	2 P.M.
	Linnean	8 P.M.
	Floricultural	6½ P.M.
Saturday, Dec. 10	Royal Botanic	3¾ P.M.
Tuesday, Dec. 13	Zoological	8½ P.M.
Wednesday, Dec. 14	Geological	8½ P.M.
	Medico-Botanical	8 P.M.
Friday, Dec. 16	Botanical	8 P.M.

AMONG the good consequences which, it is to be hoped, will follow the peace with China, and the opening of that little-known country to Europeans, we trust that one will be the acquisition of a large number of valuable hardy plants for our gardens. The cold province of Fokien, the Black Tea country of the Chinese, is the garden of China; it was thence that the beautiful Wistaria (Glycine) sinensis was procured; there is to be found the source of many of our finest Camellias and Azaleas; and from the same part of the Celestial Empire are to be had multitudes of beautiful things, authentic representations of which are now before us. Moreover, in the more northern provinces are other garden productions not less worthy of note; of which the Pekin Peaches, weighing two pounds, melting and delicious, may be taken as an example. One of the ports to be opened to our intercourse is Foo-choo-foo, a very important city, situated at the mouth of the river Min, which runs into the heart of Fokien; and this must be an admirable post for gardening operations.

We are then most happy to announce that the Horticultural Society of London have resolved upon taking immediate advantage of the opportunity now afforded, and that a collector will proceed to China, as soon as the necessary arrangements can be completed.

WE forget what was promised by the voluptuary to him who should procure him a new pleasure; but we know that he who contrives a new instrument of real value in gardening deserves a much better reward—the gratitude and support of those who are benefited by it. Such an invention is now before us.

Mr. Robert Brown, a potter of Ewell, has contrived a garden pot, with close hollow sides, which may be filled with water, or left empty, as circumstances may dictate. The following cut will explain its nature:



We regard this as a contrivance of very great value. Everybody knows how much plants suffer during summer from the heat and dryness of the pots in which they are growing, and how continually it is required to obviate the inconvenience by placing one pot within another, or by surrounding them with moss, or by plunging them in soil. All this is rendered unnecessary by the contrivance in question; for if the sides of the pot are left empty, the stratum of air contained in them will prevent the earth from becoming heated; and if they are filled with water, the inconvenience of over-watering, on the one hand, or over-drying, on the other, will be prevented in summer, because water will be continually filtering slowly through the inside lining as the roots require it. The latter reason will make it invaluable for striking cuttings, and for window gardens, where it is almost impossible to keep plants duly supplied with moisture, even if the servants entrusted with the duty would give themselves the trouble to attend to it.

We are quite aware that pots have been already made with double *open* sides; but they are very different, and far less useful, than those of Mr. Brown with double *closed* sides. We therefore trust that the patentee will receive that patronage from the public which so very useful a contrivance entitles him to.

Since writing the above, we have received a letter on this subject, signed "Ægæon." The author urges that the roots of plants may suffer, in such pots, from the quantity of water to which they are exposed in winter.

"If," he says, "water be introduced between the sides of this kind of pot, its inner surface will be always *wet*; and so the young roots will receive too much fluid, so that they will rot, and the plant will die: but if the empty space be permitted to remain empty, the inner portion of the pot receiving moisture only from the watering required for the well-being of the plant, the outer side having water occasionally poured on it, or the pot being immersed for a few minutes in it, he feels assured that the sides of the pot will be kept so fully saturated by these means, that they will be constantly giving out into the empty space a vapour, by which the inner portion of the innermost pot (towards which the young roots always incline, and with which they are in contact) will be kept sufficiently cool and moist, and the roots will be preserved from injury;" and, for this reason, he regards Mr. Brown's invention as one of considerable importance.

To the latter part of this we have no objection to offer; but we do not anticipate any danger from the young plants becoming rotted in summer; and no good gardener would, we presume, expose his plants to the risk in winter.

OUR Paper of last week contained a detailed account of the manner in which the Horticultural Society of London intends next year to distribute prizes at the exhibitions in the Society's Garden. This is in all respects an important document. It is the result of many years' experience; and it is the expression of opinion on the part of a large number of practical men, whose advice has been taken into consideration on the present occasion. Not, indeed, that all that has been recommended by them has been agreed to; but all that they have recommended has been fully considered.

We trust that those who are interested in such matters will see that the present scheme of exhibitions is much superior to all that have preceded it. Let us, nevertheless, beg permission to point out some of the more striking features of novelty in it.

It has long been felt as a hardship by gardeners of small means, that great growers should be allowed to destroy all their chances of success as exhibitors by bringing plants for the large collections and the small ones also; this is now remedied, and the general collections of plants are not only divided into classes of forty, twenty, and six, but no one can exhibit in more than one of them. It will be found. upon looking over the plan, that there are other examples of a similar kind.

Now, for the first time, a distinction is drawn between collections of Pelargoniums of whatever kind, and collections of new and first-rate varieties only: the latter are placed highest; and, what is quite as important, they are confined to small-sized pots, so as to suit the convenience of persons whose means of conveyance are not considerable.

The value of the medals offered for Orchidaceous plants is considerably increased. The growers of these noble things complained last year of the insufficiency of the prizes then offered them—but, we think, without sufficient reason; for it must be in the memory of many persons, that, previously to last year, the specimens of Orchidaceæ for which the gold medals were given, were often very far from being such as prizes of that value should be offered for. So, because the exhibitors were not true to themselves, and would not put forth their strength, and show what their skill really was, the value of their medals was lowered. Last year, however, they amply retrieved their character; the specimens they produced were of unrivalled excellence; and the Society has, in consequence, increased the value of the medals they are to show for.

The number of plants to be shown in the large collections of Stove and Greenhouse plants has been reduced from 60 to 40. This, it is presumed, will make such collections more select, and, at the same time, put the exhibitors to less expense for conveyance.

Medals are, for the first time, offered for collections of Fuchsias. The country swarms with varieties, good, bad, and indifferent; the exhibitions at Chiswick will now put some of them to the test.

Among seedling Florists' flowers a very wholesome regulation has been introduced. All seedling Pelargoniums must be shown in pots, and not in a cut state. We are quite aware that some growers will cry out at this, and insist upon the impossibility of complying with the regulation with first-rate flowers. We, however, will just take the liberty of inquiring—1stly, *Whether, if they cannot produce certain kinds of flowers otherwise than in a cut state, others are likely to be able to grow them?* and 2dly, *What the value is of a Pelargonium which the grower himself cannot obtain in a state fit for exhibition in any other than a cut state?* A medal is given to a new flower because of its being more beautiful as an object of cultivation than other flowers; but how can a variety claim rank in this respect, the flowers of which will not bear the test of a public exhibition? The old rule of showing cut flowers suited the purpose of those who grew seedlings *to sell*; we trust that the new regulations will suit the purposes of *the buyers*. The fact is, that the decision of the Judges at the Society's exhibitions determines the taste of the public, and is looked to as a guide by those who purchase Pelargoniums; and the Society is resolved that this confidence on the part of the public shall be justified by guarding the Judges against all possibility of erroneous decision.

Another alteration, in the propriety of which we think all must agree, is the reserving the duty of awarding medals for new and rare plants to the Society's officers. It is useless to deny that the decisions of the judges, in this respect, have been uniformly unsatisfactory, and that very curious errors have been committed by them on some occasions. It could not well, indeed, be otherwise; for they cannot have that acquaintance with plants which is required to decide the value of what are called new species by the exhibitors. This inconvenience will now be effectually removed, and justice will be done to exhibitors, on the one hand, by assigning the real value to the plants they produce; and to the Society, on the other, by withholding medals from plants which have no pretension to receiving them.

The last subject which we think it necessary to notice is Roses. Every one will admit that the methods everywhere now in vogue for exhibiting Roses are as bad as possible. Enormous masses of flowers indeed are produced, which make a great show, and fill the air with fragrance; but they are selected without judgment, exhibited without skill, and convey no sort of information to those who look at them. In fact, they can be compared to nothing so well as the "pretty peep-shows" which children make by placing gay flowers at the back of a piece of glass. The Society has struck at the very root of this evil. It is now determined that Roses shall be shown in small numbers of sorts; and, if cut, *in loose bunches, as gathered, so as to exhibit as far as possible the habit of the variety*; and *every sort is to be named.* But the great novelty is the establishment of a class of Roses in pots, to which much higher medals than those for cut Roses are assigned. Medals, of the intrinsic value of 7*l.* and 4*l.*, are offered for Roses in pots; but for cut Roses nothing above 1*l.* 15*s.* This is very important. It is not to be denied that, after all the fine things which modern discovery has produced, the Rose is the Queen of Flowers; compared with which, the Dahlias and Calceolarias, and Pelargoniums and Fuchsias, and all their kindred, are but as cut glass to diamonds. And yet we find less attention paid to the "getting up" Roses than to anything—as if their beauty was such that no neglect can spoil it. This may be; but the beauty of the Rose, like that of all other beauties, may be much improved by skill; and, at all events, it is very desirable to know what are the relative degrees of attraction among the varieties of this flower. There are no means of determining this, unless the Rose is shown, like other plants, in a growing state. We entertain no doubt that many gardeners will declare, that it is impossible to manage Roses well in pots; but we shall not do the great gardeners of the day the injustice to listen to any such impossibility. At one time it was impossible to grow Chinese Azaleas—at another time, Cape Heaths were uncultivable; then Orchidaceæ were considered hopeless—and we know very well there are men who cannot grow even a Cabbage as it may be grown. Such people, however, are not the exhibitors in the Garden of the Horticultural Society; and we will pledge our credit that, although very possibly no great success may attend the first efforts, yet, if the Society will but persevere in offering a great inducement to gardeners to direct their attention to Roses as pot plants, they will, before long, form quite a new feature in our gardens.

WE WILL OURSELVES GIVE FIVE GUINEAS to the first private gardener who shall win the principal prize for Roses in pots.

ON MANURING WITH GREEN CROPS.—No. 1.

(By PROFESSOR CHARLES SPRENGEL. Translated from the German.)

GREEN manuring is the operation of growing certain plants merely for the purpose of ploughing them in as soon as they have reached a certain maturity (viz., are in blossom), which may be done either on the spot, or by conveying them to another field. Green manuring is no modern discovery, for it was used even by the Romans, especially with the Lupine. Although this sort of manuring has been extolled by some authors beyond all measure, it cannot be doubted that it is a very advantageous operation, especially on light land, with a pervious subsoil. Its advantages are: most of the plants grown for green manure obtain from the subsoil, by means of their deep roots, those substances which are required as food by shallow-rooted plants, and which are thus brought back to the surface, whence they were previously removed by rain; at the same time they convey substances to the surface which it never before possessed.

These are the chief advantages derived from ploughing in green crops, which, however, have not been hitherto properly appreciated. Amongst the more useful substances thus brought up from the subsoil, are potash, soda, chlorine, sulphuric and phosphoric acid, magnesia, and lime. The green crop, when ploughed in, enriches the land with carbon, and especially with nitrogen, both which substances are absorbed from the atmosphere by the leaves. That it supplies soil with nitrogen is very important to Corn-plants, for they possess the power of attracting nitrogen (one of their chief sources of nutrition) from the air only in a very slight degree. Green crops, moreover, when ploughed in, keep hot dry soils cool and moist; because the humus which is engendered by their decomposition not only absorbs much moisture, but also retains it for a long time. Then, again, their strong herbage and woody roots act mechanically on heavy land by loosening it. After manuring with a green crop, corn is never laid, although it grows as luxuriantly as after a dressing of dung. The reason of this is, that dung supplies the ground suddenly with a great amount of nitrogen, which green manure affords much more gradually, in consequence of the slowness of its decomposition, acting most powerfully when corn requires most nourishment; hence a heavier crop of grain after green manuring than after a dressing with common dung. Green manure, however, will not last more than two years; the reason of which is, obviously, that the mass of herbage ploughed in is often not more than a third of the weight of dung. Green manure is very economical, not requiring more than one ploughing and harrowing, and the seed is generally very cheap. When fields are at a great distance, it saves much carriage; and, finally, it protects the soil from losing its humus by evaporation; because as soon as the corn is gathered in, the field is ploughed, and the crop for green manure is sown. No doubt these advantages are very important: they have even led to the assertion that plentiful crops may be obtained without any other kind of manure—if, only, between every two corn-crops green manure is employed. It has been, however, forgotten that green manure itself will exhaust the subsoil in the long-run; and then, not even green manure can be had any longer. If, however, the subsoil be very rich in fertilising substances, the surface-soil may be kept by green manure for many years in full vigour, without the assistance of dung; nevertheless, under any circumstances, it will be useful to manure occasionally even for green manure—employing such substances as gypsum, common salt, bone-dust, wood-ashes, &c., which will be useful to both the crop for manure and to the corn that is to follow.

But however useful green manure may be, it has many opponents. It is said that it must be better to feed the cattle with such plants than to plough them in, and to return to the field the manure thus obtained; because this will not only feed the cattle, but also animalise the manure. We must, however, consider that the advantage derived from feeding with such plants as are used for green manure is not so considerable as to repay the expense of mowing and cartage, the loss of manuring substances during the preparation of the manure, the carrying it back, and spreading it again upon the fields. But of plants ploughed in green, nothing whatever is lost, as they perform the whole processes of fermentation, putrefaction, and decomposition in the ground. Moreover, fodder does not improve in strength, but loses some of its power in passing through the body of animals, to which is to be added, that to light soils green manure is more useful than dung; and that, in fine, many plants which in the state of green manure are very beneficial, are not relished at all by cattle.

He who wishes to obtain all possible advantages from green manure must observe:—1. Those plants only must be sown whose seed is very cheap, otherwise green manure will be expensive as compared with dung.

2. Plants must be taken which are sure to succeed and grow very fast, in order that in the shortest time the largest mass of herbage may be secured.

3. They must not contain substances that may be injurious to the succeeding crops, otherwise much time will be lost by waiting till they are decomposed or have passed into a state of putrefaction.

4. Deep-rooted plants must be sown; for such will absorb the nourishing substances hidden in the earth, and convey them to the surface for the use of the shallow-rooted crops of corn. We are not, however, required to confine ourselves to annual plants; on the contrary, it is much better (as will be seen hereafter), if perennial plants are sown, because in that case annual cultivation and all the seed after the first will be saved. Such plants cannot, as a matter of course, be ploughed in on the spot, but they must be cut down, and carted on the field most in need of manure. For this purpose plants may be used that have not yet been much thought of, of which I shall speak hereafter.

5. Those plants, more especially, are to be used for green manure which have many broad leaves, because they most absorb aëriform substances (carbonic acid, hydrogen, and nitrogen): spurry is an exception to this rule.

6. Those plants must be selected which absorb from the subsoil those mineral substances in which the surface is deficient, and which are required for the nourishment of the future crop of corn; but whether those substances on which the success of deep-rooted plants depends are to be found in the subsoil can only be decided by chemical analysis.

7. In order that the plants sown may yield the greatest amount of herbage, seed must be used abundantly. It may therefore be useful to sow different sorts together, so that if one does not succeed, the other may. In all cases where plants are sown for green manure, it is essential that the field should be clear of grass and other weeds, because, as the land cannot be ploughed more than once, weeds may increase subsequently to such an extent, that the failure of the corn crop may be apprehended. Deep-rooted weeds are best destroyed by the closeness and shade of the green crop, and this is an additional reason for sowing a great deal of seed.

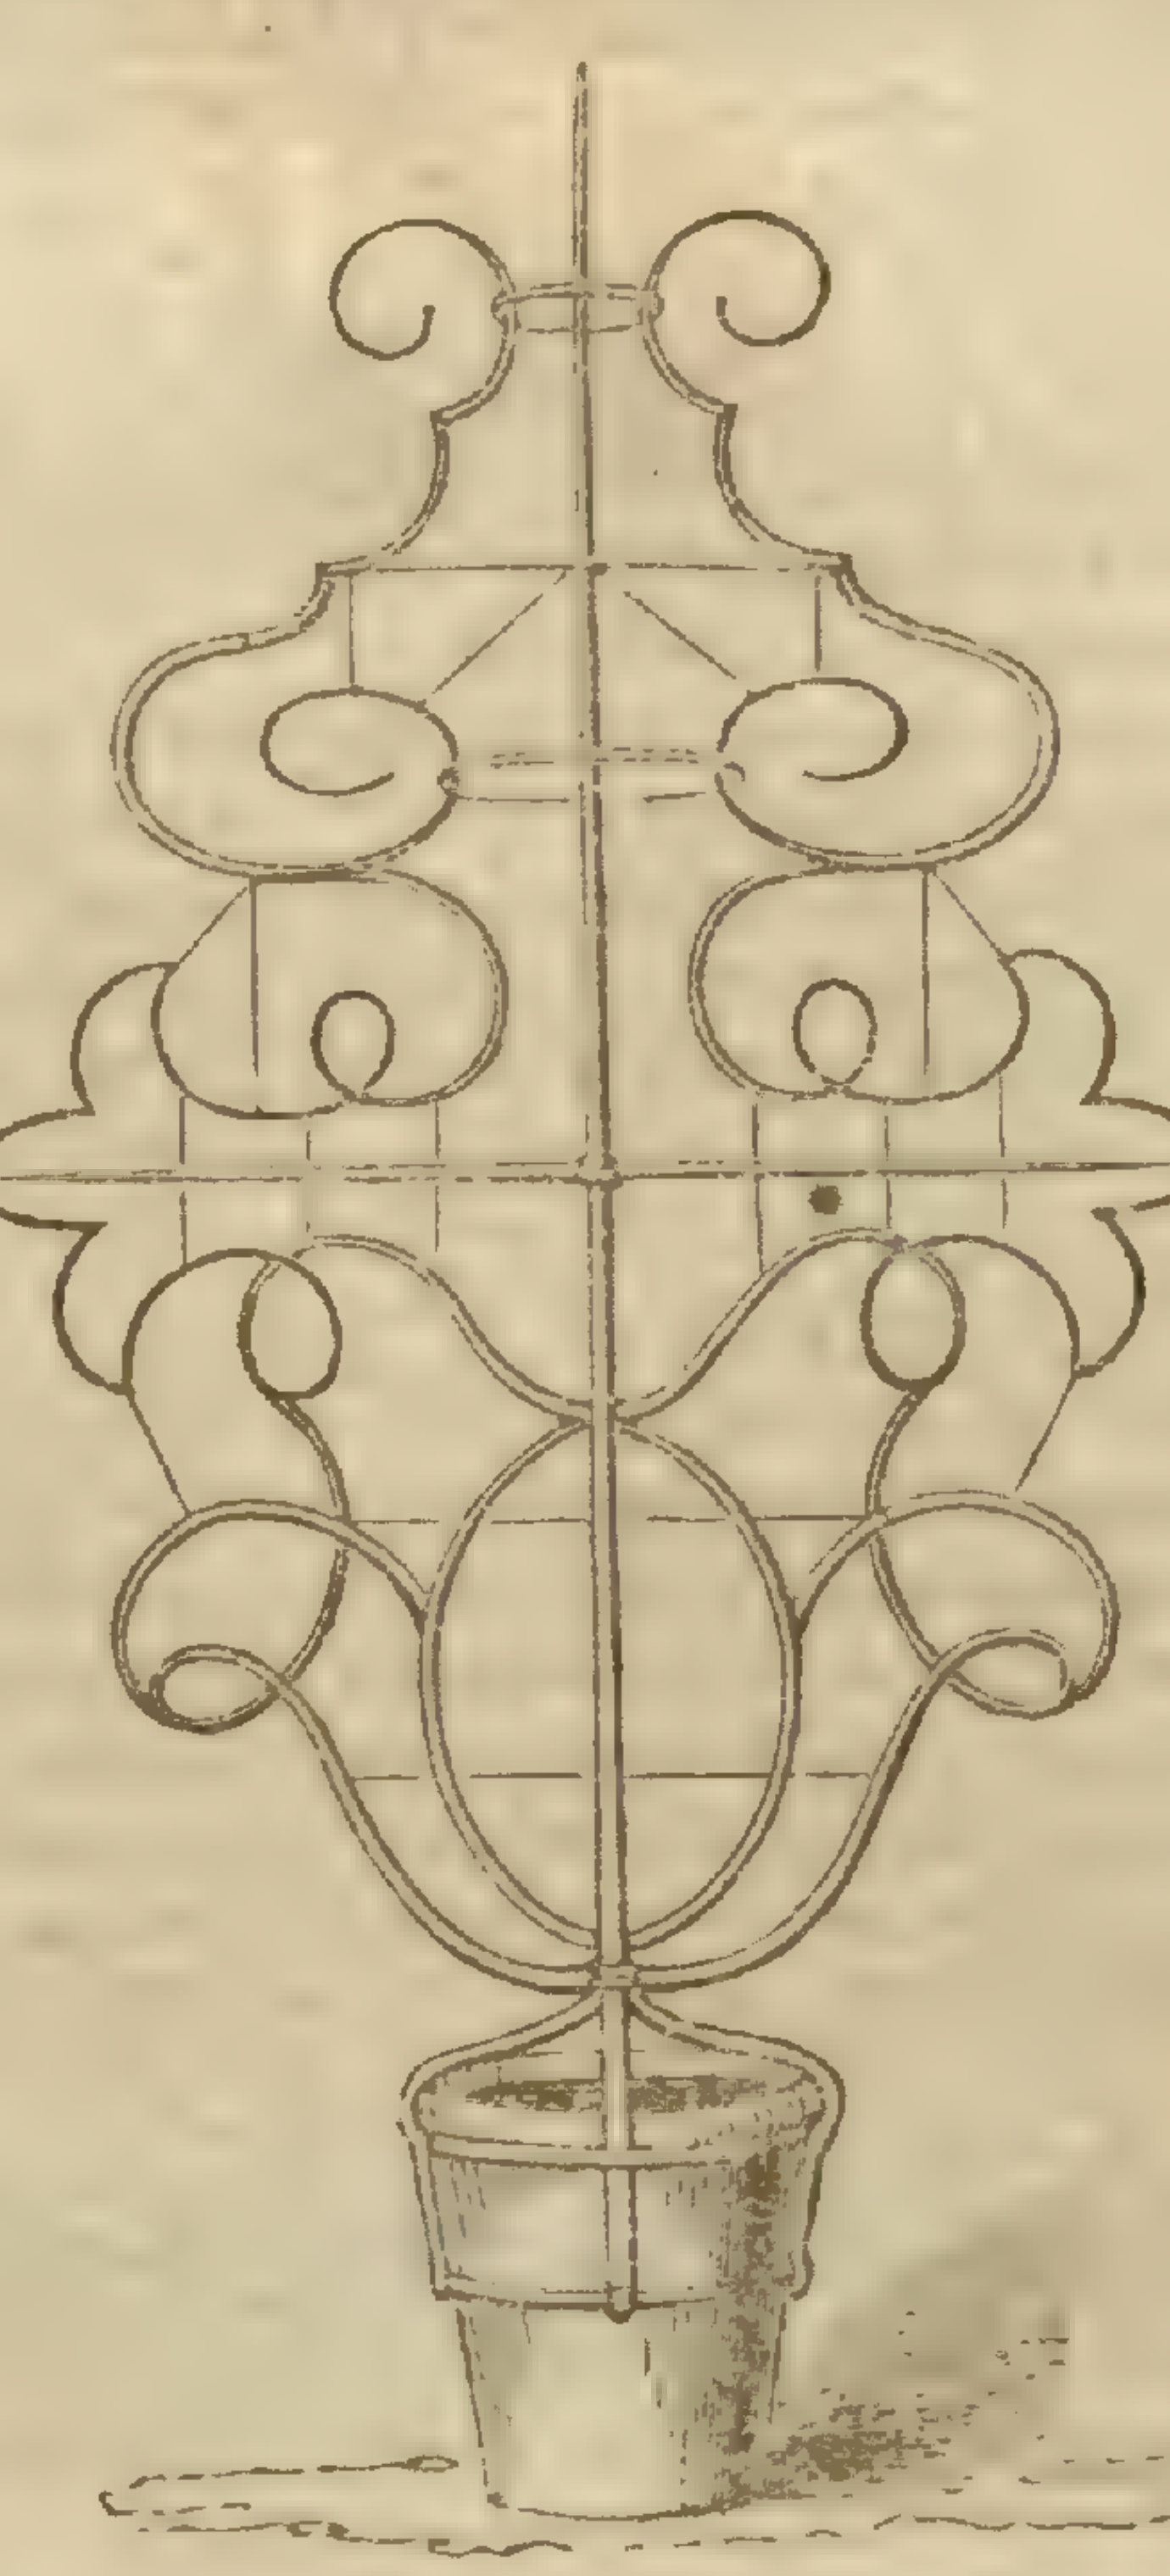
8. The land which is to be green-manured must itself be rich enough on its surface to sustain the green manure on its first development. All endeavours by ploughing-in green plants to fertilise a soil which is deficient in all vegetable nourishment, will be always vain; but if land is very poor, such plants must be selected which, like spurry, need very little nourishment. They are to be ploughed-in and re-sown repeatedly, till the land is capable of bearing something better, which will also yield an abundant herbage. This, of course, takes up several seasons. In most cases, however, Nature is the best nurse, and a field which is too poor to repay the outlay of cultivation, if left fallow, or used for feeding, will by degrees produce a scanty vegetation; or grasses or clover may be sown, and then, if the field has been fed off for three, four, or five years, and is again ploughed, the soil will have received some nourishment from the roots of grass, and will probably carry a tolerable crop. The proper green crop will, however, be always preferable, if a soil is to receive strength from itself, because plants which are constantly eaten down to their very roots can receive but little nourishment from the air.

9. All plants used for green manure must be ploughed in at the very moment they are in full blossom; not sooner, because then the herbage will not have attained its utmost extent and weight; nor later, because the humus from the decaying leaves will needlessly evaporate; more especially, however, because the flowers exhale nitrogen, which must be preserved, by all possible means, for the subsequent crops. It is generally said that a crop must be ploughed-in before it has run to seed, or otherwise the strength of the soil will be diminished. This, however, does not seem to me to be correct, because whatever the soil has yielded to the seeds is returned to it in the same way.

10. If green manuring is to produce the best possible effects, it is necessary (at least in the north of Germany) that the winter crops, which are grown afterwards, should not be sown too late. Green-manure, on account of the little nitrogen it contains, and because of its decaying only in warm weather, cannot push crops on; so that if the farmer sow too late, his crops will not only be weak during the winter, but will also grow very slowly during the spring, more especially in damp land, containing much coal of humus. Corn should therefore be sown, at the latest, by the end of September. I say this from my own experience, and warn every one not to neglect the advice.

(To be continued.)

TRELLIS FOR CLIMBERS.



ON TRAINING APPLE AND PEAR TREES.

A short description of my plans of training trees and manual operations may easily be given; but obvious reasons induce me to think that this would be a mere waste of time and paper. I have no doubt that many readers of the *Chronicle* are similarly circumstanced with a young clergyman who lately invited me to see his garden; he said that he was ashamed to expose his ignorance of horticulture—but what could he do? He had purchased several books; but as one recommended one mode of practice, and one another, he was at a loss to decide which to follow. He had also purchased Loudon's "Encyclopædia of Gardening;" but this did not help him out of the labyrinth, as he merely says one man follows this practice, and another that. A celebrated Professor of Physiology, who accompanied me round my garden, observed that my vines were furnished with as fine wood and fruit at the bottom or near the root, as at the greatest distance from it; and this he could never attain, his bearing-wood and fruit being always at the top, or farthest from the root; and, being out of bounds, he was obliged annually to cut away to waste. And as Mr. Loudon in his Encyclopædia did me the honour of giving sketches of my various plans, had this afforded sufficient instruction to enable any person to establish them, it may have been expected that, had they been worth following, many would have adopted them; but the fact is, they have not been generally adopted, and the reason why they have not, is, that the principles or laws of nature which determine the growth and production of trees and plants have either not been understood, or dishonestly denied. I therefore must beg of those who wish to follow, or to form a judgment of, my plans, first to obtain a clear understanding of what I consider to be the principles or laws of nature, which determine the growth and production of trees and plants—a knowledge of which I call the Science of Horticulture.

I am not so arrogant as to suppose myself infallible; but before I can admit any one to be justified in condemning me as a fallacious theorist, I must beg they will fairly state their evidence. The laws that I conceive more particularly apply to the growth and production of Pears and Apples are the following:—1st. No tree nor plant can bear fruit until it has attained a surface of trunk, branches, and leaves, duly proportioned to the food which it consumes; 2d. In all erect-growing trees and plants the flow of the sap is impelled and continued up through those buds and channels that offer the most vertical ascent; and in creeping plants, such as the Grape Vine, the flow of the sap is through the best ripened buds that are nearest the ends of the last year's branches—whatever be their position, whether vertical, horizontal, or declining; and 3d. The Pear and the Apple tree produce their fruit-buds on wood of one, two, or three years old.

In the first place, it must be obviously acting in opposition to nature, to cut back or shorten the branches of a tree or plant to facilitate its fructification; and it must be as obviously opposed to the second law, to cut back or shorten the branches for the purpose of improving its form or symmetrical proportions; and even after the first year of its growth, it must be equally opposed to the third law, to cut back and shorten the young branches annually, for the purpose of increasing its prolificacy; for in this case few if any buds will be left to form fruit buds.

On planting fruit-trees, it must first be determined what space the tree to be planted is desired to occupy; and then, either to adjust the capacity of the soil to the size of the tree, or the tree to the soil. It is well known that the Pear-tree, when planted in a genial soil and situation, will attain a great size and requires many years' growth before it can attain the necessary surface of trunk, branches, and leaves, to enable it to bear fruit. Under such circumstances, it is difficult to force its natural growth, so as to facilitate the acquisition of the surface required for its fructification. But many methods may be resorted to, to reduce the supply of food, and thus to adjust the consumption of food by the surface existing. Some persons effect this purpose by cutting away the bark and wood of the trunk or of the base of the large branches, and some by cutting off the roots. But when Pear-trees are required to be dwarfish in their growth, to occupy a small space, and to bear fruit as early as possible, the better mode is to graft the Pears on the Quince stock; for the roots of the Quince never extend so far nor collect food in such large quantity as the Pear: and yet it sustains the Pear-tree in sufficient luxuriance to produce large and constant crops of the finest fruit.—*J. Hayward, Lyme.*

(To be continued.)

AMATEUR'S GARDEN.—No. XLIX.

Window Pelargóniums which were pruned early in the autumn, as recommended at page 557, will now have become handsome bushy plants, and must be carefully protected from frost. When the nights are very cold, the plants should be drawn back from the window, or set down on the floor of the room; in these circumstances the heat which is given out by the floor and walls will generally be sufficient to keep the temperature above the freezing point. Fúchsias and other deciduous plants should not be pruned back until they begin to grow in spring; it will then be seen which branches require cutting out. Window plants, generally, ought to be watered sparingly at this season of the year, for very little evaporation goes on through the leaves, and the soil is apt to become wet to such a degree as to rot the roots: if enough is given just to keep the soil moist in which Pelargoniums are, this will be quite sufficient. Other things which naturally lose their leaves in winter, as Fúchsias for example, should be kept drier, although not perfectly dry. If any of those curious and pretty plants, called Mammillárias, are grown in windows, they will scarcely require any water; a little once in three weeks will be quite sufficient. Other Cacti, such as C. speciosus, require water more frequently. Hyacinths in glasses should have the water renewed occasionally.

The greenhouse should now be gay with Chrysánthemums in bloom. The collection ought to be looked over, and all the less beautiful varieties marked to be excluded from it in another year. Such kinds as Quilled White, Old Purple, and many others, are not worth growing now, when such beautiful varieties as C. formosum, lúcidum, Beauty, Duc de Canegliano, and others noticed in a former paper, are so common and cheap in the nurseries. The new French varieties are particularly valuable, not only because many of them are finely formed, but also because their dark colours are so useful for contrasting with the lighter Jersey varieties. Those who are fond of these gay flowers cannot do better than visit some nursery where they are extensively grown, and select, in flower, the kinds they most admire; or, at least, they can mark the names and description of the more interesting in their note-books, to which they can refer with confidence next spring when they wish to procure cuttings or plants. Young plants of the Chinese Primrose, Cinerárias, Tea-scented and Perpetual Roses, Mignonette, and plants of that kind, should be brought forward to succeed the Chrysánthemums; and as all these things are easily brought into flower in the winter months without the aid of forcing, they are particularly well suited for the Greenhouse or Pit of the amateur who has not much accommodation.

In the open air, the varied operations of the Kitchen and Fruit Garden, to which I have specially adverted, such as digging, draining, and planting, may be proceeded with when the weather is favourable. The lists of fruit-trees formerly given will enable the amateur to form an excellent collection of first-rate kinds; he will also find some good lists of Gooseberries in the preceding pages. Amongst Black Currants there is one sort which is particularly deserving of notice, called the Black Naples, which I would advise him to procure, if he does not already possess it.—*R. F.*

HOME CORRESPONDENCE.

Transplanting Trees.—The season has now arrived which is most suitable for making alterations and improvements in the flower-garden and pleasure-ground, in the execution of which the transplanting of trees and shrubs of considerable dimensions becomes frequently necessary. A few observations, therefore, on the manner of performing that operation may not be unacceptable. The bad effects of deep planting has been repeatedly held forth; notwithstanding which, it is still practised to a great extent; the most common method being to make the pit, or hole, for the reception of the plant so deep, that the upper surface of the ball of earth adhering to it may, when planted, be exactly level with the surrounding soil. Some even (with a view to gain stability) persist in planting still deeper. The consequences of such treatment may be readily supposed to be (in most instances) failure and disappointment; for, although the plants so treated may not die, yet their appearance is soon found to be the very reverse of ornamental. I have lately had an opportunity of examining some trees which had, about nine years since, been transplanted in the above manner, with a view to give an immediate effect to a new place. They consisted chiefly of Firs, Oaks, Chesnuts, Sorbuses, &c. Their appearance has all along been unsightly, having never recovered from the effects of their removal, and being now overtopped by small trees that were planted at the same time. On digging them up, it is found that very few rootlets have been emitted, and these only from the sides of the stem running close to the surface, and producing in some of the deciduous kinds a tendency to throw up suckers, which have in some instances formed themselves into large bushes; while, what was the tree at the time of planting, may now be seen in the midst of them, of the same size as it was when planted nine years ago.—The lower part of the ball being buried so deep, the roots are beyond the influence of the atmosphere and in immediate contact with the subsoil, consequently they are found to be dead and rotten. In planting, I would in all cases prefer small to large trees; the former recover from the effects of their removal sooner, and ultimately become the handsomest trees. When it is really a desirable object to remove large trees, the manner in which I conceive it can be most successfully done, is as follows: The tree or shrub being carefully lifted, prepare the spot where it is to stand by digging it deeply; make no pit, but merely hollow out the soil a little, so that the under surface of the ball may not be more than a foot or six inches below the level of the surrounding surface. Then place the tree in the spot so prepared, and after it is properly balanced, drive three or more strong stakes firmly into the ground, as close as possible to the ball, and so deep that their heads may be below the ground-level. Then, by stretching a piece of rope firmly from one stake to another, over the surface of the ball, the tree will be made quite firm. The prepared soil can now be thrown over the roots; a basin may be formed and liberally supplied with water. When the soil becomes dry enough the operation can be finished. The tree will then have the appearance of standing on a little hill, which will add to its height, and has a good effect. By securing the roots in the manner described, stem-staking, which is both unsightly and injurious, will be entirely dispensed with. By the above method, I have planted trees upwards of twenty feet in height, and in exposed situations, with great success.—*P. G.*

Pines.—At page 654 of the *Chronicle* is a paragraph written by a person styling himself "Inquirens." In this the author refers to an article which appeared a few weeks previously (page 624), stating the weight of several Pine-apples, which had been grown in rather a peculiar manner at Thornfield, the residence of F. A. Phillips, Esq. This he affects to call a new era in Pine-growing; neither do I much wonder at it: I should have thought it an exaggeration, had such a statement appeared a few years back. In my former account, I mentioned that the united weight of the fruit then growing upon twelve suckers was estimated at 60 lbs.; nine of these have been cut already, and their weight was 53 lbs. 7 oz. avoirdupois; the age of the plants since the preceding fruit was cut varying from eight to twelve months. The sorts were: one Enville, three Montserrats, and five Jamaicas. I have again dressed them, and placed them in the fruiting-pit, which is nearly full, without having recourse to my succession plants; and I expect next year that they will produce even larger fruit than they have done this season. I do not hesitate to say that the same plants of the Queen Pine would each produce three fruits in two years, and that Montserrats, Jamaicas, &c., would yield one fruit annually, unless some unforeseen accident should occur. I have within the last twelvemonth cut two fruits from one plant of the Black Jamaica, weighing 12 lbs. 12 oz.; a third sucker is making rapid progress, and in all probability will not shame its predecessors. That what I have already stated is a fact, many gardeners in this neighbourhood can testify. Allow me then to ask, what ifference can be drawn from such a result? If not a new era in Pine-growing, I think we may venture to call it a new era in the expense of growing this noble fruit, and a desirable object to those who are in some measure dependent on its produce for a living. It is not for me to predestine what may be the result of a few years' practice; yet I believe that, ere long, I shall hear that, out of a space of 22 feet by 9, two cwt. of fruit can be produced annually, independently of any succession-house. This is no phantasm of the head; it is what I really think, from experience. Neither let it be imagined that I want to usurp a predominance over my more enlightened brethren; my whole object in stating the above facts, is intended to arouse their energy, and show them what may be done by the above practice in the cultivation of the Pine-apple. I hope I have already stated sufficient to convince your readers of the superiority of this system over that of propagating Pine-plants from crowns or suckers. What a sacrifice I have seen, during my twenty years' acquaintance with the culture of this plant, by the mistaken notion that as soon as the first fruit is cut the plant has finished its career, and is of course only fit to be consigned to the flames or rubbish-heap, there to moulder into vegetable earth! whereas, had it been preserved and judiciously managed, in all probability the second fruit would have far surpassed the first both in size and quality.—*Joseph Hamilton, Gardener to F. A. Phillips, Esq., Thornfield, near Stockport, Lancashire.*—[We cannot pass by this communication without earnestly calling to it the attention of Pine-growers. In our opinion, the common modes of Pine growing are as much opposed as possible to common sense, and to the nature of plants. Mr. Hamilton is no doubt right.]

Scale upon Pines.—If a subscriber will syringe his Pines, and afterwards dust them with an equal mixture of dry soot and sulphur, he will soon clear his plants. The advice you give is good, but years might elapse before he could feel satisfied that the plants were clean. I have tried dung and all other moist heat, but could never get rid of them until I followed the above method.—*A Grower of Pines.*

Chamomile as a Preventive of Scale.—I have had two Camellias in the conservatory, which were covered with a white sort of scale, well cleaned with Chamomile water, since which they have been syringed three or four times. They are now quite clear of those insects.—*J. Malleson, Claremont Gardens.*

Rust on Grapes.—In different publications I have observed various causes assigned for the rust on Grapes, one writer stating that he seldom saw rust on early Grapes, but frequently on late ones; and adding that the latter were generally thinned by men with dirty hands. Another is of opinion that it is caused, in many cases, by dashing a strong stream of water against the tender fruit, or by careless handling in thinning; while a third states that it is frequently occasioned by persons thinning them with hands covered with perspiration. In my opinion not one of these surmises has any more to do with the disease called rust on Grapes, than it has with rusty bacon. Your Dublin correspondent writes, "previously to ripening, small dark spots appeared on the berries." Had he examined the bunches before they came into flower, he would have seen small dark spots upon them; for I never saw Grapes that had the rust, but dark spots were to be observed on the bunches before they were in bloom. The diseased berries appear to have a more oily appearance until nearly the size of a Pea, and the pollen adheres to them as dust does to anything fresh painted; whether syringed, thinned, or not, there is nothing that I know of which will prevent them from having the rust that season. Some persons think that your Dublin correspondent's vine was over-cropped; but if that had been the case, the berries would not have had the appearance which he described; and the top of the house would have been the last place to have looked for bad Grapes.—*A Subscriber.*

Packing Cucumber Plants.—Perhaps there is no plant the raising of which in the early part of the season causes so much anxiety to gardeners in small places, where they have nothing to depend upon but fermenting material, as the Cucumber; for, not only have they five or six weeks' trouble in preparing dung to form a seed-bed, but after that is formed, they have three weeks or a month to wait before the plants are fit to ridge out on the fruiting-beds. This, to a small grower, is not only a great trouble, but a serious expense; therefore, a system of packing that will ensure the safe transmission of Cucumber plants to a distance of 100 miles or more at the time the thermometer registers several degrees of frost, will not, I presume, be without use to some of your readers. The materials necessary to secure this are two boxes—one of a size suitable to hold the plants, and the other about four inches larger every way; a quantity of dry moss; some carded wool, and a thick woollen cloth, similar to those used for horses. In packing the plants, which should be hardened for three or four days previously by being placed in a moderately dry heat of from 55 to 60 degrees, a little moss must be put on the surface of each pot, and securely tied down with matting. A small stake should be placed in the centre of each pot, and the plants should be secured to it, so as to make their foliage occupy as little space as possible. Four or five more sticks are then to be tied firmly round the outside of the pot; and the whole may be enveloped in a sheet of paper. This being done, place the plants in the small box; pass some narrow strips of wood, which may be secured by nails from the outside, over the rims of the pots, to prevent the plants from being injured if the box should upset; and fill the latter up firmly with carded wool, which has been previously warmed. After the lid is fastened down, the box must be placed within, and equidistant from the sides of the larger one, over the bottom of which a layer of dry moss should be previously placed; the space between the boxes to be tightly filled with the same material. The lid of the large box may then be nailed down, and the whole may be wrapped up and corded in the woollen cloth. Packed in this way, I have sent plants in mid-winter a journey, in which they have been forty-eight hours on the road without their sustaining the least injury. Under ordinary circumstances, and for a journey of a few hours, I dare say the plants would pass uninjured in the small box, packed in wool and wrapped in the woollen cloth; more especially if we could ensure its travelling "inside" the coach: but as coachmen are not to be trusted, it will not be advisable to run the risk with valuable plants. Wool, hair, or charcoal dust, would be superior to moss to fill in between the boxes, but they would be more expensive.—*Judex.*

Bletting.—This word has been used in your two last Numbers to signify the ripening of fruits of the Medlar and Service kinds. Pray, on what authority do you thus use it; and whence is it derived? It is new to some of us; and, as it is not a common word, and as precision of ideas is so closely connected with the right meaning of words, you will oblige many of your readers, no better versed in the *wörterforschung* than myself, if you can find a place in your "Miscellanies" for an explanation. Is it a new coinage, or is it old, newly returned to circulation? It is not to be found in Parkinson, Gerard, or Evelyn; nor in any of the modern books I have been able to lay my hands on—though these, I must confess, are not many. The word has a good Anglo-Saxon look, and I wish I could follow it in that direction. It cannot have anything to do with the German Blätt or Blättern, though they are "goot orts" for garden use. Nothing like it is to be found in the ordinary French dictionaries. But in Boiste's *Pan-Lexique*, of date 1829, I find "Blet-te (adj. masculin inusité) (poire —) trop mûre, à demi pourrie," and in a "*Thresor de la Langue Francoyse*," of date 1606—"Blette, espece de poarrée," so that I suppose we have taken it immediately from the French, though perhaps traceable to some Gothic or Celtic original common to both languages. Blight is most probably from the same root; especially as Johnson could not find the etymology of that word—later and better philologists may have been more successful. So many words in common use, of which we have the precise notions of their meanings, have been swerved from their original significations, that it is perhaps not a valid objection to the one in question that it is not a proper expression for the maturation of the Medlar, which has no other affinity to rottenness than as it is the next before it in a series of chemico-vital changes in the fruit; and it ought certainly to be understood in a very different sense from the *Blight* of our own, or the *Blette* of the French lexicographers. Perhaps it would be more correct to speak of all sorts of ripening as the last chemical action directed by the vitality of fruits, before they are resigned to the acetous or putrescent fermentations, or other chemical operations which assist their resolution into their component principles. And if we go so far as to say that all vitality is only chemical action ill understood—or, if it be contended that the formation of sugar and the other phenomena of maturation are simply chemical, the same will apply to the maturation of the Rosaceous as to other fruits.—*P. P.*—[Our excellent correspondent has answered his own question better than we could have done it for him. The word bletting has, no doubt, been derived immediately from the French, and we are not sure that we ourselves have not to answer for the offence of introducing the word into English; not lately, however. The fact is, that we have no word in English which will express the peculiar state of the Medlar, &c., which consists of ripeness with the appearance of rottenness. "Après l'époque," says M. Decandolle, "que l'on appelle généralement maturité, la plupart des fruits charnues subissent un genre d'altération; leur chair pourrit ou *blessit*, c'est à dire passe à l'etat de fruit *blet*."—*Decand. Phys. Veg.* 587. And the same writer goes on to speak at some length of this *blessissement*. It is, therefore, evidently a word in common use among the French, and we think it may be conveniently added to our own language.]

Preservation of Apples.—I know not if the following be the usual mode adopted in Herefordshire for keeping Apples, but a person from that county has been in the habit of keeping them thus:—He covers the floor of his cellar with hurdles two in thickness, and on these he puts a little straw, upon which the Apples are placed without further care or attention, except removing all that appear to be faulty as he places them in the cellar; and he thinks it unnecessary to use any particular care in this respect. He has at present 110 bushels thus heaped up in a small cellar; two or three times each week he gives them a good wetting with fresh water, as much as he thinks will *well wet the whole of them.* This water drains off, through the straw and hurdles, into a well. In this way he assures me Apples keep well until the period at which he usually disposes of them—the best to make him a good return after Christmas. At present the Apples look as well and firm as if just gathered, and I understand that during the last 10 years they have always kept just as well and *fresh*, until sold, as we then saw them. How much less troublesome and easy of application for keeping large quantities of fruit, than storing them away in dried sand, on shelves, in boxes, and in many other ways recommended! and does it not accord perfectly with the philosophy of the question, as shown in your leading article, p. 771, by washing away the "parasitical fungi," the cause of decay in Apples themselves, and the means of inoculating other fruit in their vicinity? This drenching with water will also tend to bring about what is specified to be essentially necessary—that a fruit-room should be as sweet and as clean as a dairy. Is it possible to keep either sweet or clean without the use of plenty of water?—a dairy, certainly not. Would not this method answer for storing roots as well as fruits, keeping them *cold* enough by the constant application of the water, to prevent their growing in the spring; and yet moist enough to prevent their withering, as the air would not exhaust the roots, but rather afford a supply to the juices, and thus preserve their plumpness, should they need it?

Cockroaches.—I should have informed you sooner of the result of my experiments in destroying Cockroaches had I not been too much engaged in other matters. The treacle-trap is of no use whatever; only one having intruded into the basin in three nights. Spirit of turpentine is, however, effectual; I only used it three times, and I have now scarcely a cricket left. My servant bought spirits of wine the first time in mistake; it will do as well as turpentine, but is more expensive. I merely poured a little into the crevices and holes near the hearth-stone, and afterwards sprinkled the remainder of half-a-pint up and down the floor near the fire-place, If the liquid ever comes in contact with a cricket, it will give one or two leaps, and then fall on its back and die immediately.—*J. Ogle, Preston.*

Onion Maggot.—The Onion crop has this season failed in many parts of the country, while in other places it has been abundant. In cottage-gardens, consisting of soil of a similar nature, and even when seed has been procured from the same shop, the crop failed with some and succeeded with others. This failure has been occasioned chiefly by the Onion-maggot. I have made inquiry at several places where the crop was good, how they managed and manured their ground: in every case I was informed that they had put soap-suds and urine upon their ground during winter, with scarcely any other manure, and that the ground was dug in spring and sown in the usual way. As many cottagers and others depend a good deal on their Onion crop, it may be worth trying a piece of ground with Onions, and dunging it with these little-valued materials. They are sure to be advantageous to the ground, and the trouble in most cases is not very great. It may turn out that some of the salts in these substances may keep the maggot at a respectful distance from the seeds of the Onions, and thus prove a safeguard to the crop.—*Peter Mackenzie.*

Entomological Specimens.—I have found it a good method of killing moths and other insects for cabinet specimens, to enclose them in a tin box, and immerse it for a minute in a basin of boiling water. The insect dies almost without a struggle, and the most delicate colours are uninjured.—*Lusor.*

To prevent Sheep from Barking Young Trees.—I have seen young Apple-trees secured from being barked by sheep or hares, by binding a piece of Willow bark, taken from a pole of the same size, round the stem of the tree. It will last for a year or two, is very easily renewed, and affords complete protection.—*Lusor.*

Cure for American Blight.—In perusing Mr. Waterton's "Essays on Natural History," I found the following simple means of checking the ravages of the American blight: it costs nothing, and, I may add, it is within the reach of every one. It consists of clay, mixed with water, till it is of such a consistence that it may be put on the injured parts of the tree either with a mason's trowel, or with a painter's brush. It is then applied to the diseased places of the tree, and soon smothers every insect. A second coating upon the first fills up all the cracks which become apparent when the clay has become dry. This mixture resists, for a sufficient length of time, the effects of both sun and rain, until the sickly parts, effectually freed from the enemy which had been preying on their vitals, are placed in a state to be cured by the healing process of nature. That this method is effectual, my Apple-trees amply testify.—*Yuys.*

Althorpe Crassane Pear.—In your Notices to Correspondents in a late Number, I see that you are doubtful whether the Althorpe Crassane would succeed as an espalier. I beg to state, that in the spring of 1837 I grafted three scions of the above Pear on an espalier, and in the autumn of 1840 I gathered five Pears in good perfection. In 1841 they were very fine; but being a cold, wet summer, they had not much flavour. This year the crop has been good and in great perfection.—*Charles Elworthy, Nettlecome Court.*

Potatoes.—I this year planted most of the best varieties of Potatoes in separate rows, in heavy clayey soil, and I find that the most prolific were the Bread Fruit, the Regent, and the Pineapple, especially the latter, which is a very valuable kind, as it keeps quite sound and well-flavoured till June.—*Totty.*

Experiments upon Potatoes.—I beg to forward the results of some experiments on Potatoes with guano and other manures. The piece of ground operated upon was rather more than a rood of light loamy soil, with a gentle declivity to the south. It was ploughed up in 1841, and sown with Oats; but it was so poor and full of Couch Grass, that at harvest-time there were scarcely any Oats to be seen. In March last I ploughed it twice, cleaned the Couch well out, and cut the rows with the plough two feet apart; I planted the whole with Potatoes—the kinds being American Natives, Prince Regents, and Short-topped Reds. These were cut into sets of two eyes each, and planted seven inches apart lengthways in the rows, which ran north and south; the rows being all fifteen yards long. I manured them alternately with one pound weight of guano to each row for five rows, drilled out of the hand on the sets, and covered with mould; five more rows with a pound weight of nitrate of soda to each, put on in the same manner; five more with good stable-dung; the same number with horn-shavings; and so on alternately with the respective kinds, until the whole were finished and planted;—two rows of each sort being left without manure of any kind. The whole were managed exactly alike as to hoeing and earthing up: the quality of the ground was also as regular as possible, because I planted a row in the middle and at each end, of the same Potato, without manure: each yielded the same weight, which I think was as fair a trial as I could possibly give. The result of these experiments is as follows: the nitrate of soda was delivered to us at 27*s.* per hundred weight; the guano, which was from Peru, at 23 guineas per cwt.; the horn-shavings, about 12*s.* per cwt.; and the stable-dung at 6*s.* per ton. Every row of Short-topped Reds, manured with guano as above, yielded on an average one bushel each; those with stable-dung three pecks each; those with horn-shavings very little more than two, and those with nitrate of soda the same as the horn-shavings; those with no manure at all were equal in weight to the two last. The rows planted with American Natives, and manured with guano, yielded on an average three pecks each; those with stable manure, a quarter of a peck less; those with nitrate of soda and horn-shavings, two pecks each; those with no manure at all, rather more. The Prince Regents yielded as near as possible in quantity to the Short-topped Reds, with all the manures. Those grown with nitrate of soda and with horn-shavings were all extremely scabby, but during their growth in summer they were of a much darker green than any of the others, and the haulms were at least a foot longer: I anticipated the best crop from them, and did not find out my mistake until they were taken up. Those grown with guano and stable manure were beautifully clear-skinned, and free from scabs; one ton of dung from the stable manured twelve rows, which cost, with carting, 7*s.* 6*d.*; while the quantity of guano for the same ground would be considerably less, with much less trouble in applying it; several sets of the kinds manured with nitrate of soda did not come up, so that it would seem to have destroyed the eyes. The Potatoes which were planted without any manure at all were better than those dressed with nitrate of soda and horn-shavings, insomuch that they were not so scabby, although there were a few bad ones amongst them.—*Henry Ford, Sheaf House, Sheffield.*

Extraordinary Crop of Potatoes.—Mr. W. Hodgson, of Poulton-le-Fylde, in May last, cut into sets and planted 24 Potatoes of the kind called "Lumpers," the produce of which, when taken up, was no less than 10½ bushels, or 720lbs.!—*M. Saul, Garstang.*

Mangel Wurzel.—As the results of your correspondent's (from Odstock) stall-feeding with Mangel Wurzel are so very different from my experience, I have referred to my memoranda, and I find that on November 29th, 1819, I tied up, in separate houses, 30 Devon oxen which had been summered at grass, but were not fit for the butcher. They were divided, as nearly as could be judged, of the same estimated value, were attended by the same man, and in every respect treated alike, except that one part was fed with Swedish Turnips, and the other with Mangel Wurzel, of which they had equal quantities, with as much good meadow hay as they required (the exact quantity of roots given daily I have now no memorandum of). The first six were sold about the 29th of February, and the last on the 18th April. Those fed upon Swedes and hay averaged 21*l.* 10*s.* each, and those fed on Mangel Wurzel averaged 27*l.* each; the result was such as to satisfy me of the superiority of Mangel Wurzel over Swedes for feeding. There is yet another advantage in favour of Mangel Wurzel: the crop is so much heavier than that of Swedes, under similar culture. There was no difference in the preparation of the land for these crops, which grew side by side in the same field (11 acres), having been ridged in about 26-inch ridges, manured from the same heap of manure, and as soon as it was judged that a sufficient quantity of Mangel Wurzel had been drilled (at 2 lbs. of seed per acre, which is in my opinion the best method of planting), the drill was immediately put on Turnip-seed; but the crop of Mangel Wurzel was fully double that of the Swedes. I may observe, that a portion of the Mangel Wurzel was placed in the field in small heaps of two or three tons each, and covered with earth a few inches in thickness; but I observed on opening these that some roots which the frost had reached were rotted to the depth at which the frost had apparently extended, whilst the remaining part of the root was sound. Those stacked in the house in the manner I stated in a former communication kept well; these never heated, as the mode of stacking gave a good ventilation, and were always ready to be got at by removing a little stubble, and taking the required quantity from the ends of the stacks or cords, as wanted. I do not think with your correspondent, that the saccharine matter is dissipated by the access of air to the stacks; but I have heard it stated that the Beet-root loses a considerable part (if not the whole) of its sugar if kept late in spring, so as to unfit it for the purpose of making sugar. [Certainly.] I did not find the Mangel Wurzel to loosen the bowels more than the Swedes. As your correspondent has tried the experiment on a much larger scale than I have done (and I have had no opportunity of repeating it, having given up agricultural pursuits for nearly twenty years), I would not have obtruded the above statement, but in the hope that others may be induced to give the results of their experience, or to repeat an experiment which in my opinion promises to be attended with much advantage to cattle-feeders. For my own part, I am satisfied, and believe an acre of Mangel Wurzel equal in value to more than two acres of Turnips, *cæteris paribus.* As to the notion, that Mangel Wurzel exhausts the soil, the more feed an acre produces, the more manure will be made. I have not observed any deficiency in the Barley crop after this root.—*Lusor.*

Effect of Soil upon Peas.—"Lusor," in p. 654, asks if any one can assign the cause why Peas grown on certain soils will boil tender in a very short time; whilst the same kind, reared on other soils, will boil for hours, and still be hard and tough.—I know nothing of chemistry, therefore I cannot give "Lusor" a reason why such is the case; but I am certain of this, that Peas grown on sandy soils will boil well in a very short time; whilst the same kinds grown on a clayey soil will take hours to boil them, —in short, they will never boil soft.—*Horatio.*

Salt as a Manure.—There is no question as to the great value of salt. In the wide range of human economy it is an essential article, and, like water, we have great ground of thankfulness that the supply is so abundant. You have given us some instances of its surprising effects on vegetation in some former Numbers of the *Chronicle*, especially as applied to Asparagus. Much has also been written in other publications in former years, as to the advantage of using it as manure. This idea I could never fall in with; for although some plants may bear it and be benefited by it, yet I conceive the generality would be injured. To Fuci, and perhaps to some other things, it is essential; to Sea-kale and other glaucous plants a marine atmosphere is, no doubt, beneficial; but that is quite distinct from salting the ground. I have no wish to introduce the *odium theologicum* into your valuable paper; but I would just remark that in a book which I hope both you and your readers value above all others—the Bible —salt is very frequently mentioned as emblematical of desolation and sterility. See Genesis, chap. xix., v. 25th; Judges ix., v. 45th: when Abimelech beat down Sichem, he "sowed it with salt." Jeremiah, chap. xvii., v. 6th: "A salt land not inhabited." Zephaniah, chap. ii., v. 9th; also Matthew v., v. 13th; Mark ix., v. 50th; and Luke xiv., v. 34th: where it is expressly said, "It is neither good for the land nor for the dunghill." I am aware that in these New Testament passages an objection may be taken that salt is thus useless only where it "has lost its savour;" but still there is no encouragement as to any fertilising quality, but rather the reverse; and in the chemical analysis I am not aware that salt is found to constitute any material ingredient in the composition or food of vegetable substances. Another opinion may be entertained—that where salt is injurious, it is owing to its excess. It is found, however, that the quantity beneficial to Asparagus is destructive to most other garden productions; so that Asparagus is only to be taken as an exception, not as a rule. Upon the whole, I think salt will never become a fertiliser of the soil for general purposes, but rather the reverse. If any of your correspondents please to show good ground for contrary opinion, I shall give them all due attention.—*Quercus.*

Guano.—I can state on the best authority that 2 cwt. of the best grey-coloured guano is a sufficient quantity for an acre of Turnips. The best article with which to mix and make it fit for sowing, is 4 bushels of sifted coal ashes to 2 cwt. of guano; which will divide and make it scatter evenly in the drills. From all the trials which have been given to it in this neighbourhood, it is much cheaper and greatly superior to bones, gypsum, or even the best stable-dung, for Turnips. The demand will be very great for it next season in Roxburghshire.—*William Deans.* I have watered Camellias and Chrysanthemums regularly with liquid guano manure, with the greatest success.—*Clericus, F. H. S.*

Sporting of Colour in the Hydrangea.—I have an Hydrangea in my garden, which bloomed this summer with one large truss quite blue, while all the others were of the usual colour. The plant grows in rather a dry soil, and has been planted 14 years, near a north wall, where no sun ever reaches it. Do you know the cause of this?—*A Gardener.*

Value of Burnt Clay for striking Cuttings in.—A short time since a correspondent in the *Chronicle* recommended powdered soft bricks, as an excellent compost in which to strike cuttings. The same idea occurred to me last summer; but being from home at the time, I had not an opportunity of trying it. I, however, recommended my son, at whose house I was, to try burnt clay from the anthracite fires, which in S. Wales are supplied by a mixture of anthracite and clay. It struck me that the burnt clay would afford excellent drainage, and at the same time give sufficient moisture for the nourishment of the cuttings, and not in excess. Upon reflecting further on this matter, I am of opinion that another and a greater advantage to the cuttings is afforded by the property which burnt clay has of absorbing ammonia from the atmosphere. This ammonia would prove a constant and regular stimulus to the cuttings, and would enable them to send out the radical fibres more quickly than would otherwise be the case. If such is the fact, it is of some importance; and the reasoning deducible from it may be applied in other instances. It adds another proof of the great value of chemistry to facts made known by practical men; for which in many cases a satisfactory reason has not been given.—*John Wedgwood, Seabridge.*

Machine for crushing Bones.—Some time since one of your correspondents inquired respecting a cheap machine for crushing bones. The following is an account of one in use in the Andover Union workhouse. The bottom block of wood is 4 inches thick, by 26 inches square; the floor of the box consists of ¾ inch iron bars, fastened to the bottom with nuts and screws. This is better than an iron plate, as the bars can be removed singly when any part is worn out. The box on top is 1¾ inch thick, 13 inches deep, and 24 inches square, lined throughout with sheet iron. The crushing-rod is 3½ inches round, 3½ feet long; the face of the rod should be steeled, and with broad grooves. The top of the box should be fastened to the bottom by two strong pieces of iron passing down the outside, with an iron pin to go through them to keep the top from jumping up with the concussion. Such a machine costs from 2*l.* 5*s.* to 2*l.* 10*s.* A man will crush daily about 85 lbs. of bones if very fine, or 112 lbs. if coarse.—*Totty.*

Weight of Poultry.—Can any of your readers give me an idea as to the greatest weight (without confined feeding) a drake or duck of our common English breed has been produced at? I am endeavouring to procure the largest that is to be had, and as none of our agricultural societies give prizes for such, we are in ignorance in our part of the country what the other can do. Perhaps your correspondent would state, should one be kind enough to reply, the *age* of *duck* or *drake,* and whether alive, in feathers, or not.—*A Subscriber.*

Prognostic of Rain.—A pond in my garden, recently filled with fresh river water, became suddenly quite green a few days since. I was told that the change was a certain sign of much rain; and so it proved. The water is now as clear as before, and of its proper colour. How is the phenomenon to be explained?—*W. S. B., Grove Parsonage, Berks.* [We do not know.]

Dorónicum plantagíneum.—The devotion of this plant to the glorious source of light and heat, as pointed out by your intelligent correspondent, may be observed more or less in many plants, though certainly not to the entire sweep of the sun's circuit in the heavens—the Werd-el-Shems, on the burning plains of Chaldea; the Girasol (Helianthus tuberosus), and others. Yellow flowers manifest this property more than others—witness the Ranúnculus acris of the meadow; every blossom bent towards a declining and setting sun, like a vast multitude of fire-worshippers, or guebres.—*J. Murray.*

PROCEEDINGS OF SOCIETIES.

ROYAL AGRICULTURAL SOCIETY OF ENGLAND.

Dr. Playfair has expressed his willingness to extend his lecture to be delivered to the members, on the 7th of December, on the subject of the "Application of the principles of Physiology to the Fattening of Cattle," to the following evening, if consistent with their arrangements during that period. He considers the subject to be too extensive for a single lecture, but he thinks that in two lectures the necessary information may be conveyed. He proposes that the first lecture should consist of an explanation of the general principles of nutrition, and of the composition of the various kinds of food given to graminivorous animals; while the subject of the second lecture would be the more immediate application of these principles to the rearing and feeding of cattle, and to the explanation of the most important "fattening points" recognised by feeders or breeders of cattle. The Council stood adjourned to Wednesday last, but in consequence of the absence of members from town, a sufficient number did not attend to form a quorum for business. The next monthly Council will be held on Wednesday, the 7th of December.

COUNTRY SHOWS.

Exeter Horticultural Society, Nov. 11.—The minor exhibition of Chrysanthemums took place at the Society's Rooms, High-street. There were not so many as might have been expected; and in consequence of the wet weather the company was not numerous. The principal contributors were Mr. Griffin, gr. to Mrs. Wells; Mr. Booth, gr. to J. W. Buller, Esq.; and Messrs. Veitch and Son. The latter exhibited fine Plants of the new blue Tropæ'olum and Læ'lia Perrini. The following is the list of prizes awarded for Chrysanthemums:—*Best 12 dissimilar sorts,* 1, Mr. Griffin; 2, Mr. Booth. *Best 6 ditto,* 1, Mr. Griffin; 2, Mr. Booth. *Best collection of cut flowers,* Mr. Griffin. *Newest and best specimen,* Mr. Griffin. An extra prize was also awarded to Mr. Griffin for Gesnéria zebrina, Cypripédium insigne, Oncídium crispum, &c.; and another to Mr. Booth for Cactus truncatus, and Maxillária picta.—*Western Times.*

North British Professional Gardeners' Society, Sept. 23.—The last meeting for the season was held in the Calton Convening Rooms, when prizes were awarded as follows:—SIX BEST CHRYSANTHEMUMS—Norfolk Rival, Queen, Venus, Coronet, Victory, Marquess, 1, Mr. J. Young, gr. to T. Oliver, Esq.; 2, Mr. J. Downie, gr. to Gen. Robertson. THREE BEST CAMELLIAS—Alba fimbriata, Press's Eclipse, Double White, 1, Mr. D. Fowlis, gr. to Alex. Blair, Esq.; 2, Mr. Alex. Fowlis, gr. to Adm. Sir P. Durham. SIX BEST TENDER EXOTICS—Billbérgia farinosa, Epidendrum fragrans, Strelítzia Reginæ, Helichrysum proliferum, Cypripédium insigne, Erica mammosa, 1, Mr. G. Stirling, gr. to the Right Hon. Viscount Melville; 2, Mr. J. Young. SIX BEST DESSERT APPLES, 1, Mr. J. Goodall, gr. to the Right Hon. the Marquess of Lothian; 2, Mr. W. Thom, gr. to — Robertson, Esq. SIX BEST BAKING DITTO, 1, Mr. R. Watson, gr. to D. Anderson, Esq.; 2, Mr. W. Thom. SIX BEST DESSERT PEARS, 1, Mr. G. Stirling; 2, Mr. J. Addison, gr. to the Right Hon. the Earl of Wemyss. SIX BEST BAKING DITTO, 1, Mr. R. Watson; 2, Mr. G. Stirling. CELERY, *White,* 1, Mr. J. Goodall; 2, Mr. J. Addison. *Red,* 1, Mr. J. Goodall; 2, Mr. J. Addison. BROCCOLI, 1, Mr. J. Addison; 2, Mr. G. Stirling. BRUSSELS SPROUTS, 1, Mr. G. Stirling; 2, Mr. J. Goodall. TOMATOES, 1, Mr. G. Stirling; 2, Mr. J. Thomson, gr. to W. Keith, Esq. SAVOY, 1, Mr. J. Thomson; 2, Mr. J. Goodall. ENDIVE, 1, Mr. J. Addison; 2, Mr. G. Stirling. BEET, 1, Mr. G. Stirling; 2, Mr. J. Goodall. LEEKS, 1, Mr. J. Goodall; 2, Mr. J. Downie. A prize of One Guinea, offered by Messrs. Ballantyne, nurserymen, of Dalkeith, for a Herbarium, collected, dried, named, and arranged, by any person, a journeyman or apprentice to a member of the society, was awarded to Mr. W. Bertram, apprentice, Melville Castle.

NOTICES OF NEW PLANTS WHICH ARE EITHER USEFUL OR ORNAMENTAL.

MESEMBRYA'NTHEMUM TRI'COLOR. Three-coloured flowered Mesembryanthemum. (*Half-hardy Annual*). Ficoideæ. Icosándria Pentagýnia.—As a very dwarf and interesting object, well fitted for placing on the front shelves of a greenhouse near the eye, this plant will be found exceedingly serviceable. It should be treated like other tender annuals, by being sown thinly, in a well-drained shallow pot, in sandy soil, about the latter end of March, or later, if wanted for autumnal decoration. The pot containing the seeds should be plunged into a gentle hotbed until they germinate. When the young plants have formed two or three leaves, they should be potted singly into the smallest pots, in the same sandy soil, and placed in a warm frame until they are established. They may then be transferred to a cool frame or greenhouse, where they should stand near the glass, in order that they may receive the full benefit of the light. Water should be carefully administered, because their succulent nature makes them liable to be destroyed by damp. At their next shifting they should be repotted into a richer loam, with which a little leaf-mould and sand may be blended; or they may be turned out in a bed in the flower-garden, as soon as frosts have ceased. Wherever kept they should always be exposed to the sun, otherwise the flowers will not expand. For saving seeds a few plants should be reserved in a frame, with from six to a dozen capsules left on each, removing all the other flowers as they appear.—*Paxton's Mag. of Botany.*

MISCELLANEOUS.

Effect of Carbonic Acid on Vegetation.—A few years since I had an opportunity of observing a striking instance of the effect of carbonic acid upon vegetation in the volcanic island of St. Michael (Azores). The gas issued from a fissure in the base of a hill of trachyte and tuffa, from which a level field of some acres extended. This field, at the time of my visit, was in part covered with Indian Corn. The Corn at the distance of ten or fifteen yards from the fissure; was nearly full grown, and of the usual height, but the height regularly diminished until within five or six feet of the hill, where it attained but a few inches. This effect was owing to the great specific gravity of the carbonic acid, and its spreading upon the ground; but as the distance increased, and it became more and more mingled with atmospheric air, it had produced less and less effect.—*Liebig's Organic Chemistry, American Edition.*

Celery.—Celery, when simply boiled and eaten cold, makes an agreeable salad for those who cannot digest it in an uncooked state. Some persons consider it improved by the addition of slices of cold boiled Onion, and a very little Beet-root.

Hardy Perennials.—The following is a select list of Hardy Perennials:—Pentstemon gentianoides, P. ovatus, P. hýbridus, Chelone barbata, C. barbata alba, Œnothera macrocarpa, Œ. speciosa, Gerânium ibéricum, Delphínium Barlowi, D. grandiflorum, Dracocéphalum speciosum, Stenactis speciosa, Phlox Thompsoniana, P. omniflora, P. maculata, P. cárnea, P. stolonífera, P. aristata, P. setácea, Sisyrínchium grandiflorum, Gentiana septémfida, G. asclepiadea, G. acaulis, Dodecatheon Meádia, Alyssum saxátile, Spiræa palmata, Hotéia japónica, Campánula carpática, Státice coriária, S. Gmelini, and S. tatárica.

Daniell's Patent Manure.—At a meeting of the Warminster and South Wilts Farmers' Society, Mr. Phipps, the chairman of the Wilts Quarter Sessions, spoke strongly in favour of Daniell's Patent Manure; and stated that he had divided his field of Mangel Wurzel in three equal parts: the first, cultivated with patent manure alone, produced 30 tons per acre; the second, with half patent manure and half stable-dung, produced 26 tons per acre; and the third, with all stable-dung, produced 24 tons per acre. Mr. Phipps observed that the management of the three divisions had been all the same, except that the part with the patent manure alone was ploughed rather deeper than the other parts, and which might have been somewhat in its favour. He declared his conviction that the manure would prove a valuable discovery, and be brought into extensive use.—*Bath Chronicle.*

Locusts in England.—About three weeks ago a labouring man took a specimen of the Gryllus migratorius, or Asiatic locust, in a field at Stonegravels, near Chesterfield. The man, being struck by its unusual appearance and activity, after a severe chase, succeeded in capturing it in safety. It is now in the cabinet of a gentleman in Chesterfield. We understand that several other specimens of this destructive insect have been taken in this and the neighbouring counties in the present year; one in Sheffield in the beginning of September; another at Mickleover, near Derby, nearly at the same time; a third, about the middle of the same month, near Burton-on-Trent; the latter was found to be a female, containing from 40 to 50 eggs, apparently ready to be deposited. The gentleman who captured the last-mentioned specimen says that he disturbed it in getting over a hedge near which it was reposing; and that, when first discovered, the insect sprang a distance of 14 yards.—*Stamford Mercury.*

GARDEN MEMORANDA.

Chatsworth.—The dulness of our gardens during autumn and winter has of late years been greatly enlivened by the introduction of new and beautiful plants from all quarters of the tropical regions to which we have access; and we may confidently assert that our greatest acquisitions are amongst the almost endless additions which have been made to the tribe of Orchidaceous plants, rivalling as they do all other plants in the peculiar richness and extraordinary contrast in the colours of their flowers, as well as in the easily-traced analogies in their forms, to those of the more familiar objects in the animal kingdom. It is not unfrequent to see the beak of birds and flying doves, the back of frogs and dolphins' heads, beautifully-painted butterflies and moths, the face of monkeys, and the rich markings of the lordly tiger, represented in their flowers. There is no doubt that Orchidaceous plants will more frequently be found in the collections of the wealthy in this country, when the fact becomes more generally known that the high temperature in which they are often kept is more injurious than otherwise. A well-managed Orchidaceous house at this season is cool and pleasant, and free from excessive humidity, which gives the plants time to develop their blossoms perfectly; their duration is likewise prolonged, and the exquisite perfume of many species is considerably stronger. Under such treatment they have this season produced their seed-vessels at Chatsworth in great abundance, and have flowered most profusely. The house in which the general collection is grown is a curvilinear house, of large dimensions, well ventilated, and heated with perforated steam-pipes enclosed in a well-built flue, filled with coarse brickbats and stone. The inside is tastefully fitted up with rustic wood for suspending the plants from, which grow on blocks of wood, and in wire baskets. Along the back of the house a quantity of partly-rotten chumps of wood are arranged, at short distances from each other, covered with flourishing and luxuriant plants of the least showy kinds. There are stone shelves along the front and ends, and in the middle are two large bark-pits, divided by a walk; three of which run the whole length of the house, and are connected by cross pathways and steps. On entering the house, the arrangement of the plants in wire baskets, suspended from the rustic woodwork over the middle walk in a line with the door, has a singular and novel appearance. On proceeding along the front of the house, the plants on the front stage, and the enormous specimens arranged in the tan-beds, have a good effect. The following list will give some idea of those which are now in flower:—The first, upon entering, are, Cypripedium venustum, protruding its numerous solitary flowers above the curiously marked foliage. Liparis longipes, with 28 racemes above a foot long, of yellowish green flowers; a fine plant of Cœlogyne Gardneriana, with twelve pendent racemes of its delicate white flowers covering the pot. Before moving on, the numerous bright red flowers of the lovely little Sophrónitis cérnua, and the exquisitely beautiful Anæctochilus setáceus, with erect spikes of white-lipped flowers—which, although curious, are less beautiful than the velvety foliage pencilled all over with net work of gold [illegible]; while Pesomeria tetragona is throwing, as it were, its yellowish red flowers out of sight. Further on are a plant of the original Cattleya labiata, a variety of C. guttata, with greenish, neatly-spotted sepals and petals, and, for the sake of contrast, Pleurothallis Lanceana, Oncidium triquetrum, and Cœlógyne ovalis are suspended near them, and are flowering in humble beauty: the two latter have been in bloom during the last three or four months. To the right are the sweet-smelling Epidendrum nocturnum, Tribrachia pendula, the lately flowering Bolbophyllum Careyanum, whose close-set spike of flowers is very curious, being of the colour of bees'-wax, with dark brown lips, which tremble at the slightest touch; and a new Renanthera, introduced by Mr. Cumming, in 1838, bearing two panicles of numerous, smallish, deep red flowers; the sepals and petals of which are barred and slightly tinted with yellow. After passing Maxillaria picta, M. macrophylla, Oncidium Henchmannii, and a fading Ornithorhynchum, we come to a large plant of Cáttleya guttata, with larger spots and a smaller lip than the first noticed, and Miltónia Russelliana. Next to these are suspended the pretty Dendróbium denudans and Rodriguezia secunda. Again turning to the right, a splendid mass of Zygopetalum crinitum meets the eye, with an enormous plant of Brássia cuspidata, each diffusing its agreeable perfume over the house: above them are suspended Maxillária racemosa, with eight racemes of pale flowers, and a most magnificent plant of Læ'lia anceps glowing in all its beauty; upon which there are six spikes upwards of four feet long, each supporting three or four flowers at its extremity. On the left hand is a group of plants consisting of Epidendrum coriáceum, Saccolábium carinatum (a species not remarkable for its beauty), Bolbophyllum coccinum, with numerous graceful racemes, and the curious Oncídium raniferum. Having passed the centre of the house, we come to other fine plants of Zygopétalum crinitum and Mackayi, with numerous scapes of Oncidiums shooting up among them; and on a block of wood hangs the original Phalænopsis amábilis, in surpassing vigour and beauty; this plant has four flower-stems upon it, one of which supports fourteen of its snow-white flowers, resembling so many moths. Facing these are large plants of Epidendrum cuspidatum, covered with flowers, and E. ellipticum; also Catasetum cristatum, C. tridentatum, and two or three others; and further on are the pretty Saccolábium denticulatum, and Vanda lamellata, under which stands a large plant of the almost discarded Epidendrum fragrans, which blooms so freely, and diffuses so agreeable a perfume, that it has become a general favourite. After turning the corner and ascending a few steps, we come to the partly rotten chumps of woods, before spoken of, on which the following are producing their flowers in happy contrast:—Maxillaria atrorubens, M. densa, M. rufescens, and Masdevallia fenestrata; the racemes of Gongoras, which are growing in pots and elevated above them, interrupting their harmony with the intrusion of their racemes amongst them. There are numerous terrestrial Orchidaceæ grown in pots, placed between these chumps of woods, so as to complete the arrangements; among which Cypripédium insigne, Calanthe densiflora, Cymbidium sinense, and Goodyera discolor stand conspicuous. We next come to the spacious recess formed in the centre of the back part of the house, for the convenience of suspending the flowering plants during summer, so as to be more easily seen, and to afford them more shade: this being effected by the rustic branches which cover the recess and support the suspended plants. Here the lovely Maxillaria Steelii and M. cristata are bursting into beauty. On the chumps of wood on the other side of this recess, are Epidendrum Skinneri, Maxillária variábilis, M. nervosa, Fernandésia élegans, Bolbophyllum recurvum, the curious little Trias racemosa with woolly flowers, and a large plant of the beautiful *Æschynanthus grandiflorus,* which has been for the last three months one splendid mass of flower. In front of these is suspended, in a wooden basket, a fine plant of the showy Dendróbium chrysanthum, three stems of which being covered with flowers, form a most gorgeous object.—*G.*

Reviews.

Remarks on Bermuda, is a small 12mo pamphlet, drawn up, we believe, by the order of Col. Reid, the Governor of the Colony, for the information of emigrants, and should be consulted by all who think of settling on that island. The following passage is important:

"Such persons as from age or infirmity become unable to support themselves are provided for, after the Scotch system, from the funds of the Parish to which they belong. No rates are made exclusively for that purpose, and no labour is required of the pauper for the benefit of the Parish.

"There is great want both of agricultural and domestic labourers in the country. The wages of the former may be stated to be from 24 to 30 shillings per month, with food and lodging, or without food at 48 to 52 shillings. Domestics are usually fed and lodged, and their wages vary according to sex and other circumstances, from 10 to 30 shillings per month. A number of mechanics and artisans would find ready employment: such as ship carpenters, caulkers, house-joiners, stonemasons, shoemakers, wheel-wrights, coopers, harness-makers, &c. The wages for people of this description are about 4 shillings per day, without food or lodging.

"The mercantile marine of Bermuda being very considerable, boys from 12 to 15 years of age could at all times be advantageously apprenticed and brought up as sailors, having provided for them, during their apprenticeship, good and sufficient food, and clothing, medical attendance, and education adapted to their peculiar pursuits.

"As an encouragement to persons inclined to emigrate to Bermuda, and to enable them to make the best arrangements on their first arrival, the Legislature have granted fourteen days' subsistence money to persons (not exceeding 100 in one year) arriving in the island, with a voucher showing them to have emigrated to Bermuda with the approbation of the Commissioners of Emigration. All transported convicts, however, are prohibited from enjoying the benefit of any such allowance.

"Emigrants would no doubt on their arrival here labour under a want of suitable society. It is therefore recommended that families should as much as possible emigrate together, as well to meet this inconvenience, as to keep up those ties of mutual affection which tend so powerfully in every situation of life to render the individuals happy and contented.

"Families need not be deterred from emigrating under an impression of difficulty in employing their children. Numbers of people would always be glad to employ them of both sexes in the lighter description of household work.

"In conclusion, it may be remarked, that such persons as desire to emigrate to Bermuda may assure themselves of finding a salubrious climate, equal laws justly administered for the protection of their persons and property, fit and profitable objects for the employment of their industry, churches and schools suitable for the moral and intellectual education of their children, and in case of sickness, skilful medical attendance at fair and moderate charges."

To this we must add that, from some correspondence at the end of the tract, it appears that Government is not unwilling to give agricultural labourers a free passage to Bermuda, "on payment of the cost of their provisions during the voyage."

Callow's Popular Conchology, (Longman and Co.) is just the kind of book that was wanted by those who wish to know something of the habits of shells, and of the manner of classifying their collections of such animals, without the necessity of studying the costly works of purely scientific Conchologists. It is clearly written, abounds in instructive wood-cuts, representing all the more important genera, and has a glossary of technical terms. The classification adopted is that of Lamarck, with the addition of such genera as have been published lately. We regret that we have no room for extracts.

Kirby and Spence's Entomology is too well known, as the most entertaining account of the habits of insects that has ever been put into a popular form, to require any comments from us. It was the delight of our youth, and is the admiration of our mature age. Both to those who have the misfortune to be tormented with insect nuisances in bed or at board, in house, in garden, or in field, and to all who desire to understand the inconceivably curious contrivances by which these little animals are enabled by Providence to play their allotted part in the economy of the creation, the work is indispensable. It is only necessary for us to announce the republication of a sixth edition of the part relating to the manners and economy of the insect world, in two 8vo volumes, with a considerable addition of new matter.

CALENDAR OF OPERATIONS *for the ensuing week.*

WHEN out-door work cannot be carried on, let the Fig-house, Cherry-house, and all late forcing-houses, be made ready against they are wanted. If smoke flues are used for supplying heat, they should be cleaned once a year, at least; because, when the interior is cased with soot, which is a bad conductor, a greater portion of heat passes up the chimney than would be the case if the inside was clean. The walls should be whitewashed, and the trellises either washed or painted, as the case requires. Fig-trees that have been managed according to the directions given through the growing season will not need much pruning; a few of the thickest branches may, however, be taken out, if found necessary. If the borders are full of roots, take off a little of the surface soil and replace it with fresh. Vines, Cherry, Peach, Fig, or other fruit-trees in pots, which are meant to be forced in the ensuing spring, should have the pots plunged into the ground and mulched over with dung, to protect the roots from frost in winter. If potted Strawberry plants are not under cover, some may be taken into any of the late houses to prepare them for being forced after Christmas. Where green herbs are required in winter, some plants should be potted immediately, if it has not yet been done.

I.—KITCHEN-GARDEN AND ORCHARD.

In-door Department.

PINERY.—Ascertain the temperature of the bark-beds every day by examination, which can be done in very little time by keeping a few sticks thrust into them. There is less danger of too much than of too little bottom heat at this season, except in beds recently renewed. As the heat falls below the standard of 80°, level the raised ridges of bark round the pots; and if that is insufficient, make up the bed to the rims of the pots by adding fresh bark from the store-heaps in the sheds.

VINERY.—To have ripe Grapes by the 1st of May, a Vinery should now be shut up, and its temperature raised a few degrees above that of the atmosphere, by introducing some fermenting material, or, if that is not practicable, by fires at night, admitting a little fresh air in the day. When the Vines are planted outside of the house, the exposed parts of their stems must be covered so as to defend them from frost. Dry moss tied round the stems and thatched with straw will be found an efficient protection. The borders ought also to be mulched with long litter; but as the late heavy rains have made the soil very wet, the mulching may be deferred for a time, unless frost should occur, when it must be immediately done.

PEACH-HOUSE.—If very early fruit is wanted, forcing should be begun now. Close the house for a night or two previously to the application of fire-heat, which ought then to be given only in sufficient force to raise the thermometer in the house three or four degrees above the temperature of the open air. Cover the stems and mulch the border as directed for Vines.

CUCUMBERS.—To have this vegetable early where there is not a fire-heated pit or a Pine-stove to grow them in, nor any other house warm enough to raise young plants which might afterwards be transferred to a hot-bed frame, a seed-bed for a one-light box may now be made up. It will require to be substantial, and therefore some leaves should be mixed with the dung to moderate its violent heat; the bed ought also to be built on a foundation of brushwood. This troublesome method of growing early Cucumbers ought never to be attempted, however, unless plenty of stable-dung is at command.

ASPARAGUS.—For a succession, plant the bed made last week, using the precautions before mentioned against too much bottom-heat.

RHUBARB.—Where there is no other convenience, this can be forced where it grows, in the same manner as Sea-kale.

Out-door Department.

ASPARAGUS.—Where roots are wanted for forcing every year, a new plantation ought to be made at the proper season, in proportion to the quantity taken up; therefore, whenever time permits, and the ground is not too wet, that which is intended for planting may be prepared. Some instructions upon this point will be found at p. 144, to which it is only necessary to add that in all probability nitrate of soda, or common salt, would be a beneficial addition to the manures there specified.

CABBAGES.—If the stalks of those that are cut now are wanted to produce sprouts next spring, the leaves should be retained upon them. Earth up any plants that require it.

CELERY.—Whenever a fine drying day occurs, take advantage of it to prepare the late Celery for winter by a final earthing, which will be necessary in consequence of the mild weather of late having caused it to continue growing.

ENDIVE.—Choose a dry day for tying up and housing a succession.

PARSLEY.—Where this cannot conveniently be sheltered from cold in the open ground, some roots might be taken up and planted in boxes for protection under glass.

SUCCORY.—More roots should be housed before frosty weather sets in. A vacant shelf in the Mushroom-house would do for this purpose.

ORCHARD.—Peach and Nectarine trees are usually left unpruned till spring, possibly on the supposition that pruning makes them more subject to injury by intense cold; there seem, however, to be no just grounds for this apprehension, provided the wood is well ripened. But Peach or other wall-trees, to which it is intended to apply any wash for the prevention or destruction of insects, ought not to be nailed till after the composition has been laid on; because the efficacy of such remedies depends in a great measure upon every part of the wood being covered, which cannot be done when the branches are closely nailed to a wall. Such trees (and also any that have been transplanted) should, therefore, not be nailed till spring, as that is the best season for anointing them.

II.—FLOWER-GARDEN AND SHRUBBERY.

In-door Department.

STOVE.—Bulbs and other deciduous plants which have lost their leaves should be kept perfectly dry; shrubs or trees which retain their leaves, but which are resting, ought to be watered sparingly; other things which are growing and flowering should be more liberally watered. Do not force the plants to grow much at this season, or they will suffer for it afterwards. Temperature as before.

GREENHOUSE AND CONSERVATORY.—On mild nights, when there is no fear of high wind, the sashes of the Heath-house need not be closed. Plants in general ought not to be potted at this season; but there are some things, such as Pelargóniums, which are wanted to grow to a large size, that will perhaps need shifting now, to prevent the roots from getting matted in the pots, by which the growth of the plants would be checked. These should be made to grow slowly through the winter; and a very important point in their culture is to keep them within a short distance of the glass while growing. Let Chrysánthemums that are in blossom have plenty of air, and give them liquid manure occasionally, which will strengthen them to expand their late flowers.

PITS AND FRAMES.—Give all the air possible to half-hardy plants, taking the lights entirely off them on dry days. Free exposure will in some measure inure the plants to cold, and likewise prevent them from uselessly growing at a season when they ought to be dormant. Large plants which have been potted from the flower-borders should be trimmed, and freed from dead leaves.

Out-door Department.

Persevere in raking up leaves and cleaning the walks in woods and shrubberies. The pruning of hardy shrubs is usually deferred till spring, but it might be done now if more convenient. Any kinds, however, that are liable to injury from frost, ought to remain unpruned till the severe weather is past. Tender varieties of standard Roses may be taken up and laid in close to a north wall, so that their heads can be protected by mats, in the way recommended by Mr. Rivers.

NURSERY AND FOREST DEPARTMENT.

NURSERY.—See last Calendar.

FOREST AND COPPICE WOODS.—Accordingly as most convenient, one or other of the various kinds of work indicated in the three last Calendars should be carried on.—*J. B. Whiting, The Deepdene.*

State of the Weather near London for the Week ending Dec. 1, 1842, as observed at the Horticultural Garden, Chiswick.

		BAROMETER.		THERMOMETER.			Wind.	Rain.
Nov.		Max.	Min.	Max.	Min.	Mean.		
Friday	25	28.983	28.816	48	39	43.5	S.	.12
Saturday	26	29.208	29.060	50	29	39 5	S.W.	.01
Sunday	27	29.344	29.069	50	43	46.5	S.	.24

Wednesday	30	29.975	29.602	52	29	40.5	W.	.01
Dec. Thursday	1	30.017	29.907	54	52	53.0	S.	.01
Average		29.475	29.279	51.4	38.7	45.1		.44

Nov. 25. Rain; heavy showers; barometer very low; fine.
26. Clear; lightly overcast; clear and fine at night.
27. Fine; stormy, with rain at night.
28. Cloudy; rain; barometer again very low.
29. Fine; exceedingly fine with sun; overcast.
30. Fine; light clouds; clear.
Dec. 1. Slight rain; densely overcast.

Mean temperature of the week 2.1° above the average.

State of the Weather at Chiswick during the last 16 years, for the ensuing Week ending Dec. 10, 1842.

Dec.		Aver. Highest Temp.	Aver. Lowest Temp.	Mean Temp	No. of Years in which it Rained.	Greatest quantity of Rain.	Prevailing Winds.							
							N.	N.E.	E.	S.E.	S.	S.W.	W.	N.W.

Sat.	10	46 3	35.4	40.9	6	0.20	—	1	2	1	2	4	4	2

The highest temperature during the above period occurred on the 10th, in 1826—thermometer 56°; and the lowest on the 10th, in 1835—thermometer 20°.

REPORT ON COVENT GARDEN MARKET,

For the Week ending Dec. 2, 1842.

[The Half-sieve contains . . . 3½ imperial gallons.
The Sieve . . . . 7 " "
The Bushel Sieve . . . . . 10½ " "
The Bushel Basket . . . . . 1 imperial bushel.
Punnets for Seakale are . . . 7¾ in. wide and 2 in. deep.
" Radishes . . . . 8 " 2 "
" Mushrooms . . . 7 " 2 "
" Salad . . . . . . 5 " 2 ".]

THE supplies during the past week have been good, and the prices of most articles remain the same: owing to the continued wet weather trade has been far from brisk. *Fruit:* Pines are plentiful, and amongst them are some good specimens of the Queen and Enville. The supply of hothouse Grapes is pretty well kept up; a few Muscats have this week been offered, from 3*s.* to 5*s.* per lb. Pomegranates are selling from 3*s.* to 4*s.* per dozen. There is a great variety of dessert Pears, amongst which the Glout Morceau has appeared, from 4*s.* to 6*s.* per half-sieve; Crassanes and Marie Louise are fetching from 5*s.* to 8*s.* per half-sieve; and Beurre Diel about 6*s.* per bushel; a few Guernsey Chaumontels may likewise be obtained. Dessert Apples remain the same as in our last Report, with the exception of a few Nonpareils which have appeared, from 6*s.* to 10*s.* per bushel. A few tolerably good Cucumbers have been offered during the week, from 10*d.* to 1*s.* 6*d.* each. *Vegetables:* Little variation has taken place in this department of the Market. Asparagus is improving in quality; the best bundles selling from 9*s.* to 11*s.*; the inferior ones, from 4*s.* to 8*s.* each. Seakale has also improved greatly, and is becoming much more abundant; its price is from 1*s.* 6*d.* to 2*s.* per punnet. New Autumn Potatoes are still to be met with from 9*d.* to 1*s.* per lb. Lettuces, Endive, and Salading of every description are plentiful, and of good quality. Mushrooms are likewise abundant, from 8*d.* to 1*s.* 3*d.* per pottle. *Flowers:* Those in pots consist chiefly of Ericas and Chrysánthemums. Amongst the cut flowers are Euphórbia jacquiniflora and splendens, Rondelétia speciosa, Æschynanthus grandiflorus, Epiphyllum Ackermanni, Phaius grandifólius, Cyclamens, Heliotrope, Caméllias, &c.

PRICES, SATURDAY, Dec. 3, 1842.—FRUITS:—

Pine Apple, per lb. 3*s* to 5*s*
Grapes, Hothouse, per lb. 1*s* to 3*s*
— Muscats, 3*s* to 5*s*
— Spanish, 9*d* to 1*s*
— Portugal, 1*s* to 1*s* 6*d*
Apples, dessert, per bush., 2*s* 6*d* to 6*s*
— Kitchen, 2*s* to 5*s*
Pears, dessert, per hf. sieve, 2*s* to 8*s*
Pomegranates, per doz., 3*s* to 4*s*
Quinces, per hf.-sieve, 3*s* to 4*s*
Medlars, per hf.-sieve, 4*s* to 5*s*
Berberries, per hf.-sieve, 5*s*
Oranges, per doz., 9*d* to 2*s*

Oranges, per 100, 5*s* to 10*s*
— bitter, per 100, 12*s*
Lemons, per doz. 1*s* to 2*s*
— per 100, 6*s* to 14*s*
Almonds, per peck, 7*s*
Sweet Almonds, per pound, 3*s*
Chesnuts, per peck, 3*s*
Walnuts, per bush., dried, 12*s* to 16*s*
Filberts, English, per 100 lbs. 60*s* to 70*s*
Cob Nuts, per 100lbs., 80*s* to 90*s*
Nuts, per bushel—
— Brazil, 16*s* to 20*s*
— Spanish, 20*s*
— Barcelona, 24*s*

VEGETABLES.

Savoys, per doz. 6*d* to 1*s*
Cabbage, per doz. 9*d* to 1*s* 6*d*
— plants, per doz. 1*s* 6*d* to 2*s* 6*d*
— Red, for pickling, 1*s* 6*d* to 5*s*
Brussels Sprouts, per hf.-sv. 1*s* 3*d* to 2*s*
Broccoli, White, per bunch, 10*d* to 1*s* 6*d*
— Purple, 8*d* to 1*s*
Cauliflowers, per doz., 1*s* to 4*s*
Potatoes, per ton, 40*s* to 70*s*
— per cwt. 2*s* to 3*s* 6*d*
— per bushel, 1*s* 3*d* to 2*s*
— Kidney, per bu., 1*s* 6*d* to 2*s*
— New autumn, per lb., 9*d* to 1*s*
Jerusalem Artichokes, per half-sieve, 9*d* to 1*s* 6*d*
Turnips, per doz. bun., 1*s* 6*d* to 2*s* 6*d*
Red Beet, per dozen, 9*d* to 1*s*
Scorzonera, per bundle, 1*s* 3*d* to 1*s* 6*d*
Salsafy, per bundle, 1*s* 3*d* to 1*s* 6*d*
Horse Radish, per bundle, 2*s* to 4*s* 6*d*
Radish, per doz. hands (24 to 30 each) 9*d* to 1*s*
— Turnip, p. doz. bch., 1*s* to 1*s* 6*d*

Carrots, per doz. bun., 3*s* to 5*s*
Parsneps, per dozen, 9*d* to 1*s*
Spinach, per sieve, 1*s* to 1*s* 3*d*
Leeks, per doz. bun., 1*s* 6*d* to 2*s*
Onions, per bushel, 4*s* 6*d* to 6*s*
— Green, p. doz. bun. 3*s* to 4*s* 6*d*
— Spanish, per doz. 2*s* to 5*s*
Garlic, per lb. 6*d* to 8*d*
Shallots, per lb., 1*s*
Asparagus, per 100, 4*s* to 11*s*
Sea-kale, per punnet, 1*s* 6*d* to 2*s*
Lettuce, Cabbage, p. sc., 6*d* to 9*d*
— Cos, 9*d* to 1*s*
Endive, per score, 9*d* to 1*s* 3*d*
Celery, p. bd., (12 to 15) 6*d* to 1*s* 6*d*
Small Salads, per punnet, 2*d* to 3*d*
Watercress, per doz. sm. bun. 4*d* to 6*d*
Parsley, per hf.-sieve, 1*s* 6*d* to 2*s*
Tarragon, per doz. bun., 2*s* to 3*s*
Sage, per doz. bunches, 1*s* 6*d* to 2*s*
Mint, per doz. bunches, 2*s*
Chilies, per 100, 1*s* 3*d* to 2*s*
Mushrooms, per pottle, 8*d* to 1*s* 3*d*

Notices to Correspondents.

WE shall be obliged if our Correspondents, in their future communications, will take care that no general question relating to *different* subjects is asked in the same paragraph, and that each question is headed with the principal subject. *One side only of the paper should be written on*, so that we may separate each question. If these directions are observed, it will greatly facilitate our obtaining answers, and will enable us to arrange our Correspondence under general heads, separating those questions and answers which are of interest merely to individuals, from such as are of general interest.

MANURES.—*A Subscriber* has hardly given us information enough as to the nature of his manure. Horse and closet manure, mixed with ditchings, forms of itself a very powerful manure, and we are not aware of any means of doubling or trebling its fertilising properties for manuring grass land. If, however, it is easy to obtain gypsum, or if the refuse sulphate of lime of the candle-makers can be had at Manchester, its quality would no doubt be improved by adding such substances, thoroughly mixing them, in the proportion of one fourth of the gypsum.†——*M. H.*—You cannot use a worse material than old tan. It is quite unfit for manure until it has been converted into black vegetable mould. You had better burn your heavy land if you have the means of doing so.†——*Clericus.*—As sulphates of magnesia and iron, muriatic and sulphuric acids, are severally recommended for the fixation of ammonia in urine, and in the ammoniacal water of the gas-works, we apprehend that the crude salt of the alum works, which contains about 50 per cent. of sulphate of magnesia, and the remainder sulphate of iron and alumina, with sulphuric and muriatic acids in a free state, may be usefully employed for the said fixation in both urine and gas-water. The fixing menstruum must be added to the fermenting urine.†

LIQUID MANURE.—*J. B.*—Cow-dung makes excellent liquid manure for strong-growing greenhouse plants, and it is very safe in its application; it is best in a fresh state. You may make it most conveniently by laying a load in the compost-yard, and digging a hole in the clay, into which the liquid will be washed by the rain. A board may then be laid over it to prevent evaporation in summer. In most cases the liquid will not be too strong if used as it is taken from the drain; but experience must teach you this. Free-growing greenhouse plants, such as Fúchsias, Sálvias, Chrysánthemums, Azáleas, Rhododendrons, &c., are much benefited by it. Apply it just when they begin to grow and during the growing season.§

RESTING PLANTS.—*J. B.*—Bulbous plants, or others which lose all their leaves in the winter season, should be kept perfectly dry; plants which still retain their leaves, although they cease to grow, should be watered sparingly. These are general principles which your own good sense will enable you to apply.§

HEATING.—*C. H.*—You say you have a small greenhouse erected against the gable-end wall of your coach-house, and that you are desirous of giving warmth to the former and dryness to the latter in the winter season, by having some kind of stove or warming apparatus, to be fixed in the wall between the greenhouse and coach-house, and to be fed from the latter. The most economical apparatus would be an Arnott stove, *well managed:* but as this is difficult, it would be better to put up such a stove as is described at p. 723 of the present volume.†

VINES.—*Clericus.*—There is no danger of the Vines in your house being injured by frost, unless the thermometer out of doors should indicate a near approach to zero; in which case it will be advisable to apply sufficient fire-heat to keep the house also from settling to extreme cold.‡——*S. T.*—From the appearance of the leaves which you have sent, there is little doubt that the roots of your Vines have penetrated into a subsoil, which is exceedingly wet, or below the level of the surrounding water. Your best plan will be to take up the Vines, and, if there is no possibility of draining the present border, to form a fresh one upon its surface.‡——*R. D.*—You cannot remove your Vines at a better time than the present.‡
